Table of Contents

SECTION 1: LYCOPHYTES OR CLUBMOSSSES	56
<i>L01b. LYCOPODIACEAE</i> PALISOT DE BEAUVOIS EX MIRBEL 1802 (CLUBMOSS FAMILY) [IN LYCOPODIALES]	56
<i>L02. ISOETACEAE</i> DUMORTIER 1829 (QUILLWORT FAMILY, MERLIN'S-GRASS FAMILY) [IN ISOETALES]	58
<i>L03. SELAGINELLACEAE</i> WILLKOMM 1854 (SPIKEMOSS FAMILY) [IN SELAGINELLALES]	60
SECTION 2A: HORSETAILS.....	62
<i>F04. Equisetaceae</i> MICHAUX EX A.P. DE CANDOLLE 1804 (HORSETAIL FAMILY) [IN EQUISETALES]	62
SECTION 2B: FERNS.....	63
<i>F05. PSILOTAACEAE</i> J.W. GRIFFITH & HENFREY 1855 (WHISKFERN FAMILY) [IN PSILOTALES]	63
<i>F06. OPHIOGLOSSACEAE</i> MARTINOV 1820 (ADDER'S-TONGUE FAMILY) [IN OPHIOGLOSSALES]	63
<i>F08. OSMUNDACEAE</i> MARTINOV 1820 (ROYAL FERN FAMILY) [IN OSMUNDALES]	66
<i>F09. HYMENOPHYLLACEAE</i> MARTIUS 1835 (FILMY FERN FAMILY) [IN HYMENOPHYLLALES]	67
<i>F13. LYGODIACEAE</i> M. ROEMER 1840 (CLIMBING FERN FAMILY) [IN SCHIZAEALES]	68
<i>F16. SALVINIACEAE</i> MARTINOV 1820 (FLOATING FERN FAMILY) [IN SALVINIALES]	68
<i>F17. MARSILEACEAE</i> MIRBEL 1802 (WATER-CLOVER FAMILY) [IN SALVINIALES]	69
<i>F30. PTERIDACEAE</i> E.D.M. KIRCHNER 1831 (MAIDENHAIR FERN FAMILY) [IN POLYPODIALES]	70
<i>F31. DENNSTAEDTIACEAE</i> LOTSY 1909 (BRACKEN FAMILY) [IN POLYPODIALES]	73
<i>F32. CYSTOPTERIDACEAE</i> SHMAKOV 2001 (BRITTLE FERN FAMILY) [IN POLYPODIALES]	74
<i>F34. DIPLAZIOPSISACEAE</i> X.C. ZHANG & CHRISTENHUSZ 2011 (GLADE FERN FAMILY) [IN POLYPODIALES]	74
<i>F37. ASPLENIACEAE</i> NEWMAN 1840 (SPLEENWORT FAMILY) [IN POLYPODIALES]	75
<i>F38. WOODSIACEAE</i> HERTER 1949 (WOODSIA FAMILY) [IN POLYPODIALES]	76
<i>F39. ONOCLEACEAE</i> PICHÉ SERMOLLI 1970 (SENSITIVE FERN FAMILY) [IN POLYPODIALES]	77
<i>F40. BLECHNACEAE</i> NEWMAN 1844 (DEER FERN FAMILY) [IN POLYPODIALES]	77
<i>F41. ATHYRIACEAE</i> ALSTON 1956 (LADY FERN FAMILY) [IN POLYPODIALES]	78
<i>F42. THELYPTERIDACEAE</i> CHING EX PICHÉ SERMOLLI 1970 (MARSH FERN FAMILY) [IN POLYPODIALES]	79
<i>F45. DRYOPTERIDACEAE</i> HERTER 1949 (WOOD-FERN FAMILY) [IN POLYPODIALES]	81
<i>F46. NEPHROLEPIDACEAE</i> PICHÉ SERMOLLI 1975 (SWORD FERN FAMILY) [IN POLYPODIALES]	83
<i>F51. POLYPODIACEAE</i> J. PRESL & C. PRESL 1822 (POLYPODY FAMILY) [IN POLYPODIALES]	84
SECTION 3: GYMNOSPERMS.....	86
<i>G03. GINKGOACEAE</i> ENGLER 1897 (GINKGO FAMILY) [IN GINKGOALES]	86
<i>G07. PINACEAE</i> SPRENGEL EX RUDOLPHI 1830 (PINE FAMILY) [IN PINALES]	86
<i>G11. CUPRESSACEAE</i> S.F. GRAY 1822 (CYPRESS FAMILY) [IN CUPRESSALES]	88
SECTION 4: MAGNOLIIDS AND PRIMITIVE ANGIOSPERMS.....	92
<i>3. CABOMBACEAE</i> RICHARD EX A. RICHARD 1822 (WATER-SHIELD FAMILY) [IN NYMPHAEALES]	92
<i>4. NYMPHAEACEAE</i> SALISBURY 1805 (WATER-LILY FAMILY) [IN NYMPHAEALES]	92
<i>7A. ILLICIAEAE</i> A.C. SMITH 1947 (STAR-ANISE FAMILY) [IN AUSTROBAILEYALES]	94
<i>7B. SCHISANDRACEAE</i> BLUME 1830 (STAR-VINE FAMILY) [IN AUSTROBAILEYALES]	94
<i>10. SAURURACEAE</i> RICHARD EX T. LESTIBOUDOIS 1826 (LIZARD'S-TAIL FAMILY) [IN PIPERALES]	94
<i>12. ARISTOLOCHIACEAE</i> A.L. DE JUSSIEU 1789 (BIRTHWORT FAMILY) [IN PIPERALES]	95
<i>14. MAGNOLIACEAE</i> A.L. DE JUSSIEU 1789 (MAGNOLIA FAMILY) [IN MAGNOLIALES]	97
<i>18. ANNONACEAE</i> A.L. DE JUSSIEU 1789 (CUSTARD-APPLE FAMILY) [IN MAGNOLIALES]	99
<i>19. CALYCANTHACEAE</i> LINDLEY 1819 (SWEET-SHRUB FAMILY) [IN LAURALES]	99
<i>25. LAURACEAE</i> A.L. DE JUSSIEU 1789 (LAUREL FAMILY) [IN LAURALES]	100
SECTION 5: MONOCOTYLEDONAE (MONOCOTS).....	103
<i>27. ACORACEAE</i> MARTINOV 1820 (CALAMUS FAMILY) [IN ACORALES]	103
<i>28. ARACEAE</i> A.L. DE JUSSIEU 1789 (ARUM FAMILY) [IN ALISMATALES]	103
<i>29. TOFIELDIACEAE</i> TAKHTAJAN 1995 (FALSE-ASPHODEL FAMILY) [IN ALISMATALES]	108
<i>30. ALISMATAACEAE</i> VENTENAT 1799 (WATER-PLANTAIN FAMILY) [IN ALISMATALES]	108
<i>32. HYDROCHARITACEAE</i> A.L. DE JUSSIEU 1789 (FROG'S-BIT FAMILY) [IN ALISMATALES]	112
<i>35. JUNCAGINACEAE</i> RICHARD 1808 (ARROWGRASS FAMILY) [IN ALISMATALES]	115
<i>38. POTAMOGETONACEAE</i> BERCHTOLD & J. PRESL 1823 (PONDWEED FAMILY) [IN ALISMATALES]	115
<i>40+41. CYMODOCEACEAE</i> VINES 1895 (MANATEE-GRASS FAMILY) [IN ALISMATALES]	117
<i>43. NARTHECIACEAE</i> FRIES EX BJURZON 1846 (BOG-ASPHODEL FAMILY) [IN DIOSCOREALES]	118
<i>44. BURMANNIACEAE</i> BLUME 1827 (BURMANNIA FAMILY) [IN DIOSCOREALES]	119
<i>45. DIOSCOREACEAE</i> R. BROWN 1810 (YAM FAMILY) [IN DIOSCOREALES]	120
<i>53A. TRILLIACEAE</i> CHEVALLIER 1827 (TRILLIUM FAMILY) [IN LILIALES]	121
<i>53D. CHIONOGRAPHIDACEAE</i> TAKHTAJAN 1996 (FAIRY-WAND FAMILY) [IN LILIALES]	122
<i>53E. MELANTHACEAE</i> BATSCH 1793 (BUNCHFLOWER FAMILY) [IN LILIALES]	123
<i>55. ALSTROEMERIACEAE</i> DUMORTIER 1829 (PERUVIAN-LILY FAMILY) [IN LILIALES]	124
<i>56. COLCHICACEAE</i> A.P. DE CANDOLLE 1804 (MEADOW-SAFFRON FAMILY) [IN LILIALES]	124
<i>59. SMILACACEAE</i> VENTENAT 1799 (GREENBRIAR FAMILY) [IN LILIALES]	125
<i>60. LILIACEAE</i> A.L. DE JUSSIEU 1789 (LILY FAMILY) [IN LILIALES]	128
<i>61. ORCHIDACEAE</i> A.L. DE JUSSIEU 1789 (ORCHID FAMILY) [IN ASPARAGALES]	131
<i>66. HYPOXIDACEAE</i> R. BROWN 1814 (STARGRASS FAMILY) [IN ASPARAGALES]	142
<i>70. IRIDACEAE</i> A.L. DE JUSSIEU 1789 (IRIS FAMILY) [IN ASPARAGALES]	143

TABLE OF CONTENTS

72c. <i>HEMEROCALLIDACEAE</i> R. BROWN 1810 (DAY-LILY FAMILY) [IN ASPARAGALES]	149
73a. <i>ALLIACEAE</i> BORKHAUSEN 1797 (ONION FAMILY) [IN ASPARAGALES]	149
73b. <i>AMARYLLIDACEAE</i> J. SAINT-HILAIRE 1805 (AMARYLLIS FAMILY) [IN ASPARAGALES]	151
74a. <i>ASPARAGACEAE</i> A.L. DE JUSSIEU 1789 (ASPARAGUS FAMILY) [IN ASPARAGALES]	155
74b. <i>RUSCACEAE</i> M. ROEMER 1840 (RUSCUS FAMILY) [IN ASPARAGALES]	155
74c. <i>AGAVACEAE</i> DUMORTIER 1829 (AGAVE FAMILY) [IN ASPARAGALES]	157
74e. <i>HYACINTHACEAE</i> BATSCH EX BORKHAUSEN 1797 (HYACINTH FAMILY) [IN ASPARAGALES]	159
76. <i>ARECACEAE</i> BERCHTOLD & J. PRESL 1820 (PALM FAMILY) [IN ARECALES]	160
78. <i>COMMELINACEAE</i> MIRBEL 1804 (SPIDERWORT FAMILY) [IN COMMELINALES]	161
80. <i>PONTEDERIACEAE</i> KUNTH 1815 [1816] (PICKERELWEED FAMILY) [IN COMMELINALES]	165
81. <i>HAEMODORACEAE</i> R. BROWN 1810 (BLOODWORT FAMILY) [IN COMMELINALES]	166
85. <i>MUSACEAE</i> A.L. DE JUSSIEU 1789 (BANANA FAMILY) [IN ZINGIBERALES]	167
86. <i>CANNACEAE</i> A.L. DE JUSSIEU 1789 (CANNA FAMILY) [IN ZINGIBERALES]	167
87. <i>MARANTACEAE</i> R. BROWN 1814 (ARROWROOT FAMILY) [IN ZINGIBERALES]	168
90. <i>TYPHACEAE</i> A.L. DE JUSSIEU 1789 (CATTAIL FAMILY) [IN POALES]	168
91. <i>BROMELIACEAE</i> A.L. DE JUSSIEU 1789 (BROMELIAD OR PINEAPPLE FAMILY) [IN POALES]	169
93. <i>XYRIDACEAE</i> C. AGARDH 1823 (YELLOW-EYED GRASS FAMILY) [IN POALES]	170
94. <i>ERIOCAULACEAE</i> MARTINOV 1820 (PIPEWORT FAMILY) [IN POALES]	173
95. <i>MAYACACEAE</i> KUNTH 1840 (BOGMOSS FAMILY) [IN POALES]	175
97. <i>JUNCACEAE</i> A.L. DE JUSSIEU 1789 (RUSH FAMILY) [IN POALES]	176
98. <i>CYPERACEAE</i> A.L. DE JUSSIEU 1789 (SEDGE FAMILY) [IN POALES]	181
103. <i>POACEAE</i> BARNHART 1895 (GRASS FAMILY) [IN POALES]	239
SECTION 6: EUDICOTYLEDONAE (EUDICOTS)	330
104. <i>CERATOPHYLLACEAE</i> S.F. GRAY 1822 (HORNWORT FAMILY) [IN CERATOPHYLLALES]	330
106b. <i>FUMARIACEAE</i> MARQUIS 1820 (FUMITORY FAMILY) [IN RANUNCULALES]	330
106c. <i>PAPAVERACEAE</i> A.L. DE JUSSIEU 1789 (POPPY FAMILY) [IN RANUNCULALES]	331
109. <i>MENISPERMACEAE</i> A.L. DE JUSSIEU 1789 (MOONSEED FAMILY) [IN RANUNCULALES]	332
110. <i>BERBERIDACEAE</i> A.L. DE JUSSIEU 1789 (BARBERRY FAMILY) [IN RANUNCULALES]	333
111a. <i>HYDRASTIDACEAE</i> MARTINOV 1820 (GOLDENSEAL FAMILY) [IN RANUNCULALES]	334
111b. <i>RANUNCULACEAE</i> A.L. DE JUSSIEU 1789 (BUTTERCUP FAMILY) [IN RANUNCULALES]	335
113. <i>NELUMBONACEAE</i> A. RICHARD 1827 (LOTUS-LILY FAMILY) [IN PROTEALES]	347
114. <i>PLATANACEAE</i> T. LESTIBOUDOIS 1826 (PLANE-TREE FAMILY) [IN PROTEALES]	347
117. <i>BUXACEAE</i> DUMORTIER 1822 (BOXWOOD FAMILY) [IN BUXALES]	348
123. <i>ALTINGIACEAE</i> HORANINOW 1846 (SWEET-GUM FAMILY) [IN SAXIFRAGALES]	348
124. <i>HAMAMELIDACEAE</i> R. BROWN 1818 (WITCH-HAZEL FAMILY) [IN SAXIFRAGALES]	349
127. <i>ITEACEAE</i> J. AGARDH 1858 (SWEETSPIRE FAMILY) [IN SAXIFRAGALES]	350
129. <i>SAXIFRAGACEAE</i> A.L. DE JUSSIEU 1789 (SAXIFRAGE FAMILY) [IN SAXIFRAGALES]	350
130. <i>CRASSULACEAE</i> J. SAINT-HILAIRE 1805 (STONECROP FAMILY) [IN SAXIFRAGALES]	352
133. <i>PENTHORACEAE</i> RYDBERG EX BRITTON 1901 (PENTHOTHUM FAMILY) [IN SAXIFRAGALES]	353
134. <i>HALORAGACEAE</i> R. BROWN 1814 (WATER-MILFOIL FAMILY) [IN SAXIFRAGALES]	354
136. <i>VITACEAE</i> A.L. DE JUSSIEU 1789 (GRAPE FAMILY) [IN VITALES]	355
138. <i>ZYGOPHYLLACEAE</i> R. BROWN 1814 (CREOSOTE-BUSH FAMILY) [IN ZYGOPHYLLALES]	359
140. <i>FABACEAE</i> LINDLEY 1836 (LEGUME FAMILY) [IN FABALES]	359
142. <i>POLYGALACEAE</i> HOFFMANNSEGG & LINK 1809 (MILKWORT FAMILY) [IN FABALES]	400
143. <i>ROSACEAE</i> A.L. DE JUSSIEU 1789 (ROSE FAMILY) [IN ROSALES]	404
146. <i>ELAEAGNACEAE</i> A.L. DE JUSSIEU 1789 (OLEASTER FAMILY) [IN ROSALES]	426
147. <i>RHAMNACEAE</i> A.L. DE JUSSIEU 1789 (BUCKTHORN FAMILY) [IN ROSALES]	426
148. <i>ULMACEAE</i> MIRBEL 1815 (ELM FAMILY) [IN ROSALES]	429
149. <i>CANNABACEAE</i> MARTINOV 1820 (HOPS FAMILY) [IN ROSALES]	430
150. <i>MORACEAE</i> GAUDICHAUD-BEAUPRÉ 1835 (MULBERRY FAMILY) [IN ROSALES]	432
151. <i>URTICACEAE</i> A.L. DE JUSSIEU 1789 (NETTLE FAMILY) [IN ROSALES]	433
153. <i>FAGACEAE</i> DUMORTIER 1829 (BEECH FAMILY) [IN FAGALES]	436
154. <i>MYRICACEAE</i> RICHARD EX KUNTH 1817 (BAYBERRY FAMILY) [IN FAGALES]	446
155. <i>JUGLANDACEAE</i> A.P. DE CANDOLLE 1818 (WALNUT FAMILY) [IN FAGALES]	447
158. <i>BETULACEAE</i> S.F. GRAY 1822 (BIRCH FAMILY) [IN FAGALES]	450
163. <i>CUCURBITACEAE</i> A.L. DE JUSSIEU 1789 (GOURD FAMILY) [IN CUCURBITALES]	452
168a. <i>PARNASSIACEAE</i> MARTINOV 1820 (GRASS-OF-PARNASSUS FAMILY) [IN CELASTRALES]	455
168b. <i>CELASTRACEAE</i> R. BROWN 1814 (BITTERSWEET FAMILY) [IN CELASTRALES]	456
171. <i>OXALIDACEAE</i> R. BROWN 1818 (WOOD-SORREL FAMILY) [IN OXALIDALES]	457
185. <i>PODOSTEMACEAE</i> RICHARD EX KUNTH 1816 (RIVERWEED FAMILY) [IN MALPIGHIALES]	459
186. <i>HYPERICACEAE</i> A.L. DE JUSSIEU 1789 (ST. JOHN'S-WORT FAMILY) [IN MALPIGHIALES]	459
191. <i>ELATINACEAE</i> DUMORTIER 1829 (WATERWORT FAMILY) [IN MALPIGHIALES]	465
197. <i>CHRYSOBALANACEAE</i> R. BROWN 1818 (COCO-PLUM FAMILY) [IN MALPIGHIALES]	465
200. <i>VIOLACEAE</i> BATSCH 1802 (VIOLET FAMILY) [IN MALPIGHIALES]	466
202a. <i>PASSIFLORACEAE</i> A.L. DE JUSSIEU EX ROUSSEL 1806 (PASSIONFLOWER FAMILY) [IN MALPIGHIALES]	471
204. <i>SALICACEAE</i> MIRBEL 1815 (WILLOW FAMILY) [IN MALPIGHIALES]	472
207. <i>EUPHORBACEAE</i> A.L. DE JUSSIEU 1789 (SPURGE FAMILY) [IN MALPIGHIALES]	474
208. <i>LINACEAE</i> A.P. DE CANDOLLE 1818 (FLAX FAMILY) [IN MALPIGHIALES]	483
211. <i>PHYLLANTHACEAE</i> MARTINOV 1820 (LEAF-FLOWER FAMILY) [IN MALPIGHIALES]	485
212. <i>GERANIACEAE</i> A.L. DE JUSSIEU 1789 (GERANIUM FAMILY) [IN GERANIALES]	486
215. <i>LYTHRACEAE</i> J. SAINT-HILAIRE 1805 (LOOSESTRIFE FAMILY) [IN MYRTALES]	487
216. <i>ONAGRACEAE</i> A.L. DE JUSSIEU 1789 (EVENING-PRIMROSE FAMILY) [IN MYRTALES]	490
219. <i>MELASTOMATACEAE</i> A.L. DE JUSSIEU 1789 (MELASTOME FAMILY) [IN MYRTALES]	499
226. <i>STAPHYLEACEAE</i> MARTINOV 1820 (BLADDERNUT FAMILY) [IN CROSSOSOMATALES]	501

TABLE OF CONTENTS

239. ANACARDIACEAE R. BROWN 1818 (CASHEW FAMILY) [IN SAPINDALES]	501
240A. ACERACEAE A.L. DE JUSSIEU 1789 (MAPLE FAMILY) [IN SAPINDALES]	503
240B. HIPPOCASTANACEAE A. RICHARD 1823 (HORSE-CHESTNUT FAMILY) [IN SAPINDALES]	505
240C. SAPINDACEAE A.L. DE JUSSIEU 1789 (SOAPBERRY FAMILY) [IN SAPINDALES]	506
241. RUTACEAE A.L. DE JUSSIEU 1789 (CITRUS FAMILY) [IN SAPINDALES]	507
242. SIMAROUACEAE A.P. DE CANDOLLE 1811 (QUASSIA FAMILY) [IN SAPINDALES]	508
243. MELIACEAE A.L. DE JUSSIEU 1789 (MAHOGANY FAMILY) [IN SAPINDALES]	509
247. MALVACEAE A.L. DE JUSSIEU 1789 (MALLOW FAMILY) [IN MALVALES]	509
249. THYMELAEACEAE A.L. DE JUSSIEU 1789 (MEZEREUM FAMILY) [IN MALVALES]	516
251. CISTACEAE A.L. DE JUSSIEU 1789 (ROCKROSE FAMILY) [IN MALVALES]	516
261. BATACEAE MARTIUS EX PERLEB 1838 (BATIS FAMILY) [IN BRASSICALES]	519
269. CLEOMACEAE BERCHTOLD & J. PRESL 1825 (CLEOME FAMILY) [IN BRASSICALES]	519
270. BRASSICACEAE BURNETT 1835 (MUSTARD FAMILY) [IN BRASSICALES]	520
276A. COMANDRACEAE NICKRENT & DER 2010 (COMANDRA FAMILY) [IN SANTALES]	534
276D. SANTALACEAE R. BROWN 1810 (SANDALWOOD FAMILY) [IN SANTALES]	534
281. TAMARICACEAE LINK 1821 (TAMARISK FAMILY) [IN CARYOPHYLLALES]	534
282. PLUMBAGINACEAE A.L. DE JUSSIEU 1789 (LEADWORT FAMILY) [IN CARYOPHYLLALES]	535
283. POLYGONACEAE A.L. DE JUSSIEU 1789 (SMARTWEED FAMILY) [IN CARYOPHYLLALES]	535
284. DROSERACEAE SALISBURY 1808 (SUNDEW FAMILY) [IN CARYOPHYLLALES]	542
295. CARYOPHYLLACEAE A.L. DE JUSSIEU 1789 (PINK FAMILY) [IN CARYOPHYLLALES]	543
297A. AMARANTHACEAE A.L. DE JUSSIEU 1789 (AMARANTH FAMILY) [IN CARYOPHYLLALES]	550
297B. CHENOPODIACEAE VENTENAT 1799 (GOOSEFOOT FAMILY) [IN CARYOPHYLLALES]	555
304. AIZOACEAE MARTINOV 1820 (FIG-MARIGOLD FAMILY) [IN CARYOPHYLLALES]	559
305. PHYTOLACCACEAE R. BROWN 1818 (POKEWEED FAMILY) [IN CARYOPHYLLALES]	560
308. NYCTAGINACEAE A.L. DE JUSSIEU 1789 (FOUR-O'CLOCK FAMILY) [IN CARYOPHYLLALES]	560
309. MOLLUGINACEAE BARTLING 1825 (CARPETWEED FAMILY) [IN CARYOPHYLLALES]	562
310. MONTIACEAE RAFINESQUE 1820 (MONTIA FAMILY) [IN CARYOPHYLLALES]	562
315. PORTULACACEAE A.L. DE JUSSIEU 1789 (PURSLANE FAMILY) [IN CARYOPHYLLALES]	563
317. CACTACEAE A.L. DE JUSSIEU 1789 (CACTUS FAMILY) [IN CARYOPHYLLALES]	564
318. NYSSACEAE A.L. DE JUSSIEU EX DUMORTIER 1829 (TUPELO FAMILY) [IN CORNALES]	567
320. HYDRANGEACEAE DUMORTIER 1829 (HYDRANGEA FAMILY) [IN CORNALES]	568
324. CORNACEAE BERCHTOLD EX J. PRESL 1825 (DOGWOOD FAMILY) [IN CORNALES]	570
325. BALSAMINACEAE A. RICHARD 1822 (TOUCH-ME-NOT FAMILY) [IN ERICALES]	571
329. POLEMONIACEAE A.L. DE JUSSIEU 1789 (JACOB'S-LADDER FAMILY) [IN ERICALES]	572
333. SAPOTACEAE A.L. DE JUSSIEU 1789 (SAPODILLA FAMILY) [IN ERICALES]	574
334. EBENACEAE GÜRKE 1891 (EBONY FAMILY) [IN ERICALES]	575
335. PRIMULACEAE BATSCHE 1794 (PRIMROSE FAMILY) [IN ERICALES]	575
336. THEACEAE MIRBEL 1816 (TEA FAMILY) [IN ERICALES]	578
337. SYMPLOCACEAE DESFONTAINES 1820 (SWEETLEAF FAMILY) [IN ERICALES]	579
339. STYRACACEAE A.P. DE CANDOLLE & SPRENGEL 1821 (STORAX FAMILY) [IN ERICALES]	579
340. SARRACENIACEAE DUMORTIER 1829 (PITCHERPLANT FAMILY) [IN ERICALES]	581
343. CLETHRACEAE KLOTZSCH 1851 (CLETHRA FAMILY) [IN ERICALES]	582
344. CYRILLACEAE LINDLEY 1846 (TITI FAMILY) [IN ERICALES]	583
345. ERICACEAE A.L. DE JUSSIEU 1789 (HEATH FAMILY) [IN ERICALES]	583
352. LERICACEAE A.L. DE JUSSIEU 1789 (MADDER FAMILY) [IN GENTIANALES]	593
353. GELSEMIACEAE STRUWE & V.A. ALBERT 1994 [1995] (JESSAMINE FAMILY) [IN GENTIANALES]	601
353. GENTIANACEAE A.L. DE JUSSIEU 1789 (GENTIAN FAMILY) [IN GENTIANALES]	601
354. LOGANIACEAE R. BROWN EX MARTIUS 1827 (STRYCHNINE FAMILY) [IN GENTIANALES]	606
356. APOCYNACEAE A.L. DE JUSSIEU 1789 (DOGBANE FAMILY) [IN GENTIANALES]	607
357A. BORAGINACEAE A.L. DE JUSSIEU 1789 (BORAGE FAMILY) [IN BORAGINALES]	615
357B. HYDROPHYLLACEAE R. BROWN 1817 (WATERLEAF FAMILY) [IN BORAGINALES]	619
357D. HELIOTROPIACEAE SCHRADER 1819 (HELIOTROPE FAMILY) [IN BORAGINALES]	621
359. CONVULVACEAE A.L. DE JUSSIEU 1789 (MORNING GLORY FAMILY) [IN SOLANALES]	622
360. SOLANACEAE A.L. DE JUSSIEU 1789 (NIGHTSHADE FAMILY) [IN SOLANALES]	629
360. SPHENOCLEACEAE BASKERVILLE 1839 (CHICKENSPIKE FAMILY) [IN SOLANALES]	637
361. HYDROLEACEAE R. BROWN 1821 (HYDROLEA FAMILY) [IN SOLANALES]	638
366. OLEACEAE HOFFMANNSEGG & LINK 1809 (OLIVE FAMILY) [IN LAMIALES]	638
367. TETRACHONDRACEAE SKOTTSBERG EX WETTSTEIN 1924 (TETRACHONDRA FAMILY) [IN LAMIALES]	642
370. PLANTAGINACEAE A.L. DE JUSSIEU 1789 (PLANTAIN FAMILY) [IN LAMIALES]	642
371. SCROPHULARIACEAE A.L. DE JUSSIEU 1789 (FIGWORT FAMILY) [IN LAMIALES]	653
373. LINDERNIACEAE BORSCH, KAI MÜLLER, & EB. FISCHER 2005 (FALSE-PIMPERNEL FAMILY) [IN LAMIALES]	654
375. MARTYNIACEAE HORANINOW 1847 (MARTYNIA FAMILY) [IN LAMIALES]	655
376E. VISCACEAE BATSCHE 1802 (CHRISTMAS MISTLETOE FAMILY) [IN SANTALES]	656
377. ACANTHACEAE A.L. DE JUSSIEU 1789 (ACANTHUS FAMILY) [IN LAMIALES]	656
378. BIGNONIACEAE A.L. DE JUSSIEU 1789 (BIGNONIA FAMILY) [IN LAMIALES]	659
379. LENTIBULARIACEAE RICHARD 1808 (BLADDERWORT FAMILY) [IN LAMIALES]	660
382. VERBENACEAE J. SAINT-HILAIRE 1805 (VERBENA FAMILY) [IN LAMIALES]	663
383. LAMIACEAE MARTINOV 1820 (MINT FAMILY) [IN LAMIALES]	667
384. MAZACEAE REVEAL 2011 (MAZUS FAMILY) [IN LAMIALES]	684
385. PHRYMACEAE SCHAUER 1847 (LOPSEED FAMILY) [IN LAMIALES]	685
386. PAULOWNIACEAE NAKAI 1949 (PAULOWNIA FAMILY) [IN LAMIALES]	685

Peet, J. Townsend, G. Nesom, A. Floden, J. Horn, E. Schilling, J. Triplett, T. Murphy, Z. Irick, K. Schoonover McClelland, M. Alford, M. Brock, and others.

AN IMPORTANT NOTE TO USERS OF THE 2022 EDITION

I started this project a little more than 30 years ago, initially as a means of providing Natural Heritage biodiversity explorers in North Carolina with the most effective keys possible (and with an emphasis on vegetative features) to the set of species recognized most currently. Since that time, I have expanded the geographic boundaries of the Flora's coverage to meet the needs of effective biodiversity inventory and science in other parts of the southeastern United States. This geographic expansion, first to Virginia, then to Georgia, then led to the 2015 Flora region: southeast of the Mississippi River, Ohio River and Mason-Dixon Line but excluding peninsular Florida. Having gone so far, it now makes sense that the Flora embrace the biogeographic region of the moist, relictual, unglaciated southeastern North America: south of the glacial boundary and east of the "dry line" to the west that marks a marked floristic boundary to the Great Plains prairies to the northwest and the Madrean woodlands and scrub to the southwest. I differ with Takhtajan (1986: Floristic Regions of the World), however, by regarding the parts of southeastern North America inland in the "hard rock provinces" but south of the glacial boundary as being fundamentally "southeastern", connected to the Coastal Plain, and retaining the core diversity of the critical temperate Eastern North American relictual flora, badly needing coverage in a modern treatment. I have also rounded off (actually "straightened off") the Flora boundary to include the glaciated portions of two states that are primarily unglaciated, Pennsylvania and New Jersey, to provide comprehensive coverage for state-based usage in those states.

Some of the goals and principles underlying the Flora have always been and remain:

1. It should be a catalog of the species in the region as modern and accurate as possible and based on modern species concepts.
2. It should be a basic resource focused on biodiversity exploration and inventory, including the discovery of populations of rare species, and the accurate reporting of species from ecological plots and site inventory lists. This to me implies keys based as much as possible on plant characteristics readily observable (especially vegetative characteristics) throughout the growing season.
3. It should have broad geographic coverage to promote discoveries of range extensions in the still-very-imperfectly-explored southeastern United States.
4. It should provide detailed information on the habitats of species, in order to emphasize an ecological perspective on our flora and its exploration.
5. The keys should be structured non-traditionally and pragmatically to juxtapose species or groups superficially similar and easily mistakable (e.g., *Hydrastis*, *Podophyllum*, and *Diphyllaea* should be keyed near one another, as should *Nyssa* and *Diospyros*, and *Polygonatum*, *Smilacina*, *Uvularia*, *Prosartes*, and *Streptopus*). Identification notes should call attention to similar and mistakable taxa, even if they are not taxonomically close. Keys should NOT be written "by those who don't need them, for those who won't be able to use them".
6. Biogeographical understanding should be facilitated, by making clear the distributions of species within the region and beyond, and the nativity status should be immediately clear (including uncertainty about nativity). The "little maps" provided for each species have been designed to provide the most concentrated biogeographic information possible in a small space.
7. The advantages of a geographically narrowly focused flora and a geographically broader flora can be largely combined with digital tools and subsets -- which we are innovating and have begun to make available in "derivative floras" and apps.
8. The Flora should not be dry, academic, and devoid of life, but should reflect the immense wonder of the subject -- while also being scientifically rigorous, exhaustively researched, and referenced in ways to facilitate the interested user's additional exploration in the scientific literature.
9. It should be open source, open access, and developed collaboratively from all information available.

Put another way -- I'm trying to create the Flora I've always wished I had had!

The number of species (and other unique "finest level taxa", e.g. varieties and subspecies when a species has more than one in the Flora region) has increased from about 7,500 in 2015 to 10,046 in 2020, to 10,719 in the 2022 edition.

Areas added to the Flora in the 2022 Edition include:

1. "Trans-Mississippian Southeast", the part of the Southeast west of the Mississippi River:
 - a. The Interior Highlands of Arkansas, southern Missouri, and Oklahoma. Floristically, the Ozarks and Ouachitas are part of the core "unglaciated warm temperate interior Southeast" and share most of their flora with the other upland provinces than can be so described. The Ozarks and Ouachitas also have profound relationships with the

Appalachians and Interior Low Plateau eastwards, high endemism, and have not been well-covered in a modern Flora.

- b. The western half of the Mississippi River Alluvial Plain. This is very similar to the eastern side of the River and adds few species not already included in the Flora – though some in areas like the Grand Prairie of Arkansas and the Mississippi River delta of Louisiana.
 - c. The narrowly-defined West Gulf Coastal Plain of primarily western Louisiana and eastern (“Pineywoods”) Texas (but including portions of southern Arkansas and southeastern Oklahoma). The West Gulf Coastal Plain is an intrinsic part of the core southeastern Coastal Plain, in part characterized by the longleaf pine ecosystem. Many genera and species of that ecosystem are disjunct west of the River, but there is also substantial endemism, in an area poorly served by modern floras.
 - d. The remainder of the North American Coastal Plain in Texas and Oklahoma and adjacent areas (ecoregions often referred to as Gulf Prairies and Marshes, Post Oak Savanna, Blackland Prairies, and Cross Timbers). These areas admittedly represent a transition in the northern part of the region (Oklahoma and northeastern Texas) to Plainsian ecosystems and further south to Tamaulipan/Madrean ecosystems, but retain a predominantly southeastern floristic affinity and many species (including endemics) of southeastern genera. The 2022 edition includes the entirety of the Cross Timbers ecoregion (Fig. 1), which includes portions of TX, OK, and KS. The Cross Timbers region, while marking the vegetational boundary between the southwest arid zones and Great Plains to the west and the eastern deciduous forests to the east, still contains a strong overlap with the flora of the Southeast.
2. Peninsular Florida. Most of peninsular Florida, its plant species and its ecosystems are clearly part of the core Southeastern Coastal Plain. Even coastal fringes of the central peninsula and breadth of the southern peninsula, though, have a predominantly Southeastern North American flora (including dominant species, like *Taxodium ascendens*, *Quercus virginiana*, etc., missing from the West Indies) with an increasing admixture of tropical and subtropical components of West Indian affinity or broader Caribbean affinity, and a few more generally neotropical or pantropical taxa. And while the Monroe County keys have a more strongly West Indian flora, their flora has a very strong overlap with mainland Florida and it would make little sense to orphan them from a “Southeastern Flora”.
 3. The “southern Midwest” of unglaciated southern Illinois, southern Indiana, and southern Ohio. The unglaciated portions of these states “face south” -- are floristically similar to areas just to the south across the Ohio River (Kentucky, West Virginia) and Mississippi River (southeastern Missouri). Their inclusion is straightforward and adds few taxa; in contrast, glaciated portions of these states have several hundred additional species (especially wetland and northern prairie species), and the Great Lakes shores of these states would add more – so I have not “gone there”.
 4. Pennsylvania, New Jersey, and New York (southern Long Island). These areas are primarily unglaciated (or were formed as sandy, terminal moraine outwash plains) and clearly have an “unglaciated warm temperate interior Southeast” flora in their interior (“hard rock”) provinces, and a Southeastern Coastal Plain floristic component-- the Coastal Plain flora strongly developed in s. New Jersey and s. Long Island (Pine Barrens), but only barely present in Pennsylvania (a narrow fringe along the Delaware River, now mainly urbanized). Central and southern Pennsylvania represents the north range extend for many Southern Appalachian and Southern/Central Appalachian endemics, and the Pine Barrens are likewise the northern range edge of many Southeastern Coastal Plain species and includes a flora with endemics with southern sister species. “Rounding off” the northern Flora boundary by including glaciated northwestern New Jersey, northeastern Pennsylvania, and northwestern Pennsylvania does add (less than a hundred) species more characteristic of the glaciated northeastern United States and Canada, but has the pragmatic advantage of making the Flora useful for state-based users in Pennsylvania, New Jersey, and southern New York.

What does all this mean for users of the 2022 Edition?

The process of fully adding several thousand species, several hundred genera, and several tens of families to the Flora is incomplete. I have prioritized to a degree by various factors: taxonomic level (working generally from finest upwards), geography (northern fringe of NJ, PA, OH, IN, IL, nontropical FL peninsula, and LA, AR, and MO first, leaving southernmost FL, and OK and TX for later), nativity (natives first, as more important for biodiversity conservation work), and abundance (more common species first). Genera and families around the periphery of the Southeast (especially western areas of OK and TX and tropical Florida) have been “worked over” less intensely, with less reassessment of taxonomic decisions, less use (so far) and citation of literature, and some keys are entirely absent, incomplete, or simply less perfect than I would wish them.

For each genus key, taxa that are not keyed are shown under “Unkeyed taxa: XX” (for nonwaif taxa that have not yet been included in the key) and “Unkeyed waifs: YY” (for waifs that have not yet been included in the key). 259 genera have one or more non-waif species unkeyed, mostly taxa occurring only in the OK, TX, or southern FL parts of the Flora region. 176 genera have one or more waif species unkeyed, also mostly in the OK, TX, and southern FL. When keying a plant, be sure to note if there are “unkeyed” taxa listed for that genus. For those taxa not keyed, you may be able to deduce the identity of your

KEY TO FAMILIES AND GENERA

plant by checking the range maps for each taxon as there is a reasonable possibility that they may not occur within your region (i.e., the key may very likely be complete for your location, even though it is not fully complete for the entire flora).

There is no equivalent indication for genera that have not been included in the family's key to genera, or for genera or families that have not been included (or not fully and completely included) in the "Big Key" – what is in most floras a key to families, but in this Flora is pragmatically a key to families or in many cases genera that best key distinctively and practically at that level of key.

In the plans for 2022 and 2023: completing all the keys (within the big keys and genus keys), redesigning and further improving many of the "older" keys, more specific habitat descriptions for each taxon, a redesigned FloraQuest app (or suite of apps) covering the Southeastern United States (with geography and waif filtering), aggregating and inputting photos for all taxa, and more.

A final note: A flora is not so much proscriptive as suggestive. In something as complex and understudied as the plant life (10,000 species strong) of the diverse southeast, there is no One Truth, but a best approximation at this point in time – a compilation that makes useful the accumulated (but often conflicting) ideas about what the plants of the region are, their habitats, distributions, and best means of identification. This Flora is my critical, creative compilation -- based on over 5000 scientific papers, untold numbers of specimens, 46 years of field exploration of the region, conversations with other botanists, and teaching about the flora in the classroom and the field.

I still have a lot to learn (we still don't know jack).

Thanks for your support for this work!

Alan Weakley

The Flora

In the nineteenth and early twentieth centuries, the botanical exploration of a region and writing a flora to summarize that information was seen as a basic societal need leading to the discovery of economically valuable information. Financial support for the research and writing of floras has waned in recent decades, though, as they have been increasingly regarded as “old science” and resources have shifted to areas of plant science seen as more “cutting edge”. Even in taxonomic research, the advent of molecular techniques has largely supplanted detailed taxonomic research (at generic levels and below) and the writing of floras, and the great majority of papers in plant systematics now address phylogenetic relationships within a particular group of plants, and mostly at higher taxonomic levels. Traditional monographic taxonomy, with descriptions of taxa, keys to facilitate their identification, distribution maps, and assessments of habitat and relative abundance or rarity, has become increasingly rare.

Yet, paradoxically, the societal uses and needs for the translation of taxonomic information to a useable form, such as floras, have never been greater. Globalization of human societies and economies has meant that plants are regularly introduced far away from their regions of nativity, and many become established and can be either benign or cause economic and conservation damages. Increasing human utilization of land resources has fueled a biodiversity crisis, with many species now imperiled. In the United States and elsewhere, this has resulted in considerable governmental and nongovernmental activity focused on biodiversity inventory and conservation, “recovery” of endangered and threatened species, ecological studies and ecological restoration, and assessment and suppression of invasive exotics. All these activities require an accurate and sophisticated understanding of the flora of an area. These activities also generate new information about the taxonomy, distribution, and conservation status of components of a region’s flora which then needs to be incorporated into new iterations.

In the southeastern United States, the publication fifty-two (52) years ago of the Manual of the Vascular Flora of the Carolinas, by A.E. Radford, H.E. Ahles, and C.R. Bell (Radford, Ahles, & Bell 1968), was a landmark. In the half century since its publication, it has served as the primary reference for the identification of plants in the Carolinas, and throughout the southeastern United States (since most other states were not covered by comparable, “recent” references). The effort to research and write the Manual of the Vascular Flora of the Carolinas took about 11 years, and resulted in a series of publications, the Guide to Vascular Flora of the Carolinas (Radford, Ahles, & Bell 1964), the Atlas of the Vascular Flora of the Carolinas (Radford, Ahles, & Bell 1965), and finally the Manual itself (1968). Once published, the existence of “the Manual” helped generate an interest in and further studies of the flora of the region; since then, many additional species have been documented as part of the region's flora, additional alien species have become naturalized, new species have been described, monographs have given new taxonomic insights into groups, nomenclature accepted in 1968 has been found to be invalid, new and more reliable keys have been developed, and systematic treatments have changed and advanced. Increasingly, identification of the flora of our region by academic researchers, agency personnel, and the interested public is hampered by the lack of an up-to-date flora. Without such a flora, identification must involve reference to herbaria and thousands of monographs, papers, and other floras – resources not readily available to many people who need them. The absence in the region of a single-source modern standard for the systematic treatment, nomenclature, and identification of the flora compromises scientific studies, ecological research, and agency inventory, management, and monitoring of ecosystem and species biodiversity.

The Flora includes treatment of all vascular plant taxa in the flora region of Alabama, Arkansas, Delaware, District of Columbia, Florida, Georgia, Kentucky, Louisiana, Maryland, Mississippi, New Jersey, North Carolina, Pennsylvania, South Carolina, Tennessee, Virginia, West Virginia, and varying portions of the additional states of New York, Texas, Oklahoma, Kansas, Missouri, Illinois, Indiana, and Ohio (see Figure 1). Approximately 10,000 taxa are keyed and treated, making the Flora a comprehensive resource for understanding the flora of all the southeastern United States east of the “dry line” and south of the glacial extent.

Sources of information.

This new flora is based on all resources available: herbarium specimens, published literature, grey literature, Natural Heritage databases and rare species lists, and personal communication with a regional network of botanists and taxonomic experts. Herbarium specimens have been consulted at major institutions in the region.

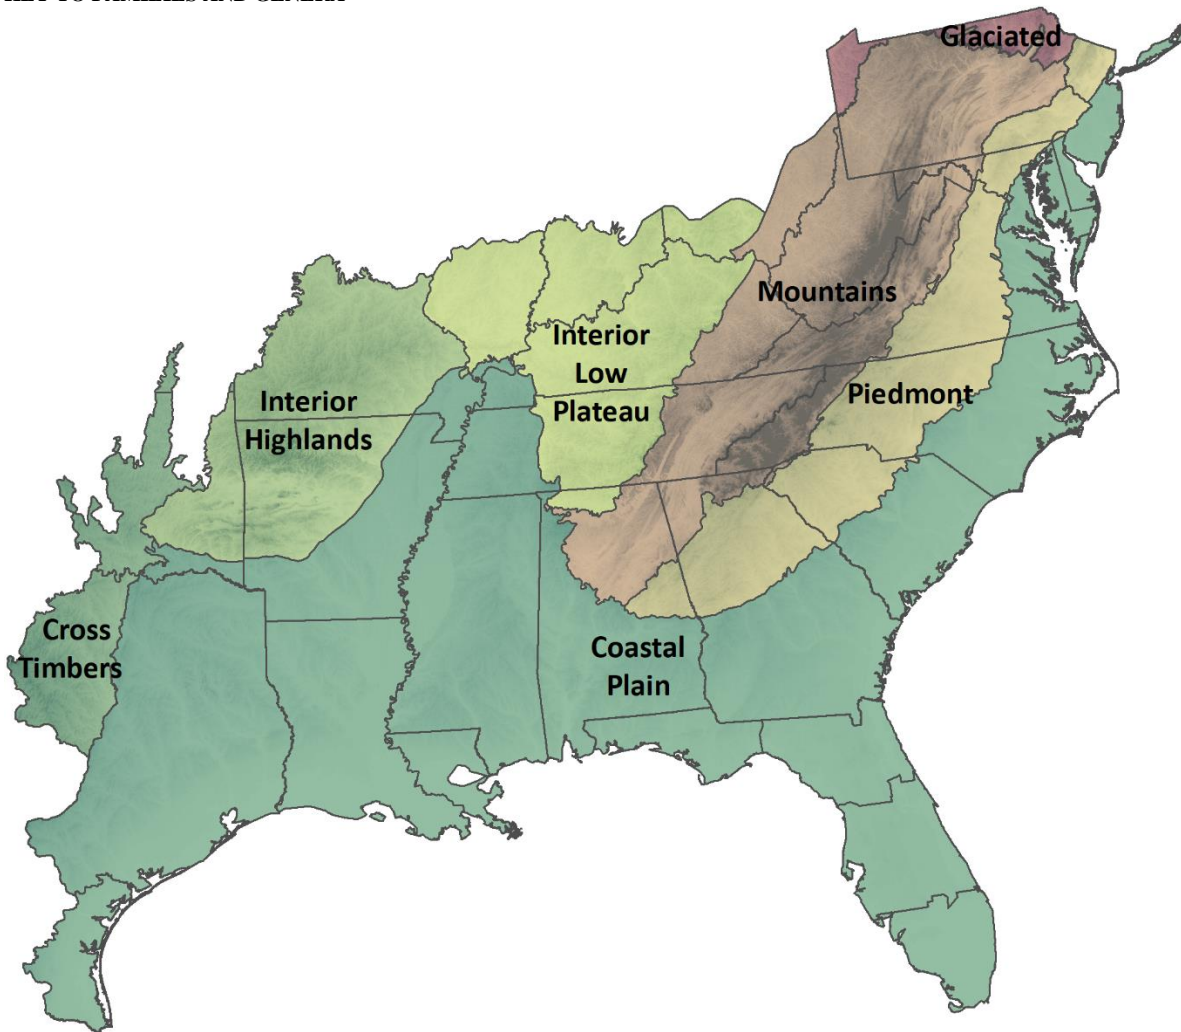

Figure 1. Map of the region covered by the Flora.

Criteria for inclusion of taxa.

One of the first challenges that the author of a flora encounters is to decide the criteria for the inclusion of taxa. The general rule in most floras can be simply summarized as “all native taxa and naturalized alien taxa,” but within this simplistic phrase hide many complicated issues, and floras often differ widely in the actual criteria and judgments that they apply (Pyšek et al. 2004; Palmer, Wade, & Neal 1995). In particular, coverage of alien species is very uneven in floras, and the frequent exclusion of many alien species from floras hampers ecological studies, conservation efforts, and efforts to minimize the ecological and economic impacts of invasive aliens.

The following categories of taxa are included and treated fully as “primary” species:

1. Native taxa documented from the Flora region, whether extant or presumed extinct. Some authors, such as Isely (1990), have “excluded” taxa from a flora if they believed them to be extinct or extirpated. This philosophy seems poorly considered: these taxa may prove not to be extinct or extirpated and their inclusion in the Flora will facilitate possible rediscovery. Even if never found again, specimens of them in the herbarium need to be identified or confirmed, and their former existence in the region should be documented.
2. Alien taxa introduced by whatever means and demonstrably established and reproducing (sexually or vegetatively) as a component of the flora. Parallel to #1 above, established alien taxa which have been presumably eradicated (such as *Striga asiatica* in the Carolinas) are included, as their eradication may not have been effective, they may be reintroduced, specimens need to be identifiable using the Flora, and their former existence should be documented.
3. Alien taxa substantially cultivated in the Flora region as crops, such as *Triticum aestivum*, *Zea mays*, *Vitis vinifera*, and *Pinus clausa*. Such species are variably represented in herbaria, and are often included in floras only if one or more herbarium specimens indicate that the species is persisting, or has been collected around a dump or in the edge of a field “out of cultivation.” This seems an arbitrary criterion to apply to species which are among the most commonly seen and

economically most important in a region, and may cover many thousands of acres or square miles in the region covered by the flora.

Additional categories of taxa are included and treated as “secondary” species:

1. Native taxa with uncertain documentation, this varying from literature reports not definitely verifiable with specimens (some of these old and some new), to sight reports regarded as probably correct. Taxa in this category are included as secondarily-treated taxa, and their imperfect documentation is described.

Species which have been reported from the Flora region but which are excluded for one reason or another are also listed and the reason for their exclusion mentioned or discussed.

Taxonomic philosophy. Taxonomic treatments generally follow recent monographic and revisionary work, but an effort has been made to provide a certain rough consistency of “splitting” vs. “lumping” across different taxonomic groups. As is generally true in recent treatments, generic and family concepts are often narrower than those used in the Radford, Ahles, and Bell (1968) Manual, based on new evidence, including (but not limited to) phylogenetic analyses. Ironically, these results have often resulted in a validation of earlier, narrower generic (and familial) concepts espoused by J.K. Small, P.A. Rydberg, and others (see Weakley 2005 for extensive discussion). Varieties are less frequently recognized than by Fernald (1950), though a considerable number of species and infraspecific taxa “lumped” by Radford, Ahles, and Bell (1968) are recognized (generally following more recent monographic or revisionary work). Some taxa not formally recognized are discussed and characters for their recognition provided in the text, to draw attention to putative taxa that may warrant recognition after further evaluation.

Format and features.

Detailed keys. Keys have been subjected to rigorous testing in the field and herbarium by hundreds of users. To the degree feasible, keys are structured to emphasize characters that are readily observable and available for long parts of the year, such as vegetative characters; this is not feasible for all groups, of course. Multiple characters are provided. Terminology strives to avoid abstruse technical terms which do not significantly add meaning (for some genera, an introduction to morphological characters and terms used is provided as “Identification notes” preceding the key). Geographic distributions and habitats are sometimes included in the keys as pragmatic, useful, secondary “characters,” but are placed in brackets to indicate that they are not “true” characters. The keys include (or are in the process of including) all species from the Flora region. In some cases, several alternate keys are provided. The primary emphasis of the keys is pragmatism – effective and efficient identification. For this reason, a key to a genus sometimes includes closely similar taxa not in the genus that may be mistaken for it. Another example is that the “family key” to ferns and fern allies is actually a key to genera, allowing an emphasis in the key on readily observable characteristics, rather than the technical characters often needed to distinguish fern families. Keys are based on herbarium specimens, though reference is made when characters based on live or fresh plants may differ from those of pressed and dried specimens. Some keys have been adapted from literature cited; where the adaptation is particularly close, credit is given to the source by specific citation.

Habitat. Information is provided about the habitat of the taxon. This information is largely from the field experience of the author, supplemented by information from other botanists, from herbarium labels, and from the literature. For species with wide ecological amplitudes, the habitat may be described simply and broadly (“a wide variety of upland forests”), while the habitat of more localized, specialized, or rare taxa may be described in considerable detail (“moist outcrops of calcareous to semi-calcareous metamorphic rocks, such as mylonite or marble, near waterfalls in humid escarpment gorges with high rainfall, at low elevations”).

Native status. The native or alien status is stated. Also, an asterisk prior to the species’ name indicates that it is considered alien throughout the Flora region. Some past floras, including Radford, Ahles, and Bell (1968), were haphazard in their inclusion of this information, which is a very important attribute of each recognized taxon. If there is a question, it is mentioned or discussed. For aliens, an opinion is given as to whether the taxon is naturalized, persistent, waif, etc. in the Flora region.

Flowering/fruiting dates. Flowering and fruiting dates are provided for the Flora region. These are derived from herbarium specimens viewed by the author (collected from within the Flora region), from field observations by the author (within the Flora region), and from literature cited.

Distribution of species. A statement of the range wide distribution of each taxon treated is provided. This is based on published distribution maps and distribution statements in other floras, amended and improved by additional herbarium specimens and published records (such as the “Noteworthy Collections” section in the journal Castanea). The distribution within the primary area is provided by state and physiographic province.

These distribution statements are augmented by a map; see Figure 2 for symbology used. The map shows distribution within the Flora area symbolically, with each state × physiographic province area. The native/alien status of the taxon is shown by squares for native

KEY TO FAMILIES AND GENERA

occurrence and triangles for alien occurrence. Note that some species have distributions including both alien and native distributions, so *Dionaea muscipula* for instance is native in the Coastal Plain of NC and SC, but alien in the Coastal Plain of FL and NJ.

In the lower left and right corners are spaces that also provide distributional information. If the species is endemic to the Flora region, you will see "EN." If the species is alien, you will see the region of the world to which it is native. If the species is native but not endemic, you will see a compass rose. Seven arrows depict the native distribution of the taxon outside of the Flora region. Arrows can be long (common at least somewhere in that region), or short (only uncommon or rare in that region).

The regions to which the seven arrows point are:

N arrow -- ne. North America (PA and n. NJ north to the Canadian maritime provinces, west through QC to se. ON and e. and s. OH); NW arrow -- nw. North America (w. OH, MI, w. ON, and NU west to AK, BC, and OR, north of and including n. MO, NE, WY, ID, and OR);

W arrow -- w. United States (the western "Southeast" of trans-Mississippi LA, AR, s. MO, OK, and e. TX), west to sw. United States; SW arrow -- Mexico, Central America, and South America;

SE arrow (dashed to indicate oversea) -- West Indies (including Bahamas) and Bermuda;

E arrow (dashed to indicate oversea) -- Asia and/or Africa;

NE arrow (dashed to indicate oversea) -- Europe.

Literature. Nearly all genera have citations to recent, pertinent systematic literature, as well as more limited citations to literature on ecology and population biology. The intent is to provide the user with access into more detailed literature, and to document the literature basis of the treatment followed in the Flora. About 5164 references have been consulted and are cited.

Synonymy. Cited synonymy is provided to regional floras, monographs, revisions, and other significant floristic and monographic treatments (over 5000 references are used), at the end of the account and encoded in brackets: [...]. This allows comparison of the taxonomic treatment in the Flora to other treatments, and convenient access to the taxonomic opinions and additional information available in those other treatments.

Synonymy is (or is in the process of being) provided comprehensively for the following floras:

Ar = Gentry et al. (2013) Atlas of the Vascular Plants of Arkansas

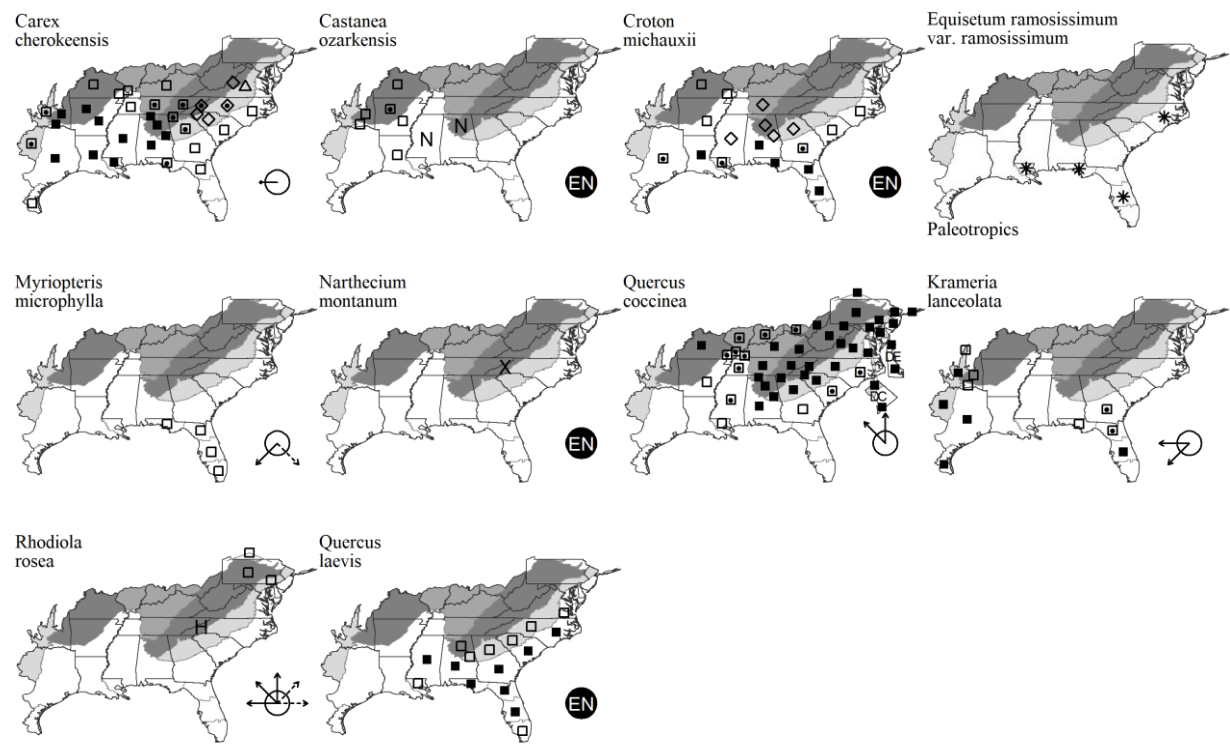

Figure 2: Distribution map key and sample distribution maps

All names known to me to be attributed to the *Flora* area in the other floras cited above, significant monographs and revisions, and important regional publications are accounted for, from Small (1933) and forward in time, with the exception that the process has not yet been completed for several floras.

It is important to recognize that this is not a conventional “synonymy” listing, but a **concept-mapping** that provides additional information on the details of the relationship between each taxon-represented-by-a-name in this *Flora*, and each taxon-represented-by-a-name in the other 5000 taxonomic references whose concept intersects the 10,000 taxa in the *Flora*. Prior to the name cited, a symbol is inserted to convey the conceptual relationship of the two names – in other words, the relationship of the name and associated taxonomic concept being applied in the *Flora* to the name and associated taxonomic concept in the other references, regardless of the nomenclatural relationship of the two names. “=” means that the two concepts are believed to be identical (the names may differ by rank, spelling, or genus, but the conceptual entity is the same). If the taxonomic concept is identical and the name is also

KEY TO FAMILIES AND GENERA

the same, the name is omitted. “<” means that the name in use in the Flora is finer than (a split relative to, and wholly included within) the name as used in the reference(s) listed (once again the names may differ by rank, spelling, or genus – or be exactly the same, even though the concept differs). “>” means that the name and associated taxonomic concept in use in the Flora is broader than (a lump relative to, and wholly including) the name as used in the reference(s) listed. “<>” means that there is a complex and cross-cutting relationship between the name and associated taxonomic concept used in the Flora and the name and associated taxonomic concept used in the reference(s) listed. “?” means that the relationship between the taxonomic concepts is not understood by me (or at least has not been indicated here) at this time (often this means that there are complications outside the flora area, and often outside of North America, that make the concept relationship difficult to determine or characterize simply).

NatureServe Global Conservation Status Ranks and US Endangered Species Act (USES) Listed Species. These statuses are provided by NatureServe for all species that can be easily and unambiguously crosswalked between the Flora and NatureServe’s taxonomic concepts. In the previous version of the Flora, we crosswalked based on exact name matches. In this version, we crosswalked using the synonymy data in the Flora, and resulted in many new matches from unambiguous name changes (e.g., *Benthamedia florida*). It also created situations where a rank was no longer displayed for exact name matches that are taxonomically ambiguous (e.g., *Andropogon glomeratus*). The ranks provided are current as of the publication of this version of the Flora. For more information on Global Rank definitions, updates, additions, and supporting documentation, see NatureServe Explorer (explorer.natureserve.org), accessible for each species through a link in the PDF version of the Flora. Entries missing Global Rank or USES status may reflect taxonomic ambiguity and should not be assumed to be secure or not listed.

Comments and discussion. Miscellaneous comments and discussion are provided for many species and genera, including discussion of biogeography, more details on distribution of rare species, additional notes on identification not included in the keys, information of particular interest on species biology and ecology, habitat, uses, discovery in the flora area or a state, etc. These “idiosyncratic comments” add to the general usefulness and interest of what is intended to be a rigorous, practical, and interesting flora.

Acknowledgments

I began this project 34 years ago (in 1988) and have managed it to provide an openly and freely available resource, with updated versions posted and available for download. An important goal throughout has been to incorporate the insights of all knowledgeable students of the flora of the region – professional and amateur, non-academic and academic, taxonomist and natural historian – and to access information from traditional sources for floras (herbaria, journal articles, other floras) as well as less traditional sources (gray literature, agency reports, and increasingly botany-oriented Facebook groups, and citizen science platforms like iNaturalist).

KEY TO GENERA AND FAMILIES

General advice on keying. The keys in this *Flora* are artificial and unabashedly pragmatic. One can get to the sub-keys (Key A, Key B, Key A7, etc.) by proceeding through the general key, or by jumping directly to the sub-key based on its “description”. In order to accommodate both access methods, some taxa are keyed in 2 or more sub-keys, but would logically be found only in one sub-key if one proceeded accurately through the general key. For instance, floating aquatic pteridophytes are keyed in both Key A2 and Key C1, though a logical procession through the general Key would key them into Key C1 and not allow them to appear in Key A2; they are keyed as well in Key A2, so that if it is apparent or determinable to the user that they are vascular cryptogams, they can be found via that key as well.

Identification keys are a time-honored and useful way to arrive at a tentative decision about the identity of a plant in the field, on an herbarium sheet, or in an image. A key is essentially a decision tree, where you are presented with a series of dichotomous (“choose A or B”) choices that arrive eventually at an “answer”. “Keying” takes some practice, though, and we here provide some advice and information to help you use the keys in the *Flora of Virginia*. The keys in this book are indented keys, which take more space but provide easier visual understanding of the structure of the key and make it easier to backtrack, when that is needed, or to look ahead, which is often helpful, particularly for those who are more experienced with the plants of Virginia. Each choice in the decision tree (key) is represented as a couplet with 2 leads. Each couplet in a key has a unique (and sequential) number, which reduces errors in following the key, particularly in longer subkeys, in which the two leads to be compared may be some distance apart and even on different pages. Some characters require some magnification; a high-quality 10× hand lens is adequate for use of the Key to Genera and Families and for use in nearly all the subsequent keys to genera and species in the families (greater magnification and a dissecting scope are helpful or necessary in some families and genera with small, technical features).

It is important to **read both leads of a couplet** and to make a choice based on the **preponderance of the evidence**. In most couplets, 2 or more characters are used, and the character states of each of those characters are contrasted. Sometimes the contrast for a particular character may be an incomplete one, such as “petals 4 or 5” vs. “petals 5 or 10” – if your plant has 4 or 10 petals, the choice based on that character is clear, but if your plant has 5 petals, this character provides no useful information for you and you will need to rely on other characters used in the same lead. This illustrates the problem of just reading the first lead and making a snap decision (“oh, it has 5 petals, so I will choose the first lead”). Many couplets use one or more characters that may not be available on your specimen, or at least not readily determinable, such as the number of petals on a plant in fruiting stage, or the fruit type on a plant in flowering stage (though see “Sleuthing Characters” below for some advice on determining character states that may not be readily apparent). Occasionally, you may run into a couplet which represents a “dead end” for you, in that the plant you are keying does not have the feature(s) you are asked to judge (e.g., the petal number of a plant not in flowering stage). A “dead end” does not mean that you cannot arrive at an “answer”, though it does make it somewhat more difficult. In this situation, as well as in any situation in which the choice between the two leads of a couplet is somewhat or completely ambiguous, it is a good idea to record or remember the location or identity of the ambiguous couplet (“Key N1, couplet 11”), take one lead and see what answer results, then take the other lead and see what answer results. Occasionally, the answer will be the same (some species and genera are keyed in multiple places), but often this will lead you to two contrasting potentially correct answers which must then be compared (see below for advice about testing the “answer” arrived at in a key). Often, you will get an indication that one way is the wrong way because you will be confronted with couplets that do not make sense relative to the plant you have in hand.

The Key to the Genera and Families has been structured in a somewhat novel way, emphasizing vegetative characters (those not involving flowers and fruits). Many professional and amateur users of floras nowadays need or want to name plants throughout the growing season, and not only during the somewhat short periods of time when flowers or fruits may be present on the plant. For this reason, more readily observable features of the growth form of the plant, the arrangement of the leaves, whether it is woody or herbaceous, a vine or not, and other characters that are readily observable over a long period are used as much as possible in the keys, and those vegetative characters are especially used in the early portions of the keys, so that based strictly on more observable and less “technical” characteristics, you can key down to an answer or at least to a relatively small subset of the species in the *Flora*. In other words, we have tried to minimize the use of difficult choices, ambiguities, and technicalities at all, but when they have proven necessary, we have “pushed them” as far down into the latter parts of keys as possible, so that if a true “dead end” is reached in the key, an identification can possibly be made based on comparison of the relatively few possibilities remaining.

Confirming identifications. Identification keys are a tool, but not an infallible one, and it is therefore critical to confirm your identifications. It is easy to make the dangerous assumption that “it keys to it, so it must be it”. You may have made a simple error (such as jumping down a line in the key), or an error of interpretation in deciding between the two leads. The key may be imperfect, having failed to accommodate an unusual species or genus, or unusual conditions (character states) in a species or genus (e.g., abnormally large leaves, leaves whorled by developmental anomaly in a typically opposite-leaved species, etc.). Or, you may have found a native or alien species not known before from Virginia and therefore not provided for in the key! For these reasons, it is

KEY TO FAMILIES AND GENERA

important that you compare your “answer” from keying to the description and drawings in the Flora of Virginia, to written technical descriptions and drawings in other floras (increasingly available online, such as the Flora of North America), to specimens in area herbaria, and to photographic images available in other books and online.

Leaf arrangement. The arrangement of leaves (**alternate**, **whorled**, or **opposite**) and their **disposition** (**basal** or **cauline**) is used frequently in the keys. Alternate leaves are attached at the stem 1 per node, opposite leaves 2 per node, and whorled leaves 3 or more per node. Note, however, that alternate leaves are sometimes closely clustered (with very short internodes) and mistakable as whorled or opposite. Note also that some plants (*Hypericum*, *Eupatorium*, many Lamiaceae, many others) have a strong tendency to have axillary shoots in the axils of primary leaves; these are often referred to as **axillary fascicles**. These can superficially make it appear that there are many leaves at a node. Axillary fascicles tend to have smaller leaves (at least for a time) than the primary leaves and to have short and compressed internodes; these should not be interpreted as whorled if the primary leaves are not whorled. Also, many herbs with opposite leaves have occasional developmental “errors” that result in the leaves being in whorls of 3; these cannot be reliably accommodated under “leaves whorled” choices in the key, so if a plant with whorled leaves does not key well under “leaves whorled”, it should also be sought under “leaves opposite”.

Leaf duration. The longevity of leaves is used in the keys for woody plants. **Evergreen** plants are those that retain full leaf cover through the winter, while **deciduous** plants lose their leaves at the end of the growing season (for some species, sometimes well before autumn). Some plants are also described as **tardily deciduous** or **semi-evergreen**, meaning that they drop leaves gradually into the winter, so that they are sparsely bedecked with leaves or even bare by the time of initiation of new growth in the spring. Unless you are in a position to observe the plant repeatedly through the seasons, leaf duration must be interpreted, and this can be difficult, especially on herbarium specimens. In general, evergreen leaves tend to be darker green (at least on the upper surface), often shinier, and usually thicker in texture and stiffer than deciduous leaves, but there are exceptions to all these tendencies. It can be helpful to see if the specimen or living plant has two obviously different ages of leaves present: older, tougher, more ragged and insect-eaten leaves of last year as well as younger leaves of the year. On many woody plants, it is easy to determine what is new (this year’s) growth from older growth, and the younger vs. older leaves may be spatially separated on shoots of the season vs. on older wood. Note, though, that some “evergreen” shrubs or trees essentially replace all their leaves at leaf-out in the spring, all of last year’s leaves being sloughed as the current year’s leaves are emerging.

Growth form or habit. The basic growth form or habit of the plant is used extensively in the keys. **Woody** plants have substantial secondary or diameter growth of wood, which makes their stems (in general) thicker, stronger, stiffer, and tougher; they also have “perennating structures” (normally buds) borne above ground on their woody stems. **Woody plants** are further subdivided into **trees**, **shrubs**, **rosette shrubs**, **subshrubs**, **rosette subshrubs**, and **lianas**. **Trees** are generally more than 5 meters tall at maturity and usually have single stems which are not interconnected by subterranean rhizomes (forming clonal patches). However, some tree species are characteristically multi-trunked or tend to produce a multi-trunked growth form as a result of stump-sprouting following logging, and stressful ecological conditions (such as shallow soil over rock or maritime exposure) can produce trees shorter than 5 meters. **Shrubs** are generally less than 5 meters tall and are often multi-stemmed from the base or near it (though some shrubs are characteristically single stemmed); quite a few are also clonal and produce many above-ground stems from a series of interconnected underground rhizomes). Some species grow as both trees and shrubs or have an ambiguous form; these are generally keyed as both trees and shrubs. Note that trees have seedlings or saplings that are shorter than 5 meters tall and may be multi-stemmed in growth form, especially in burned habitats; these are not keyed as shrubs and can generally be recognized as tree seedlings or saplings by the presence in the habitat of adult trees of the same species and by their lack of sexual reproduction (flowers, fruits, cones, etc.) because of their juvenile condition. **Subshrubs** are somewhat to strongly woody, but short in stature (often < 2 dm tall); while they have woody growth, they are often mistaken for herbs. **Rosette shrubs** and **rosette subshrubs** have basal leaves (see **Leaf location**, below) from an above-ground but short woody stock. **Lianas** are woody vines: in essence shrubs with specialized structures for climbing, including a) adventitious roots, b) twining growth of main stems, or c) simple or branched tendrils that either twine themselves or have adhesive “holdfast” tips. Some plants are keyed both as lianas and as shrubs. **Herbaceous plants** lack substantial secondary growth of wood and are either annual or have perennating organs (such as buds) on subterranean rhizomes, crowns, caudices, or corms. Herbaceous plants are further subdivided into **herbs** and **herbaceous vines**. **Herbs** are erect, sprawling, or trailing, but lack specialized adaptations for climbing (twining, tendrils, etc.); whereas **herbaceous vines** have these specialized adaptations. The interpretation of “woodiness”, between shrub and herb (and liana and herbaceous vine), can be difficult, especially with herbarium specimens. Some herbaceous plants can become suffrutescent: tough, fibrous, or thick in ways that mimic or approach woodiness. The presence of vegetative buds (not flower buds) in the axils of leaves on the aerial stems clearly indicates a woody plant. Some plants which are ambiguously woody and likely to be mistaken one way or the other are keyed both ways.

Leaf disposition. The disposition of the leaves, whether basal or cauline, is used as a distinction to separate some of the major subkeys (in the woody plants separating Keys A7, B1, and E from the others, and in the herbaceous plants separating Key N from Keys O, P, Q, R, and S), as well as in a few other places. **Basal leaves** arise from underground buds (on rhizomes, crowns, caudices, or corms) or from the very base (ground level) of an aerial stem. **Stem leaves** (cauline leaves) are those which arise from above-ground (aerial) stems of the plant. Many plants, however, have **basally disposed** leaves, where the largest leaves are basal (and usually persistent through the growing season as a “basal rosette”), but smaller stem leaves extend up the above-ground stem. This can

KEY TO FAMILIES AND GENERA

be ambiguous, though, and the persistence of basal leaves can be affected by season and conditions. While many taxa are keyed both in Key N and in one or more of Keys O, P, Q, R, and S), if this choice seems at all ambiguous and keying one way does not work well, the other choice should be tried.

Leaf type. Leaves are described as either **simple** or **compound**. Simple leaves are not divided into separate leaflets; the leaf tissue is continuous with all other leaf tissue of the leaf. By contrast, compound leaves are separated into 2 or more separate leaflets, connected only by various stalks (petiolules, rachises, rachillas) that lack leaf tissue. Simple leaves may be **unlobed**, **pinnately lobed**, or **palmately lobed**, and the lobes may be variously shallow or cut nearly to the midvein or base of the leaf. Perhaps the easiest way to determine whether leaf lobing is pinnate or palmate is to look at the major veins in the leaf. Pinnately lobed leaves have lobes arrayed in a line along either side of the midvein, and the lobes are associated with the major secondary veins of the (pinnately veined) leaf. The lobes of palmately lobed leaves are associated with the 3 or more palmate veins that arise together from the base of the leaf blade (note that the lobes of palmately lobed leaves are sometimes themselves sublobed, and that these sublobes are often pinnately arrayed: the leaf is still considered palmately lobed). **Compound leaves** are further classified by the number of leaflets, whether the leaflets are arrayed in a pinnate or palmate manner, and whether there is a single order of division or 2 or more orders of division. **Palmately compound** leaves have all leaflets attached at a single point, at the end of the petiole. Palmately compound leaves in our flora have from 3 to ca. 21 leaflets and are never further compound beyond the single order of division (in other words, the leaflets are not themselves compound). **Pinnately compound** leaves have leaflets attached to one or more axes (rachises, rachillas) that extend beyond the end of the petiole, and many taxa have 2 or more orders of division. Bifoliolate (**2-foliolate**) leaves are very rare in our flora. Trifoliolate leaves (**3-foliolate**, and sometimes called “ternate”) are very common in our flora and can be either **palmately 3-foliolate** or (especially in the Fabaceae) **pinnately 3-foliolate**. Pinnately compound leaves have a short rachis extending past the end of the petiole (and the point of attachment of the 2 lateral leaflets via their petiolules), with the terminal leaflet attached at the end of this rachis via its petiolule; the joint between the rachis and the terminal petiolule is usually obvious because of a change in diameter, color, vestiture, and/or texture. The distinction between palmately 3-foliolate and pinnately 3-foliolate leaves is not used in the Key to Genera and Families but is important in some other keys, especially the key to genera of the Fabaceae. Pinnately compound leaves with 4 or more leaflets are very common in our flora, especially in some families. **Even-pinnately compound** leaves (the less common situation) have an even number of leaflets, often paired along the rachis or rachillas, and lack a terminal leaflet at the tip of the rachis or rachilla and extending along its axis; these taxa are concentrated in the Fabaceae and a few other smaller families. **Odd-pinnately compound** leaves have a terminal leaflet and therefore usually an odd number of leaflets. Odd-pinnately compound leaves with 2 or more orders of division are typically described in the keys as **complexly compound**. Other floras variously describe leaves of this sort as 2-pinnate, 3-pinnate, decompound, biternate, or other terms, but these have largely been avoided in the keys in this work because the “compoundness” is often complex, mixed between pinnate and ternate, and therefore difficult to describe accurately with such terminology. For instance, many members of the Apiaceae have complexly compound leaves, which are initially 3-forked (ternate), each of these forks may then be 3-forked again (though with the lateral forks supporting fewer or smaller leaflets than the terminal one), and these 3-order divisions are then often pinnately compound. Note that **deeply lobed leaves** can sometimes be easily mistaken for **compound leaves**. Compound leaves have no leaf tissue connecting the individual leaflets, whereas lobed leaves have at least a narrow flange of leaf tissue along the rachis or rachilla that connects the leaf tissue of one lobe with the leaf tissue of the next. In some taxa, this is difficult to interpret, and these have generally been keyed both ways.

Lobes and teeth. The presence, absence, number, and shape of **lobes** or **teeth** along the margin of the leaf are very useful vegetative characters. The term “tooth” or “teeth” is here used in a broad sense to include any of the small marginal projections covered under the terms dentate, denticulate, serrate, serrulate, crenate, crenulate, spinose, spinulose, doubly serrate (biserrate), or erose. In other words, teeth can be rounded, pointed, or spine-tipped, and of various shapes and sizes. The term “tooth” or “teeth” does not include undulations out of the main plane of the leaf, hairs, or epidermal projections in the plane of the leaf margin, described by terms such as ciliate, ciliolate, or scabrous-margined. Teeth are often regular in size and position but in some species are irregular in form, shape, and even presence (these species are keyed in several places). The term “lobe” or “lobes” is also used in a broad sense to mean a larger feature of the leaf margin. Relative to teeth, lobes are typically both actually larger and relatively larger in relation to the size of the leaf, and also more widely spaced, often with a sinus (the depression between 2 lobes) extending $1/10^{\text{th}}$ to $9/10^{\text{th}}$ of the way from the outer leaf outline to the midrib. Lobes are typically spaced 1 cm or more apart, though the term is also applied to more closely spaced features with relatively deep sinuses (at least $3/10^{\text{th}}$ of the way to the midrib), especially in pteridophytes and in flowering plants with small leaves. Teeth are truly marginal, typically meeting 2 or 3 of the following 3 conditions: spaced < 1 cm apart, the sinuses between them usually extending $< 1/10^{\text{th}}$ of the way to the midrib, and the tooth itself (measured on its shorter side if it not equilateral) < 4 mm long. Occasionally we have also used the number of “**points**” as a character in the keys. This is the total number of lobe points and tooth points along one side of the leaf (base to apex on one side of the midvein). Note that some leaves are unlobed except for the presence of 2 basal lobes (one on either side, often described as cordate, sagittate, auriculate, or hastate depending on the shape, size, and orientation of the lobes); this situation is not keyed in the “lobed” sections of the key (as noted in the pertinent couplets).

Learning families. Learning plant families, especially those that are particularly important in the Southeastern United States flora or that are especially distinctive, is an extremely useful aid in identifying plants. While “learning” a family often starts with understanding its distinctive characteristics, often including some rather technical characteristics, with experience it becomes a more “gestalt” sense that, for instance, “that plant just looks like Asteraceae”, even if the features that would allow it to be keyed are not

KEY TO FAMILIES AND GENERA

present. Knowing plant families often allows one to bypass the Key to Genera and Families entirely or facilitates decisions at particular couplets in it. A few of the families that are particularly useful to learn are Apiaceae, Asteraceae, Brassicaceae, Cyperaceae, Euphorbiaceae, Fabaceae, Juncaceae, Lamiaceae, Poaceae, Ranunculaceae, Rosaceae, and Rubiaceae.

Sleuthing characters. Some characters used in the key may seem initially impossible to find on your plant or specimen, but may actually be findable or deducible. Old fruits can sometimes be found on woody species, or on the ground under the tree or shrub. Old flower stalks (from the previous year) are sometimes present in perennial herbs, allowing the size of the plant and the type of inflorescence to be assessed. The calyx is often persistent after the petals have fallen, and calyx merosity (number in the whorl) and symmetry is usually the same as the merosity and symmetry of the corolla (though not always). Various fruit characters can sometimes be deduced from the flowers, and various flower characters can be deduced from the fruits. When capsules are immature (sometimes even in the stage of an ovary while in flower), dehiscence can often be deduced by the presence of visible lines on the fruit (sutures, visible at 10×). The number of carpels and locules can usually be determined from either the ovary or the immature or mature fruit, by making a careful ×-section. Stamens are sometimes present as shriveled remnants on fruits, allowing the number of stamens to be determined. Hair types (e.g., simple vs. stellate) may seem impossible if the leaf appears superficially glabrous, but hairs often remain to the end of the season on even apparently glabrous leaves in protected places, especially on the lower surface in the main vein axils. The bulbous or papillose bases of some hairs remain after the rest of the hair has worn off. Deducing the presence of stipules is often possible by looking for scars (usually linear) that extend beyond the leaf scar proper.

Winter identification. Note that no attempt has been made to make the key work consistently for plants in winter condition. Woody plants with evergreen foliage will generally be “keyable” in Keys B, D, E, F, G, H, I, and J, but deciduous species will not; there are various winter twig and bud keys available in print and online for the winter identification of trees and shrubs. Herbaceous plants with winter rosettes or otherwise green winter foliage will generally be found in Key N, but an impractical number of ambiguous or “dead end” leads will be encountered.

Botanical terminology. While the use of specialized terminology and jargon has been reduced, some of these terms are useful and unavoidable, and provide a precise meaning without a lengthy explanation. Terms can be found in the glossary, and there are print and online resources that provide definitions and often illustrations as well. Particularly recommended at the time of writing is Harris and Harris (2001), Plant Identification Terminology: an Illustrated Glossary.

Characteristics of major groups of vascular plants. At various points in the key, a kind of shorthand is used in key leads to indicate the main evolutionary group involved: Lycophytes, Pteridophytes, Gymnosperms, Basal Angiosperms, Eudicots, and Monocots. This shorthand is not placed in every couplet in which it could be, but is used where it is likely to be helpful to the user. While the readily visible characteristics of these groups have many exceptions, the following table} will aid in their recognition (note that this table is pragmatically based only on the characteristics of those taxa in our flora).

KEY TO FAMILIES AND GENERA

	Lycophytes	Pteridophytes	Gymnosperms	Basal Angiosperms	Eudicots	Monocots
Leaf size	Very small (< 20 mm long), or linear quill leaves in <i>Isoetes</i>	Very small scale to very large	Very small scale leaves to very large pinnately compound leaves	Small to large (> 3 cm long)	Very small scale to large	Very small scale to giant leaves
Leaf complexity	Simple	Usually complexly compound (1-5× compound), but also simple or variously less complicatedly compound	Simple and scale-like or needle-like (or 1-pinnately compound in Zamiaceae and Cycadaceae, and fan-shaped and dichotomously veined in <i>Ginkgo</i>)	Simple (or dichotomously compound in <i>Cabomba</i>)	Simple to complexly compound	Simple with few exceptions (except palmately or pedately compound in <i>Arisaema</i> and palmately or pinnately compound in the giant leaves of Arecaceae)
Leaf or leaflet toothiness	Entire or minutely toothed	Often toothed (diversely so), but sometimes entire	Entire or minutely toothed	Entire	Entire or variously toothed	Entire (often marginally scabrous or ciliate; rarely with spinulose teeth in some aquatics)
Leaf or leaflet lobing	Leaves not lobed (leaflets never present)	Leaves and/or leaflets often lobed (diversely so)	Leaves or leaflets not lobed	Leaves not lobed (except the base sometimes cordate or auriculate)	Leaves and/or leaflets often lobed (diversely so)	Leaves or leaflets not lobed
Leaf arrangement	Alternate, opposite, or whorled	Alternate	Alternate, opposite, whorled, or fascicled	Alternate (rarely opposite, in <i>Cabomba</i> , <i>Calycanthus</i> , and <i>Asarum</i>)	Alternate, opposite, or whorled	Almost always alternate (rarely opposite or whorled)
Leaf disposition	Cauline scale leaves (basal quill leaves in <i>Isoetes</i>)	Basal	Cauline (or basal in Zamiaceae and Cycadaceae)	Cauline (or basal in Nymphaeaceae and <i>Brasenia</i>)	Cauline or basal	Cauline or basal
Leaf venation	A single unbranched vein	Complex and variable, often with some dichotomous portions	Single midvein or several parallel (dichotomous in <i>Ginkgo</i>)	1° and 2° veins pinnate or palmate, ultimate veins netted or free	1° and 2° veins pinnate or palmate, ultimate veins netted or free	1° and 2° veins parallel or penni-parallel, smaller veins cross-veins at right angles
Reproductive structures	Spores , borne in sporangia axillary to scale leaves (or in <i>Isoetes</i> embedded in the base of quill leaves)	Spores , mostly borne on the undersurface of leaves, but also in a variety of specialized structures (but not as in Lycophytes)	Seeds, borne naked on scales, or in berry- or drupe-like structures	Seeds, borne in fruits	Seeds, borne in fruits	Seeds, borne in fruits
Perianth	N.A.	N.A.	N.A.	Typically many-merous , the segments borne spirally or in whorls	Typically 4-5-merous (sometimes many), the segments in whorls	Typically 3-merous , the segments in whorls
# of carpels	N.A.	N.A.	N.A.	Typically > 6 (rarely 1-6)	Typically 4-5 or 1-2 , sometimes many, very rarely 3	Typically 3 (rarely 1, 2, 4, or 6)
Carpel fusion	N.A.	N.A.	N.A.	Usually separate (sometimes fused)	Usually fused, sometimes separate	Always fused
Perianth connation	N.A.	N.A.	N.A.	Perianth segments typically separate (fused in Nymphaeaceae or Aristolochiaceae)	Perianth segments often fused , but also often separate	Perianth segments typically separate (sometimes fused)

KEY TO FAMILIES AND GENERA

Key to keys - Key to Plantae

- 1 Plant minute, consisting of filaments or thalli (undifferentiated into leaves, stems, and roots), generally a single cell thick, usually with abundant single-celled gemmae (specialized bud-like groups of cells for asexual reproduction), a free-living fern gametophyte, superficially resembling bryophytes in lacking vascular tissue, reproducing only vegetatively (by gemmae); [usually growing on vertical or overhanging bedrock (epipetric)]; [Pteridophytes] **Vittaria in PTERIDACEAE**
- 1 Plant more complex, with stems (or rhizomes), leaves, roots, the leaves generally > 1 cell thick (except in sporophytes of *Didymoglossum*, *Crepidomanes*, *Vandenboschia*, and *Hymenophyllum*), with vascular tissue, reproducing by seeds or spores (and often also with various vegetative means of reproduction); [growing in very diverse habitats, including epipetric on bedrock]; [Lycophytes, Pteridophytes, Gymnosperms, Monocots, Basal Angiosperms, and Eudicots].
 - 2 Plants floating aquatics, never rooted to the substrate (though sometimes stranded by dropping water levels); plants often thalloid in structure (lacking clear differentiation of stems and leaves)..... **Key CI**
 - 2 Plants terrestrial, wetland, or aquatic, normally rooted to the substrate (sometimes becoming detached and then floating in the water column, though usually not on the water surface, and lacking obvious adaptations for surface flotation); plants generally with clear differentiation of stems and leaves (with some exceptions).
 - 3 Plants woody, either trees, shrubs, lianas (woody vines), subshrubs, or rosette shrubs, with perennating structures (buds) borne on long-lived, above-ground, woody stems or caudices.
 - 4 Stems fleshy and flattened, green and photosynthetic (becoming gray on older stems), the nodes scattered on the flattened pads and bearing glochidia and also often spines; leaves absent..... **CACTACEAE**
 - 4 Stems not both fleshy and flattened, usually brown, gray, or tan (sometimes green and photosynthetic), lacking glochidia (sometimes bearing spines, prickles, or thorns); leaves present, usually obvious, but sometimes scale-like.
 - 5 Plants rosette shrubs or subshrubs, the leaves strongly basally disposed and few to many, the above-ground stem stout (> 1 cm in diameter), usually < 1 dm tall; leaf arrangement alternate (but often with very short internodes).
 - 6 Leaves 'fern-like', 1-pinnate-pinnatifid or more divided, deciduous; plants lacking both flowers and seeds, reproducing by spores; [Pteridophytes]... **Key A7**
 - 6 Leaves either simple, 1-pinnate, or palmately compound, evergreen; plants bearing seeds, with or without flowers; [Gymnosperms, Monocots, and Eudicots]. **Key E**
 - 5 Plants trees, shrubs, or lianas (woody vines), the leaves usually many and cauline (borne along the stem), the above-ground stem usually > 2 dm long, if shorter, then not stout (< 0.5 cm in diameter); leaf arrangement alternate, opposite, or whorled.
 - 9 Leaf venation dichotomous (with even Y-forks, the veins alike, no vein dominant); leaf fan-shaped, deltoid, 3-8 cm wide; leaves alternate, borne in clusters or short, spur shoots; [Gymnosperms]..... **Ginkgo in GINKGOACEAE**
 - 9 Leaf venation various, parallel, pinnate-reticulate, palmate-reticulate, with differentiation into primary, secondary, and finer levels of venation, most vein branches showing dominance by one of the two veins; leaf shape various, but not fan-shaped and ginkgo-like; leaves alternate, opposite, whorled, or fascicled; [Gymnosperms, Eudicots, Basal Angiosperms, Monocots].
 - 10 Leaves stiff or scarious, needle or scale-like, in \times -section flat, nearly terete, or variously angled, with or without an obvious midvein and generally lacking noticeable secondary venation; leaf arrangement alternate, opposite, whorled, or grouped into fascicles of 2-5 with a scarious sheath at the base; seeds not enclosed by an ovary or a true fruit, either borne naked on the upper surface of ovuliferous scales aggregated into a cone (the cone sometimes modified and fleshy and "berrylike") or the seed solitary and mostly or completely enclosed in a fleshy or leathery aril or receptacle; [Gymnosperms]..... **Key B3**
 - 10 Leaves generally not stiff (some exceptions), usually broader and with well-developed leaf blades (therefore flat in \times -section), usually with a midvein and well developed secondary and tertiary venation (some exceptions); leaf arrangement alternate, opposite, or whorled; seeds borne in fruits, which develop from ovaries; [Eudicots, Basal Angiosperms, and Monocots].
 - 11 Leaves alternate; [Eudicots, Basal Angiosperms, and Monocots].
 - 12 Leaves compound; [Eudicots and Monocots]..... **Key F**
 - 12 Leaves simple; [Eudicots, Basal Angiosperms, and Monocots]..... **Key G**
 - 11 Leaves opposite or whorled; [Eudicots].
 - 13 Leaves whorled..... **Key H**
 - 13 Leaves opposite.
 - 14 Leaves compound..... **Key I**
 - 14 Leaves simple..... **Key J**
 - 3 Plants herbaceous, herbs, or herbaceous vines (though sometimes with a tough, semi-woody texture), annual, biennial, or perennial, if the latter, with perennating structures borne below-ground (on the ground surface) as crowns, offsets, etc., or as buds on woody rhizomes.
 - 15 Plants aquatics, all of the plant (except sometimes the reproductive structures) normally submerged or suspended in water, or floating on its surface; {some ambiguously aquatic taxa keyed both here and under 14b}..... **Key C**
 - 15 Plants terrestrial or amphibious, all or most of the plant, including most of its leaves and its reproductive structures normally borne in the air, emergent plants may have their bases permanently submerged, and other wetland plants may be occasionally submerged by high waters.
 - 16 Plants completely lacking chlorophyll (white, pink, orange, tan, red), strictly parasitic or mycotrophic; [Eudicots and Monocots]..... **Key K**
 - 16 Plants with chlorophyll (usually all or partially green, the green pigment sometimes wholly or partly masked by non-green pigments), at least in part autotrophic (many are also partially mycotrophic or parasitic).
 - 17 Plant reproducing by spores; [Lycophytes and Pteridophytes]..... **Key A**
 - 17 Plant reproducing by seeds, developing in fruits derived from flowers; [Eudicots, Basal Angiosperms, and Monocots].
 - 18 Plants epiphytic, normally growing attached to plants and not rooting in soil; [note that epiphytic Pteridophytes are not keyed here, and should be sought in Keys A4 and A6]..... **Key L**
 - 18 Plants terrestrial, rooted in soil (sometimes on logs or in tree knotholes, hollows, or tree-limb crotches where soil has accumulated, but not truly epiphytic).
 - 19 [Monocots; see combination of features in Table 1]..... **Key M**
 - 19 [Eudicots and Basal Angiosperms; see combination of features in Table 1]
 - 20 Leaves strictly basal, or strongly "basally disposed" (the basal leaves the largest, and usually persistent through most of the growing season)..... **Key N**
 - 20 Leaves cauline (if plant with basal leaves, these not noticeably the largest, often senescing early) [note: many taxa keyed in both leads].
 - 21 Leaves alternate.
 - 22 Leaves compound..... **Key O**

- 22 Leaves simple..... **Key P**
- 21 Leaves opposite or whorled or appearing whorled (a few plants have leaves or leaf-like structures which appear whorled but anatomically are opposite or alternate with leaflets divided to the stem).
 - 23 Leaves whorled (some taxa with normally opposite leaves can have occasional developmental errors that result in an individual plant having 3-whorled leaves; these are not accommodated in the key as “whorled” [if a plant does not key readily as “whorled”, try it as “opposite”]) or appearing so **Key Q**
 - 23 Leaves opposite.
 - 24 Leaves compound..... **Key R**
 - 24 Leaves simple..... **Key S**

Key A - lycophytes and pteridophytes

- 1 Plant minute, consisting of filaments or thalli (undifferentiated into leaves, stems, and roots), generally a single cell thick, usually with abundant single-celled gemmae (specialized budlike groups of cells for asexual reproduction), and superficially resembling bryophytes in lacking vascular tissue; [usually epipetric on vertical or overhanging bedrock; [Pteridophytes] **Vittaria in PTERIDACEAE**
- 1 Plant more complex, with vascular tissue, with stems (or rhizomes), leaves, and roots, the leaves generally > 1 cell thick (except in sporophytes of Hymenophyllaceae), reproducing by spores; [growing in very diverse habitats, including on bedrock]; [Lycophytes, Pteridophytes].
 - 2 Plant aquatic, either floating and unattached, or rooting and largely submersed **Key A2**
 - 2 Plant of various habitats, including wetlands, where sometimes growing in soils saturated or intermittently flooded, but not aquatic.
 - 3 Leaves ‘un-fern-like’: unlobed, variously awl-shaped, scale-like, terete, strap-shaped, or palmately lobed; [Lycophytes or Pteridophytes]..... **Key A3**
 - 3 Leaves ‘fern-like’: variously lobed or divided, ranging from pinnatifid to 4-pinnate; [Pteridophytes].
 - 4 Leaf blades (not including the petiole) small, < 30 cm long or wide (some species will key either here or in the next lead).
 - 5 Epipetric or epiphytic, growing on rock, tree bark, walls, or over rock in thin soil mats or in small soil pockets..... **Key A4**
 - 5 Terrestrial, growing in soil, not associated with rock outcrops..... **Key A5**
 - 4 Leaf blades medium to large, > 30 cm long or wide.
 - 6 Epipetric or epiphytic, growing on rock, walls, over rock in thin soil mats or in small soil pockets, or on tree trunks **Key A6**
 - 6 Terrestrial, growing in soil, not associated with rock outcrops..... **Key A7**

Key A2 - pteridophytes and lycophytes growing as floating or rooted aquatics

- 1 Plant with at least some leaves palmately or pinnately lobed or 1-4× pinnately divided (‘fern-like’) and > 2 cm long **Ceratopteris in PTERIDACEAE**
- 1 Plant either a floating aquatic with leaves <5 cm long, or with clover-like or linear leaves.
 - 2 Plant a floating aquatic..... **SALVINIACEAE**
 - 2 Plant a rooted aquatic.
 - 3 Plant clover-like, with 4 leaf segments borne terminally..... **Marsilea in MARSILEACEAE**
 - 3 Leaves linear.
 - **Isoetes in ISOETACEAE**

Key A3 - lycophytes and pteridophytes with leaves not ‘fern-like’ (unlobed, variously awl-shaped, scale-like, or terete)

- 1 Stem obviously jointed; leaves scale-like, borne in a whorl at each of the distant joints; spores borne in a terminal strobilus with peltate scales **Equisetum in EQUISETACEAE**
- 1 Stem (or rhizome) not jointed; leaves scale-like or larger, but if scale-like not borne in whorls at distant joints; spores borne variously, but if in a terminal strobilus the scales not peltate.
 - 2 Leaves linear, grass-like, 1-60 cm long, 20× or more as long as wide.
 - 4 Leaves straight and stiff, arching, or flaccid, from a 2-3-lobed corm; sporangia borne in the expanded, hyaline leaf bases..... **Isoetes in ISOETACEAE**
 - 4 Leaves either straight and stiff or notably spiral-curly, from a short-creeping rhizome; sporangia borne in 2 rows either at the expanded pectinate tip of the fertile leaves or along much of the length of the linear leaves.
 - **Vittaria in PTERIDACEAE**
 - 2 Leaves various (scale-like, awl-like, moss-like, or flat), but not linear and grass-like, mostly 1-10 (-20)× as long as wide.
 - 6 Leaves inconspicuous, reduced to a few nerveless scales (< 1.5 mm long), the internodes much longer than the leaves; sporangia yellowish, 3-locular, 1-2 mm in diameter; stems upright, repeatedly branched dichotomously **Psilotum nudum in PSILOTACEAE**
 - 6 Leaves either larger or, if scale-like, with 1 or more nerves and longer than the internodes (the leaves thus overlapping); sporangia yellowish to brownish, 1-locular, < 1 mm in diameter; stems either subterranean or surficial rhizomes or erect or ascending (and sometimes dichotomously branched in whole or in part in *Huperzia* in HUPERZIACEAE, and *Diphasiastrum* and *Dendrolycopodium* in LYCOPODIACEAE).
 - 7 Plant with leaves very numerous and overlapping along the creeping, ascending, erect, or pendant stems, the leaves scale-like or awl-like, 0.5-2 (-3) mm wide, typically acute, acuminate, or hair-tipped; sporangia either in terminal strobili (axillary to specialized, smaller leaves) or axillary to normal leaves; [Lycophytes].
 - 8 Sporangia borne in flattened or quadrangular strobili sessile at the tips of leafy branches; spores and sporangia each of two sizes, the megasporangia larger and borne basally in the strobili..... **SELAGINELLACEAE**
 - 8 Sporangia borne either in the axils of normal foliage leaves, or in strobili sessile at the tips of leafy branches or stalked on specialized branches with fewer and smaller leaves; spores and sporangia each of one size.
 - **LYCOPODIACEAE**
 - 7 Plant with leaves not as above (see below for details); [Pteridophytes].
 - 12 Plant with 1 (-several) leaves, divided into separate sterile and fertile segments, the sterile leaf blade 0.3-90 cm long, ovate to lanceolate, entire-margined, unlobed, obtuse, the longer fertile portion with 2 rows of sporangia somewhat imbedded in it..... **OPHIOGLOSSACEAE**
 - 12 Plant with many leaves, generally 5 or more, not divided into separate sterile and fertile segments, the leaves either (a) small, 0.3-1.6 cm long, obovate, scattered along a very thin creeping rhizome, or (b) larger, (2-) 8-30 cm long, cordate at base, the tip long-attenuate (often proliferous, bearing a plantlet at the tip).
 - 13 Leaf blades (2-) 8-30 cm long, cordate at the base, the tip long-attenuate, often proliferous (bearing a plantlet at the tip); sporangia grouped into indusiate sori on the undersurface; leaf texture moderately thick; rhizome erect or ascending, 1.0-1.5 mm in diameter, the leaves clustered from its tip..... **Asplenium in ASPLENIACEAE**

KEY TO FAMILIES AND GENERA

- 13 Leaf blades 0.3-15 cm long, cuneate at the base, acute to rounded or obtuse at the tip, not proliferous; sporangia solitary in a marginal pocket on the leaf; leaf texture very thin; rhizome creeping on the surface of rock or bark, either 0.1-0.3 or 0.5-1.5 mm in diameter, the leaves scattered along it
.....**HYMENOPHYLLACEAE**

Key A4 - small 'fern-like' pteridophytes, epipetric or epiphytic, growing on rock, tree bark, or walls

- 1 Leaves pinnatifid or bipinnatifid, the pinnae not fully divided from one another (the rachis winged by leaf tissue most or all of its length).
2 Leaves pinnatifid, the pinnae not lobed.
3 Leaf blades with a long-attenuate apex, blade lobed for up to 2/3 its length; sori elongate.....**Asplenium in ASPLENIACEAE**
3 Leaves without a long-attenuate apex, blade lobed for > 4/5 of its length; sori round.....**POLYPODIACEAE**
2 Leaves bipinnatifid, at least the lowermost pinnae deeply lobed.
4 Leaves of a very delicate texture, 1 cell thick; sori borne in cups on the leaf margins; [rock outcrops with high air humidity].....**HYMENOPHYLLACEAE**
4 Leaves of an herbaceous, subcoriaceous, or coriaceous texture, > 1 cell thick; sori otherwise; [various habitats, not strictly of moist sites].
.....**Pteris in PTERIDACEAE**
1 Leaves pinnate, pinnate-pinnatifid, 2-pinnate, or even more divided, to 5-pinnate (the rachis naked for most of its length, often winged in the apical portion).
7 Leaves pinnate or pinnate-pinnatifid.
8 Leaves of a very delicate texture, 1 cell thick; sori borne in cups on the leaf margins; [rock outcrops with high air humidity].....**HYMENOPHYLLACEAE**
8 Leaves of an herbaceous, subcoriaceous, or coriaceous texture, > 1 cell thick; sori otherwise or sporangia not grouped in sori; [various habitats, not strictly of moist sites].
9 Pinnae > 1 cm wide; leaves subcoriaceous to coriaceous
.....**Cyrtomium in DRYOPTERIDACEAE**
9 Pinnae < 1 cm wide; leaves herbaceous to subcoriaceous.
13 Sori on the undersurface of the leaf, located away from the margins.....**Asplenium in ASPLENIACEAE**
13 Sori on the undersurface of the leaf, marginal and more-or-less hidden beneath either the unmodified revolute leaf margin or under a modified, reflexed false indusium**PTERIDACEAE**
7 Leaves bipinnate or more divided.
20 Sori marginal, usually more-or-less hidden under the revolute margin of the pinnule**Adiantum in PTERIDACEAE**
20 Sori not marginal, either exposed, or slightly to strongly hidden by indusia.
21 Leaf blades 3-12 cm long; sori elongate, covered by a flap-like, entire indusium.....**Asplenium in ASPLENIACEAE**
21 Leaf blades 4-30 (-50) cm long; sori globular, surrounded or covered by an entire, ciliate, or divided indusium.
22 Veins reaching the margin; indusium attached under one side of the sorus, hood-like or pocket-like, arching over the sorus; petioles glabrous or sparsely beset with scales, the petiole bases not persistent**Cystopteris in CYSTOPTERIDACEAE**
22 Veins ending short of the margin; indusium attached under the sorus, either cup-like (divided into 3-6 lanceolate to ovate lobes which surround the sorus from below) or of minute numerous septate hairs, which extend out from under the sorus on all sides; petioles often densely beset with scales, the petiole bases persistent**Woodsia in WOODSIACEAE**

Key A5 - small 'fern-like' pteridophytes, terrestrial, growing in soil, not associated with rock outcrops

- 2 Petiole branched once dichotomously, each branch then bearing 3-7 pinnae on the same side of the 2 rachis branches, the overall outline of the blade in the shape of a fan and often broader than long.....**Adiantum in PTERIDACEAE**
2 Petiole not branched dichotomously, the outline of the blade either longer than broad or triangular and about as wide as long.
3 Leaves pinnatifid or bipinnatifid, most of the pinnae not fully divided from one another (the rachis winged by leaf tissue most or all of its length).
4 Sporangia borne on an erect stalk that arises at or above ground level from the petiole of the sterile leaf blade (joining the petiole of the sterile leaf above the rhizome).....**OPHIOGLOSSACEAE**
4 Sporangia either borne on normal leaf blades or on specialized (fertile) leaves separate from the rhizome.
5 Leaves monomorphic, the sori borne on normal leaf blades**Phegopteris in THELYPTERIDACEAE**
5 Leaves dimorphic, the sori borne on leaves significantly different from normal leaves.
6 Fertile leaf woody, with bead-like segments; margins of sterile pinnae entire, often wavy or the lowermost even somewhat lobed; pinnae mostly with obtuse apices, tending to be borne oppositely.....**Onoclea in ONOCLEACEAE**
6 Fertile leaf stiff but herbaceous, the pinnae linear, not at all bead-like; margins of sterile pinnae finely serrulate, otherwise slightly wavy or straight; pinnae mostly with acute apices, tending to be borne alternately**Lorinseria in BLECHNACEAE**
3 Leaves pinnate, pinnate-pinnatifid, 2-pinnate, or even more divided (the rachis naked for most of its length, often winged in the apical portion).
7 Leaves broadly triangular in outline, about as broad as long.
.....**Sceptridium in OPHIOGLOSSACEAE**
7 Leaves lanceolate in outline, definitely longer than broad; sporangia either borne on normal leaf blades, or on slightly dimorphic blades, or on the basalmost pinnae of the leaf, or on an erect stalk that arises at or above ground level from the petiole of the sterile leaf blade (joining the petiole of the sterile leaf above the rhizome).
10 Leaves dark green, subcoriaceous in texture, evergreen**Rumohra adiantiformis in DRYOPTERIDACEAE**
10 Leaves light to medium green, herbaceous in texture, deciduous to semi-evergreen.
12 Sori elongate; leaf blades somewhat dimorphic, the fertile larger and erect, the sterile smaller and prostrate, the larger leaf blades 2-4 (-6.5) cm wide; petiole with 2 vascular bundles, uniting upwards into 1 x-shaped bundle**Asplenium platyneuron in ASPLENIACEAE**
12 Sori round; leaf blades monomorphic (or slightly dimorphic in *Cystopteris*); the larger leaf blades 5-15 cm wide; petiole with 2 vascular bundles, uniting upwards into 1 U-shaped or V-shaped bundle.
13 Leaf vestiture nearly lacking (if present, not of unicellular acicular hairs or gland-tipped hairs)**Cystopteris in CYSTOPTERIDACEAE**
13 Leaf vestiture of unicellular acicular hairs 0.2-1 mm long intermixed with short-stalked or sessile yellowish glands**THELYPTERIDACEAE**

Key A6 - medium to large 'fern-like' pteridophytes, epipetric on rock or walls, or epiphytic on tree trunks

- 1 Leaf vine-like, 0.3-10 m long, the branching dichotomous, 1 branch of each dichotomy terminating in a pair of pinnae, the pinnae often widely spaced (> 10 cm apart)**Lygodium in LYGODIACEAE**
1 Leaf not vine-like, 0.3-3 m long, the branching not as described above, the pinnae regularly and more-or-less closely spaced (mostly < 10 cm apart).
2 Leaves (at least the sterile leaves if the leaves are dimorphic) 1-pinnate-pinnatifid or less divided (the pinnae entire, toothed, lobed or pinnatifid).

KEY TO FAMILIES AND GENERA

- 4 Sori marginal, continuous, covered by a reflexed false indusium along the leaf margin; pinnae usually opposite, linear, not toothed or lobed..... *Pteris* in **PTERIDACEAE**
- 4 Sori neither marginal nor continuous, slightly to entirely covered by an elongate or roundish indusium (sometimes ciliate, toothed, or divided into narrow segments); pinnae usually at least in part alternate, mostly lanceolate, toothed, lobed, or pinnatifid.
- 5 Sori elongate, the indusium flap-like, attached along the side; leaf blades < 7 cm wide when > 30 cm long..... *Asplenium* in **ASPENIACEAE**
- 5 Sori circular or globular, the indusium peltate, reniform, or cuplike; leaf blades > 5 cm wide when > 30 cm long.
- 6 Leaves pinnatifid..... **POLYPODIACEAE**
- 6 Leaves 1-pinnate or, 1-pinnate-pinnatifid, or 2-pinnatifid.
- 7 Leaves 1-pinnate, the pinnae toothed and each with a slight to prominent lobe near the base on the side toward the leaf tip; indusia peltate, reniform, or crescent-shaped.
- 8 Leaves pale green, thin in texture; pinnae articulate to rachis, deciduous with age; rhizome bearing elongate, thin, wiry stolons; indusia reniform or crescent-shaped..... *Nephrolepis* in **NEPHROLEPIDACEAE**
- 8 Leaves dark-green, subcoriaceous to coriaceous; pinnae not articulate and deciduous with age; rhizome not producing stolons; indusia peltate..... **DRYOPTERIDACEAE**
- 7 Leaves 1-pinnate-pinnatifid or 2-pinnatifid, the pinnae pinnatifid, generally lacking a prominent basal lobe; indusia either reniform or cuplike.
- 11 Vascular bundles in the petiole 3-7..... *Dryopteris* in **DRYOPTERIDACEAE**
- 11 Vascular bundles in the petiole 2.
- 12 Indusium reniform, arching over the sorus..... **THELYPTERIDACEAE**
- 12 Indusium cuplike, attached beneath the sorus and consisting of 3-6 lanceolate to ovate segments..... *Woodsia* in **WOODSIACEAE**
- 2 Leaves (at least the sterile leaves if the leaves are dimorphic) 2-pinnate or more divided (the pinnae divided to their midribs).
- 14 Sori marginal and borne on the underside of the false indusium (modified, marginal flaps of the leaf margin); petioles and rachis shiny black or reddish-black; pinnules fan-shaped or obliquely elongate..... *Adiantum* in **PTERIDACEAE**
- 14 Sori not marginal, borne on the undersurface of the leaf blade (if marginal, as in *Pteridium* and *Dennstaedtia*, borne on the undersurface of the leaf); petioles darkened only basally (if at all), rachis green, tan, or reddish; pinnules not notably fan-shaped or obliquely elongate.
- 15 Outline of leaf blade narrowed to base, the widest point > 7 pinna pairs above the base, the lowermost pinnae < 1/4 as long as the longest pinnae; rhizomes long-creeping, the leaves scattered, forming clonal patches..... **THELYPTERIDACEAE**
- 15 Outline of the leaf blade slightly if at all narrowed to the base, the widest point < 5 pinna pairs from the base, the lowermost pinnae > 1/2 as long as the longest pinnae; rhizomes short-creeping, the leaves clustered, not forming clonal patches (or with rhizomes long-creeping, leaves scattered, forming clonal patches in *Dennstaedtia* in **DENNSTAEDTIACEAE**).
- 17 Vascular bundles (3-) 5 (-7) in the petiole..... *Dryopteris* in **DRYOPTERIDACEAE**
- 17 Vascular bundles 2 in the petiole (or uniting near the leaf blade into 1).
- 18 Leaves 25-65 cm wide, with whitish, straight, acicular hairs; [species adventive and weedy]..... *Macrothelypteris* in **THELYPTERIDACEAE**
- 18 Leaves 5-25 (-30) cm wide, with scales and minute glands (sometimes also with septate hairs); [native species].
- 19 Leaves 1-pinnate-pinnatifid; indusium cup-like, attached beneath the sorus and consisting of 3-6 lanceolate to ovate segments..... **WOODSIACEAE**
- 19 Leaves 2-pinnate-pinnatifid; indusium flap-like, pocket-like, or hood-like, attached at one side of the sorus and arching over it.
- 20 Leaves 10-30 cm wide, the tip acute to acuminate; indusium flap-like..... **ATHYRIACEAE**
- 20 Leaves 4-9 cm wide, the tip long-attenuate; indusium pocket-like or hood-like..... *Cystopteris* in **CYSTOPTERIDACEAE**

Key A7 - medium to large 'fern-like' pteridophytes, terrestrial, growing in soil, not associated with rock outcrops

- 1 Leaf vine-like (with indeterminate growth), 0.3-10 m long, the branching dichotomous, 1 branch of each dichotomy terminating in a pair of pinnae, the pinnae often widely spaced (> 10 cm apart)..... *Lygodium* in **LYGODIACEAE**
- 1 Leaf not vine-like, 0.3-3 m long, the branching not as described above, the pinnae regularly and more-or-less closely spaced (mostly < 10 cm apart).
- 3 Leaf blades broadly (about equilaterally) triangular, pentagonal, or flabellate in outline, 0.7-1.3× as long as wide.
- 4 Leaf blades flabellate or fan-shaped in outline, the petiole branched once dichotomously, each branch bearing 3-7 pinnae on one side of the rachis only..... *Adiantum pedatum* in **PTERIDACEAE**
- 4 Leaf blades pentagonal or broadly triangular in outline, the petiole not branched dichotomously.
- 7 Sporangia borne in a stalked, specialized, fertile portion of the blade; texture of mature blades somewhat fleshy; plants solitary from a short underground rhizome with thick, mycorrhizal roots; [primarily of moist forests]..... *Botrypus* in **OPHIOGLOSSACEAE**
- 7 Sporangia borne in marginal, linear sori, indusium absent, the sporangia protected by the revolute leaf margin and a minute false indusium; texture of mature leaf blades hard and stiff; plants colonial from deep-seated rhizomes; [primarily of moist to dry woodlands and savannas]..... *Pteridium* in **DENNSTAEDTIACEAE**
- 3 Leaves elongate in outline, mostly ovate, lanceolate, oblanceolate, or narrowly triangular, 1.5-10× or more as long as wide.
- 8 Leaves 2-pinnate or more divided (the pinnae divided to their midribs).
- 9 Leaf blade divided into sterile and fertile portions, the sterile pinnae basal, the sterile pinnules 30-70 mm long and 8-23 mm wide, serrulate, rounded basally, rounded to somewhat acute apically, the fertile pinnae terminal and greatly reduced in size, the fertile pinnules 7-11 mm long and 2-3 mm wide..... *Osmunda spectabilis* in **OSMUNDACEAE**
- 9 Leaf blade not divided into sterile and fertile portions (though often not all pinnules on a leaf bearing sporangia), the sporangia-bearing pinnules only slightly if at all reduced in size, both fertile and sterile pinnules usually 4-20 mm long and 2-10 mm wide.
- 10 Rhizomes long-creeping, leaves scattered, forming clonal patches; vascular bundles in the petiole either 1, U-shaped (even in the lower petiole) or 3 or more; sori very small, marginal in sinuses, the indusium cup-like, 2-parted, the outer part a modified tooth of the leaf blade; leaf blades conspicuously puberulent with septate hairs or glabrous to puberulent with glandular trichomes..... **DENNSTAEDTIACEAE**
- 10 Rhizomes short-creeping, ascending, or erect, the leaves clustered, not forming clonal patches; vascular bundles in the lower petiole 2-7 (sometimes uniting to 1 in the upper petiole); sori mostly larger, mostly not marginal, the indusium not as above (though cuplike in *Woodsia obtusa*); leaf blades either glabrous, glabrescent, with flattened scales, or puberulent with glandular trichomes.
- 11 Vascular bundles (3-) 5 (-7) in the petiole..... **DRYOPTERIDACEAE**
- 11 Vascular bundles 2 in the petiole.
- 13 Leaves 25-65 cm wide, with whitish, straight, acicular, septate hairs; [species adventive and weedy]..... *Macrothelypteris* in **THELYPTERIDACEAE**
- 13 Leaves 5-25 (-50) cm wide, with scales and minute glands (sometimes also with septate hairs); [native species, widespread].
- 14 Leaves 1-pinnate-pinnatifid; indusium cup-like, attached beneath the sorus and consisting of 3-6 lanceolate to ovate segments..... **WOODSIACEAE**
- 14 Leaves 2-pinnate-pinnatifid; indusium flap-like, pocket-like, or hood-like, attached at one side of the sorus and arching over it.

- 8 Leaves 1-pinnate-pinnatifid or less divided (the pinnae entire, toothed, lobed or pinnatifid)..... **ATHYRIACEAE**
- 16 Leaves 1-pinnatifid, most of the pinnae not fully divided from one another (the rachis winged by leaf tissue most or all of its length); leaves either dimorphic, the fertile much modified, stiff and/or woody (*Onoclea* in ONOCLEACEAE or *Lorinseria* in BLECHNACEAE), or not dimorphic (*Peculuma* in POLYPODIACEAE).
- 18 Fertile leaf woody, with bead-like segments; margins of sterile pinnae entire, often wavy or the lowermost even somewhat lobed; pinnae mostly with obtuse apices, tending to be borne opposite..... **Onoclea in ONOCLEACEAE**
- 18 Fertile leaf stiff but herbaceous, the pinnae linear, not at all bead-like; margins of sterile pinnae finely serrulate, otherwise slightly wavy or straight; pinnae mostly with acute apices, tending to be borne alternate..... **Lorinseria in BLECHNACEAE**
- 16 Leaves 1-pinnate or 1-pinnate-pinnatifid, the pinnae fully divided from one another (the rachis naked for most of its length, often winged in the terminal portion); leaves dimorphic or not.
- 19 Rhizomes long-creeping, leaves scattered, forming clonal patches.
- 20 Sori elongate, along either side of the main veins **BLECHNACEAE**
- 20 Sori roundish, borne away from the main veins. **THELYPTERIDACEAE**
- 19 Rhizomes short-creeping, the leaves clustered, not forming clonal patches (or rhizomes of both types, but leaves borne only in clusters on the short erect ones, in *Matteuccia*)
- 21 Plants moderately to very robust, the leaves typically 6-50 dm tall; leaves either strongly dimorphic, the fertile leaves very unlike the sterile, brown at maturity (*Matteuccia* and *Osmundastrum cinnamomeum*), or the fertile pinnae very unlike the sterile, brown at maturity, borne as an interruption in the blade, with normal green pinnae above and below (*Osmunda claytoniana*), or the fertile pinnae toward the tip of the leaf and with sporangia entirely covering the lower surface (*Acrostichum*); rachises scale-less, petioles scale-less (except at the base in *Matteuccia*).
..... **OSMUNDACEAE**
- 21 Plants mostly less robust, the leaves 3-10 dm tall (except *Dryopteris ludoviciana*, *D. celsa*, *D. goldiana*, and *Nephrolepis exaltata* to 15 dm); leaves not at all or only slightly dimorphic, the fertile differing in various ways, such as having narrower pinnae (as in *Dryopteris ludoviciana*, *Polystichum acrostichoides*, *Diplazium*, *Deparia*, and *Thelypteris palustris*) or the fertile leaves taller and more deciduous (as in *Asplenium platyneuron* and *Dryopteris cristata*), but not as described in the first lead; rachises and petioles variously scaly or scale-less, but at least the petiole and often also the rachis scaly if the plants over 1 m tall.
- 24 Sori elongate, the indusium elongate, attached along one side as a flap.
- 25 Petiole and rachis lustrous brownish-black; fertile leaves 2-8 (-12) cm wide..... **Asplenium in ASPLENIACEAE**
- 25 Petiole and rachis green; fertile leaves 10-20 (-30) cm wide.
- 26 Leaves 1-pinnate-pinnatifid (the pinnae pinnatifid)..... **ATHYRIACEAE**
- 26 Leaves 1-pinnate (the pinnae entire)..... **Diplaziosis in DIPLAZIOPSIDACEAE**
- 24 Sori roundish, the indusium kidney-shaped or roundish, attached by a central stalk.
- 27 Leaves 1-pinnate, the pinnae toothed and each with a slight to prominent lobe near the base on the side toward the leaf tip (except *Nephrolepis exaltata* in NEPHROLEPIDACEAE); indusium peltate (*Polystichum* in DRYOPTERIDACEAE) or reniform or crescent-shaped (*Nephrolepis* in NEPHROLEPIDACEAE).
- 28 Leaves pale green, thin in texture; pinnae articulate to rachis, deciduous with age; thin, rhizome bearing elongate, thin, wiry stolons; [mostly, if not entirely, alien in our area, rare] **Nephrolepis in NEPHROLEPIDACEAE**
- 28 Leaves dark-green, subcoriaceous to coriaceous; pinnae neither articulate nor deciduous with age; rhizome not producing stolons; [native, common] **Polystichum in DRYOPTERIDACEAE**
- 27 Leaves 1-pinnate-pinnatifid, the pinnae pinnatifid, generally lacking a prominent basal lobe; indusium reniform.
- 29 Vascular bundles in the petiole 4-7 **Dryopteris in DRYOPTERIDACEAE**
- 29 Vascular bundles in the petiole 2, uniting above **THELYPTERIDACEAE**

Key B - gymnosperms

- 2 Leaves broad and fan-shaped, > 30 mm wide, with conspicuous dichotomous venation, seasonally deciduous..... **Ginkgo in GINKGOACEAE**
- 2 Leaves needle-like or scale-like, < 10 mm wide, evergreen (seasonally deciduous in *Larix* and *Taxodium*)..... **Key B3**

Key B3 - gymnosperm trees and shrubs with scale or needle leaves

- 1 Leaves opposite or in whorls of 3.
..... **CUPRESSACEAE**
- 1 Leaves either alternate, or in fascicles of 2-5 (basally bound by a scarious sheath), or on short shoots in clusters of many 10-60 leaves in apparent whorls.
- 5 Leaves either borne in fascicles of 2-5 (basally bound by a scarious sheath) (*Pinus*) or on short shoots in clusters of many leaves in apparent whorls (*Cedrus*, *Larix*) **PINACEAE**
- 5 Leaves alternate.
- 8 Leaves very soft in texture, seasonally deciduous as twiglets; [primarily Coastal Plain] **Taxodium in CUPRESSACEAE**
- 8 Leaves stiffer in texture, evergreen; [collectively more widespread].
- 9 Leaves tapering from base to a long-acuminate tip..... **Cunninghamia in CUPRESSACEAE**
- 9 Leaves with parallel margins for most of their length, or widest near middle and gradually tapering to base and apex, the apex acute, obtuse, or retuse.
..... **PINACEAE**

Key C - aquatics

- 1 Plants floating aquatics, never rooted to the substrate (though sometimes stranded by dropping water levels); plants sometimes thalloid in structure, lacking clear differentiation of stems and leaves..... **Key C1**
- 1 Plants rooted aquatics (sometimes uprooted and then floating in the water column, or rooted in floating, peaty vegetation mats); plants always with clear differentiation of stems and leaves (except *Podostemum*).
- 2 Leaves or leaf-like stems basal, or arising in clusters from along a buried rhizome.
- 3 Leaves variously compound or divided..... **Key C2**
- 3 Leaves or leaf-like stems simple.
- 4 Leaves broad, usually long-petiolate, with strong differentiation between petiole and blade, the blade margins not parallel, the blade < 6× as long as wide and > 2.5 cm wide..... **Key C3**

KEY TO FAMILIES AND GENERA

- 4 Leaves or leaf-like stems linear, sessile or essentially so (lacking strong differentiation of a blade and a petiole), the blade margins more-or-less parallel or tapering from base towards apex, the blade > 10× as long as wide and < 2 cm wide..... **Key C4**
- 2 Leaves cauline.
 - 5 Leaves variously compound or divided..... **Key C5**
 - 5 Leaves simple.
 - 6 Leaves alternate..... **Key C6**
 - 6 Leaves opposite or whorled..... **Key C7**

Key C1 - floating aquatics

- 1 Individual leaves > 2 cm wide.
 - 2 Leaves obovate, cuneate at the base, sessile, pale green; plants floating because of “unwetttable” leaf surfaces..... **Pistia in ARACEAE**
 - 2 Leaves orbicular, cordate or truncate at the base, petiolate, dark green; plants floating because of petioles inflated as bladders, or inflated cells centrally located on each leaf.
 - 3 Petiole terete, not air-filled; plants floating because of inflated cells centrally located on each leaf (most easily seen on the lower surface)..... **Limnobium in HYDROCHARITACEAE**
 - 3 Petiole conspicuously expanded into an air-filled bladder; plants floating because of petioles inflated as bladders..... **Oshuna crassipes in PONTEDERIACEAE**
- 1 Individual leaves or “fronds” < 2 cm wide, or leaves absent.
 - 4 Submersed portions of the plant with small (< 4 mm in diameter) bladder-traps..... **Utricularia in LENTIBULARIACEAE**
 - 4 Submersed portions of plant lacking small bladder traps.
 - 5 Plants dichotomously forked, upper surface of leaves velvety or variously hairy..... **SALVINIACEAE**
 - 5 Plants unbranched, or if branched, irregularly so; upper surface of leaves glabrous, waxy..... **ARACEAE**

Key C2 - rooted aquatics with basal leaves, compound or divided

- 1 Leaves palmately 4-foliolate, with very clear differentiation of the long petiole from the 4 leaflets..... **Marsilea in MARSILEACEAE**
- 1 Leaves pinnately compound.
 - 2 Plants usually attached to rocks in flowing water of streams and rivers; [mainly Piedmont, Mountains, Interior Low Plateau, and Interior Highlands]..... **Podostemum in PODOSTEMACEAE**
 - 2 Plants in mud or soil of stagnant waters; [Coastal Plain]..... **Ceratopteris in PTERIDACEAE**

Key C3 - rooted aquatics with basal and simple, broad leaves

- 1 Leaves peltate.
 - 2 Leaf blades oval in shape, ca. 1.5-2× as long as wide, at maturity floating on the water’s surface; underwater portions of fresh plant coated in transparent mucilage..... **Brasenia in CABOMBACEAE**
 - 2 Leaf blades orbicular in shape, ca. 1× as long as wide, at maturity floating on the water’s surface, emersed, or submersed; underwater portions of fresh plant not mucilaginous (though possibly with green algae, etc.).
 - 3 Leaves small, < 8 cm in diameter, at maturity emersed or submersed..... **Hydrocotyle in ARALIACEAE**
 - 3 Leaves large, > 20 cm in diameter, at maturity floating on the water’s surface or emersed..... **Nelumbo in NELUMBONACEAE**
- 1 Leaves not peltate, the petiole attached at a cuneate, cordate, or sagittate base.
 - 4 Leaf blades cuneate, rounded, or truncate at the base.
 - 6 Main veins palmate from the leaf base and also diverging from the midvein, the secondary and tertiary veins then reticulating; inflorescence a spike; [Eudicots]..... **Plantago cordata in PLANTAGINACEAE**
 - 6 Main veins either parallel or palmate from the leaf base with cross-veins at nearly right angles to the main veins; inflorescence either a diffuse raceme or panicle of white flowers, or a linear spadix of tightly packed golden-yellow flowers; [Monocots].
 - 7 Inflorescence diffuse, a raceme or panicle with whorled branches or pedicels, the flowers widely spaced and white; leaves green, “wetttable”..... **ALISMACEAE**
 - 7 Inflorescence tightly packed with flowers, an elongate, golden yellow spadix; leaves blue-green, “unwetttable”..... **Orontium in ARACEAE**
 - 4 Leaf blades cordate or sagittate at the base.
 - 8 Leaf blades sagittate, the two lobes distinctly acute; leaf apex acute; leaf blade 1.3-3× as long as wide..... **Sagittaria in ALISMACEAE**
 - 8 Leaf blades cordate, the two lobes rounded or sub-acute; leaf apex rounded or apiculate; leaf blade 0.8-8× as long as wide.
 - 9 Leaf blade margins serrate, dentate, and/or incised..... **Hydrocotyle in ARALIACEAE**
 - 9 Leaf blade margins entire or obscurely crenate.
 - 10 Flowers 4-5-merous (sepals 4-5, petals 4-5, stamens 4-5); [Eudicots]
 - 11 Leaves emersed or submersed, on stout, stiff petioles (the submersed and winter leaves cuneate-based and lanceolate); flowers 4-merous (sepals 4, petals 4, stamens 4); inflorescence a spike..... **Plantago cordata in PLANTAGINACEAE**
 - 11 Leaves floating, on slender, flexuous petioles (all leaves cordate-based); flowers 5-merous (sepals 5, petals 5, stamens 5); inflorescence an umbel..... **Nymphoides in MENYANTHACEAE**
 - 10 Flowers 3-merous or many (>5-) -merous; [Basal Angiosperms or Monocots].
 - 12 Perianth parts numerous (usually showing differentiation into sepals and petals, though often with some intergradation), borne in a spiral; stamens numerous; leaves usually > 10 cm long or > 10 cm wide, or both (a few northern species of *Nymphaea* with leaves as small as 2.5 cm × 2.5 cm); [Basal Angiosperms]..... **NYMPHAEACEAE**
 - 12 Perianth parts 3-6 (either differentiated or not into sepals and petals); stamens either 3, or 9-12 (-18), or >20; leaves 1-10 cm long, 1-10 cm wide; [Monocots].
 - 14 Flowers unisexual, white, the sepals and petals separate; stamens 3, 6, 9, 12, 15, or 18; leaves either with a central area of spongiform cells (most easily seen on the lower leaf surface) (*Limnobium*), or without spongiform cells (*Ottelia*)..... **HYDROCHARITACEAE**
 - 14 Flowers bisexual, white to blue, the perianth segments united below into a perianth tube 3-45 mm long; stamens 3; leaves lacking a central area of spongiform cells..... **PONTEDERIACEAE**

Key C4 - rooted aquatics with basal and simple, linear leaves

- 1 Leaves thread-like or quill-like, about as thick as wide.
 - 2 Plants bulbous at base, and with the leaf bases expanded and containing sporangia; plant tufted or with very short rhizomes; [Lycophytes] *Isoetes in ISOETACEAE*
 - 2 Plants either somewhat bulbous or not at the base, the leaf-bases not containing sporangia; plant rhizomatous; [Pteridophytes, Eudicots, Monocots].
 - 4 Perianth differentiated, with either 3 sepals and 3 petals or 5 sepals and 5 petals; stamens either 7-many or stamens 4. *Sagittaria in ALISMATACEAE*
 - 4 Perianth undifferentiated, with 0, 3, or 6 tepals; stamens 1, 2, or 3; [Monocots].
 - 6 Gynoecium of 2 or more pistils, each pistil with 1 carpel and with 1 stigma *Triglochin in JUNCAGINACEAE*
 - 6 Gynoecium of 1 pistil, each pistil with (2-) 3 carpels and (2-) 3 stigmas.
 - 7 Fruit an achene; perianth absent *CYPERACEAE*
 - 7 Fruit a capsule; perianth of 6 tepals *Juncus in JUNCACEAE*
 - 1 Leaves ribbon-like or strap-like, distinctly flattened (sometimes only near the tip of the leaf).
 - 8 Subterranean portions of plant bearing bladder-traps; flowers yellow or purple, bilaterally symmetrical *Utricularia in LENTIBULARIACEAE*
 - 8 Subterranean portions of plant lacking bladder traps; flowers white, green, gray, radially symmetrical (except bilaterally symmetrical in *Glossostigma* in PHRYMACEAE).
 - 9 Leaves broadened towards the tip; [Monocots, Eudicots].
 - 10 Flowers 3-merous; [Monocots] *ALISMATACEAE*
 - 10 Flowers 4- or 5-merous; [Eudicots].
 - *Lilaeopsis in APIACEAE*
 - 9 Leaves parallel-margined or tapering towards the apex over much of their length; [Monocots].
 - 12 Leaves tapering towards the apex over much of their length; plant either tufted and not rhizomatous, or short rhizomatous.
 - 13 Plant tufted, not rhizomatous; leaves spreading radially; inflorescence a tightly button-like head of very numerous small flowers, white, gray, tan, yellowish, or blackish; roots thickened, septate (not requiring magnification), unbranched *Eriocaulon in ERIOCAULACEAE*
 - 13 Planted short-rhizomatous; leaves distichous, equitant; inflorescence either a subglobular, ovoid, or cylindrical head, of spirally imbricate scales, or a diffuse corymb; roots not thickened, not septate, branched.
 - 14 Inflorescence a diffuse corymb; rhizomes and roots bright red *Lachnanthes in HAEMODORACEAE*
 - 14 Inflorescence a subglobular, ovoid, or cylindrical head of spirally imbricate scales subtending individual flowers; rhizomes and roots not bright red. *Xyris in XYRIDACEAE*
 - 12 Leaves parallel-margined; plant usually rhizomatous.
 - 15 Plants of marine habitats, growing submersed in salt water; [FL and the Gulf Coast of AL, MS, and LA] *Thalassia in HYDROCHARITACEAE*
 - 15 Plants of freshwater or slightly to somewhat brackish habitats; [collectively widespread].
 - 16 Leaves lacking any midvein; flowers and fruits in globose heads *Sparganium in TYPHACEAE*
 - 16 Leaves with a midvein; flowers and fruits solitary or in diffuse inflorescences.
 - 17 Leaves with a distinct, broad lacunar band along the midvein *Vallisneria in HYDROCHARITACEAE*
 - 17 Leaves lacking a distinct lacunar band along the midvein.
 - 18 Stamens 3 *Blyxa in HYDROCHARITACEAE*
 - 18 Stamens >6 *ALISMATACEAE*

Key C5 - rooted aquatics with cauline leaves, compound or divided

- 1 Leaves (or leaf-like adventitious roots) 1-pinnately compound or divided (with a central axis bearing pinnae, the pinnae not further divided).
 - 2 Leaves crowded at the upper end of the stem, supported by inflated branches *Hottonia in PRIMULACEAE*
 - 2 Leaves (or leaf-like adventitious roots) spaced along the stem, no branches inflated. *HALORAGACEAE*
- 1 Leaves dichotomously or otherwise complexly (2-3×) compound or divided.
 - 4 Plants bearing numerous bladder-like traps *Utricularia in LENTIBULARIACEAE*
 - 4 Plants lacking bladder-like traps.
 - 5 Leaves alternate; leaf segments complexly (but not dichotomously) branched.
 - 6 Leaf dissection 2-pinnate to 3-pinnate; flowers in racemes; petals 4, white *Rorippa in BRASSICACEAE*
 - 6 Leaf dissection 2-ternate to 3-ternate; flowers solitary; petals 5, yellow or white *Ranunculus in RANUNCULACEAE*
 - 5 Leaves opposite or whorled; leaf segments dichotomously branched.
 - 7 Leaves whorled; leaf segments entire or toothed with denticles. *Ceratophyllum in CERATOPHYLLACEAE*
 - 7 Leaves opposite; leaf segments entire. *Cabomba in CABOMBACEAE*

Key C6 - rooted aquatics with simple, cauline, alternate leaves

- 1 Leaves broad, < 4× as long as wide.
 - 2 Floating leaves peltate *CABOMBACEAE*
 - 2 Floating or emersed leaves cuneate to rounded at base.
 - 4 Leaves emersed, lanceolate to narrowly elliptic; flowers 5-merous; [Eudicots] *Hydrolea in HYDROLEACEAE*
 - 4 Leaves emersed or floating, suborbicular or elliptic (if emersed, then suborbicular; flowers 3-merous; [Monocots]. *Potamogeton in POTAMOGETONACEAE*
- 1 Leaves narrow, > 4× as long as wide.
 - 6 Leaves 0.3-1.4 cm long, very numerous and tightly spaced *Mayaca in MAYACACEAE*
 - 6 Leaves 2-35 cm long, fewer and scattered along the stem.
 - 7 Leaf divided into a sheath and blade, with a ligule 0.5-8 mm long at the juncture; inflorescence a spike, raceme, or panicle of spikelets *POACEAE*
 - 7 Leaf not divided into a sheath and blade, but if basally sheathing lacking a ligule (though sometimes with 1-2 conspicuous stipules); inflorescence various, but not as above.

KEY TO FAMILIES AND GENERA

- 8 Leaves terete, to 35 cm long, 0.3-2 mm wide; plants of marine habitats, growing submersed in salt water; [FL and the Gulf Coast of AL, MS, and LA] *Syringodium* in **CYMODOCEACEAE**
- 8 Leaves flat or terete, to 200 cm long; plants of fresh or brackish waters (if of marine waters, *Zostera*, the leaves obviously flat, 1.5-6 mm wide); [collectively widespread].
- 9 Leaves filiform, terete or nearly so; stipules present, adnate to the leaf base and forming a sheath around the stem > 10 mm long.
 - 10 Stipule free at its tip, the sheathing portion not appearing inflated; flowers > 2, in an interrupted spike *Stuckenia* in **POTAMOGETONACEAE**
 - 10 Stipule adnate its entire length to the leaf base, appearing inflated; flowers usually 2, on a flexuous, elongate peduncle *Ruppia* in **CYMODOCEACEAE**
- 9 Leaves flat; stipules absent, or if present, either free or adnate to the leaf base and forming a sheath for < 10 mm.
 - 11 Leaves lacking a midvein; perianth parts 6, yellow *Heteranthera* in **PONTEDERIACEAE**
 - 11 Leaves with a midvein; perianth parts 0 or 4, variously colored (not yellow).
 - 12 Plants pubescent (at least on the upper stem); leaves pinnately veined; [Eudicots] *Hydrolea* in **HYDROLEACEAE**
 - 12 Plants nearly or entirely glabrous; leaves with parallel venation; [Monocots].
 - 13 Inflorescences of flowers solitary or in 2-4 flowered racemes, axillary; spathe lacking; perianth conspicuous with 3 pink to purple petals *Murdannia* in **COMMELINACEAE**
 - 13 Inflorescence a spike, terminal or axillary; with or without a spathe; perianth lacking.
 - 14 Inflorescence a cylindrical, interrupted spike, lacking a spathe; leaves either parallel-margined or variously with a narrow blade differentiated from a petiole; [fresh to brackish waters] *Potamogeton* in **POTAMOGETONACEAE**
 - 14 Inflorescence either a flattened spike sheathed by a spathe-like bract, or solitary; leaves parallel-margined, to 20 dm long; [saline (marine) to brackish waters].
 - *Halodule* in **CYMODOCEACEAE**

Key C7 - rooted aquatics with simple, cauline, opposite or whorled leaves

- 1 Leaves whorled, most nodes with 3 or more leaves.
 - 3 Leaves tipped by a callus (visible at 10× magnification); leaf margins entire; flowers many, grouped in a terminal involucre head; [Eudicots] *Sclerolepis* in **ASTERACEAE**
 - 3 Leaves not callus-tipped; leaf margins finely toothed or at least with conical protrusions remaining from the disintegration of better-developed deciduous teeth; flowers solitary on elongate, flexuous stalks; [Monocots] **HYDROCHARITACEAE**
- 1 Leaves opposite, no nodes with 3 or more leaves.
 - 5 Leaves in 2-3 pairs, appearing verticillate; plants of marine waters; [of FL, MS, LA and southward] *Halophila* in **HYDROCHARITACEAE**
 - 5 Leaves along stem at 2-many nodes; plants of fresh to brackish waters; [collectively widespread].
 - 6 Flowers 3-merous; [Monocots].
 - 7 Leaf margins (or at least leaf sheaths) serrate or minutely spiny; fruits sessile, entire; leaves 5-15× as long as wide *Najas* in **HYDROCHARITACEAE**
 - 7 Leaf margins (including sheaths) entire; fruit stalked, dentate on one side; leaves >20× as long as wide *Zannichellia* in **POTAMOGETONACEAE**
 - 6 Flowers 4- or 5-merous; [Eudicots].
 - 8 Leaves 1-12 cm long; flowers borne in axillary or terminal spikes or clusters *Hygrophila* in **ACANTHACEAE**
 - 8 Leaves 0.5-3 (-5) cm long; flowers solitary, axillary.
 - 9 Carpels 4-5, separate; fruit an aggregate of follicles; leaves succulent *Crassula* in **CRASSULACEAE**
 - 9 Carpels 2-5, fused; fruit capsular (variously dehiscent); leaves thin in texture or somewhat succulent (e.g. *Bacopa* in **PLANTAGINACEAE**).
 - 10 Leaves dimorphic, the terminal leaves usually spatulate (strongly expanded towards the apex); corolla absent; stamen 1 *Callitriche* in **PLANTAGINACEAE**
 - 10 Leaves monomorphic, obovate, oblanceolate, or parallel-margined; corolla present (absent in *Didiplis* in **LYTHRACEAE**); stamens 2-6.
 - 11 Flower radially symmetrical, 3-4-merous; petals absent or separate
 - 12 Stems lacking ridges running down from leaf bases *Elatine* in **ELATINACEAE**
 - 12 Stems with ridges running down from leaf bases **LYTHRACEAE**
 - 11 Flower bilaterally symmetrical, 4-5-merous; petals present, fused at least basally, forming a tube.
 - 13 Corolla 4-merous **LINDERNIACEAE**
 - 13 Corolla 5-merous **PLANTAGINACEAE**

Key E - angiosperm shrubs and subshrubs with basally-disposed leaves

- 1 Leaves giant, either pinnately compound and > 15 dm long, or palmately divided into numerous segments and > 6 dm wide; [Monocots] **ARECACEAE**
- 1 Leaves small to giant, simple or 3-foliolate; leaves < 9 dm long and < 2 dm wide (except *Agave*, with leaves < 20 dm long and < 2.5 dm wide); [Eudicots or Monocots].
 - **AGAVACEAE**

Key F - woody angiosperms with alternate, compound leaves

- 2 Leaves trifoliolate.
 - 3 Plant a liana, climbing by twining, by tendrils, or by adventitious roots.
 - 4 Leaves untoothed and unlobed *Lackeya* in **FABACEAE**
 - 4 Leaves coarsely toothed or lobed. {add *Eleutherococcus trifolius* **ARALIACEAE**}
 - 5 Leaflets obovate or broadly elliptic (broadest at or above the middle), the teeth or lobes primarily or solely in the apical half of the leaf; plant climbing by leaf-opposed tendrils *Cissus trifoliata* in **VITACEAE**
 - 5 Leaflets orbicular or ovate (broadest at the middle or below the middle), the teeth or lobes primarily or solely in the basal half of the leaf; plant climbing by stem twining or by dense, reddish adventitious roots.
 - 6 Plant climbing by the stem twining; [plant not actually woody, but so robust as to often be assumed to be so] *Pueraria* in **FABACEAE**
 - 6 Plant climbing by dense, reddish adventitious roots attaching the stem to tree trunks or rock outcrops *Toxicodendron* in **ANACARDIACEAE**
 - 3 Plant a shrub (sometimes scrambling or occasionally high-climbing with the support of other vegetation, but lacking the specialized climbing structures listed above).

KEY TO FAMILIES AND GENERA

- 7 Stems armed with small prickles or stout thorns.
 - 8 Stems with stout thorns at the nodes; fruit a hesperidium (orange-like, but densely hairy).....*Citrus* in **RUTACEAE**
 - 8 Stems with many small prickles along the internodes; fruit either a legume, or an aggregate of drupelets, or a hip.
 - 9 Leaflets with 2 rounded lateral lobes near the base, otherwise entire; fruit a legume*Erythrina* in **FABACEAE**
 - 9 Leaflets serrate and sometimes also cleft; fruit either an aggregate of drupelets or a hip..... **ROSACEAE**
- 7 Stems unarmed.
 - 10 Leaflets serrulate, crenulate, serrate, with a few coarse and jagged teeth (spine-tipped or not), or shallowly lobed.
 - 11 Leaflets serrulate or crenulate.....*Ptelea* in **RUTACEAE**
 - 11 Leaflets serrate, with a few coarse and jagged teeth (spine-tipped or not), or shallowly lobed.
 - 12 Leaflets with 2 prominent, rounded lobes near the base; fruit a legume; flowers > 3 cm long, corollas bilaterally symmetrical, red, in a terminal raceme.....*Erythrina* in **FABACEAE**
 - 12 Leaflets serrate and sometimes also cleft, or with a few coarse and jagged teeth (spine-tipped or not); fruit either a tan or red drupe or a red berry; flowers < 1 cm across, corollas radially symmetrical, green, yellow, or white, in axillary or terminal panicles or racemes**ANACARDIACEAE**
 - 10 Leaflets entire and unlobed.
 - 14 Terminal leaflet sessile.*Ptelea* in **RUTACEAE**
 - 14 Terminal leaflet with a petiolule.
 - 16 Leaves pinnately trifoliate, a rachis present as an extension of the petiole past the point of attachment of the 2 lateral leaflets, the terminal leaflet borne on a petiolule at the terminus of the rachis, with an obvious joint present between the rachis and petiolule **FABACEAE**
 - 16 Leaves palmately trifoliate, the terminal leaflet typically with a longer petiolule than the lateral leaflets, but lacking a rachis (the petiolule of the terminal leaflet attached at the same point as the 2 lateral leaflets and unjointed).....*Toxicodendron* in **ANACARDIACEAE**
- 2 Leaves with 5-many leaflets (poorly developed leaves in some species with only 3 leaflets).
 - 17 Leaves palmately or palmately-pedately compound.
 - 18 Leaves palmately-pedately 5-foliate (the lateral 2 leaflets on each side borne on a common Y-shaped stalk). *Causonis* in **VITACEAE**
 - 18 Leaves palmately compound (all the leaflets attached at a single point).
 - 20 Leaves > 6 dm wide..... **ARECACEAE**
 - 20 Leaves < 3 dm wide.
 - 22 Stems armed with prickles scattered in the internodes..... *Rubus* in **ROSACEAE**
 - 22 Stems unarmed or with paired nodal spines. *Parthenocissus* in **VITACEAE**
 - 17 Leaves pinnately, bipinnately, or complexly compound.
 - 24 Leaves at least in part pinnate-pinnatifid, 2-pinnate, or otherwise more complexly compound than 1-pinnate.
 - 25 Leaves evenly 2-pinnately compound..... **FABACEAE**
 - 25 Leaves oddly pinnate-pinnatifid, 2-pinnately compound, or more complexly compound than 2-pinnate.
 - 27 Plant a liana, climbing by tendrils *Nekemias* in **VITACEAE**
 - 27 Plant a shrub or tree, not climbing.
 - 28 Plant armed with prickles on the stem, and sometimes also on the axes and main veins of the leaves*Aralia* in **ARALIACEAE**
 - 28 Plant unarmed.
 - 29 Plant a shrub, < 2.5 m tall. *Nandina* in **BERBERIDACEAE**
 - 29 Plant a tree, > 3 m tall when flowering and fruiting.
 - 31 Leaflets entire..... *Gymnocladus* in **FABACEAE**
 - 31 Leaflets serrate.
 - 32 Fruit a globose drupe, tan at maturity, 10-15 mm in diameter; inflorescence an axillary panicle; corolla lavender *Melia* in **MELIACEAE**
 - 32 Fruit an inflated capsule, 30-50 mm long; inflorescence a terminal thyrse; corolla yellow *Koelreuteria* in **SAPINDACEAE**
 - 24 Leaves 1-pinnately compound.
 - 33 Leaves even-pinnately compound (generally with 2 leaflets at the apex of the rachis, these obviously and symmetrically paired).
 - 34 Leaflets rounded to obtuse at the apex (or acute to acuminate in *Gymnocladus*); fruit a legume; inflorescence various, but not as below..... **FABACEAE**
 - 34 Leaflets acuminate at the apex; fruit a drupe; inflorescence a panicle with many, small, radially symmetrical flowers.
 - 35 Tree dioecious; drupe ca. 5 mm long; stamens (of male flowers) 3-5 (-7)..... *Pistacia* in **ANACARDIACEAE**
 - 35 Tree bisexual; drupe ca. 13 mm long; stamens 8-10..... *Sapindus* in **SAPINDACEAE**
 - 33 Leaves odd-pinnately compound (generally with a single leaflet at the terminus of the rachis).
 - 36 Leaves very large, > 10 dm long..... **ARECACEAE**
 - 36 Leaves small to large, < 10 dm long.
 - 37 Stems armed with prickles or stipules or nodal spines; leaves often also with prickles.
 - 38 Leaves with conspicuous leafy stipules, often adnate to the petiole; plant a liana or small to medium shrub; leaves serrate, often sharply and prominently so; leaves not strongly aromatic when fresh, lacking pellucid punctate glands on the surface..... **ROSACEAE**
 - 38 Leaves lacking leafy stipules; plant a tree or tall shrub; leaves entire or obscurely crenate or serrate; plant a tree or tall shrub; leaves either strongly aromatic when fresh, with conspicuous pellucid punctate glands or not aromatic and not pellucid-punctate.
 - 39 Leaves not aromatic when fresh, lacking pellucid punctate glands; leaves never with prickles on the rachis; leaflet apices rounded *Robinia* in **FABACEAE**
 - 39 Leaves strongly aromatic when fresh, with conspicuous pellucid punctate glands; leaves often with prickles on the rachis; leaflet apices usually acuminate..... *Zanthoxylum* in **RUTACEAE**
 - 37 Stems unarmed (leaflets with spinose margins in some species, or the stem with dense hispid hairs).
 - 40 Leaflets entire.
 - 41 Plant a liana, climbing by twining *Wisteria* in **FABACEAE**
 - 41 Plant an upright shrub or tree, not climbing.
 - 42 Plant a medium or tall tree. **FABACEAE**
 - 42 Plant a shrub or small tree to 7 (-10) m tall.

- 45 Flowers bilaterally symmetrical, papilionaceous (reduced in *Amorpha* to a single petal); stamens 10; fruit a legume; leaves with stipules..... **FABACEAE**
- 45 Flowers radially symmetrical, stamens 4-5; fruit either a drupe (Anacardiaceae), or a 1-3-seeded berry or a samara (Picramniaceae); leaves without stipules.
.....**ANACARDIACEAE**
- 40 Leaflets serrate or crenate.
- 47 Leaflets crenate, the teeth rounded and often inconspicuous.
- 48 Leaflets with obscure crenations, not as below nor bearing glands; leaf rachis narrowly to conspicuously winged, especially towards the tip; fruit a drupe; plant a shrub or small tree.....**ANACARDIACEAE**
- 48 Leaflets (especially the basal and on the basalscopic side) with 1-5 large rounded teeth, each bearing a prominent dark green gland; leaf rachis not winged; fruit a schizocarp, with 2-5 samaroid mericarps; plant a medium to large tree.....**Ailanthus in SIMAROUBACEAE**
- 47 Leaflets serrate.
- 49 Leaf serrations spinose.....**Berberis in BERBERIDACEAE**
- 49 Leaf serrations not spinose.
- 50 Inflorescences axillary.
- 51 Plant a tree, freely branched; rhizome inner bark not brightly colored; flowers unisexual, the male flowers in catkins, the female flowers solitary or few in a spike, the perianth greenish or tan and inconspicuous; fruit a nut covered by a dehiscent or indehiscent involucre.....**JUGLANDACEAE**
- 51 Plant a short shrub, < 1 m tall, little branched; rhizome inner bark of fresh plants bright yellow; flowers bisexual, petals absent, the 5 petaloid sepals maroon; inflorescence a drooping panicle from the base of the new year's growth; fruit an aggregate of follicles ...
.....**Xanthorhiza in RANUNCULACEAE**
- 50 Inflorescences terminal.
- 54 Fruit a drupe **Rhus in ANACARDIACEAE**
- 54 Fruit an inflated membranaceous capsule **Koelreuteria in SAPINDACEAE**

Key G - woody plants with alternate, simple leaves

- 1 Leaves palmately or pinnately lobed.
- 2 Leaves pinnately lobed (the midvein dominant, with 2, 4, or more lateral veins diverging into the lobes from the midvein above the base of the leaf blade)..... **Key G1**
- 2 Leaves palmately lobed or bilobed (3, 5, or more veins diverging from the base of the leaf blade into the lobes)..... **Key G2**
- 1 Leaves not lobed (entire or serrate, sometimes coarsely so), or only with 2 small auriculate lobes at the base of an otherwise unlobed leaf blade (such as various *Magnolia* species).
- 3 Woody grasses (bamboos), infrequently flowering, with hollow stems..... **Key A in Poaceae**
- 3 Lianas, shrubs, or trees, not grasses, generally with solid stems.
- 4 Lianas (plant generally with obvious adaptations for climbing, such as adventitious roots, twining stems, or tendrils)..... **Key G3**
- 4 Shrubs, subshrubs, or trees (sometimes scrambling or occasionally high-climbing with the support of other vegetation, but lacking the specialized climbing structures listed above).
- 5 Shrubs or subshrubs.
- 6 Leaves entire (sometimes ciliate or scabrous on the margin)..... **Key G4**
- 6 Leaves serrate, crenate, serrulate, crenulate, or doubly serrate **Key G5**
- 5 Trees.
- 6 Leaves entire (sometimes ciliate or scabrous on the margin)..... **Key G6**
- 7 Leaves serrate, crenate, serrulate, crenulate, or doubly serrate **Key G7**

Key G1 - woody plants with alternate, simple, pinnately lobed leaves

- 1 Shrubs or subshrubs.
- 2 Leaves 1-2 (-4) cm long, 0.11-0.3 (-0.5) mm wide, each with > 40 terete lobes; plant white or silvery-gray; inflorescence an involucre head **Santolina in ASTERACEAE**
- 2 Leaves longer and/or wider, with a few to many flattened (< 30) lobes; plant green; inflorescence various, but not as above.
- 4 Leaf blades 4-30 cm long; leaf lobing evenly from base to apex, or predominantly towards the tip of the leaf; flowers small, in catkins **Quercus in FAGACEAE**
- 4 Leaf blades 2-7 cm long; leaf lobing predominantly basal (hastate, or with larger basal lobes becoming smaller and more like serrations towards the apex); flowers larger, in various diffuse inflorescences.
..... **ROSACEAE**
- 1 Trees.
- 6 Leaves even-pinnately lobed, with 4 (or sometimes 6 or 8) lobes, the apex a very broad V-notch or truncate..... **Liriodendron in MAGNOLIACEAE**
- 6 Leaves odd-pinnately lobed, with 3, 5, 7, etc. lobes (or sometimes with 2 lobes, but one obviously central and the other smaller and to the side, mitten-like), the apex obtuse to acute.
- 7 Leaf lobe margins entire.
- 8 Leaves deeply 2- or 3-lobed (or rarely with 1-4 additional very small, tooth-like lobes towards the base), most branches with a mixture of unlobed, 2-lobed (mitten), and 3-lobed leaves; fruit a blackish-seeded drupe; fresh plants strongly aromatic **Sassafras in LAURACEAE**
- 8 Leaves shallowly or deeply 3-25-lobed; fruit either an acorn or a rather fleshy spherical multiple fruit; fresh plants not aromatic.
- 9 Leaves shallowly or deeply 3-25-lobed; fruit a nut in a cupule (an acorn)..... **Quercus in FAGACEAE**
- 9 Leaves shallowly 3-lobed (or mostly unlobed); fruit a rather fleshy multiple fruit **Maclura in MORACEAE**
- 7 Leaf lobe margins serrate.
- 10 Leaves irregularly toothed, the teeth tipped by a soft bristle; fruit a nut in a cupule (an acorn); small to large trees **Quercus in FAGACEAE**
- 10 Leaves evenly and rather finely serrate, not bristly-tipped; fruit at least somewhat fleshy, either a pome or a multiple of nutlets surrounded by a fleshy calyx; small trees.
- 11 Petals absent (the individual flowers inconspicuous and aggregated into catkins); fruit a multiple, of nutlets surrounded by a fleshy calyx (mulberry) or a syconium (fig); leaves mainly larger, at least some on a branch > 8 cm long **MORACEAE**
- 11 Petals 5, conspicuous, white or pink; fruit a pome; leaves mainly small, generally < 8 cm long **Crataegus in ROSACEAE**

Key G2 - woody plants with alternate, simple, palmately lobed leaves

- 1 Lianas.
 - 2 Lianas climbing by adventitious roots.....*Hedera* in **ARALIACEAE**
 - 2 Lianas climbing by twining or by tendrils.
 - 3 Lianas climbing by twining..... **MENISPERMACEAE**
 - 3 Lianas climbing by tendrils.
 - 4 Tendrils branched, leaf-opposed; leaves mostly 5-7-lobed, the margins also serrate or dentate..... **VITACEAE**
 - 4 Tendrils simple (though paired in *Smilax* in **SMILACACEAE**), axillary; leaves 3-lobed, the margins entire, serrulate, or prickly.
 - 5 Leaves longer than wide, entire or prickly-margined; stems armed with prickles; flowers 6-merous, greenish, in umbels borne in leaf axils; tendrils stipular, 2 per leaf axil, adnate to the petiole basally..... *Smilax* in **SMILACACEAE**
 - 5 Leaves wider than long, entire or serrulate; stems not armed; flowers 5-merous, blue-purple or yellow, solitary or in small fascicles in leaf axils; tendrils 1 per leaf axil..... *Passiflora* in **PASSIFLORACEAE**
 - 1 Trees or shrubs. {add: *Vernicia* in **EUPHORBIACEAE**, *Firmiana* in **MALVACEAE**, *Kalopanax* in **ARALIACEAE**, *Ficus* in **MORACEAE**}
 - 6 Trees.
 - 7 Leaves > 3 dm long and wide; tree monopodial, with a single, unbranched stem (rarely with a few branches)..... **ARECACEAE**
 - 7 Leaves < 3 dm long and wide; tree branching; [Eudicots].
 - 11 Leaf blades (3-) 5 (-7) lobed, to 15 cm wide and long, each lobe finely serrate-crenate (>3 teeth per cm of margin) and rarely with a small sub-lobe; multiple fruit spherical and spiky, consisting of multiple bird-beak-like loculicidal capsules; buds axillary..... *Liquidambar* in **ALTINGIACEAE**
 - 11 Leaves 3 (-5)-lobed, to 35 cm wide and long, each lobe coarsely toothed or sublobed, the teeth or sublobes (at most 1-2 per cm of margin) attenuate-acuminate; multiple fruit spherical and merely rough on the surface, consisting of multiple achenes with tawny bristles; buds infrapetiolar (completely hidden in the swollen petiole base)..... *Platanus* in **PLATANACEAE**
 - 6 Shrubs.
 - 12 Leaf lobe margins entire (or undulate to sublobed at the tip)..... *Manihot* in **EUPHORBIACEAE**
 - 12 Leaf lobe margins serrate.
 - 13 Leaves glabrous.....*Ricinus* in **EUPHORBIACEAE**
 - 13 Leaves pubescent (slightly or strongly).....**MALVACEAE**

Key G3 - lianas with alternate, simple, and unlobed leaves

- 1 Leaves serrate.
 - 2 Leaf venation palmate, the leaf often lobed or at least pentagonal in shape (as well as serrate); plants climbing by leaf-opposed tendrils..... **VITACEAE**
 - 2 Leaf venation pinnate, the leaf neither lobed nor pentagonal; plants climbing by other mechanisms (see below).
 - 6 Leaf blades mostly 2-6 cm long, 0.3-2 cm wide; plants climbing by growing through bark layers of *Taxodium ascendens* or *Chamaecyparis thyoides*.....*Pieris* in **ERICACEAE**
 - 6 Leaf blades mostly 6-13 cm long, 3-8 cm wide; plants climbing by twining.....*Schisandra* in **SCHISANDRACEAE**
- 1 Leaves entire.
 - 7 Stems with well-developed prickles; tendrils paired, stipular (diverging from the leaf petiole above its base); [Monocots]..... *Smilax* in **SMILACACEAE**
 - 7 Stems lacking prickles; tendrils either absent or (if present) not stipular and paired; [Eudicots or Basal Angiosperms].
 - 8 Plant climbing by dense, reddish adventitious roots.....*Hedera* in **ARALIACEAE**
 - 8 Plant climbing by twining or by tendrils.
 - 9 Plant climbing by tendrils..... **POLYGONACEAE**
 - 9 Plant climbing by twining.
 - 10 Leaves elliptic or ovate, obviously longer than broad, most leaves > 1.4× as long as wide; leaf blade base narrowly cuneate, broadly cuneate, rounded, or subcordate.
 - 11 Leaves 3-8 cm long, rounded to broadly cuneate at the base and rounded or obtuse at the apex; lateral leaf veins straight, parallel, not forking; inflorescence a terminal thyse or panicle..... *Berchemia* in **RHAMNACEAE**
 - 11 Leaves 6-15 cm long, cuneate at the base and acuminate at the apex; lateral leaf veins forking at or beyond the middle; inflorescence a solitary, axillary flower.....*Schisandra* in **SCHISANDRACEAE**
 - 10 Leaves orbicular to very widely ovate, most leaves < 1.4× as long as wide; leaf blade base deeply cordate, subcordate, rounded, or broadly cuneate
 - 12 Leaf venation pinnate, but "pseudopalmate", with 3 primary veins from the marginal point of attachment of the petiole, the 2 lateral veins then promptly rebranching (< 1 cm from the leaf base) into 2-3 prominent veins (the remainder of the venation pinnate along the midvein); basalmost pair of primary veins exposed (lacking leaf tissue) on their basal side for > 2 mm; leaf blade base deeply cordate; leaf with no tendency to lobing, the leaf outline convex from the base to the apex (except in the immediate vicinity of the petiole and sometimes immediately near a slightly acuminate apex)..... **ARISTOLOCHIACEAE**
 - 12 Leaf venation palmate, with (3-) 5-9 primary veins from the marginal or peltate point of attachment of the petiole, these primary veins then rebranching well above the leaf base; basalmost pair of primary veins completely included within leaf tissue; leaf blade base cordate, subcordate, rounded, or broadly cuneate; leaf with a tendency to lobing, the leaf outline with 1 or more concave areas between the base and the apex (except *Cissampelos* of s. FL)..... **MENISPERMACEAE**

Key G4 - shrubs and subshrubs with alternate, simple, unlobed, entire leaves

- 1 Leaves evergreen. {add to 1a: *Scaevola* in **GOODENIACEAE**, *Morella (inodora)* in **MYRICACEAE**, *Ternstroemia* in **PENTAPHYLACACEAE**, *Pittosporum* in **PITTOSPORACEAE**, *Myrsine* in **PRIMULACEAE**, *Pyracantha* in **ROSACEAE**, *Dodonaea* in **SAPINDACEAE**, *Cestrum* in **SOLANACEAE**, *Thymelaea* in **THYMELAEACEAE**, *Conocarpus* in **COMBRETACEAE**}
 - 3 Leaves linear, > 15× as long as wide; [Monocots]..... *Yucca* in **AGAVACEAE**
 - 3 Leaves broader, < 15× as long as wide; [Eudicots, Basal Angiosperms, or Monocots].
 - 4 Plant a creeping subshrub, < 1 dm tall..... *Epigaea* in **ERICACEAE**
 - 4 Plant not creeping, > 3 dm tall.
 - 5 Inflorescence an involucre head..... **ASTERACEAE**
 - 5 Inflorescence solitary (*Illicium* in **ILLICACEAE**) or variously branched, spicate, racemose, or fascicled, not an involucre head.

KEY TO FAMILIES AND GENERA

- 6 Carpels separate; fruit an aggregate; fresh foliage strongly fragrant; [Basal Angiosperms] *Illicium* in **ILLICACEAE**
- 6 Carpels fused; fruit a berry, drupe, acorn (nut), capsule, or legume; fresh foliage not strongly fragrant; [Eudicots, Monocots, and Basal Angiosperms].
- 9 Leaves largely covered with silver and/or bronze lepidote scales and/or dense stellate hairs below (visible at 10× or higher magnification), giving the lower leaf surface a slightly shiny to almost metallic appearance. {add *Lyonia ferruginea* and *L. fruticosa* in **ERICACEAE**; add *Loropetalum* in **HAMAMELIDACEAE**}
- 10 Petals present, conspicuous, connate, white, the corolla rotate; fruit a berry with several seeds; fresh foliage with a strong, tar-like odor **Solanum** in **SOLANACEAE**
- 10 Petals absent or inconspicuous, greenish and separate if present (note that the calyx is petaloid and white or yellowish in *Elaeagnus* of **ELAEAGNACEAE**); fruit a dry capsule with 3 seeds, or a drupe with a single seed; fresh foliage lacking a strong odor.
- 11 Perianth 4-merous; petals absent; petaloid sepals white to cream, fused and salverform; carpel 1; fruit a fleshy, red drupe, with a single seed .. **Elaeagnus** in **ELAEAGNACEAE**
- 11 Perianth 5-merous; petals green and separate, or absent; sepals greenish, separate; carpels 3; fruit a 3-valved capsule with 3 seeds **Croton** in **EUPHORBIACEAE**
- 9 Leaves with various vestiture, but not as above.
- 13 Leaves 1-foliate on the upper stems, sometimes 3-foliate below, or all reduced to phyllodial spines; flowers papilionaceous, bright yellow; fruit a legume; stems bright green **FABACEAE**
- 13 Leaves simple throughout; flowers either small, inconspicuous, tannish, borne in catkins (*Quercus*), or larger and urceolate, or with almost separate and spreading petals, white to pink, in various terminal or axillary, branched inflorescences; fruit either a nut in a cupule (an acorn), or a (3-) 5-valved capsule, or a spherical berry or drupe; stems generally brown or tan (sometimes green).
- 14 Flowers small, inconspicuous, tannish, borne in catkins; fruit a nut in a cupule (an acorn) **Quercus** in **FAGACEAE**
- 14 Flowers white to pink, either urceolate or tubular or with separate and spreading petals, in various terminal or axillary inflorescences; fruit either a (3-) 5-valved capsule, or a spherical berry with 10+ seeds, or a 4-8 seeded fleshy drupe, or a 1-seeded dry or fleshy drupe.
- 15 Flowers white to pink, rotate or urceolate (the petals united at least basally), in various terminal or axillary inflorescences; fruit either a 2-5 valved capsule or a spherical berry with 10+ seeds.
- 16 Leaves 1 per node or also paired (on one side of the stem) at some nodes (the leaves then uneven in size); inflorescences leaf-opposed; fruit a berry **Solanum** in **SOLANACEAE**
- 16 Leaves 1 per node; inflorescences terminal or axillary, never leaf-opposed; fruit a valved capsule **ERICACEAE**
- 15 Flowers white, petals spreading, separate even at the base, in axillary fascicles or racemes; fruit either a fleshy drupe with 4-8 pyrenes, or a dry single-seeded drupe.
- 19 Shrub rhizomatous and colonial; fruit an ellipsoid drupe, 2-3 cm long **CHRYSOBALANACEAE**
- 19 Shrub not rhizomatous; fruit either a fleshy or dry drupe, < 1 cm long.
- 20 Inflorescence an axillary fascicle or cluster; fruit a fleshy drupe with 4-8 pyrenes **Ilex** in **AQUIFOLIACEAE**
- 20 Inflorescence an axillary raceme; fruit a dry drupe with 1 seed **CYRILLACEAE**
- 1 Leaves deciduous. {add: *Ditrysinia* in **EUPHORBIACEAE**, *Glochidion* in **PHYLLANTHACEAE**, *Phyllanthopsis* in **PHYLLANTHACEAE**, *Nierembergia* in **SOLANACEAE**, *Edgeworthia* in **THYMELAEACEAE**, *Ipomoea* (*I. carnea*) in **CONVOLVULACEAE**; *Swida* (*S. alternifolia*) in **CORNACEAE**}
- 21 Inflorescence an involucre head **ASTERACEAE**
- 21 Inflorescence branched, spicate, a catkin, or consisting of a solitary flower or axillary clusters or whorls, not an involucre head.
- 22 Inflorescence a catkin; flowers unisexual; plants dioecious
- 23 Leaves 3.5-6 cm wide **Leitneria** in **SIMARUBACEAE**
- 23 Leaves < 3 cm wide **Salix** in **SALICACEAE**
- 22 Inflorescence various, not a catkin; flowers bisexual; plants hermaphroditic.
- 24 Inflorescence of a solitary, axillary flower; perianth 3-4-merous; fresh plants fragrant with a strange, musky odor; berry oblong, 3-7 (-10) cm long, greenish-yellow when ripe; [Basal Angiosperms] **ANNONACEAE**
- 24 Inflorescence of 2 or more flowers; perianth 3-5-merous; fresh plants not musky-fragrant; fruits various, not as above.
- 25 Flowers 3-merous; fruit fleshy, red or greenish-yellow at maturity; ovary superior; [Basal Angiosperms or Eudicots].
- 26 Leaves elliptic or narrowly elliptic, broadest near the middle; fresh plants strongly fragrant with a citrus-like aroma; stems unarmed; fruit a drupe, with a single seed **LAURACEAE**
- 26 Leaves obovate or oblanceolate, broadest near the apex; stems armed with nodal spines; fresh plants not fragrant; fruit a berry, with several seeds. ... **Berberis** in **BERBERIDACEAE**
- 25 Flowers 4-5-merous; fruit fleshy or dry, black, blue, brown, tan, or red at maturity; ovary superior or inferior; [Eudicots].
- 27 Fruit a 4-5-valved capsule with many seeds; inflorescence either terminal, a corymb or panicle, or an axillary whorl **ERICACEAE**
- 27 Fruit either a drupe or berry (indehiscent, and variously fleshy or dry) or a dry 3-valved capsule with 1 seed; inflorescence axillary (solitary, clusters, fascicles, or racemes), or in a terminal raceme (*Pyralaria* in **SANTALACEAE**).
- 28 Leaves largely covered with silver and/or bronze shiny lepidote scales below, giving the lower leaf surface an almost metallic appearance **Elaeagnus** in **ELAEAGNACEAE**
- 28 Leaves with various vestiture, but not as above.
- 29 Ovary inferior or half-inferior; inflorescence an axillary cluster or raceme, or a terminal raceme.
- 30 Fruit a spherical berry, with 10 or more seeds **ERICACEAE**
- 30 Fruit an elongate drupe (definitely longer than thick), with 1 seed. **Symplocos** in **SYMPLOCACEAE**
- 29 Ovary superior; inflorescence an axillary cluster or an axillary raceme (borne themselves in clusters).
- 32 Fruits elongate, 8-20 mm long.
- 33 Fruit a red or orange berry, 8-20 mm long; leaves usually on spur-shoots; [salty coastal areas, or aliens of disturbed situations] **Lycium** in **SOLANACEAE**
- 33 Fruit a yellowish-green drupe, 12-15 mm long; leaves on main stems; [rich forests, mainly inland] **Dirca** in **THYMELAEACEAE**
- 32 Fruits spherical, < 10 mm long.
- 34 Inflorescence a narrowly cylindrical raceme, clustered several to many at the tip of the previous year's wood and below the current season's growth; fruit < 3 mm in diameter **Cyrilla** in **CYRILLACEAE**
- 34 Inflorescence an axillary cluster; fruit > 4 mm in diameter
- 35 Fruit dry, opening by 3 valves, 1-seeded; leaf pubescence stellate **Styrax** in **STYRACACEAE**
- 35 Fruit fleshy, with 4-8 seeds; leaf pubescence simple or absent. **RHAMNACEAE**

Key G5 - shrubs and subshrubs with alternate, simple, unlobed, toothed leaves

- 1 Subshrubs or dwarf shrubs, aboveground stems creeping or erect, < 15 cm tall; leaves evergreen.
 - 2 Leaves 1.5-3 cm wide, coarsely toothed; flowers lacking sepals and petals; [alien species, sparingly naturalized or spreading in suburban situations] *Pachysandra* in **BUXACEAE**
 - 2 Leaves < 1.5 cm wide, finely toothed or entire; flowers with sepals and petals; [native species, collectively widespread and common] **ERICACEAE**
- 1 Shrubs, aboveground stems erect, > 30 cm tall; leaves evergreen or deciduous.
 - 5 Inflorescence an involucre head subtended by phyllaries, the heads solitary or many and variously arrayed in secondary inflorescences, the ovary inferior, the corolla connate and tubular at least basally, the calyx absent, the stamens 5, the fruit a cypsel. **ASTERACEAE**
 - 5 Inflorescence, flower, and fruit structure various, but not with the combination of features as above.
 - 6 Leaves evergreen. {add to 6a *Ardisia* in PRIMULACEAE, *Raphiolepis* in ROSACEAE, *Camellia* in THEACEAE}
 - 7 Leaves glandular-punctate on one or both surfaces with golden-yellow glands; flowers unisexual, lacking a perianth; fruit a pale gray, waxy drupe with a single seed *Morella* in **MYRICACEAE**
 - 7 Leaves not glandular punctate; flowers bisexual or unisexual, with a white, pink, or yellow perianth; fruit various, a red, blue, or black drupe or berry with several seeds, or a capsule.
 - 8 Petals connate and urceolate, white to pale pink; flowers bisexual; leaves ovate, lanceolate, or elliptic, broadest near the middle or towards the base, the teeth well-distributed along most of the margin on either side; fruit either a capsule or a red, blue, or black berry **ERICACEAE**
 - 8 Petals distinct, yellow or white; flowers unisexual or bisexual; leaves oblanceolate or elliptic, broadest towards the tip or near the middle, the teeth usually concentrated in the upper half of the leaf; fruit either a black or red drupe with several pyrenes or a red berry with several seeds.
 - 9 Plants lacking thorns; flowers unisexual, with a white perianth; fruit a black or red drupe with several pyrenes *Ilex* in **AQUIFOLIACEAE**
 - 9 Plants with nodal, simple or tripartite thorns; flowers bisexual, with a yellow perianth; fruit a red berry with several seeds *Berberis* in **BERBERIDACEAE**
 - 6 Leaves deciduous.
 - 10 Plants with nodal, simple or tripartite thorns; leaf teeth spinulose *Berberis* in **BERBERIDACEAE**
 - 10 Plants lacking thorns; leaf teeth acute, blunt, rounded, or callus-tipped, but not spinulose.
 - 11 Leaves crenate-wavy, with 1-2 teeth per cm of leaf margin; leaves usually obliquely cordate or angled-truncate at the base; pubescence of leaves and stems stellate **HAMAMELIDACEAE**
 - 11 Leaves crenulate, serrate or serrulate, with >2 teeth per cm of leaf margin; leaves cuneate, rounded, or subcordate at base, not oblique; pubescence of leaves and stems absent or simple.
 - 12 Leaves prominently 3-veined from the base.
 - 13 Ovary 5-locular; stamens many or 5, fused or separate; fruit a 5-valved capsule or of 5 mericarps; flowers yellow or pink, or white with a pink blaze **MALVACEAE**
 - 13 Ovary 3-locular; stamens 5, separate; fruit a 3-valved capsule or drupe; flowers white or pale green **RHAMNACEAE**
 - 12 Leaves pinnately veined.
 - 14 Flowers in catkins; perianth absent or very small; fruit a 1-seeded nut, samara, or waxy drupe (capsule in *Salix* in **SALICACEAE**).
 - 15 Leaves > 4 cm wide, lacking punctate glands; fruit a 1-seeded nut or samara **BETULACEAE**
 - 15 Leaves < 3 cm wide, either punctate-glandular on one or both surfaces or lacking punctate glands; fruit a 1-seeded waxy drupe or a capsule.
 - 16 Leaves punctate-glandular on one or both surfaces; fruit a 1-seeded waxy drupe. **MYRICACEAE**
 - 16 Leaves lacking punctate glands; fruit a capsule *Salix* in **SALICACEAE**
 - 14 Flowers arrayed variously, but not in catkins; perianth present, conspicuous; fruit a 1-many-seeded capsule, pome, berry, or follicle.
 - 17 Ovary inferior; fruit fleshy and indehiscent, a berry or pome.
 - 18 Fruit a berry; leaves lacking stipules *Vaccinium* in **ERICACEAE**
 - 18 Fruit a pome; leaves usually prominently stipular **ROSACEAE**
 - 17 Ovary superior; fruit either dry and dehiscent, a capsule or an aggregate of follicles or achenes, or fleshy and indehiscent, a drupe with 4-8 pyrenes.
 - 19 Flower apocarpous; fruit an aggregate of follicles or achenes **ROSACEAE**
 - 19 Flower syncarpous; fruit either a capsule or a fleshy drupe.
 - 20 Ovary 1-carpellate; fruit a 1-seeded drupe *Prunus* in **ROSACEAE**
 - 20 Ovary 2-8-carpellate; fruit either a capsule or a drupe with 4-8 pyrenes
 - 21 Ovary 2-8-locular; fruit fleshy and indehiscent, a drupe with 2-8 pyrenes; flowers mostly functionally unisexual (or sometimes bisexual in **RHAMNACEAE**).
 - 22 Petals connate at the base; stamens alternate to the petals and opposite to the sepals; fruit 4-8-locular, with 4-8 pyrenes *Ilex* in **AQUIFOLIACEAE**
 - 22 Petals separate (or absent in *Rhamnus alnifolia*); stamens opposite to the petals (when present) and alternate to the sepals; fruit 2-4-locular, with 2-4 pyrenes **RHAMNACEAE**
 - 21 Ovary 2-3- or 5-locular; fruit dry and dehiscent, a capsule; flowers bisexual (except *Stillingia* in **EUPHORBIACEAE**).
 - 23 Ovary and capsule 5-locular; stamens 10-many.
 - 24 Stamens 10; corolla urceolate, sympetalous **ERICACEAE**
 - 24 Stamens many; corolla spreading, apopetalous *Stewartia* in **THEACEAE**
 - 23 Ovary and capsule 2-3-locular; stamens 2, 5, or 10.
 - 25 Leaves > 5× as long as wide; stamens 2; ovary and capsule 3-locular; [plants of the Coastal Plain of SC, GA, AL, and FL] *Stillingia* in **EUPHORBIACEAE**
 - 25 Leaves < 3× as long as wide; stamens 5 or 10; ovary and capsule 2-3-locular; [plants collectively widespread].
 - 26 Stamens 5; ovary and capsule 2-locular; leaves elliptic (widest near the middle), the teeth fine (usually > 5 points per cm of margin), and along much of the margin; inflorescence a terminal raceme; hairs of the lower leaf surface simple, erect .. *Itea* in **ITEACEAE**
 - 26 Stamens 10; ovary and capsule 3-locular; leaves obovate (widest towards the apex), the teeth obscure to coarse (usually < 4 points per cm of margin), and primarily in the upper half of the leaf; inflorescence a terminal or axillary raceme or cyme; hairs of the lower leaf surface either simple and appressed, or stellate.
 - 27 Leaf margins regularly and evenly serrate in the upper half of the leaf (usually nearly entire towards the base); inflorescence an elongate, many flowered (>30) raceme borne at the end of branchlets of the season; corolla of separate petals, the stamens separate; hairs of the lower leaf surface simple and appressed *Clethra* in **CLETHRACEAE**

- 27 Leaf margins wavy or irregularly dentate, mainly in the upper half of the leaf; inflorescence a few flowered (<20) axillary raceme, cyme, or cluster; corolla fused basally into a tube, the stamens adnate to the tube; hairs of the lower leaf surface stellate *Styrax* in **STYRACACEAE**

Key G6 - trees with alternate, simple, unlobed, entire leaves

- 1 Leaves evergreen. {add to 1a: [*Conocarpus*] **COMBRETACEAE**; [*Maytenus*] **CELASTRACEAE**}
 - 2 Leaves tiny, scale-like, broadest at the base and more or less clasping the stem, < 10 mm long and < 1 mm wide *Tamarix* in **TAMARICACEAE**
 - 2 Leaves larger and broader, > 40 mm long and > 8 mm wide.
 - 3 Fruit a hesperidium; petiole flanged or winged for most of its length, constricted at the base of the blade (except linear in *C. medica*) *Citrus* in **RUTACEAE**
 - 3 Fruit various (but not a hesperidium); petiole linear (not flanged or winged with leafy tissue).
 - 4 Leaves pubescent with stellate hairs or peltate scales (sometimes hairs simple), or glandular punctate, appearing as translucent dots (best seen on lower leaf surfaces, with at least 10x magnification).
 - 6 Vestiture of the lower leaf surface of silvery and/or reddish peltate scales; plants hermaphroditic, the flowers bisexual; fruit a fleshy drupe *Elaeagnus* in **ELAEAGNACEAE**
 - 6 Vestiture of the lower leaf surface in part of stellate hairs (and also of simple acicular hairs and gland-tipped hairs); plants monoecious, the male flowers in yellow to brownish catkins, the female flowers solitary or in small spikes; fruit a nut in a cupule (an acorn) *Quercus* in **FAGACEAE**
 - 4 Leaves glabrous, or if hairy, with strictly simple hairs.
 - 7 Flowers solitary, terminal, large (> 5 cm in diameter); pistils many, carpels separate; petals many (typically > 8); leaves mostly > 10 cm long (at least some on a branch longer than 10 cm); fruit an aggregate of follicles, each dehiscing along 1 suture; stipule scar circumferential at each node, encircling the twig *Magnolia* in **MAGNOLIACEAE**
 - 7 Flowers either in axillary racemes, panicles, umbels, fascicles, or solitary, or in terminal corymbs, umbels, compound cymes, or racemes, small (< 5 cm in diameter); pistil 1, with 1-8 fused carpels; petals 3-8; leaves < 30 cm long; fruit either a drupe, berry, or capsule; stipule scars either absent or linear or triangular, not circumferentially encircling the twig.
 - 8 Inflorescence terminal, a corymb, umbel, compound cyme, or raceme; fruit either a capsule (dehiscing along 5 longitudinal sutures) or a few-seeded berry.
 - *Kalmia latifolia* in **ERICACEAE**
 - 8 Inflorescence axillary, a raceme, panicle, umbel, fascicle, or solitary; fruit drupaceous, fleshy to dry, but not regularly dehiscent along sutures.
 - 12 Inflorescence an axillary raceme (with an elongate central axis, to which all flowers/fruits are attached).
 - 13 Fruit a dry, tan to brown, spherical or winged drupe; stamens 5 or 10; carpels 2-5; leaves oblanceolate (rarely narrowly elliptic), < 2.5 cm wide, the apex obtuse (more rarely acute, retuse, or rounded) **CYRILLACEAE**
 - 13 Fruit a fleshy, black, spherical drupe; stamens 10; carpels 1; leaves elliptic, the apex acute to short-acuminate *Prunus caroliniana* in **ROSACEAE**
 - 12 Inflorescence either an axillary umbel or fascicle (or reduced to solitary) or an axillary compound inflorescence (panicle or compound cyme), with 2-3 orders of branching.
 - 14 Fruit a fleshy and oily 1-seeded drupe; flowers 3-merous, with separate and undifferentiated perianth segments; fresh plants strongly aromatic; inflorescence compound, a panicle or compound cyme (with 2-3 orders of branching); [Basal Angiosperms] **LAURACEAE**
 - 14 Fruit a fleshy but not oily 1-8-seeded drupe or berry; flowers 4-8-merous, with differentiated sepals and petals, the petals usually basally fused; fresh plants not strongly aromatic; inflorescence an axillary umbel or fascicle (or reduced to solitary), a central axis absent or < 1 cm long; [Eudicots].
 - 15 Plants unarmed (or with marginal leaf prickles or spines); stamens 4-7, not epipetalous; fruit a drupe with 4-8 pyrenes; flowers 4-7-merous *Ilex* in **AQUIFOLIACEAE**
 - 15 Plants armed with nodal thorns; stamens 5 and staminodia 5, epipetalous; fruit a berry or drupe with 1 seed; flowers 5-merous *Sideroxylon* in **SAPOTACEAE**
 - 1 Leaves deciduous.
 - 16 Leaf base deeply to shallowly cordate, with 3-7 palmate veins from the base; leaf blade about as wide as long or a little longer, mostly 0.9-1.3x as long as wide.
 - 17 Juncture of petiole and leaf blade with 2 red glands; corolla radially symmetrical, with 5-8 petals, white with red veins towards the base of the petals; flowers unisexual; fruit globose, 4-8 cm in diameter; main palmate leaf veins 3 (-5) *Vernicia* in **EUPHORBIACEAE**
 - 17 Juncture of petiole and leaf blade eglandular, but the uppermost 1-3 mm of the petiole swollen into a prominent upper pulvinus; corolla bilaterally symmetrical, with 5 petals, pink to purple (rarely white in some cultivars); flowers bisexual; fruit an oblong, flat legume, 6-10 cm long; main palmate leaf veins 5-7 (-9) *Cercis* in **FABACEAE**
 - 16 Leaf base cuneate, rounded, truncate, subcordate, or auriculate (with 2 small "earlobe-like" lobes at the base of the leaf blade), with 1 (mid) vein from the base (3 veins from the base in *Celtis* in **CANNABACEAE**); leaf blade about as wide as long, or somewhat to much longer, 0.9-10x as long as wide.
 - 18 Leaves 0.9-1.4x as long as wide (some taxa keyed in both leads).
 - 19 Stipule scars circumferential, forming a line around the twig; flowers and aggregate fruits solitary, terminal; [Basal Angiosperms] *Magnolia* in **MAGNOLIACEAE**
 - 19 Stipule scars not circumferential (or not apparent); flowers and simple fruits in inflorescences of 1-many flowers, axillary or terminal, but not simultaneously solitary and terminal; [Eudicots].
 - 20 Leaf blade 3-6 cm long, 1-1.5x as long as the flexuous petiole *Triadica* in **EUPHORBIACEAE**
 - 20 Leaf blade 4-30 cm long, > 3x as long as the stiff petiole.
 - 22 Fruit a dry, subglobose 3-valved capsule, with 1 seed; flowers bisexual, white, conspicuous *Styrax* in **STYRACACEAE**
 - 22 Fruit a nut in a cupule (an acorn); flowers unisexual, greenish or brownish, individually inconspicuous, the male flowers borne in catkins *Quercus* in **FAGACEAE**
 - 18 Leaves > 1.4x as long as wide.
 - 24 Plants bearing nodal thorns; leaves elliptic to obovate, 3-9 cm long, 1-4 cm wide, 1.5-4x as long as wide.
 - *Sideroxylon* in **SAPOTACEAE**
 - 24 Plants unarmed (except spiny in *Maclura* in **MORACEAE**); leaves various in shape, from broadest towards the base, near the middle, or towards the apex, 3-80 cm long, 1-30 cm wide, 1.5-10x as long as wide.
 - 26 Leaves distinctly widest near the base (at a point < 0.3x of the way from the base of the leaf blade to its apex), gradually long-tapering to an acuminate apex.
 - 27 Fruit a spherical, dry drupe, 4-8 mm in diameter, with a single seed; leaf 1.5-6 cm wide *Celtis laevigata* in **CANNABACEAE**
 - 27 Fruit a spherical, fleshy multiple, 80-120 mm in diameter; leaf 5-8 cm wide *Maclura* in **MORACEAE**
 - 26 Leaves widest near the middle or towards the tip of the leaf blade (at a point > 0.4x of the way from the base of the leaf blade to its apex).

- 28 Pubescence of the foliage stellate (at least in part; simple hairs sometimes present as well); flowers unisexual, the individual flowers inconspicuous, male flowers in catkins; fruit a nut in a cupule (an acorn)..... *Quercus* in **FAGACEAE**
- 28 Pubescence of the foliage simple or absent (except stellate in STYRACACEAE); flowers bisexual, conspicuous, borne variously, but not in catkins (except in *Leitneria*); fruit various.
- 29 Leaf undersurface strongly whitened..... *Magnolia* in **MAGNOLIACEAE**
- 29 Leaf surface green (often somewhat paler green than the upper surface, but not whitened).
- 30 Flowers unisexual and borne in male and female catkins; plants dioecious..... *Leitneria* in **SIMARUBACEAE**
- 30 Flowers bisexual, not borne in catkins; plants hermaphroditic.
- 31 Flowers solitary; ovary superior; perianth either 3-merous and whorled or many-merous and spiraled; leaves mostly > 20 cm long and > 8 cm wide, distinctly broadest towards the apex (> 0.6× of the way from the leaf blade base to apex) (except *Magnolia acuminata*, which is sometimes both shorter, narrower, and broadest near the middle or towards the base); [Basal Angiosperms].
- 32 Flowers axillary, < 2 cm across, brown or maroon; perianth 3-merous, whorled; fresh foliage with a strong musky odor; fruit a fleshy berry; leaves cuneate at the base; twigs lacking circumferential stipule scars at each node *Asimina triloba* in **ANNONACEAE**
- 32 Flowers terminal, > 4 cm across, white, pale yellow, or pink; perianth many-merous, spiraled; fresh foliage not noticeably aromatic; fruit an aggregate of follicles; leaves cuneate or auriculate at the base; twigs with circumferential stipule scars at each node..... **MAGNOLIACEAE**
- 31 Flowers in inflorescences of several to many; ovary inferior (or superior in *Diospyros* in EBENACEAE and *Cyrilla* in CYRILLACEAE); perianth 4-5-merous; leaves mostly < 20 cm long and < 10 cm wide, broadest near the middle or towards the apex; [Eudicots].
- 33 Leaves with prominently parallel-arcing secondary veins; inflorescence a terminal corymb; leaves clustered at the tips of the twigs, agassoid appearing pseudo-whorled; trichomes of the leaf undersurface predominantly 2-branched (some simple) (use at least 10× magnification); flowers 4-merous; fruit a blue drupe; small tree..... *Swida alternifolia* in **CORNACEAE**
- 33 Leaves with secondary veins more obscure and complexly branching into tertiary veins; inflorescence axillary (often on the previous year's wood), solitary to variously fascicled, clustered, or in racemes; leaves arrayed distichously along horizontal or arching twigs, not prominently clustered or pseudo-whorled (except often in *Cyrilla* in CYRILLACEAE, *Symplocos* in SYMPLOCACEAE, and *Nyssa* in NYSSACEAE); trichomes of the leaf undersurface either simple or stellate (or absent); flowers 4-5-merous; fruit a green, blue, or black drupe, an orange berry, or a green to brownish indehiscent capsule; small to large tree.
- 34 Pubescence of foliage and other parts stellate (use at least 10× magnification); petals 4-5, white, 10-25 mm long; fruit dryish, indehiscent, either longitudinally 2-4-winged or not winged..... **STYRACACEAE**
- 34 Pubescence of foliage and other parts simple; petals either 0, or 4-5 and pink, white, or greenish-yellow, or 10 and greenish-yellow; fruit either a somewhat to very fleshy drupe or berry or a dry, brownish, spherical drupe, 2-2.5 mm in diameter.
- 35 Leaves < 2.5 cm wide, dark green above, somewhat thickened, and tardily deciduous or semi-evergreen; fruit a dry, brownish, spherical drupe, 2-2.5 mm in diameter; inflorescence a narrowly cylindrical raceme with > 40 flowers..... *Cyrilla* in **CYRILLACEAE**
- 35 Leaves > 2.5 cm wide, usually medium-green above, herbaceous in texture, promptly seasonally deciduous; fruit a somewhat to very fleshy drupe or berry, > 5 mm in diameter; inflorescence a solitary flower or cluster, head, or irregular raceme of < 15 flowers.
- 36 Fruit a drupe (green when ripe), cylindrical to barrel-shaped, 8-12 mm long; leaves rather thick and leathery in texture, persistent into the winter, dropping tardily or at latest the following spring; flowers bisexual; stamens 30-50, in 5 fascicles.... *Symplocos* in **SYMPLOCACEAE**
- 36 Fruit a berry (orange when ripe) or a drupe (blue-black, yellow, orange, or red when ripe), 8-50 mm long, spherical or ovoid to ellipsoid; leaves thin in texture, promptly deciduous in the autumn; flowers functionally unisexual; stamens 5-16, separate.
- 37 Fruit a spherical berry, 15-50 mm long, orange when ripe, subtended by the enlarged and persistent woody or leathery calyx; vascular bundles 1 per leaf scar; leaves never toothed; leaves whitish-green beneath; leaf midrib and upper petiole with tiny glands on their upper surfaces (reddish initially, then darkening) (use at least 10× magnification); leaves glabrate to tomentose with curly hairs beneath; female and male flowers on separate trees (dioecious); stamens 16; widest point of the leaf usually at the middle or below, the apex acute to acuminate *Diospyros* in **EBENACEAE**
- 37 Fruit an ovoid or ellipsoid drupe, 8-30 -40 mm long, blue-black, yellow, orange, or red when ripe; vascular bundles 3 per leaf scar; leaves sometimes bearing a few irregular teeth; leaves pale to medium green beneath; leaf midrib and upper petiole lacking reddish to dark glands on their upper surfaces; leaves glabrous or glabrate beneath; female and male flowers on the same tree (monoecious); stamens 5-12; widest point of the leaf usually beyond or at the middle, the apex obtuse to strikingly and abruptly acuminate..... *Nyssa* in **NYSSACEAE**

Key G7 - trees with alternate, simple, unlobed, toothed leaves

- 1 Leaves evergreen.
- 2 Petiole flanged or winged, constricted at the base of the blade; fruit a hesperidium..... *Citrus* in **RUTACEAE**
- 2 Petiole linear (not flanged or winged with leafy tissue); fruit various. {add to 2b: [*Sapium*] EUPHORBIACEAE, [*Photinia*] ROSACEAE, [*Prunus caroliniana*] ROSACEAE, [*Ilex (cassine, myrtifolia)*] AQUIFOLIACEAE}
- 3 Leaves 7-20 cm long, usually at least some on a branch > 12 cm long, thick in texture but readily flexible when fresh; inflorescence of a solitary flower, axillary, 5-7 cm across; fruit a capsule, ca. 1 cm in diameter *Gordonia lasianthus* in **THEACEAE**
- 3 Leaves 3-12 cm long, thick in texture and also noticeably stiff; inflorescence of 1-several flowers in axillary clusters or cymes, or in catkins, the individual flowers < 1 cm across; fruit either a drupe with 4 pyrenes or a nut (acorn).
- 4 Leaf with a spinose margin, the marginal spines well-developed, generally arrayed along most of the leaf margin and borne at nearly a right angle to the midvein..... *Ilex* in **AQUIFOLIACEAE**
- 4 Leaf margins serrate with one or a few stiff teeth (sometimes sharpish, but not spines), these usually towards the apex of the leaf and oriented towards the leaf apex **FAGACEAE**
- 1 Leaves deciduous.
- 5 Secondary veins neatly pinnate, the veins on each side of the midrib evenly spaced, parallel to one another, and extending nearly or actually to the leaf margin; fruit either a 1-seeded nut (dry, with or without samaroid wings, bracts, a subtending cupule, or an enclosing and valvate involucre) or a fleshy drupe with 2-4 stones.
- 6 Leaves doubly-serrate, the number of teeth greater than the number of the pinnate secondary veins (sometimes obscurely so in *Planera* in ULMACEAE); fruit a nut or samaroid nut, lacking a cupule or valvate involucre, though sometimes associated with green, leaf-like bracts.
- 7 Flowers unisexual, in catkins, the tree monoecious; leaf base symmetrical..... **BETULACEAE**

KEY TO FAMILIES AND GENERA

- 7 Flowers bisexual, in axillary fascicles, the tree androgynous; leaf base strongly asymmetrical (oblique) or nearly or quite symmetrical. **ULMACEAE**
- 6 Leaves singly serrate or crenate, the teeth the same number as the secondary veins; fruit either a fleshy drupe with 2-4 stones, or a nut with a cupule (acorn) or enclosed by a valvate involucre that splits at maturity.
- 8 Fruit a fleshy drupe with 2-4 stones..... **RHAMNACEAE**
- 8 Fruit dry, single-seeded (or with 1-4 nuts in *Castanea*).
- 9 Fruit > 9 mm long or wide, either a nut with a cupule (acorn) or 1-4 nuts enclosed by a valvate involucre that splits at maturity **FAGACEAE**
- 9 Fruit < 9 mm long and wide, leathery, indehiscent, winged or not **ULMACEAE**
- 5 Secondary veins not as above, usually arching and/or branching or reticulating well before reaching the leaf margin; fruit various.
- 10 Leaves strongly 3-5-veined from the base; leaf blade cordate or truncate, often oblique.
- 12 Flowers unisexual, plants monoecious; pith of mature twigs chambered with hollow sections between soft partitions..... **Celtis in CANNABACEAE**
- 12 Flowers bisexual; plants hermaphroditic; pith of mature twigs continuous without hollow sections between partitions.
- 13 Flowers bisexual; inflorescence an axillary cyme; fresh leaves and stems lacking white latex; fruit simple, a 1-seeded nut; main leaf veins splitting several times towards the leaf margin and leading into the teeth without rejoining and forming a marginal vein; basal veins 5, palmate, all joining together at the summit of the petiole; main lateral leaf veins (above the basal veins) often opposite; winter buds with 3 entire bud scales (1 much smaller than the other 2) **Tilia in MALVACEAE**
- 13 Flowers unisexual, the pistillate inflorescence a head, the staminate inflorescence a catkin, borne on the same tree (monoecious) or on separate trees (dioecious); fresh leaves and stems with white latex; fruit a multiple of fleshy achenes; main leaf veins splitting towards the margin but then rejoining to form a prominent, looping (scalloped) marginal vein; basal veins 3, palmate, sometimes an additional prominent vein on each side joining the lateral vein above its divergence from the petiole end; main lateral leaf veins (above the basal veins) mainly alternate; winter buds with 5 ciliate-margined bud scales **MORACEAE**
- 10 Leaves pinnately veined; leaf blade base cordate, subcordate, truncate, rounded, or cuneate base, not oblique.
- 14 Inflorescence a terminal raceme of racemes, with more than 50 flowers; petals connate, urceolate; fruit a 5-valved capsule, < 6 mm in diameter; fresh leaves with a sour taste..... **Oxydendrum arboreum in ERICACEAE**
- 14 Inflorescence various, either with < 30 flowers or if with > 50 flowers a catkin (with a single axis); corolla with separate petals (or petals absent); fruit various, fleshy or dry, if a 5-valved capsule (*Franklinia* in THEACEAE), then 15-20 mm in diameter; fresh leaves without a sour taste.
- 15 Pubescence stellate (look especially in vein axils on the undersurface of the leaf) **STYRACACEAE**
- 15 Pubescence simple (or absent).
- 17 Flowers unisexual, borne in axillary catkins; trees dioecious; fruit dehiscent, a lanceolate or ovoid capsule..... **SALICACEAE**
- 17 flowers bisexual (unisexual in *Ilex* in AQUIFOLIACEAE), borne variously in terminal or axillary clusters, cymes, racemes, or umbels, but not at all catkin-like; trees hermaphroditic (dioecious in AQUIFOLIACEAE); fruit indehiscent, a fleshy drupe or pome with 1-many seeds.
- 18 Pith of twigs with transverse diaphragms and also continuous between the diaphragms (make a longitudinal section of twig and use at least 10× magnification; look for translucent diaphragms spaced at < 1 mm apart, with whiter pith tissue between them); fruit distinctly longer than broad, a 1-seeded drupe **Nyssa in NYSSACEAE**
- 18 Pith of twigs lacking diaphragms, continuous and homogeneous; fruit either suborbicular to spherical or pear-shaped, either a several- to many-seeded pome, or a berry-like drupe with 4-8 seeds, or a 1-seeded drupe.
- 19 Vascular bundle scars 1 in each leaf scar; fruit a berrylike drupe with 4-8 bony pyrenes; ovary superior, the calyx persistent at the base of the fruit..... **Ilex in AQUIFOLIACEAE**
- 19 Vascular bundle scars (2-) 3 in each leaf scar; fruit a pome or 1-seeded drupe; ovary either inferior and the calyx persistent at the summit of the fruit (*Amelanchier*, *Crataegus*, *Malus*, *Pyrus*) or superior and the calyx not at all persistent at the base of the fruit (*Prunus*) **ROSACEAE**

Key H - woody plants with whorled leaves

- 2 Leaves needle-like or scale-like, terete, angled, or flat in \times -section, < 2 cm long; leaves (2-) 3-4 (-6) per node **ERICACEAE**
- 2 Leaves flat, > 3 cm long; leaves (2-) 3 per node; [Eudicots].
- 3 Plant a subshrub, < 3 dm tall, with < 10 leaves per stem. **Chimaphila in ERICACEAE**
- 3 Plant a shrub or tree, > 3 dm tall, with many > 10 leaves per stem.
- 5 Leaves toothed, and most leaves also lobed **Broussonetia papyrifera in MORACEAE**
- 5 Leaves entire, not lobed.
- 6 Leaves cordate at base; leaves about as long as wide; medium to large tree.
- 7 Flowers white to yellow; capsules linear, >10× as long as wide; leaf undersurface with curly simple hairs; nectar glands present in the main vein axils on the undersurface of the leaf (visible from the underside or the upperside in fresh leaves and herbarium specimens as a triangle 1-4 mm on a side)..... **Catalpa in BIGNONIACEAE**
- 7 Flowers lavender; capsules ellipsoid, < 2× as long as wide; leaf undersurface with branched (dendritic or stellate) hairs; nectar glands absent **Paulownia tomentosa in PAULOWNIACEAE**
- 6 Leaves cuneate to rounded at base; leaves > 1.5× as long as wide; shrub to small tree.
- 8 Leaves rounded at the tip..... **Kalmia in ERICACEAE**
- 8 Leaves acute to acuminate at the tip.
- 9 Leaves lanceolate (> 2.5× as long as wide), the secondary venation not prominent; inflorescences axillary or terminal; flowers pink or white.
- 10 Inflorescences terminal; flowers pink or white; leaves thick and leathery; [alien plants of uplands, persistent or weakly naturalized] **Nerium oleander in APOCYNACEAE**
- 10 Inflorescences axillary; flowers pink; leaves thin and herbaceous; [native plants of wetlands] **Decodon verticillatus in LYTHRACEAE**
- 9 Leaves ovate (< 2× as long as wide), the secondary venation prominent and arching-parallel; inflorescences terminal; flowers white, greenish-yellow, red, or orange. **Cephalanthus occidentalis in RUBIACEAE**

Key I - woody plants with opposite, compound leaves

- 1 Leaves 2-3-foliolate.
- 2 Leaves 2-foliolate, with a branched tendril in the terminal position (this sometimes not developed, or withered); liana **BIGNONIACEAE**
- 2 Leaves 3-foliolate, lacking tendrils; shrub, liana, or tree.
- 3 Upright shrub or tree.

KEY TO FAMILIES AND GENERA

- 5 Leaflets 3-5 (-7), coarsely and jaggedly serrate, with < 5 teeth per leaflet side; fruit a schizocarp of 2 samaroid mericarps (maple "keys")..... *Acer in ACERACEAE*
- 5 Leaflets 3, evenly serrulate, with > 10 teeth per leaflet side; fruit an inflated capsule *Staphylea trifolia in STAPHYLEACEAE*
- 3 Liana or sprawling shrub.
 - 7 Leaves 3-more-foliolate; flowers white, radially symmetrical, uniseriate, with white petaloid sepals and no petals *Clematis in RANUNCULACEAE*
 - 7 Leaves 1 (-3) foliolate; flowers blue, bilaterally symmetrical, biserial, with green calyx and blue corolla *Vitex in LAMIACEAE*
- 1 Leaves 4-15-foliolate.
 - 8 Leaves palmately compound.
 - 9 Leaflets serrate; flowers white, yellow, or red; fruit a leathery capsule, irregularly spheroidal, 2-9 cm in diameter, with 1-3 (-6) large seeds, each with a large pale hilum contrasting with the dark brown color of the rest of the seed..... *Aesculus in HIPPOCASTANACEAE*
 - 9 Leaflets entire; flowers blue, pink, or purple; fruit either a 4-seeded drupe, < 0.5 cm in diameter, or an elongated capsule, 8-10 cm long and ca. 0.7 cm in diameter. *Vitex in LAMIACEAE*
 - 8 Leaves pinnately compound, bipinnately compound, or more complexly compound.
 - 11 Plant a liana (woody vine).
 - 12 Leaves pinnately compound, with 7-15 coarsely serrate leaflets; perianth biserial, with a green synsepalous calyx and an orange sympetalous corolla; fruit an elongate capsule, with many winged seeds; stems to 20 cm in diameter, with tan bark *Campsis radicans in BIGNONIACEAE*
 - 12 Leaves either pinnately compound, the leaflets 3-7 and coarsely serrate, or more complexly compound, the leaflets 5-many, not serrate though often lobed; perianth uniseriate, with a white, pink, or purplish aposepalous calyx and no corolla; fruit an aggregate of plumose achenes; stems to 1 cm in diameter, brown or green..... *Clematis in RANUNCULACEAE*
 - 11 Plant a tree or shrub, with stiff branches.
 - 13 Leaves 3-7-foliolate and strictly 1-pinnate; leaflets with a few very coarse teeth; 1st year stems green; fruit a pair of winged, asymmetrical samaroid mericarps..... *Acer in ACERACEAE*
 - 13 Leaves 3-15-foliolate, 1-pinnate or partially 2-pinnate; leaflets evenly serrate with many teeth or entire; 1st year stems tan to brown (very new growth may be green); fruit either a symmetrical (winged) samara (*Fraxinus*) or a purplish-black, many-seeded berry (*Sambucus*).
 - 14 Fruit a purplish-black or red, 4-seeded berry (*Sambucus*); plant a shrub or small tree; stems hollow or pithy; petiole prominently grooved on the upper side; fresh leaves somewhat fleshy in texture *Sambucus in VIBURNACEAE*
 - 14 Fruit either a green or tan, symmetrical (winged) samara or a blackish 5-seeded dryish drupe; plant a small to large tree; stems solid and woody; petiole nearly round in x-section (not grooved); fresh leaves membranaceous or coriaceous in texture. *Fraxinus in OLEACEAE*

Key J - woody plants with opposite, simple leaves

- 1 Leaves palmately or pinnately lobed..... *Key J1*
- 1 Leaves not lobed.
 - 2 Leaves serrate, serrulate, crenate, or spinose-serrate *Key J2*
 - 2 Leaves entire.
 - 3 Plants with obvious adaptations for climbing..... *Key J3*
 - 3 Plants without adaptations for climbing.
 - 4 Shrubs and subshrubs *Key J4*
 - 4 Trees *Key J5*

Key J1 - woody plants with opposite, simple, palmately or pinnately lobed leaves

- 1 Leaves pinnately lobed.
 - 2 Leaves harshly scabrous on the upper surface; leaves typically a mix of alternate, opposite, and whorled *Broussonetia in MORACEAE*
 - 2 Leaves glabrous or glabrescent on the upper surface; leaves strictly opposite..... *Hydrangea quercifolia in HYDRANGEACEAE*
- 1 Leaves palmately lobed.
 - 4 Leaves 3-9-lobed, the margins generally serrate or sublobed; fruit either a drupe or a schizocarp of 2 samaroid mericarps (maple "keys").
 - 5 Fruit a schizocarp of 2 samaroid mericarps (maple "keys"); stamens (4-) 8 (-12); small to large trees; petioles >1× as long as the leaf blade..... *Acer in ACERACEAE*
 - 5 Fruit a drupe; stamens 5; shrubs; petioles < ¾× as long as the leaf blade..... *Viburnum acerifolium in VIBURNACEAE*
 - 4 Leaves 3-lobed, the margins entire; fruit a capsule.
 - 6 Flowers white to yellow; capsules linear, >10× as long as wide; leaf undersurface with curly simple hairs; nectar glands present in the main vein axils on the undersurface of the leaf (visible from the underside or the upperside in fresh leaves and herbarium specimens) *Catalpa in BIGNONIACEAE*
 - 6 Flowers lavender; pods ellipsoid, < 2× as long as wide; leaf undersurface with branched (dendritic) stellate hairs; nectar glands absent *Paulownia in PAULOWNIACEAE*

Key J2 - woody angiosperms with opposite, simple leaves with toothed margins {add [*Abelia*] CAPRIFOLIACEAE}

- 1 Leaves evergreen.
 - 2 Plant a shrub, erect, not requiring support.
 - 4 Leaves slightly to strongly fleshy; inflorescence a head; [maritime situations]..... *Iva in ASTERACEAE*
 - 4 Leaves not fleshy; inflorescence either a head or otherwise; [collectively widespread].
 - 7 {XXXX} *Euonymus in CELASTRACEAE*
 - 7 {YYYY}
 - 8 {ZZZZ} *Abelia ×grandiflora in LINNAEACEAE*
 - 8 {AAAA} *Sageretia minutiflora in RHAMNACEAE*
 - 2 Plant a subshrub, creeping shrub, or liana.
 - 10 Leaves slightly to strongly fleshy; inflorescence a head; [maritime situations]..... *Iva in ASTERACEAE*
 - 10 Leaves not fleshy; inflorescence otherwise; [collectively widespread].
 - 11 Leaves on vigorous shoots with a few coarse rounded teeth towards the base (most leaves entire)..... *Lonicera in CAPRIFOLIACEAE*

KEY TO FAMILIES AND GENERA

- 11 Leaves serrulate to serrate, the teeth uniformly around the margin or concentrated towards the tip; fruit dry, either indehiscent and 1-seeded or capsular and with several seeds. **CELASTRACEAE**
- 1 Leaves deciduous.
- 13 Leaves slightly to strongly fleshy; inflorescence a head, subtended by an involucre of phyllaries; [maritime situations] **Iva in ASTERACEAE**
- 13 Leaves not fleshy; inflorescence, flower, and fruit structure various, but not with the combination of features as above (sometimes the flowers in a head subtended by bracts, but then with other features differing, such as stamens 4, or green calyx present, or petals separate, or fruit a schizocarp of mericarps, etc.); [collectively widespread].
- 14 Lianas climbing by twining or by adventitious roots.
- 16 Leaves on vigorous shoots with a few coarse rounded teeth towards the base (most leaves entire), the larger leaves < 3 cm wide; lianas climbing by twining; fruit a fleshy berry; flowers 5-merous, with a fused, tubular corolla **Lonicera in CAPRIFOLIACEAE**
- 16 Leaves serrate, the teeth towards the leaf apex, the larger leaves > 4 cm wide; lianas climbing by adventitious roots; fruit a capsule; flowers 7-10-merous, with separate petals **HYDRANGEACEAE**
- 14 Upright shrubs or trees, lacking any adaptations for climbing.
- 17 Trees; leaves often a mix of alternate and opposite.
- 18 Leaves harshly scabrous on the upper surface; fruit a multiple of achenes; leaf venation pinnate but irregular **Broussonetia in MORACEAE**
- 18 Leaves not scabrous; fruit a 2-4-seeded drupe; leaf venation neatly pinnate, the lateral veins nearly straight and parallel to one another **RHAMNACEAE**
- 17 Shrubs or trees; leaves strictly opposite (or often a mix of alternate and opposite in RHAMNACEAE).
- 20 Leaves strongly triple-veined from at or near the base of the blade, the 2 lateral veins arching towards the tip and rejoining the midvein or nearly so (becoming diffuse before rejoining); petals 4, white; stamens 15-90 **Philadelphus in HYDRANGEACEAE**
- 20 Leaves pinnate-veined; petals various, not both 4 and white (except sometimes in *Hydrangea*); stamens 1-15 (except 15-30 in *Exochorda* in ROSACEAE).
- 21 Inflorescence head-like; flowers sympetalous and 4-lobed; fruit 2 seeded **Lantana in VERBENACEAE**
- 21 Inflorescence more diffuse, with internal axes and pedicels; flowers not both sympetalous and 4-lobed (except in *Forsythia* and *Buddleja*); fruit 1-seeded, 2-4-seeded, or 4-many-seeded.
- 22 Plants in flower.
- 23 Corolla absent; flowers inconspicuous and small, in axillary fascicles or catkins. **Forestiera in OLEACEAE**
- 23 Corolla present; flowers larger, in terminal cymes, corymbs, racemes, panicles, or in axillary cymes or fascicles.
- 25 Petals separate; stamens 8-10 (-60) (or 4-6 in RHAMNACEAE and *Euonymus* in CELASTRACEAE).
- 26 Flowers 1-few, in axillary cymes; stamens 4-6; stems brown, tan, gray, or green.
- 27 Leaf venation pinnate, but irregular and reticulated; stems green **Euonymus in CELASTRACEAE**
- 27 Leaf venation neatly pinnate, the lateral veins nearly straight and parallel to one another; stems brown, tan, or gray **RHAMNACEAE**
- 26 Flowers 1 and terminal, or many, in terminal panicles or corymbs; stamens 8-10 (-60); stems brown, tan or gray. **HYDRANGEACEAE**
- 25 Petals fused, at least basally, and often strongly tubular; stamens 2, 4, or 5.
- 29 Stamens 5.
- 30 Petals white, fused basally only, the lobes spreading **Viburnum in VIBURNACEAE**
- 30 Petals pink, yellow, or reddish, fused for most of their length **Lonicera in CAPRIFOLIACEAE**
- 29 Stamens 2 or 4.
- 32 Petals 4; inflorescence a terminal thyrse **Buddleja in SCROPHULARIACEAE**
- 32 Petals 5; inflorescence a terminal panicle or an axillary cyme. **Callicarpa in LAMIACEAE**
- 22 Plants in fruit.
- 34 Fruit a drupe or achene, indehiscent, fleshy at maturity (or dry in *Kolkwitzia*).
- 36 Inflorescence a terminal corymb **Viburnum in VIBURNACEAE**
- 36 Inflorescence axillary, fascicled or a cyme.
- 37 Foliage with stellate hairs; fruit a pink-purple 4-seeded drupe **Callicarpa in LAMIACEAE**
- 37 Foliage glabrous or with simple hairs; fruit a dark red, black, or blue 1-4-seeded drupe.
- 38 Fruit a 1-seeded drupe; [NC southwards and westwards] **Forestiera in OLEACEAE**
- 38 Fruit a 2-4-seeded drupe; [widespread in our region] **RHAMNACEAE**
- 34 Fruit a capsule, dehiscent, dry at maturity.
- 39 Inflorescence a catkin, the flowers small (< 5 mm in diameter) and tightly arranged on the inflorescence axis (>5 per cm of the axis) **Salix in SALICACEAE**
- 39 Inflorescence various, but more diffuse, the flowers larger (> 5 mm in diameter, except for some flowers in *Hydrangea* in HYDRANGEACEAE) and loosely arranged (< 5 per cm of axis).
- 40 Capsule prominently 5-angled (star-shaped in x-section) **Exochorda in ROSACEAE**
- 40 Capsule not angled.
- 41 Inflorescence axillary, fascicled. **Euonymus in CELASTRACEAE**
- 41 Inflorescence terminal, a raceme, panicle, corymb, or compound cyme.
- 43 Inflorescence a flat-topped corymb or rounded compound cyme, as wide as or wider than long *Hydrangea* in HYDRANGEACEAE
- 43 Inflorescence elongated, a raceme or panicle, longer than wide.
- 45 {XXXX} **Deutzia in HYDRANGEACEAE**
- 45 {YYYY} **Buddleja in SCROPHULARIACEAE**

Key J3 - lianas with opposite simple leaves with entire margins {add *Paederia* in RUBIACEAE}

- 1 Fresh plants with white, milky juice; pistils 2, united only by the style and stigma; fruit a pair of linear follicles, > 8× as long as thick **APOCYNACEAE**
- 1 Fresh plants with clear juice; pistil 1; fruit either a capsule (< 3× as long as wide), or paired berries, or an accessory fruit of a utricle embedded in a leathery expanded calyx.

KEY TO FAMILIES AND GENERA

- 3 Flowers white, pale yellow, orange, or red, distinctly to obscurely bilaterally symmetrical; leaves widest slightly below, at, or above the middle, the apex rounded, obtuse, to broadly acute.....*Lonicera* in **CAPRIFOLIACEAE**
- 3 Flowers bright yellow, radially symmetrical; leaves widest well below the middle, the apex acuminate.....*Gelsemium* in **GELSEMIACEAE**

Key J4 - shrubs and subshrubs with opposite simple leaves with entire margins

- 1 Aerial and epiphytic, hemiparasitic shrub.....*Phoradendron* in **VISCACEAE**
- 1 Terrestrial, autotrophic or hemiparasitic shrub or subshrub.
- 2 Leaves succulent, nearly as thick as wide; [brackish to saline situations].....*Batis* in **BATACEAE**
- 2 Leaves herbaceous (succulent in *Borrchia*), much wider than thick; [various habitats].
- 3 Creeping or short subshrubs, the stems primarily prostrate, < 2 dm tall.
- 5 Flowers yellow; leaves with pellucid or dark punctate glands (use at least 10× magnification).....*Hypericum* in **HYPERICACEAE**
- 5 Flowers white, pale pink, or deep pink; leaves lacking sessile, punctate glands.
- 6 Leaves linear; flowers pale to deep pink, 5-merous.....*Phlox* in **POLEMONIACEAE**
- 6 Leaves orbicular or elliptic; flowers white to pale pink, 4-merous or 5-merous.....*Mitchella* in **RUBIACEAE**
- 3 Upright or scrambling shrubs, > 3 dm tall
- 9 Inflorescence a terminal head of many flowers.
- 10 Head spherical, lacking an involucre of conspicuous bracts or phyllaries.....*Cephalanthus* in **RUBIACEAE**
- 10 Head flattened, either subtended by 4 large white bracts or by an involucre with >5 green phyllaries.
- 11 Head subtended by 4 large white bracts; leaves with prominently parallel-arching secondary veins; flowers 4-merous.....**CORNACEAE**
- 11 Head subtended by an involucre of >5 green phyllaries; leaves with venation otherwise; flowers 5-merous.....**ASTERACEAE**
- 9 Inflorescence otherwise, either of a solitary flower, or one of a wide variety of inflorescences with flowers attached at different points along branched or unbranched axes. {add: [*Lagerstroemia*] **LYTHRACEAE**; [*Rosmarinus*] **LAMIACEAE**; [*Laguncularia*] **COMBRETACEAE**; [*Buxus*] **BUXACEAE**; [*Exochorda*] **ROSACEAE**; various other [see spreadsheet]}
- 12 Inflorescence flat-topped (broader than long), terminal, a compound cyme or corymb.
- 13 Flowers bright yellow; stamens many; leaves < 1.5 cm wide; fruit a capsule; leaves with pellucid or dark punctate glands (use at least 10× magnification).....*Hypericum* in **HYPERICACEAE**
- 13 Flowers white or creamy; stamens 4-5; leaves > 1.5 cm wide; fruit a drupe; leaves lacking sessile, punctate glands.....*Viburnum* in **VIBURNACEAE**
- 12 Inflorescence either terminal and not flat-topped, or axillary and variously shaped, or terminal and solitary, or leaf-opposed.
- 15 Carpels many (> 9), either separate or fused; stamens many; perianth segments either many and undifferentiated into calyx and corolla, maroon, brown, or yellow (in **CALYCANTHACEAE**), or differentiated into a fleshy and persistent calyx of 5-9 sepals, and a deciduous corolla of 5-9 red (or white) petals (*Punica* in **LYTHRACEAE**).
- 16 Fruit a wrinkled, 3-7 cm long, brown to black, elliptical aggregate of nearly spherical, large achenes; flowers solitary in axils; perianth segments many and undifferentiated into calyx and corolla, maroon, brown, or yellowish; ovary superior; branches unarmed.....**CALYCANTHACEAE**
- 16 Fruit a leathery, 4-15 cm in diameter, reddish, spherical berry with obpyramidal seeds surrounded by a juicy sarcotesta (pomegranate); perianth differentiated, the sepals fleshy and persistent on the fruit, the petals deciduous, 5-9, bright red to white; ovary inferior; branches typically armed with axillary spines.....*Punica* in **LYTHRACEAE**
- 15 Carpels 1-5, fused; stamens either 1-5 or 8-10; perianth segments 4-5 or 8, variously colored; fruit a simple capsule, drupe, or berry; flowers 2-many, in axillary or terminal inflorescences (pistillate flowers sometimes solitary in **SANTALACEAE** and **THESIACEAE**); [Eudicots].
- 17 Ovary inferior; corolla absent, radially symmetrical, or bilaterally symmetrical; fruit either a berry or a 1-seeded drupe.
- 18 Flowers unisexual and plants dioecious; corolla absent; pistillate flowers solitary, staminate flowers in pedunculate umbels or cymes, either terminal or axillary; fruit a 1-seeded drupe; leaves acute to acuminate at the apex.....*Nestronia* in **SANTALACEAE**
- 18 Flowers bisexual and plants hermaphroditic; corolla present; flowers paired, terminal or axillary, or in axillary spikes; fruit a berry; leaves rounded, obtuse, to acute (or acuminate in *Lonicera maackii*) at the apex.....**CAPRIFOLIACEAE**
- 17 Ovary superior; corolla radially symmetrical (absent in *Forestiera* in **OLEACEAE**); fruit either a 1-4-seeded drupe, or a many-seeded berry, or a capsule.
- 20 Stamens 8-10, of 2 different lengths in each flower; petals separate, 4-5 (-7), pink purple, 10-15 mm long; stems strongly arching, rooting at the tips; [plants of flooded to saturated wetlands].....*Decodon* in **LYTHRACEAE**
- 20 Stamens either (1-) 2 (-4), or 4-5, or 10, all of the same length; petals fused (separate in **RHAMNACEAE** and **BUXACEAE**, but then < 5 mm long and white or cream), white, bright-yellow, lilac, or pink; stems erect (or at least not arching and rooting at the tips); [plants of various habitats].
- 21 Petals separate, 4-5, white or cream; stamens 4-5.....**RHAMNACEAE**
- 21 Petals fused, 4-5, white, bright yellow, lilac, or pink; stamens either (1-) 2 (-4) or 10; fruit either a capsule or a 1-seeded drupe.
- 23 Perianth 5-merous; corolla pink; stamens 10; fruit a 5-locular capsule.....**ERICACEAE**
- 23 Perianth 4-merous; corolla white, bright yellow, or lilac; stamens (1-) 2 (-4); fruit either a 1-seeded drupe or a 2-locular capsule.....**OLEACEAE**

Key J5 - trees with opposite simple leaves with entire margins

- 1 Leaves deciduous (medium to pale green, thin in texture); leaves strictly opposite.
- 2 Leaves 10-70 cm wide, cordate or subcordate at the base; flowers 5-merous, bilaterally symmetrical, large (20-70 mm long), the petals connate into a tube; fruit a capsule.
- 3 Flowers white to yellow; capsules linear, >10× as long as wide; leaf undersurface with curly simple hairs; nectar glands present in the main vein axils on the undersurface of the leaf (visible from the underside or the upperside in fresh leaves and herbarium specimens as a triangle 1-4 mm on a side).....*Catalpa* in **BIGNONIACEAE**
- 3 Flowers lavender; capsules ellipsoid, < 2× as long as wide; leaf undersurface with branched (dendritic or stellate) hairs; nectar glands absent.....*Paulownia* in **PAULOWNIACEAE**
- 2 Leaves 1-12 cm wide, cuneate to rounded at the base; flowers 4-6-merous, radially symmetrical, small to medium (< 25 mm long), the petals either connate into a tube or separate and clawed; fruit a drupe or capsule.....*Lagerstroemia* in **LYTHRACEAE**

KEY TO FAMILIES AND GENERA

- 1 Leaves evergreen (dark green or gray-green, thick in texture); leaves opposite or subopposite (offset by < 2mm from the opposing leaf).
 - 6 Mangroves, with one of various adaptations to growing in tidal or near-tidal, saline situations: prominent salt-excreting glands on the petiole (*Laguncularia* in COMBRETACEAE), or prop roots (*Rhizophora* in RHIZOPHORACEAE), or abundant pneumatophores (*Avicennia* in ACANTHACEAE); [FL and less commonly subtropical shores of other, especially Gulf Coast, southeastern states].

..... *Avicennia* in ACANTHACEAE
 - 6 Non-mangroves; [collectively widespread].

..... OLEACEAE

Key K - holoparasites and holomycotrophs

- 1 Stems thin, flexible, twining, yellow to bright orange; plants parasitic on the stems of other vascular plants via above-ground haustoria.

..... *Cuscuta* in CONVOLVULACEAE
- 1 Stems erect, stiff, straight, variously colored (tan, red, violet, brown, white, pink); plants mycotrophic (or indirectly parasitic via a fungal intermediary), attached to fungi underground.
 - 3 Flowers radially symmetrical.

..... ERICACEAE
 - 3 Flowers bilaterally symmetrical.
 - 5 Petals 3, separate; stamen 1; capsule 1-locular, pendent when mature, opening by 3 slits; [Monocots] ORCHIDACEAE
 - 5 Petals fused into a tube, with 4-5 lobes; stamens 4; capsule 2-locular, ascending or spreading when mature, opening by 2 valves; [Eudicots] OROBANCHACEAE

Key L - epiphytic angiosperms {Note that epiphytic Pteridophytes are not re-keyed here; seek them in Keys A4 and A6}

- 1 Stems yellow to bright orange, lacking leaves *Cuscuta* in CONVOLVULACEAE
- 1 Stems green or brown, with leaves (scale-like or larger).
 - 2 Leaves opposite, orbicular or oblanceolate, rounded at the apex; [Eudicots] *Phoradendron* in VISCACEAE
 - 2 Leaves alternate, either orbicular or oblanceolate (rounded at the apex), or scale-like, or elongate and tapering, or lanceolate-elliptic.
 - 4 Leaves either scale-like or elongate and tapering; flowers radially symmetrical *Tillandsia* in BROMELIACEAE
 - 4 Leaves lanceolate-elliptic; flowers bilaterally symmetrical ORCHIDACEAE

Key M - monocots {Note that strictly aquatic monocots are not additionally keyed here; seek them in Key C. Some amphibious monocots are keyed both here and in Key C}

- 1 Leaves lacking a differentiated petiole, either with essentially parallel margins for most of the leaf's length, or tapering from base to apex, or scale like (< 15 mm long, often clasping the stem), or with lanceolate leaves slightly dilated above the base and > 6× as long as broad, or a grass (the leaf consisting of a sheath, with a ligule and/or constriction at the summit, diverging from the stem into a blade, this sometimes no more than 3× as long as wide, but more often lanceolate to linear); leaves simple and unlobed **Key M1**
- 1 Leaves with a differentiated petiole and blade, the blade > 10 mm long, and the leaf < 6× as long as broad; leaves either simple and unlobed, or compound, or palmately divided **Key M2**

Key M1 - monocots with linear, scale, or narrow leaves (or grasses)

- 1 Primary inflorescences of spikelets, these consisting of 1-2-many reduced florets, each subtended by 1-2 scales (and also enclosed in a sac or perigynium in *Carex* in CYPERACEAE), arrayed spirally or distichously, the spikelets then themselves arrayed in various dense or diffuse secondary or tertiary inflorescences; perianth absent, or reduced to chaff, scales, paddles, or bristles.
 - 2 Leaf sheaths continuous, lacking a split or only irregularly split in age; leaves usually 3-ranked (sometimes reduced to a sheath with a small scale at the summit; stems triangular in ×-section (or roundish), usually with a pith; flowers spirally arrayed in the spikelet (or distichously arrayed, in e.g. *Cyperus*, *Dulichium*, *Kyllinga*); anthers basifixed CYPERACEAE
 - 2 Leaf sheaths generally split lengthwise on the side opposite the leaf blade; leaves usually 2-ranked; stems round or flattened in ×-section, usually hollow; flowers distichously arrayed in the spikelet; anthers versatile POACEAE
- 1 Primary inflorescences of dense spikes, spadices, heads, glomerules, or a compound corymb of helicoid cymes; perianth present, often very small and variously colored.
 - 3 Leaves equitant (the leaves distichous, in a fan-like array, e.g. *Iris*, each leaf clasping the next above in a basal fold, this uniting above so that the main leaf blade, above the basal fold, has only the lower [abaxial] leaf surface visible because of fusion of the 'upper' surfaces).
 - 4 Inflorescence a very densely flowered spike (spadix), appearing lateral, 1 per plant; fresh plant strongly aromatic *Acorus* in ACORACEAE
 - 4 Inflorescence either more diffuse, 1 or several per plant, or terminal and cone-like; fresh plant not aromatic.
 - 5 Inflorescence brownish or tan, spherical, ovoid, or cylindrical, with numerous scale-like bracts arrayed in a cone; flowers individually conspicuous, a single yellow (to white) flower at a time emerging from each of the scales *Xyris* in XYRIDACEAE
 - 5 Inflorescence more diffuse.
 - 7 Inflorescence or flower groups subtended by well-developed, green or scarious spathaceous bracts; inflorescence either a fan-shaped pair of cymes, or seemingly racemose, or solitary IRIDACEAE
 - 7 Inflorescence or flower groups not subtended by spathes (though individual flowers may be subtended by small green bracts); inflorescence a raceme, panicle, or corymb.
 - 8 Inflorescence a corymb of helicoid cymes; corolla yellow, densely tomentose; roots bright red (*Lachnanthes*) or white to brown (*Lophiola*).
 - 9 Stamens 3, longer than the (ascending) tepals inner 3 tepals > 2 mm longer than the outer 3 tepals; rhizomes and roots of fresh plants bright red.. *Lachnanthes caroliniana* in HAEMODORACEAE
 - 9 Stamens 6, shorter than the (recurved) tepals; inner 3 and outer 3 tepals equal in length; rhizomes at roots of fresh plants white to brown *Lophiola aurea* in NARTHECIACEAE
 - 8 Inflorescence a terminal raceme (the flowers attached to the rachis in groups of 3 or more in *Triantha* in TOFIELDIACEAE); corolla white, cream, or yellow, glabrous; roots white or brown.

..... TOFIELDIACEAE
 - 3 Leaves not equitant, sometimes distichous, upper and lower surfaces both present.

KEY TO FAMILIES AND GENERA

- 11 Inflorescence either a linear spike, terminal, the thicker female portion below, the thinner male portion above, or an ovoid, hemispheric, spherical head or glomerule, 1 or several per plant
 12 Inflorescence a linear spike, terminal, the thicker female portion below, the thinner male portion above *Typha* in **TYPHACEAE**
- 12 Inflorescence an ovoid, hemispheric, or spherical head or glomerule, 1 or several per plant.
 13 Flowers in a single head terminating an elongate scape; leaves basal (often with 1-2 much smaller leaves or bladeless sheaths on the lower part of the scape); inflorescence white, tan, pale yellow, gray, or blackish, the head usually as broad as or broader than long, involucrate **ERIOCAULACEAE**
- 13 Flowers in multiple heads, not scapose; leaves basal and usually also prominently cauline; inflorescence green, tan, brown, or reddish, the head spherical, not involucrate.
 14 Flowers bisexual, the flowers in various arrays.....**JUNCACEAE**
- 14 Flowers unisexual, the male flowers in a terminal head, the female flowers in heads below the male along a usually zigzag stem.....*Sparganium* in **TYPHACEAE**
- 11 Individual flowers solitary or in more diffuse inflorescences; perianth present, at least one whorl petal-like in size, color, and texture.
 15 Flowers bilaterally symmetrical; stamen 1 or 2; tepals 6; perianth often differentiated into a lip and 5 petaloid tepals **ORCHIDACEAE**
- 15 Flowers radially symmetrical (sometimes weakly bilaterally symmetrical); stamens 6 (rarely 3); tepals usually 6 (rarely 3), when 6, either undifferentiated (6 tepals) or differentiated into 3 petals and 3 sepals.
 16 Leaves < 15 mm long, scale-like or linear; leaves cauline.
 17 Leaves (actually cladophylls) clustered, in whorls of (1-) 2-20 (-25); fruit a berry; perianth undifferentiated, of 6 yellow, white, or green tepals.....*Asparagus* in **ASPARAGACEAE**
- 17 Leaves alternate; fruit a capsule; perianth either differentiated, the 3 petals yellowish-green or maroon, or undifferentiated, the 6 tepals white, blue, or purplish.
 18 Plants terrestrial, erect; stems and leaves lacking a scaly indumentum; flower solitary, or several to many in heads or racemose cymes; perianth undifferentiated, the 6 tepals white, blue, or purplish **BURMANNIACEAE**
- 18 Plants either epiphytic and pendulous in festoons, or terrestrial, wetland, or aquatic and sprawling; stems and leaves with or without a scaly indumentum; flowers solitary and axillary; perianth differentiated, the 3 petals either yellowish-green or maroon.
 19 Plants epiphytic, pendulous in festoons; stems and leaves densely covered by silvery scales; petals yellowish-green *Tillandsia* in **BROMELIACEAE**
- 19 Plants of moist to wet habitats, sprawling or aquatic; stems and leaves not covered by silvery scales; petals maroon *Mayaca* in **MAYACACEAE**
- 16 Leaves (at least the larger) > 25 mm long, linear or narrowly lanceolate; leaves basal, basally disposed (or rarely mostly or entirely cauline).
 20 Ovary inferior (or partly inferior; ambiguous taxa keyed both ways).
 21 Inflorescence axillary, a raceme or umbel (or reduced to a single flower); petaloid tepals yellow.....*Hypoxis* in **HYPOXIDACEAE**
- 21 Inflorescence terminal; petaloid tepals various (including yellow).
 22 Inflorescence or flower groups subtended by well-developed, green or scarious spathaceous bracts; inflorescence either an umbel, or fan-shaped pair of cymes, or seemingly racemose, or solitary.
 23 Stamens 6; inflorescence an umbel (or sometimes solitary) **AMARYLLIDACEAE**
- 23 Stamens 3; inflorescence either a fan-shaped pair of cymes or seemingly racemose (or rarely solitary (e.g. *Crocus*))..... **IRIDACEAE**
- 22 Inflorescence or flower groups not subtended by spathes (though individual flowers may be subtended by small green bracts; inflorescence a raceme or panicle).
 24 Leaves fleshy; anthers 12-15 mm long..... **AGAVACEAE**
- 24 Leaves herbaceous; anthers < 5 mm long.
 25 Tepals connate into a tube; perianth tube exterior farinose; flowers bisexual, white to bright yellow; inflorescence a raceme.....*Alettris* in **NARTHECIACEAE**
- 25 Tepals distinct; perianth not farinose; flowers unisexual or bisexual, white, greenish, or creamy; inflorescence a raceme or panicle (raceme of racemes)..... **MELANTHIACEAE**
- 20 Ovary superior (or partly inferior; ambiguous taxa keyed both ways).
 26 Gynoecium of 2 or more pistils, each pistil consisting of 1 carpel and with 1 stigma; [wetland plants].
 27 Inflorescence a terminal raceme, the flowers (fruits) in whorls of 3; perianth differentiated into showy petals and green sepals, the petals white; leaf not differentiated into a sheath and blade separated by a ligule; fruit an aggregate of achenes **ALISMACEAE**
- 27 Inflorescence a terminal raceme or spike, the flowers (fruits) alternate; perianth not differentiated, consisting of 3 or 6 green or yellow-green tepals; leaf differentiated into an open sheath and blade, with a ligule separating them; fruit an aggregate of achenes or follicles.
 *Triglochin* in **JUNCAGINACEAE**
- 26 Gynoecium of 1 pistil, with 2-6 stigmas; [wetland and upland plants].
 29 Leaves strictly or primarily cauline.
 30 Leaves linear, > 15 cm long, hollow or flat; inflorescence an umbel; fresh plants with an oniony odor.....**ALLIACEAE**
- 30 Leaves linear to lanceolate, < 15 (-30) cm long, flat; inflorescence various, not an umbel; fresh plants without oniony odor.
 31 Petals < 2 cm long, white, blue, or pink; leaves alternate..... **COMMELINACEAE**
- 31 Petals > 5 cm long, yellow, orange, or red; leaves alternate or whorled..... *Lilium* in **LILIACEAE**
- 29 Leaves strictly or primarily basal (the basal leaves persistent, and larger than any stem leaves).
 33 Tepals brown or green, not at all yellow, white, or otherwise more brightly colored; inflorescence branched and complex **JUNCACEAE**
- 33 Tepals white, cream, pink, greenish-yellow, yellow, orange, pink, blue, or blue-brown; inflorescence either a terminal umbel, subtended by spathes or bracts, or a terminal raceme or panicle (or a terminal corymb in *Ornithogalum* in **HYACINTHACEAE**), not subtended by spathes or bracts.
 34 Inflorescence a terminal umbel, subtended by spathes or bracts; fresh plants with or without an oniony odor **ALLIACEAE**
- 34 Inflorescence a terminal raceme or panicle (or a terminal corymb in *Ornithogalum* in **HYACINTHACEAE**), not subtended by spathes or bracts.
 35 Tepals evidently connate, fused at least basally and sometimes nearly their entire length; filaments adnate to the tepals.
 36 Tepals 5-8.5 cm long, yellow to orange; anthers dorsifixed (attached near the middle) *Hemerocallis* in **HEMEROCALLIDACEAE**
- 36 Tepals 0.2-1.0 0.2-1.2 (-2.0) cm long, white, cream, yellow, blue, or blue-brown; anthers basifixed (attached at the base) or dorsifixed (attached at the back).
 38 Perianth blue or blue-brown, not farinose; leaves 2-7, erect, ascending, or the tips spreading; anthers dorsifixed (attached at the back)..... **HYACINTHACEAE**
- 38 Perianth white, cream, or yellow, farinose-roughened on the outer surface; leaves typically > 8, spreading to slightly ascending (often forming a flattish rosette); anthers basifixed (attached at the bottom).....*Alettris* in **NARTHECIACEAE**

- 35 Tepals completely distinct; filaments free (rarely epitepalous).
 39 Styles 1, lobed only in the upper portion if at all; fruit either loculicidal capsules or berry-like; tepals blue, pink, or white with a broad green central stripe.
 40 Tepals white, with a broad green stripe; inflorescence an umbel or raceme..... *Ornithogalum* in **HYACINTHACEAE**
 40 Tepals blue or pink; inflorescence a raceme
 41 Tepals blue, 7-17 mm long; inflorescence a true raceme *Camassia* in **AGAVACEAE**
 41 Tepals pink, 3-10 mm long; inflorescence a raceme-like dibotrya..... *Liriope* in **RUSCACEAE**
 39 Styles 3, separate to the base; fruit a septicidal capsules (sometimes then also secondarily loculicidal); tepals white, greenish, yellowish, or pink.
 42 Inflorescence ebracteate, lacking bracts subtending pedicels; tepals pink (*Helonias*) or white to cream (*Chamaelirium*).
 *Chamaelirium luteum* in **CHIONOGRAPHIDACEAE**
 42 Inflorescences bracteate, with bracts subtending individual pedicels and (if they are present) branches of the inflorescence; tepals white, greenish-white, or cream.
 **MELANTHIACEAE**

Key M2 - monocots with broad leaves

- 1 Leaves compound.
 2 Plants herbaceous; leaves palmately 3-foliolate or pedately compound **ARACEAE**
 2 Plants woody; leaves either palmately divided or pinnately compound into > 20 segments..... **ARECACEAE**
 1 Leaves simple.
 3 Leaves opposite or whorled, cauline.
 5 Plant with 2 or more leaf-bearing nodes (all nodes whorled or some alternate).
 6 Leaves broad, < 2× as long as wide, cordate at the base; flowers unisexual and plants dioecious *Dioscorea* in **DIOSCOREACEAE**
 6 Leaves lanceolate, oblanceolate or narrowly elliptic, > 4× as long as wide, cuneate at the base; flowers bisexual and plants hermaphroditic
 **LILIACEAE**
 5 Plant with a single leaf-bearing node.
 7 Leaves in whorls of 3 leaves..... **TRILLIACEAE**
 7 Leaves in whorls of 5 or more leaves.
 8 Stem floccose, wiry (and at maturity with a second smaller whorl with usually 3 leaves subtending the flowers); flowers radially symmetrical.....
 *Medeola* in **LILIACEAE**
 8 Stem glabrous, fleshy, never with a second whorl; flowers bilaterally symmetrical..... *Isotria* in **ORCHIDACEAE**
 3 Leaves alternate, either cauline or basal.
 9 Inflorescence a spadix (a dense spike of hundreds of flowers, the rachis thickened and somewhat fleshy) subtended by a spathe (a green, white, orange, yellowish-green, or maroon bract) (spathe missing in *Orontium*)..... **ARACEAE**
 9 Inflorescence otherwise, a raceme, panicle, cyme, umbel, spike, etc., the flowers arrayed in a more diffuse manner, the central rachis not thickened, the inflorescence subtended or not by green or scarious spathes.
 10 Flowers bilaterally symmetrical or asymmetrical; fertile stamens 1 or 2 (or 5 in **MUSACEAE**), often with several staminodes present as well; tepals 6.
 11 Leaf venation parallel; leaves various in size and shape, if > 3 dm long, then < 1 dm wide; perianth often differentiated into a lip and 5 petaloid tepals ...
 **ORCHIDACEAE**
 11 Leaf venation prominently penni-parallel; leaves large, at least some on a plant with blade > 2 dm long.
 12 Fertile stamens 5-6; leaf blades 6-30 dm long..... *Musa* in **MUSACEAE**
 12 Fertile stamen 1; leaf blades 0.5-7 dm long.
 13 Leaves spirally arranged.
 *Canna* in **CANNACEAE**
 13 Leaves 2-ranked.
 *Thalia* in **MARANTACEAE**
 10 Flowers radially symmetrical (weakly to strongly bilaterally symmetrical in **PONTEDERIACEAE**); stamens 6 (rarely 3, 4, 5, 9, 12, 15, or 18); tepals usually 6 (rarely 3 or 4), when 6, either undifferentiated (6 or 4 tepals) or differentiated into 3 petals and 3 sepals.
 16 Inflorescence subtended by spathes (well-developed green or scarious bracts).
 17 Perianth not differentiated, consisting of 6 similarly colored and shaped tepals; flowers strongly to slightly bilaterally symmetrical; inflorescence lacking well-developed spathaceous bracts..... **PONTEDERIACEAE**
 17 Perianth differentiated into green sepals and more brightly colored petals; flowers radially symmetrical (or weakly bilaterally symmetrical, as in some *Commelina*).
 18 Ovary superior; fruit a capsule; stamens 6; [plants mainly of uplands (*Murdannia* and sometimes *Commelina* of wetlands)]**COMMELINACEAE**
 18 Ovary inferior; fruit a berry; stamens 3, 6, 9, 12, 15, or 18; [plants of wetlands]..... **HYDROCHARITACEAE**
 16 Inflorescence not subtended by spathes, though individual small green bracts sometimes subtending individual flowers.
 19 Perianth differentiated into green sepals and white petals; gynoecium of 2 or more pistils, each pistil consisting of 1 carpel and with 1 stigma; fruit an aggregate of achenes or follicles; inflorescence a raceme or panicle with branching in whorls of 3; [wetland plants]..... **ALISMACEAE**
 19 Perianth not differentiated into strikingly different whorls (at most, with only subtle variation in the size or shape of the outer and inner whorls of the perianth); gynoecium of 1 pistil, with 2-6 stigmas; fruit simple, a capsule or berry; inflorescence various, terminal or axillary, but if a raceme or panicle, not with branching in whorls of 3; [upland (or very rarely wetland) plants].
 20 Leaves basal or basally disposed.
 21 Leaves 2 (rarely 3 in *Convallaria* in **RUSCACEAE**).
 23 Flowers in an umbel, white; fresh plants with oniony odor **ALLIACEAE**
 23 Flowers solitary, white or yellow; fresh plants without strong odor..... *Erythronium* in **LILIACEAE**
 21 Leaves 4 or more.
 *Chamaelirium* in **CHIONOGRAPHIDACEAE**
 20 Leaves cauline.
 27 Leaves both cordate/subcordate (rarely merely rounded at the base) and obviously petiolate.
 28 Inflorescence an axillary many-flowered umbel; fruit a berry; axillary tendrils often present (absent in some species).....
 *Smilax* in **SMILACACEAE**
 28 Inflorescence an axillary solitary flower, a few-flowered cyme, or a panicle; fruit a capsule (winged in *Dioscorea*, unwinged in *Croomia*); axillary tendrils never present (plant not climbing, or climbing by twining).
 *Dioscorea* in **DIOSCOREACEAE**

KEY TO FAMILIES AND GENERA

- 27 Leaves not both cordate/subcordate and petiolate (some with cordate clasping or perfoliate leaf bases). {add [*Smilax*] SMILACACEAE below}
- 30 Leaves alternate and in whorls at some nodes; flowers orange; tepals > 5 cm long; inflorescence a terminal umbel or single flower *Lilium* in LILIACEAE
- 30 Leaves strictly alternate; flowers yellow, white, pink, greenish, or maroon; tepals < 5 cm long; inflorescence either a terminal cluster, raceme, panicle or umbel, or an axillary raceme, cluster or solitary flower.
- 31 Inflorescence a terminal umbel; flowers slightly zygomorphic, reddish, the tepals 3.5-4.5 cm long *Alstroemeria* in ALSTROEMERIACEAE
- 31 Inflorescence either a terminal cluster, raceme, or panicle, or an axillary raceme, cluster or solitary flower; flowers actinomorphic, variously colored (most white or yellow), the tepals < 3.5 cm long (except *Uvularia grandiflora*).
- 32 Leaves arrayed spirally around an erect, unbranched stem; fruit a septicidal capsule; flowers a mixture of bisexual and unisexual (staminate) on a plant; perianth greenish white *Melanthium* in MELANTHIACEAE
- 32 Leaves arrayed distichously (2 ranked) along an arching, unbranched or dichotomously (Y-forking) branched stem; fruit a berry or loculicidal capsule; flowers all bisexual; perianth white, pink, or yellow.
- 34 Stems of fertile individuals simple (never branched); inflorescence a terminal raceme or panicle (*Maianthemum*) or axillary racemes or clusters of 1-9 flowers (*Polygonatum*); fruit a berry.
- 35 Inflorescence terminal, a raceme or panicle; tepals separate; leaves with 3 main parallel veins, acute to acuminate at the apex; foliage green, not glaucous *Maianthemum* in RUSCACEAE
- 35 Inflorescence of 1-several axillary flowers; tepals fused; leaves with > 7 main parallel veins, obtuse to acute at the apex; foliage blue-green, glaucous *Polygonatum* in RUSCACEAE
- 34 Stems of fertile individuals branched (always at least bifurcate); inflorescence either of 1 (-2) flower(s) borne in a leaf axil (*Uvularia*, *Streptopus*), or of (1) 2 (-3) flowers borne terminally opposite the last leaf; fruit a berry or capsule.
- 36 Leaves perfoliate; fruit a capsule *Uvularia* in COLCHICACEAE
- 36 Leaves sessile (though sometimes slightly to strongly clasping); fruit a berry or capsule *Uvularia* in COLCHICACEAE

Key N - herbaceous dicots with mainly basal leaves

- 1 Leaves compound Key N1
- 1 Leaves simple Key N2

Key N1 - herbaceous dicots with mainly basal, compound leaves

- 1 Leaves either 2-3-foliolate or palmately 4-11-foliolate (all the leaflets attached at a common point).
- 3 Inflorescence an involucre head subtended by phyllaries, the heads solitary or many and variously arrayed in secondary inflorescences, the ovary inferior, the corolla connate and tubular at least basally, the calyx absent, the stamens 5, the fruit a cypsel *ASTERACEAE*
- 3 Inflorescence, flower, and fruit structure various, but not with the combination of features as above.
- 4 Inflorescence an umbel; ovary inferior; fruit a mericarp of 2 schizocarps *APIACEAE*
- 4 Inflorescence various, usually not an umbel (sometimes an umbel in *Oxalis* in OXALIDACEAE); ovary superior; fruit an aggregate, legume, berry, or 2-valved capsule.
- 5 Leaflets either entire or barely and very shallowly crenulate or notched at the tip (but otherwise entire).
- 6 Inflorescence a spadix, surrounded by a spathe; fruit a berry; [Monocots {illogically keyed here because of the likelihood of being mistaken for a dicot}] *Arisaema* in ARACEAE
- 6 Inflorescence a raceme or umbel, not surrounded by a spathe; fruit a capsule or legume; [Eudicots].
- 7 Flowers bilaterally symmetrical; fruit a legume; [plant of uplands] *FABACEAE*
- 7 Flowers radially symmetrical; fruit a 2-valved or 5-valved capsule; [plant of uplands or wetlands] *Oxalis* in OXALIDACEAE
- 5 Leaflets serrate, serrulate, or cleft.
- 9 Petals 4; stamens 6; fruit a silique *Cardamine* in BRASSICACEAE
- 9 Petals 5 or more; stamens 10 or more; fruit either a legume or an aggregate of achenes or follicles
- 10 Stamens many, fused into a staminal tube; carpels 10-20, in a ring; pubescence stellate (sometimes mixed with simple hairs) *Callirhoe* in MALVACEAE
- 10 Stamens 10-many, separate, or fused but not all into a staminal tube; carpel either 1 (FABACEAE), or 3-7 in a ring (RANUNCULACEAE), or many and spirally arranged on a conical receptacle (RANUNCULACEAE or ROSACEAE)
- 11 Leaflets serrulate; flowers bilaterally symmetrical; fruit a legume; corolla variously colored, including white *FABACEAE*
- 11 Leaflets serrate; flowers radially symmetrical; fruit an aggregate of achenes or of follicles; corolla white or yellowish or greenish.
- 12 Fruit an aggregate of follicles *RANUNCULACEAE*
- 12 Fruit an aggregate of achenes (borne on a fleshy, expanded receptacle in *Fragaria* and some *Potentilla*)
- 13 Flowers lacking a hypanthium *Ranunculus* in RANUNCULACEAE
- 13 Flowers with a hypanthium *ROSACEAE*
- 1 Leaves 1-pinnately compound (all leaflets attached to a central rachis) or more complexly compound (with several orders of branching, some leaflets at least attached to second-order branches from the rachis).
- 14 Leaves 1-pinnately compound (all leaflets attached to a central rachis).
- 15 Inflorescence an involucre head subtended by phyllaries, the heads solitary or many and variously arrayed in secondary inflorescences, the ovary inferior, the corolla connate and tubular at least basally, the calyx absent, the stamens 5, the fruit a cypsel *ASTERACEAE*
- 15 Inflorescence, flower, and fruit structure various, but not with the combination of features as above.
- 16 Flowers bilaterally symmetrical; fruit a legume *FABACEAE*
- 16 Flowers radially symmetrical; fruit a silique/silicle, or a schizocarp of mericarps, or an achene.
- 17 Petals 4; stamens 6; fruit a silique/silicle *BRASSICACEAE*
- 17 Petals 0 or 5 (if 0, the sepals petaloid); stamens 2, 4, 5, or many.
- 18 Stamens 5; fruit a schizocarp of 2 mericarps *APIACEAE*
- 18 Stamens 2, 4, or many; fruit an achene *ROSACEAE*
- 14 Leaves more complexly compound (with 2 or more orders of branching, some leaflets at least attached to second-order branches from the rachis).

KEY TO FAMILIES AND GENERA

- 19 Inflorescence an involucre head subtended by phyllaries, the heads solitary or many and variously arrayed in secondary inflorescences, the ovary inferior, the corolla connate and tubular at least basally, the calyx absent, the stamens 5, the fruit a cypsela..... **ASTERACEAE**
- 19 Inflorescence, flower, and fruit structure various, but not with the combination of features as above (sometimes the flowers in a head subtended by bracts, but then with other features differing, such as stamens 4, or green calyx present, or petals separate, or fruit a schizocarp of mericarps, etc.).
- 20 Leaf segments or ultimate lobes linear or lanceolate, $> 2\times$ as long as wide, < 4 mm wide.
- 21 Inflorescence an umbel; ovary inferior; fruit a mericarp of 2 schizocarps..... **APIACEAE**
- 21 Inflorescence various, but not an umbel; ovary superior; fruit an aggregate of follicles or an elongate capsule.
- 22 Carpels 2, fused; fruit an elongate capsule; flowers bilaterally symmetrical..... **FUMARIACEAE**
- 22 Carpels 5-10 or many, separate; fruit an aggregate; flower radially symmetrical..... **RANUNCULACEAE**
- 20 Leaf segments or ultimate lobes ovate or elliptic, $< 3\times$ as long as wide, > 5 mm wide.
- 23 Inflorescence an umbel; ovary inferior; fruit a mericarp of 2 schizocarps or a 5-seeded drupe.
- 24 Fruit a schizocarp of 2 mericarps **APIACEAE**
- 24 Fruit a 5-seeded drupe..... **Aralia in ARALIACEAE**
- 23 Inflorescence various, but not an umbel; fruit an aggregate of follicles or achenes, an elongate capsule, or a naked seed resembling a drupe.
- 25 Leaflets with < 10 ultimate 'points' (lobe or tooth terminations), these rounded to broadly acute, often large in comparison to the leaflet and appearing as "sublobes"; pistil 1 or 4-many.
- **RANUNCULACEAE**
- 25 Leaflets with > 11 ultimate 'points' (lobe or tooth terminations), these acuminate to acute; pistils 1-8.
- 29 Flowers bisexual (plants hermaphroditic); carpels 1-8 per flower; inflorescence a raceme, or a panicle of racemes with just a few branches; fruit an aggregate of follicles, a follicle, or a red or white berry..... **Actaea in RANUNCULACEAE**
- 29 Flowers unisexual (plants dioecious); carpels 3-4 per pistillate flower; inflorescence a panicle of racemes, with numerous branches; fruit an aggregate of follicles..... **Aruncus in ROSACEAE**

Key N2 - herbaceous dicots with mainly basal, simple leaves

- 1 Inflorescence an involucre head subtended by phyllaries, the heads solitary or many and variously arrayed in secondary inflorescences, the ovary inferior, the corolla connate and tubular at least basally, the calyx absent, the stamens 5, the fruit a cypsela **ASTERACEAE**
- 1 Inflorescence, flower, and fruit structure various, but not with the combination of features as above (sometimes the flowers in a head subtended by bracts, e.g. *Eryngium* in **APIACEAE**, but then with other features differing, such as stamens 4, or green calyx present, or petals separate, or fruit a schizocarp of mericarps, etc.).
- 2 Basal leaves 2-lobed, pinnately lobed, or palmately lobed (not considering cordate, hastate, or auriculate leaf bases as "lobed").
- 4 Leaf lobing pinnate.
- 5 Gynoecium of separate pistils (each with a single carpel); fruit an aggregate..... **Geum in ROSACEAE**
- 5 Gynoecium of a single pistil (with 2, rarely more, carpels); fruit simple.
- 6 Stamens many; sepals 2, petals 4; fresh plants with yellow, orange, or white milky juice..... **PAPAVERACEAE**
- 6 Stamens 4, 5, or 6; sepals 4 or 5; petals 4 or 5.
- 7 Petals 4, distinct; stamens 6..... **BRASSICACEAE**
- 7 Petals 5, fused; stamens 2, 4, or 5.
- 8 Corolla radially symmetrical; stamens 5..... **BORAGINACEAE**
- 8 Corolla 2-lipped, bilaterally symmetrical or asymmetrical; stamens 2 or 4.
- 9 Corolla lobes not twisted, the flower bilaterally symmetrical; stamens 2..... **Salvia in LAMIACEAE**
- 9 Corolla lobes twisted so as to make the flower asymmetrical; stamens 4..... **Pedicularis in OROBANCHACEAE**
- 4 Leaf lobing palmate.
- 10 Petiole attachment peltate.
- 11 Leaves < 10 cm in diameter..... **Hydrocotyle in ARALIACEAE**
- 11 Leaves > 15 cm in diameter..... **BERBERIDACEAE**
- 10 Petiole attachment marginal.
- 12 Ovary inferior.
- 13 Petals 4; stamens 8; fruit a capsule..... **Oenothera in ONAGRACEAE**
- 13 Petals 5; stamens 5; fruit a schizocarp of 2 mericarps.
- 14 Fruit tuberculate; leaves 3-lobed..... **Eryngium prostratum in APIACEAE**
- 14 Fruit smooth; leaves with 5 or more lobes **Hydrocotyle in ARALIACEAE**
- 12 Ovary superior, or half-inferior by fusion of a hypanthium a part of the way up the ovary wall.
- 15 Gynoecium of separate pistils (each with a single carpel); fruit an aggregate.
- 16 Perianth of 5 green sepals and 5 colored petals.
- 17 Carpels partly fused, arrayed in a ring of 10-20..... **MALVACEAE**
- 17 Carpels separate, spiral, many..... **RANUNCULACEAE**
- 16 Perianth of a single whorl of 3-12 petaloid sepals (the petals absent or small and rudimentary).
- 18 Leaves 2, the single flower terminal and associated with the upper leaf; fruit an aggregate of berries **Hydrastis in HYDRASTIDACEAE**
- **RANUNCULACEAE**
- 18 Leaves normally > 2 , flowers not as above; fruit an aggregate of achenes, utricle, or follicles
- 15 Gynoecium of a single pistil (with 1-5 carpels); fruit simple.
- 19 Hypanthium present, partially fused or not fused to the pistil; ovary partially inferior to superior **SAXIFRAGACEAE**
- 19 Hypanthium absent; ovary superior.
- 20 Petals connate at base; leaves sharply toothed..... **Hydrophyllum in HYDROPHYLLACEAE**
- 20 Petals distinct; leaves with rounded lobes or teeth.
- 21 Corolla radially symmetrical; petals 8-12; capsule fusiform, narrowed to both ends, $> 5\times$ as long as wide **Sanguinaria in PAPAVERACEAE**
- 21 Corolla bilaterally symmetrical; petals 5; capsule ovoid, $< 2\times$ as long as wide..... **Viola in VIOLACEAE**
- 2 Basal leaves not lobed, at most serrate or crenate (and sometimes also cordate, hastate, auriculate, or peltate at the base).
- 22 Basal leaves petiolate, the blade with a cordate, hastate, auriculate, or peltate base.
- 23 Leaf margins entire.
- 24 Inflorescence a terminal and/or axillary raceme, panicle, or cyme of many small flowers; fruit an achene; perianth uniseriate, of 0, 4-5, or 6 tepals.
- **POLYGONACEAE**
- 24 Inflorescence either a terminal spike, or a 1-7-flowered terminal cyme, or of a solitary axillary or terminal flower; fruit various; perianth biseriate (of differentiated sepals and petals (except uniseriate, of 3 fused sepals in **ARISTOLOCHACEAE**)).

KEY TO FAMILIES AND GENERA

- 26 Flowers bilaterally symmetrical; inflorescence a terminal spike (with > 20 flowers); petals 4, usually scarious, transparent; sepals 4, green; stamens 4.....*Plantago* in **PLANTAGINACEAE**
- 26 Flowers radially symmetrical; inflorescence either of a solitary flower or of a 1-7-flowered terminal cyme; petals 5, 8-12, or 0; sepals 5 (green), 3 (brown), or 5-9 (yellow); stamens 5, 12, or many.
- 27 Gynoecium of separate pistils (each with a single carpel); fruit an aggregate of achenes or follicles; flowers bright yellow, either of 5-9 distinct petaloid sepals, or of 8-12 distinct petals subtended by 3-4 green distinct sepals..... **RANUNCULACEAE**
- 27 Gynoecium either of a single pistil with 6 carpels or of a single pistil with 4 carpels or of 2 nearly separate carpels; fruit a simple capsule (or deeply 2-lobed); flowers white, brown, or greenish, either of 5 fused or distinct white petals and 5 fused or distinct green sepals, or of 3 fused brown or greenish petaloid sepals.
- 28 Flowers brown or green, of 3 fused brown or greenish petaloid sepals (and 0 petals); carpels 6; stamens 12; leaves 4-10 cm wide **ARISTOLOCHIACEAE**
- 28 Flowers white, of 5 white or whitish petals and 5 green sepals; carpels 2; stamens 5; leaves 1-12 (-15) cm wide
- 29 Petals separate; sepals separate; plant glabrous *Parnassia* in **PARNASSIACEAE**
- 29 Petals fused; sepals fused; carpels 2; plant pubescent. *Dichondra* in **CONVOLVULACEAE**
- 23 Leaf margins crenate, serrate, or incised.
- 31 Gynoecium of separate pistils (each with a single carpel); fruit an aggregate; perianth of 5 green sepals and 5 colored petals.
- 32 Carpels 10-20, partly fused, arrayed in a ring; petals white, pink, red, or purplish.....**MALVACEAE**
- 32 Carpels many, separate, spiral; petals yellow or white.
- 33 Flowers lacking a hypanthium; fruit an aggregate of achenes or aggregate of follicles..... **RANUNCULACEAE**
- 33 Flowers with a hypanthium; fruit an aggregate of drupelets or aggregate of achenes **ROSACEAE**
- 31 Gynoecium of a single pistil (with 1-5 carpels); fruit simple.
- 34 Flowers bilaterally symmetrical; inflorescence of a solitary flower; fruit a 3-locular capsule..... *Viola* in **VIOLACEAE**
- 34 Flowers radially symmetrical; inflorescence an umbel (or composite of umbelliform units, or a terminal panicle.
- 35 Ovary superior; inflorescence a terminal panicle or terminal raceme. **BRASSICACEAE**
- 35 Ovary inferior; inflorescence an umbel (or a composite of umbellate units); fruit a schizocarp of mericarps.
- 37 Petiole attachment peltate..... *Hydrocotyle* in **ARALIACEAE**
- 37 Petiole attachment marginal (the blade cleft to the petiole.
- 38 Leaf blades longer than wide, sharply V-cleft at the base and otherwise shallowly denticulate*Centella* in **APIACEAE**
- 38 Leaf blades as broad or broader than long, cleft at the base and also irregularly serrate or crenate around the margin *Hydrocotyle* in **ARALIACEAE**
- 22 Basal leaves petiolate or not, with a truncate, rounded, or cuneate leaf base.
- 39 Leaves tubular, with a sutured ventral flange, erect or reclining, adapted as a pitfall for insects (flat, phyllodial leaves sometimes present as well, common in the winter in some species, such as *S. oreophila*) *Sarracenia* in **SARRACENIACEAE**
- 39 Leaves flat, not sutured into a tubular shape.
- 40 Stem leaves opposite; perianth 5-merous, at least the corolla bilaterally symmetrical (barely so in **VALERIANACEAE**), or the parts curved so as to be asymmetrical (*Pedicularis* in **OROBANCHACEAE**); stamens 2, 3, or 4.
- 41 Ovary inferior; stamens 3..... **VALERIANACEAE**
- 41 Ovary superior; stamens 2 or 4.
- 42 Corolla narrowly tubular, the five lobes flaring at nearly 90 degrees and nearly radially symmetrical *Buchnera* in **OROBANCHACEAE**
- 42 Corolla distinctly 2-lipped (with prominently large upper and lower corolla lobes) or hooded (the upper lip hood-like), distinctly bilaterally symmetrical, or the lobes twisted so as to make the corolla asymmetrical.
- 43 Corolla yellow, the upper lip often slightly to strongly maroon, hooded but the corolla lobes twisted so as to make the flower asymmetrical.... *Pedicularis* in **OROBANCHACEAE**
- 43 Corolla white, lavender, or blue, 2-lipped and bilaterally symmetrical.
- 44 Sepals separate to the base or nearly so, not forming a tube..... *Lindernia* in **LINDERNIACEAE**
- 44 Sepals connate for at least 0.3× their length to form a tube *Mazus* in **MAZACEAE**
- 40 Stem leaves alternate; perianth radially symmetrical (less commonly bilaterally symmetrical); stamens 5, 6-8, 9, 10 (rarely 4).
- 45 Ovary inferior (or half-inferior in *Samolus*).
- 46 Perianth 4-merous; stamens 8 *Oenothera* in **ONAGRACEAE**
- 46 Perianth 5-merous; stamens 5.
- 47 Inflorescence an umbel; fruit a schizocarp of 2 mericarps..... **APIACEAE**
- 47 Inflorescence an axillary or terminal raceme; fruit a capsule..... *Samolus* in **PRIMULACEAE**
- 45 Ovary superior.
- 48 Pistils many, each with a single carpel; fruit an aggregate of achenes *Myosurus* in **RANUNCULACEAE**
- 48 Pistil 1, with 1-5 carpels; fruit simple (a legume, silique/silicle, capsule, utricle, or schizocarp of 4 nutlets).
- 49 Corolla bilaterally symmetrical (barely so in *Limosella* in **SCROPHULARIACEAE**); stamens 2, 4, 6, 8, or 10.
- 50 Stamens 6-8 or 10.
- 51 Petals separate; stamens 10..... *Micranthes* in **SAXIFRAGACEAE**
- 51 Petals fused; stamens 10 or 6-8.
- 52 Stamens 10, monadelphous..... **FABACEAE**
- 52 Stamens 6-8, epipetalous *Polygala* in **POLYGALACEAE**
- 50 Stamens 2 or 4.
- 53 Stamens 2..... **LENTIBULARIACEAE**
- 53 Stamens 4.
- 55 Flowers (and subtending bracts) red or yellow *Castilleja* in **OROBANCHACEAE**
- 55 Flowers purple, blue, or lavender..... *Mazus* in **MAZACEAE**
- 49 Corolla radially symmetrical; stamens 5, 10, 4-6, or 9.
- 56 Perianth of 6 tepals; stamens 4-6 or 9; carpels 3..... **POLYGONACEAE**
- 56 Perianth of green sepals and more brightly colored petals; stamens 5 or 10; carpels 2, 3, 4, or 5.
- 57 Leaves covered with sticky, gland-tipped hairs (often red), as flypaper traps for insects..... *Drosera* in **DROSERACEAE**
- 57 Leaves lacking sticky gland-tipped hairs.
- 58 Fruit a schizocarp of 4 nutlets (ovary obviously 4-lobed in flower)..... **BORAGINACEAE**
- 58 Fruit a capsule or silique/silicle (or utricle in *Limonium* in **PLUMBAGINACEAE**).

- 59 Inflorescence of a solitary, terminal flower; carpels 2-3 (-4). **PARNASSIACEAE**
- 59 Inflorescence of several to many flowers; carpels 5 (3 in *Galax* in DIAPENSIACEAE).
 62 Inflorescence an umbel; petals recurved, pink to almost white **Primula in PRIMULACEAE**
 62 Inflorescence a raceme or panicle.
 63 Fruit a silique/silicle; petals 4; stamens 6. **BRASSICACEAE**
 63 Fruit either a capsule or a utricle; petals 5; stamens 5 or 10.
 64 Inflorescence a somewhat to very diffuse panicle, with 3 or more orders of branching, not giving at all the impression that the overall inflorescence is made of racemose units.
 65 Leaves entire; stamens 5; [plants of tidal marshes] **Limonium in PLUMBAGINACEAE**
 65 Leaves serrate or crenate; stamens 10; [plants of various habitats, especially rock outcrops and bottomland forests and streambanks, never in tidal marshes] **Micranthes in SAXIFRAGACEAE**
 64 Inflorescence either a single terminal raceme (sometimes spike-like), or of 1 to several terminal and axillary racemes (these sometimes combined into a diffuse panicle, but one whose structure is clearly made up of many racemes).
 66 Inflorescence of 1-several terminal and axillary racemes, the plant typically well-branched, especially from the base; stamens 5. **Samolus in PRIMULACEAE**
 66 Inflorescence of a single, terminal raceme, the plant unbranched; stamens 10 (or 5, with 5 staminodes) **ERICACEAE**

Key O - herbaceous dicots with alternate, compound leaves on the stem

- 1 Leaves either 3-foliolate or palmately 4-11-foliolate (all the leaflets attached at a common point, or the leaflets slightly pedate in *Helleborus* in RANUNCULACEAE).
 2 Inflorescence an involucre head subtended by phyllaries, the heads solitary or many and variously arrayed in secondary inflorescences, the ovary inferior, the corolla connate and tubular at least basally, the calyx absent, the stamens 5, the fruit a cypsela. **Nabalus in ASTERACEAE**
 2 Inflorescence, flower, and fruit structure various, but not with the combination of features as above. {add under 2b [*Cynoscadium*] APIACEAE; [*Cannabis*] CANNABACEAE}
 3 Leaflets obviously and sharply serrate; pistils 5-many; fruit an aggregate of achenes, drupelets, or follicles. **ROSACEAE**
 3 Leaflets entire, finely denticulate, or very obscurely toothed (or irregularly serrate or lobed in *Cardamine* in BRASSICACEAE); pistil 1; fruit simple, a legume, capsule, silique, or berry.
 5 Corolla bilaterally symmetrical; petals 5; fruit a legume; carpel 1. **FABACEAE**
 5 Corolla radially symmetrical; petals 4 or 5; fruit either an elongate capsule or a berry; carpels 1, 2, or 5.
 6 Leaflets radially arranged at the summit of the petiole, not differentiated in size or placement into a terminal leaflet and 2 lateral leaflets; leaflets prominently notched at the apex; petals 5, yellow; inflorescence axillary, cymose or umbelliform; carpels 5 **Oxalis in OXALIDACEAE**
 6 Leaflets differentiated in size and placement into a terminal leaflet and 2 or more lateral leaflets; leaflets not regularly notched at the apex (a few may be slightly retuse); petals 4, white, pink, or yellow; inflorescence terminal and racemose; carpels 1 or 2.
 8 Stem leaves 1-3, alternate [or whorled or opposite]; leaflets 3, irregularly serrate, lacerate, or additionally divided or lobed; fruit a silique; carpels 2. **Cardamine in BRASSICACEAE**
 8 Stem leaves >3, alternate; leaflets (1-) 3-7, each entire or obscurely toothed; fruit a capsule; carpel 1 **CLEOMACEAE**
 1 Leaves either 1-pinnately compound (all leaflets attached to a central rachis) or more complexly compound (with several orders of branching, some leaflets at least attached to second-order branches from the rachis).
 9 Inflorescence an involucre head subtended by phyllaries, heads solitary or many, variously arrayed in secondary inflorescences; fruit a cypsela; ovary inferior ...
 9 Inflorescence various, but not as above; fruit various, not as above; ovary superior. **ASTERACEAE**
 10 Leaves 1-pinnately compound (all leaflets attached to a central rachis).
 11 Flowers bilaterally symmetrical, papilionaceous; fruit a legume; leaves even-pinnately or odd-pinnately compound, the terminal leaflet sometimes replaced by a tendril; leaflets entire or at most minutely denticulate. **FABACEAE**
 11 Flowers radially symmetrical (or barely bilaterally symmetrical in *Erodium* in GERANIACEAE); fruit a capsule, capsular but of 5 mericarps, or an aggregate of achenes, nutlets, or follicles (in some cases the # of pistils from many down to 2 or even 1); leaves odd-pinnately compound, never with tendrils; leaflets serrate (or entire to shallowly lobed in *Polemonium* in POLEMONIACEAE, *Cardamine* in BRASSICACEAE, and *Floerkea* in LIMNANTHACEAE).
 12 Pistils many (only 1-2 in *Agrimonia*, *Poteridium*, *Poterium*, and *Sanguisorba*); fruit an aggregate of achenes, nutlets, or follicles; hypanthium present; stamens 5-many (only 4 in *Poteridium* and *Sanguisorba*). **ROSACEAE**
 12 Pistil 1 (or deeply 2-3-lobed in *Floerkea* in LIMNANTHACEAE); fruit a silique, capsule, schizocarp of 2-3 mericarps, or a capsular schizocarp of 5 mericarps (*Erodium* in GERANIACEAE); hypanthium absent; stamens 3-6.
 14 Petals 4, distinct; stamens 6; inflorescence a terminal raceme; fruit a silique/silicle. **BRASSICACEAE**
 14 Petals 5, fused (distinct in *Erodium* in GERANIACEAE); stamens 5; inflorescence axillary or terminal, cymose, consisting of subcapitate, umbel-like, or helicoid cymes; fruit either a capsule, or a capsular schizocarp of 5 mericarps (*Erodium* in GERANIACEAE).
 15 Flowers slightly bilaterally symmetrical (2 of the petals of different size than the other 3); fruit a capsular schizocarp of 5 mericarps; carpels 5
 15 Flowers radially symmetrical; fruit either a loculicidal capsule or a berry; carpels 2 or 3. **Erodium in GERANIACEAE**
 16 Fruit a berry; fresh plant rankly fragrant. **SOLANACEAE**
 16 Fruit a capsule; fresh plant not aromatic.
 17 Capsule 2-valvate; carpels 2; leaflets prominently serrate or with some tooth-like sublobes. **HYDROPHYLLACEAE**
 17 Capsule 3-valvate; carpels 3; leaflets with entire margins. **Polemonium in POLEMONIACEAE**
 10 Leaves more complexly compound (with 2 or more orders of branching, some leaflets at least attached to second-order branches from the rachis).
 18 Leaves 2× even-pinnate; flowers in spikes or spherical heads; {XXXX} **FABACEAE**
 18 Leaves either 2× odd-pinnate or more complexly 2-4× ternately or ternately-pinnately compound; {YYYY}.
 19 Leaf segments linear, less than 2 mm wide.
 20 Inflorescence an umbel; ovary inferior, of 2 fused carpels; fruit a schizocarp of 2 mericarps. **APIACEAE**
 20 Inflorescence either a terminal solitary flower or terminal raceme or panicle; ovary superior, either of 2 fused carpels or of 1-5 or many distinct 1-carpellate pistils; fruit either a capsule or an aggregate of follicles or achenes.
 21 Ovary of 2 fused carpels; fruit a capsule (1-seeded and indehiscent in *Fumaria*) **FUMARIACEAE**
 21 Ovary of 1-5 or many distinct 1-carpellate pistils; fruit an aggregate of follicles or achenes. **RANUNCULACEAE**

KEY TO FAMILIES AND GENERA

- 19 Leaf segments broader, lanceolate, ovate, or elliptic, > 5 mm wide.
 22 Herbaceous vine climbing by axillary tendrils; stamens 8..... *Cardiospermum* in **SAPINDACEAE**
 22 Erect or sprawling herb; stamens 5-6 or >15.
 23 Leaflets sharply serrate, with usually many teeth on each leaflet side, the total number of "points" per leaflet > 10.
 24 Inflorescence an umbel; ovary inferior, of 2 fused carpels; fruit a schizocarp of 2 mericarps; inflorescence an umbel **APIACEAE**
 24 Inflorescence a panicle or raceme; ovary superior, of 1-8 carpels; fruit an aggregate of follicles, a single follicle, or an indeshiscent berry-like fruit.
 25 Flowers bisexual; carpels 1-8; fruit an aggregate of follicles, a single follicle, or an indeshiscent berry-like fruit.....
 *Actaea* in **RANUNCULACEAE**
 25 Flowers unisexual; carpels (in pistillate flowers) of 3 (-5) carpels; fruit an aggregate of follicles..... *Aruncus* in **ROSACEAE**
 23 Leaflets entire, or with 1-several, broad, obtuse, rounded, or broadly acute "sublobes", especially towards the tip of the leaflet, the total number of "points" per leaflet < 10.
 26 Inflorescence an umbel; ovary inferior, of 2 fused carpels; fruit a schizocarp of 2 mericarps..... **APIACEAE**
 26 Inflorescence a raceme, panicle, or cyme; ovary superior, of either 1-2 fused carpels or of many separate 1-carpellate pistils.
 27 Perianth bilaterally symmetrical, the corolla of 4 fused petals; plant a scandent vine or erect or sprawling herb..... **FUMARIACEAE**
 27 Perianth radially symmetrical, of 1-5 whorls of separate perianth parts; plant an erect herb.
 **RANUNCULACEAE**

Key P - herbaceous dicots with alternate, simple leaves on the stem

- 1 Leaves unlobed (the leaf base sometimes cordate, sagittate, or hastate) **Key P1**
 1 Leaves palmately or pinnately lobed (leaves with cordate, sagittate, or hastate leaf bases and otherwise unlobed are treated as unlobed), the lobes in some cases not prominent (much broader than long), but strongly associated with the primary veins
 2 Leaves palmately lobed **Key P2**
 2 Leaves pinnately lobed **Key P3**

Key P1 - herbaceous dicots with alternate, simple, and unlobed leaves on the stem

- 1 Inflorescence an involucre head subtended by phyllaries, the heads solitary or many and variously arrayed in secondary inflorescences, the ovary inferior, the corolla connate and tubular at least basally, the calyx absent, the stamens 5, the fruit a cypsela **ASTERACEAE**
 1 Inflorescence, flower, and fruit structure various, but not with the combination of features as above (sometimes the flowers in a head, e.g. *Eryngium* in **APIACEAE**, but then with other features differing, such as stamens 4, or green calyx present, or fruit a schizocarp of mericarps, etc.).
 2 Perianth uniserial (represented only by undifferentiated tepals or sepals) or completely absent; flowers usually unisexual, less commonly bisexual).
 3 Inflorescence a cyathium, consisting of a single pistillate flower (reduced to a single 3-carpellate pistil) and 2 or more staminate flowers (each reduced to 1 stamen), borne in a cup-like involucre, the involucre bearing pointed or rounded glands, these sometimes brightly colored and petaloid, mimicking an individual flower (the cyathia then secondarily arranged in terminal cymes, or solitary and axillary, etc.); fresh plants with milky juice; fruit a 3-lobed, 3-locular capsule *Euphorbia* in **EUPHORBIACEAE**
 3 Inflorescence not a cyathium (and staminate or bisexual flowers with > 1 stamen; fresh plants lacking milky juice (except *Stillingia* in **EUPHORBIACEAE**); fruit various, not as above.
 4 Leaf margins toothed in some manner (serrate, dentate, crenate, etc.)
 5 Leaf teeth rounded to subacute, resembling shallow lobes, irregular, few (mostly < 6 per leaf side).
 6 Fruit a single-seeded achene or utricle; [plants of various disturbed or saline, usually sunny habitats] **CHENOPODIACEAE**
 6 Fruit a 3-lobed, circumscissile dehiscent capsule; [plants native of rich moist shaded forests or aliens in suburban woodlands]
 *Pachysandra* in **BUXACEAE**
 5 Leaf teeth sharp to crenate, not lobe-like, regular, many (mostly > 10 per leaf side).
 7 Leaf bases cuneate **EUPHORBIACEAE**
 7 Leaf bases cordate to rounded.
 8 Styles 3; fruit a 3-lobed, 3-carpellate capsule (1 carpel sometimes aborting); inflorescence either a terminal or leaf opposed raceme, or a dense axillary condensed cyme with conspicuous toothed bracts subtending the flowers..... **EUPHORBIACEAE**
 8 Styles 1 or 2; fruit either an achene or a multiple of achenes; inflorescence either an axillary dense cyme (almost a head), or an axillary spike with glomerules, or a terminal or axillary panicle.
 9 Styles 2; inflorescence a dense axillary cyme (almost a head); fruit a multiple of achenes; plant lacking stinging hairs; [alien plant of weedy situations] *Fatoua* in **MORACEAE**
 9 Style 1; inflorescence an axillary spikes with glomerules, or a terminal or axillary panicle; plant either with stinging hairs or not; [plant a rare alien (*Boehmeria nivea*) or a native of moist forests (*Boehmeria cylindrica*, *Laportea*)] **URTICACEAE**
 4 Leaf margins entire.
 10 Ovary inferior or half-inferior.
 11 Leaf base cordate; calyx 3-lobed, fused into a bilaterally symmetrical, curved brown or yellowish tube; fruit a capsule **ARISTOLOCHIACEAE**
 11 Leaf base cuneate, rounded, or truncate; calyx of 3-4-5 distinct sepals, radially symmetrical, white or yellow; fruit a dry, nutlike drupe or an achene.
 *Comandra* in **COMANDRACEAE**
 10 Ovary superior.
 14 Inflorescence a leaf-opposed (sometimes apparently terminal) spike or raceme; flowers visually white from white petaloid sepals, white bracts, or white stamens.
 15 Sepals present, 4 or 5; petaloid, white; carpels 1 to many (-12); stamens 4 to many (-25); fruit a berry or an apically 2-lobed achene (as in *Petiveria*); leaf bases cuneate or rounded (but not cordate); [Eudicots].
 *Phytolacca* in **PHYTOLACCACEAE**
 15 Sepals absent; carpels 3-4; stamens 2-6 (-8); fruit a capsule, a 1-seeded drupe, or a schizocarp of 3-4 mericarps; leaf bases cordate or subcordate; [Basal Angiosperms].
 **SAURURACEAE**
 14 Inflorescence not leaf-opposed, either simpler (single axillary or glomerules of flowers) or more complexly branched (axillary or terminal panicles or complex cymes); flowers white, reddish, scarious, or greenish.
 18 Stipules tubular, sheathing (= ocreae); flowers subtended by tubular, sheathing bracteoles (= ocreolae); nodes usually prominently swollen; perianth usually of 5-6 white to pink tepals **POLYGONACEAE**
 18 Stipules not tubular or sheathing; flowers not subtended by ocreolae; nodes not swollen; perianth absent or of 3-5 sepals.

KEY TO FAMILIES AND GENERA

- 20 Ovary 3-locular; styles 3, each bifid; fruit a capsule, with 6 seeds..... *Phyllanthus* in **PHYLLANTHACEAE**
- 20 Ovary 1-locular; styles 1-3, not bifid; fruit a utricle or achene (1-seeded).
- 21 Styles 1, stigma 1; flowers unisexual..... *Parietaria* in **URTICACEAE**
- 21 Styles 1-3, if style 1, then stigmas 3; flowers bisexual or unisexual.
- 22 Tepals acute, scarious **AMARANTHACEAE**
- 22 Tepals usually blunt, herbaceous..... **CHENOPODIACEAE**
- 2 Perianth biseriate (represented by differentiated whorls of sepals and petals, the sepals usually green or drab in color, the petals often brightly colored); flowers nearly always bisexual (there are exceptions).
- 23 Ovary inferior or half-inferior.
- 24 Petals connate.
- 25 Inflorescence leaf-opposed, a dense, cylindrical spike *Sphenoclea* in **SPHENOCLEACEAE**
- 25 Inflorescence various, either a terminal head, or axillary and solitary, or variously axillary or terminal and more diffuse.
- 26 Leaves toothed; flowers blue to white..... **CAMPANULACEAE**
- 26 Leaves entire; flowers white..... *Samolus* in **PRIMULACEAE**
- 24 Petals distinct.
- 27 Petals 5; stamens 5; inflorescence a head; fruit a schizocarp of 2 mericarps *Eryngium* in **APIACEAE**
- 27 Petals 4-7; stamens 6 or more; inflorescence various, not a head; fruit a capsule.
- 28 Petals 4-7; stamens 1× or 2× as many as the petals, 4-7, 8, 10, 12, or 14; leaves herbaceous in texture..... **ONAGRACEAE**
- 28 Petals 5 (or sometimes doubled in horticultural forms); stamens 6-40 (or more); leaves fleshy in texture..... *Portulaca* in **PORTULACACEAE**
- 23 Ovary superior.
- 29 Corolla bilaterally symmetrical, petals connate (except distinct in **VIOLACEAE**); fruit a capsule or legume (except a 1-seeded indehiscent pod in *Krameria* in **KRAMERIACEAE**).
- 30 Petals distinct, 5; carpels 3; fruit a 3-loculed capsule **VIOLACEAE**
- 30 Petals connate (at least basally), 4, 5, 6, 7, or 8; carpels 1, 2, 4, 5, or 6 (rarely 3 in *Reseda* in **RESEDACEAE**); fruit a legume or 1-, 2-, or 5-loculed capsule (except a 1-seeded indehiscent pod in *Krameria* in **KRAMERIACEAE**).
- 31 Stamens 6-10 (-25), more than the number (4 or 5) of petals and the number (4 or 5) of the sepals; fruit a legume or a 1-6-carpellate capsule.
- 32 Stamens fused, monadelphous or diadelphous.
- 33 Stamens 10, monadelphous or diadelphous; fruit a legume **FABACEAE**
- 33 Stamens 6-8, monadelphous; fruit a capsule..... **POLYGALACEAE**
- 32 Stamens distinct.
- *Baptisia* in **FABACEAE**
- 31 Stamens 4-5, less than the number (5) of the petals; fruit a 2-5-carpellate capsule.
- 35 Pistil 5-carpellate; capsule 5-locular, explosively dehiscent; inflorescence axillary, small clusters of flowers *Impatiens* in **BALSAMINACEAE**
- 35 Pistil 2-carpellate; capsule 2 locular, opening gradually or not at all; inflorescence a terminal spike, raceme or panicle (or solitary, axillary flowers in *Chaenorhinum* in **PLANTAGINACEAE** and *Krameria* in **KRAMERIACEAE**).
- 37 Stamens 5; corolla not spurred; capsule septicidal; pubescence of the stem and leaves either gland-tipped or dendritically branched..... *Verbascum* in **SCROPHULARIACEAE**
- 37 Stamens 4; corolla with a distinct spur or sac at the base between the the 2 lower calyx lobes (except not spurred in *Digitalis* and *Schwalbea*); capsule loculicidal (only at the summit in *Antirrhinum* and *Chaenorhinum*, and septicidal in *Schwalbea*); pubescence of the stem and leaves neither gland-tipped (except in *Antirrhinum* and *Chaenorhinum*) nor dendritically branched.
- 38 Capsule septicidal; corolla not spurred..... **OROBANCHACEAE**
- 38 Capsule loculicidal; corolla spurred (except *Digitalis*)..... **PLANTAGINACEAE**
- 29 Corolla radially symmetrical, petals connate or distinct; fruit various (including a capsule).
- 39 Petals distinct; stamens 5-many.
- 40 Pistils 4-10 (each 1-carpellate) in a ring, these sometimes fused basally, each with its own style/stigma; fruit either an aggregate of achenes or follicles or a 5 (-7) locular capsule.
- 41 Pistils 5 (-7); inflorescence a compound terminal cyme.
- 42 Fruit an aggregate of follicles; leaves fleshy in texture; inflorescence; leaves entire of sparsely and coarsely serrate, with < 12 points per leaf; [plants primarily of dry habitats] **CRASSULACEAE**
- 42 Fruit a 5 (-7) locular capsule; leaves membranaceous in texture; leaves serrate, with > 20 points per leaf; [plants of wet habitats]..... *Penthorum* in **PENTHORACEAE**
- 41 Pistils many; inflorescence of solitary flowers, or diffuse.
- 43 Leaves cuneate at the base; flowers in a diffuse inflorescence..... *Ranunculus* in **RANUNCULACEAE**
- 43 Leaves cordate at the base; flowers solitary, on long pedicels *Rubus* in **ROSACEAE**
- 40 Pistil 1, with 1-to many carpels (in many **MALVACEAE**, the carpels loosely united in a ring [of more than 5] around the single style/stigma); fruit either a 1-, 2-, 3-, 5-, 6-, or 10-locular capsule, or a silique/silicle, or a ring of mericarps.
- 44 Petals 4; sepals 4; stamens 6; fruit a silique/silicle..... **BRASSICACEAE**
- 44 Petals 5 (rarely 4 or 6); sepals 5 (rarely 4 or 6); stamens 5 (or multiples of 5), 6, or 12; fruit a capsule or a ring of mericarps.
- 45 Stamens many, connate into a staminal tube; carpels 5-many; fruit a capsule or ring of mericarps; leaves usually serrate **MALVACEAE**
- 45 Stamens 5-many, distinct; carpels 2-5; fruit a capsule; leaves entire (serrate in *Croton* in **EUPHORBIACEAE**).
- 46 Flowers unisexual; leaf vestiture of peltate scales and/or stellate hairs *Croton* in **EUPHORBIACEAE**
- 46 Flowers bisexual; leaf vestiture simple or stellate.
- 47 Flowers 6-merous (the petals and sepals 6, the stamens 6 or 12); corolla pink or purplish (rarely white); fruit a septicidal capsule..... *Lythrum* in **LYTHRACEAE**
- 47 Flowers 5-merous (the petals and sepals 5, stamens 5 or various multiples of 5); corolla yellow, reddish, or blue; fruit a loculicidal or septicidal capsule.
- 48 Stamens 5; corolla yellow or blue; capsule either 10-locular and septicidal or 1-locular (with 3 carpels) and loculicidal.
- *Linum* in **LINACEAE**
- 48 Stamens (5-) 10, 15, 20, 30 (-many); corolla white, pink, yellow, or reddish; capsule 3-, 5- (-10)-locular, loculicidal.
- 50 Stamens (5-) 10, 15, 20, 30 (-many); corolla yellow or reddish; capsule 3 (-10)-locular, loculicidal **CISTACEAE**
- 50 Stamens 10; corolla white or pink; capsule 5-locular *Chimaphila* in **ERICACEAE**
- 39 Petals fused; stamens (4-) 5 (-7).

KEY TO FAMILIES AND GENERA

- 51 Pistils 2, united only by the style and stigma; fruit a schizocarp of 2 follicles (often single by abortion); plant with milky juice when fresh; leaves entire; inflorescence an umbel..... **APOCYNACEAE**
- 51 Pistil 1 (of 2 or 3 fused carpels); fruit a capsule; plant lacking milky juice; leaves entire or serrate; inflorescence various (but not an umbel).
- 52 Ovary slightly to deeply 2-4-lobed; fruit a schizocarp of 4 mericarps or a drupe.
- 53 Ovary deeply 4-parted; style gynobasic; fruit a schizocarp of 4 mericarps..... **BORAGINACEAE**
- 53 Ovary slightly 2-4-lobed, or not at all lobed; style terminal or reduced to a sessile terminal stigma; fruit a schizocarp of 4 mericarps, or a drupe..... **HELIOTROPIACEAE**
- 52 Ovary not lobed; fruit a capsule or berry.
- 54 Leaves scale-like, 1-4.5 mm long, appressed to the stem; petals 4; stamens 4..... **Bartonia in GENTIANACEAE**
- 54 Leaves larger (or only 2-8 mm long in *Pyxidantha* in **DIAPENSIACEAE**, but then spreading); petals 5-7; stamens 5-7.
- 55 Plant a creeping subshrub (keyed here as a failsafe); leaves either 0.2-0.8 cm long and acicular, or 2-10 cm long and broadly ovate or elliptic.
- **Epigaea in ERICACEAE**
- 55 Plant an herb, erect or sprawling; leaves > 1.5 cm long.
- 57 Leaves cordate at the base; plant a twining vine **CONVOLVULACEAE**
- 57 Leaves cuneate to rounded at the base; plant an erect, sprawling, or reclining herb (twining in *Solanum dulcamara* in **SOLANACEAE**).
- 58 Inflorescences (solitary or of several flowers) terminal on the stem.
- 59 Corolla lobes longer than the fused corolla cup, blue, pink, or white; styles 2; herbage lacking stipitate glands; fresh plants not aromatic.
- **Hydrolea in HYDROLEACEAE**
- 59 Corolla lobes very short, much shorter than the corolla cup or tube, sometimes barely perceptible and represented only by teeth on the edge of the corolla limb, white or pink; style 1; herbage often with stipitate glands; fresh plants often rankly aromatic
- **SOLANACEAE**
- 58 Inflorescences (of solitary or several flowers) axillary or lateral on the stem.
- 61 Flowers sessile or very-short pedicelled, solitary in the leaf axils.
- **Lysimachia in PRIMULACEAE**
- 61 Flowers either solitary and obviously pedicelled, or several in an axillary or lateral inflorescence.
- 63 Corolla lobes longer than the fused corolla cup, blue..... **Hydrolea in HYDROLEACEAE**
- 63 Corolla lobes very short, much shorter than the corolla cup or tube, sometimes barely perceptible and represented only by teeth on the edge of the corolla limb, white, yellow, pink, various other colors (rarely including blue).
- 64 Fruit a capsule, 4-seeded..... **CONVOLVULACEAE**
- 64 Fruit a berry or capsule, many-seeded..... **SOLANACEAE**

Key P2 - herbaceous dicots with alternate, simple, and palmately lobed leaves on the stem

- 1 Inflorescence an involucre head subtended by phyllaries, the heads solitary or many and variously arrayed in secondary inflorescences, the ovary inferior, the corolla connate and tubular at least basally, the calyx absent, the stamens 5, the fruit a cypsela **ASTERACEAE**
- 1 Inflorescence, flower, and fruit structure various, but not with the combination of features as above (sometimes the flowers in a head, e.g. *Eryngium* in **APIACEAE**, but then with other features differing, such as stamens 4, or green calyx present, or fruit a schizocarp of mericarps, etc.).
- 2 Plant a vine, climbing by tendrils or twining.
- 3 Vine climbing by twining.
- **CONVOLVULACEAE**
- 3 Vine climbing by tendrils.
- 5 Ovary inferior; petals connate; flowers unisexual..... **CUCURBITACEAE**
- 5 Ovary superior; petals distinct; flowers bisexual **Passiflora in PASSIFLORACEAE**
- 2 Plant an herb, sometimes sprawling, reclining (e.g. *Cymbalaria* in **PLANTAGINACEAE**, *Aconitum* in **RANUNCULACEAE**), but lacking climbing adaptations such as tendrils or twining stems.
- 6 Ovary inferior; inflorescence an umbel; fruit a schizocarp of 2 mericarps
- 7 Involucre well-developed and obvious **APIACEAE**
- 7 Involucre absent or minute..... **Hydrocotyle in ARALIACEAE**
- 6 Ovary superior; inflorescence various, not an umbel; fruit various, a capsule, an aggregate of achenes or follicles, a ring of (>2) mericarps.
- 8 Perianth uniseriate, the corolla absent (the calyx petaloid and white in *Cnidioscolus*); flowers unisexual; plants either with stinging hairs or not
- **EUPHORBIACEAE**
- 8 Perianth biseriate (uniserial in *Aphanes* in **ROSACEAE** and in *Trautvetteria* in **RANUNCULACEAE**); flowers bisexual; plants lacking stinging hairs.
- 9 Pistils many (or 2-3 in *Aphanes* in **ROSACEAE**), each with 1 carpel, arranged spirally or in a ring (if in a ring, of 2-5); fruit an aggregate of achenes, follicles, or utricle.
- 10 Perianth bilaterally symmetrical, either hooded or spurred; fruit an aggregate of follicles..... **RANUNCULACEAE**
- 10 Perianth radially symmetrical, not hooded or spurred; fruit an aggregate of utricle or achenes (plumose achenes in *Geum*)
- 11 Stamens showy, bright white, dilated towards the tip; pistils ca. 15; fruit an aggregate of utricle **Trautvetteria in RANUNCULACEAE**
- 11 Stamens not showy, white, or dilated towards the tip; pistils many (> 25); fruit an aggregate of achenes.
- 12 Flowers lacking a hypanthium; achenes short-beaked..... **Ranunculus in RANUNCULACEAE**
- 12 Flowers with a prominent hypanthium; achenes with an elongate, plumose beak **ROSACEAE**
- 9 Pistil 1, with 1-to many carpels (in many **MALVACEAE**, the carpels loosely united in a ring of more than 5 around the style); fruit a capsule, an achene, a follicle, or a ring of 3 or 5-many 1-seeded mericarps.
- 13 Perianth uniseriate, the corolla absent..... **Aphanes in ROSACEAE**
- 13 Perianth biseriate, with well-developed and differentiated calyx and corolla
- 14 Corolla bilaterally symmetrical, the petals connate (except distinct in *Delphinium* in **RANUNCULACEAE**); fruit a capsule, a follicle, or a schizocarp of 3 1-seeded mericarps.
- 15 Corolla not spurred; fruit an elongate (10-20 cm) capsule with 2 curved beaks..... **MARTYNIACEAE**
- 15 Corolla with a nectar spur; fruit < 3 cm long.
- **Delphinium in RANUNCULACEAE**
- 14 Corolla radially symmetrical, the petals distinct (fused and tubular in *Ipomoea*); fruit a capsule or a schizocarp consisting of a ring of 5-many 1-seeded mericarps.
- 18 Stem trailing; petals fused and tubular..... **Ipomoea in CONVOLVULACEAE**

18 Stem erect; petals separate.

- 19 Stamens many, connate into a stamen tube; carpels 5-many, completely or only loosely fused; fruit a capsule or a schizocarp of 5-many mericarps borne in a ring; calyx often subtended by an epicalyx (an additional calyx-like, green, foliaceous whorl of bracts) **MALVACEAE**
- 19 Stamens 5 or 10, distinct; carpels 2 or 5, fused; fruit a capsule or a schizocarp of 5 1-seeded mericarps.
- 20 Fruit a schizocarp of 5 1-seeded mericarps; carpels 5; stamens 10..... **Geranium in GERANIACEAE**
- 20 Fruit a capsule with 2 locules, loculicidal; carpels 2; stamens 5..... **Hydrophyllum in HYDROPHYLLACEAE**

Key P3 - herbaceous dicots with alternate, simple, and pinnately lobed leaves on the stem

- 1 Inflorescence an involucre head subtended by phyllaries, the heads solitary or many and variously arrayed in secondary inflorescences, the ovary inferior, the corolla connate and tubular at least basally, the calyx absent, the stamens 5, the fruit a cypsela **ASTERACEAE**
- 1 Inflorescence, flower, and fruit structure various, but not with the combination of features as above (sometimes the flowers in a head, e.g. *Eryngium* in **APIACEAE**, but then with other features differing, such as stamens 4, or green calyx present, or fruit a schizocarp of mericarps, etc.).
- 2 Perianth uniseriate, with only undifferentiated tepals; flowers many and small, greenish or brownish, inconspicuous individually; inflorescence of glomerules that are usually further aggregated into racemes or panicles; fruit an achene or utricle..... **CHENOPODIACEAE**
- 2 Perianth biseriate, both sepals and petals present and differentiated (except uniseriate and of 2 white to cream-colored sepals 5-10 mm long in *Macleaya* in **PAPAVERACEAE**); flowers larger, usually with the petals prominently colored; inflorescence various, but not as above; fruit a capsule, silique/silicle, or a schizocarp of 2 mericarps.
- 3 Corolla bilaterally symmetrical and the petals connate into a tube (or the corolla 2-lipped but the corolla lobes twisted so as to make the flower asymmetrical); stamens 4; fruit a 2-locular and loculicidal capsule opening by 2 valves **OROBANCHACEAE**
- 3 Corolla radially symmetrical and either connate into a tube or distinct (except *Reseda* in **RESEDACEAE**, with bilateral symmetry but separate petals); stamens 5 or more; fruit a silique/silicle, a schizocarp of 4 mericarps, or a 1-, 3-, or 4-locular capsule (2-locular in *Ipomoea* in **CONVOLVULACEAE** and *Glaucium* in **PAPAVERACEAE**), opening variously.
- 4 Ovary inferior; fruit either a schizocarp of 2 mericarps or a 4-locular capsule.
- 5 Flowers 5-merous, aggregated into a head; fruit a schizocarp of 2 mericarps..... **Eryngium in APIACEAE**
- 5 Flowers 4-merous, in a diffuse inflorescence; fruit a 4-locular capsule **Oenothera in ONAGRACEAE**
- 4 Ovary superior; fruit either a silique/silicle, or a 1-, 2-, or 3-locular capsule, or a berry.
- 6 Sepals and petals of different numbers, the sepals 2-3, the petals 0, 4, or 6; stamens many **PAPAVERACEAE**
- 6 Sepals and petals the same number, 4-8 each; stamens 5 or 6 (10-25 in *Reseda* in **RESEDACEAE**).
- 8 Petals 4, distinct; stamens 6; fruit a silique/silicle **BRASSICACEAE**
- 8 Petals 5, connate into a tube; stamens 5; fruit either a capsule or a berry.
- 9 Plant a twining vine. **Ipomoea in CONVOLVULACEAE**
- 9 Plant an erect or sprawling herb.
- 11 Fruit a capsule, 1-locular; corolla white, pink, lavender, or blue, the tube short (< 4 mm long), the lobes flaring, the corolla < 15 mm long or wide..... **HYDROPHYLLACEAE**
- 11 Fruit either a capsule, 2- or 3-locular, or a berry; corolla scarlet, blue, white, yellow, greenish-yellow, or purple, the tube long (>10 mm long) and cylindrical, the corolla > 10 mm long or wide.
- 12 Stigmas 3; fruit a capsule with 3 valves; {XXXX} **POLEMONIACEAE**
- 12 Stigmas 2; fruit either a capsule with 2 valves or a berry; {YYYY} **SOLANACEAE**

Key Q - herbaceous dicots with whorled leaves on the stem {add [*Platycodon*] **CAMPANULACEAE**}

- 1 Cauline leaves palmately compound.
- 2 Cauline leaves essentially sessile, and also palmately cleft to the base, and further lacerately divided into linear or oblanceolate segments..... **Anemone in RANUNCULACEAE**
- 2 Cauline leaves petiolate, with 3-5, sessile or petiolulate, ovate, elliptic, or obovate leaflets (these serrate and sometimes with additional lobes).
- 3 Inflorescence a spherical umbel of many flowers; fruit a drupe with 2-3 seeds; stem leaves 3-5 **Panax in ARALIACEAE**
- 3 Inflorescence of single terminal flowers on the 1-several branches; fruit an aggregate of achenes; stem leaves 3..... **Anemone in RANUNCULACEAE**
- 1 Cauline leaves simple.
- 5 Inflorescence an involucre head subtended by phyllaries, heads solitary or many, variously arrayed in secondary inflorescences; fruit a cypsela **ASTERACEAE**
- 5 Inflorescence various, but not as above; fruit various, not as above (sometimes the flowers tightly grouped, but then with other features differing, such as stamens 4, or green calyx present, or fruit a schizocarp of mericarps, etc.).
- 6 Fruit a 3-lobed, 3-locular capsule; inflorescence a cyathium, consisting of a single pistillate flower (reduced to a single 3-carpellate pistil) and 2 or more staminate flowers (each reduced to 1 stamen), borne in a cup-like involucre, the involucre bearing pointed or rounded glands, these sometimes brightly colored and petaloid, mimicking an individual flower (the cyathia then secondarily arranged in terminal cymes, or solitary and axillary, etc.); fresh plants with milky juice..... **Euphorbia in EUPHORBIACEAE**
- 6 Fruit various, not as above; inflorescence not a cyathium (and staminate or bisexual flowers almost always with > 1 stamen); fresh plants lacking milky juice.
- 7 Leaves succulent, the terminal whorls closely juxtaposed; pistils 4-5; fruit an aggregate of follicles..... **Sedum in CRASSULACEAE**
- 7 Leaves herbaceous, thin in texture, whorls separated; pistil 1, of 2-5 fused carpels; fruit a capsule, achene, or drupe.
- 8 Larger whorled leaves on a plant < 10 mm wide [some taxa keyed here and under the second lead].
- 9 Inflorescence a cymule, either axillary, or axillary and terminal; ovary inferior.
- 10 Leaves markedly variable in shape or size in each whorl; fruit a capsule; petals 5 **MOLLUGINACEAE**
- 10 Leaves similar in size and shape in each whorl; fruit dry or fleshy, indehiscent; petals (3-) 4..... **Galium in RUBIACEAE**
- 9 Inflorescence a terminal raceme, panicle, spike, cyme, corymb, or umbel; ovary superior.
- 11 Corolla bilaterally symmetrical, the petals connate; carpels 2; stamens 4, 6, or 8.
- 12 Stamens 4; corolla blue or almost white..... **PLANTAGINACEAE**
- 12 Stamens 6 or 8; corolla pink or yellow **Polygala in POLYGALACEAE**
- 11 Corolla radially symmetrical, the petals separate; carpels 2, 3, or 5; stamens 5, 10, or many.
- 13 Inflorescence an axillary umbel; leaves narrowly linear and more than 10× as long as wide, > 20 mm long and < 2 mm wide; whorls of 3-6 leaves..... **Asclepias verticillata in APOCYNACEAE**

- 13 Inflorescence a terminal cyme, raceme, panicle, or umbel; leaves as above, or broader in shape, narrower, or shorter; whorls of 3-16 leaves.
 - 14 Inflorescence a terminal cyme or umbel; corolla white; carpels 5.
 - 15 Leaves narrowly linear, 12-16 in each whorl; stamens 5..... *Spergula* in **CARYOPHYLLACEAE**
 - 15 Leaves ovate or obovate, 3 (-4) in each whorl..... *Chimaphila* in **ERICACEAE**
 - 14 Inflorescence a terminal raceme or panicle; corolla reddish, maroon, or yellow.
 - 16 Corolla reddish or maroon *Lechea* in **CISTACEAE**
 - 16 Corolla yellow..... **PRIMULACEAE**
- 8 Larger whorled leaves on a plant > 10 mm wide.
 - 19 Fruit dry or fleshy, indehiscent; petals (3-) 4; ovary inferior..... *Galium* in **RUBIACEAE**
 - 19 Fruit a capsule or follicle, dehiscent; petals 4-7; ovary superior.
 - 21 Corolla pink-purple, 6-merous, the petals separate and borne on the edge of a hypanthium; stamens 8, 10, or 12; [plants of wetlands] **LYTHRACEAE**
 - 21 Corolla white, yellow, or greenish, 4-, 5-, or 7-merous, the petals fused at least basally into a tube (falling as a unit), not on a hypanthium; stamens 2, 4, 5, or 7; [plants of mesic habitats].
 - 22 Stamens 2; corolla bilaterally symmetrical..... *Veronicastrum* in **PLANTAGINACEAE**
 - 22 Stamens 4, 5, or 7; corolla radially symmetrical.
 - 23 Petals yellowish-white, with prominent green streaks; biennial or monocarpic plant, 10-30 dm tall when fertile; leaves 15-35 cm long *Frasera* in **GENTIANACEAE**
 - 23 Petals white or yellow; perennial plants, 1-15 dm tall; leaves 1-15 cm long.
 - 24 Leaves punctate; stem without swollen nodes..... *Lysimachia* in **PRIMULACEAE**
 - 24 Leaves not punctate; stem with swollen nodes..... *Silene* in **CARYOPHYLLACEAE**

Key R - herbaceous dicots with opposite, compound leaves on the stem

- 1 Inflorescence an involucre head subtended by phyllaries, heads solitary or many, variously arrayed in secondary inflorescences; fruit a cypsela **ASTERACEAE**
- 1 Inflorescence various, but not as above; fruit various, not as above.
 - 2 Leaves pinnately compound. **ZYGOPHYLLACEAE**
 - 2 Leaves palmately compound.
 - 5 Cauline leaves essentially sessile, and also palmately cleft to the base, and further lacerately divided into linear or oblanceolate segments *Anemone* in **RANUNCULACEAE**
 - 5 Cauline leaves petiolate, with 3-5, sessile or petiolulate, ovate, elliptic, or obovate leaflets (these serrate and sometimes with additional lobes).
 - 6 Plants annual; flowers typically unisexual and not showy, green; plants highly resinous and glandular; inflorescences variously arranged *Cannabis* in **CANNABACEAE**
 - 6 Plants perennial; flowers radially symmetric, showy, variously colored; plants typically not strongly resinous or glandular; inflorescences terminal *Anemone* in **RANUNCULACEAE**

Key S - herbaceous dicots with opposite, simple leaves on the stem

- 1 Leaves unlobed (though sometimes serrate or crenate)..... **Key S1**
- 1 Leaves palmately or pinnately lobed (leaves with cordate, sagittate, or hastate leaf bases and otherwise unlobed are treated as unlobed).
 - 2 Leaves palmately lobed **Key S2**
 - 2 Leaves pinnately lobed **Key S3**

Key S1 - herbaceous dicots with opposite, simple, and unlobed leaves on the stem

- 1 Inflorescence an involucre head subtended by phyllaries, the heads solitary or many and variously arrayed in secondary inflorescences, the ovary inferior, the corolla connate and tubular at least basally, the calyx absent, the stamens 5, the fruit a cypsela **ASTERACEAE**
- 1 Inflorescence, flower, and fruit structure various, but not with the combination of features as above (sometimes the flowers in a head, e.g. *Pycnanthemum* in **LAMIACEAE**, but then with other features differing, such as stamens 4, or green calyx present, or fruit a schizocarp of mericarps, etc.).
 - 2 Leaves scale-like, stems fleshy; flowers embedded in the fleshy stem, no perianth present; [saline environments (coastal or rarely inland)] **CHENOPODIACEAE**
 - 2 Leaves small to large; stems not fleshy; flowers sessile or on pedicels; [collectively of many habitats, saline and not].
 - 3 Ovary inferior or partially inferior.
 - 4 Perianth of a single whorl (petals absent) (note that in *Mirabilis* in **NYCTAGINACEAE** the petaloid calyx is subtended by a 5-lobed fused set of involucral bracts).
 - 5 Leaves herbaceous, suborbicular, about as long as wide or wider than long; calyx 3- or 4-merous; stamens 4, 8, or 12. *Asarum* in **ARISTOLOCHIACEAE**
 - 5 Leaves fleshy, linear, lanceolate, to broadly ovate, at least slightly longer than broad; calyx 5-merous; stamens 3, 5, or 10.
 - 7 Flowers axillary, sessile or nearly so, solitary or a few; petaloid sepals widely spreading, separate; leaves linear to oblanceolate; stamens 5 or 30-50. *Sesuvium* in **AIZOACEAE**
 - 7 Flowers in terminal cymose panicles; petaloid sepals connate into a narrow tube (reminiscent of the corolla of *Ipomoea*); leaves lanceolate, elliptic, ovate, or broadly ovate; stamens 3 or 5 **NYCTAGINACEAE**
 - 4 Perianth in 2 whorls (sepals and petals both present).
 - 8 Petals distinct; inflorescence diffuse.
 - 9 Leaves distinctly 3-veined from the base, the 3 veins converging again at the leaf apex..... *Rhexia* in **MELASTOMATACEAE**
 - 9 Leaves with prominently pinnate venation..... **ONAGRACEAE**
 - 8 Petals connate into a tube (at least basally); inflorescence often a head or dense terminal cyme (also axillary, or solitary on long peduncles).
 - 10 Petals 5; stamens 3, 4, or 5
 - 12 Flowers in terminal corymbs; fruit dry..... **VALERIANACEAE**
 - 12 Flowers axillary; fruit fleshy..... *Triosteum* in **CAPRIFOLIACEAE**
 - 10 Petals 4 (or 6 or 8 in *Richardia* in **RUBIACEAE**); stamens 4, 6, or 8.

- 14 Leaves serrate; corolla bilaterally symmetrical (especially the flowers near the outer edge of the head); inflorescence a head.....*DIPSACACEAE*
- 14 Leaves entire; corolla radially symmetrical; inflorescence a head or more diffuse (see below).
- 15 Petals acute; flowers in terminal panicles, cymes, or panicles, or axillary; plant habit various, not simultaneously with all the characters below.....*RUBIACEAE*
- 15 Petals broadly rounded; flowers axillary, solitary; plant a diffusely branched herb with linear leaves*Polypremum* in *TETRACHONDRA**CEAE*
- 3 Ovary superior.
- 16 Perianth of a single whorl (petals absent) or missing entirely (petals and sepals both absent). {key lead number needs adjusting}
- 17 Inflorescence a cyathium, consisting of a single pistillate flower (reduced to a single 3-carpellate pistil) and 2 or more staminate flowers (each reduced to 1 stamen), borne in a cup-like involucre, the involucre bearing pointed or rounded glands, these sometimes brightly colored and petaloid, mimicking an individual flower (the cyathia then secondarily arranged in terminal cymes, or solitary and axillary, etc.); fresh plants with milky juice; fruit a 3-lobed, 3-locular capsule.....*Euphorbia* in *EUPHORBIACEAE*
- 17 Inflorescence not a cyathium (and staminate or bisexual flowers with > 1 stamen, except *Callitriche* in *PLANTAGINACEAE*); fresh plants lacking milky juice; fruit various, not as above.
- 18 Flowers 1 (or 2) in leaf axils; leaves entire.
- 19 Flowers unisexual; sepals 0; flowers (staminate) with 1 stamen.....*Callitriche* in *PLANTAGINACEAE*
- 19 Flowers bisexual; sepals 4; flowers with 2, 4, or 6 stamens.
- 20 {XXXX}*Trianthema* in *AIZOACEAE*
- 20 {YYYY}*LYTHRACEAE*
- 18 Flowers many, in axillary spikes, cymes, or glomerules, or in terminal spikes, heads, cymes, or panicles; leaves entire or serrate.
- 22 Leaves serrate, regularly and sharply so; plants with stinging hairs (or not).....*URTICACEAE*
- 22 Leaves entire, or with a few very obscure crenations (*Iresine*) or basally disposed rounded lobe-like teeth (*Atriplex*); plants without stinging hairs.
- 23 Leaves of a pair slightly to strongly different in size*Pilea* in *URTICACEAE*
- 23 Leaves of a pair the same size.
- 24 Styles 1-2 (-3); leaves 2-30 mm long, 0.5-8 mm wide, linear or narrowly elliptic.....*CARYOPHYLLACEAE*
- 24 Style 1; leaves generally either longer than 30 mm, or wider than 8 mm (if linear and smaller than those dimensions, then fleshy).
- 25 Tepals scarious; inflorescence of heads, spikes, or panicles.....*AMARANTHACEAE*
- 25 Tepals herbaceous; inflorescence of glomerules, these axillary or arrayed in spikes or panicles*Atriplex* in *CHENOPODIACEAE*
- 16 Perianth in 2 whorls (sepals and petals both present).
- 26 Gynoecium of 4-many pistils, each 1-carpellate.
- 27 Pistils 4-5, in a single whorl; stamens 4, 5, 8, or 10; fruit an aggregate of follicles*CRASSULACEAE*
- 27 Pistils many, spiral; stamens many; fruit an aggregate of plumose achenes*Clematis* in *RANUNCULACEAE*
- 26 Gynoecium either of 1 pistil (with 1 or more carpels), or of 2 pistils, united only by the style and stigma (*APOCYNACEAE*).
- 28 Petals not at all connate, not even at their bases.
- 29 Leaves with pellucid punctate glands (most easily visible with transmitted light); stamens often fascicled into 3, 4, or 5 fascicles; petals yellow or pinkish.....*HYPERICACEAE*
- 29 Leaves lacking pellucid punctate glands; stamens not fascicled; petals variously colored.
- 30 Sepals 2; stamens opposite the petals*PORTULACACEAE*
- 30 Sepals 3-7; stamens opposite the sepals.
- 31 Petals 3; sepals 5, dimorphic, the 2 outer sepals narrower than the 3 inner and concave sepals; stamens (3-) 5-15 (-25).....*Lechea* in *CISTACEAE*
- 31 Petals 4-7; sepals 4-7, normally monomorphic; stamens 4, 5, 6, 8, 10, or 12 (or sometimes rarely 2 or 3).
- 32 Capsule 2-5 (-6) locular; style 1; perianth 4-7-merous; stamens 4, 6, 8, 10, or 12*LYTHRACEAE*
- 32 Capsule either 1-locular of 10-locular; styles 2-5; perianth 4-5-merous; stamens 4, 5, 8, or 10 (or rarely 2 or 3).
- 33 Capsule 1-locular, dehiscent apically by teeth or valves; sepals connate into a tube or separate; styles 2-5; perianth 4-5-merous; stamens 4, 5, 8, or 10 (or rarely 2 or 3).....*CARYOPHYLLACEAE*
- 33 Capsule 10-locular (each of the 5 carpels divided at maturity), septicidal; sepals distinct or nearly so; styles 5, perianth 5-merous; stamens 5.....*Linum* in *LINACEAE*
- 28 Petals connate at least for a short distance at their bases.
- 34 Corolla radially symmetrical (or so slightly bilaterally symmetrical as to be mistakable as radially symmetrical); stamens as many as the corolla lobes (or 1 less in *Ruellia* in *ACANTHACEAE*, *Buchnera* in *OROBANCHACEAE*, *Trichostema* in *LAMIACEAE*, and *Verbena* in *VERBENACEAE*); carpels 2 or 3.
- 35 Pistils 2, united only by the style and stigma; fruit a schizocarp of 2 1-carpellate follicles (often single by abortion); plant with milky juice when fresh (except *Catharanthus*); leaves entire.....*APOCYNACEAE*
- 35 Pistil 1 (of 2-5 fused carpels); fruit either a 2-5-carpellate capsule or of 2 or 4 1-seeded nutlets derived from 2 carpels; plant lacking milky juice; leaves entire or serrate.
- 36 Ovary and capsule 3-5-carpellate; capsule 3- or 1-locular.
- 37 Sepals 2.....*Montia* in *MONTIACEAE*
- 37 Sepals 5.
- 38 Inflorescence a terminal cyme; corolla salverform, with an elongated and very narrow tube, pink or white; capsule 3-locular*Phlox* in *POLEMONIACEAE*
- 38 Inflorescence various but not cymose, of terminal or axillary racemes or panicles, or of solitary axillary flowers; corolla connate only at the base, the petals appearing nearly separate (not salverform); capsule 1-locular.....*Lysimachia* in *PRIMULACEAE*
- 36 Ovary and capsule 2-carpellate; fruit either a 2-locular capsule or of 2 or 4 1-seeded nutlets derived from 2 carpels.
- 39 Stamens 4-12, the same number as the corolla lobes; corolla (and the flower as a whole) strictly radially symmetrical.
- 40 Capsule septicidal; corolla white, pink, blue, yellowish white, or greenish white; inflorescence either a terminal or axillary cyme, or a terminal panicle or raceme, or a terminal or axillary cyme reduced to 1 or a few flowers*GENTIANACEAE*
- 40 Capsule loculicidal and also deeply 2-lobed; corolla white, pink, or scarlet with a yellow interior; inflorescence of cymosely arranged spikes*LOGANIACEAE*
- 39 Stamens either 4, 1 fewer than the 5 corolla lobes, or 2 (with 2 staminodes); corolla usually slightly bilaterally symmetrical (the flower as a whole made bilaterally symmetrical by the 2 or 4 stamens).
- 41 Leaves entire; corolla tube flaring for all of its length

- 42 Fruit a schizocarp of 4 1-seeded nutlets; inflorescence terminal, of cymes; corolla ca. 5 mm long; leaves prominently 3-veined .. *Trichostema* in **LAMIACEAE**
- 42 Fruit a capsule; inflorescence axillary, of cymes or clusters (often reduced to a solitary flower); corolla > 12 mm long; leaves with single primary vein.....**ACANTHACEAE**
- 41 Leaves serrate; corolla salverform, the tube narrow and nearly the same diameter for most of its length; inflorescence a terminal spike, raceme, raceme of racemes, or head.
- 43 Fruit a 2-locular capsule; stamens inserted near the base of the corolla tube..... **Buchnera** in **OROBANCHACEAE**
- 43 Fruit a schizocarp of 4 mericarps; stamens inserted near or above the middle of the corolla tube..... **VERBENACEAE**
- 34 Corolla bilaterally symmetrical (or the corolla 2-lipped but the corolla lobes twisted so as to make the flower asymmetrical); fertile stamens fewer than the corolla lobes (except *Plantago* in **PLANTAGINACEAE**, which is equal, with 4 each; a few genera have a 5th, sterile, stamen which is obviously different in form than the 4 fertile stamens) (note that many corollas are bilabiate and the number of corolla lobes, 4 or 5, may be difficult to interpret); carpels 2.
- 44 Carpels 2, each carpel slightly to deeply lobed, separating at maturity into 4 half-carpellate units (not separating in *Phyla* in **VERBENACEAE**); fruit a schizocarp of 4 mericarps (or 2 nutlets in *Phyla* in **VERBENACEAE**).
- 45 Inflorescence a thyrs, verticillaster, or terminal cyme, the flowers borne in cymose lateral branches; corolla strongly bilaterally symmetrical (rarely nearly radially symmetrical); stems square in \times -section (or sometimes rounded, especially on older growth); fresh plants often (but not always) aromatic.....**LAMIACEAE**
- 45 Inflorescence of spikes, racemes, or heads, the flowers or fruits single at nodes; corolla often nearly radially symmetrical; stems rounded in X-section (rarely square); fresh plants usually not aromatic..... **VERBENACEAE**
- 44 Carpels 2, unlobed; fruit a capsule (or an achene in *Phryma*).
- 46 Stamens 2.
- 47 Corolla 4 lobed, almost radially symmetrical; corolla scarious, white, or bluish..... **PLANTAGINACEAE**
- 47 Corolla 4-5-lobed, either strongly bilabiate or salverform (*Pseuderanthemum* in **ACANTHACEAE**); white, blue, or yellow.
- 48 Inflorescence an axillary cluster or spike.....**ACANTHACEAE**
- 48 Inflorescence of solitary (rarely 2) axillary flower. {add [*Hypoestes*] **ACANTHACEAE**}
- 49 Sepals 4.....**LINDERNIACEAE**
- 49 Sepals 5, distinct or nearly so.
- 50 Corolla barely bilaterally symmetrical, the lobes about as long as the tube; outer sepals ovate, much wider than the inner sepals **Bacopa** in **PLANTAGINACEAE**
- 50 Corolla distinctly bilabiate, the lobes shorter than the tube; sepals of nearly the same width.
- 51 Sterile stamens (the lower pair) consisting of slender filaments..... **Lindernia** in **LINDERNIACEAE**
- 51 Sterile stamens minute or completely absent **Gratiola** in **PLANTAGINACEAE**
- 46 Stamens 4.
- 52 Corolla 4 lobed, nearly radially symmetrical; corolla scarious.....**Plantago** in **PLANTAGINACEAE**
- 52 Corolla 5-lobed, distinctly bilabiate or in some nearly radially symmetrical; corolla colored.
- 53 Flowers in terminal racemes, panicles, or spikes, the inflorescence not interspersed with large, leaf-like bracts.
- 54 Sepals separate to the base or nearly so, not forming a tube **PLANTAGINACEAE**
- 54 Sepals connate for at least 0.3 \times their length to form a tube (this cup-like and flaring in *Scrophularia* in **SCROPHULARIACEAE**).
- 55 Inflorescence a diffuse panicle; corolla 5-11 mm long, reddish-brown (sometimes with some yellow); fruit a septidial capsule **Scrophularia** in **SCROPHULARIACEAE**
- 55 Inflorescence of 1 or more terminal (and sometimes upper axillary) spikes or racemes; corolla 10-50 mm long (6-8 mm long in *Phryma* in **PHRYMACEAE**), white, pink, blue, purple, or yellow; fruit either a loculicidal capsule (OROBANCHACEAE) or a single seeded achene (*Phryma* in **PHRYMACEAE**).
- 56 Corolla 10-50 mm long, pink, blue, purple, or yellow; fruit a loculicidal capsule..... **OROBANCHACEAE**
- 56 Corolla 6-8 mm long, white to pale pink; fruit a 1-seeded achene contained in the accrescent calyx, this "lopping down" against the inflorescence axis.....**Phryma** in **PHRYMACEAE**
- 53 Flowers axillary and solitary, borne in the axils of normally-sized leaves or somewhat reduced but still large and leaf-like bracts [some taxa keyed here and below].
- 57 Sepals separate to the base or nearly so, not forming a tube.
- 58 Corolla distinctly bilabiate **Lindernia** in **LINDERNIACEAE**
- 58 Corolla not bilabiate, only slightly bilaterally symmetrical.
- 59 Leaves serrate, 2.0-4.5 cm long; plant usually blackening on drying.....**Mecardonia** in **PLANTAGINACEAE**
- 59 Leaves entire, either mostly larger or smaller [see below]; plant not blackening on drying
- 60 Leaves 0.6-2.8 cm long, round, obovate, or broadly elliptic, < 1.8 \times as long as wide; plants creeping, ascending to 3 dm tall; [plants of wet places]..... **Bacopa** in **PLANTAGINACEAE**
- 60 Leaves 3-30 cm long, narrowly elliptic to lanceolate, > 2 \times as long as wide; plants erect or the stems sprawling; [plants mostly of uplands]**ACANTHACEAE**
- 57 Sepals connate for at least 0.3 \times their length to form a tube.
- 61 Corolla yellow, orange, or red.
-**Aureolaria** in **OROBANCHACEAE**
- 61 Corolla white, pale blue, lavender, or pink (sometimes with some yellow).
- 64 Corolla pink (sometimes almost white), often lined with yellow inside; leaves narrowly linear, often filiform (except lanceolate in *A. auriculata*); plants usually blackening on drying (some species do not); corolla not strongly bilabiate **Agalinis** in **OROBANCHACEAE**
- 64 Corolla white, blue, or combinations of blue and white (sometimes with some yellow markings); leaves broader, mostly lanceolate; plants not blackening on drying; corolla strongly bilabiate.
- **Mimulus** in **PHRYMACEAE**

Key S2 - herbaceous dicots with opposite, simple, and palmately lobed leaves on the stem {add [*Humulus*] **CANNABINACEAE}**

- 1 Leaf lobes very narrow, < 3 mm wide; inflorescence an involucre head subtended by phyllaries, the heads solitary or many and variously arrayed in secondary inflorescences, the ovary inferior, the corolla connate and tubular at least basally, the calyx absent, the stamens 5, the fruit a cypsela..... **ASTERACEAE**
- 1 Leaf lobes broad, >20 mm wide; inflorescence, flower, and fruit structure various, but not with the combination of features as above.

KEY TO FAMILIES AND GENERA

- 2 Leaves >4 per above-ground stem; perianth 5-merous; flowers bilaterally symmetrical, the corolla with connate petals, lavender-white with yellow markings in the throat; fruit a large curved capsule.....*Proboscidea* in **MARTYNIACEAE**
- 2 Leaves 1-2 per above-ground stem; perianth 3-merous; flowers radially symmetrical, the corolla absent or with distinct petals, white; fruit a berry or aggregate of berries.
 - 3 Leaves with peltate petiole attachment; carpel 1; petals present, white.....**BERBERIDACEAE**
 - 3 Leaves with petiole attached marginally; carpels many, as separate pistils; petals absent.....*Hydrastis* in **HYDRASTIDACEAE**

Key S3 - herbaceous dicots with opposite, simple, and pinnately lobed leaves on the stem

- 1 Inflorescence an involucre head subtended by phyllaries, the heads solitary or many and variously arrayed in secondary inflorescences, the ovary inferior, the corolla connate and tubular at least basally, the calyx absent, the stamens 5, the fruit a cypsela **ASTERACEAE**
- 1 Inflorescence, flower, and fruit structure various, but not with the combination of features as above (sometimes the flowers tightly grouped, but then with other features differing, such as stamens 4, or green calyx present, or fruit a schizocarp of mericarps, etc.).
 - 2 Flowers tiny, individually inconspicuous; perianth absent or vestigial; fruit a utricle*Atriplex* in **CHENOPODIACEAE**
 - 2 Flowers larger, individually conspicuous; perianth present, the petals or sepals brightly colored; fruit a capsule (or aggregate of achenes in *Clematis* in **RANUNCULACEAE** or schizocarp of 4 mericarps in *Glandularia* in **VERBENACEAE**).
 - 3 Flowers radially symmetrical; stamens 5 or many; fruit a capsule or aggregate of achenes.*Clematis* in **RANUNCULACEAE**
 - 3 Flowers bilaterally symmetrical (sometimes only slightly so); stamens 4 (or 2 in *Veronica* in **PLANTAGINACEAE**); fruit a capsule or schizocarp of mericarps.
 - 5 Inflorescence of cymosely arranged spikes or heads; fruit a schizocarp of 4 nutlets.....*Glandularia* in **VERBENACEAE**
 - 5 Inflorescence of solitary axillary flowers or terminal racemes.
 - 6 Corolla yellow, orange, or red; plants often drying black (but not *Striga*); sepals connate into a tube at least 1/3 as long as the corolla lobes; calyx 5-merous.....**OROBANCHACEAE**
 - 6 Corolla white, pink, lavender, or blue; plants not drying black; sepals distinct or only shortly connate into a short tube, the calyx lobes much longer than the tube; calyx 5- or 4-merous **PLANTAGINACEAE**

THE FLORA

SECTION 1: LYCOPHYTES or CLUBMOSES

L01b. LYCOPODIACEAE Palisot de Beauvois ex Mirbel 1802 (CLUBMOSS FAMILY) [in LYCOPODIALES]

A family of 10-15 genera and about 400 species. Lycopodiaceae + Huperziaceae, along with Selaginellaceae and Isoetaceae, have now been shown to be only distantly related to other extant pteridophytes and seed plants (Pryer et al. 2001). The division of North American *Lycopodium* into three or more genera has been strongly advocated by Wagner & Beitel (1992), Wagner & Beitel in FNA (1993), Haines (2003a), and nearly all other recent authors. The traditionally broad *Lycopodium* appears to include a number of natural groups which are strikingly different from one another and have constituted separate lineages for tens to hundreds of millions of years. These natural groups are separable by numerous morphological, developmental, and anatomical characters, karyotype, and inability to hybridize. Wagner & Beitel (1992) divide *Lycopodium* (*sensu latissimo*) of our area into six genera in three subfamilies, as follows: *Huperzia* in Subfamily Huperzioideae, *Lycopodium* and *Diphasiastrum* in Subfamily Lycopodioidae, and *Lycopodiella*, *Palhinhaea*, and *Pseudolycopodiella* in Subfamily Lycopodielloideae. Haines (2003a) further divides *Lycopodium* (*sensu lato*) into three genera: *Dendrolycopodium*, *Spinulum*, and *Lycopodium* (*sensu stricto*). The reasoning behind this division is very strong, and it is here followed. Profound differences in anatomy, morphology, reproduction, gametophyte morphology, and karyotype support this separation, in addition to the very great age of these lineages. The chromosome numbers of our genera: *Dendrolycopodium* (x=34), *Diphasiastrum* (x=23), *Huperzia* (x=67, 68), *Lycopodiella* (x=78), *Lycopodium* (x=34), *Palhinhaea* (x=55), *Pseudolycopodiella* (x=35), and *Spinulum* (x=34). Øllgaard in Kramer & Green (1990) and Wikström & Kenrick (2000) follow a somewhat broader coarse, recognizing three genera for our species (corresponding to the subfamilies of Wagner & Beitel 1992), and recognizing as sections the genera of Wagner & Beitel (1992). Øllgaard states that the “genera are very distinct, and also the sections within *Lycopodiella* and *Lycopodium* seem to represent ancient, independent evolutionary lines”; later, Øllgaard has elevated the sections to generic rank (Øllgaard & Windisch 2014). Wikström & Kenrick (2000, 2001) suggest that the phylogenetic separation of *Lycopodium* (including *Diphasiastrum*) and *Lycopodiella* (including *Pseudolycopodiella* and *Palhinhaea*) occurred at least as long ago as the early Jurassic (208 million years before present), and the divergence of *Huperzia* from *Lycopodium* and *Lycopodiella* still longer ago. Based on this deep division between *Huperzia* and the other genera, some authors additionally advocate the recognition of *Huperzia* in a separate family, Huperziaceae, an opinion followed here. The generic taxonomy used here follows PPG I (2016). References: Beitel (1979); Chen et al (2021); Haines (2003a); Lellinger (1985); Mickel (1979); Øllgaard in Kramer & Green (1990); Øllgaard (1987); Øllgaard, Kessler, & Smith (2018); PPG I (2016); Snyder & Bruce (1986); Testo, Field, & Barrington (2018); Wagner & Beitel (1992); Wagner & Beitel (1993) in FNA2 (1993b); Wikström & Kenrick (2000); Wikström & Kenrick (2001).

- 2 Leaves herbaceous, pale or yellow-green, dull, deciduous; principal leafy stems creeping (except erect and repeatedly branched in *Palhinhaea*); rhizome dying back annually to an underground vegetative tuber at apex; spores rugulate; erect fertile shoots in a single dorsal rank; [wetlands, mostly on moist or wet sands or peats]; [subfamily *Lycopodielloideae*].
- 3 Upright shoots repeatedly branched; strobili nodding at the ends of the branches, 4-8 mm long; [known to occur from se. SC southward].....*Palhinhaea cernua*
- 3 Upright shoots not branched; strobili erect on upright shoots, 1.5-80 mm long; [widespread in our area].
- 4 Leaves of the prostrate stems 0.5-1.2 mm wide, ciliate-toothed or not toothed; leaves of the erect stem many, overlapping, spiral; leaves of the strobilus (sporophylls) resembling leaves of the prostrate and upright stems in size and shape; strobilis 10-80 mm long; upright stems 1.5-15 mm in diameter (including the leaves).....*Lycopodiella*
- 4 Leaves of the prostrate stems 1.3-2.1 mm wide, not toothed; leaves of the erect stem few, not overlapping, whorled; leaves of the strobilus (sporophylls) much reduced relative to leaves of the prostrate and upright stems, their margins entire to minutely denticulate-fimbriate; strobilis 1.5-9 mm long; upright stems 1.5-3 mm in diameter (including the leaves).....*Pseudolycopodiella*
- 2 Leaves rigid, bright to dark green, shiny, evergreen; principal leafy stems mainly erect, treelike, fanlike, or creeping (if creeping, then the leaves with elongate, hyaline hair-tips); rhizome perennial, elongate, surficial or subterranean; spores reticulate; erect fertile shoots in 2 dorsolateral ranks; [mostly uplands, in moist to dry soils]; [subfamily *Lycopodioidae*].
-*Diphasiastrum*

Diphasiastrum Holub 1975 (FLAT-BRANCHED CLUBMOSS, RUNNING CEDAR)

A genus of about 15-20 species, mostly north temperate and subarctic. This group has often in the past been treated as *Lycopodium* section *Complanata* (Øllgaard in Kramer & Green 1990, Øllgaard 1987, Wikström & Kenrick 2000). References: Haines (2003a); Øllgaard in Kramer & Green (1990); Wagner & Beitel (1993) in FNA2 (1993b); Wikström & Kenrick (2000).

Identification Notes: *Diphasiastrum* is similar in overall appearance to *Dendrolycopodium*. Both genera have horizontal rhizomes (on or below the ground surface), bearing vertical stems at intervals, and each vertical stem bears sterile branchlets and fertile branchlets. The sterile branchlets are horizontal to ascending, and branch dichotomously (in Ys), while the fertile branchlets are erect and terminate in narrow strobili (cone-like structures) which bear the sporangia. At all seasons, *Diphasiastrum* is easily distinguished from *Dendrolycopodium* by its leaves, which are scale-like and tightly appressed to the branches, giving the plant a smooth texture, as opposed to the leaves of *Dendrolycopodium*, which are needle-like (but only slightly stiff), and which spread away from the branches at acute to right angles, giving the plant a slightly prickly appearance and feel.

Diphasiastrum digitatum (Dillenius ex A. Braun) Holub. SOUTHERN RUNNING-CEGAR, COMMON RUNNING-CEGAR, FAN GROUND-PINE, TURKEYFOOT, SILVER-PINE. **Hab:** Dry to mesic, usually acid forests and openings, especially common in disturbed sites, such as successional pine

L01b. LYCOPODIACEAE

forests. **Dist:** NL (Newfoundland) west to MN, south to SC, GA, AL, MS, and AR. **Phen:** Jul-Sep. **Tax:** Hickey & Beitel (1979) and Holub (1975a, 1975b) explain the nomenclatural reasons for accepting the epithet '*digitatum*' over '*flabelliforme*'. **Syn:** = Ar, FNA2, Il, K3, K4, NE, NY, Pa, Tn, Va, Haines (2003a); = *Lycopodium complanatum* Linnaeus var. *flabelliforme* Fernald – F, G; = *Lycopodium digitatum* Dillenius ex A. Braun – C, K1, Mo1, W; = *Lycopodium flabelliforme* (Fernald) Blanch – Md, RAB, Sf, WV; < *Lycopodium complanatum* Linnaeus, misapplied.

***Lycopodiella* Holub 1964 (BOG-CLUBMOSS)**

A genus of about 15-20 species, temperate and tropical. Additional research on this genus in our area is needed. Two fertile tetraploid species were named from MI (Bruce, Wagner, & Beitel 1991), and additional cryptic or semicryptic species may be found in the Southeastern Coastal Plain. This group has been variously treated as genus *Lycopodiella*, or as *Lycopodiella* section *Lycopodiella* (Øllgaard in Kramer & Green 1990, Wikström & Kenrick 2000), with a strong trend towards generic rank. References: Haines (2002a); Haines (2003a); Haines (2003b); Haines (2007a); Øllgaard in Kramer & Green (1990); Øllgaard (2012a); Wagner & Beitel (1993) in FNA2 (1993b); Wikström & Kenrick (2000); Zhang & Iwatsuki in FoC (2013).

Identification Notes: Species of this genus are difficult to identify. They often grow together; it is not uncommon to find two or more species at a single site in the southeastern Coastal Plain. Hybrids occur. Juvenile plants, resprouting in spring or after fire, are especially difficult to identify. In contrast to most *Lycopodiella* species, *Pseudolycopodiella caroliniana* and, to a lesser degree, *L. prostrata*, are dorsiventrally flattened (or "pseudodistichous"), but it seems that juvenile sprouts of all species are somewhat flattened.

- 2 Fertile leaves (sporophylls) 2.9-5.0 (-5.2) mm long, appressed at maturity, entire or with short teeth < 0.3 mm long; strobili 3-6 mm in diameter at maturity *Lycopodiella appressa*
- 2 Fertile leaves (sporophylls) 5.5-9 mm long, spreading, with 1-8 teeth per margin, some or all of the teeth exceeding 0.3 mm in length; strobili 10-20 mm in diameter at maturity.
- 3 Prostrate stems arching, not in contact with the ground (and rooting) all along their length, 8-11 mm wide (including leaves), the stem (stripped of leaves) 2-4 mm in diameter; leaves of the prostrate stem of one size and shape, spreading to ascending, 5-7 mm long, 0.5-0.7 mm wide; erect stems many, equally spaced along the prostrate stems, progressively shorter and sterile toward the apex of the prostrate stems *Lycopodiella alopecuroides*
- 3 Prostrate stems creeping, in contact with the ground (and rooting) all along their length, 12-19 mm wide (including leaves), the stem (stripped of leaves) 1-2.2 mm in diameter; leaves of the prostrate stems dimorphic, spreading to reflexed, the upper leaves smaller (4-5 mm long, 0.4-0.6 mm wide) than the lateral leaves (7-8 mm long, 0.7-1.8 mm wide); erect stems few, clustered well behind the apex of the prostrate stems, mostly fertile and subequal in length *Lycopodiella prostrata*

Lycopodiella alopecuroides (Linnaeus) Cranfill. FOXTAIL BOG-CLUBMOSS. **Hab:** Pine savannas, seepages, wet pine flatwoods, wet prairies, bogs, ditches, and other wet, sandy sites. **Dist:** Primarily Southeastern Coastal Plain: se. MA south to FL and west to e. TX, and disjunct in the Cumberland Plateau of KY, TN, and VA, the Allegheny Mountains of WV (Morton et al. 2004), the e. Highland Rim of TN, and in ME (Haines 2001); s. Mexico south through Central America to n. South America; Cuba. **Phen:** Jul-Sep. **Comm:** The tropical portions of the distribution may be considered presumptive at this time; for instance, Øllgaard (2012a) elevates two taxa previously treated as varieties of *Lycopodiella alopecuroides* to species rank. **Syn:** = Ar, ETx1, Fl1, FNA2, K1, K3, K4, Meso1, NE, NY, Pa, Tn, TxFerns, Va, WH3, Haines (2002a); = *Lycopodium alopecuroides* Linnaeus – C, F, G, Md, Sf, W; = *Lycopodium alopecuroides* var. *alopecuroides* – Tx; < *Lycopodium alopecuroides* Linnaeus – RAB. **NatureServe G5** (Secure).

Lycopodiella appressa (Chapman) Cranfill. SOUTHERN BOG-CLUBMOSS. **Hab:** Pine savannas, wet pine flatwoods, seepages, bogs, wet prairies. **Dist:** Primarily Southeastern Coastal Plain: se. NL (Newfoundland) and MA, south to FL, west to OK, AR, and TX, and disjunct inland in KY, TN, NC, w. SC, and WV, s. OH. **Phen:** Jul-Sep. **Syn:** = Ar, ETx1, Fl1, FNA2, Il, K1, K3, K4, NE, NY, Pa, Tn, TxFerns, Va, WH3, Haines (2002a), Haines (2007a); = *Lycopodium adpressum* (Chapman) Lloyd & Underwood – Tx; = *Lycopodium appressum* (Chapman) Lloyd & Underwood – C, RAB, Sf, W; = *Lycopodium inundatum* Linnaeus var. *bigelovii* Tuckerman – F, G. **NatureServe G5** (Secure).

Lycopodiella xbrucei Cranfill [*Lycopodiella alopecuroides* × *prostrata*]. **Syn:** = K1, K3, K4, WH3; = *Lycopodium xbrucei* (Cranfill) Lellinger; = n/a – RAB.

Lycopodiella xcopelandii (Eiger) Cranfill [*Lycopodiella alopecuroides* × *appressa*]. **Syn:** = Ar, K1, K3, K4, NE, WH3, Haines (2002a), Haines (2007a); = *Lycopodiella alopecuroides* × *appressa* – NY; = n/a – RAB.

Lycopodiella prostrata (R.M. Harper) Cranfill. FEATHERSTEM CLUBMOSS, PROSTRATE BOG-CLUBMOSS. **Hab:** Pine savannas, wet pine flatwoods, seepages, bogs, wet prairies. **Dist:** A Southeastern Coastal Plain endemic: se. NC south to c. FL and west to AR and e. TX, with scattered occurrences disjunct inland (as in n. GA, n. AL, and c. AR). **Phen:** Jul-Sep. **Syn:** = Ar, ETx1, Fl1, FNA2, K1, K3, K4, TxFerns, WH3; = *Lycopodium alopecuroides* Linnaeus var. *pinnatum* Chapman – Tx; = *Lycopodium inundatum* Linnaeus var. *pinnatum* Chapman; = *Lycopodium prostratum* R.M. Harper – C, Sf; < *Lycopodium alopecuroides* Linnaeus – RAB.

Palhinhaea Vasconcellos & Franco 1967 (NODDING CLUBMOSS)

A genus of about 25 species, tropical and subtropical. This group has been variously treated as the genus *Palhinhaea* (Øllgaard 2015; Wagner & Beitel in FNA 1993b; PPG 2016; Øllgaard, Kessler, & Smith 2018) or as *Lycopodiella* section *Campylostachys* (Øllgaard in Kramer & Green 1990; Wikström & Kenrick (2000). References: Øllgaard in Kramer & Green (1990); Øllgaard (2015); Wagner & Beitel (1993) in FNA2 (1993b); Wikström & Kenrick (2000); Zhang & Iwatsuki in FoC (2013).

Palhinhaea cernua (Linnaeus) Vasconcellos & Franco. NODDING CLUBMOSS, STAGHORN CLUBMOSS. **Hab:** Wet savannas, ditches and other disturbed moist areas. **Dist:** E. SC south to s. FL, west to s. AR and e. TX; Neotropics; Paleotropics. **Phen:** Jun-Nov. **Tax:** As circumscribed broadly, *Palhinhaea cernua* has a very wide distribution, but there are indications that it is likely a complex of semicryptic species. **Comm:** Some of the occurrences in our area may be adventive and of short duration. MacRoberts et al. (2018) report on occurrences of this species in LA, e. TX, and s. AR. **Syn:** = Ar, ETx1, FNA2, TxFerns, Øllgaard, Kessler, & Smith (2018); = *Lycopodiella cernua* (Linnaeus) Pichi Sermolli – F11, Meso1, WH3; = *Lycopodium cernuum* Linnaeus – FoC, Sf; > *Lycopodiella cernua* (Linnaeus) Pichi Sermolli var. *cernua* – K1; > *Palhinhaea cernua* var. *cernua* – K3, K4. NatureServe G5T5 (Secure).

Pseudolycopodiella Holub 1983 (CAROLINA BOG CLUBMOSS)

A genus of about 12 or more species, sub-cosmopolitan, but especially tropical and subtropical. This group has often been treated as section of *Lycopodium* (or of *Lycopodiella*); it appears to warrant status as a genus separate from *Lycopodiella* (Øllgaard, Kessler, & Smith 2018). In addition to the morphologic distinctions, the "*Pseudolycopodiella* group" has considerable anatomical differences, a different base chromosome number than *Lycopodiella* ($x = 35$ vs. $x = 78$), and does not hybridize with *Lycopodiella* (Wagner & Beitel 1992). Øllgaard in Kramer & Green (1990) and Wikström & Kenrick (2000) retained it as *Lycopodiella* section *Carolinianae*. References: Cook (2015); Haines (2003a); Øllgaard in Kramer & Green (1990); Wagner & Beitel (1993) in FNA2 (1993b); Wikström & Kenrick (2000); Zhang & Iwatsuki in FoC (2013).

Identification Notes: In contrast to most *Lycopodiella* species, *Pseudolycopodiella caroliniana* and, to a lesser degree, *L. prostrata*, are dorsiventrally flattened (or "pseudodistichous"), but it seems that juvenile sprouts of all species are somewhat flattened.

- 1 Peduncle leaves and sporophylls < 3.0 mm long; peduncle < 1.0 mm wide; strobili < 6.0 mm wide; spores (35.37-) mean 40.72 (-49.82) μ m long; *Pseudolycopodiella caroliniana*
 1 Peduncle leaves and sporophylls > 3.0 mm long; peduncle > 1.0 mm wide; strobili > 6.0 mm wide; spores (33.75-) 45.61 (-54.81) μ m long *Pseudolycopodiella species 1*

Pseudolycopodiella caroliniana (Linnaeus) Holub. CAROLINA BOG CLUBMOSS, SLENDER CLUBMOSS. **Hab:** Pine savannas, seepages. **Dist:** MA south to s. FL and west to e. TX. Attributions of a wider distribution of this species (West Indies, Mexico, Central and South America, Asia, Africa) are based on a much broader circumscription of the species than that adopted by Cook (2015). **Phen:** Jul-Sep. **Tax:** A diploid species (Cook 2015). **Syn:** = Cook (2015); < *Lycopodiella caroliniana* (Linnaeus) Pichi Sermolli – WH3; < *Lycopodiella caroliniana* (Linnaeus) Pichi Sermolli var. *caroliniana* – F11, K1; < *Lycopodium carolinianum* Linnaeus – C, F, G, Md, RAB, Sf, Tx; < *Pseudolycopodiella caroliniana* (Linnaeus) Holub – Ar, ETx1, FNA2, FoC, K3, NE, NY, TxFerns, Va, Haines (2003a); < *Pseudolycopodiella caroliniana* var. *caroliniana* – K4. NatureServe G5T4 (Apparently Secure).

Pseudolycopodiella species 1. FLORIDA BOG CLUBMOSS. **Hab:** Wet pine savannas, bogs. **Dist:** Se. NC south to c. FL, west to w. LA; West Indies; s. Mexico and Central America. **Phen:** Jul-Sep. **Tax:** A tetraploid species (Cook 2015). **Syn:** = "*Pseudolycopodiella floridana*"; < *Lycopodiella caroliniana* (Linnaeus) Pichi Sermolli – WH3; < *Lycopodiella caroliniana* var. *meridionalis* (Underwood & F.E. Lloyd) Øllgaard & P.G. Windisch – Meso1; < *Lycopodium carolinianum* Linnaeus – RAB, Sf; < *Pseudolycopodiella caroliniana* (Linnaeus) Holub – Ar, ETx1, FNA2, FoC, K3, Va, Haines (2003a); < *Pseudolycopodiella caroliniana* var. *caroliniana* – K4. NatureServe G5TNR (Not Yet Ranked).

L02. ISOETACEAE Dumortier 1829 (QUILLWORT FAMILY, MERLIN'S-GRASS FAMILY) [in ISOETALES]

A family of a single genus and about 250-300 species. References: Jermy in Kramer & Green (1990); Taylor et al (1993a) in FNA2 (1993b).

Contributed by P.W. Schafran, L.J. Musselman, and A.S. Weakley

A genus of about 250-300 species, cosmopolitan in distribution. Allopolyploids, derived from crossing between parental species and genome duplication, represent roughly half of the named taxa in eastern North America. Molecular data suggest that many of the southeastern polyploid species contain complexes of morphologically similar but genetically unique taxa. These complexes represent independent polyploidy events between different sets of parental species. The appropriate systematic treatment of these complexes would recognize approximately twice as many species. At present, many polyploid species should be treated only as taxonomic, not evolutionary, entities. References: Boom (1982); Bray, Schafran, & Musselman (2018); Brunton & Britton (1996a); Brunton & Britton (1996b); Brunton & Britton (1997); Brunton & Britton (1998); Brunton & Britton (1999); Brunton & McNeill (2015); Brunton (2015); Brunton (2016); Caplen & Werth (2000a); Caplen & Werth (2000b); Hoot, Napier, & Taylor (2004); Jermy in Kramer & Green (1990); Kott & Britton (1983); Luebke & Budke (2003); Musselman & Knepper (1994); Musselman (2001); Musselman et al (1995); Musselman, Bray, & Knepper (1996); Musselman, Bray, & Knepper (1997); Musselman, Taylor, & Bray (2001); Schafran (2019); Schafran et al (2016); Schafran et al (2018); Singhurst et al (2011); Taylor et al (1993a) in FNA2 (1993b); Wood et al (2020a).

Identification Notes: Hybrids are possible between many combinations of species. Hybrids are readily recognized by having megaspores of variable size, shape, and ornamentation (aborted). Leaf width measurements are at midpoint of the leaf length, well above the flared base. Leaf lengths are of undamaged leaves from leaf tip to the top of the rootstock.

11 Velum coverage > 40% (uncommonly to ± 30% in *Isoetes valida*).

11 Velum coverage < 40%.....*Isoetes valida*

15 Megaspore ornamentation of low vermiform muri in semi-reticulate pattern or with low tubercles.

18 Megaspores < 360 µm in diameter; megaspores ornamented with dense pattern of ± narrow, short muri; velum coverage 15-35%.

18 Megaspores > 360 µm in diameter; megaspores plain or ornamented with vermiform muri and/or broad tubercles; velum coverage 5-15%; [ephemeral inland freshwater pools and swales].....*Isoetes mississippiensis*

20 Broad (± 1.3 mm wide) light green leaves, bases never becoming black-brown and hardened; megaspores ± 410 (to 440) µm in diameter in diameter; conspicuously ornamented with numerous low tubercles or ridges; [2n: woodland pools of Piedmont of VA to AL and se. MS].....

20 Narrow (± 1 mm wide) gray-green leaves with shiny, black-brown bases when spores are mature; megaspores ± 380 µm in diameter in diameter; typically with plain and mealy surface or obscurely ornamented with scattered tubercles and ridges; [2n: wet prairies and open graminoid swales of s. MS, w. AL and westward].....*Isoetes melanopoda ssp. silvatica*

15 Megaspore ornamentation in distinctly reticulate ('honeycomb') pattern or with dense pattern of tall, short-crested, almost echinate muri.

21 Plants emergent or aquatic; megaspores ± 460 (occasionally to 500) µm in diameter; evenly-reticulate ornamentation pattern of even-topped muri continuous to the equatorial ridge without an equatorial band; [2n: Atlantic Coastal Plain, Appalachian Mts and irregularly northward, south to c GA, ne AL].....

21 Plants primarily emergent or amphibious; megaspores > 520 (rarely to over 600) µm in diameter; unevenly-reticulate and interrupted ornamentation pattern of ragged-topped muri, with an equatorial band of few to numerous spines; [4n or 6n].....*Isoetes engelmannii*

25 Irregularly reticulate megaspore ornamentation pattern of both interconnected, longer muri and short, stand-alone muri; velum coverage ± 30% (occasionally less); plants usually deeply rooted (> 20% of leaf length) in clay or clayey-sand; [4n: Coastal Plain; LA, MS, AL].....

25 Regularly reticulate megaspore ornamentation pattern of interconnected muri with few or no stand-alone muri; velum coverage 10-25%; plants usually shallowly rooted (10-20% of leaf length) in sand or silty-sand substrate.....*Isoetes louisianensis*

.....*Isoetes appalachiana*

Isoetes appalachiana D.F. Brunton & D.M. Britton. APPALACHIAN QUILLWORT. **Hab:** Seepages, small woodland streams, ephemeral wetlands, backwaters. **Dist:** N. NJ and PA south to ne. FL, s. AL, and ne. MS. See McAVoy (2021) for its occurrence in DE. **Tax:** A tetraploid species (2n=44), apparently derived from a northern *I. engelmannii* entity and *I. valida* (Hoot, Napier, & Turner 2004), genotype=NNVV. A southern variant is derived from a southern *I. engelmannii* entity and *I. valida*, genotype=SSVV. See Brunton & Britton (1997) for additional information. **Syn:** = Fl1, K1, K4, Tn, Va, WH3, Musselman (2001); < *Isoetes engelmannii* A. Braun – C, FNA2, Pa, RAB, W, WV; < *Isoetes engelmannii* var. *engelmannii* – F, Sf; > *Isoetes engelmannii* var. *georgiana* Engelm.

Isoetes engelmannii A. Braun. **Hab:** Usually in permanent water bodies with active current. **Phen:** May-Oct. **Comm:** A diploid species (2n=22). Apparently there are two cryptic taxa currently combined under the name *I. engelmannii* (Hoot, Napier, & Taylor 2004), genotype NN and genotype SS. **Syn:** = Ar, Il, K1, K3, K4, NE, NY, Tn, Va, Musselman (2001); < *Isoetes engelmannii* A. Braun – C, FNA2, G, Pa, RAB, W, WV, (also see I. appalachiana; < *Isoetes engelmannii* var. *engelmannii* – F, Mo1, Sf.

Isoetes louisianensis Thieret. LOUISIANA QUILLWORT. **Hab:** Small streams, braided swamps, seepage areas. **Dist:** S. AL, MS, and LA. Reported for GA by Duncan & Kartesz (1981); this species is extremely unlikely in GA and is treated as rejected for that state. **Tax:** A tetraploid species (2n=44). **Syn:** = FNA2, K1, K3, K4. NatureServe G2G3 (Imperiled); USESA E.

Isoetes melanopoda Gay & Durieu ex Durieu ssp. *melanopoda*. BLACKFOOT QUILLWORT. **Hab:** Floodplains. **Dist:** S. IN, IL, and MO south to ne. LA; probably represented eastward to c. TN and s. MS (the available material ambiguous) (Brunton & Britton 2006). **Phen:** May-Sep. **Tax:** A diploid species (2n=22). (Brunton & Britton 2006). This taxon should be treated at species rank relative to *I. melanopoda* ssp. *silvatica*, based on the polyphyly of *Isoetes melanopoda* s.l. (Schafran et al. 2018). **Syn:** = K3, K4, Tn, TxFerns; < *Isoetes melanopoda* Gay & Durieu ex Durieu – Ar, C, ETx1, FNA2, G, GrPl, Il, K1, Mo1, Tx, Musselman (2001). NatureServe G5TNR (Not Yet Ranked).

Isoetes melanopoda Gay & Durieu ex Durieu ssp. *silvatica* D.F. Brunton & D.M. Britton. EASTERN BLACKFOOT QUILLWORT. **Hab:** Clay soils in low woods, seeps on sandstone or granitic rocks, in NJ in clay-based depressions on Cape May. **Dist:** VA south (in the Piedmont and Coastal Plain) to sw. GA, sc. AL, and s. MS; disjunct in s. NJ. **Tax:** A diploid species (2n=22), genotype= PP. This taxon should be raised to species rank based on

the polyphyly of *Isoetes melanopoda* s.l. (Schafran et al. 2018). **Syn:** = K3, K4; < *Isoetes melanopoda* Gay & Durieu ex Durieu – C, FNA2, G, K1, RAB, Va, Musselman (2001). **NatureServe G5TNR** (Not Yet Ranked).

Isoetes mississippiensis S.W. Leonard, W.C. Taylor, L.J. Musselman, & R.D. Bray. MISSISSIPPI QUILLWORT. **Hab:** Submersed in sluggish Coastal Plain streams. **Dist:** Endemic to s. MS. **Phen:** June. **Tax:** A diploid species ($2n=22$). See Schafran et al. (2016) for detailed information. **Syn:** = Schafran et al (2016). **NatureServe G1** (Critically Imperiled).

Isoetes valida (Engelmann) Clute. MOUNTAIN QUILLWORT, CAROLINA QUILLWORT. **Hab:** Bogs (growing in *Sphagnum*), pools, ponds, and seeps. **Dist:** C. PA to s. AL. **Comm:** A diploid species ($2n=22$). Genotype=VV. **Syn:** = K1, K3, K4, Tn, Va, Musselman (2001); = *Isoetes caroliniana* (A.A. Eaton) N. Luebke – FNA2; = *Isoetes engelmannii* A. Braun var. *caroliniana* A.A. Eaton – F, Sf; < *Isoetes engelmannii* A. Braun – C, Pa, RAB, W, WV.

L03. SELAGINELLACEAE Willkomm 1854 (SPIKEMOSS FAMILY) [in SELAGINELLALES]

A family of 1-several genera (the generic circumscriptions still somewhat unclear), and about 700 (or more) species. Selaginellaceae, along with Lycopodiaceae and Isoetaceae, now appear to be only distantly related to other extant pteridophytes and seed plants (Pryer et al. 2001). There has been some recent tendency to split *Selaginella* based on groups that represent very old clades (comparable to the recognition of multiple genera in Lycopodiaceae), though this remains controversial (Soják 1992; Škoda 1997; Korall, Kenrick, & Therrien 1999; Korall & Kenrick 2002). By a moderate approach to generic segregation, we have two to four genera, in which case *Selaginella* itself (sensu stricto) is restricted to the type species and a close relative. PPG I (2016) and Weststrand & Korall (2016a, 2016b) retained *Selaginella* as a single, broadly defined genus including all members of the family, with recognition of seven major clades worldwide at subgeneric rank. References: Buck (1977); Jermy in Kramer & Green (1990); Lellinger (1985); Somers & Buck (1975); Tryon (1955); Valdespino (1993) in FNA2 (1993b); Weststrand & Korall (2016a); Weststrand & Korall (2016b).

Lycopodioides Boehmer 1760 (SPIKEMOSS)

A genus of ca. 650 species, primarily tropical and subtropical. References: Buck (1977); Jermy in Kramer & Green (1990); Lellinger (1985); Somers & Buck (1975); Tryon (1955); Valdespino (1993) in FNA2 (1993b); Zhang, Nooteboom, & Kato in FoC (2013).

- 3 Margins of lateral leaves entire; lateral branches of the stems further branching 2-3 times *Lycopodioides uncinatum*
- 3 Margins of lateral leaves dentate-serrate; lateral branches of the stems further branching 1-2 times
 - 5 Leaves with margins of 3-5 rows of transparent (hyaline) cells; stomates of lateral leaves confined to near the midrib on the upper surface *Lycopodioides ludovicianum*
 - 5 Leaves with margins undifferentiated or with 1-2 rows of slightly paler cells; stomates distributed over entire leaf surface *Lycopodioides apodum*

Lycopodioides apodum (Linnaeus) Palisot de Beauvois. MEADOW SPIKEMOSS. **Hab:** Seepages, bogs, spray cliffs, stream margins, wet meadows, marsh edges, wet spots in lawns, other moist habitats. **Dist:** S. ME, NY, OH, s. IN, AR, and e. OK south to FL, GA, AL, MS, LA, and e. TX; c. Mexico south to Guatemala. **Phen:** Jun-Oct. **Comm:** Often overlooked by vascular plant botanists as a moss or liverwort. *L. ludovicianum* of the Gulf Coast east to GA, and *S. eclipses* W.R. Buck, more northern/midwestern, are superficially very similar (see key). **Syn:** = Va; = *Diplostachyum apodum* – Sf; = *Selaginella apoda* (Linnaeus) Fernald – Ar, FNA2, IL, K1, K3, K4, Ky, Md, Mo1, NE, NY, Pa, RAB, Tn, W, WV; = *Selaginella apoda* var. *apoda* – ETx1, F11, TxFerns, WH3; < *Selaginella apoda* (Linnaeus) Fernald – C, F, G, Meso1, Tx.

Lycopodioides ludovicianum (A. Braun) Small. GULF SPIKEMOSS, LOUISIANA SPIKEMOSS. **Hab:** Limestone outcrops, ravine slopes, calcareous swamps, seeps, and hammocks. **Dist:** Gulf Coastal Plain from ne. FL and sw. GA west to e. LA. **Phen:** Jul-Oct. **Syn:** =; = *Diplostachyum ludovicianum* – Sf; = *Selaginella apoda* var. *ludoviciana* (A. Braun) B.F. Hansen & Wunderlin – F11, WH3; = *Selaginella ludoviciana* (A. Braun) A. Braun – FNA2, K1, K3, K4; < *Lycopodioides ludovicianum* (A. Braun) Small. **NatureServe G3G4** (Vulnerable).

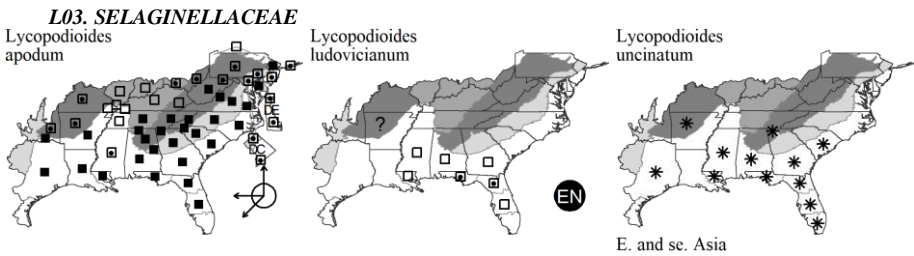

* ***Lycopodioides uncinatum*** (Desvaux ex Poiret) Kuntze. BLUE SPIKEMOSS. **Hab:** Moist forests, disturbed hammocks. **Dist:** Native of China. Introduced in sw. GA and other places in the Southeastern United States. **Syn:** = *Selaginella uncinata* (Desvaux ex Poiret) Baker – F11, FNA2, FoC, K1, K3, K4, WH3. **NatureServe GNR** (Not Yet Ranked).

SECTION 2a: HORSETAILS

F04. EUISETACEAE Michaux ex A.P. de Candolle 1804 (HORSETAIL FAMILY) [in EUISETALES]

A family with a single genus and about 15-20 species. Equisetaceae is an evolutionarily isolated group, which has been interpreted variably over time. The current consensus is that Equisetaceae be included as "ferns", but the basalmost group to be so considered. The profound morphological differences and ancient age of the lineage make its treatment as a separate class from the ferns equally or more compelling. References: Christenhusz et al (2019); Des Marais et al (2003); Hauke in Kramer & Green (1990); Hauke (1993) in FNA2 (1993b); Lellinger (1985); Mickel (1979); PPG I (2016).

Equisetum Linnaeus 1753 (HORSETAIL, SCOURING RUSH)

A genus of 15-20 species, nearly cosmopolitan in distribution. This treatment follows Christenhusz et al. (2019) in recognizing 3 subgenera, the monotypic subgenus *Paramochaete* Christenhusz & Husby (of n. South America), basal to the two main subgenera (and the ones in our flora -- see key): subgenus *Equisetum* and subgenus *Hippochaete* (Milde) Baker. References: Christenhusz et al (2019); Des Marais et al (2003); Guillon (2004); Hauke in Kramer & Green (1990); Hauke (1993) in FNA2 (1993b); Lellinger (1985); Mickel (1979); Zhang & Turland in FoC (2013).

- 1 Stems annual, deciduous, the sterile stems flexible; sterile and fertile stems dimorphic or monomorphic, usually branched (often copiously so) but sometimes unbranched or sparsely and irregularly branched; [subgenus *Equisetum*].
- *Equisetum arvense*
- 1 Stems perennial (or annual in *E. laevigatum*), evergreen, stiff; sterile and fertile stems monomorphic and either unbranched or with 2-3 short and unequal branches per node; [subgenus *Hippochaete*].
- 8 Spores not produced, or white and misshapen; most stem sheaths lacking a blackish band well below the teeth..... *Equisetum ferrissii*
- 8 Spores green, spherical; most stem sheaths with a narrow to broad blackish band well below the teeth..... *Equisetum praealtum*

Equisetum arvense Linnaeus. FIELD HORSETAIL, BOTTLEBRUSH HORSETAIL. **Hab:** Moist streambanks, bottomlands, moist disturbed sites, road banks, railroad banks. **Dist:** A circumboreal species, in North America south to c. GA, c. AL, c. MS, n. AR, n. TX, NM, AZ, and south into Mexico. **Phen:** Mar-May. **Syn:** = Ar, C, FNA2, FoC, G, GrPl, Il, K1, K3, K4, Md, Mo1, NE, NY, Pa, RAB, Sf, Tn, Tx, TxFerns, Va, W, WV, Christenhusz et al (2019); > *Equisetum arvense* var. *arvense* – F. NatureServe G5 (Secure).

Equisetum ferrissii Clute [*E. laevigatum* × *praealtum*]. FERRISS'S HORSETAIL. **Hab:** Riverbanks, wet forests. **Dist:** There are old reports, repeated in RAB, S, and FNA, of the occurrence of *E. ×ferrissii* in NC and SC; documentation of these reports is not known; it is reported for Prince George's County, MD (Shetler & Orli 2000), for KY (Campbell & Medley 2007), and for all 75 counties of AR (Peck 2011). **Phen:** May-Aug. **Tax:** This is the hybrid of *E. laevigatum* and *E. praealtum* (= *E. hyemale* ssp. *affine*). It behaves as a species, often occurring independent of one or both parents. **Syn:** = G; = *Equisetum ferrissii* Clute (pro sp.) – Ar, C, FNA2, GrPl, Il, K1, K3, NE, Pa, TxFerns, Christenhusz et al (2019); = *Hippochaete ×ferrissii* (Clute) Škoda & Holub.

Equisetum praealtum Rafinesque. TALL SCOURING-RUSH, RIVER SCOURING-RUSH. **Hab:** Riverbanks, alluvial floodplains. **Dist:** Widespread in North America south to s. Mexico and El Salvador. **Phen:** May-Sep. **Tax:** As interpreted by Christenhusz et al. (2019), American material often treated as synonymous or variably or subspecifically distinct from Eurasian *E. hyemale* warrants specific recognition, based on morphology and molecular phylogeny. **Syn:** = Sf, Christenhusz et al (2019); = *Equisetum hyemale* Linnaeus ssp. *affine* (Engelmann) Calder & R.L. Taylor – Ar, ETx1, FNA2, FoC, Il, Meso1, NE, NY, Tn, TxFerns, Va; = *Equisetum hyemale* var. *affine* (Engelmann) A.A. Eaton – C, Fl1, GrPl, K1, K3, K4, Md, Mo1, Pa, RAB, Tx, W, WH3; = *Hippochaete hyemalis* (Linnaeus) Bruhin ssp. *affinis* (Engelmann) W.A. Weber; > *Equisetum hyemale* var. *affine* (Engelmann) A.A. Eaton – F, WV; > *Equisetum hyemale* var. *elatum* (Engelmann) Morton – G, WV; > *Equisetum hyemale* var. *pseudohyemale* (Farwell) Morton – G; > *Equisetum hyemale* var. *robustum* (A. Braun) A.A. Eaton – F. NatureServe G5T5 (Secure).

SECTION 2b: FERNS

F05. PSILOACEAE J.W. Griffith & Henfrey 1855 (WHISKFERN FAMILY) [in PSILOTALES]

A family of 2 genera and about 17 species, pantropical and warm temperate. References: Kramer & Green (1990); Lellinger (1985); PPG I (2016); Thieret (1993) in FNA2 (1993b).

Psilotum Swartz 1800 (WHISKFERN)

A genus of 2 species, tropical and warm temperate. *Psilotum* lacks roots and true leaves. Other than the Australasian genus *Tmesipteris*, *Psilotum* has no close living relatives, and the 2 genera have sometimes been considered to comprise a distinct class (Wagner 1977), though PPG I (2016) treats the family in Order Psilotales in Subclass Ophioglossidae. The stem is chlorophyllose. Fungal cells interspersed in the outer layers of the rhizome aid in the absorption of nutrients. References: Kramer & Green (1990); Lellinger (1985); Thieret (1993) in FNA2 (1993b); Zhang & Yatskevych in FoC (2013).

Identification Notes: The stiff, dichotomously-branched habit of *Psilotum* is unmistakable.

Psilotum nudum (Linnaeus) Palisot de Beauvois. WHISKFERN. **Hab:** Moist bottomland forests, strand swamps, maritime forests, rockland hammocks, wet hammocks, on soil, stumps, and tree bases, along building foundations (where introduced). **Dist:** S. SC south to s. FL, west to s. AR and e. TX, disjunct (and apparently native) in ne. NC (Perry & Musselman 1994), rarely naturalized around buildings in c. NC, c. SC, and elsewhere; also in sw. United States and in the tropics and subtropics of Central and South America, Africa, and Asia. **Phen:** Apr-Sep. **Syn:** = Ar, Bah, ETx1, FL2, FNA2, FoC, K1, K3, K4, Mesol, RAB, Sf, Tx, TxFerns, WH3. NatureServe G5 (Secure).

F06. OPHIOGLOSSACEAE Martinov 1820 (ADDER'S-TONGUE FAMILY) [in OPHIOGLOSSALES]

A family of 10 genera and about 115 species (as treated by PPG I 2016). The Ophioglossaceae is only distantly related to the leptosporangiate ferns; Kuo et al. (2011), Pryer et al. (2004), and PPG I (2016) indicate that it is most closely related to Psilotaceae. There is an increasing consensus that *Botrychium* as often very broadly circumscribed should be separated into four or five genera, of which three are native in our area: *Botrychium*, *Botrychium*, and *Sceptridium* (Shinohara et al. 2013; Dauphin, Vieu, & Grant 2014; Hauk, Parks, & Chase 2003; Hauk 1996; PPG I 2016; Zhang et al. 2020). References: PPG I (2016); Wagner in Kramer & Green (1990); Wagner & Wagner (1993) in FNA2 (1993b); Zhang et al. (2020).

Identification Notes: The family Ophioglossaceae is characterized by bearing spores on a specialized and modified "leaf", the sporophore. The sterile leaf (the trophophore) characteristically has a rather fleshy or rubbery texture (when alive).

- 1 Sterile portion of the leaf simple, unlobed or palmately few-lobed; veins anastomosing; fertile stalks unbranched, the sporangia embedded in a linear spike; [subfamily *Ophioglossioideae*].
- *Ophioglossum*
- 1 Sterile leaf blade pinnatifid, pinnate, or more divided; veins free; fertile stalks branched, the sporangia sessile or stalked; [subfamily *Botrychioideae*].
- 4 Fertile stalk joined to the stalk of the sterile leaf blade near the rhizome, far below the base of the leaf blade, and usually at or below the surface of the ground; leaves evergreen, appearing in spring, summer, or fall, and withering the following spring; sterile leaf blades triangular (or pentagonal) in general outline
- *Sceptridium*
- 4 Fertile stalk joined to the stalk of the sterile leaf blade near the base of the leaf blade, far above the rhizome, and usually well above the surface of the ground; leaves deciduous, appearing in spring and withering the same summer or fall; sterile leaf blades either triangular (or pentagonal) or elongate in general outline.
- *Botrychium*

Botrychium Richard 1801 (RATTLESNAKE FERN)

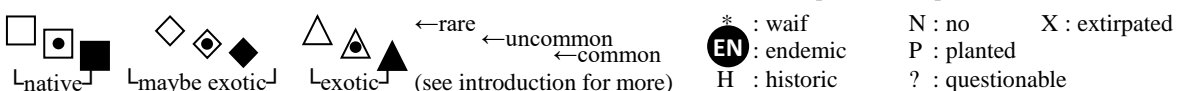

A genus of 1 (as currently recognized), or more likely, several species, perennial herb(s), of Eurasia, the Americas, and Australia. Zhang et al. (2020) removed *Sahashia* Li Bing Zhang & Liang Zhang (a monotypic genus of e. Asia) from *Botrychium*, rendering *Botrychium* monophyletic (for now). There is increasing evidence, morphological and molecular, that additional species should be recognized (Zhang et al. 2020). References: Hauk, Parks, & Chase (2003); PPG I (2016); Wagner & Wagner (1993) in FNA2 (1993b); Zhang & Sahashi in FoC (2013); Zhang et al. (2020).

Identification Notes: *Botrychium* has a large, very finely divided sterile leaf blade distinguishing it from all other Ophioglossaceae except perhaps the more dissected forms of *Sceptridium dissectum*. *Botrychium* has a bright green color, unlike *Sceptridium* species, with their dark green, grayish, purple, or bronze colors, and thinner leaf texture than the thick and rubbery leaves of *Sceptridium*.

Botrychium virginianus (Linnaeus) Michaux. RATTLESNAKE FERN, SANG-FIND. **Hab:** In a wide range of fairly dry, mesic, and wet forests, cove forests, especially in nutrient-rich, moist bottomlands and slopes. **Dist:** NL (Newfoundland) and BC south to n. peninsular FL and CA, and Mexico south through Central America and n. South America; West Indies; Asia; Australia; scattered in Europe. **Phen:** Apr-Jun. **Tax:** *Botrychium virginianus*

Key to Map
Symbology:

F06. OPHIOGLOSSACEAE

as currently defined (with a semicosmopolitan distribution in Eurasia, North America, Central America, South America, West Indies, and Australia) is a complex of semi-cryptic species, not yet well-understood or recognized. **Syn:** = Il, K3, K4, Tn, Va, Zhang et al (2020); = *Botrychium virginianum* (Linnaeus) Swartz – Ar, C, ETx1, F11, FNA2, FoC, G, GrPl, K1, K3, K4, Meso1, NE, NY, Pa, RAB, Tx, TxFerns, W, WH3, WV; = *Osmundopteris virginiana* (Linnaeus) Small – Sf; > *Botrychium virginianum* var. *europaeum* Ångström – F; > *Botrychium virginianum* var. *virginianum* – F, Mo1.

Ophioglossum Linnaeus 1753 (ADDER'S-TONGUE)

A genus of about 41 species, nearly cosmopolitan, primarily tropical. Circumscription follows PPG I (2016). References: Lellinger (1985); Liu & Sahashi in FoC (2013); PPG I (2016); Wagner in Kramer & Green (1990); Wagner & Wagner (1993) in FNA2 (1993b).

Identification Notes: *Ophioglossum* is distinctly "unfernlike", with a single elliptical or ovate leaf blade (the trophophore) and a narrow, tongue-like sporangium-bearing sporophore branching from near the base of the trophophore blade. The sporophore bears the large sporangia in two rows. The netlike (interconnecting and anastomosing) venation requires strong backlight or chemical 'clearing' of the leaf to see well.

- 1 Underground stem globose, nearly spherical, 3-11 mm in diameter; fertile spikes commonly with a conspicuous, acute or attenuate sterile portion (apiculus) at its apex; sterile blade 1-4 cm long, 0.5-2.5 cm wide, borne horizontally near the ground *Ophioglossum crotalophoroides*
- 1 Underground stem narrowly cylindrical or irregularly elongate, 2-4 mm in diameter; fertile spikes without a sterile portion at the apex or the sterile portion inconspicuous; sterile blade 0.5-10 cm long, 0.2-5.5 cm wide, borne horizontally, ascending, or vertically.
 - 2 Sterile blade 0.2-1 cm wide, the polygonal venation areoles usually lacking both smaller areoles and free included veinlets *Ophioglossum nudicaule*
 - 2 Sterile blade (0.5-) 1.2-5 cm wide, the polygonal venation areoles either with smaller areoles or with free included veinlets.
 - 3 Large areoles of the sterile blade subdivided into smaller areoles, these further subdivided into smaller areoles and free veinlets; sterile blade apiculate *Ophioglossum engelmannii*
 - 3 Large areoles of the sterile blade lacking smaller areoles, but with free included veinlets in some areoles; sterile blade obtuse or acute.
 - 4 Sterile blade ovate-lanceolate, the base obtuse to nearly truncate, broadest < ¼ of the way from the base to the apex; primary areoles mostly > 2 mm wide, without included veinlets *Ophioglossum petiolatum*
 - 4 Sterile blade ovate to elliptic, the base cuneate to obtuse, broadest between one quarter and one half of the way from the base to the tip; primary areoles mostly < 2 mm wide, with included veinlets. *Ophioglossum pycnostichum*

Ophioglossum crotalophoroides Walter. BULBOUS ADDER'S-TONGUE. **Hab:** Moist ditch banks, grassy roadside flats, lawns, cemeteries, moist pine woodlands. **Dist:** E. NC (Dare County) south to FL and west to c. TX; also in Mexico, the West Indies, Central America, and South America. **Phen:** Mar-May (-Sep). **Syn:** = Ar, ETx1, F11, FNA2, K3, K4, Meso1, Mo1, RAB, Sf, Tn, Tx, TxFerns, WH3; > *Ophioglossum crotalophoroides* var. *crotalophoroides* – K1; > *Ophioglossum crotalophoroides* var. *nanum* Osten ex de Lichtenstein – K1.

Ophioglossum engelmannii Prantl. ENGELMANN'S ADDER'S-TONGUE, LIMESTONE ADDER'S-TONGUE. **Hab:** Dry barrens and glades over calcareous rocks, very rarely on granite. **Dist:** W. VA, IN, IL, KS, and AZ south to Panhandle FL and TX; Mexico and Central America. **Phen:** Dec-Jun. **Comm:** Ascribed to NC by Wagner & Wagner in FNA (1993b), the documentation unknown. **Syn:** = Ar, C, ETx1, F, F11, FNA2, G, GrPl, IL, K1, K3, K4, Meso1, Mo1, Pa, Sf, Tn, Tx, TxFerns, Va, W, WH3. *NatureServe* G5 (Secure).

Ophioglossum nudicaule Linnaeus f. SLENDER ADDER'S-TONGUE. **Hab:** Pine flatwoods, lawns, and other moist, grassy areas. **Dist:** E. NC south to s. FL, west to TX; West Indies; Mexico, Central, and South America; Asia; Africa. **Phen:** Mar-Jun. **Comm:** First reported from NC by Thomas & Marx (1979). **Syn:** = Ar, ETx1, F11, FNA2, FoC, K1, K3, K4, Meso1, RAB, TxFerns, WH3; > *Ophioglossum dendroneuron* E.P. St. John – Sf; > *Ophioglossum mononeuron* E.P. St. John – Sf; > *Ophioglossum nudicaule* var. *tenerum* – Tx; > *Ophioglossum pumilio* E.P. St. John – Sf; > *Ophioglossum tenerum* Mettenius – Sf.

* ***Ophioglossum petiolatum*** Hooker. LONG-STEM ADDER'S-TONGUE. **Hab:** Maritime wet grasslands, wet pine flatwoods, moist ditch banks, and grassy roadside flats. **Dist:** Se. VA south to FL and west to TX and OK; West Indies; Central America to n. South America; Asia. **Phen:** Feb-Jul (-Nov). **Comm:** First reported for NC by Thomas & Marx (1979). Wagner & Wagner in FNA (1993b) and Peck (2011) suggest that this species is likely introduced in North America (from a native distribution in Asia). **Syn:** = Ar, ETx1, F11, FNA2, FoC, K1, K3, K4, Mo1, RAB, Tx, TxFerns, Va, WH3; > *Ophioglossum floridanum* E. St. John – Sf. *NatureServe* G5 (Secure).

Ophioglossum pycnostichum (Fernald) Á. Löve & D. Löve. SOUTHERN ADDER'S-TONGUE. **Hab:** Bottomland forests, moist loamy soils of successional forests and old fields. **Dist:** S. NJ, IN, IL, and s. MI south to GA, MS, and e. TX; s. Mexico. **Phen:** Mar-Jul. **Comm:** *O. vulgatum* (defined narrowly) is Eurasian. Fernald (1939) provides a number of characters to separate this taxon from Eurasian *O. vulgatum* s.s. While Wagner in FNA (1993) subsumes "*pycnostichum*" in *O. vulgatum*, he points out that "a distinctive large-spored form with a chromosome number of $2n = ca. 1320$ " occurs "in the Appalachians", suggesting the possibility of cryptic taxa within "*pycnostichum*" (= southeastern North American *O. vulgatum*). The best treatment of this complex remains uncertain and needs additional study. **Syn:** = Ar, Tn, Va, W; = *Ophioglossum vulgatum* Linnaeus var. *pycnostichum* Fernald – C, F, GrPl, Pa, RAB, WV; < *Ophioglossum vulgatum* Linnaeus – ETx1, FNA2, FoC, G, IL, K1, K3, K4, Meso1, Mo1, Sf, Tx, TxFerns.

Sceptridium Lyon 1905 (GRAPE FERN)

A genus of about 25 species, perennial herbs, nearly cosmopolitan. The unusual species *S. lunarioides* has been regarded as belonging to a monotypic section, *Hiemobotrychium* W.H. Wagner. Zhang et al. (2020) found *S. lunarioides* to be basal to the rest of the genus, and ambiguously advocated that it be treated as a monotypic genus, *Holubiella* Škoda. For now, I retain it at sectional rank as *Sceptridium* section *Hiemobotrychium*, but its recognition at generic rank may well be warranted. References: Hauk (1996); Hauk, Parks, & Chase (2003); PPG I (2016); Wagner & Wagner (1993) in FNA2 (1993b); Zhang et al (2020).

Identification Notes: *Sceptridium* has thick, leathery leaves ternately divided, and an overall equilaterally triangular or pentagonal outline. The leaves emerge in the spring, summer, or fall of the year, and overwinter, withering the following spring. The leaves are often purplish or bronze, or green with shades of purple or bronze. Identification of some of the species is problematic or indefinite, based on subtleties of the shapes of the ultimate leaf divisions. The "Grape Fern" common name refers to the fertile leaves and the large sporangia, yellow when mature.

- 1 Sterile leaves usually 2 per plant, the petioles prostrate and the blades therefore held flat on the ground; roots smooth, yellowish; ultimate leaf segments about as wide as long, sublabelately veined, lacking a midrib; sporulating Jan-Apr; [section *Hiemobotrychium* or genus *Holubiella*] *Sceptridium lunarioides*
- 1 Sterile leaf 1 per plant, the petiole erect or ascending and the blade usually held aerially; roots irregularly ribbed, blackish; ultimate leaf segments fan-shaped, obovate, longer than wide, pinnately veined, the midrib weakly developed; sporulating Jul-Oct; [section *Sceptridium* or genus *Sceptridium* s.s.].
 - 2 Sterile leaf 4-pinnate-pinnatifid, finely divided, the ultimate segments lacerate and linear, < 3 mm wide *Sceptridium dissectum*
 - 2 Sterile leaf 2-pinnate to 4-pinnate, not finely divided, the ultimate segments ovate or oblong, most or all of them > 8 mm wide.
 - 3 Sterile pinnae entirely divided into short, round or acute pinnules; lateral pinnules with an inconspicuous and poorly-developed central vein; plant producing 1 or 2 leaves per season. *Sceptridium jenmanii*
 - 3 Sterile pinnae (or their terminal portion) elongate (the sides often nearly parallel), entire to shallowly lobed, not divided into pinnules; lateral pinnules with a conspicuous and well-developed central vein; plant producing 1 leaf per season.
 - 6 Sterile blade mostly 2(-3)-pinnate, herbaceous in texture; ultimate blade segments mostly oblong to obliquely lanceolate, the margins nearly parallel, the base cuneate, the apex relatively blunt *Sceptridium biternatum*
 - 6 Sterile blade mostly 3-pinnate (or more divided, those forms keyed above), leathery in texture; ultimate blade segments trowel-shaped, the margins usually not parallel, the base truncate or obtuse, the apex relatively pointed *Sceptridium dissectum*

Sceptridium biternatum (Savigny) Lyon. SOUTHERN GRAPEFERN. **Hab:** Moist forests, clearings, old fields. **Dist:** MD, PA, s. IN, s. IL, and c. OK south to s. FL and e. TX. **Phen:** Aug-Oct. **Syn:** = *Botrychium biternatum* (Savigny) Underwood – Ar, C, ETx1, FNA2, K1, Mo1, RAB, Sf, TxFerns, W, WH3; = *Botrychium dissectum* var. *tenuifolium* (Underwood) Farwell – F, G; < *Botrychium biternatum* (Savigny) Underwood – Fl1; < *Botrychium dissectum* Sprengel – WH3.

Sceptridium dissectum (Sprengel) Lyon. CUT-LEAF GRAPE FERN, DISSECTED GRAPEFERN. **Hab:** Moist forests, clearings, old fields. **Dist:** NS and QC west to ON and MI, south to Panhandle FL and e. TX; also in the West Indies. **Phen:** Aug-Oct. **Tax:** The two forms have caused much confusion. In our area, forma *obliquum* is much more common and widely distributed, and is easily and often confused with *B. biternatum*. Forma *dissectum* is fairly common in our area only northwards and in the Mountains. The different distributions of the two forms suggest that further research is needed. **ID Notes:** The dissected form of this species is distinctive, with the ultimate segments tending to end in two sharp cusps. The less dissected form is difficult to distinguish from *Sceptridium biternatum* (southwards) and *Sceptridium oneidense* (northwards). **Syn:** = K4, Tn, Va; = *Botrychium dissectum* Sprengel – Ar, C, ETx1, FNA2, K1, Mo1, NE, NY, Pa, RAB, TxFerns, W, WV; < *Botrychium biternatum* (Savigny) Underwood – Fl1; < *Botrychium dissectum* Sprengel – WH3; > *Botrychium dissectum* Sprengel – Sf; < *Botrychium dissectum* var. *dissectum* – F; > *Botrychium dissectum* var. *dissectum* – G, GrPl; > *Botrychium dissectum* var. *obliquum* (Muhlenberg ex Willdenow) Clute – G, GrPl; > *Botrychium dissectum* Sprengel var. *oblongifolium* (Graves) Broun; > *Botrychium dissectum* var. *tenuifolium* (Underwood) Farwell – Tx; > *Botrychium obliquum* Muhlenberg ex Willdenow – Sf; > *Sceptridium dissectum* var. *dissectum* – Il; > *Sceptridium dissectum* var. *obliquum* (Muhlenberg ex Willdenow) Mohlenbrock – Il.

Sceptridium jenmanii (Underwood) Lyon. ALABAMA GRAPEFERN. **Hab:** Moist to dryish forests and disturbed areas. **Dist:** C. and sw. VA and w. KY south to Panhandle FL, s. AL, and e. LA; also in the West Indies. **Phen:** Aug-Oct. **Tax:** This species probably arose as a hybrid between *B. biternatum* and *B. lunarioides* (Michaux) Swartz, followed by polyploidization, resulting in a fertile taxon functioning as a species. **Syn:** = K3, K4, Tn, Va; = *Botrychium alabamense* Maxon – RAB, Sf; = *Botrychium jenmanii* Underwood – C, Fl1, FNA2, K1, Meso1, W, WH3. **NatureServe G3G4** (Vulnerable).

Sceptridium lunarioides (Michaux) Holub. WINTER GRAPEFERN. **Hab:** Old fields, pastures, young forests, granitic flatrocks, juniper-oak-blue ash woodlands over limestone, cemeteries. **Dist:** W. NC, c. TN, and s. SC south to n. FL, and west to e. TX and se. OK. **Phen:** Jan-Apr. **Tax:** Wagner (1992) proposed that *Botrychium lunarioides* be treated in a new monotypic section, *Hiemobotrychium*, of *Botrychium*, subgenus *Sceptridium*. Zhang et al. (2020) advocated its placement in a monotypic genus, *Holubiella*. Its apparent involvement in the generation of the allopolyploid species *Sceptridium jenmanii* seems a compelling reason to retain the species in *Sceptridium*. **ID Notes:** The species is hard to spot, and all the more difficult to find because of its phenology; the leaves appear in late fall and die by early spring. **Syn:** = K3, K4; = *Botrychium lunarioides* (Michaux) Swartz – Ar, ETx1, Fl1, FNA2, K1, RAB, TxFerns, WH3; = *Botrychium lunarioides* Michaux; = *Holubiella lunarioides* (Michaux) Škoda – Zhang et al (2020). **NatureServe G4?** (Apparently Secure).

F08. OSMUNDACEAE Martinov 1820 (ROYAL FERN FAMILY) [in OSMUNDALES]

A family of 6 genera and about 18 species. Our three species have traditionally been all placed in *Osmunda*, but PPG I (2016) and others show that *Osmunda* s.l. includes ancient, divergent clades with ages of 100–250 million years, and also with great morphological divergence, warranting generic recognition (Schneider et al. 2015, PPG I 2016). We here follow PPG I (2016) in recognizing three genera in our area: *Osmunda*, *Osmundastrum*, and *Claytosmunda*. References: Bomfleur, Grimm, & McLoughlin (2015); Bomfleur, Grimm, & McLoughlin (2017); Kramer & Green (1990); Lellinger (1985); Metzgar et al (2008); PPG I (2016); Schneider et al (2015); Sylvestre, Costa, & Arana (2022); Whetstone & Atkinson (1993) in FNA2 (1993b); Yatabe, Nishida, & Murakami (1999).

Identification Notes: Osmundaceae are large, coarse, clump-forming ferns from thick rhizomes; the rhizomes, densely clad with old leaf bases, often form large mounds on the ground surface, especially noticeable after fires. *Osmunda spectabilis* is a wetland species and *Osmundastrum cinnamomeum* occurs primarily in wetlands, while *Claytosmunda claytoniana* is usually in moist to dry uplands, but can occur in wetlands.

- 1 Leaves bipinnate, each pinna fully divided into distinct pinnules, the larger pinnules 3–7 cm long and 0.7–2.0 cm wide; spores borne on modified pinnae in the terminal portion of the leaf blade; veins of each pinnule 2× Y-forked (thus each vein reaching the margin as 4 final veinlets), each final veinlet making a fine tooth, thus the pinnule margins finely serrulate *Osmunda spectabilis*
- 1 Leaves pinnate-pinnatifid, each pinna additionally pinnatifid but not divided into distinct pinnules; spores borne either on specialized leaves that are normally wholly fertile (lacking flat, blade-like sterile pinnae), or hemidimorphic (juvenile leaves with only sterile pinnae, adult leaves with both sterile and fertile pinnae, the fertile pinnae borne in the middle of the leaf with sterile pinnae above and below; photosynthetic (sterile) pinnae lacking tufts of hairs; veins of each pinna lobe 1× Y-forked (thus each vein reaching the margin as 2 final veinlets), the final veinlets not creating a tooth, thus the pinna lobes entire to obscurely crenulate.
- 2 Plants with hemidimorphic leaves (juvenile leaves with only sterile pinnae; adult leaves with both sterile and fertile pinnae, the fertile pinnae borne in the middle of the leaf with sterile pinnae above and below); photosynthetic (sterile) pinnae lacking tufts of hair on the lower side of the junction of the pinna and the rachis; [usually upland]..... *Claytosmunda claytoniana*
- 2 Plants with dimorphic leaves (each leaf normally either completely photosynthetic or completely fertile); photosynthetic (sterile) pinnae with tufts of reddish hairs near the junction with the rachis; [usually of wetlands, or in mesic soils, or drier soils with seasonal and subterranean seepage] *Osmundastrum cinnamomeum*

Claytosmunda (Y. Yatabe, N. Murakami, & K. Iwatsuki) Metzgar & Rouhan Rouhan 2016 (INTERRUPTED FERN)

A monotypic genus, a perennial fern, of e. North America and e. Asia. References: Kramer & Green (1990); Lellinger (1985); Metzgar et al (2008); PPG I (2016); Schneider et al (2015); Tsutsumi et al (2011); Whetstone & Atkinson (1993) in FNA2 (1993b); Yatabe, Nishida, & Murakami (1999); Zhang, Iwatsuki, & Kadokawa in FoC (2013).

Identification Notes: *Claytosmunda* is the most "upland" and least robust of our Osmundaceae species. Fertile leaves of *Claytosmunda* are unique in the placement of brown (later shriveled) spore-bearing pinnae in the middle of the blade, with sterile, green pinnae above and below the fertile pinnae. Sterile plants (which are frequent, and entire populations sometimes lack fertile plants) can closely resemble sterile plants of *Osmundastrum cinnamomeum*, but can be told by the lack of a tuft of hairs on the lower side of the junction of each pinna to the rachis. Additionally, *Claytosmunda claytoniana* has a smoother gestalt and overall rounder pinna and pinna lobe tips, while *Osmundastrum cinnamomeum* has a hairier gestalt and overall more pointed pinna tips and pinna lobe tips.

Claytosmunda claytoniana (Linnaeus) Metzgar & Rouhan. INTERRUPTED FERN. **Hab:** Upland forests, woodlands, and balds, moist to rather dry. **Dist:** NL (Newfoundland) west to MN, south to n. GA, n. AL, TN, and AR; disjunct in e. and sc. Asia (the Asian plants sometimes separated as a variety). **Phen:** Mar-Jun. **Comm:** A fossil from the Triassic is seemingly indistinguishable from this species and suggests "that *O. claytoniana* has perhaps been in morphological stasis for at least 200 million years, and also that the genus *Osmunda* is at least this old" (Metzgar et al. 2008). **Syn:** = Bomfleur, Grimm, & McLoughlin (2015), Bomfleur, Grimm, & McLoughlin (2017), Metzgar et al (2008), PPG I (2016); = *Osmunda claytoniana* – Ar, FNA2, FoC, G, II, K1, K3, Mo1, NE, NY, Pa, RAB, Sf, Tn, W, WV; = *Osmundastrum claytonianum* (Linnaeus) Tagawa – K4; > *Osmunda claytoniana* var. *claytoniana* – C, F, Va. **NatureServe G5TNR** (Not Yet Ranked).

Osmunda Linnaeus 1753 (ROYAL FERN)

A genus of ca. 4 species, if circumscribed (as here) to exclude *Todea*, *Leptopteris*, *Osmundastrum*, *Plenasium*, and *Claytosmunda*, following PPG I (2016) and (in part) Metzgar et al. (2008). References: Arana & Ponce (2015); Kramer & Green (1990); Lellinger (1985); Metzgar et al (2008); PPG I (2016); Tsutsumi et al (2011); Tsutsumi et al (2021); Whetstone & Atkinson (1993) in FNA2 (1993b); Yatabe, Nishida, & Murakami (1999); Zhang, Iwatsuki, & Kadokawa in FoC (2013).

Identification Notes: An obligate wetland species, *Osmunda spectabilis* looks less like *Claytosmunda claytoniana* and *Osmundastrum cinnamomeum* than they look like one another, with larger and more widely spaced (diffuse) ultimate leaf segments

Osmunda spectabilis Willdenow. AMERICAN ROYAL FERN. **Hab:** Bogs, marshes (including tidal), moist forests, floodplains, swamp forests, and other wetlands. **Dist:** NL (Newfoundland) west to MB, south to s. FL, e. TX; Mexico south through Central America to s. South America; West Indies. **Phen:** Mar-Jun. **Tax:** American *O. spectabilis* is more closely related to Asian *O. japonica* (= *O. regalis* var. *japonica*) and *O. lancea* than to European, African, and sw. Asian (typic) *O. regalis* (Metzgar et al. 2008; Tsutsumi et al. (2011); Arana & Ponce (2015); Tsutsumi et al. 2021). Specific rank therefore appears fully warranted for American royal ferns. **Syn:** = II, K4, Va, Arana & Ponce (2015), Sylvestre, Costa, & Arana (2022); =

F08. OSMUNDACEAE

Osmunda regalis Linnaeus var. *spectabilis* (Willdenow) A. Gray – Ar, Bah, C, ETx1, F, Fl1, FNA2, G, GrPl, K1, K3, Mo1, NE, NY, Pa, RAB, Tn, Tx, TxFerns, W, WH3, WV; < *Osmunda regalis* – Meso1, Sf. [NatureServe G5T5](#) (Secure).

***Osmundastrum* C. Presl 1847 (CINNAMON FERN)**

A monotypic genus, of the Americas and e. Asia. “When the *rbcL* trees, the fossil and morphological evidences are all taken into account, it can be concluded that the extant *Osmunda cinnamomea* has no closely related living species in Osmundaceae, and it has evolutionarily very static morphology with no significant modification for more than 200 million years. Thus we can call extant *Osmunda cinnamomea* a ‘living fossil’ “ (Yatabe, Nishida, & Murakami 1999); Metzgar et al. (2008) confirmed the opinion that cinnamon fern is an outlier and warrants generic status. References: Arana & Ponce (2015); Kramer & Green (1990); Lellinger (1985); McAvoy (2011); Metzgar et al (2008); Whetstone & Atkinson (1993) in FNA2 (1993b); Yatabe, Nishida, & Murakami (1999); Zhang, Iwatsuki, & Kadokawa in FoC (2013).

Identification Notes: Sterile plants of *Osmundastrum cinnamomeum* are sometimes confused with *Anchistea virginica*, which also has rather coarse, pinnate-pinnatifid leaves and grows in similar wet, acid places. *Osmundastrum* is coarser (to 2 m tall, vs. to 1 m tall), has cinnamon tufts of tomentum present in the axils of the pinnae (vs. absent), has the rachis greenish and rather fleshy in texture (vs. brown and wiry), and bears fronds clumped or tufted from a massive, woody, ascending rhizome covered with old petiole bases (vs. fronds borne scattered along a thick, horizontal, creeping rhizome). See *Claytosmunda* for discussion of distinctions from *Osmundastrum*.

Osmundastrum cinnamomeum* (Linnaeus) C. Presl. CINNAMON FERN. **Hab:* Bogs, peatlands, pocosins, wet savannas, floodplains, blackwater stream swamps, marshes, and other wetlands, less typically in merely mesic or even dry-mesic forests, especially if seasonally sub-irrigated. **Dist:** NL (Labrador) west to MN, south to s. FL, c. TX; Mexico south through Central America to Uruguay and Argentina in South America; West Indies; e. Asia. **Phen:** Mar-May. **Tax:** The species also occurs in e. Asia, where sometimes treated as a separate variety (but the combination is not available in *Osmundastrum*); these disjunct populations are genetically distinct (Metzgar et al. 2008). The taxonomic significance of the densely glandular pubescent *Osmundastrum cinnamomeum* var. *glandulosum* (Waters) McAvoy needs additional evaluation; it is reported from scattered locations in e. North America, including SC and VA. Because of its geographic incoherence it is here regarded as a form. **Syn:** = Ar, FoC, NE, Tn, TxFerns, Va, Bomfleur, Grimm, & McLoughlin (2015), Bomfleur, Grimm, & McLoughlin (2017), Metzgar et al (2008), Sylvestre, Costa, & Arana (2022); = *Osmunda cinnamomea* Linnaeus – ETx1, Fl1, FNA2, G, Il, Meso1, Mo1, Pa, RAB, Sf, Tx, W, WH3, WV; > *Osmunda cinnamomea* Linnaeus; > *Osmunda cinnamomea* var. *cinnamomea* – C, F, K1; > *Osmunda cinnamomea* Linnaeus var. *glandulosa* Waters – F, K1; > *Osmundastrum cinnamomeum* var. *cinnamomeum* – K3, K4, NY, Arana & Ponce (2015), McAvoy (2011); > *Osmundastrum cinnamomeum* var. *glandulosum* (Waters) McAvoy – K3, K4, McAvoy (2011).

**F09. HYMENOPHYLLACEAE Martius 1835 (FILMY FERN FAMILY) [in HYMENOPHYLLALES]**

A family of 9 genera and about 430 species. This treatment follows the generic interpretation of Ebihara et al. (2006) and PPG I (2016), which split *Trichomanes* (as both polyphyletic and morphologically diverse) and retain a broad and monophyletic *Hymenophyllum*. See Moran (1998) for an interesting discussion and overview of independent fern gametophytes in e. North America. References: Ebihara et al (2006); Ebihara et al (2007); Farrar (1993b) in FNA2 (1993b); Iwatsuki in Kramer & Green (1990); Morton (1968).

4 Leaves simple to slightly lobed, < 2 cm long; rhizomes filiform, <0.5 mm in diameter.

..... *Didymoglossum*

4 Leaves pinnatifid to pinnate-pinnatifid, > 2.5 cm long; rhizomes filiform or moderately stout.

..... *Vandenboschia boschiana*

***Didymoglossum* Desvaux 1827 (FILMY FERN)**

A genus of 30-40 species, primarily tropical. All five of our species belong to subgenus *Didymoglossum* (Ebihara et al. 2006). References: Dubuisson et al (2003); Ebihara et al (2006); Ebihara et al (2007); Farrar (1993b) in FNA2 (1993b); Gann & Weakley (2017) in Weakley et al (2017); Iwatsuki in Kramer & Green (1990); Morton (1968); Wessels Boer (1962).

2 Leaf margins fringed with paired disclike scales; soral involucre 5-15 per leaf; leaf blades 2 cells thick between the veins *Didymoglossum membranaceum*

2 Leaf margins fringed with dark stellate hairs; soral involucre 1-6 per leaf; leaf blades 1 cell thick between the veins.

..... *Didymoglossum petersii*

Didymoglossum membranaceum* (Linnaeus) Vareschi. SCALE-EDGED BRISTLE-FERN. **Hab:* Terrestrial in acid humus. **Dist:** Known in North America only from a 1929 collection from Harrison County, MS; also in West Indies, Mexico south through Central America to South America. **Syn:** = K4, Ebihara et al (2006); = *Trichomanes membranaceum* Linnaeus – FNA2, K3, Meso1, Wessels Boer (1962). [NatureServe G5](#) (Secure).

Didymoglossum petersii* (A. Gray) Copeland. DWARF FILMY FERN. **Hab:* On vertical faces of acidic rock outcrops in humid gorges (in sw. NC, nw. SC, and ne. GA, primarily of the Savannah River drainage), in the context of the very humid escarpment gorges on relatively dry rocks, not on rocks receiving substantial seepage or spray from waterfalls, also on outcrops of Altamaha Grit in the Coastal Plain, on tree bark (especially *Magnolia grandiflora* and *Fagus grandifolia*) in swamps and hammocks (in FL, LA, and MS), and on chert around limestone sinkholes (in FL). **Dist:** W. NC, nw. SC, sw. and sc. TN, south to n. peninsular FL, c. AL, s. MS, and e. LA; disjunct in the Ozarks and Ouachitas of AR; disjunct in Mexico (CHP, VER, and PUE), Guatemala, Costa Rica, and El Salvador. **Phen:** Jun-Aug. **Comm:** This diminutive species is often overlooked, except by bryologists and hepaticologists; superficially, it does resemble a moss or liverwort more than a fern. **Syn:** = K3, K4, Ebihara et al (2006); = *Trichomanes petersii* A. Gray – Ar, Fl1, FNA2, K1, Meso1, RAB, Sf, Tn, W, WH3, Wessels Boer (1962). [NatureServe G4G5](#) (Apparently Secure).

**Vandenboschia** Copeland 1938 (FILMY FERN)

A genus of 15-20 species, of the tropics and extending to north temperate areas of high humidity. References: Dubuisson et al (2003); Ebihara et al (2006); Ebihara et al (2007); Farrar (1993b) in FNA2 (1993b); Iwatsuki in Kramer & Green (1990); Morton (1968).

Vandenboschia boschiana (Sturm) Ebihara & K. Iwatsuki. APPALACHIAN FILMY FERN. **Hab:** On rock outcrops, usually vertical or overhanging, usually in deeply shaded grottoes receiving seepage or spray from waterfalls. **Dist:** W. VA, s. OH, s. IN, s. IL south to w. NC and nw. SC, n. GA, n. AL, and ne. MS (Menapace, Davison, & Webb 1998); disjunct in the Ozarks of nw. AR; disjunct in Chihuahua, Mexico. See Belden et al. (2004) for more details on the first documented Virginia occurrence. **Phen:** Jun-Sep. **Syn:** = Il, K3, K4, Va, Ebihara et al (2006); = *Trichomanes boschianum* Sturm – Ar, C, F, FNA2, G, K1, RAB, Sf, Tn, W, WV; < *Trichomanes radicans* Swartz, misapplied.

**F13. LYGODIACEAE** M. Roemer 1840 (CLIMBING FERN FAMILY) [in SCHIZAEALES]

A family with a single genus and about 40 species, of tropical and temperate regions, particularly equatorial and south temperate. Sometimes included in the Schizaeaceae, but the relationship is remote and unclear. References: Nauman (1993b) in FNA2 (1993b); PPG I (2016).

Lygodium Swartz 1800 (CLIMBING FERN)

A genus of about 40 species, mostly tropical, with a few temperate species. References: Nauman (1993b) in FNA2 (1993b); Zhang & Hanks in FoC (2013).

Identification Notes: *Lygodium* in our region consists of two non-native and invasive species and an uncommon native. All species have underground rhizomes and very long leaves with wiry petioles and rachises that can climb into shrubs and trees or sprawl over the ground and lower vegetation. These "leaves with pinnae" are often mistaken for "stems with leaves" because of their surprising length and the distancing between the pinnae.

* **Lygodium japonicum** (Thunberg) Swartz. JAPANESE CLIMBING FERN. **Hab:** Disturbed areas. **Dist:** Native of e. Asia. **Phen:** Jun-Dec. **Comm:** The leaves (up to 30 m in length!) climb into the canopy of trees in swamp forests and other wet habitats. **Syn:** = Ar, ETx1, F11, FNA2, FoC, K1, K3, K4, RAB, Sf, Tx, TxFerns. NatureServe GNR (Not Yet Ranked).

**F16. SALVINIACEAE** Martinov 1820 (FLOATING FERN FAMILY) [in SALVINIALES]

A family of 2 genera and about 21 species, all floating aquatics. *Azolla* is sometimes separated as a separate family, Azollaceae, a reasonable alternate approach. References: Lumpkin (1993) in FNA2 (1993b); Nagalingum, Nowak, & Pryer (2008); Nauman (1993j) in FNA2 (1993b); Schneller in Kramer & Green (1990).

Identification Notes: Salviniaceae includes two genera of small, floating aquatics.

- 1 Leaves < 1 mm long, reddish or green, without hairs on the upper surface *Azolla*
 1 Leaves 5-50 mm long, bright green, with obvious hairs on the upper surface *Salvinia*

Azolla Lamarck 1783 (MOSQUITO FERN)

A small genus of about 6-9 species, floating aquatics, in tropical and warm temperate regions. The taxonomy and nomenclature of *Azolla* has been highly disputed and remains unsettled, with complex issues of taxon entitiation and also great uncertainty about application of names with priority to the uncertainly entitiated taxa. Sections shown in the key follow Metzgar, Schneider, & Pryer (2007). *Azolla* has a symbiotic, nitrogen-fixing cyanobacterium, *Anabaena azollae* Strasburger; the nitrogen-fixing capabilities of *Azolla* (through its symbiont) have resulted in its use as a fertilizer, green manure, and livestock feed, much promoted in recent years, but used historically in Asian rice paddies for centuries (Lumpkin in FNA 1993b). References: Bates & Browne (1981); Bunch &

F16. SALVINIACEAE

Hayden (2020); Evrard & Van Hove (2004); Lumpkin (1993) in FNA2 (1993b); Metzgar, Schneider, & Pryer (2007); Reid, Plunkett, & Peters (2006); Saunders & Fowler (1992).

Identification Notes: Very unfernlike, *Azolla* is a floating aquatic that looks superficially more like an aquatic liverwort, because of its very small (< 2 mm wide), bilobed leaves, borne in two ranks on either side of the stem. In some years and some places it occurs in great abundance, covering the surface of the water with a green or red mass of vegetation.

Azolla caroliniana Willdenow. EASTERN MOSQUITO FERN, WATER FERN. **Hab:** Stagnant waters of interdune ponds, limesink ponds, old millponds, beaver ponds, floodplain sloughs, often locally abundant. **Dist:** Widespread in the se. United States, extending irregularly north (partly from introductions) into s. New England and MN, and south into the tropics. **Phen:** Jun-Sep. **Syn:** = Ar, C, ETx1, F, FNA2, G, Il, K1, Meso1, Mo1, NE, Pa, RAB, Sf, Tn, Tx, TxFerns, Va, Bates & Browne (1981), Bunch & Hayden (2020), Reid, Plunkett, & Peters (2006); < *Azolla cristata* Kaulfuss – K4, NY; < *Azolla filiculoides* Lamarck – WH3, Evrard & Van Hove (2004); < *Azolla microphylla* Kaulfuss – K3.

***Salvinia* Séguier 1754 (WATER SPANGLES)**

A genus of about 12 species, mostly tropical. References: Jacono (1999); Lellinger (1985); Nauman (1993j) in FNA2 (1993b); PPG I (2016); Schneller in Kramer & Green (1990).

Identification Notes: *Salvinia* is a floating aquatic, with leaves borne in whorls of three, two of which are the conspicuous floating leaves, to 5 cm long, and round or elliptical; the third leaf is dissected and pendant into the water.

- 1 Floating leaves 5-15 mm long; multicellular hairs of the upper leaf surface with 4 free, spreading branches (use 10× magnification)..... *Salvinia minima*
 1 Floating leaves to 50 mm long; multicellular hairs of the upper leaf surface with 4 branches joined at their tips, forming a cage-like structure (use 10× magnification)..... *Salvinia molesta*

* *Salvinia minima* Baker. WATER SPANGLES. **Hab:** Quiet waters. **Dist:** Native of the Neotropics. **Phen:** Jan-Dec. **Syn:** = Ar, ETx1, Fl1, FNA2, K1, K3, K4, Meso1, NE, TxFerns, Lellinger (1985); *Salvinia auriculata* – Sf, misapplied; ~ *Salvinia rotundifolia* Willd..

* *Salvinia molesta* D.S. Mitchell. GIANT SALVINIA, KARIBA WEED. **Hab:** Still waters of farm ponds, calcareous seepage ponds, and other situations. **Dist:** Native of Brazil. *S. molesta* has been found at scattered sites in GA (Gwinnett and Lamar counties) (Carter, Baker, & Morris 2009), NC (Brunswick, Carteret, Craven, Cumberland, Duplin, Durham, Johnston, Jones, Lenoir, Mecklenburg, New Hanover, Onslow, Orange, Person, Pitt, Sampson, and Wake counties), SC (Colleton County), and VA (Shenandoah County), where it has been subjected to extermination efforts; it will likely be reintroduced (Anonymous 1999, D. Patterson, pers. comm.). **Phen:** Jan-Dec. **Tax:** Moran & Smith (1999) support the continued use of the name *S. molesta* for this species, as opposed to the ambiguous name *S. adnata* Desvaux. **Comm:** This species is considered a noxious aquatic weed and has been reported from other southeastern states, such as TX and LA (Jacono 1999). **Syn:** = ETx1, Fl1, FNA2, K1, K3, TxFerns, WH3, Lellinger (1985); = *Salvinia* × *molesta* – K4; ? *Salvinia adnata* Desvaux. NatureServe GNR (Not Yet Ranked).

**F17. MARSILEACEAE** Mirbel 1802 (WATER-CLOVER FAMILY) [in SALVINIALES]

A family of 3 genera and about 61 species, nearly cosmopolitan. References: Johnson (1993c) in FNA2 (1993b); Kramer & Green (1990); Nagalingum, Nowak, & Pryer (2008).

Identification Notes: Marsileaceae has two genera in our region, both small "unfernlike" plants of amphibious or aquatic situations.

***Marsilea* Linnaeus 1753 (WATERCLOVER)**

A genus of about 55 species, nearly cosmopolitan. References: Jacono & Johnson (2006); Johnson (1993a) in FNA2 (1993b); Knepper, Johnson, & Musselman (2002); Kramer & Green (1990); Lin & Johnson in FoC (2013); Schaefer, Carine, & Rumsey (2011).

Identification Notes: *Marsilea* superficially resembles an aquatic four-leaf clover, with four leaflets (pinnae) palmately arrayed at the petiole summit. Species determination is difficult and relies on features of the sporocarp, a hard pea-like structure than contains the sori, and is borne on short stalks from near or at the base of the petioles. The raphe is the portion of the peduncle adnate to the sporocarp. The peduncle ends in a blunt tooth, the proximal tooth. Further up on the sporocarp is a second tooth, the distal tooth.

- 1 Leaves strongly bicolored (pale green toward the base of each of the 4 leaflets, darker green toward the tip); aquatic forms with a swollen air bladder just below the leaf..... *Marsilea mutica*
 1 Leaves unicolored.

* ***Marsilea mutica*** Mettenius. NARDOP, AUSTRALIAN WATERCLOVER. **Hab:** Ditches, ponds. **Dist:** Native of Australasia. Apparently spreading rapidly in VA. **Syn:** = K1, K3, K4, WH3, Jacono & Johnson (2006).

Marsilea vestita Hooker & Greville. HAIRY WATERCLOVER. **Hab:** Ponds, wet depressions, streamsides, wet ditches, old fields. **Dist:** MN and BC south to MS, LA, TX, NM, AZ, CA, and Mexico. **Phen:** Jan-Dec. **Syn:** = Ar, Bah, ETx1, F11, FNA2, K1, K3, K4, TxFerns, WH3, Jacono & Johnson (2006); > *Marsilea mexicana* A. Braun – Tx, misidentification; > *Marsilea mucronata* – Tx; > *Marsilea tenuifolia* – Tx; > *Marsilea uncinata* A. Braun – GrPl, Sf, Tx; > *Marsilea vestita* Hooker & Greville – GrPl, Sf.

F30. PTERIDACEAE E.D.M. Kirchner 1831 (MAIDENHAIR FERN FAMILY) [in POLYPODIALES]

A family of about 53 genera and about 1211 species. Here circumscribed to include Vittarioideae (see PPG 2016; Smith et al. 2006b). Following PPG 1 (PPG 2016), the family is divided into five subfamilies, which may ultimately be elevated to five families: family Adiantaceae or subfamily Vittarioideae (*Adiantum*, *Vittaria*), family Sinopteridaceae or subfamily Cheilanthesoideae (*Astrolepis*, *Argyroschisma*, *Bommeria*, *Myriopteris*, *Notholaena*, *Pellaea*), family Cryptogrammeaceae or subfamily Cryptogrammoideae (*Cryptogramma*), family Pteridaceae or subfamily Pteridoideae (*Pityrogramma*, *Pteris*), and family Parkeriaceae or subfamily Parkerioideae (*Acrostichum*, *Ceratopteris*). References: Christenhusz, Fay, & Byng (2018); Crane (1997); Grusz & Windham (2013); Kramer & Green (1990); Lellinger (1985); Lloyd (1993a) in FNA2 (1993b); Tryon, Tryon, & Kramer in Kramer & Green (1990); Windham (1993a) in FNA2 (1993b).

Identification Notes: Pteridaceae is an important and diverse fern family in our region, especially southwards and westwards. The five subfamilial lineages and some of the genera within them are disparate in their gestalt, making it difficult to provide useful identification characterizations of the family as a whole (see the individual genera).

- 1 Gametophytes only present; [subfamily Vittarioideae]..... *Vittaria*
- 1 Sporophytes present.
 - 2 Leaves undissected and unlobed, linear, 10-60 cm long and 1-3 mm wide; [subfamily Vittarioideae] *Vittaria*
 - 2 Leaves dissected, not linear, > 20 mm wide.
 - 3 Sori round or oblong, distinct and separate along the pinnule margins; leaves bright-green, glabrous, herbaceous, delicate, and flexible (darker green, thicker, and hairy in *A. hispidulum*); [subfamily Vittarioideae] *Adiantum*
 - 3 Sori continuous along the pinnule margins (or across the blade in *Acrostichum*); leaves mostly dark-green or glaucous, often pubescent, coriaceous, tough, and stiff (except *Ceratopteris*).
 - 4 Plant aquatic or subaquatic, pale green, delicate; [subfamily Ceratopteridoideae]..... *Ceratopteris*
 - 4 Plant epipetric or terrestrial (except *Acrostichum*), usually dark or bluish green and coriaceous.
 - 7 Petioles with alternating longitudinal grooves (2 or 3) and ridges on the upper surface; [subfamily Pteridoideae].
 - *Pteris*
 - 7 Petioles rounded, flattened, or with a single groove on the upper surface; [subfamily Cheilanthesoideae].
 - 13 Leaves 1-3-pinnate, the ultimate leaf-segments 8-100 mm long, glabrous or sparsely and inconspicuously hairy
 - *Pellaea*
 - 13 Leaves 2-5-pinnate, the ultimate leaf-segments 1-4 (-8) mm long, more-or-less densely hairy (glabrous or glabrescent in *Myriopteris alabamensis* and *M. microphylla*).
 - *Myriopteris*

Adiantum Linnaeus 1753 (MAIDENHAIR FERN)

A genus of about 225 species, perennial herbs, nearly cosmopolitan. References: Lin, Prado, & Gilbert in FoC (2013); Lu et al (2011); Paris (1993) in FNA2 (1993b); Tryon, Tryon, & Kramer in Kramer & Green (1990); Williams, Theis, & Hoess (2016); Zhao et al (2021).

Identification Notes: *Adiantum* has sporangia borne marginally on the lower surface of the ultimate leaf segments, under a narrow false indusium (an often scarious flap). A distinctive feature is the black, dark purple or dark brown petiole and rachises, contrasting strongly with the pale green leaf segments. Most species of *Adiantum* in our region grow on or associated with rock outcrops, with the most widespread and northern species in the region, *Adiantum pedatum*, an exception, as it grows on rock outcrops or talus but also in mesic terrestrial situations away from exposed rock.

- 4 Leaves broader than long, dichotomously divided at the summit of the petiole, the two main branches pedately branched, fanlike; ultimate segments oblong, > 2× as long as broad *Adiantum pedatum*
- 4 Leaves longer than broad, pinnately divided, with a main central axis, not fanlike; ultimate segments rhombic, about as long as broad (usually 0.7-1.3× as long as broad).
 - *Adiantum capillus-veneris*

(see introduction for more)

Adiantum capillus-veneris Linnaeus. VENUS'-HAIR FERN, SOUTHERN MAIDENHAIR, CULANTRILLO. **Hab:** Moist calcareous substrates, in the Coastal Plain on 'marl' (coquina limestone) (NC and SC), on calcareous clay bluffs (GA), and adventive on lime mortar of old buildings and walls (as in Wilmington and Fayetteville, NC); in the Mountains and Interior Low Plateau on limestone or other calcareous sedimentary rocks. **Dist:** Widespread on several continents, in e. North America largely southern in distribution, from e. NC, w. VA, MO, CO, UT, and CO south; also disjunct in SD and BC, and in Mexico, the West Indies, tropical and warm temperate portions of Central and South America, Eurasia, and Africa. A rather implausible record for the NC Mountains (Buncombe County, Montreat, mountain ravines, rare, 1923, J.H. Davis, Herbarium UNCC) is mapped as questionable. **Phen:** Jun-Oct. **Tax:** There is some question whether North American plants are conspecific with those in the Old World (Paris in FNA 1993b). **Syn:** = Ar, Bah, C, ETx1, F, FI1, FNA2, FoC, G, GrPl, K1, K3, K4, Meso1, Mo1, NY, RAB, Sf, Tn, TxFerns, Va, W, WH3. NatureServe G5 (Secure).

Adiantum pedatum Linnaeus. NORTHERN MAIDENHAIR. **Hab:** Moist forests and cliffs, especially over calcareous or mafic rocks, sometimes in seasonal seepage. **Dist:** NS and NB west to ON and MN, south to GA, AL, MS, LA, and OK. Sometimes interpreted to also be present in e. Asia; Lu et al. (2011) make clear that Asian material should be treated as two species distinct from *Adiantum pedatum*; *Adiantum japonicum* was named in 2021 (Zhao et al. 2021). **Phen:** Jun-Aug. **Tax:** Plants growing on serpentine in MD and se. PA have sometimes been interpreted as being *A. aleuticum*, but recent molecular studies show that they are "stunted forms" or "sun forms" of *A. pedatum* (Williams, Theis, & Hoess 2016). **Syn:** = Ar, G, GrPl, Il, K4, NE, NY, RAB, Sf, Tn, Va, W, WV, Lu et al (2011), Zhao et al (2021); = *Adiantum pedatum* var. *pedatum* – F, Mo1; > *Adiantum aleuticum* (Ruprecht) Paris – FNA2, Pa, misapplied to MD and PA material; > *Adiantum aleuticum* var. *aleuticum* – K3, misapplied to MD and PA material; < *Adiantum pedatum* Linnaeus – FoC; > *Adiantum pedatum* Linnaeus – FNA2, K3, Pa; > *Adiantum pedatum* Linnaeus ssp. *calderi* Cody – C, misapplied to MD and PA material; > *Adiantum pedatum* ssp. *pedatum* – C.

Ceratopteris Brongniart 1821 (ANTLER FERN)

A genus of 3-6 species, widespread in tropical, subtropical, and warm temperate areas. References: Kinoshian, Pearse, & Wolf (2020a); Kinoshian, Pearse, & Wolf (2020b); Lin & Masuyama in FoC (2013); Lloyd (1993a) in FNA2 (1993b).

Identification Notes: *Ceratopteris* are aquatic and semi-aquatic (amphibious) ferns with irregularly and lacerately divided leaves.

- 1 Sterile leaves simple, or palmately to pinnately lobed, or 1-4-pinnately divided, the pinnae (or veins) toward the base of the leaf opposite; petioles often inflated; sporangia with or without an annulus, the annulus with 0-10 (-40) indurated cells *Ceratopteris pteridoides*
- 1 Sterile leaves (1-) 2-3-pinnately divided, the pinnae toward the base of the leaf alternate; petioles usually not inflated; sporangia with an annulus, the annulus with 13-71 indurated cells.

..... *Ceratopteris species 1* [New World]

Ceratopteris pteridoides (Hooker) Hieronymus. WATER-HORN FERN. **Hab:** Ponds and lakes (natural and artificial). **Dist:** S. GA, FL, LA (including Florida parishes); West Indies; Central and South America; se. Asia. **Phen:** Jan-Dec. **Syn:** = FI1, FNA2, FoC, K1, K3, K4, Meso1, Sf, WH3; = *Parkeria pteridoides* Hooker. NatureServe G5? (Secure).

* ***Ceratopteris species 1*** [New World]. WATERSPRITE. **Hab:** Canals, swamps, ditches. **Dist:** Widespread in tropical and subtropical areas of America; regarded by some authors as introduced in the se. United States. **Phen:** Jan-Dec. **Tax:** Kinoshian, Pearse, & Wolf (2020a, 2020b) show that New World plants previously classified as part of *C. thalictroides* should be treated as a separate species, which they informally refer to as New World *C. thalictroides*. **Syn:** =; ? *Ceratopteris deltoidea* Benedict – Sf; < *Ceratopteris thalictroides* (Linnaeus) Brongniart – ETx1, FI1, FNA2, FoC, K1, K3, Meso1, Tx, TxFerns, WH3; < *Ceratopteris thalictroides* ssp. *thalictroides* – K4. NatureServe G4G5 (Apparently Secure).

Myriopteris Fée 1852 (LIPFERN)

A genus of about 45 species, 44 in the Western Hemisphere and 1 in Africa. As outlined in Grusz & Windham (2013), *Myriopteris* is not closely related to *Cheilanthes* sensu stricto. References: Christenhusz, Fay, & Byng (2018); Gastony & Rollo (1998); Grusz & Windham (2013); Grusz et al (2014); Lellinger (1985); Tryon, Tryon, & Kramer in Kramer & Green (1990); Windham & Rabe (1993) in FNA2 (1993b).

Key to Map
Symbology:

* : waif
EN : endemic
H : historic

N : no X : extirpated
P : planted
? : questionable

F30. PTERIDACEAE

Identification Notes: *Myriopteris* includes a diversity of small, rock outcrop ferns with (in our region) lance-shaped leaves that are 2-4 pinnate-pinnatifid, the ultimate segments or lobes often < 2 mm wide. While many are conspicuously hairy and appear grayish or bluish from a distance, some are smooth (see key).

- 1 Lower leaf surfaces with a few obscure hairs or glabrescent. *Myriopteris alabamensis*
- 1 Lower leaf surfaces obviously pubescent (tomentose, villous, or lanose). *Myriopteris lanosa*

Myriopteris alabamensis (Buckley) Grusz & Windham. ALABAMA LIPFERN, SMOOTH LIPFERN. **Hab:** Dry outcrops of limestone. **Dist:** VA, w. NC, s. MO, and OK south and west to n. GA, AL, peninsular FL (historically), TX, NM, se. AZ, and Mexico (south to OAX). **Phen:** Mar-Nov (-Feb). **Tax:** Our plants are apparently apogamous triploids. **Syn:** = K3, K4, Grusz & Windham (2013); = *Cheilanthes alabamensis* (Buckley) Kunze – Ar, C, ETx1, F, FI1, FNA2, G, GrPl, K1, Mo1, RAB, Sf, Tn, Tx, TxFerns, Va, W, WH3, Lellinger (1985); = *Hemionitis alabamensis* (Buckley) Christenhusz – Christenhusz, Fay, & Byng (2018); = *Pellaea alabamensis* (Buckley) Baker ex Hooker. [NatureServe G4G5](#) (Apparently Secure).

Myriopteris lanosa (Michaux) Grusz & Windham. HAIRY LIPFERN. **Hab:** Dry outcrops of felsic or intermediate-composition metamorphic, igneous, and sedimentary rocks. **Dist:** CT, NY, PA, s. OH (pers.comm. 2021), s. IL, MO, and KS south to FL, AL, MS, LA, and e. TX, and disjunct in WI and MN. **Phen:** Jun-Oct. **ID Notes:** Much the commonest and most widespread lipfern in our area, a sexual diploid, and the most eastern of a predominantly "southwestern" genus. **Syn:** = K3, K4, NY, Grusz & Windham (2013); = *Cheilanthes lanosa* (Michaux) D.C. Eaton – Ar, C, ETx1, FI1, FNA2, G, GrPl, IL, K1, Mo1, NE, Pa, RAB, Sf, Tn, Tx, TxFerns, Va, W, WH3, WV, Lellinger (1985); = *Cheilanthes vestita* (Sprengel) Swartz – F; = *Hemionitis lanosa* (Michaux) Christenhusz – Christenhusz, Fay, & Byng (2018).

Pellaea Link 1841 (CLIFF-BRAKE)

A genus of about 40 species, mostly in the Western Hemisphere. As here circumscribed broadly, following PPG I (PPG 2016), *Pellaea* is not monophyletic and will likely be additionally split in the future (Kessler, Smith, & Prado 2017). References: Gastony & Rollo (1998); Gastony (1988); Gastony, Yatskievych, & Dixon (1992); Heafner (2001); Tryon, Tryon, & Kramer in Kramer & Green (1990); Windham (1993c) in FNA2 (1993b).

Identification Notes: *Pellaea* are small rock ferns with dark and lustrous petioles and rachises, and at least some of the pinnae grouped into 3s (except *P. ovata*, which has tannish petioles and rachises and pinnae all well-separated).

Pellaea atropurpurea (Linnaeus) Link. PURPLE CLIFF-BRAKE. **Hab:** Outcrops of limestone and other rocks (usually either calcareous, subcalcareous, or mafic), rarely on masonry walls (Wieboldt 1995). **Dist:** Widespread in e. North America, from NH, VT, NY, MN, SD, SK, and AB south to Panhandle FL, AL, TN, AR, TX, NM, AZ, Mexico, and Guatemala. **Phen:** Mar-Nov. **Tax:** This species is an apogamously-reproducing triploid, either an allopolyploid derived from the hybridization of a sexually-reproducing diploid species and sexually-reproducing tetraploid, or an autopolyploid of an undiscovered or extinct species. Gastony, Yatskievych, & Dixon (1992) provide convincing evidence that modern *P. glabella* is not one of the parental taxa, contrary to the suggestion by Lellinger (1985). **Syn:** = Ar, C, ETx1, F, FI1, FNA2, GrPl, IL, K1, K3, K4, Mesol, Mo1, NE, NY, Pa, RAB, Sf, Tn, Tx, TxFerns, Va, W, WH3, WV; = *Hemionitis atropurpurea* (Linnaeus) Christenhusz – Christenhusz, Fay, & Byng (2018); = *Pellaea* \times *atropurpurea*; = *Pellaea atropurpurea* var. *atropurpurea* – G. [NatureServe G5](#) (Secure).

Pteris Linnaeus 1753 (BRAKE)

A genus of about 250 species, warm temperate and tropical, as broadly circumscribed by Zhang et al. (2015). Infrageneric taxonomy (subgenera and sections) follow Zhang & Zhang (2018). References: Liao et al. (2013); Nauman (1993b) in FNA2 (1993b); Picard et al (2021); Tryon, Tryon, & Kramer in Kramer & Green (1990); Wyatt (2020); Zhang & Zhang (2018); Zhang et al (2015).

Identification Notes: *Pteris* is a diverse genus, making it difficult to characterize. Most of the *Pteris* in our region (excepting *Pteris tripartita* and *Pteris plumula* of Florida) are small to medium ferns of rock outcrops or the faux rock of walls, with 1-2-pinnate leaves.

- 2 Pinnae strictly simple, without lobes or pinnules; outline of leaf blade lanceolate, typically > 3× as long as wide; [subgenus *Pteris*; section *Pteris*] *Pteris vittata*
- 2 Pinnae (at least the basal ones) with at least 1-several lobes or pinnules (many lobes or pinnules in *P. plumula*); outline of leaf blade ovate to orbicular, typically nearly as wide as long (or to 4× as long as wide in *P. plumula*); [subgenus *Campteria*; section *Creticae*]. *Pteris multifida*

F30. PTERIDACEAE

* ***Pteris multifida*** Poiret. SPIDER BRAKE, HUGUENOT FERN. **Hab:** Old walls with lime mortar, dams. **Dist:** Native of the Paleotropics. See Wyatt (2020) for discussion of spread and naturalization in our region. **Phen:** Apr-Dec. **Syn:** = Ar, ETx1, Fl1, FNA2, FoC, K1, K3, K4, RAB, Tx, TxFerns, WH3; = *Pteris multifida* Poiret – Il, orthographic error; = *Pycnodoria multifida* (Poiret) Small – Sf. NatureServe G5 (Secure).

* ***Pteris vittata*** Linnaeus. LADDER BRAKE. **Hab:** Old walls with lime mortar. **Dist:** Native of e. Asia. **Syn:** = Bah, ETx1, FNA2, FoC, K1, K3, K4, Meso1, RAB, TxFerns, WH3; = *Pycnodoria vittata* (Linnaeus) Small – Sf. NatureServe GNR (Not Yet Ranked).

***Vittaria* J.E. Smith 1793 (SHOESTRING FERN)**

A genus of about 7 species, mainly epiphytic and epipetric perennial herbs, of the tropics and subtropics. The circumscription of *Vittaria* has been significantly narrowed (PPG I; Kessler, Smith, & Prado 2017). References: Farrar & Mickel (1991); Farrar (1993a) in FNA2 (1993b); Kramer & Green (1990); Pinson, Chambers, & Sessa (2017).

Identification Notes: *Vittaria* in its sporophytic form is readily recognized by its epiphytic or epipetric habit (usually epiphytic on Sabal palmetto), and narrow (< 4 mm wide), linear, pendent leaves. It might be mistaken for *Campyloneurum*, which has broader leaves and separate sori on the lower surface (as opposed to sori sunk in submarginal grooves in *Vittaria*). The gametophytic species, *Vittaria appalachiana*, is mistakable only for a non-fascular plant.

***Vittaria appalachiana* Farrar & Mickel. APPALACHIAN SHOESTRING FERN, "APPALACHIAN GAMETOPHYTE".**

Hab: Shaded grottoes, undersides of overhanging rock outcrops, especially in moist gorges or on spray cliffs in the vicinity of waterfalls, usually on felsic metamorphic rocks, such as mica schist, mica gneiss, granite gneiss, or metaquartzite, or on sandstone. **Dist:** Southern and Central Appalachians, mostly but not entirely south of the glacial boundary, from se. PA, sw. NY, and ne. OH south through c. TN and c. KY to n. GA, n. AL, and n. MS (Menapace, Davison, & Webb 1998). **Comm:** The species is often overlooked or mistaken for a liverwort; it is most often collected by bryologists and hepaticologists, and was first noted in 1824 by von Schweinitz, who considered it a *Jungermannia*. Although this species has been known for some time (often referred to as the 'Appalachian Gametophyte'), it was only named formally relatively recently (Farrar & Mickel 1991). A range of evidence (morphologic, electrophoretic, and developmental) indicates that it is not the gametophyte of any known *Vittaria* sporophyte; instead, it is a distinct taxon, reproducing vegetatively by gemmae, having lost the capability of producing sporophytes. For additional information, see Farrar (1974), Farrar (1978), Gastony (1977), Farrar, Parks, & McAlpin (1983), and Pittillo et al. (1975). **ID Notes:** This reduced species consists of "a branched, ribbon-like thallus one cell in thickness, usually differentiated into basal and upright branches; basal branches attached to the substrate by numerous short, brown rhizoids emanating from marginal and interior cells; upright branches terminating in the production of gemmae" (Farrar & Mickel 1991). **Syn:** = FNA2, K3, K4, NY, Pa, Tn, Va, Pinson, Chambers, & Sessa (2017); = "a branching, ribbon-like gametophyte, with diffuse rhizoids and linear-shaped gemmae only one cell wide, of the genus *Vittaria*" – RAB; = "irregularly shaped gametophytes a species" – C; < *Vittaria lineata* (Linnaeus) Smith – WV.

**F31. DENNSTAEDTIACEAE** Lotsy 1909 (BRACKEN FAMILY) [in POLYPODIALES]

A family of about 10 (or more) genera and about 265 species, of cosmopolitan distribution; the circumscriptions of the family and some of its component genera remain uncertain and controversial, however. References: Cranfill (1993a) in FNA2 (1993b); Kramer & Green (1990); Lellinger (1985); Perrie, Shepherd, & Brownsey (2015); PPG I (2016); Schwartzburd et al (2020).

***Pteridium* Gleditsch ex Scopoli 1760 (BRACKEN)**

A genus of 2-11 species, cosmopolitan in distribution. Bracken taxonomy remains provisional; the molecular work of Der et al. (2009) and Zhou et al. (2014) outlines a probable taxonomic structure for the genus, though rank decisions will remain controversial. It is my perception that all evidence supports the recognition of three taxa in eastern North America, at specific rank. *Pteridium* is a notorious and nearly worldwide weed (though less consequential in our area than in many parts of the world), nearly impossible to eradicate because of its deeply subterranean rhizomes. Bracken fiddleheads are sometimes eaten, but they are poisonous and highly carcinogenic. Bracken is not favored by grazing animals, and increases its abundance under grazing pressure. In overgrazed pastures, however, cattle will graze on bracken, the carcinogenic compound (shikimic acid) then transmittable to humans through milk. References: Christenhusz, Fay, & Byng (2018); Der et al (2009); Jacobs & Peck (1993) in FNA2 (1993b); Liao et al. (2013); Speer & Hilu (1998); Speer, Werth, & Hilu (1998); Thomson (2000); Thomson (2004); Thomson, Mickel, & Mehlreter (2008); Tryon (1941); Zhou et al (2014).

- 2 Leaf segment margins slightly to moderately pubescent (with 1-12 hairs per mm); terminal (caudate) tip of the basalmost pinnule of the basal pinna (3-) avg. 12 (-28)% as long as the entire pinnule; terminal segments of well-developed pinnules generally 2-4× as long as broad, about 3-8 mm wide.....***Pteridium latiusculum***
- 2 Leaf segment margins glabrous (rarely sparsely pilose with as many as 4 hairs per mm); terminal (caudate) tip of the basalmost pinnule of the basal pinna (16-) avg. 25 (-45)% as long as the entire pinnule; terminal segments of well-developed pinnules generally 6-15× as long as broad, about 2-5 mm wide.....***Pteridium pseudocaudatum***

Pteridium latiusculum (Desvaux) Hieronymus. EASTERN BRACKEN. **Hab:** Mainly in dry woodlands, forests, and heath balds, up to 1600 m in elevation. **Dist:** NL (Newfoundland) west to MB, south to Panhandle FL, TX, and n. Mexico. **Phen:** Jul-Sep. **Tax:** The circumscription of the "latiusculum entity" follows Thomson, Mickel, & Mehlreter (2008) in excluding Old World material included by many earlier authors. The relationship of the 'latiusculum' and 'pseudocaudatum' entities is discussed in detail by Speer & Hilu (1999) and Speer, Werth, & Hilu (1999). **Syn:** =; = *Pteridium aquilinum* (Linnaeus) Kuhn ssp. *latiusculum* (Desvaux) Hultén – NE, NY, Va, Thomson, Mickel, & Mehlreter (2008), Zhou et al (2014); = *Pteris latiuscula* Desvaux var. *latiuscula* – Sf; < *Pteridium aquilinum* (Linnaeus) Kuhn var. *latiusculum* (Desvaux) Underwood ex Heller – Ar, C, F, FI1, FNA2, FoC, G, GrPl, Il, K1, K3, K4, Mo1, Pa, RAB, W, WH3, WV, Speer & Hilu (1998); < *Pteris aquilinum* – Tn. [NatureServe G5T5](#) (Secure).

Pteridium pseudocaudatum (Clute) Christenhusz. SOUTHERN BRACKEN. **Hab:** Mainly in dry sandy or rocky woodlands, often locally abundant in longleaf pine sandhills and pine flatwoods. **Dist:** The "pseudocaudatum entity" is primarily distributed in the Southeastern Coastal Plain (where it is ubiquitous and abundant), but is reported north to MA, OH, IN, IL, s. MI, and MO. **Phen:** Jul-Sep. **Syn:** = Christenhusz, Fay, & Byng (2018); = *Pteridium aquilinum* (Linnaeus) Kuhn ssp. *pseudocaudatum* (Clute) Hultén – NE, NY, TxFerns, Va, Thomson, Mickel, & Mehlreter (2008), Zhou et al (2014); = *Pteridium aquilinum* (Linnaeus) Kuhn var. *pseudocaudatum* (Clute) Heller – Ar, C, ETx1, F, FI1, FNA2, G, GrPl, Il, K1, K3, K4, Mo1, RAB, Tx, W, WH3, WV, Speer & Hilu (1998); = *Pteris latiuscula* Desvaux var. *pseudocaudata* (Clute) Maxon – Sf; < *Pteridium aquilinum* – Tn. [NatureServe G5T5](#) (Secure).

F32. CYSTOPTERIDACEAE Shmakov 2001 (BRITTLE FERN FAMILY) [in POLYPODIALES]

A family of 3 genera and about 37 species, perennials, sub-cosmopolitan in distribution, primarily of temperate regions but also in montane to alpine settings in tropical regions. References: Christenhusz, Zhang, & Schneider (2011); Rothfels et al (2014).

Cystopteris Bernhardt 1806 (BLADDER FERN, BRITTLE FERN)

A genus of about 30-35 species, sub-cosmopolitan in distribution, primarily of temperate regions but also in montane to alpine settings in tropical regions. References: Ekrt et al (2022); Haufler, Moran, & Windham (1993) in FNA2 (1993b); Haufler, Windham, & Ranker (1990); Kramer & Green (1990); Rothfels et al (2014); Shmakov, Batkin, & Vaganov (2018); Wang & Haufler in FoC (2013).

Identification Notes: See *Woodsia* for suggestions on distinguishing between *Cystopteris* and *Woodsia*, somewhat similar ferns often confused. Hybrids frequently occur where two or more species of *Cystopteris* grow in proximity. The following hybrids may be anticipated in our area: *Cystopteris bulbifera* × *tennesseensis*, *Cystopteris bulbifera* × *tenuis* [= *C. ×illinoensis* R.C. Moran], *Cystopteris fragilis* × *tenuis*, *Cystopteris protrusa* × *tennesseensis*, *Cystopteris protrusa* × *tenuis*, *Cystopteris tenesseensis* × *tenuis* [= *C. ×wagneri* R.C. Moran].

Cystopteris protrusa (Weatherby) Blasdell. LOWLAND BLADDER FERN. **Hab:** Rich woods or on moss- and soil-covered talus in boulderfields, occasionally on ledges of rock outcrops. **Dist:** NY and ON west to MN, south to GA, Panhandle FL (Washington and Gadsden counties) (Wunderlin & Hansen 2006; L. Byrd, pers.comm., 2020), AL, MS, LA, e. TX, and OK. **Phen:** Apr-Jun. **Tax:** This species is a diploid involved in the reticulate evolution of *Cystopteris* in e. North America. It is one parent of *C. tenesseensis* and *C. tenuis*. Its genome can be symbolized PP. **Syn:** = Ar, C, ETx1, FI1, FNA2, GrPl, Il, K1, K3, K4, Mo1, NE, NY, Pa, RAB, Tn, TxFerns, Va, W, WH3, WV, Shmakov, Batkin, & Vaganov (2018); = *Cystopteris fragilis* var. *protrusa* Weatherby – F, G, Sf; < *Cystopteris fragilis* (Linnaeus) Bernhardt – Tx.

F34. DIPLAZIOPSIDACEAE X.C. Zhang & Christenhusz 2011 (GLADE FERN FAMILY) [in POLYPODIALES]

A family of a single genus and 4 species, perennials, of e. Asia and e. North America. References: Christenhusz & Schneider (2011); Christenhusz, Zhang, & Schneider (2011); PPG I (2016); Price (1990b).

Diplaziopsis C. Christensen 1905 (GLADE FERN)

A genus of 4 species, perennial herbs, of e. Asia and e. North America. Alternatively, our single North American species is sometimes placed in the monotypic genus, *Homalosorus* Small ex Pichi Sermolli. References: Christenhusz, Zhang, & Schneider (2011); Kato (1993a) in FNA2 (1993b); Kramer & Green (1990); Price (1990b).

Diplaziopsis pycnocarpa (Sprengel) M.G. Price. GLADE FERN. **Hab:** Very nutrient-rich, loamy or seepy forests, over calcareous sedimentary (such as limestone or dolostone) or mafic metamorphic or igneous rocks (such as greenstone or amphibolite). **Dist:** QC, ON, and MN south to GA and LA (much more common in sedimentary

F34. DIPLAZIOPSIDACEAE

rock areas of the Appalachians than in the primarily acid-soil Blue Ridge and Piedmont). **Phen:** Jul-Sep. **Syn:** = Price (1990b); = *Athyrium pycnocarpon* Sprengel – C, F, G, GrPl, RAB, WV; = *Diplazium pycnocarpon* (Sprengel) M. Broun – Ar, FNA2, IL, K1, Mo1, NE, Pa, Tn; = *Homalosorus pycnocarpos* (Sprengel) Pichi-Sermolli – K3, K4, NY, Sf, Va, W, Christenhusz, Zhang, & Schneider (2011). NatureServe G5 (Secure).

F37. ASPLENIACEAE Newman 1840 (SPLEENWORT FAMILY) [in POLYPODIALES]

A family of a single genus and about 750 species, of nearly cosmopolitan distribution. Murakami et al. (1999) conducted a molecular phylogenetic analysis of the Aspleniaceae, which confirmed that *Camptosorus* should be included in *Asplenium*, but suggested that *Phyllitis* is better separated from *Asplenium*. A later and more comprehensive study shows *Phyllitis* and *Camptosorus* to be deeply embedded in *Asplenium* (Schneider et al. 2004a), a conclusion followed here. References: Kessler & Smith (2018); Kramer & Viane in Kramer & Green (1990); PPG I (2016); Schneider et al (2004a); Wagner, Moran, & Werth (1993) in FNA2 (1993b); Xu et al (2019).

***Asplenium* Linnaeus 1753 (SPLEENWORT)**

A genus of about 750 species, perennials, nearly cosmopolitan. The southeastern North American flora is not especially rich in number of species, but includes a large number of the clades in the genus (Xu et al. 2019). References: Keener & Davenport (2007); Kessler & Smith (2018); Kramer & Viane in Kramer & Green (1990); Lin & Viane in FoC (2013); Moran (1982); Morzenti & Wagner (1962); Murakami et al (1999); Taylor, Mohlenbrock, & Burton (1976); Wagner, Moran, & Werth (1993) in FNA2 (1993b); Xu et al (2019).

Identification Notes: Several of the more frequently encountered sterile (to partly fertile) hybrids are included in the key and treated fully below. Rarer and solely sterile hybrids may be recognized by intermediate morphology and usual co-occurrence with both parents.

- 1 Leaves simple, unlobed (or with a few, irregular forkings in *A. septentrionale*); veins free or anastomosing-areolate. ***Asplenium rhizophyllum***
- 1 Leaves pinnatifid (at least in the lower half of the leaf), pinnate, pinnate-pinnatifid, bipinnate, or tripinnate, the apex obtuse, acute, acuminate, or attenuate; veins free.
 - 6 Rachis shiny black or dark brown throughout its length; rachis not grooved on its upper surface; leaves pinnate, the outline of the leaf blade linear, lanceolate, or oblanceolate, with more-or-less parallel sides for much of its length.
 - 7 Pinnae orbicular to obovate-oblong, 1-2× as long as wide, the base more-or-less symmetrical (if auriculate, only slightly so and on the side of the pinna toward the base of the leaf); old leaf rachises often with persistent projections left from the disarticulation of the pinnae; [VI. *A. trichomanes* clade; *A. trichomanes* subclade]. ***Asplenium trichomanes***
 - 7 Pinnae oblong-rectangular, 2× or more as long as wide, the base asymmetrical or auricled (more prominently auricled on the side of the pinna toward the tip of the leaf); old leaf rachises lacking persistent projections left from the disarticulation of the pinnae.
 - 9 Leaves slightly dimorphic, the fertile upright and larger, the sterile spreading and smaller; pinna auricles prominent, often overlapping the rachis; [terrestrial, often not associated with rock outcrops]; [V. *Schaffneria* clade; *A. incisum* subclade]. ***Asplenium platyneuron***
 - 9 Leaves not dimorphic; pinna auricles less prominent, usually not overlapping the rachis; [epipetric, always growing in crevices of rock outcrops or in thin soil immediately adjacent to exposed rock]; [VI. *A. trichomanes* clade; *A. monanthes* subclade]. ***Asplenium resiliens***
 - 6 Rachis dull green throughout its length, or at least toward the tip; rachis grooved on the upper surface, at least in the green portion; leaves pinnatifid to tripinnate, the outline of the leaf blade narrowly to broadly triangular, widest at the base (or slightly above the base in *A. abscissum*) (except *A. dentatum*).
 - 13 Petiole shiny black or brown throughout its length (from base to first leaflet). ***Asplenium ×ebenoides***
 - 13 Petiole partially or entirely green (darkened or not at its base). ***Asplenium pinnatifidum***

***Asplenium ×ebenoides* R.R. Scott.** SCOTT'S SPLEENWORT. **Hab:** Moist outcrops of calcareous sedimentary rocks, such as limestone, dolostone, and on coquina limestone (shell marl), at low elevations. **Dist:** VT, NJ, c. PA, OH, s. IL, and MO south to e. VA, w. NC, nw. GA, c. AL, TN, and AR. **Phen:** May-Oct. **Tax:** *A. ×ebenoides* is a sterile hybrid (chromosome complement symbolized PR). In AL, however, one population in Hale County has undergone chromosome doubling and is a fertile allotetraploid (PPRR), now treated as *A. tutwilerae*. Populations of "*A. ×ebenoides*", especially if consisting of many individuals, should be checked for fertile spores to be sure they are not *A. tutwilerae*. **Syn:** = Ar, IL, K4, NE, Pa, WV, Keener & Davenport (2007); = *×Asplenosorus ebenoides* (R.R. Scott) Wherry – F; = *Asplenium ebenoides* R.R. Scott – K3; = *Asplenium platyneuron* × *rhizophyllum* – NY; = *Asplenosorus ebenoides* (R.R. Scott) Wherry – G; < *Asplenium ×ebenoides* R.R. Scott – K1; < *Asplenium ebenoides* R.R. Scott – FNA2, Sf.

***Asplenium pinnatifidum* Nuttall.** LOBED SPLEENWORT. **Hab:** Fairly moist to very dry outcrops of felsic sedimentary or (mostly low-grade) metamorphic rocks, such as sandstone, phyllite, and schist, at low to moderate elevations. **Dist:** NY (historically), NJ, se. PA, wc. PA, s. OH, IN, IL, and MO south to w. NC, c. GA (Jones & Coile 1988), AL, n. MS, AR, and e. OK. **Phen:** May-Oct. **Tax:** This species is a fertile allotetraploid derived from hybridization of *A. montanum* and *A. rhizophyllum*; its chromosome complement is symbolized MMRR. **Syn:** = Ar, C, F, FNA2, IL, K3, Mo1, NY, Pa, RAB, Sf, Tn, Va, W, WV; = *×Asplenosorus pinnatifidus* (Nuttall) Mickel; = *Asplenium ×pinnatifidum* – K1; = *Asplenium pinnatifidum* var. *pinnatifidum* – G. NatureServe G4 (Apparently Secure).

***Asplenium platyneuron* (Linnaeus) Britton, Sterns, & Poggenburg.** EBONY SPLEENWORT. **Hab:** Moist to dry soils of forests, woodlands, old fields; also on outcrops, especially of calcareous rocks and in masonry crevices, at low to moderate elevations. **Dist:** QC, ON, se. MN, IA, and se. CO south to FL, TX, NM, and AZ (and varieties or relatives reported from Central and South America); Slovakia; South Africa. **Phen:** (Jan-) Apr-Oct (-Dec). **Tax:** *A. platyneuron* var. *incisum* does not seem to warrant taxonomic recognition. Strikingly large plants of the outer Atlantic Coastal Plain and Gulf Coastal Plain have been named var. *bacculum-rubrum* (Featherman) Fernald; they are probably not worthy of taxonomic recognition. They can be distinguished as follows: var. *bacculum-rubrum* has the longest pinnae > 3.5-6 cm long, the pinnae often coarsely serrate-incised to pinnatifid and the larger leaves to (30-) 40-70 (-100) cm tall, with 45-70 pairs of pinnae (vs. longest pinnae < 3.5 cm long, pinnae subentire to pinnatifid, larger leaves to 20-45 (-50) cm tall, with 25-50 pairs of pinnae). **Comm:** This species is one of the diploid progenitors involved in the

F37. ASPLENIACEAE

reticulately evolved Appalachian *Asplenium* complex. It is one parent of *A. bradleyi* and *A. ×ebenoides* (as well as other sterile hybrids). *A. platyneuron* in general, and var. *platyneuron* specifically, is by far the most common of our *Asplenium* species, and the only one found characteristically away from rock. **Syn:** = Ar, C, ETx1, F11, FNA2, GrPl, K3, K4, Mo1, NE, Pa, RAB, Sf, Tn, Tx, TxFerns, Va, W, WH3, WV, Keener & Davenport (2007); > *Asplenium platyneuron* var. *bacculum-rubrum* (Featherman) Fernald – F, G, K1, Taylor, Mohlenbrock, & Burton (1976); > *Asplenium platyneuron* var. *incisum* (Howe ex Peck) B.L. Robinson – F, Il, Taylor, Mohlenbrock, & Burton (1976); > *Asplenium platyneuron* var. *platyneuron* – F, G, Il, K1, Taylor, Mohlenbrock, & Burton (1976).

***Asplenium resiliens* Kunze. BLACKSTEM SPLEENWORT. Hab:** Moist to dry outcrops of calcareous sedimentary or metamorphic rocks, such as limestone, dolostone, coquina, or marble, sometimes on narrow seams of calcareous materials in otherwise acidic rocks, rarely on mortar or concrete, mostly at low to moderate elevations, but remarkably on Grandfather Mountain at over 1800 m. **Dist:** Sc. PA, KY, s. IL, MO, se. KS, OK, TX, CO, and s. NV south to FL, TX, AZ, and Mexico; West Indies; Central America and South America. **Phen:** Apr-Nov. **Comm:** This species is a triploid (EEE), unable to produce viable spores by sexual means, but producing spores apogamously. It is a parent species of the rare *A. heteroresiliens*. **Syn:** = Ar, C, ETx1, F, F11, FNA2, G, GrPl, Il, K1, K3, Meso1, Mo1, Pa, RAB, Sf, Tn, Tx, TxFerns, Va, W, WH3, WV, Kessler & Smith (2018). **NatureServe G5** (Secure).

***Asplenium rhizophyllum* Linnaeus. WALKING FERN. Hab:** Moist outcrops of calcareous sedimentary, calcareous metamorphic, or mafic metamorphic rocks, such as limestone, dolostone, calcareous siltstone, amphibolite, mostly at low to moderate elevations, rarely to 1500 m or higher. **Dist:** S. QC, ON and se. MN south to c. GA, AL, MS, AR, OK, and IA. **Phen:** May-Oct. **Tax:** This species, sometimes placed in the genus *Camptosorus* because of its strikingly different morphology from (most) other *Asplenium*, is one of the diploid progenitors of the reticulately evolved Appalachian *Asplenium* complex. It is a parent of *A. pinnatifidum* and *A. ×ebenoides* (as well as other sterile hybrids), both of which have inherited a limited ability to produce plantlets at the attenuate leaf-tip. It is closely related to *Asplenium ruprechtii* Kurata of e. Asia. **Syn:** = Ar, C, FNA2, GrPl, Il, K1, K3, K4, Mo1, NE, NY, Pa, RAB, Tn, Va, W, Keener & Davenport (2007); = *Camptosorus rhizophyllum* (Linnaeus) Link – F, G, Sf, WV. **NatureServe G5** (Secure).

***Asplenium trichomanes* Linnaeus. MAIDENHAIR SPLEENWORT. Hab:** Moist outcrops of slightly to strongly calcareous sedimentary or metamorphic rocks and moderately to strongly mafic metamorphic and igneous rocks, such as limestone, dolostone, mafic and intermediate gneisses and schists, amphibolite, most typically in strong shade, as under overhangs. **Dist:** *A. trichomanes* as a whole is a complex, with diploid, tetraploid, and hexaploid elements, occurring in North America, Europe, Australia, New Zealand, and Asia. *A. trichomanes* s.s. is known to occur in Europe and North America (at least); in North America, it ranges from NL (Newfoundland) to BC, south to NC, c. GA (Jones & Coile 1988), c. AL, AR, OK, w. TX, CHI, se. AZ, and w. OR. **Phen:** May-Oct. **Comm:** *A. trichomanes* is a diploid, involved as one parent in the origin of *A. quadrivalens*. **Syn:** = Lin & Viane in FoC (2013); = *Asplenium trichomanes* Linnaeus ssp. *trichomanes* – Ar, FNA2, Il, K1, K3, K4, Mo1, NE, NY, Pa, TxFerns, Va, W; < *Asplenium trichomanes* Linnaeus – C, F, G, GrPl, RAB, Sf, Tn, Tx, WH3, WV. **NatureServe G5T5** (Secure).

F38. WOODSIACEAE Herter 1949 (WOODSIA FAMILY) [in POLYPODIALES]

A family of about 1 genus and ca. 65 species, cosmopolitan in distribution, but concentrated in temperate and montane areas. Proposals have been made to split *Woodsia* into 7 genera (Shmakov 2015) or 2 genera (Lu et al. 2020). We retain a broad *Woodsia* for now, while additional studies are done. References: Kramer & Green (1990); Lellinger (1985); Lu et al (2020); Shmakov (2015); Smith (1993a) in FNA2 (1993b); Smith et al (2006b).

- 1 Sori elongate, indusia present and flaplike, attached along a long side.
 - 2 Leaves 2-pinnate to 3-pinnate (the pinnae at least 1-pinnate); sori elongate, 2-3× as long as wide, the larger sori generally curved and extending across the veins (except *Diplazium esculentum*).
 - *Athyrium*
 - 2 Leaves 1-pinnate to 1-pinnate-pinnatifid (the pinnae entire or pinnatifid); sori elongate, 2.5-6× as long as wide, even the larger sori generally straight and not extending across the veins.
 - 4 Leaves 1-pinnate-pinnatifid, the pinnae pinnatifid *Deparia*
 - 4 Leaves 1-pinnate, the pinnae entire *Diplazopsis*
 - 1 Sori round, indusia present or absent, if present cuplike or lateral (but not attached along a long side).
 - 6 Indusium attached under one side of the sorus, hoodlike or pocketlike, arching over the sorus; petioles glabrous or sparsely beset with scales, the petiole bases not persistent *Cystopteris*
 - 6 Indusium attached under the sorus, cuplike (divided into 3-6 lanceolate to ovate lobes which surround the sorus from below) or of minute numerous septate hairs, which extend out from under the sorus on all sides; petioles often densely beset with scales, the petiole bases persistent *Woodsia*

Woodsia R. Brown 1810 (WOODSIA, CLIFF FERN)

A genus of about 65 species, of temperate and cool-temperate regions, widespread in the Northern Hemisphere, in montane tropical South America and Africa. Recent proposals have been made, based on molecular and morphological data, to split *Woodsia* into 2 or more genera (Shmakov 2015; Lu et al. (2020). They have merit, but

Key to Map
Symbology:

* : waif
EN : endemic

N : no
P : plar
? : questionable

F38. WOODSIACEAE

we hold with a broad circumscription of *Woodsia* until a consensus develops. References: Kramer & Green (1990); FoC; Lu et al (2020); PPG I (2016); Shmakov (2015); Windham (1993d) in FNA2 (1993b).

Identification Notes: *Woodsia* species and *Cystopteris* species are all small ferns with thin-textured leaves, occurring primarily on or near rock outcrops; they frequently occur together or in proximity to one another and are often confused. *Woodsia* has the indusium divided into a series of scale-like or hair-like structures, attached below the sorus; *Cystopteris* has an undivided indusium, pocket-like or hood-like, attached around one side of the sorus. *Woodsia* has persistent dark petiole bases; in *Cystopteris* the petiole bases are deciduous. *Woodsia* has the final veinlets not reaching the margin; *Cystopteris* veins do reach the margin.

Woodsia obtusa (Sprengel) Torrey *ssp. obtusa*. COMMON WOODSIA, BLUNT-LOBED CLIFF FERN. **Hab:** Rock outcrops of various sorts, moist talus, terrestrial near rock outcrops. **Dist:** ME, QC, MN, and e. NE, south to Panhandle FL and e. TX. **Phen:** May-Oct. **Syn:** = Ar, ETx1, FNA2, K1, K3, K4, Mo1, NE, NY, TxFerns, Va; = *Physematum obtusum* (Sprengel) Hooker *ssp. obtusum* – Lu et al (2020); = *Woodsiopsis obtusa* (Sprengel) Shmakov *ssp. obtusa* – Shmakov (2015); < *Woodsia obtusa* – C, F, FI1, G, GrPl, Il, Pa, RAB, Sf, Tn, Tx, W, WH3, WV. [NatureServe G5T5](#) (Secure).

F39. ONOCLEACEAE Pichi Sermolli 1970 (SENSITIVE FERN FAMILY) [in POLYPODIALES]

A family of 4 genera and 5 species (but see below), of north temperate regions (PPG I 2016). The family as here circumscribed is monophyletic and sister to Blechnaceae (Smith et al. 2006b). Christenhusz, Zhang, & Schneider (2011) preferred to combine the 5 species in the family into the single genus (*Onoclea*). References: Christenhusz, Zhang, & Schneider (2011); PPG I (2016); Smith et al (2006b).

***Onoclea* Linnaeus 1753 (SENSITIVE FERN)**

A genus of 2 species, of temperate e. North America and e. Asia. References: Christenhusz, Zhang, & Schneider (2011); Gastony & Ungerer (1997); Johnson (1993b) in FNA2 (1993b); Kramer & Green (1990); Xing, Wang, & Kato in FoC (2013).

Identification Notes: In sterile leaf, *Onoclea sensibilis* is sometimes confused with *Lorinseria areolata*, but *Lorinseria* has the pinnae generally alternate (vs. tending to be opposite), the pinnae generally acute or acuminate (vs. obtuse to less typically acute), and the pinna margin finely serrulate (vs. entire).

Onoclea sensibilis Linnaeus. SENSITIVE FERN, BEAD FERN. **Hab:** Marshes, swamps, ditches, wet disturbed places. **Dist:** NL (Newfoundland) west to MN and CO, south to FL and TX. *O. interrupta* (also treated as a variety or included in *O. sensibilis* without taxonomic recognition (see synonymy) is e. Asian. **Phen:** May-Jun. **Tax:** Two taxa of *Onoclea*, one in e. North America and one in e. Asia, should be recognized (Gastony & Ungerer 1997); the appropriate rank is not agreed on, though Gastony & Ungerer (1997) demonstrated a similar level of distinction as various disjunct sibling pairs in other fern genera. **Comm:** The specific epithet and common name refer to the fact that the fronds wither at the first touch of frost, not that they respond to touch. The peculiar fertile leaves (with their brown, beadlike, fertile pinnules) are collected for use in dried arrangements. **Syn:** = Gastony & Ungerer (1997); = *Onoclea sensibilis* Linnaeus var. *sensibilis* – TxFerns, Va; < *Onoclea sensibilis* Linnaeus – Ar, C, ETx1, F, FI1, FNA2, FoC, G, GrPl, Il, K1, K4, Mo1, NE, NY, Pa, RAB, Sf, Tx, W, WH3, WV. [NatureServe G5TNR](#) (Not Yet Ranked).

**F40. BLECHNACEAE** Newman 1844 (DEER FERN FAMILY) [in POLYPODIALES]

A family of about 24 genera (Gasper et al. 2016, 2017) and about 265 species, cosmopolitan in distribution. References: Cranfill (1993b) in FNA2 (1993b); Gasper et al (2016); Gasper et al (2017); Kramer, Chambers, & Hennipman in Kramer & Green (1990); Lellinger (1985); Li et al (2016b); Perrie et al (2014); PPG I (2016).

- 3 Leaves dimorphic, the sterile leaves pinnatifid, the pinnae 7-10 pairs per leaf, basally not distinct from one another, the rachis therefore winged by leaf tissue throughout its length, the pinnae merely finely serrulate.....*Lorinseria areolata*
- 3 Leaves monomorphic; the leaves pinnate-pinnatifid, the pinnae 15-20 pairs per leaf, fully distinct, the rachis therefore not winged by leaf tissue, the pinnae themselves pinnatifid.....*Anchistea virginica*

***Anchistea* C. Presl 1851 (VIRGINIA CHAIN FERN)**

A monotypic genus, perennial herb, of e. North America. *Anchistea* has often been lumped into the Eurasian (mainly e. Asian) *Woodwardia*, but is basal to *Woodwardia*, morphologically distinctive from both *Woodwardia* and *Lorinseria*, and an ancient independent lineage (Gasper et al. 2016, 2017). References: Cranfill & Kato (2003); Cranfill (1993b) in FNA2 (1993b); Gasper et al (2016); Gasper et al (2017); Kramer, Chambers, & Hennipman in Kramer & Green (1990); Li et al (2016b); PPG I (2016).

Identification Notes: Sterile plants of *Osmundastrum cinnamomeum* are sometimes confused with *Anchistea virginica*, which also has rather coarse, pinnate-pinnatifid leaves and grows in similar wet, acid places. *Osmundastrum* is coarser (to 2 m tall, vs. to 1 m tall), has cinnamon tufts of tomentum present in the axils of the pinnae (vs. absent), has the rachis greenish and rather fleshy in texture (vs. brown and wiry), and bears fronds clumped or tufted from a massive, woody, ascending rhizome covered with old petiole bases (vs. fronds borne scattered along a thick, horizontal, creeping rhizome).

F40. BLECHNACEAE

Anchistea virginica (Linnaeus) C. Presl. VIRGINIA CHAIN FERN. **Hab:** Moist to wet, acid, organic soils, such as bogs, blackwater bottomlands, pocosins, sometimes in standing water, as in periodically flooded coastal plain depression ponds, wet hammocks. **Dist:** NS west to MI and IL, south to s. FL and e. TX (primarily Coastal Plain); Bermuda. **Phen:** Apr-Dec. **Syn:** = K4, NY, Sf, Cranfill & Kato (2003), Gasper et al (2016), Gasper et al (2017), Perrie et al (2014), PPG I (2016); = *Woodwardia virginica* (Linnaeus) J.E. Smith – Ar, C, ETx1, F, FI2, FNA2, G, IL, K1, K3, NE, Pa, RAB, Tn, Tx, TxFerns, Va, W, WH3. NatureServe G5 (Secure).

Lorinseria C. Presl 1849 [1851] (NETTED CHAIN FERN)

A monotypic genus, perennial herb, of e. North America. *Lorinseria* has often been lumped into the Eurasian (mainly e. Asian) *Woodwardia*, but is basal to *Anchistea* + *Woodwardia*, morphologically distinctive from both, and an ancient independent lineage (Gasper et al. 2017; Gasper et al. 2016). References: Cranfill & Kato (2003); Cranfill (1993b) in FNA2 (1993b); Gasper et al (2016); Gasper et al (2017); Kramer, Chambers, & Hennipman in Kramer & Green (1990); Li et al (2016b); PPG I (2016).

Identification Notes: In sterile leaf, *Lorinseria areolata* is sometimes confused with *Onoclea sensibilis*, but *Lorinseria* has the pinnae generally alternate (vs. tending to be opposite), the pinnae generally acute or acuminate (vs. obtuse to less typically acute), and the pinna margin finely serrulate (vs. entire).

Lorinseria areolata (Linnaeus) C. Presl. NETTED CHAIN FERN. **Hab:** Moist to wet, acid, organic soils, such as bogs, blackwater bottomlands, pocosins, wet hammocks. **Dist:** NS west to MI and MO, south to s. FL and e. TX, primarily on the Coastal Plain. **Phen:** May-Sep. **Comm:** See Cranfill (1983) for a discussion of the geography and ecology of *L. areolata*. **Syn:** = K4, NY, Sf, Tx, WV, Cranfill & Kato (2003), Gasper et al (2016), Gasper et al (2017), Perrie et al (2014); = *Woodwardia areolata* (Linnaeus) T. Moore – Ar, C, ETx1, F, FI2, FNA2, G, IL, K1, K3, Mo1, NE, Pa, RAB, Tn, TxFerns, Va, W, WH3. NatureServe G5 (Secure).

F41. ATHYRIACEAE Alston 1956 (LADY FERN FAMILY) [in POLYPODIALES]

A family of 3-5 genera and about 650 species, subcosmopolitan in distribution. References: Christenhusz, Zhang, & Schneider (2011); PPG I (2016); Wang, He, & Kato in FoC (2013); Wei et al (2017).

- 1 Leaves 1-pinnate to 1-pinnate-pinnatifid (the pinnae entire or pinnatifid); sori elongate, 2.5-6× as long as wide, even the larger sori generally straight and not extending across the veins.
 2 Leaves 1-pinnate, the pinnae entire *Diplaziosis pycnocarpa*
 2 Leaves 1-pinnate-pinnatifid, the pinnae pinnatifid *Deparia*
 1 Leaves 2-pinnate to 3-pinnate (the pinnae at least 1-pinnate); sori elongate, 2-3× as long as wide, the larger sori generally curved and extending across the veins (except *Diplazium esculentum*).
 *Athyrium*

Athyrium Roth 1799 (LADY FERN)

A genus of about 225 species, cosmopolitan in distribution, but concentrated in e. and se. Asia. Wei et al. (2017) recognize ten sections in the genus; the species in our area are in section *Athyrium*. For our area, Kelloff et al. (2002) and Kelloff & Werth (1998) support recognition of two taxa at either specific or infraspecific levels, based on morphology, allozymes, and spores. References: Kato (1993c) in FNA2 (1993b); Kelloff et al (2002); Kramer & Green (1990); Moran, Hanks, & Sundue (2019); Wang, He, & Kato in FoC (2013); Wei et al (2017).

Identification Notes: *Athyrium* and *Deparia* superficially resemble *Dryopteris*, and they often grow together. *Athyrium* and *Deparia* have linear, flap-like sori (vs. rounded, reniform sori). Sterile individuals can be distinguished by the number of vascular bundles in the petiole (easily determined by breaking off a leaf and counting the vascular bundles, which will appear as thread-like, but flattened, strands); *Athyrium* and *Deparia* have 2, *Dryopteris* has 4-7.

Athyrium asplenoides (Michaux) A.A. Eaton. SOUTHERN LADY FERN. **Hab:** Moist forests. **Dist:** MA, WV, IL, and KS south to n. FL and e. TX. **Phen:** May-Sep. **Tax:** High elevation plants (mainly in spruce-fir and northern hardwoods forests) in the Southern Appalachians need additional taxonomic study. They have much larger leaves than typical lowland forms, and the leaves are more divided. The name *Athyrium filix-femina* var. *subtripinnatum* Butters may apply. **Syn:** = K3, K4, NE, NY, RAB, Sf, Va, WV; = *Athyrium filix-femina* ssp. *asplenoides* (Michaux) Hultén – Ar, ETx1, IL, K1, Mo1, Tn, TxFerns, W, WH3; = *Athyrium filix-femina* (Linnaeus) Roth ex Mertens var. *asplenoides* (Michaux) Farwell – C, F, FNA2, G, GrPl, Pa, Tx; > *Athyrium filix-femina* (Linnaeus) Roth ex Mertens var. *subtripinnatum* Butters.

Deparia Hooker & Greville 1829

A genus of about 70-90 species, primarily in tropical to warm temperate Asia and Africa. Infrageneric classification follows Kuo et al. (2018). References: Kato (1993b) in FNA2 (1993b); Kramer & Green (1990); Kuo et al (2018); Moran, Hanks, & Sundue (2019); PPG I (2016); Shinohara et al (2006); Wang, He, & Kato in FoC (2013); Wyatt (2020).

Identification Notes: Unlike *Athyrium*, *Deparia acrostichoides* has the costal groove not continuous with the rachis groove. In addition, *Deparia acrostichoides* has multicellular hairs on the leaf blades.

F41. ATHYRIACEAE

- 1 Leaf blade narrowed to base; petiole bases swollen, with 2 rows of teeth; [plant a common native species of moist forests]; [section *Lunathyrium*] *Deparia acrostichoides*
- 1 Leaves widest at the base; petiole bases not markedly swollen, lacking teeth; [plant an exotic species, rarely introduced and naturalized]; [section *Deparia*; subsection *Athyriopsis*] *Deparia petersenii*

Deparia acrostichoides (Swartz) M. Kato. SILVERY SPLEENWORT. **Hab:** Moist forests, cove forests. **Dist:** NS west to MN, south to NC, SC, n. GA, n. AL, and AR. **Phen:** Jun-Sep. **Comm:** *D. acrostichoides* is the only species of *Deparia* native to the New World; it has several very closely related species in e. Asia (in section *Lunathyrium*). It stores starch in the swollen, persistent petiole bases. **Syn:** = Ar, FNA2, Il, K1, K3, K4, Mo1, NE, NY, Pa, Tn, Va, W; = *Athyrium thelypteroides* (Michaux) Desvaux – C, F, G, RAB, WV; = *Diplazium acrostichoides* (Swartz) Butters – Sf; = *Lunathyrium acrostichoides* (Swartz) Ching. [NatureServe G5](#) (Secure).

* ***Deparia petersenii*** (Kunze) M. Kato. JAPANESE LADY FERN. **Hab:** Swamp forests, wet hammocks, moist banks, disturbed areas. **Dist:** Introduced and naturalized in the Southeast, including in sw. NC (K.A. Bradley, pers.comm., 2021), e. and w. SC (K.A. Bradley, pers.comm., 2021), c. and s. GA, AL, s. MS, e. LA, and FL, from a native distribution in se. Asia. See Wyatt (2020) for discussion of naturalization in our region. **Phen:** Jun-Oct. **Tax:** *Deparia petersenii* as currently broadly circumscribed is a polyploid complex, likely to be interpreted in the future as including several species (Kuo et al. 2018, Shinohara et al. 2006). **ID Notes:** The contrast of stiff silvery hairs against a dark brown petiole (stipe) and rachis is a helpful diagnostic feature. **Syn:** = F11, FNA2, FoC, K3, K4, WH3, Shinohara et al (2006); = *Deparia japonica* (Thunberg) M. Kato, misapplied; = *Deparia petersonii* – K1, orthographic error; = *Diplazium japonicum* (Thunberg) Beddome, misapplied. [NatureServe GNR](#) (Not Yet Ranked).

**F42. THELYPTERIDACEAE** Ching ex Pichi Sermolli 1970 (MARSH FERN FAMILY) [in POLYPODIALES]

A family of about 37 genera and about 1190 species, nearly cosmopolitan, but especially diverse in the tropics and in e. and se. Asia. (Fawcett & Smith 2021; Fawcett et al. 2021). References: Almeida et al (2016); Fawcett & Smith (2021); Fawcett et al (2021); He & Zhang (2012); Kramer & Green (1990); Kuo et al (2019a); Lellinger (1985); FoC; Mickel (1979); Smith & Cranfill (2002); Smith (1993a) in FNA2 (1993b).

- 1 Leaf blades 7-25 (-30) cm long, triangular, < 2× as long as wide (or lanceolate and > 4× as long as wide in the rarely naturalized *P. decursive-pinnata*); rachis with adnate wings between the pinnae; sori without indusia; midribs of pinnae lacking an adaxial groove; [subfamily *Phegopteridoideae*]; [Phegopteroid clade] *Phegopteris*
- 1 Leaf blades (15-) 20-100 cm long, lanceolate, oblong-lanceolate, or triangular, > 2× as long as wide; rachis without adnate wings between the pinnae; sori with reniform indusia; midribs of pinnae with an adaxial groove (adaxial groove lacking in *Macrothelypteris*).
2 Midribs of the pinnae lacking an adaxial groove; leaf bipinnate to tripinnate; [subfamily *Phegopteridoideae*]; [Phegopteroid clade] *Macrothelypteris torresiana*
- 2 Midribs of the pinnae with an adaxial groove; leaf pinnate to pinnate-pinnatifid; [subfamily *Thelypteridoideae*].
6 Basal veins from adjacent lobes of the pinna not meeting at all; lowermost pinnae of a leaf either as long as the pinnae above (or only slightly smaller), or strongly reduced (with an obvious and strong taper of the blade outline towards the base).
7 Lowermost pinnae of a leaf strongly reduced, at least 3 or 4 pairs distinctly smaller than the longest pair on a leaf (and therefore with an obvious and strong taper of the blade outline towards the base); [Amauropeltoid clade] *Amauropelta*
- 7 Lowermost pinnae of a leaf as long as the pinnae above, or only slightly smaller (> 80% as long).
..... *Thelypteris palustris* var. *pubescens*
- 6 Basal veins from adjacent lobes of the pinna either uniting either below the sinus (between the sinus and the costa) and therefore forming a united vein continuing to the sinus, or reaching the sinus at the same point; lowermost pinnae of a leaf as long as the pinnae above, or only slightly smaller (> 80% as long) (except in *Christella*); pinnae 3.5-45 cm long, usually at least the longer > 15 cm long (except in *Christella*).
9 Basal veins from adjacent lobes of the pinna either uniting either below the sinus (between the sinus and the costa) and therefore forming a united vein continuing to the sinus; rhizomes 3-12 mm in diameter
..... *Pelazoneuron*
- 9 Basal veins from adjacent lobes of the pinna reaching the sinus at the same point (but not uniting to form a united vein to the sinus); rhizomes 3-6 mm in diameter.
..... *Christella*

***Amauropelta* Kunze 1843**

A genus of about 233 species, perennial herbs, mainly of the New World tropics, but also in the Old World tropics. References: Fawcett & Smith (2021); He & Zhang (2012); Kuo et al (2019b); Smith & Flory (1990); Smith & Kessler (2017); Smith (1981); Smith (1993a) in FNA2 (1993b); Smith (1993a) in FNA2 (1993b).

Amauropelta noveboracensis (Linnaeus) S.E. Fawcett & A.R. Smith. NEW YORK FERN. **Hab:** Mesic forests, bottomland forests, bogs, submesic forests. **Dist:** NL (Newfoundland) and WI south to GA, AL, and AR. Reported for MO by Brant (2018). **Phen:** May-Aug. **ID Notes:** Distinctive in the leaves tapering about equally to both tip

[NatureServe G5T3T5](#) (Apparently Secure).

***Macrothelypteris* (H. Itô) Ching 1963 (MAIDEN FERN)**

A genus of about 10 species, tropical and subtropical. References: Fawcett & Smith (2021); FoC; Smith & Flory (1990); Smith & Kessler (2017); Smith (1993a) in FNA2 (1993b); Wyatt (2020).

* ***Macrothelypteris torresiana*** (Gaudichaud-Beaupré) Ching. MARIANA MAIDEN FERN. **Hab:** Wet hammocks, cypress swamps, streamsides, moist forests, disturbed areas, increasingly invasive in natural habitats (especially in the southern parts of our area). **Dist:** Native of the Asian and African tropics. Leonard (1972) and Wyatt (2020) discussed the history of this species in the southeastern United States. *Macrothelypteris torresiana* continues to spread northward, and is reported for KY (Gorman, Bruton, & Estes 2011) and IL (Mohlenbrock 2014). **Phen:** Jan-Dec. **Syn:** = Ar, Bah, ETx1, Fl1, FNA2, FoC, Il, K1, K3, K4, Meso1, Tn, TxFerns, WH3, Fawcett & Smith (2021), Smith & Kessler (2017); = *Dryopteris setigera* (Blume) Kuntze – Sf, misapplied; = *Thelypteris torresiana* (Gaudichaud-Beaupré) Alston – Tx. [NatureServe G5](#) (Secure).

***Pelazoneuron* (Holttum) A.R. Smith & S.E. Fawcett 2021**

A genus of 16 species, perennial (rhizomatous) ferns, of the New World tropics and subtropics. References: Fawcett & Smith (2021).

- 2 Upper surface of the costae and costules with at least a few stout hairs > 0.3 mm long; upper leaf surface pubescent to nearly glabrous, also glandular with stipitate glands. ***Pelazoneuron kunthii***
- 2 Upper surface of the costae and costules glabrous above (rarely minutely hairy, the hairs never > 0.2 mm long), eglandular ***Pelazoneuron ovatum* var. *ovatum***

Pelazoneuron kunthii (Desvaux) A.R. Smith & S.E. Fawcett. KUNTH'S MAIDEN FERN, SOUTHERN SHIELD FERN. **Hab:** Coquina limestone ('marl') outcrops, calcareous bluffs and sinkhole slopes, also adventive on and around coquina limestone (marl) riprap around small bridges and ditches and in suburban forests. **Dist:** Se. NC south to s. FL and west to c. TX; West Indies; Mexico south through Central America into n. South America. **Phen:** (Jan-) May-Aug (-Dec). **Syn:** = Fawcett & Smith (2021); = *Cyclosorus kunthii* (Desvaux) Christenhusz – K3; = *Thelypteris kunthii* (Desvaux) C.V. Morton – Ar, Bah, ETx1, Fl1, FNA2, K1, Meso1, RAB, Tx, TxFerns, WH3; < *Christella normalis* (C. Christensen) Holttum – K4; < *Dryopteris normalis* C. Christensen; < *Thelypteris normalis* (C. ***Phegopteris*** (C. Presl) Fée 1852 (BEECH FERN)

A genus of about 8 (or ultimately probably more) species, mainly north temperate and boreal. References: Fawcett & Smith (2021); Fujiwara et al (2021); Gilman (2020); FoC; Patel, Fawcett, & Gilman (2019); Smith & Flory (1990); Smith (1993a) in FNA2 (1993b).

Phegopteris hexagonoptera (Michaux) Fée. BROAD BEECH FERN. **Hab:** Mesic to submesic forests. **Dist:** QC west to ON, WI, and MN, south to Panhandle FL and e. TX. **Phen:** Apr-Aug. **Syn:** = Ar, Fl1, FNA2, GrPl, Il, K1, K3, K4, Mo1, NE, NY, Pa, Sf, Tn, TxFerns, Va, WH3, WV, Fawcett & Smith (2021), Gilman (2020), Patel, Fawcett, & Gilman (2019); = *Dryopteris hexagonoptera* (Michaux) C. Christensen – F; = *Thelypteris hexagonoptera* (Michaux) Weatherby – C, G, RAB, Tx, W. [NatureServe G5](#) (Secure).

Thelypteris Schmidel 1763 (MARSH FERN)

A genus of 2 species, perennial herbs, circumboreal in distribution (with several varieties) and also with a Southern Hemisphere member. Often in the past considered a large genus (with about 1190 species), clearly warranting segregation, a consensus has developed to recognize smaller genera in Thelypteridaceae, as reflected in this treatment. Our species fall into several disparate groups, here recognized as genera, following much recent literature and synopsized in PPG I (2016). References: Fawcett & Smith (2021); He & Zhang (2012); FoC; PPG I (2016); Smith & Flory (1990); Smith (1981); Smith (1993a) in FNA2 (1993b).

Identification Notes: In the northern and/or more montane parts of our region, *Coryphopteris simulata* is similar to and can be mistaken for *Thelypteris palustris* var. *pubescens*; see *Coryphopteris* for identification notes.

Thelypteris palustris Schott var. ***pubescens*** (G. Lawson) Fernald. MARSH FERN. **Hab:** Bogs, marshes (including freshwater tidal marshes), and bottomland forests. **Dist:** The species is circumboreal, occurring in n. Europe, n. Asia, and n. North America. Var. *pubescens* is the American variety, ranging from NL (Newfoundland) and MB south to s. FL and c. TX; c. Mexico (Michoacán, Distrito Federal); Bermuda, Cuba; also e. Asia. **Phen:** Jun-Sep. **Syn:** = Ar, C, ETx1, FNA2, FoC, G, Il, K1, K3, K4, Mo1, NE, NY, Pa, Tn, TxFerns, Va, W, WH3, WV, Fawcett & Smith (2021); = *Dryopteris thelypteris* (Linnaeus) Swartz var. *pubescens* (Lawson) A.R. Prince ex Weatherby – F; < *Thelypteris palustris* – GrPl, RAB; > *Thelypteris palustris* var. *haleana* Fernald – Tx; < *Thelypteris thelypteris* (Linnaeus) Nieuwland – Sf. [NatureServe G5T5](#) (Secure).

F45. DRYOPTERIDACEAE Herter 1949 (WOOD-FERN FAMILY) [in POLYPODIALES]

A family of about 26 genera and about 2115 species, cosmopolitan in distribution, but concentrated in temperate and montane areas. Here circumscribed (following Smith et al. 2006b, PPG I 2016, and others) to exclude Onocleaceae and Woodsiaceae. References: Kramer & Green (1990); Lellinger (1985); Smith (1993b) in FNA2 (1993b); Smith et al (2006b).

- 3 Indusium reniform, attached laterally and with a sinus on one side *Dryopteris*
 3 Indusium peltate, round.
 4 Rhizomes creeping, leaves single; leaf blade < 40 cm long *Rumohra adiantiformis*
 4 Rhizomes erect or ascending, leaves clustered; leaf blade > 40 cm.
 5 Veins anastomosing, rejoining to form a netlike pattern; pinnae 4-25 pairs per leaf; [non-native, rarely naturalized] *Cyrtomium*
 5 Veins branching dichotomously, free, not rejoining to form a netlike pattern; pinnae 25-50 pairs on larger leaves; [plant a common native species] *Polystichum*

Cyrtomium C. Presl 1836 (NET-VEINED HOLLY FERN)

A genus of about 35 species, of temperate regions of Africa, Asia, and the Pacific Islands. *Cyrtomium* is closely related to *Polystichum*, with some recent molecular studies suggesting that they are reciprocally paraphyletic. They may be combined, or, alternatively, split into smaller genera (Li,

Lu, & Barrington 2008). Both species in our flora are apogamous triploids. References: Kramer & Green (1990); Li, Lu, & Barrington (2008); MacDougal (1976); Wyatt (2020); Yatskievych (1993) in FNA2 (1993b); Zhang & Barrington (2013).

- 1 Leaf coriaceous, the upper surface dark green and shiny; pinnae 4-10 (-12) pairs per leaf, 1.5-3 cm wide, the margins coarsely toothed or undulate..... *Cyrtomium falcatum*
- 1 Leaf less coriaceous, the upper surface pale green and dull; pinnae (8-) 10-25 pairs per leaf, 1-2 cm wide, the margins finely denticulate..... *Cyrtomium fortunei*

* ***Cyrtomium falcatum*** (Linnaeus f.) C. Presl. ASIAN NET-VEINED HOLLY FERN. **Hab:** Ditches, disturbed swamps, moist ravines, old mortar of brick walls. **Dist:** Native of e. Asia. Reported for se. VA (Virginia Beach) (Robert Wright, pers.comm., 2021). **Phen:** Jun-Oct. **Syn:** = Ar, ETx1, F11, FNA2, FoC, K1, K3, K4, Sf, TxFerns, WH3; = *Polystichum falcatum* Linnaeus f.. **NatureServe G5** (Secure).

* ***Cyrtomium fortunei*** J. Smith. FORTUNE'S NET-VEINED HOLLY FERN. **Hab:** Roadside banks, rock outcrops, old mortar of brick walls. **Dist:** Native of se. China. **Tax:** Three varieties are sometimes recognized. **Comm:** Reported for Polk County, TN (D. Estes, pers. comm., 2010). **Syn:** = FoC; = *Cyrtomium fortunei* J. Smith var. *fortunei* – FNA2; = *Polystichum fortunei* (J. Smith) Nakai; < *Cyrtomium fortunei* J. Smith – K1, K3, K4. **NatureServe G3G5** (Apparently Secure).

***Dryopteris* Adanson 1763 (WOODFERN, SHIELDFERN)**

A genus of about 400 species, nearly cosmopolitan, but concentrated in temperate Asia. Sessa, Zimmer, & Givnish (2012) discuss the phylogeny and biogeography of *Dryopteris*; the clades shown in the key are from their work. References: Hoshizaki & Wilson (1999); Kees & Weakley (2018) in Weakley et al (2018b); Kramer & Green (1990); Montgomery & Paulton (1981); Montgomery & Wagner (1993) in FNA2 (1993b); Montgomery (1982); Sessa, Zimmer, & Givnish (2012); Umstead & Diggs (2018); Wyatt (2020).

Identification Notes: *Dryopteris* and *Athyrium* are often confused when not fertile; they can be easily distinguished by breaking off a leaf and counting vascular bundles (which will appear as thread-like strands). *Dryopteris* has 5 and *Athyrium* has 2. Many *Dryopteris* species will hybridize with one another to form sterile hybrids. Whenever two or more *Dryopteris* species are found growing together, there is a good chance that hybrids are present. Hybrids generally show intermediacy between the two parents, and have abortive sporangia or spores.

- 5 Sori marginal (no blade tissue visible on the underside of the blade between the sori and the margins); leaves evergreen, gray-green, leathery in texture; ["clade I"] ... *Dryopteris marginalis*
- 5 Sori medial or submedial (some blade tissue visible on the underside of the blade between the sori and the margins); leaves evergreen or deciduous, dark- to bright-green, thin to stiff in texture.
- 9 Costa with bullate (blistered-appearing) scales abundant, usually dark; [naturalized alien]; ["clade V"] *Dryopteris erythrosora*
- 9 Costa lacking bullate scales; [native, sometimes also cultivated]; ["clade III"].
- 10 Leaves evergreen, fertile only toward the tip, the fertile pinnae and segments narrower than the sterile and more widely spaced; scales at the petiole base light brown, not shiny.
- 11 Fertile leaflets only slightly narrower than the sterile leaflets and spaced similarly along the rachis; teeth tapering to sharp points; spores shrunken and irregular *Dryopteris australis*
- 11 Fertile leaflets much narrower and obviously more widely spaced along the rachis than the sterile leaflets; teeth triangular (acute); spores full *Dryopteris ludoviciana*
- 10 Leaves deciduous or semi-evergreen, fertile throughout or nearly so, the fertile pinnae and segments not differentiated from sterile ones; scales at petiole base medium to dark brown, shiny or not. *Dryopteris celsa*

Dryopteris australis (Wherry) Small [*celsa* × *ludoviciana*]. SOUTHERN WOODFERN, SOUTHERN SHIELDFERN. **Hab:** Swamps, bottomlands, mesic forests. **Dist:** MD south to n. GA, s. AL, MS, w. LA and AR. **Tax:** *Dryopteris australis* originated as a hybrid of *D. celsa* × *D. ludoviciana*. It regularly occurs in the absence of one or both parents and also sometimes outside the current distribution of one of its parents, suggesting that it is able to reproduce via viable spores. It is therefore treated here without the hybrid ×, which would misleadingly indicate sterility and non-independence. **Syn:** = Sf; = *Dryopteris* × *australis* – K3, K4, pro species; = *Dryopteris clintoniana* (D.C. Eaton) Dowell var. *australis* Wherry.

Dryopteris celsa (W. Palmer) Knowlton, W. Palmer, & Pollard. LOG FERN. **Hab:** Swamps, seepage bogs, and calcareous floodplains, typically associated with calcareous substrates. **Dist:** Ne. NJ and ne. NY west to s. IL, e. MO, and AR, south to SC, GA, n. AL, TN, e. and n. LA, and e. TX (Mink, Singhurst, & Holmes 2011a); disjunct in w. NY and w. MI; overall very scattered in its distribution. Discovered in MS by John Kees (Kees & Weakley 2018). **Phen:** Jun-Sep. **Comm:** This species is a fertile allotetraploid derived from hybridization of *D. goldiana* and *D. ludoviciana*; its chromosome complement is symbolized GGLL (Werth 1991). **Syn:** = Ar, C, ETx1, F, FNA2, IL, K1, K3, K4, Mo1, NY, Pa, RAB, Tn, TxFerns, Va, W, WV, Montgomery & Paulton (1981); = *Dryopteris goldiana* (Hooker ex Goldie) ssp. *celsa* W. Palmer – G; > *Dryopteris atropalustris* Small – Sf; > *Dryopteris celsa* (W. Palmer) Knowlton, W. Palmer, & Pollard – Sf; >> *Dryopteris cristata* (Linnaeus) A. Gray – Tx, misidentification.

* ***Dryopteris erythrosora*** (D.C. Eaton) Kuntze. AUTUMN FERN, JAPANESE RED SHIELDFERN. **Hab:** Suburban woodlands, especially in ravines and along creeks. **Dist:** Native of Japan, Korea, and China. Also recently reported as naturalizing in AR (Simpson, Crank, Witsell, & Peck 2008; Peck

F45. DRYOPTERIDACEAE

2011), nc. NC (Rothfels, Sigel, & Windham 2012), and c. GA (Zomlefer et al. 2018; Umstead & Diggs 2018). This species seems to be well on its way to being an aggressive invasive, likely to be widespread in our area; see discussion in Wyatt (2020). **Comm:** "Two factors suggest [*Dryopteris erythrosora*] might have tremendous potential [for spread in the future]. First, it is wildly popular as an ornamental planting and undoubtedly hundreds of thousands, if not millions, of plants will be installed in landscapes all over Georgia and the Southeast. Second, this species is hardy over most of the United States" (Wyatt 2020). **Syn:** = Ar, K3, K4, Umstead & Diggs (2018).

Dryopteris ludoviciana (Kunze) Small. SOUTHERN WOODFERN. **Hab:** Blackwater swamp forests, hammocks. **Dist:** A Southeastern Coastal Plain species: e. NC south to s. FL, west to s. AL, s. MS (Sorrie & Leonard 1999), and e. LA; disjunct in the West Gulf Coastal Plain of LA and AR (Peck 2011), and possibly disjunct in sc. KY, the report old and somewhat uncertain. **Phen:** Jun-Sep. **Comm:** This species is one of the diploid "parent species" of the e. North American reticulately-evolved *Dryopteris* complex. Its genome (symbolized LL) forms half of the genome of the tetraploids *D. cristata* and *D. celsa*, as well as contributing one third of the genome of *D. clintoniana* indirectly (via its daughter species *D. cristata*). **Syn:** = Ar, ETx1, F11, FNA2, K1, K3, K4, RAB, Sf, TxFerns, WH3, Montgomery & Paulton (1981). **NatureServe** G4 (Apparently Secure).

Dryopteris marginalis (Linnaeus) A. Gray. MARGINAL WOODFERN. **Hab:** Rock outcrops, boulderfield forests, other rocky forests. **Dist:** NL (Newfoundland) west to s. ON and MI, south to SC, c. GA, AL, TN, AR, e. OK, and n. TX. **Phen:** Jun-Sep. **Comm:** *D. marginalis* has not participated in the reticulate evolution of *Dryopteris* in e. North America; it does, however, form sterile hybrids with some other species. **Syn:** = Ar, C, F, FNA2, G, GrPl, Il, K1, K3, K4, Mo1, NE, NY, Pa, RAB, Sf, Tn, TxFerns, Va, W, WV, Montgomery & Paulton (1981). **NatureServe** G5 (Secure).

Polystichum Roth 1799 (HOLLY FERN)

A genus of about 500 species, nearly cosmopolitan in distribution. References: Kramer & Green (1990); Wagner (1993) in FNA2 (1993b); Zhang & Barrington (2013).

Polystichum acrostichoides (Michaux) Schott. CHRISTMAS FERN. **Hab:** Moist to dry forests and woodlands, especially slopes, ravines, and small stream bottomlands. **Dist:** NS west to MN, south to s. FL and e. TX; also in ne. Mexico (NLE and TAM). **Phen:** Jun-Nov. **Tax:** Var. *lonchitoides* Brooks, allegedly endemic to WV, is just a form and should not be recognized taxonomically. **Comm:** One of the most familiar ferns in e. North America. **Syn:** = Ar, C, ETx1, F, F11, FNA2, G, GrPl, Il, K3, K4, Mo1, NE, NY, Pa, RAB, Sf, Tn, Tx, TxFerns, Va, W, WH3, WV; > *Polystichum acrostichoides* var. *acrostichoides* – K1; > *Polystichum acrostichoides* var. *lonchitoides* Brook – K1.

Rumohra Raddi 1819 (LEATHERLEAF FERN)

A genus of about 8 species, perennials, mainly tropical and Southern Hemisphere. References: Kramer & Green (1990); PPG I (2016).

* ***Rumohra adiantiformis*** (G. Forster) Ching. LEATHERLEAF FERN, IRON FERN. **Hab:** Suburban woodlands, roadsides, disturbed areas. **Dist:** Native of Old World and New World tropics. Reported for Franklin County in the FL Panhandle by Kunzer et al. (2009). **Phen:** Jun-Sep. **Syn:** = F11, K1, K3, WH3; = *Arachniodes adiantiformis* (G. Forster) Tindale – K4. **NatureServe** G4G5 (Apparently Secure).

F46. NEPHROLEPIDACEAE Pichi Sermolli 1975 (SWORD FERN FAMILY) [in POLYPODIALES]

A family of 1 genus and about 19 species. Sometimes united, as by Smith et al. (2006b), into the Lomariopsidaceae. References: Christenhusz, Zhang, & Schneider (2011); PPG I (2016).

Nephrolepis Schott 1834 (SWORD FERN)

A genus of about 19-20 species, widespread in tropical and subtropical areas. The familiar cultivated "Boston Fern" is a hybrid of *N. biserrata* × *cordifolia* (Yahaya et al. 2016). References: Hovenkamp & Miyamoto (2005); Nauman (1993e) in FNA2 (1993b); Xing, Wang, & Hovenkamp in FoC (2013); Yahaya et al (2016).

Unkeyed waifs: *Nephrolepis hybrid 1*

Nephrolepis exaltata (Linnaeus) Schott ssp. *exaltata*. WILD SWORD FERN, WILD BOSTON FERN. **Hab:** Epiphytic or terrestrial in a range of open to shaded moist habitats. **Dist:** Panhandle and ne. FL south to s. FL; West Indies; Central and South America; widely introduced elsewhere. Marginally present in GA (Jekyll island, Glynn County, Max Medley, pers.comm. 2022), where it seemed to have been in place for several years but then died; not likely to become established, but included because it is likely to be observed occasionally where it appears to be naturalized, or at least stably persistent. **Phen:** Jan-Dec. **Tax:** *N. exaltata* ssp. *exaltata* appears to be a trigenomic hybrid involving *N. cordifolia*, *N. biserrata*, and probably

F46. NEPHROLEPIDACEAE

N. brownii, with normal, sexual fertility (Yahaya et al. 2016). **Comm:** Ssp. *hawaiiensis* W.H. Wagner is endemic to the Hawaii Islands. **Syn:** = K3, K4; < *Nephrolepis exaltata* – Ar, Bah, ETx1, F11, FNA2, Meso1, Sf, Tx, TxFerns, WH3, Hovenkamp & Miyamoto (2005).

* ***Nephrolepis hybrid* 1.** BOSTON FERN. **Hab:** Persistent and spreading asexually from horticultural use; of horticultural origin. **Tax:** The cultivated "Boston Fern" appears to be of hybrid origin and is sexually sterile; its parentage may involve *N. cordifolia*, *N. biserrata*, and/or *N. exaltata* ssp. *exaltata* (Yahaya et al. 2016). **Syn:** = *Nephrolepis exaltata* (Linnaeus) Schott var. *bostoniensis* Davenport; < *Nephrolepis exaltata* – Ar, ETx1, FNA2, K3, TxFerns.

**F51. POLYPODIACEAE** J. Presl & C. Presl 1822 (POLYPODY FAMILY) [in POLYPODIALES]

A family of about 65 genera and about 1650 species, cosmopolitan, especially tropical. Here circumscribed to include Grammitidaceae, following PPG I (2016) and Wei & Zhang (2022). Subfamily classification shown in the key follows Wei & Zhang (2022). References: Hennipman, Veldhoen, & Kramer in Kramer & Green (1990); Hirai et al (2011); Parris in Kramer & Green (1990); PPG I (2016); Smith & Tejero-Díez (2014); Smith (1993e) in FNA2 (1993b); Smith et al (2006a); Smith et al (2006b); Sundue et al (2014); Wei & Zhang (2022).

- 8 Leaf blade densely scaly on the lower surface with peltate, bicolored scales; rhizome 1-2 mm in diameter; leaf segment margins entire; [subfamily Polypodioideae] ..
 ***Pleopeltis***
 8 Leaf blade scaleless on the lower surface; rhizome 3-15 (-30) mm in diameter; leaf segment margins denticulate (*Polypodium*) or entire (*Peculuma*, *Phlebodium*, *Phymatosorus*).
 ***Phlebodium aureum***

Phlebodium (R. Brown) J. Smith 1841 (GOLDEN POLYPODY)

A genus of 2-4 species, of tropical and subtropical regions of the Western Hemisphere. References: Hennipman, Veldhoen, & Kramer in Kramer & Green (1990); Mickel & Smith (2004); Nauman (1993f) in FNA2 (1993b); Smith et al (2018); Tejero-Díez, Mickel, & Smith (2009).

Phlebodium aureum (Linnaeus) J. Smith. GOLDFOOT FERN, GOLDEN POLYPODY. **Hab:** Epiphytic on the old leaf bases of *Sabal palmetto* and in crotches and crevices of other trees, particularly *Quercus virginiana*, and rarely terrestrial on calcareous soils or masonry. **Dist:** E. SC (Beaufort, Jasper, and Charleston counties), e. GA (Camden, Chatham, and Glynn counties), south to s. FL, west to Panhandle FL (Wakulla County) (Kunzer et al. 2009); West Indies; South America. Found in Cape Romain National Wildlife Refuge (Charleston County, SC) in the late 1970s by Steve Bowling, where apparently native (S. Bowling, pers. comm. 2007); also introduced and apparently established in SC (Beaufort, Jasper, Charleston counties) via planting of palmettos from farther south (P. McMillan, pers. comm. 2005). Also introduced on cultivated palmettos in s. AL and s. MS. **Phen:** Jan-Dec. **Tax:** *Phlebodium pseudoreum* has been reported as occurring in FL peninsula, but it seems as if plants so attributed may be within the variation of *P. aureum* (W. Testo, pers. comm. 2019). See Davidse, Sousa, & Knapp 1995 for additional discussion. **Syn:** = F11, FNA2, K1, K3, K4, Sf, WH3; = *Polypodium aureum* Linnaeus – Bah; > *Polypodium pseudoreum* (Cavanilles) Lellinger – Meso1. **NatureServe G5** (Secure).

***Pleopeltis*** Humboldt & Bonpland ex Willdenow 1810 (SHIELDED-SORUS POLYPODY)

A genus of about 90 species (as circumscribed by Smith & Tejero-Díez 2014 and PPG I 2016), primarily tropical. Windham (1993) and later authors, such as Otto et al. (2009), make a compelling case, based on morphological, chemical, and molecular data, that the "scaly polypodies" should be placed in *Pleopeltis*, rather than in *Polypodium*. The *Pleopeltis polypodioides* complex is monographed by Sprunt (2010) as including eight taxa at species rank: one (*P. michauxiana*) in se. North America, six in tropical America from s. FL and Mexico south through the West Indies, Central America to South America, and one in s. Africa. References: Andrews & Windham (1993) in FNA2 (1993b); Hennipman, Veldhoen, & Kramer in Kramer & Green (1990); Mickel & Smith (2004); Nauman (1993i) in FNA2 (1993b); Otto et al (2009); Smith & Tejero-Díez (2014); Smith et al (2018); Sprunt (2010); Vincent & Hickey (2014); Windham (1993).

Pleopeltis michauxiana (Weatherby) Hickey & Sprunt. RESURRECTION FERN, SCALY POLYPODY. **Hab:** On tree limbs and trunks (especially when leaning) in a wide variety of forest types, especially southwards, and less typically (but not uncommonly) on rocks. **Dist:** *P. michauxiana* ranges from se. MD, IL, MO, and se. KS, south to s. FL and TX; Mexico and Central America (Guatemala, Honduras); Bahamas (Abaco Island). **Phen:** (Jan-) Jun-Oct (-Dec). **Tax:** Although traditionally treated as a variety of *Pleopeltis polypodioides*, recent studies suggest that this taxon warrants specific status (Sprunt 2010; Sprunt et al. 2011; Vincent & Hickey 2014). Seven additional taxa in the complex are tropical in s. FL, Mexico, Central America, South America, and Africa. **Syn:** = K4, Vincent & Hickey (2014); = *Pleopeltis polypodioides* ssp. *michauxiana* – Va, nomen nudum; = *Pleopeltis polypodioides* (Linnaeus) E.G. Andrews & Windham var. *michauxiana* (Weatherby) E.G. Andrews & Windham – Ar, ETx1, F11, FNA2, K2, TxFerns, Va, WH3, Smith & Tejero-Díez (2014); = *Polypodium polypodioides* (Linnaeus) Watt var. *michauxianum* Weatherby – C, F, G, GrPl, Meso1, Mo1, Tx, W, WV, Mickel &

SECTION 3: GYMNOSPERMS

G03. GINKGOACEAE Engler 1897 (GINKGO FAMILY) [in GINKGOALES]

A family of a single genus and single species, a tree, native of China. *Ginkgo biloba* has no close living relatives. References: Page in Kramer & Green (1990); Whetstone (1993) in FNA2 (1993b).

Ginkgo Linnaeus 1771 (GINKGO, MAIDENHAIR TREE)

A monotypic genus, a tree, native of China. *Ginkgo* is famous as a "living fossil," known from fossils nearly 200 million years old which are nearly identical to modern plants; it may be extinct as a native plant. References: Crane (2013); Page in Kramer & Green (1990); Whetstone (1993) in FNA2 (1993b).

* *Ginkgo biloba* Linnaeus. GINKGO, MAIDENHAIR TREE. **Hab:** Frequently planted, rarely seeding down locally near plantings in suburban woodlands and yards. **Dist:** Native to se. China; *Ginkgo* is only weakly naturalized in our area (FNA). **Comm:** See Crane (2013) for a book-length discussion of *Ginkgo* from all angles. **Syn:** = C, FNA2, Il, K1, K4, Pa. [NatureServe G1](#) (Critically Imperiled).

G07. PINACEAE Sprengel ex Rudolphi 1830 (PINE FAMILY) [in PINALES]

A family of about 12 genera and about 220 species, trees and shrubs, almost exclusively in the Northern Hemisphere. References: Page in Kramer & Green (1990); Price (1989); Thieret (1993) in FNA2 (1993b).

- 1 Leaves either borne in fascicles of 2-5 (basally bound by a scarious sheath) or on short shoots in clusters of many leaves in apparent whorls.Pinus
- 1 Leaves alternate; [subfamily *Abietoideae*].Tsuga

Pinus Linnaeus 1753 (PINE)

A genus of about 110 species, trees, of the Northern Hemisphere, south to Central America. The classification of subgenera, sections, and subsections follows Zeb et al. (2019). References: Duncan & Duncan (1988); Gernandt et al (2005); Kral (1993) in FNA2 (1993b); Krings (2020); Page in Kramer & Green (1990); Pile et al (2018); Price, Liston, & Strauss (1998); Richardson (1998); Silba (2011); Wang & Wang (2014); Ward (1963); Zeb et al (2019).

The State Tree of North Carolina is the “Pine,” the species left (artfully and politically?) ambiguous.

Identification Notes: Young saplings generally have shorter needles than larger saplings and mature trees; measurements in the key are those of mature trees. Seedlings have needles single, rather than fascicled; see Krings (2020) for information on distinguishing seedlings of *P. taeda*, *P. echinata*, and *P. virginiana*. “Cones” in the key below refers to mature (brown) female (seed) cones.

- 2 Bracts and bud scales fimbriate; sheath > 1.3 cm long; needles 20-50 cm long, in bundles of 3 (-4); twigs about 1 cm in diameter; [subgenus *Pinus*, section *Trifoliae*, subsection *Australes*].....Pinus palustris
- 2 Bracts and bud scales entire or edged with hairs, but not fimbriate; sheath < 1.5 cm long; needles (2-) 3-30 cm long, in bundles of 2-4; twigs < 1 cm in diameter.
 - 3 Needles in bundles of 3, or 2 and 3, or 3 and 4 (predominantly or at least substantially in 3's); [subgenus *Pinus*, section *Trifoliae*, subsection *Australes*].
 - 4 Needles in bundles of 3 (rarely with a few bundles of 2, 4, or 5).Pinus taeda
 - 4 Needles in bundles of 2 and 3.
 - 7 Needles 3-11 (-13) cm long.Pinus echinata
 - 7 Needles 17-30 cm long.Pinus elliotii
 - 3 Needles in bundles of 2 only.
 - 10 Needles slender to somewhat stout, 0.5-1.2 mm wide.
 - 12 Needles 2-8 cm long, generally twisted; cones either opening at maturity, not serotinous, the scales bearing prominent, slender prickles 2-5 mm long, or serotinous and unarmed; [subgenus *Pinus*, section *Trifoliae*, subsection *Contortae*].Pinus virginiana
 - 12 Needles 5-13 cm long, twisted or not; cones opening at maturity or serotinous, the scales bearing prominent, short, stout prickles or minute, deciduous prickles, and also with a faint to conspicuous horizontal ridge.
 - 14 Anthers dark orange; bark flaky, the laminated layers sloughing off in a manner typical of a pine; [native in xeric sands, also sometimes planted in pine tree farms]; [subgenus *Pinus*, section *Trifoliae*, subsection *Contortae*].....Pinus clausa
 - 14 Anthers yellow; bark tight, closely ridged, not sloughing off, reminiscent of a hardwood; [mesic to fairly wet, fertile soils]; [subgenus *Pinus*, section *Trifoliae*, subsection *Australes*].....Pinus glabra
 - 10 Needles stout, 1.3-2.5 mm wide.Pinus nigra

(see introduction for more)

Pinus clausa (Chapman ex Engelm.) Vasey ex Sargent. SAND PINE. **Hab:** Florida scrub, and dry sands where planted outside of its native range, for instance widely planted in pulp plantations in FL and s. GA, experimentally planted as far north as NC (and persisting and naturalizing). **Dist:** FL Panhandle, S. AL, and s. MS, south to s. FL; planted and naturalized further north in GA, SC, and NC Coastal Plain. **Tax:** *P. clausa* is closely related to *P. virginiana*, the n. North American *P. banksiana*, and the nw. North American *P. contorta* complex. **Syn:** = F11, FNA2, K1, K3, K4, S, WH3, Price (1989); > *Pinus clausa* var. *clausa* – Ward (1963); > *Pinus clausa* var. *immuginata* D.B. Ward – Ward (1963). **NatureServe G4** (Apparently Secure).

Pinus echinata P. Miller. SHORTLEAF PINE, ROSEMARY PINE, YELLOW PINE. **Hab:** Dry to dry-mesic upland forests and woodlands, rocky ridges and slopes, glades, bluffs, Coastal Plain sandhills, old fields, riparian forests, generally in rather xeric sites and on acid soils, but also occurring in mesic to even wet sites and on mafic or subcalcareous rocks. **Dist:** Widespread in se. North America, north to s. NY, NJ, s. PA, s. OH, s. IL, s. MO, and e. OK, perhaps reaching its greatest importance in dry, sandstone landscapes, such as the Cumberland Plateau of WV, KY, TN, and AL, and the Ozarks and Ouachitas of AR, MO, and OK. **Phen:** Mar-Apr; Sep-Oct. **ID Notes:** Where their ranges overlap, *P. echinata* often co-occurs with *P. virginiana* and is sometimes confused because both species have short needles and small cones that tend to persist on the trees. *P. echinata* has needles 7-13 cm long, not twisted, or slightly so, in bundles of 2, usually with some in bundles of 3, rather slender, < 1.0 mm wide (vs. needles 2-8 cm long, typically twisted, in bundles of 2, rather stout, often 1.0-1.2 mm wide), bark plates mostly > 4 cm wide, with crater-like blisters ca. 1 mm in diameter (vs. bark plates mostly about 2 cm wide, without crater-like blisters), winter buds not very resinous (vs. very resinous), and 3-4 year-old twigs rough and flaking (vs. smoothish to rough). **Syn:** = Ar, C, ETx1, F, F11, FNA2, G, IL, K1, K3, K4, Mo1, NY, Pa, RAB, S, Tn, Tx, Va, W, WH3, WV, Price (1989); = *Pinus mitis* Michaux. **NatureServe G5** (Secure).

Pinus elliotii Engelm. SLASH PINE. **Hab:** Native in wet pine flatwoods and maritime forests, also extensively planted (over a broader distribution than the natural one, as in GA, SC, and NC) in silvicultural plantations on a wide variety of soils, many of them unsuitable for its successful growth. **Dist:** *P. elliotii* ranges from e. SC south to c. peninsular FL, west to e. LA. **Phen:** Jan-Feb; Oct-Nov. **Comm:** *P. elliotii* has been extensively planted throughout the Coastal Plain of Georgia, North Carolina, and South Carolina, where it now occupies tens of thousands of hectares. Superficially, *P. elliotii* resembles both *P. palustris* and *P. taeda*, with cone size and needle length intermediate. *P. elliotii* is sometimes difficult to tell from *P. taeda*; additional helpful characteristics are the seed cones on 1.5-3 cm long stalks (vs. essentially sessile), seed cones reddish-brown and glossy, appearing varnished (vs. brown and dull), needles thicker and a dark glossy green (vs. thinner and a yellowish green); bark prominently flaking off and revealing reddish patches (vs. not notably flaking off and not revealing reddish patches). **Syn:** = *Pinus elliotii* var. *elliotii* – FNA2, K1, K3, Price (1989), Ward (1963); < *Pinus elliotii* Engelm. – ETx1, F11, RAB, Tx, WH3; ? *Pinus heterophylla* – S; > < *Pinus palustris* P. Miller – S, misapplied.

Pinus glabra Walter. SPRUCE PINE, WALTER'S PINE. **Hab:** Bottomland forests, rich, moist soils, also upland in calcareous areas, such as calcareous bluffs. **Dist:** SC south to n. FL and west to se. LA. **Phen:** Mar-Apr; Sep-Oct. **Comm:** This pine is unusual in growing in moist (even infrequently flooded), fertile habitats, usually mixed with bottomland hardwoods, and rather shade tolerant, sometimes growing as an understory tree. **Syn:** = Ar, F11, FNA2, K1, K3, K4, RAB, S, WH3, Price (1989), Ward (1963). **NatureServe G5?** (Secure).

* ***Pinus nigra*** J.F. Arnold. AUSTRIAN PINE. **Hab:** Disturbed areas. **Dist:** Native of Europe. **Syn:** = C, F, FNA2, G, IL, K1, K3, K4, Mi, Mo1, NE, NY, Pa. **NatureServe GNR** (Not Yet Ranked).

Pinus palustris P. Miller. LONGLEAF PINE, SOUTHERN PINE. **Hab:** Formerly throughout the Coastal Plain, Sandhills, and lower Piedmont, on a wide variety of soils (sandy, loamy, clayey, or peaty), from very dry to very wet conditions, in savannas, woodlands, and forests affected by relatively frequent natural (lightning caused) fires (likely augmented by native Americans), now reduced to less than a tenth of its former abundance by a variety of forces, including turpentine, timbering, free-range hogs, fire suppression, and 'site conversion' by foresters to other trees, now extremely rare in VA and north of the Neuse River in NC, still occurring in some abundance in the outer Coastal Plain from Carteret County, NC south into GA, in the Bladen Lakes area of Bladen and Cumberland counties, and in the Fall-Line Sandhills of Harnett, Hoke, Scotland, Richmond, Moore, Anson, and Montgomery counties, NC and south into GA. **Dist:** A Southeastern Coastal Plain endemic: se. VA south to FL and west to se. TX; it extends slightly into the Piedmont in most states where it occurs, and further into the Piedmont and low mountains in GA and AL. **Phen:** Jan-Apr; Sep-Oct. **Comm:** "The species has been heavily exploited for timber and turpentine production, and it has been estimated that by 1930 only ten percent of its original volume of timber remained" (Price 1989); certainly much less now remains. Longleaf Pine is featured in the official NC State Toast ("Here's to the land of the longleaf Pine...") and the highest honor that the Governor of North Carolina can bestow on an individual for service to the state is to appoint him or her to the honorary Order of the Longleaf Pine. A hybrid with *P. taeda*, *P. ×sondereggeri* H.H. Chapman, occurs. **Syn:** = Ar, C, ETx1, F11, FNA2, K1, K3, K4, RAB, Tx, Va, WH3, Ward (1963); = *Pinus australis* Michaux f. – F, G, S.

Pinus taeda Linnaeus. LOBLOLLY PINE, OLD FIELD PINE. **Hab:** Dry to dry-mesic upland forests and woodlands, riparian forests, maritime forests, sandy rises in bottomland forests, pine flatwoods, roadsides, pine plantations, disturbed areas, especially in acid soil, much more abundant and widespread than formerly, and occurring farther inland than as a native. **Dist:** Native from s. NJ, DE, and e. MD south to n. peninsular FL, west to e. TX and se. OK, primarily on the Coastal Plain, but inland to s. TN; this distribution now expanded by forestry plantation northward. **Phen:** Mar-Apr; Oct-Nov. **Comm:** See *P. elliotii* for additional characters to distinguish these two species. **Syn:** = Ar, C, ETx1, F, F11, FNA2, G, IL, K1, K3, K4, RAB, S, Tn, Tx, Va, W, WH3, Price (1989), Ward (1963). **NatureServe G5** (Secure).

Pinus virginiana P. Miller. VIRGINIA PINE, SCRUB PINE, JERSEY PINE. **Hab:** Dry forests and woodlands, especially on slopes and ridges, also common in certain areas as a weedy successional tree on nearly any kind of site, such as rocky, sandy, or clayey successional old fields or blowdowns. **Dist:** Primarily a Central and Southern Appalachian endemic: s. NY, NJ, and PA, south through VA, WV, s. OH, s. IL, KY, TN, and NC to nw. SC, n. GA, n. AL, and ne. MS. **Phen:** Mar-May; Sep-Nov. **Comm:** A small, scrubby pine, occurring in very dense, monospecific stands in the upper Piedmont as a result of secondary succession of old fields. **ID Notes:** The small, thin, curling bark plates colored orangish and purplish-

G07. PINACEAE

brown are distinctive for *Pinus virginiana*. From a distance, its crown has a spiky appearance, from the ascending and narrow branches with short needles. **Syn:** = Ar, C, F, FNA2, G, Il, K1, K3, K4, Mo1, NY, Pa, RAB, S, Tn, Va, W, WV, Price (1989). NatureServe G5 (Secure).

***Tsuga* Carrière 1847 (HEMLOCK)**

A genus of about 14 species, trees, of e. Asia (China, Japan, and Taiwan), e. North America, and w. North America. References: Page in Kramer & Green (1990); Taylor (1993a) in FNA2 (1993b).

Tsuga canadensis (Linnaeus) Carrière. EASTERN HEMLOCK, CANADA HEMLOCK. **Hab:** In a wide variety of habitats in the mountains, most typically and abundantly in moist sites in ravines or coves along streams, but likely to be found in all but the driest habitats between 300 and 1500 m (even occurring in peaty bogs, where it has a sickly yellow color and short life expectancy); in the western Piedmont of NC limited to progressively rarer microhabitats (primarily north-facing river bluffs), reaching its eastward limit in NC at a disjunct stand at Hemlock Bluff State Natural Area, Wake County (but uncommon in the Piedmont of VA and even present, though rare, in the Coastal Plain of VA). **Dist:** Widespread in ne. North America, south to w. and c. VA, w. and (rarely) c. NC, nw. SC, n. GA, n. AL, TN, KY, IN, WI, and MN. **Phen:** Mar-Apr; Sep-Nov. **Comm:** One of the largest trees commonly encountered nowadays in our area, but probably not naturally larger than many other trees – because of its low timber value, it was often left by loggers. The hemlock woolly adelgid is severely affecting this species. **Syn:** = C, F, FNA2, G, K1, K3, K4, Mi, Mo1, NE, NY, Pa, RAB, S, Tn, Va, W, WV, Price (1989). NatureServe G4G5 (Apparently Secure).

**G11. CUPRESSACEAE** S.F. Gray 1822 (CYPRESS FAMILY) [in CUPRESSALES]

A family of about 29 genera and about 130 species. Recent studies indicate that the separation of the Taxodiaceae from the Cupressaceae is not warranted, and they are here combined (Gadek et al. 2000; Brunsfeld et al. 1994). The subfamilial classification used here follows Gadek et al. (2000). References: Farjon (2005); Hardin (1971b); Hart & Price (1990); Page in Kramer & Green (1990); Schulz, Knopf, & Stützel (2005); Watson & Eckenwalder (1993) in FNA2 (1993b); Zhu et al (2018).

- 1 Leaves alternate.
 - 3 Leaves evergreen, rigid, > 2 cm long, tapering from near the base to a long-acuminate apex; [subfamily *Cunninghamioideae*]..... *Cunninghamia lanceolata*
 - 3 Leaves deciduous, flexible, < 2 cm long, parallel-sided, the apex short-acute; [subfamily *Taxodioideae*]..... *Taxodium*
- 1 Leaves opposite or whorled; [subfamily *Cupressoideae*].
 - 5 Plants dioecious, male and female cones on separate plants; mature female cones fleshy and berry-like, with smooth surfaces, indehiscent; branchlets not disposed in one plane, thus bushy and not fan-like; leaves of a branchlet monomorphic; [subfamily *Cupressoideae*]..... *Juniperus*
 - 5 Plants monoecious, male and female cones on the same plant; mature female cones woody or leathery, with irregular surfaces, dehiscent; ; branchlets either disposed in one plane, thus flattened and fan-like, or not disposed in one plane, thus bushy and not fan-like; leaves of a branchlet either monomorphic (*Callitris*, *Hesperocyparis*) or dimorphic.
 - 8 Leaves acute; female cones globose and woody, the hard scales peltate, not imbricate; ultimate branchlets (including the scale leaves) about 1 mm broad..... *Chamaecyparis*
 - 8 Leaves obtuse; female cones ellipsoid and leathery, the pliable scales basally attached, imbricate; ultimate branchlets (including the scale leaves) about 1.5 mm broad..... *Platyclusus orientalis*

***×Hesperotropis* Garland & Gerry Moore 2012 (LEYLAND CYPRESS)**

A “hybrid genus” (*Callitropsis* × *Hesperocyparis*) with a few named entities, trees, of garden origin. References: Garland & Moore (2012).

* ***×Hesperotropis leylandii*** (A.B. Jackson & Dallimore) Garland & Gerry Moore [*Callitropsis nootkatensis* × *Hesperocyparis macrocarpa*]. LEYLAND CYPRESS. **Hab:** Frequently planted, sometimes persistent in overgrown areas where it can seem naturalized; of garden origin. **Tax:** A horticulturally popular hybrid between *Callitropsis nootkatensis* and *Hesperocyparis macrocarpa*. **Syn:** = Garland & Moore (2012); *Cupressus* × *leylandii* A.B. Jackson & Dallimore – K4; = *Callitropsis* × *leylandii* – K3; = n/a – RAB, S.

Chamaecyparis Spach 1841 (WHITE CEDAR)

A genus of about 6 species, trees, of warm temperate to cool temperate North America and Asia. The genus consists of 5 species – ours, 1 in w. North America, and 3 in Japan & Taiwan. References: Farjon (1998); Farjon (2005); Michener (1993) in FNA2 (1993b); Mylecraine et al. (2005, 2006, 2009); Page in Kramer & Green (1990); Schulz, Knopf, & Stützel (2005).

Chamaecyparis thyoides (Linnaeus) Britton, Sterns, & Poggenburg var. ***henryae*** (H.L. Li) Little. PANHANDLE WHITE CEDAR. **Hab:** Blackwater stream swamps. **Dist:** Var. *henryae* is sometimes interpreted as endemic of the w. Panhandle of FL and s. AL east of Mobile Bay, notably in the drainages of the Yellow River, Blackwater River, Escambia River, and Perdido River, with populations further west (in s. MS) as being part of *Chamaecyparis thyoides* var. *thyoides*, or arguably in a third, unnamed, clade. **Tax:** The recognition of this taxon at either varietal or specific rank has been controversial. Mylecraine et al. (2004) found significant genetic variation, with Group 2 (FL peninsula) first diverging, Gulf Coast populations (Group 3) in three clusters in a major clade, and all populations north of GA in Group 1. **Syn:** = Farjon (1998), Farjon (2005), Mylecraine et al. (2005, 2006, 2009), Schulz, Knopf, & Stützel (2005); = *Chamaecyparis henryae* H.L. Li; < *Chamaecyparis thyoides* – FNA2, K1, K3, K4, S, WH3.

*Cunninghamia* R. Brown 1826 (CHINA-FIR)

A genus of 2 species, trees, of e. Asia (China and Taiwan). References: Farjon (1998); Page in Kramer & Green (1990).

* ***Cunninghamia lanceolata*** (Lambert) Hooker. CHINA-FIR. **Hab:** Suburban woodlands; commonly planted horticulturally, rarely naturalizing. **Dist:** Native of China. **Comm:** A variety of forms are seen, some with dark-green, others with glaucous-blue foliage. **Syn:** = K1, K4, Farjon (1998); = n/a – RAB; ? *Cunninghamia sinensis* R. Brown. NatureServe GNR (Not Yet Ranked).

*Juniperus* Linnaeus 1753 (RED CEDAR, JUNIPER, SAVIN)

A genus of about 60 species, trees and shrubs, of temperate, boreal, and subtropical regions of the Northern Hemisphere. Various species of *Juniperus*, especially creeping species, are frequently used in landscaping. Molecular studies suggest that section *Juniperus* (*J. communis* in our area) and section *Sabina* are quite divergent (Adams & Demeke 1993). Small's (1933) recognition of the genus *Sabina* may prove to be warranted; some modern authors accept it (especially Europeans) and recent molecular evidence provides some support. References: Adams & Demeke (1993); Adams & Schwarzbach (2012); Adams & Schwarzbach (2013); Adams (1986); Adams (1993) in FNA2 (1993b); Adams (1995); Adams (2008a); Adams (2008b); Adams (2008c); Adams (2008d); Adams (2014); Adams et al (2016); Page in Kramer & Green (1990).

- 6 Female cones ("berries") 3-4 mm long; male cones 4-5 mm long; terminal twigs 0.75-0.90 mm wide (including the scale-like leaves); scale leaves 1.20-1.45 mm long, obtuse to acute; trees generally with rounded or flattened crowns, the lower branches often drooping; [upland to wetland saline or calcareous habitats near the coast] ***Juniperus silicicola***
- 6 Female cones ("berries") 4-7 mm long; male cones 3-4 mm long; terminal twigs 0.85-1.00 mm wide (including the scale-like leaves); scale leaves 1.40-1.65 mm long, acute; trees generally with sharply tapered crowns, the lower branches generally ascending; [upland habitats inland] ***Juniperus virginiana***

Juniperus silicicola (Small) L.H. Bailey. SOUTHERN RED CEDAR, COASTAL RED CEDAR. **Hab:** Maritime forests and maritime scrub, hammocks, coastal shell middens and natural shell deposits, brackish marshes, pine rocklands in s. FL, and other sandy or peaty, circumneutral situations. **Dist:** Se. VA south to s. FL, west to e. LA (Florida Parishes); reports from further west (e.g. TX) are misidentifications. **Phen:** Jan-Feb; Oct-Nov. **Tax:** The recognition of the "*silicicola*" entity (and if recognized, at what rank) has been controversial. Some authors have treated this taxon as a species, but Adams (1986, 2008a, 2008b, 2014), Adams in FNA (1993b), and Adams & Schwarzbach (2012, 2013) considered varietal status more appropriate. Adams (1995) suggested that the two may have diverged as recently as the Pleistocene. Later, however, Adams (2008c, 2014) and Adams & Schwarzbach (2012, 2013) presented molecular evidence that "*silicicola*" may be of Caribbean origin or perhaps of hybrid origin between *J. barbadensis* var. *lucayana* and *J. virginiana* var. *virginiana*". The "*virginiana*" and "*silicicola*" entities have been said to intergrade in GA, and in other areas the characters used to separate them seem variable or imperfectly correlated. A preliminary molecular phylogeny, however, shows *J. virginiana* clading with *J. maritima* of BC and WA, this clade sister to *J. silicicola* (Adams & Schwarzbach 2012, 2013), which if confirmed with more detailed sampling and analysis would suggest that species status is warranted. Given the uncertainty that "*virginiana*" and "*silicicola*" are indeed sister taxa (more closely related to one another than to other species) I choose to accord them species rank, despite the sometime challenges in their straightforward identification based on morphologic features. **Comm:** Large individuals can be as much as a meter in diameter. **Syn:** = RAB; = *Juniperus virginiana* ssp. *silicicola* (Small) J. Silba; = *Juniperus virginiana* Linnaeus var. *silicicola* (Small) E. Murray – FNA2, K1, K2, K4, Adams & Schwarzbach (2012), Adams & Schwarzbach (2013), Adams (2008b), Adams (2014); = *Sabina silicicola* Small – S; > *Juniperus barbadensis* Linnaeus – Bah; < *Juniperus virginiana* Linnaeus – FI1, WH3. NatureServe G5T4T5 (Apparently Secure).

Juniperus virginiana Linnaeus. EASTERN RED CEDAR. **Hab:** Bluffs, glades, upland forests and woodlands, pastures, old fields, roadsides, and fencerows, primarily upland, occurring most abundantly on (but by no means restricted to) circumneutral soils (including shrink-swell clays) derived from mafic or calcareous rocks. **Dist:** S. ME west to e. ND, south to n. FL, s. AL, s. MS, s. LA, and c. TX; disjunct in Coahuila, Mexico (Adams 2011). **Phen:** Jan-Mar; Oct-Nov. **Comm:** The wood is much used for fence posts and the traditional southern cedar chest (which takes advantage of the aromatic and moth-deterrent properties of cedar wood). **Syn:** = GrPl, Il, Mi, NcTx, Pa, RAB, Tn, W, WV; = *Juniperus virginiana* ssp. *virginiana*; = *Juniperus virginiana* Linnaeus var. *virginiana* – Ar, C, ETx1, F, FNA2, G, K1, K2, K4, Mo1, NE, NY, Va, Adams & Schwarzbach (2012), Adams & Schwarzbach (2013), Adams (2008b), Adams (2014); = *Sabina virginiana* (Linnaeus) Antoine – S; > *Juniperus silicicola* (Small) L.H. Bailey – Tx, misapplied; < *Juniperus virginiana* Linnaeus – FI1, WH3; > *Juniperus virginiana* Linnaeus – Tx. NatureServe G5T5 (Secure).

*Platycladus* Spach 1842 (CHINESE ARBORVITAE)

A monotypic genus, a tree, of e. Asia (n. China and Manchuria). *Platycladus* is distinct from *Thuja*. References: Page in Kramer & Green (1990); Watson & Eckenwalder in FNA (1993).

* ***Platycladus orientalis*** (Linnaeus) Franco. ORIENTAL ARBORVITAE, TREE-OF-LIFE. **Hab:** Commonly planted, especially in graveyards, and rarely persisting and spreading to pastures, fields, and roadsides. **Dist:** Native of Asia. **Syn:** = F11, FNA2, K1, K3, K4, WH3; = *Biota orientalis* (Linnaeus) Endlicher – S; = *Thuja orientalis* Linnaeus. NatureServe G5? (Secure).

*Taxodium* L.C. Richard 1810 (BALD-CYPRESS)

A genus of 3 species, trees, of e. North America and Mexico. There has been much debate over whether the taxa of *Taxodium* should be treated as species or varieties, and if as varieties, the proper nomenclature. I agree with Godfrey (1988), in his preference "to recognize two species [within his area, which did not include the distribution of *Taxodium mucronatum*]... because it is my perception that the vast majority of trees (populations) are thus distinguishable." True intermediates appear to be very rare, though the "mimicry" of the two species creates "pseudo-intermediates" that can cause difficulties in identification. Occasionally, the *Taxodium ascendens* and *Taxodium distichum* can be seen growing together, in "hybrid habitats," as at the junction of Lake Waccamaw and the Waccamaw River (Columbus County, NC); a few recognizable intermediates can be seen. See Lickey & Walker (2002) for a contrary argument supporting varietal status. Neufeld (1986) discusses the different architecture and ecophysiology of the two species. The third taxon in the genus is *Taxodium mucronatum* Tenore, ranging from s. TX south to Mexico and Guatemala. West of the Mississippi River, the architecture of *Taxodium distichum* comes to resemble that of *Taxodium mucronatum*, suggesting the possibility of introgression. For this and other reasons, Watson in FNA (1993b) and other authors prefer to treat *Taxodium mucronatum* at varietal rank, as *Taxodium distichum* var. *mexicanum* Gordon. *Taxodium* is most closely related to *Glyptostrobus* and *Cryptomeris*. References: Duncan & Duncan (1988); Godfrey (1988); Lickey & Walker (2002); Page in Kramer & Green (1990); Tiwari et al (2012); Tsumura et al (1999); Watson (1993) in FNA2 (1993b).

- 2 Larger knees short, rarely > 4 dm tall, usually columnar or broad and mound-like, with thick, compact bark on top; leafy branchlets ascending from the twigs, secundly erect (the base often curving, the apical portion of the branchlet borne in a vertical plane), except on juvenile trees (which mimic *T. distichum*); leaves subulate, spirally arranged, not spreading laterally and featherlike (except on juvenile trees), ascending or appressed; leaves mostly 3-10 mm long (to 15 mm long on juvenile trees); bark thick (1-2.5 cm thick), furrowed, dark-brown, not exfoliating; [trees mainly of fire-maintained habitats: isolated depressions (clay-based Carolina bays, depression ponds), wet pine savannas, pocosins and other wet peaty habitats, domes and stringers in wet prairies, and, less commonly, blackwater swamps and natural lakes] ***Taxodium ascendens***
- 2 Larger knees often tall, often > 4 dm tall, usually narrowly conical, with thin, shreddy bark on top; leafy branchlets spreading laterally from the twigs, except in the crowns of mature trees (which sometimes mimic *T. ascendens*); leaves linear, flat, spirally arranged but by twisting of their basal portions spreading laterally and featherlike (pseudo-distichous), appressed only on drooping branches of the crown, if at all; leaves mostly 8-20 mm long (sometimes less on crown branches); bark thin (< 1 cm thick), exfoliating in shreddy, orange-brown strips; [trees of brownwater swamp forests, blackwater swamp forests, natural lakes, and millponds] ***Taxodium distichum***

Taxodium ascendens Brongniart. POND-CYPRESS. **Hab:** Limesink ponds (dolines), clay-based Carolina bays, wet savannas, pocosins and other wet, peaty habitats, shores of natural blackwater lakes, swamps of blackwater streams, forming "domes" and "stringers" in Florida in very flat, fire landscapes, also as "hatrack" stands of widely spaced and stunted trees on oolite in south Florida. **Dist:** Se. VA south to s. FL, west to e. LA. **Phen:** Mar-Apr; Oct. **Comm:** *Taxodium ascendens* is surely one of the most scenic trees of eastern North America. **Syn:** = F11, G, K1, K3, K4, RAB, S, Va, WH3, Godfrey (1988); = *Taxodium distichum* var. *imbricarium* (Nuttall) Croom – FNA2, Lickey & Walker (2002); = *Taxodium distichum* var. *nutans* (Aiton) Sweet; = *Taxodium imbricarium* Nuttall; < *Taxodium distichum* (Linnaeus) L.C. Richard – F.

Taxodium distichum (Linnaeus) L.C. Richard. BALD-CYPRESS. **Hab:** Brownwater and blackwater swamps, usually in riverine situations, depressions in bottomland forests, lake margins, river banks, rarely in wooded seeps. **Dist:** DE and e. MD south to s. FL and west to e. TX and se. OK, north along the Mississippi River and its tributaries to s. IN and s. IL. This species is sometimes planted as an ornamental in upland and wetland sites within and beyond its natural range, and these planted trees are very long persistent and may be encountered. **Phen:** Mar-Apr; Oct. **Comm:** A remarkable population of *Taxodium distichum* is found along a stretch of the Black River in NC, with many trees exceeding 1500 years old. **Syn:** = F11, G, IL, K1, K4, Mi, Pa, RAB, S, Tn, Tx, Va, WH3, WV, Godfrey (1988); = *Taxodium distichum* var. *distichum* – Ar, C, ETx1, K3, Mo1, NY, Lickey & Walker (2002); < *Taxodium distichum* (Linnaeus) L.C. Richard – F; < *Taxodium distichum* var. *distichum* – FNA2.

SECTION 4: MAGNOLIIDS AND PRIMITIVE ANGIOSPERMS

3. CABOMBACEAE Richard ex A. Richard 1822 (WATER-SHIELD FAMILY) [in NYMPHAEALES]

A family of 2 genera and about 6 species, aquatic herbs, nearly cosmopolitan. This family is closely related to the Nymphaeaceae and is sometimes combined with it (Angiosperm Phylogeny Group 2003). References: Les & Crawford (1999); Wiersma (1997c) in FNA3 (1997); Williamson & Schneider in Kubitzki, Rohwer, & Bittrich (1993).

- 1 Plants with all leaves floating and peltate; underwater portions of plants coated with a layer of transparent, mucilaginous jelly; floating peltate leaves 3.5-11 cm long, 2-6.5 cm wide; [subfamily *Hydropeltoideae*] *Brasenia*
- 1 Plants with submersed leaves dichotomously divided into linear segments; plants not coated with mucilaginous material; floating peltate leaves (when present) 0.6-3.0 cm long, 0.1-0.4 wide; [subfamily *Cabomboideae*] *Cabomba*

Brasenia Schreber 1789 (WATER-SHIELD)

A monotypic genus, an aquatic herb, widely distributed in tropical and temperate regions of the Old and New World. References: Wiersma (1997c) in FNA3 (1997); Williamson & Schneider in Kubitzki, Rohwer, & Bittrich (1993).

Identification Notes: The elliptic, peltate, floating leaves and mucilaginous petioles make *Brasenia* unmistakable.

Brasenia schreberi J.F. Gmelin. WATER-SHIELD, PURPLE WEN-DOCK. **Hab:** Lakes, ponds, sluggish streams, floodplain oxbow ponds, beaver ponds. **Dist:** NS west to MN, south to s. FL and TX; also from BC south to CA; also in tropical America and the Old World. **Phen:** Jun-Oct. **ID Notes:** The elliptical, peltate leaves are distinctive in comparison to our other rooted aquatics with broad, floating leaves. Also distinctive is the thick layer of gelatinous mucilage coating underwater parts of the plant (stems, petioles, and leaf undersurfaces), presumably acting as an anti-herbivory deterrent. **Syn:** = Ar, C, F, Fl2, FNA3, G, GrPl, GW2, Il, K1, K3, K4, Mi, Mo2, NcTx, NE, NY, Pa, RAB, S, Tn, Tx, Va, W, WH3. [NatureServe G5](#) (Secure).

*Cabomba* Aublet 1775 (FANWORT)

A genus of about 5 species, aquatic herbs, tropical and temperate regions of America. References: Fassett (1953); Ørgaard (1991); Wiersma (1997c) in FNA3 (1997); Williamson & Schneider in Kubitzki, Rohwer, & Bittrich (1993).

Identification Notes: *Cabomba* is sometimes mistaken for other, superficially somewhat similar aquatics, such as *Ceratophyllum* (Ceratophyllaceae), *Utricularia* (Lentibulariaceae), and *Myriophyllum* (Haloragaceae). *Cabomba* has the leaves opposite (rather than whorled), dichotomously divided (like *Ceratophyllum*), but the divisions lacking the marginal denticles of *Ceratophyllum*, and on a 1-3 cm long petiole (vs. sessile or on a petiole 0-2 mm long). *Utricularia* has the leaves sometimes dichotomously divided, but the divisions are usually irregular, the leaves are alternate (in most species), and bladder traps are present. *Myriophyllum* has the leaves pectinately rather than dichotomously divided.

Cabomba caroliniana A. Gray. FANWORT. **Hab:** Millponds, lakes, slow-moving streams. **Dist:** MA, NY, and NJ west to OH, s. MI, and MO, south to FL and TX; also native in s. South America (s. Brazil, Paraguay, Uruguay, and n. Argentina). Additionally sporadically introduced elsewhere from aquarium "throw-outs". **Phen:** May-Sep. **Tax:** *C. caroliniana* var. *pulcherrima* R.M. Harper, with purplish flowers and vegetative parts (vs. white flowers and green vegetative parts), occurs in the southeastern Coastal Plain; it needs further evaluation. Godfrey & Wooten (1981) imply that the purple pigmentation may be merely an environmental response to warm waters, and is not correlated with morphologic characters. **Syn:** = Ar, C, F, Fl2, FNA3, G, GrPl, GW2, Il, K3, K4, Mi, NcTx, NE, NY, Pa, RAB, S, Tn, Tx, Va, WH3; > *Cabomba caroliniana* A. Gray – Fassett (1953); > *Cabomba caroliniana* var. *caroliniana* – K1, Mo2, Ørgaard (1991); > *Cabomba caroliniana* var. *pulcherrima* R.M. Harper – K1, Ørgaard (1991); > *Cabomba pulcherrima* (R.M. Harper) Fassett – Fassett (1953).

4. NYMPHAEACEAE Salisbury 1805 (WATER-LILY FAMILY) [in NYMPHAEALES]

A family of 6 genera and about 75 species, aquatic herbs, cosmopolitan. References: Les & Crawford (1999); Schneider & Williamson in Kubitzki, Rohwer, & Bittrich (1993); Wiersma & Hellquist (1997) in FNA3 (1997).

- 1 Flowers nearly spherical, 2-5 cm in diameter; sepals 6 (in our species), petaloid, green to yellow, incurved; petals many, inconspicuous, scalelike or staminodial; leaves often of 2 types, the submersed leaves (when present) thinner in texture than the floating or emersed leaves; floating or emersed leaves having 60-90% of their surface area with vasculature derived from the midrib; rhizome with triangular or winged leaf scars; [subfamily *Nupharoideae*] *Nuphar*
- 1 Flowers hemispheric, 4-20 cm across; sepals 4, greenish, inconspicuous; petals spreading and ascending, white or yellow, showy; leaves of 1 type, floating; floating leaves having 25-40 % of their surface area with vasculature derived from the midrib; rhizome with circular leaf scars; [subfamily *Nymphaeoidae*] *Nymphaea*

Nuphar J.E. Smith 1809 (SPATTERDOCK, YELLOW PONDILY)

A genus of about 16 species, aquatic herbs, of north temperate areas. Beal (1956) recognized 8 taxa of *Nuphar* in North America, which he treated as subspecies of the European *N. lutea*. Voss's (1985) statement (about the genus in Michigan) "our plants are quite easily distinguished ... and they are treated here as closely related species" applies equally (or better!) in our area. Recent treatments (see references) recognize multiple species. References: Beal (1956); Padgett (1999); Padgett (2007); Schneider & Williamson in Kubitzki, Rohwer, & Bittrich (1993); Wiersma & Hellquist (1997) in FNA3 (1997).

- 3 Floating leaf blades 2-6× as long as wide, the sinus < ¼ as long as the midrib; thin-textured submersed leaves often more abundant than the floating leaves; [of blackwater or tidal streams, rivers, and lakes of the Coastal Plain, se. VA, e. NC, e. SC, Panhandle FL, s. AL]. *Nuphar ulvacea*
- 3 Floating leaf blades 1-2× as long as wide, the sinus > ¼ as long as the midrib; thin-textured submersed leaves absent or at least fewer than floating or emerged leaves; [collectively of various habitats and distributions, but not as above]. *Nuphar advena*

Nuphar advena (Aiton) R. Brown ex W.T. Aiton. BROADLEAF PONDILY. **Hab:** Lakes, ponds, natural depression ponds, old millponds, slow-flowing rivers (blackwater and brownwater), tidal freshwater marshes. **Dist:** The most widespread and common *Nuphar* in e. North America, ranging from ME west to WI, south to s. FL, Cuba, TX, and n. Mexico. **Phen:** Apr-Oct. **Syn:** = C, IL, MI, NC, TX, NE, PA, TN, VA, WV; = *Nuphar advena* ssp. *advena* – FL2, K3, K4, NY, WH3, Padgett (1999), Padgett (2007); = *Nuphar lutea* J.E. Smith ssp. *advena* (Aiton) Kartesz & Gandhi – K1; = *Nuphar luteum* (Linnaeus) Sibthorp & J.E. Smith ssp. *macrophyllum* (Small) E.O. Beal – GR, PL, GW2, RAB, TX, W, Beal (1956); < *Nuphar advena* (Aiton) R. Brown ex W.T. Aiton – FNA3; > *Nuphar advena* (Aiton) R. Brown ex W.T. Aiton – F, G; > *Nuphar fluviatile* (R.M. Harper) Standley – F, G; < *Nuphar luteum* (Linnaeus) Sibthorp & J.E. Smith, misapplied; > *Nuphar puteorum* Fernald – F; > *Nymphaea advena* Aiton – S; > *Nymphaea chartacea* Miller & Standley – S; > *Nymphaea fluvialis* R.M. Harper – S; > *Nymphaea macrophylla* Small – S.

Nuphar ulvacea (G.S. Miller & Standley) Standley. SEA-LETTUCE PONDILY. **Hab:** Blackwater streams. **Dist:** Endemic to Panhandle FL, s. AL, and recently reported for s. MS (Jackson County) (H. Horne, pers. comm., 2014). **Comm:** Apr-Sep. **Syn:** = FNA3; = *Nuphar advena* (Aiton) R. Brown ssp. *ulvacea* (G.S. Miller & Standley) D. Padgett – FL2, K3, K4, WH3, Padgett (2007); = *Nuphar luteum* (Linnaeus) Sibthorp & J.E. Smith ssp. *ulvaceum* (G.S. Miller & Standley) E.O. Beal – GW2, K1; = *Nymphaea ulvacea* G.S. Miller & Standley – S.

*Nymphaea* Linnaeus 1753 (WATERLILY)

A genus of about 50 species, aquatic herbs, cosmopolitan. References: Borsch et al (2014); Borsch et al (2017); Schneider & Williamson in Kubitzki, Rohwer, & Bittrich (1993); Wiersma (1997b) in FNA3 (1997); Woods et al (2005a); Woods et al (2005b).

- 6 Petals yellow; plants producing stolons *Nymphaea mexicana*
- 6 Petals white (to pink); plants not producing stolons. *Nymphaea odorata* ssp. *odorata*

Nymphaea mexicana Zuccarini. BANANA WATERLILY, YELLOW WATERLILY. **Hab:** Sluggish or stagnant waters; scattered in occurrence and possibly introduced from farther south, but the introduction agents may well be wild ducks, such as canvasbacks. **Dist:** Ne. NC south to s. FL, west to TX, also in sw. United States and Mexico. **Phen:** Jun-Sep. **Syn:** = FNA3, GW2, K1, K3, K4, NC, TX, RAB, TX, WH3, Borsch et al (2014), Borsch et al (2017), Woods et al (2005a), Woods et al (2005b); = *Castalia flava* (Leitner) Greene – S. **NatureServe G3G4** (Vulnerable).

Nymphaea odorata Aiton ssp. *odorata*. WHITE WATERLILY. **Hab:** Ponds, sluggish waters. **Dist:** NL (Newfoundland) west to MB, south to FL and TX; also scattered in the w. United States as an introduction. **Phen:** Jun-Sep. **Comm:** *N. odorata* is polymorphic, leading to the naming of numerous species, subspecies, and varieties (see synonymy for a few of the named entities). Wiersma in FNA (1997) recognizes ssp. *odorata* (most of our plants) and ssp. *tuberosa* (Paine) Wiersma & Hellquist, more western and northern, but edging into our area. Other named entities warrant further evaluation. *N. odorata* var. *gigantea* [= *Castalia lekophylla* Small] occurs on the Coastal Plain, and is considered to differ from var. *odorata* in its larger leaves (1.5-6 dm in diameter vs. 0.5-2.5 dm), larger flowers (mostly > 15 cm wide vs. mostly < 10 cm), and leaves upturned at the margins (vs. flat). *N. odorata* var. *minor* [= *Castalia minor* (Sims) Nyar] is considered to differ from var. *odorata* in its generally smaller size, leaves 5-11 cm in diameter, flowers mostly < 8 cm wide (vs. mostly > 9 cm wide); it may be merely a dwarfed form of extremely nutrient-limited waters of the Coastal Plain. **Syn:** = Ar, FNA3, K1, K3, K4, MI, NY, VA, Borsch et al (2014), Borsch et al (2017), Woods et al (2005a), Woods et al (2005b); = *Nymphaea odorata* – GR, PL, GW2, IL, NE; > *Castalia lekophylla* Small – S; > *Castalia minor* (Sims) Nyar – S; > *Castalia odorata* (Aiton) Wood – S; > *Castalia reniformis* (Walter) Nash; < *Nymphaea odorata* – FL2, NC, TX, PA, RAB, TX, WH3, WV; > *Nymphaea odorata* var. *gigantea* Tricker – C, F, G; > *Nymphaea odorata* var. *godfreyi* D.B. Ward; > *Nymphaea odorata* Aiton var. *minor* Sims; > *Nymphaea odorata* var. *odorata* – F, G; > *Nymphaea odorata* var. *odorata* – C; > *Nymphaea odorata* var. *stenopetala* Fernald – F. **NatureServe G5T5** (Secure).

4. NYMPHAEACEAE

7a. ILLICACEAE A.C. Smith 1947 (STAR-ANISE FAMILY) [in AUSTROBAILEYALES]

A family of 1 genus and about 42 species, shrubs and trees, of temperate and subtropical se. Asia and se. North America (se. United States, Cuba, Haiti, and e. Mexico). The family is most closely related to the Schisandraceae, Austrobaileyaceae, and Trimeniaceae. References: Keng in Kubitzki, Rohwer, & Bittrich (1993); Vincent (1997a) in FNA3 (1997).

Illicium Linnaeus 1759 (STAR-ANISE)

A genus of about 42 species, shrubs and trees, of temperate and subtropical se. Asia and se. North America (se. United States, Cuba, Haiti, and e. Mexico). Morris et al. (2007) studied the evolution of the genus and revised its sectional taxonomy; New World and Old World taxa form separate clades, treated as separate sections, our species being in section *Cymbostemon*. References: Keng in Kubitzki, Rohwer, & Bittrich (1993); Morris et al (2007); Stone & Freeman (1968); Vincent (1997a) in FNA3 (1997).

***Illicium floridanum* J. Ellis.** FLORIDA STAR-ANISE. **Hab:** Acid ravines and small stream swamps. **Dist:** Sw. GA west to e. LA; disjunct in ne. FL. Sparingly naturalized north of its native range from plantings, as along Black Creek, at Kalmia Gardens, Hartsville, Darlington County, SC (D. Hope, pers.comm. 2008). **Phen:** Apr-Jun. **Tax:** Most closely related to *I. mexicanum*, of ne. Mexico (HID, PUE, SLP, TAM, and VER). **Syn:** = FI2, FNA3, GW2, K1, K3, K4, S, WH3. NatureServe G5 (Secure).

7b. SCHISANDRACEAE Blume 1830 (STAR-VINE FAMILY) [in AUSTROBAILEYALES]

A family of 2 genera and about 40-60 species, woody vines, of e. Asia and e. North America (only our single species). The family is most closely related to the Illiciaceae, Austrobaileyaceae, and Trimeniaceae. In APG III (2009), Schisandraceae is included in Illiciaceae, but the differences seem entirely sufficient to keep them separate. References: Keng in Kubitzki, Rohwer, & Bittrich (1993); Saunders (2001); Vincent (1997b) in FNA3 (1997).

Schisandra Michaux 1803 (STAR-VINE)

A genus of about 26 species, woody vines, of e. Asia (about 25 species) and e. North America (1 species). References: Godfrey (1988); Keng in Kubitzki, Rohwer, & Bittrich (1993); Lin, Shui, & Yang (2011); Saunders (2001); Stone (1968); Vincent in FNA3 (1997).

***Schisandra glabra* (Brickell) Rehder.** BAY STARVINE, CLIMBING-MAGNOLIA, MAGNOLIA-VINE. **Hab:** Rich slopes adjacent to bottomland forests, mesic "islands" surrounded by bottomlands, moist hammocks. **Dist:** Ne. NC (Martin County), sc. NC (Gaston County), n. GA, w. TN, e. and se. KY, and e. AR south to the FL Panhandle and LA; Mexico (Baja California Sur, Hidalgo, Veracruz). **Phen:** Apr-Jun; Jul-Aug. **Syn:** = Ar, FI2, K1, K3, RAB, Tn, WH3, Godfrey (1988), Saunders (2001); = *Schisandra coccinea* – Tx, W; = *Schizandra coccinea* Michaux – S, orthographic variant. NatureServe G3 (Vulnerable).

10. SAURURACEAE Richard ex T. Lestiboudois 1826 (LIZARD'S-TAIL FAMILY) [in PIPERALES]

A family of 4 genera and 6 species, perennial herbs, of temperate e. and se. Asia (*Saururus*, *Gymnotheca*, *Houttuynia*), w. North America (*Anemopsis*), and e. North America (*Saururus*). One other member of the family occurs in North America: *Anemopsis californica* Hooker & Arnott, primarily of the sw. United States. References: Buddell & Thieret (1997) in FNA3 (1997); Cheng-Yih & Kubitzki in Kubitzki, Rohwer, & Bittrich (1993); Meng et al (2003); Wood (1971).

Saururus Linnaeus 1753 (LIZARD'S-TAIL, WATER-DRAGON)

A genus of 2 species, perennial herbs, our species in temperate e. North America, the other in e. Asia. References: Buddell & Thieret (1997) in FNA3 (1997); Cheng-Yih & Kubitzki in Kubitzki, Rohwer, & Bittrich (1993).

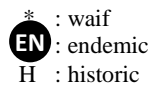

***Saururus cernuus* Linnaeus.** LIZARD'S-TAIL, WATER-DRAGON. **Hab:** Swamps, overwash pools in stream floodplains, freshwater and oligohaline tidal marshes, semipermanently inundated rocky bars and shores, beaver ponds, ditches, usually where water ponds seasonally or periodically. In swamps of the Coastal Plain, *Saururus* often is dominant in large patches. **Dist:** CT, s. QC, s. ON, and MI south to s. FL and e. TX. **Phen:** (Dec-) May-

12. ARISTOLOCHIACEAE

features relate to the shape and size of the fleshy and brittle calyx – characters which are difficult to describe and are largely lost when specimens are pressed. The difficulty of identifying herbarium specimens has sometimes been (apparently) used as a justification for reducing (often drastically, as in Gleason & Cronquist 1991) the number of taxa recognized. To those familiar with this genus in the field, however, the taxa here recognized form geographically distinctive populations. Size and (to a lesser degree) shape of individual flowers show considerable variation and can be altered by environmental factors; individual flowers or plants can be difficult to identify if taken out of context. Populations, however, are usually readily identifiable. References: Barringer (1993); Blomquist (1957); Gaddy in W (1989); Gaddy (1986); Gaddy (1987a); Gaddy (1987b); Huber in Kubitzki, Rohwer, & Bittrich (1993); Keener & Davenport (2015); Keener & Todia (2021); Keener (2020); Schaner (2021); Sinn (2015); Sinn (2017a); Sinn (2017b); Sinn, Kelly, & Freudenstein (2015a); Sinn, Kelly, & Freudenstein (2015b); Sugawara (1987); Weakley & Poindexter (2020a) in Weakley et al (2020); Whittemore & Gaddy (1997) in FNA3 (1997).

Identification Notes: The photograph (Figure 1) in Gaddy (1987a) of the flowers of all species then known (other than *H. arifolia* and *H. speciosa*) is highly recommended as an aid to identification. The calyx tube orifice is measured on the inside – the diameter of the opening. The width of calyx lobes is measured from sinus (notch) to sinus (notch).

- 1 Leaves triangular to ovate-sagittate or subhastate, portions of the sides of larger leaves straight or concave; leaves mottled, the paler areas between the veins; style extension bifid to the stigma.
 - 7 Calyx tube 13-18 mm long, 6-10 mm wide; calyx lobes 2.5-8 mm long, 3-9 mm wide across the base; [of the Coastal Plain, Piedmont, and Mountains of s. VA, NC, SC, GA, and westward through AL and MS to se. LA] *Hexastylis arifolia*
 - 7 Calyx tube 20-25 mm long, 10-12 mm wide; calyx lobes 12-20 mm long, 8-15 mm wide across the base; [of the lower Gulf Coastal Plain, of sw. GA, FL Panhandle, s. AL, s. MS, and se. LA]..... *Hexastylis callifolia*
- 1 Leaves rounded, with cordate base, all portions of the sides of the leaves convex; leaves mottled or unmottled, if mottled, the paler areas along the veins; style extension notched or divided at the apex, not bifid to the stigma.
 *Hexastylis harperi*

Hexastylis arifolia (Michaux) Small. LITTLE BROWN JUG, ARROWLEAF HEARTLEAF, PIGS. **Hab:** In a wide variety of dry to mesic forests. **Dist:** Se. VA, sw. VA, se. KY, se. TN, and n. AL south to se. GA (Carter, Baker, & Morris 2009), Panhandle FL, s. MS, and se. LA, primarily on the Coastal Plain and Piedmont; recently reported for far sw. TN, in the Mississippi Embayment of the Coastal Plain (Trently 2017). **Phen:** (Late Feb) Mar-May. **Syn:** = G, S; = *Asarum arifolium* Michaux – F; = *Asarum arifolium* Michaux var. *arifolium* – Barringer (1993); = *Hexastylis arifolia* (Michaux) Small var. *arifolia* – C, FNA3, K1, K3, K4, Tn, Va, W, Blomquist (1957), Gaddy (1987a); < *Asarum arifolium* Michaux – F12, WH3; < *Hexastylis arifolia* (Michaux) Small – RAB. NatureServe G5T5 (Secure).

Hexastylis callifolia (Small) Small. GULF LITTLE BROWN JUG. **Hab:** Mesic forests. **Dist:** Sw. GA and Panhandle FL west to se. LA, in the lower East Gulf Coastal Plain. **Phen:** Mar-May. **Syn:** = S; = *Asarum arifolium* Michaux var. *callifolium* (Small) Barringer – Barringer (1993); = *Asarum callifolium* Small; = *Hexastylis arifolia* (Michaux) Small var. *callifolia* (Small) Blomquist – FNA3, K1, K3, K4, Blomquist (1957), Gaddy (1987a); < *Asarum arifolium* Michaux – F12, WH3. NatureServe G5T4? (Apparently Secure).

Hexastylis harperi (Gaddy) B.R. Keener & L.J. Davenport. HARPER'S HEARTLEAF. **Hab:** Bogs, acid hammocks. **Dist:** C. GA, c. AL, and ne. MS, south and west of (and allopatric from) *H. shuttleworthii*; it approaches SC and should be sought there (Gaddy 1987b). **Comm:** Keener & Davenport (2015) elevate it to specific rank in *Hexastylis*; Diamond (2016a) gives it specific rank in *Asarum*. **Syn:** = K4, Keener & Davenport (2015); = *Asarum harperi* (Gaddy) Diamond; = *Asarum shuttleworthii* Britten & Baker f. var. *harperi* (Gaddy) Barringer – Barringer (1993), Sinn (2015); = *Hexastylis shuttleworthii* (Britten & Baker f.) Small var. *harperi* Gaddy – FNA3, K1, K3, Gaddy (1987a); < *Hexastylis shuttleworthii* (Britten & Baker f.) Small – S. NatureServe G4T3 (Vulnerable).

Isotrema Rafinesque 1819 (DUTCHMAN'S-PIPE)

A genus of about 90-100 species, of temperate and tropical Asia, se. North America, and Central America. Zhu et al. (2019) argue for the recognition of *Isotrema* at generic rank, but include *Endodeca* in it; we prefer to separate *Endodeca* (basal to *Isotrema* s.s.). References: Barringer (1997) in FNA3 (1997); Huber in Kubitzki, Rohwer, & Bittrich (1993); Kelly & González (2003); Ohi-Toma et al (2006); Zhu et al (2019).

Isotrema tomentosum (Sims) H. Huber. WOOLLY DUTCHMAN'S-PIPE, PIPEVINE. **Hab:** Bottomland and riparian forests, stream and river banks, disturbed areas. **Dist:** S. IN, s. MO, and se. OK, south to sw. GA, Panhandle FL, and c. TX. Also cultivated horticulturally and persistent or spreading more widely around eastern North America. **Phen:** May-Jun. **Comm:** FNA also reports that it is escaped in VA. **Syn:** = K3, K4, Mi, NE, NY, Zhu et al (2019); = *Aristolochia tomentosa* Sims – Ar, C, F, F12, FNA3, G, GrPl, GW2, Il, K1, Mo2, NcTx, RAB, S, Tx, WH3; = *Isotrema tomentosa* – Tn, orthographic variant. NatureServe G5 (Secure).

14. MAGNOLIACEAE A.L. de Jussieu 1789 (MAGNOLIA FAMILY) [in MAGNOLIALES]

A family of about 7 genera and 223 species, trees and shrubs, tropical and warm temperate, of e. and se. Asia, and from e. North America south through West Indies and Central America to Brazil. References: Figlar & Nootboom (2004); Frodin & Govaerts (1996); Hardin & Jones (1989); Hardin (1972); Kim et al (2001); Meyer (1997a) in FNA3 (1997); Nie et al (2008); Nootboom in Kubitzki, Rohwer, & Bittrich (1993).

- 1 Leaves about as broad as long, (0-) 4 (-8)-lobed; fruit a lanceoloid aggregate of samaras (a “samaracetum”), each samara 2-seeded, tan, and indehiscent; [subfamily *Liriodendroideae*]..... *Liriodendron*
- 1 Leaves longer than broad, not lobed (in some species the leaves auriculate-cordate basally); fruit an ovoid, cone-like aggregate of follicles (a “follicetum”), each follicle dehiscent to reveal a scarlet seed, at first connected to the follicle by a thread-like strand; [subfamily *Magnolioideae*]..... *Magnolia*

Liriodendron Linnaeus 1753 (TULIP-TREE)

A genus of 2-4 species (or taxa), trees, relictually distributed, with *L. tulipifera* in e. North America and *L. chinense* (Hemsley) Sargent in c. China and n. Vietnam. References: Fetter & Weakley (2019); Fetter (2014); Fetter, Weakley, & Poindexter () (in prep); Nootboom in Kubitzki, Rohwer, & Bittrich (1993).

Identification Notes: Leaf characters of shade leaves and vigorous young shoots are highly variable and also show a variety of shapes not encountered in mature, sun leaves. The leaf characters in the key are based on mature, sun leaves subtending flowers/fruits. The length measurements of the leaf blades are made from the point of attachment of the petiole to the tip of the midvein.

- 2 Mature leaves of fertile branches small [measurements], 0-4-lobed (sun leaves), the terminal lobes obtuse, broadly rounded to acuminate, though when acuminate the ultimate tip minutely blunt, the base cuneate, rounded, or truncate; fully-developed tepals 3.0-4.0 cm long; aggregate fruit (samaracetum) { < 6 } cm long at maturity; stamens < 32; [of the Coastal Plain, especially fire-maintained, wetland, acidic, saturated, peaty/sandy sites]..... *Liriodendron tulipifera* var. **1**
- 2 Mature leaves of fertile branches large [measurements], 4-8-lobed (sun leaves), the terminal lobes acute to acuminate, and often terminating in an apiculum, the base cordate to broadly cuneate; fully-developed tepals 4.5-5+ cm long; aggregate fruit (samaracetum) { usually > 6 } cm long at maturity; stamens mostly > 30; [of the Mountains, Piedmont, and Coastal Plain (in the Coastal Plain, especially along brownwater rivers and on mesic bluffs and slopes)]..... *Liriodendron tulipifera* var. *tulipifera*

***Liriodendron tulipifera* Linnaeus var. 1. COASTAL PLAIN TULIP-TREE, SOUTHERN YELLOW POPLAR. Hab:** Streamhead pocosins, pineland seepage swamps, small blackwater stream swamps. **Dist:** Sc. and se. NC south to Panhandle FL, west to s. MS. **Phen:** Apr-Jun; Sep-Oct. **Tax:** Under study by Fetter, Weakley, & Poindexter (in prep.). **Comm:** Its occurrence in fire-maintained, acid soil habitats in the Coastal Plain is surprising to people used to *Liriodendron* as a tree of mesic, rich soil forests with little or no fire. This variety is, however, a typical species of streamhead pocosins in the fall-line sandhills, growing with *Pinus serotina*, *Nyssa biflora*, and *Acer rubrum*, and often with scorch marks twenty feet up the trunk. **Syn:** = Fetter, Weakley, & Poindexter () (in prep); < *Liriodendron tulipifera* – FI2, FNA3, GW2, K1, K3, RAB, S, WH3; > *Liriodendron tulipifera* var. *obtusiloba* Michaux – K4; > *Liriodendron tulipifera* Linnaeus var. *tulipifera* – K4.

***Liriodendron tulipifera* Linnaeus var. *tulipifera*. TULIP-TREE, YELLOW POPLAR, WHITEWOOD. Hab:** Mesic forests, cove forests in the Mountains to at least 1500m in elevation, bottomland forests and swamps. **Dist:** MA, VT, NY, ON, MI, and n. IL south to Panhandle FL and w. LA; also spread elsewhere from cultivation. **Phen:** Apr-Jun; Sep-Oct. **Comm:** An important timber tree in the Southern Appalachians. **Syn:** = Fetter, Weakley, & Poindexter () (in prep); < *Liriodendron tulipifera* – Ar, C, F, FI2, FNA3, G, GW2, IL, K1, K3, Mi, NE, Pa, RAB, S, Tn, Tx, Va, W, WH3, WV, Hardin & Jones (1989); > *Liriodendron tulipifera* var. *obtusiloba* Michaux – K4; > *Liriodendron tulipifera* Linnaeus var. *tulipifera* – K4.

Magnolia Linnaeus 1753 (MAGNOLIA, CUCUMBER-TREE)

As treated here, a genus of about 130 species, trees and shrubs, of e. Asia (Himalayas and Sri Lanka to Japan and w. Malaysia) and America (e. North America to West Indies, Central America, and South America); alternate treatments in current use divide *Magnolia* into as many as 16 genera (of which *Magnolia* Linnaeus, *Houpoa* N.H. Xia & C.Y. Wu, *Metamagnolia* Sima & S.G. Lu, *Paramagnolia* Sima & S.G. Lu, and *Yulania* Spach are represented in our flora). Molecular phylogenetics show *Magnolia virginiana* and *Magnolia grandiflora* as closely related in a New World primarily subtropical clade, *Magnolia macrophylla* and *Magnolia ashei* in one branch in a clade with *M. fraseri* and *M. pyramidata* in another branch, *Magnolia acuminata* as basal in a clade that is otherwise Asian (equivalent to subgenus *Yulania*), and *Magnolia tripetala* grouped in another clade that is otherwise Asian (Azuma et al. 2001). The sections used follow Wang et al. (2020). References: Azuma et al (2001); Azuma, Thien, & Kawano (1999); Figlar & Nootboom (2004); Frodin & Govaerts (1996); García-Morales, Iamónico, & García Jiménez (2019); Hunt (1998); Kim et al (2001); Nootboom in Kubitzki, Rohwer, & Bittrich (1993); Palmarola-Bejerano, Romanov, & Bobrov (2008); Sima & Lu (2012); Spongberg (1998); Tobe (1998); Vázquez-García et al (2016); Wang et al (2020); Williams (1999).

- 1 Leaves cordate-auriculate at base; [subgenus *Magnolia*].

X : extirpated

- 2 Leaves glaucous and finely appressed-pubescent beneath; buds and twigs pubescent; [section *Macrophylla*; or genus *Metamagnolia*]. *Magnolia macrophylla*
- 2 Leaves green and glabrous beneath; buds and twigs glabrous; [section *Tuliparia*; or genus *Paramagnolia*]. *Magnolia pyramidata*
- 1 Leaves cuneate to rounded (subcordate) at base.
- 5 Leaves evergreen, coriaceous in texture, glossy dark green above as if varnished, rusty tomentose or green beneath; [section *Magnolia*; or genus *Magnolia*]. *Magnolia grandiflora*
- 5 Leaves variably evergreen to deciduous, herbaceous or subcoriaceous in texture, medium green above with a slightly glossy or dull finish; glaucous or green beneath. *Magnolia virginiana* var. *australis*
- 6 Leaves evergreen to deciduous, aromatic when fresh, 8-20 cm long, elliptic, strongly glaucous beneath; [section *Magnolia*; or genus *Magnolia*]. *Magnolia tripetala*
- 6 Leaves deciduous, non-aromatic, 3-80 cm long, either ovate, obovate, or oblanceolate, green beneath.
- 8 Leaf base cuneate-attenuate; leaf blade obovate or oblanceolate (broader toward the tip); buds either glabrous or sericeous. *Magnolia acuminata* var. *acuminata*
- 8 Leaf base rounded to subcordate (often cuneate to widely cuneate in *M. acuminata* var. *subcordata*); leaves 10-30 cm long, broader near the middle or toward the base, borne scattered along the twig; buds pubescent; [section *Tulipastrum*; or genus *Yulania*]. *Magnolia acuminata* var. *acuminata*

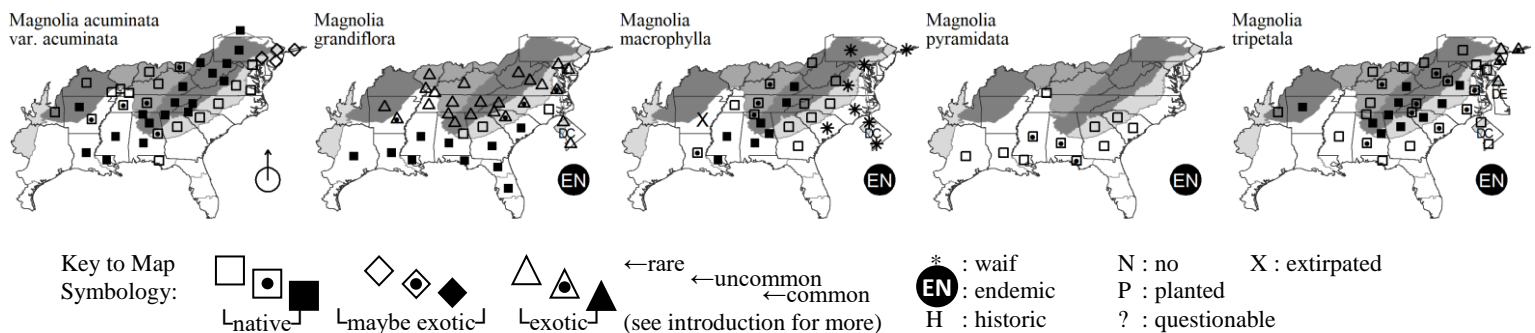

Magnolia acuminata (Linnaeus) Linnaeus var. *acuminata*. CUCUMBER-TREE, CUCUMBER MAGNOLIA. **Hab:** Mesic to subxeric forests, especially (but by no means strictly) over mafic or calcareous rocks, up to at least 1550m (where growing with *Betula alleghaniensis*, *Abies fraseri*, *Picea rubens*, and *Sorbus americana*), ultramafic outcrop barrens (where codominant with *Pinus rigida* and *Quercus alba*). **Dist:** S. ME, MY, c. IN, s. MO, and e. OK, south to c. GA, w. Panhandle FL (Holmes and Walton counties), s. AL, s. MS, and w. LA. **Phen:** Apr-Jun; Jul-Aug. **Tax:** The recognition of two varieties is uncertain (see discussion below). **Syn:** = C, F, G, W, Frodin & Govaerts (1996), Sponberg (1998), Tobe (1998); = *Tulipastrum acuminatum* (Linnaeus) Small – S; < *Magnolia acuminata* – Ar, FI2, FNA3, IL, K1, K3, K4, NE, NY, Pa, RAB, Tn, Va, WH3, WV, Hardin & Jones (1989); < *Yulania acuminata* (Linnaeus) D.L. Fu – Sima & Lu (2012).

Magnolia grandiflora Linnaeus. SOUTHERN MAGNOLIA, BULL BAY. **Hab:** Maritime forests, mesic Coastal Plain bluffs and flats, bottomlands, now also widely naturalized, spreading from cultivation into wet to mesic (and even dry) forests. **Dist:** The pre-Columbian range was apparently from se. NC south to c. peninsular FL, west to e. TX, largely on the Coastal Plain, now somewhat expanded northward and inland by naturalization from centuries of horticultural planting and spread by birds to nearby forests. **Phen:** Apr-Jun; Sep-Oct. **Comm:** Curtis (1860) states that "the northern limit of this tree is in Brunswick County [NC], south of the Cape Fear; but it flourishes in cultivation through all the lower part of the State". This is, of course, the classic "southern magnolia", along with live oak (*Quercus virginiana*) and bald-cypress (*Taxodium distichum*), a totem tree of the Deep South. **Syn:** = Ar, C, FI2, FNA3, GW2, K1, K3, K4, RAB, S, Tn, Tx, Va, Frodin & Govaerts (1996), Sima & Lu (2012), Tobe (1998); = *Magnolia foetida* (Linnaeus) Sargent. **NatureServe G5** (Secure).

Magnolia macrophylla Michaux. BIGLEAF MAGNOLIA. **Hab:** Mesic forests, primarily over limestone, other calcareous sedimentary rocks (calcareous shales, sandstones, etc.), or mafic rocks (east of the Blue Ridge), mesic hammocks in the Coastal Plain. **Dist:** S. OH and sw. VA south through e. TN to w. GA, west to AL, MS, n. LA, and se. AR (Sundell et al. 1999); disjunct on Crowleys Ridge in ne. AR (population now extirpated), c. and nc. SC, and e. SC (where probably not native). The range of this species is sometimes stated in such a way as to imply that it is a tree of the southern Blue Ridge, which it barely and marginally enters. Actually, it avoids the Southern Blue Ridge, reaching its greatest abundance in the sedimentary rock Appalachians west of the Blue Ridge, particularly the Cumberland Plateau, and occurs east of the Blue Ridge only as a rare disjunct. **Phen:** May-Jun; Jul-Aug. **Tax:** The Gulf Coast endemic *Magnolia ashei* Weatherby is related and is sometimes treated as a variety or subspecies of *M. macrophylla*. **Comm:** See Williams (1999) for additional information about the discovery and nomenclature of this species. **ID Notes:** The leaves are up to 1.1 meter long and 3.5 dm wide. The large size of the leaves, the small lobes (auricles) at the base of the leaf, and the strongly whitened lower leaf surface separate it from all other species in our flora, except its sister species, *Magnolia macrophylla*, which is allopatric (not geographically overlapping) in the FL Panhandle. **Syn:** = Ar, C, F, FNA3, G, K1, K3, K4, NY, RAB, S, Tn, Va, W, Hardin & Jones (1989), Vázquez-García et al (2016); = *Magnolia macrophylla* ssp. *macrophylla* – Frodin & Govaerts (1996), Sponberg (1998), Tobe (1998); = *Metamagnolia macrophylla* (Michaux) Sima & S.G. Lu ssp. *macrophylla* – Sima & Lu (2012). **NatureServe G5** (Secure).

Magnolia pyramidata Bartram. PYRAMID MAGNOLIA. **Hab:** Mesic hammocks, mesic forests, especially of bluffs and ravines. **Dist:** A Southeastern Coastal Plain endemic: c. SC south to Panhandle FL, west to e. TX. **Phen:** Apr-May; Aug. **Tax:** Sometimes treated as a variety or subspecies of *M. fraseri*, to which it is clearly closely related, but the distributional and morphological differences are discrete and specific status seems warranted. **Syn:** = FI2, FNA3, K1, K3, K4, RAB, S, WH3, Hardin & Jones (1989); = *Magnolia fraseri* Walter ssp. *pyramidata* (Bartram) E. Murray – Tobe (1998); = *Magnolia fraseri* Walter var. *pyramidata* (Bartram) Pampinini – Frodin & Govaerts (1996), Sponberg (1998); = *Paramagnolia fraseri* (Walter) Sima & S.G. Liu var. *pyramidata* (Bartram) Sima & S.G. Liu – Sima & Lu (2012); > *Magnolia fraseri* Walter – Tx, misapplied; > *Magnolia pyramidata* Bartram – Tx.

Magnolia tripetala (Linnaeus) Linnaeus. UMBRELLA MAGNOLIA, UMBRELLA-TREE. **Hab:** Mesic forests, ravines. **Dist:** Centered in the Southern Appalachians, but avoiding higher elevations, and therefore occurring primarily "around" the Blue Ridge; ranging from sc. and sw. PA, s. OH, s. IN south to SC, GA, Panhandle FL (Tobe 2007), AL, and MS; also disjunct in the Ouachita Mountains of c. AR and e. OK. **Phen:** Apr-May; Jul-Oct. **Tax:** Most closely related to several e. Asian species. **Syn:** = Ar, C, F, FI2, FNA3, G, K1, K3, K4, Mo1, NE, NY, Pa, RAB, S, Tn, Va, W, WH3, WV, Frodin & Govaerts (1996), Hardin & Jones (1989), Sponberg (1998), Tobe (1998); = *Houpoea tripetala* (Linnaeus) Sima & S.G. Lu – Sima & Lu (2012). **NatureServe G5** (Secure).

Calycanthus Linnaeus 1759 (SWEET-SHRUB)

A genus of 2-4 species, 1 (or possibly 2) of e. North America, 1 of w. North America, and 1 of China (the latter sometimes segregated as a separate genus, *Sinocalycanthus*). References: Ferry & Ferry (1987); Johnson (1997) in FNA3 (1997); Kubitzki, Rohwer, & Bittrich (1993); Nicely (1965); Weakley (2017a) in Weakley et al (2017).

Calycanthus floridus Linnaeus. SWEET-SHRUB, STRAWBERRY-SHRUB, CAROLINA ALLSPICE, SWEET BUBBY-BUSH. **Hab:** Mesic to dry-mesic forests and streambanks; in the East Gulf Coastal plain in dry-mesic beech-magnolia bluff forests and lower slopes of sandhills. **Dist:** PA, WV, and KY, south to GA, nw. FL, AL, s. MS, and e. LA (but note that the outer edges of the natural original distribution are obscured by centuries of cultivation and naturalization). **Phen:** Apr-May; Aug-Sep. **Tax:** Two varieties have traditionally been recognized, var. *floridus* with pubescent twigs, petioles, and leaf undersurfaces, and var. *glaucus* with glabrous (or sparsely pubescent) twigs, petioles, and leaf undersurfaces. They have broadly overlapping distributions and variable characters and seem best considered as taxonomically uninformative variation (Weakley 2017a). *C. brockianus* Ferry & Ferry (of n. GA) has been controversial, alleged to differ in pale yellowish-green tepals (vs. reddish-brown tepals) and seeds with short, curved hairs (vs. long, straighter hairs). **Syn:** = IL, NY, Va, Weakley (2017a) in Weakley et al (2017); > *Butneria fertilis* (Walter) Kearney; > *Butneria florida* (Linnaeus) Kearney; > *Butneria nana* (Loiseleur) Small; > *Calycanthus brockiana* – K1, Ferry & Ferry (1987), orthographic variant; > *Calycanthus brockianus* – K3, K4; > *Calycanthus fertilis* Walter – F, G, S; > *Calycanthus floridus* Linnaeus – F, K4, S; > *Calycanthus floridus* var. *floridus* – F12, FNA3, GW2, K1, K3, NE, Pa, RAB, Tn, WH3, Ferry & Ferry (1987), Nicely (1965); > *Calycanthus floridus* Linnaeus var. *glaucus* (Willdenow) Torrey & A. Gray – C, F12, FNA3, K1, K3, NE, Tn, WH3, Ferry & Ferry (1987); > *Calycanthus floridus* var. *laevigatus* (Willdenow) Torrey & A. Gray – GW2, Pa, RAB, Nicely (1965); > *Calycanthus floridus* var. *oblongifolius* (Nuttall) Boufford & Spongberg; > *Calycanthus glaucus* Willdenow; > *Calycanthus laevigatus* Willdenow; > *Calycanthus mohrii* Small – S; > *Calycanthus nanus* Loiseleur – S.

25. LAURACEAE A.L. de Jussieu 1789 (LAUREL FAMILY) [in LAURALES]

A family of about 50 genera and 2500-3500 species, trees and shrubs, of tropical, subtropical, and (rarely) warm temperate regions. *Laurus nobilis* Linnaeus, Laurel, Bay, native to the Mediterranean region of Europe and the bay leaf of commerce; planted as an ornamental and spice, especially in warmer parts of our area, but is not known to escape in our area. References: Rohwer in Kubitzki, Rohwer, & Bittrich (1993); Song et al (2020); van der Werff & Richter (1996); van der Werff (1997a) in FNA3 (1997).

- 2 Leaves deciduous; flowers unisexual; [tribe *Laureae*].
 - 3 Some of the leaves with 1-2 (-5) rounded lobes; small to medium trees..... *Sassafras albidum*
 - 3 None of the leaves lobed; medium to large shrubs. *Lindera*
- 2 Leaves evergreen; flowers bisexual; [tribe *Perseeae*].
 - 5 Leaf surfaces glabrous, bright green; leaf venation 3-nerved from at or near the base of the blade; crushed leaves with the odor of camphor *Camphora officinarum*
 - 5 Leaf surfaces pubescent to glabrate or glabrous, dark to medium green; leaf venation strongly pinnate; principal vein axils lacking yellow domatia; crushed fresh leaves with the odor of bay. *Tamala*

Camphora Fabricius 1759 (CAMPHOR)

A genus of about XX species, trees and shrubs, of e. and se. Asia. Huang et al. (2016) showed our introduced species "*Cinnamomum camphora*" in a basal clade to the rest of *Cinnamomum*, morphologically and biogeographically distinctive, warranting its re-separation as genus *Camphora* Fabricius. References: Franck (2012); Huang et al (2016); Rohwer in Kubitzki, Rohwer, & Bittrich (1993); van der Werff (1997a) in FNA3 (1997).

* ***Camphora officinarum*** Nees. CAMPHORTREE. **Hab:** Disturbed areas, suburban woodlands, increasingly in natural forests. **Dist:** Native of e. Asia. A serious invasive, especially southwards. **Phen:** Apr-May. **Comm:** Reported as escaped and apparently naturalized in South Carolina by Hill & Horn (1997). In NC, reported for Moore County. **Syn:** = *Camphora camphora* (Linnaeus) Karsten – S, invalid name (tautonym); = *Cinnamomum camphora* (Linnaeus) J. Presl – F12, FNA3, K1, K3, K4, Tx, WH3, Franck (2012). NatureServe GNR (Not Yet Ranked).

Lindera Thunberg 1783 (SPICEBUSH, BENZOIN)

A genus of about 100 species, trees and shrubs, of tropical and temperate Asia, Australia, and e. North America. References: McCartney, Wurdack, & Moore (1989); Rohwer in Kubitzki, Rohwer, & Bittrich (1993); Steyermark (1949); Wofford (1983); Wofford (1997a) in FNA3 (1997).

Identification Notes: The odor of *Lindera* leaves decreases in the fall and may not be detectable.

- 1 Leaves typically with a thick, subcoriaceous texture (though sometimes thinner in texture if growing in shade), 4-8 (-10.5 in male plants) cm long, 2-3.5 (-4.8 in male plants) cm wide, narrowly obovate to oblanceolate (and characteristically also with smaller broadly obovate leaves basal on the branches), pubescent and strongly whitened below; leaves and bark aromatic, the odor lemony *Lindera subcoriacea*

Key to Map
Symbology:

* : waif
EN : endemic
H : historic

N : no
P : planted
? : questionable
X : extirpated

- 1 Leaves with a thin, membranous texture, 6-16 cm long, 2-6 cm wide, obovate, elliptic, or ovate, glabrous to pubescent below, but not strongly whitened; leaves and bark strongly aromatic, the odor spicy or like sassafras.
- 2 Leaf base cuneate; leaves widely obovate, plane (not rugose), with a short-acuminate apex, glabrous above, borne horizontally, spicy-fragrant when crushed; shrubs not colonial, often multi-stemmed from base, short to tall (to 5 m tall); fruiting pedicels 3-5 mm long..... *Lindera benzoin*
- 2 Leaf base widely cuneate to rounded; leaves narrowly ovate, reticulate-rugose, with an acute apex, pubescent above, drooping, fragrant when crushed with an odor like sassafras; shrubs colonial, short (to 2 m tall); fruiting pedicels 7-12 mm long..... *Lindera melissifolia*

Lindera benzoin (Linnaeus) Blume. NORTHERN SPICEBUSH. **Hab:** Rich alluvial forests, mesic forests on slopes with circumneutral soils, bottomlands, swamps. **Dist:** ME, s. ON, and MI, south to Panhandle FL and e. TX; disjunct in Edwards Plateau of c. TX. **Phen:** Mar-Apr; Aug-Sep. **Tax:** Some floristic treatments recognize two varieties based on whether the leaves and young twigs are pubescent (var. *pubescens*) or not (var. *benzoin*) but the varieties so recognized overlap broadly in distribution; it seems best to regard this as mere variation within the species. **Comm:** Where occurring on upland slopes, *L. benzoin* is an excellent indicator of base-rich soils, generally derived from calcareous sedimentary rocks or mafic metamorphic or igneous rocks. **Syn:** = Ar, Fl2, FNA3, GrPl, GW2, K3, K4, Mi, NE, NY, Pa, RAB, Tn, Va, W, WH3, WV, Wofford (1983); = *Benzoin aestivale* (Linnaeus) Nees – S; = *Benzoin benzoin* (Linnaeus) Coulter; > *Lindera benzoin* var. *benzoin* – C, F, G, Il, K1; > *Lindera benzoin* (Linnaeus) Blume var. *pubescens* (Palmer & Steyermark) Rehder – C, F, G, Il, K1, NcTx, Tx.

Lindera melissifolia (Walter) Blume. SOUTHERN SPICEBUSH, PONDBERRY. **Hab:** Wet flats and depressions, generally with pocosin shrubs. **Dist:** This species is southern in range, with a very scattered distribution in se. and c. NC, e. SC, e. & sw. GA, nw. FL, sw. AL (?), nw. MS, se. MO-AR, and se. AR-LA (recent collections unknown from FL and LA). It is nearly extirpated in NC, currently known only from three populations, in Sampson, Bladen, and Cumberland counties. A historic record from Orange County, NC (in the lower Piedmont), collected by Elisha Mitchell in 1820 and 1822, appears to be bonafide (McVaugh, McVaugh, & Ayers 1996). **Phen:** Mar-Apr; Aug-Sep. **Syn:** = Ar, Fl2, FNA3, K1, K3, K4, WH3, Wofford (1983); = *Benzoin melissaefolium* (Walter) Nees – S; = *Lindera melissaefolia* – F, GW2, RAB, orthographic variant. **NatureServe G3** (Vulnerable); USESA E.

Lindera subcoriacea Wofford. BOG SPICEBUSH. **Hab:** Peaty seepage bogs in headwaters of blackwater streams, in the sandhills and immediately adjacent Piedmont, with other pocosin shrubs. **Dist:** The overall range of this newly described species is still poorly known; it appears to be a Southeastern Coastal Plain endemic, ranging from se. VA (perhaps s. NJ) south to FL and west to LA. **Phen:** Mar-Apr; Jul-Aug. **Comm:** Occurring in the Carolinas primarily in a scattering of small populations in the fall line Sandhills of NC and SC, with an outlier or two in "Piedmont pocosins" just west of the Sandhills. Anderson (1999) reports on the sexual dimorphism of the species, with male plants having larger leaves. Reports in some areas (as VA) have been doubted as being authentic *L. subcoriacea*. **ID Notes:** Distinctive characteristics of sun-grown plants include the rounded apex of the leaf, the leaf strongly whitened beneath and borne in an ascending to even appressed position in relation to the twigs, and a typically fastigiate or virgate branching pattern, with multiple stems or branches ascending vertically and nearly parallel to one another. Shade plants have a different form. **Syn:** = Fl2, FNA3, K1, K3, K4, WH3, Wofford (1983); = n/a – RAB. **NatureServe G3** (Vulnerable).

Sassafras J. Presl 1825 (SASSAFRAS)

A genus of 3 species, trees, of temperate e. Asia (2 species) and e. North America (1 species). References: Rohwer in Kubitzki, Rohwer, & Bittrich (1993); van der Werff (1997a) in FNA3 (1997).

Sassafras albidum (Nuttall) Nees. SASSAFRAS. **Hab:** A wide variety of forests, old fields, disturbed areas, fencerows. **Dist:** S. ME, s. ON, MI, and s. WI, south to c. peninsular FL, s. AL, s. MS, and se. TX. **Phen:** Mar-Apr; Jun-Jul. **Comm:** The original source of 'root beer'. **Syn:** = Ar, C, Fl2, FNA3, G, GrPl, K1, K3, K4, Mi, NcTx, NE, NY, Pa, RAB, Tn, Va, W, WH3; = *Laurus sassafras* Linnaeus; = *Sassafras officinale* Nees & Ebermaler; = *Sassafras sassafras* (Linnaeus) H. Karsten; > *Sassafras albidum* var. *albidum* – F, Il, Tx, WV; > *Sassafras albidum* var. *molle* (Rafinesque) Fernald – F, Il, Tx, WV.

Tamala Rafinesque 1838 (BAY, RED-BAY)

A genus of 3 species, trees and large shrubs, of se. North America and the Bahamas. Song et al. (2020) and other recent phylogenetic studies showed that the current circumscription of *Persea* is untenable, and our three native species should be placed in another genus, *Tamala* (as done by Small 1933). The affinities of *Tamala* appear to be with Asian genera, not with *Persea* s.s. References: Clewell (1985); Godfrey (1988); Rohwer in Kubitzki, Rohwer, & Bittrich (1993); Shearman, Wang, & Mayfield (2022); Song et al (2020); Wofford (1997b) in FNA3 (1997).

- 1 Lower surfaces of leaves with ascending to spreading, rusty hairs, especially evident along the midrib and principal veins; peduncles 4-7 cm long; leaf blades tending to be larger and more acute; drupe 7-9 mm in diameter..... *Tamala palustris*
- 1 Lower surfaces of leaves with appressed hairs, silvery, golden, or blackish (the color depending on age), uniform across the surface and veins; peduncles 1-3 cm long; leaves tending to be smaller and blunter; drupe 8-12 mm in diameter..... *Tamala borbonica*

25. LAURACEAE

Tamala borbonia (Linnaeus) Rafinesque. RED BAY, TISSWOOD. **Hab:** Hammocks, dunes, maritime forests, in dry sandy soils on barrier islands. **Dist:** E. NC (Carteret County) south to s. FL and west to s. TX; reports of the species north of NC are based on the inclusion of *T. palustris* in a broadly defined *T. borbonia*, or are simply in error, based on less hairy plants of *T. palustris*. **Phen:** May-Jun; Sep-Oct. **Comm:** This species is rare north of Florida and becoming rarer with the destruction of most maritime and near coastal upland forests for the construction of vacation homes and tourist accommodations. **Syn:** =; = *Persea borbonia* (Linnaeus) Sprengel – Ar, FNA3, G, GW2, K1, K3, K4, Godfrey (1988), Shearman, Wang, & Mayfield (2022); = *Persea borbonia* var. *borbonia* – Fl2, WH3; < *Persea borbonia* (Linnaeus) Sprengel – F, RAB, Tx; > *Persea littoralis* Small; > *Tamala borbonia* (Linnaeus) Rafinesque – S; > *Tamala littoralis* (Small) Small – S.

Tamala palustris Rafinesque. SWAMP BAY. **Hab:** Swamps, pocosins, bay forests, maritime forests, generally in wet peaty soils, but also in fairly dry, sandy soils in maritime forests. **Dist:** DE, e. MD, and se. VA south to s. FL and west to se. TX; Bahamas. **Phen:** May-Jun; Sep-Oct. **ID Notes:** Though variable in amount of hairs on the leaves, the hairs of *T. palustris* are always of a distinctly different character than those of *T. borbonia* (see key). **Syn:** =; = *Persea borbonia* var. *pubescens* (Pursh) Little; = *Persea palustris* (Rafinesque) Sargent – C, Fl2, FNA3, G, GW2, K1, K3, K4, Va, WH3, Godfrey (1988), Shearman, Wang, & Mayfield (2022); = *Tamala pubescens* (Pursh) Small – S; < *Persea borbonia* (Linnaeus) Sprengel – Bah, F, RAB, Tx.

SECTION 5: MONOCOTYLEDONAE (MONOCOTS)

27. ACORACEAE Martinov 1820 (CALAMUS FAMILY) [in ACORALES]

The family consists only of *Acorus*, a genus of 2-4 species, perennial herbs. Although traditionally treated as part of the Araceae, a wide variety of morphological, anatomical, and embryological evidence supports the segregation of the Acoraceae (Grayum 1987), a segregation additionally supported by molecular studies (Duvall et al. 1993; Chase et al. 1993). The spathe in *Acorus* is not morphologically equivalent to the spathe of the Araceae. References: Bogner & Mayo in Kubitzki (1998b); Thompson (2000a) in FNA22 (2000).

Acorus Linnaeus 1753 (CALAMUS, SWEETFLAG)

A genus of 3-4 species, perennial herbs, widespread in north temperate and subtropical regions. References: Grayum (1987); Haines (2000); Simmons et al (2020); Spaulding et al (2019); Thompson (2000a) in FNA22 (2000).

* *Acorus calamus* Linnaeus. EUROPEAN CALAMUS, SWEETFLAG. **Hab:** Marshes, wet meadows, other wet areas. **Dist:** Native of Eurasia, now widespread in e. North America. **Phen:** May-Jun. **Tax:** Populations of *A. calamus* in our area are apparently sterile triploids introduced from Europe, though diploid and tetraploid populations of *A. calamus* are known from Asia. **Comm:** The aromatic rhizome and leaves have been used medicinally and candied as a confection. **Syn:** = Ar, ETx1, FNA22, Il, K1, K3, K4, Mi, Mo1, NcTx, NE, NY, Pa, Tx, Va, Spaulding et al (2019); < *Acorus americanus* (Rafinesque) Rafinesque – W; < *Acorus calamus* Linnaeus – C, F, G, GrPl, GW1, NeUS, RAB, S.

28. ARACEAE A.L. de Jussieu 1789 (ARUM FAMILY) [in ALISMATALES]

A family of about 100-110 genera and about 3000-4000 species, herbs and reduced aquatic herbs, cosmopolitan, but mostly tropical and subtropical. Circumscription of the Araceae is uncertain. Recent phylogenetic studies (Lee et al. 2019) show four distinctive and major clades in what is now (APG IV 2016) generally considered to comprise Araceae s.l., with the four clades generally now treated as subfamilies: Gymnostachydoideae, Orontioideae, Lemnoideae, and Aroideae. A strong case exists for treating these morphologically and molecularly disparate clades at family rank, as has variably been done traditionally. References: Bown (2000); Cabrera et al (2008); Cusimano et al (2011); Keating (2004); Landolt in Kubitzki (1998b); Landolt (1980); Landolt (1986); Landolt (2000) in FNA22 (2000); Lee et al (2019); Les & Crawford (1999); Mayo, Bogner, & Boyce in Kubitzki (1998b); Nauheimer, Metzler, & Renner (2012); Serviss, McDaniel, & Bryson (2000); Thompson (2000b) in FNA22 (2000).

- 1 Plant a floating aquatic (or stranded), the individual thalloid leaves < 2 cm long; [subfamily Lemnoideae].
 - 2 Fronds rootless; fronds without nerves; reproductive pouch 1, terminal.
 - 3 Fronds thick, globose, < 2 mm long *Wolffia*
 - 3 Fronds flat, elongate and curved, 4-14 mm long *Wolffiella*
 - 2 Fronds with roots; fronds with 1 or more nerves; reproductive pouches 2, lateral.
 - 4 Roots 1 per frond; fronds with 1-5 (-7) nerves *Lemna*
 - 4 Roots (1-) 2-21 per frond; fronds with (3-) 5-21 nerves.
 - 5 Roots (1-) 2-7 (-12) per frond; fronds with (3-) 5-7 nerves; fronds 1.5-3× as long as wide; all of the roots perforating the scalelike leaflet *Landoltia punctata*
 - 5 Roots 7-21 per frond; fronds with 7-16 (-21) nerves; fronds 1-1.5× as long as wide; only some of the roots perforating the scalelike leaflet (borne on the underside) *Spirodela*
- 1 Plant terrestrial, rooted in wetlands, or a floating aquatic (if a floating aquatic – *Pistia* – the individual leaves > 2 cm long).
 - 6 Plant a floating aquatic, with gray-green, velvety, cabbage-like leaves; [subfamily Aroideae, tribe Pistieae] *Pistia stratiotes*
 - 6 Plant rooted (even when growing in water), the leaves various, but not as above.
 - 7 Leaves compound (or sometimes very deeply 3-lobed, with only <3 mm leaf tissue connecting the lobes).
 - *Arisaema*
 - 7 Leaves simple.
 - 10 Leaves both peltate and cordate-hastate; [subfamily Aroideae, tribe Colocasieae]
 - *Colocasia esculenta*
 - 10 Leaves not peltate, either cuneate, rounded, cordate, or hastate.
 - 12 Spathe absent or obscure; leaf blade 2.5-5× as long as wide, cuneate at the base, lanceolate or narrowly elliptic; leaf venation parallel; [subfamily Orontioideae, tribe Orontieae] *Orontium aquaticum*
 - 12 Spathe present, surrounding the spadix, at least at its base; leaf blade 1-2.5× as long as wide, either hastate at the base (*Arum*, *Peltandra*, *Syngonium*, and *Xanthosoma*), or rounded (*Symplocarpus*), or cordate (*Calla*), broadly ovate in outline.
 - *Peltandra*

Arisaema Martius 1831 (JACK-IN-THE-PULPIT, INDIAN-TURNIP)

A genus of about 150-170 species, of Asia, e. North America, e. Africa, and Arabia. The taxa of the *Arisaema triphyllum* complex have been variously treated as species, subspecies, varieties, and forms. They are here treated as species with relatively subtle morphological distinctions; they are broadly sympatric, and sometimes occur together in mixed populations with little sign of introgression or hybridization and seem to behave as biological species. *A. quinatum* has often been treated as a full species and seems to warrant that status. *A. stewardsonii* seems amply distinct in

Key to Map
Symbology:

* : waif
 EN : endemic
 H : historic

N : no X : extirpated
 P : planted
 ? : questionable

28. ARACEAE

morphology, northern distribution, and boggy habitat. *A. triphyllum* is tetraploid and does not produce fertile seed when crossed with the other (diploid) taxa, including *A. pusillum*, with which it is broadly sympatric (Treiber 1980). The size (though diploid) and strongly attenuated spathe apex seem good reason to accord *A. acuminatum* species status as well. References: Gusman & Gusman (2002); Huttleston (1949); Huttleston (1981); Mayo, Bogner, & Boyce in Kubitzki (1998b); Renner, Zhang, & Murata (2004); Spaulding et al (2019); Thompson (2000b) in FNA22 (2000); Treiber (1980); Ward (2012b).

Identification Notes: Can be confused in vegetative condition with *Pinellia*.

- 1 Leaf with (5-) 7-15 leaflets, arranged pedately on a semicircular axis; spadix 9-20 cm long, attenuate, long-exserted from the spathe; [section *Tortuosa*].....*Arisaema dracontium*
- 1 Leaf with 3-5 leaflets, arranged palmately; spadix 3.5-8 cm long, clavate or cylindrical and blunt, included in the spathe; [section *Pedatisecta*].
 - 2 Leaves glaucous beneath at maturity; spathe flange 2-9 mm broad; spathe hood green, or green with purple stripes; sterile spadix (appendix) clavate or cylindrical.
 - 3 Leaves (3-) 5-foliolate (the lateral leaflets of at least the primary leaf 2-parted or 2-lobed); sterile spadix 1-3 mm in diameter, cylindrical, gently curved outward; spathe hood green, obtuse to abruptly acute; [s. NC and TN south to Panhandle FL, LA, and e. TX]*Arisaema quinatum*
 - 3 Leaves 3-foliolate (the lateral leaflets undivided, rarely lobed); sterile spadix (appendix) 4-10 mm in diameter, cylindrical to clavate, straight; spathe hood green, or green striped with purple, long-acute; [NB west to se. MB, south to peninsular FL, LA, and e. TX].....*Arisaema triphyllum*
 - 2 Leaves green beneath at maturity (very rarely glaucous); spathe flange 1-3 mm broad; spathe hood green with white stripes, green with purple stripes, solid green, or solid purple; sterile spadix (appendix) cylindrical.*Arisaema pusillum*

Arisaema dracontium (Linnaeus) Schott. GREEN DRAGON. **Hab:** Bottomlands and floodplains, rarely in uplands over mafic rocks. **Dist:** S. QC, MI, and WI, south to n. peninsular FL and e. TX. **Phen:** May-Jun; Jul-Aug. **Tax:** Ward (2012b) recognizes two varieties: var. *dracontium* with the "spathe tightly inrolled around the spadix, to 1.5 cm broad when unrolled" and var. *macrospathum* (Benth.) D.G. Huttleston ex D.B. Ward, with the "spathe flared distally, forming a blade, to 2.5 cm broad". The latter entity is based on a type in Mexico, and is very unlikely to be correctly applied. **Syn:** = Ar, C, ETx1, F, FNA22, G, GrPl, GW1, IL, K1, K4, Mi, Mo1, NcTx, NE, NY, Pa, RAB, Tn, Tx, Va, W, WH3, Gusman & Gusman (2002), Spaulding et al (2019); = *Muricauda dracontium* (Linnaeus) Small – S; > *Arisaema dracontium* var. *dracontium* – K3, Ward (2012b); > *Arisaema dracontium* var. *macrospathum* (Benth.) D.G. Huttleston ex D.B. Ward – K3, Ward (2012b). **NatureServe G5** (Secure).

Arisaema pusillum (Peck) Nash. SMALL JACK-IN-THE-PULPIT, SWAMP JACK. **Hab:** Swamps and moist forests. **Dist:** CT, NY, and IN, south to GA, LA, and e. TX. **Phen:** Mar-May; Jul-Sep. **Comm:** This taxon is diploid (2n=28). **Syn:** = S, Spaulding et al (2019); = *Arisaema triphyllum* (Linnaeus) Schott – F, apparently misapplied; = *Arisaema triphyllum* (Linnaeus) Schott ssp. *pusillum* (Peck) Huttleston – IL, K1, NE, NY, Pa, Tn, Va, Huttleston (1949), Huttleston (1981); = *Arisaema triphyllum* var. *pusillum* Peck – C, G, Tx; < *Arisaema triphyllum* (Linnaeus) Schott – Ar, ETx1, FNA22, GW1, Mi, RAB, W, WH3; < *Arisaema triphyllum* (Linnaeus) Schott ssp. *pusillum* (Peck) Huttleston – K3, K4, Gusman & Gusman (2002), Treiber (1980); < *Arisaema triphyllum* var. *pusillum* Peck – Ward (2012b). **NatureServe G5T5** (Secure).

Arisaema quinatum (Nuttall) Schott. SOUTHERN JACK-IN-THE-PULPIT, PREACHER JOHN. **Hab:** Mesic forests, bottomlands. **Dist:** Sc. NC, sw. NC, se. TN south to Panhandle FL and e. TX. **Phen:** Mar-Jun; Jul-Sep. **Tax:** This taxon has been of controversial validity and rank; Treiber lumped it with ssp. *pusillum*, while Huttleston recognized it as a full species (Huttleston 1949) or as a subspecies (Huttleston 1981). It is reported to flower later than *A. pusillum* or *A. triphyllum* when sympatric (Tennessee Flora Committee 2015). This taxon is diploid (2n=28). **Syn:** = GW1, S, Tn, Tx, WH3, Huttleston (1949), Ward (2012b); = *Arisaema triphyllum* (Linnaeus) Schott ssp. *quinatum* (Nuttall) Huttleston – ETx1, K1, Huttleston (1981); ? *Arisaema polymorphum* Buckley; < *Arisaema triphyllum* (Linnaeus) Schott – FNA22, RAB, W; < *Arisaema triphyllum* (Linnaeus) Schott ssp. *pusillum* (Peck) Huttleston – K3, K4, Gusman & Gusman (2002), Treiber (1980).

Arisaema triphyllum (Linnaeus) Schott. COMMON JACK-IN-THE-PULPIT. **Hab:** Mesic forests, bottomlands. **Dist:** NB west to se. MB, south to Panhandle FL, LA, and e. TX (Treiber 1980). **Phen:** Mar-Apr. **Comm:** This taxon is tetraploid (2n=56). **Syn:** = S, Spaulding et al (2019); = *Arisaema atrorubens* (Aiton) Blume – F; = *Arisaema triphyllum* (Linnaeus) Schott ssp. *triphyllum* – IL, K1, K3, K4, Mo1, NE, NY, Pa, Tn, Va, Gusman & Gusman (2002), Huttleston (1949), Huttleston (1981), Treiber (1980); = *Arisaema triphyllum* var. *triphyllum* – C, Tx, Ward (2012b); < *Arisaema triphyllum* (Linnaeus) Schott – Ar, ETx1, FNA22, GrPl, GW1, Mi, RAB, W, WH3.

Colocasia Schott 1832 (ELEPHANT'S-EAR, TARO, DASHEEN)

A genus of about 8 species, of tropical Asia. References: Mayo, Bogner, & Boyce in Kubitzki (1998b); Serviss, McDaniel, & Bryson (2000); Spaulding et al (2019); Thompson (2000b) in FNA22 (2000).

* ***Colocasia esculenta*** (Linnaeus) Schott. ELEPHANT'S-EAR, TARO, DASHEEN, COCO-YAM, EDDO. **Hab:** Ditches, shores, bottomland hardwood forests. **Dist:** Native of the Tropics. Frequently planted for its "tropical" appearance, becoming naturalized, for instance at Lake Waccamaw, Columbus County, NC, where it grows scattered along much of the shoreline, spread by fragments of rhizome. **Phen:** Jun-Oct. **Tax:** See Serviss, McDaniel, & Bryson (2000) for a discussion of various varieties cultivated in the southeastern United States, their identification, and their weediness. **Comm:** In our area, it is generally infertile. In the Tropics, *Colocasia* is a food crop cultivated for its rhizomes and shoots. The rhizomes are the source of "poi", a starchy staple of the Hawaiian Islands. **Syn:** = Ar, ETx1, FNA22, GW1, K1, NcTx, WH3, Spaulding et al (2019); > *Colocasia antiquorum*

Pantropics

Lemna Linnaeus 1753 (DUCKWEED)

A genus of 13 species, cosmopolitan. References: Bog et al (2020); Landolt in Kubitzki (1998b); Landolt (1980); Landolt (1986); Landolt (2000) in FNA22 (2000); Spaulding et al (2019).

- 2 Fronds with (0-) 1 nerve; anthocyanin absent in fronds (fronds green); [section *Uninerves*].
 - 3 Fronds 1-2× as long as wide; nerve indistinct to fairly prominent, reaching at most 2/3 of the distance from node to apex (nerve about as long as or shorter than the aerenchymatous portion of the frond); fruit 0.6-1.0 mm long..... *Lemna minuta*
 - 3 Fronds 1.3-3× as long as wide; nerve mostly prominent, reaching at least 3/4 of the distance from node to apex (nerve longer than the aerenchymatous portion of the frond); fruit 1.0-1.35 mm long..... *Lemna valdiviana*
- 2 Fronds with 3-5 (-7) nerves; anthocyanin absent or present in fronds (fronds green or red).
 - 4 Root sheath winged at the base; root tip sharply pointed; roots not longer than 3 cm long; anthocyanin absent in fronds; [section *Alatae*].
 - 5 Seeds with 8-26 prominent ribs, brownish, falling from the fruit when ripe; fronds with only 1 papilla above the node, which is smaller than the papule at the apex; wing of the root sheath 1-2.5× as long as wide..... *Lemna aequinoctialis*
 - 5 Seeds with 35-70 obscure ribs, whitish, remaining in the fruit when ripe; fronds very often with 2-3 papilla above the node, which are larger than the papule at the apex; wing of the root sheath 2-3× as long as wide..... *Lemna perpusilla*
 - 4 Root sheath not winged at the base; root tip mostly rounded; roots often longer than 3 cm long; anthocyanin present or absent in fronds; [section *Lemna*].
 *Lemna obscura*

Lemna aequinoctialis Welwitsch. LESSER DUCKWEED. **Hab:** Still to slowly moving waters of ponds, lakes, beaver ponds, and swamps. **Dist:** Widespread worldwide, except in n. North America and n. Eurasia. **Syn:** = ETx1, FNA22, K1, K3, K4, NcTx, Va, WH3, Landolt (1980), Landolt (1986), Spaulding et al (2019); > *Lemna aequinoctialis* Welwitsch – Il; > *Lemna trinervis* (Austin) Small – Il, Tx.

Lemna minuta Kunth. LEAST DUCKWEED. **Hab:** Quiet waters, seepages. **Dist:** Widespread in North America, Central America, and South America; more local in Europe and Japan. **Syn:** = Ar, C, ETx1, FNA22, Il, K1, K3, NcTx, NE, WH3, Bog et al (2020); = *Lemna minima* – Tx; = *Lemna minuscula* Herter – Landolt (1980), Landolt (1986); = *Lemna valdiviana* Philippi var. *abbreviata* Hegelmann – F, K4; < *Lemna valdiviana* Philippi – GrPl.

Lemna obscura (Austin) Daubs. LITTLE DUCKWEED. **Hab:** Still to slowly moving waters of ponds, lakes, beaver ponds, and swamps. **Dist:** NY west to MN and NE, south to s. FL, TX, Mexico, and the Bahamas. **Syn:** = Ar, Bah, ETx1, FNA22, Il, K1, K3, NcTx, Pa, Tn, Va, WH3, Landolt (1980), Landolt (1986), Spaulding et al (2019); < *Lemna minor* Linnaeus – C, F, G, GrPl, RAB.

Lemna perpusilla Torrey. TINY DUCKWEED. **Hab:** Still to slowly moving waters of ponds, lakes, beaver ponds, and swamps. **Dist:** QC west to MN, south to NC, TN, and TX. **Syn:** = Ar, C, ETx1, F, FNA22, G, Il, K1, K3, K4, NcTx, NE, NY, Pa, RAB, Tn, Tx, Va, W, Landolt (1980), Landolt (1986); < *Lemna perpusilla* Torrey – GrPl. NatureServe G5 (Secure).

Lemna valdiviana Philippi. PALE DUCKWEED. **Hab:** Still to slowly moving waters of ponds, lakes, beaver ponds, and swamps. **Dist:** Widespread in North America, Central America, and South America. **Phen:** Jun-Sep. **Syn:** = Ar, C, ETx1, FNA22, G, Il, K1, K3, K4, Mi, NcTx, NE, NY, Pa, RAB, Tn, Tx, Va, W, WH3, WV, Bog et al (2020), Landolt (1980), Landolt (1986), Spaulding et al (2019); = *Lemna valdiviana* var. *valdiviana* – F; < *Lemna valdiviana* Philippi – GrPl.

Orontium Linnaeus 1753 (GOLDEN CLUB)

A monotypic genus, an aquatic herb, of e. North America. References: Lee et al (2019); Mayo, Bogner, & Boyce in Kubitzki (1998b); Nie et al (2006); Spaulding et al (2019); Thompson (2000b) in FNA22 (2000).

Orontium aquaticum Linnaeus. GOLDEN CLUB, BOG TORCHES, NEVER-WET. **Hab:** Generally in peaty and stagnant water (acidic to calcareous), such as beaver ponds, blackwater streams, swamps, pools in low pocosins, streambeds in the Piedmont, bogs and swamps in the mountains, tidal freshwater marshes. **Dist:** MA and c. NY south to s. FL and west to LA and e. TX, north in the inland to w. NC, KY, and WV, primarily but by no means strictly Coastal Plain. **Phen:** Feb-May; May-Jul. **ID Notes:** The fresh leaves are unwettable, silvery-glistening when forced under water. **Syn:** = C, ETx1, F, FNA22, G, GW1, K1, K3, K4, NE, NY, Pa, RAB, S, Tx, Va, W, WH3, WV, Spaulding et al (2019). [NatureServe G5](#) (Secure).

Peltandra Rafinesque 1819 (ARROW-ARUM)

A genus of 2 species, endemic to e. North America. References: Blackwell & Blackwell (1974); Fernald (1948); Mayo, Bogner, & Boyce in Kubitzki (1998b); Spaulding et al (2019); Thompson (2000b) in FNA22 (2000).

Identification Notes: *Peltandra* is often confused in vegetative condition with *Pontederia* and *Sagittaria*, superficially similar emergent aquatics with hastate or sagittate leaves. *Peltandra* leaves have pinnate venation, a prominent midvein, a prominent vein running parallel to the leaf margin, and the hastate lobes with rounded to acute apices. *Pontederia* leaves have parallel venation, lack a prominent midvein and a prominent vein parallel to the leaf margin, and have hastate lobes with broadly rounded apices. The leaves of sagittate species of *Sagittaria* have parallel venation, a prominent midrib, a vein at 90 degrees to the midrib at the junction of the main blade and each of the hastate lobes that forks, with at least one fork directed apically and at least one fork directed into the basal lobe, lack a prominent vein parallel to the margin, and have hastate-sagittate lobes with acuminate apices.

- 1 Spathe green at base, bright white above (the white portion not merely a margin), flared open and therefore only loosely surrounding the spadix, succulent below, the white portion thin and herbaceous, the margins generally nearly entire and plane; fruits red; distal portion of leaf blade lacking broad, coarse veins similar to the midvein (all the veins alike and fine); leaf underside distinctly paler than upper surface, and glaucous.....*Peltandra sagittifolia*
- 1 Spathe green (rarely with a narrow cream-colored or whitish margin up to 1.7 cm wide), tightly surrounding the spadix, thick and succulent throughout, the margins crisped; fruits green to dark purplish-green; distal portion of leaf blade often with several broad, coarse veins similar to the midvein, the remainder of the veins fine (sometimes the distal portion of the leaf with fine veins only); leaf underside somewhat paler green than upper surface, but not at all glaucous.....*Peltandra virginica*

Peltandra sagittifolia (Michaux) Morong. SPOONFLOWER, WHITE ARROW-ARUM. **Hab:** Pocosins of the outer Coastal Plain, sphagnum swamps. **Dist:** A Southeastern Coastal Plain endemic: e. NC south to c. peninsular FL and west to se. LA. **Phen:** Jul-Aug. **Syn:** = FNA22, GW1, K1, K3, K4, WH3; = *Peltandra glauca* (Elliott) Feay – S; = *Peltandra sagittifolia* (Michaux) Morong – RAB, orthographic variant; = *Peltandra virginica* ssp. *luteospadix* (Fernald) Blackwell & Blackwell – Blackwell & Blackwell (1974), misapplied; < *Peltandra luteospadix* Fernald – F, Fernald (1948), misapplied. [NatureServe G3G4](#) (Vulnerable).

Peltandra virginica (Linnaeus) Schott. GREEN ARROW-ARUM, TUCKAHOE. **Hab:** Marshes, bogs, beaver ponds, pocosins, other stagnant, aquatic situations, freshwater to oligohaline tidal marshes. **Dist:** ME, s. QC, and n. MI south to s. FL and e. TX; Cuba. **Phen:** May-Jun. **Syn:** = Ar, C, ETx1, FNA22, G, GW1, IL, K1, K3, K4, Mi, Mo1, NE, NY, Pa, RAB, S, Tn, Tx, Va, W, WH3, Spaulding et al (2019); = *Peltandra virginica* ssp. *virginica* – Blackwell & Blackwell (1974); > *Peltandra luteospadix* Fernald – F, Fernald (1948); > *Peltandra virginica* (Linnaeus) Schott – F, Fernald (1948).

*Pistia* Linnaeus 1753 (WATER LETTUCE)

A genus of probably a single species, widespread in the tropics of both hemispheres. References: Evans (2013); Mayo, Bogner, & Boyce in Kubitzki (1998b); Spaulding et al (2019); Thompson (2000b) in FNA22 (2000).

Pistia stratiotes Linnaeus. WATER LETTUCE. **Hab:** Stagnant or slow-moving waters of rivers, sometimes cultivated in ponds, where it persists for a while (presumably eventually eliminated by cold winters in the more northern parts of our area). **Dist:** Native in a wide area across the Paleotropics and Neotropics, including in North America at least peninsular FL; it has been sometimes considered an alien and noxious waterweed in FL but evidence strongly supports its nativity there (Evans 2013). **Comm:** This floating aquatic appeared in the Waccamaw River of SC (downstream from NC) in 1990 and 1991, apparently successfully overwintering (Nelson 1993). **Syn:** = ETx1, FNA22, GW1, IL, K1, K3, K4, NcTx, NY, S, Tx, Va, WH3, Spaulding et al (2019). Spirodela Schleiden 1839

A genus of 2 species (with *Landoltia* removed), cosmopolitan. References: Landolt in Kubitzki (1998b); Landolt (1980); Landolt (1986); Landolt (2000) in FNA22 (2000); Les & Crawford (1999); Spaulding et al (2019).

Spirodela polyrhiza (Linnaeus) Schleiden. GREATER DUCKWEED, MINNOW-FOLE. **Hab:** Still to slowly moving waters of ponds, lakes, beaver ponds, and swamps. **Dist:** Widespread worldwide. **Tax:** The spelling of the epithet is correctly '*polyrhiza*', matching Linnaeus's basionym; there is no basis in the Code to change the spelling to '*polyrrhiza*'.

ID Notes: The largest of the "duckweeds" (*Landoltia*, *Lemna*, *Spirodela*, *Wolffia*, *Wolffiella*). **Syn:** = C, ETx1, F, G, GW1, K4, Mi, NcTx, NY, Pa, S, Tn, Tx, W, WH3, WV; = *Spirodela polyrrhiza* (Linnaeus) Schleiden – Ar, FNA22, GrPl, Il, K1, K3, NE, RAB, Va, Landolt (1980), Landolt (1986), Les & Crawford (1999), Spaulding et al (2019), orthographic variant. NatureServe G5 (Secure).

Wolffia Horkel ex Schleiden 1844 (WATERMEAL, MUD-MARY, ROOTLESS-DUCKWEED)

A genus of 11 species, cosmopolitan. References: Landolt in Kubitzki (1998b); Landolt (1980); Landolt (1986); Landolt (2000) in FNA22 (2000); Spaulding et al (2019).

1 Fronds globoid to ovoid, 1-1.5× as deep as wide; thallus not brownish punctate above

..... ***Wolffia columbiana***

1 Fronds nutshell-like, 0.5-1.0× as deep as wide; thallus punctate above with brownish pigment cells (most visible on dead fronds).

..... ***Wolffia brasiliensis***

Wolffia brasiliensis Weddell. BRAZILIAN WATERMEAL. **Hab:** Still to slowly moving waters of ponds, lakes, beaver ponds, and swamps. **Dist:** Widespread in e. North America, Central America, and South America. **Syn:** = Ar, ETx1, FNA22, GrPl, Il, K1, K3, K4, Mi, NcTx, NE, NY, Pa, Tn, Va, W, WH3, Landolt (1980), Landolt (1986), Spaulding et al (2019); = *Wolffia papulifera* C. Thompson – C, F, G, GW1, RAB, Tx; = *Wolffia punctata* Grisebach – WV; < *Bruneria punctata* (Grisebach) Nieuwland – S.

Wolffia columbiana H. Karsten. COLOMBIAN WATERMEAL. **Hab:** Still to slowly moving waters of ponds, lakes, beaver ponds, and swamps. **Dist:** Widespread in North America, Central America, and South America. **Syn:** = Ar, C, ETx1, F, FNA22, G, GrPl, GW1, Il, K1, K3, K4, Mi, NcTx, NE, NY, Pa, RAB, Tn, Tx, Va, WH3, Landolt (1980), Landolt (1986), Spaulding et al (2019); = *Bruneria columbiana* (Karsten) Nieuwland – S. NatureServe G5 (Secure).

***Wolffiella*** Hegelmaier 1895

A genus of 10 species, cosmopolitan. References: Landolt in Kubitzki (1998b); Landolt (1980); Landolt (1986); Landolt (2000) in FNA22 (2000); Spaulding et al (2019).

1 Fronds (4-) 6-15 (-20)× as long as wide; angle of pouch 25-50°..... ***Wolffiella gladiata***

1 Fronds 1.5-8× as long as wide; angle of pouch 45-120°.

..... ***Wolffiella oblonga***

Wolffiella gladiata (Hegelmaier) Hegelmaier. MUD-MIDGETS. **Hab:** Ponds, ditches, beaver-ponds millponds, tidal waters. **Dist:** MA and n. IL (s. WI?) south to s. FL and TX; Mexico. **Phen:** Apr-Jun. **Syn:** = Ar, ETx1, FNA22, Il, K1, K3, K4, NcTx, NE, Pa, Tn, Va, WH3, Landolt (1980), Landolt (1986), Spaulding et al (2019); > *Wolffiella floridana* (Donnell-Smith) C. Thompson – C, F, G, GW1, RAB, S, Tx; > *Wolffiella gladiata* (Hegelmaier) Hegelmaier – GW1, Tx. NatureServe G5 (Secure).

Wolffiella oblonga (Philippi) Hegelmaier. **Hab:** Quiet waters. **Dist:** N. peninsular FL, MS (?), LA, TX, south to Mexico, Central America, South America; West Indies. **Syn:** = ETx1, FNA22, GW1, K1, K3, K4, WH3. NatureServe G5 (Secure).

29. TOFIELDIACEAE Takhtajan 1995 (FALSE-ASPHODEL FAMILY) [in ALISMATALES]

A family of 4 genera and about 30 species, of disjunct distribution in north temperate and subarctic areas, and in the Guayana Shield and northern Andes areas of n. South America. There is controversy about the circumscription of the genera; Azuma & Tobe (2011) have clarified the phylogeny and generic subscriptions in the family. Some have believed that *Tofieldia*, *Triantha*, and *Pleea* should be treated together in a broadly circumscribed *Tofieldia* (Utech 1978, Zomlefer 1997c); others that all three should be treated separately (Ambrose 1980; Packer 1993; Cruden 1991). Packer in FNA (2002a) has recently recognized *Triantha*, *Pleea*, and *Tofieldia* as separate genera, a conclusion followed here in part because of the ancient, relictual nature of these units, and additionally supported by the molecular analysis of Azuma & Tobe (2011). Reveal & Zomlefer (1998) place the Tofieldiaceae in the monotypic order Tofieldiales, only distantly related to the Liliaceae. Tamura in Kubitzki (1998a) treats this group as subfamily Tofieldioideae of the Nartheciaceae; this treatment is not tenable following more recent research. References: Azuma & Tobe (2011); Tamura in Kubitzki (1998a); Zomlefer (1997c); Zomlefer (1999).

Triantha (Nuttall) Baker 1879 (BOG ASPHODEL)

A genus of ca. 4 species, herbs, of North America and Japan. References: Azuma & Tobe (2011); Cruden (1991); Hitchcock (1944); Packer (2002c) in FNA26 (2002a); Spaulding et al (2019); Zomlefer (1997c).

Triantha racemosa (Walter) Small. SOUTHERN BOG ASPHODEL, COASTAL PLAIN BOG ASPHODEL. **Hab:** Pine savannas, pine savanna-pocosin ecotones, seepage bogs, sinkhole ponds (dolines) in the mountains of VA, acidic wet barrens. **Dist:** NJ south to nw. FL, west to e. TX; disjunct in c. TN. **Phen:** Jun-early Aug; late Sep-Oct. **Tax:** The NJ populations are anomalous (as discussed by Packer in FNA 2002a) and are under taxonomic investigation by Sasha Eisenman. **Syn:** = ETx1, FNA26, K1, K3, K4, S, Tn, Va, Spaulding et al (2019); = *Tofieldia racemosa* (Walter) Britton, Sterns, & Poggenburg – C, F, G, GW1, Tx, W, WH3, Zomlefer (1997c); = *Tofieldia racemosa* var. *racemosa* – RAB. [NatureServe G5](#) (Secure).

30. ALISMATACEAE Ventenat 1799 (WATER-PLANTAIN FAMILY) [in ALISMATALES]

A family of about 13 genera and 80 species, herbs, subcosmopolitan in distribution. Here including the Limncharitaceae. References: Haynes & Hellquist (2000a) in FNA22 (2000); Haynes (2000b) in FNA22 (2000); Haynes, Les, & Holm-Nielsen in Kubitzki (1998b); Lehtonen & Myllys (2008); Lehtonen (2008); Rogers (1983).

- 1 Pistils in a single whorl, borne on a flat receptacle; stamens 6; inflorescence compound, many of the primary nodes bearing whorled branches which in turn bear whorled branches or whorled flowers ***Alisma***
- 1 Pistils spiraled in several to many whorls, borne on a globose receptacle; stamens 6-many; inflorescence either racemose (or in some species of both *Echinodorus* and *Sagittaria* somewhat compound, with the lowermost node or two bearing branches which in turn bear whorled flowers) or umbellate (*Hydrocleys*).
- 3 Achenes flattened, with winged margins and often also with irregular corky ornamentations on the faces; flower whorls subtended by 3 bracts, with no additional bracteoles ***Sagittaria***
- 3 Achenes turgid, with ribs or ridges; flower whorls subtended by 3 bracts and additional bracteoles.
- 4 Leaf blades 5-20 cm long, 3-15 cm wide; achenes (pistils) 45-250 per head; stamens ca. 21; petals 6-12 mm long, scapes 20-120 cm tall, erect or arching/reclining ***Echinodorus***
- 4 Leaf blades 1-3 cm long, 0.2-2 cm wide; achenes (pistils) 10-20 per head; stamens 6 or 9; petals 1-3 mm long; scapes 5-10 cm tall, erect ***Helanthium***

Alisma Linnaeus 1753 (WATER-PLANTAIN)

A genus of about 9 species, herbs, subcosmopolitan in distribution. References: Haynes & Hellquist (2000a) in FNA22 (2000); Haynes, Les, & Holm-Nielsen in Kubitzki (1998b).

Alisma subcordatum Rafinesque. SOUTHERN WATER-PLANTAIN. **Hab:** Marshes, ponds, stream edges. **Dist:** MA west to ND, south to GA and TX. **Phen:** Apr-Nov. **Syn:** = Ar, C, ETx1, F, FNA22, G, GrPl, GW1, Il, K1, K3, K4, Mi, Mo1, NcTx, NE, NY, Pa, RAB, S, Tx, Va, W, WV; = *Alisma plantago-aquatica* Linnaeus ssp. *subcordatum* (Rafinesque) Hultén; *Alisma plantago-aquatica* var. *parviflorum* (Pursh) Torrey. [NatureServe G5](#) (Secure).

Echinodorus L.C. Richard ex Engelman 1848 (BURHEAD)

A genus of about 27 species, herbs, primarily of the American tropics and subtropics. Christenhusz, Fay, & Byng (2018) propose splitting *Echinodorus* into two genera, *Echinodorus* (of *E. berteroi* only), and *Aquarius* Christenhusz & Byng (of all other species of *Echinodorus*), allegedly based on the results of Lehtonen & Myllys (2008). Lehtonen & Myllys's (2008) results are ambiguous, however, and it is unclear that this split is well-founded. References: Christenhusz, Fay, & Byng (2018); Haynes & Hellquist (2000a) in FNA22 (2000); Haynes, Les, & Holm-Nielsen in Kubitzki (1998b); Lehtonen & Myllys (2008); Lehtonen (2008); Lehtonen (2009).

- 1 Leaves monomorphic, all leaf blades 1-3 cm long, 0.2-2 cm wide; achenes (pistils) 10-20 per head; stamens 6 or 9; petals 1-3 mm long; scapes 5-10 cm tall, erect ***Helanthium***

30. ALISMATACEAE

- 1 Leaves multimorphic, plants with one or more leaf type (differently shaped emersed, submersed, and floating leaves), usually at least some leaves 5-20 cm long, 3-15 cm wide; achenes (pistils) 40-250 per head; stamens ca. 21; petals 6-12 mm long, scapes 20-120 cm tall, erect or arching/reclining.
- 2 Scapes arching and rooting down at maturity; veins of the sepals papillose-roughened.....*Echinodorus cordifolius*
- 2 Scapes rigidly erect at maturity; veins of the sepals smooth.....*Echinodorus berteroi*

Echinodorus berteroi (Sprengel) Fassett. TALL BURHEAD, UPRIGHT BURHEAD. **Hab:** Ponds, marshes, ditches, typically in seasonally flooded situations. **Dist:** OH, IL, and ND south to e. Panhandle FL, s. FL, sw. GA, and TX, south through Mexico; West Indies; South America. Reported for s. FL (Lange, Bradley, & Sadle [in prep.]). **Phen:** Apr-Oct. **Syn:** = Ar, Bah, ETx1, FNA22, Il, K1, K3, K4, Meso6, NcTx, WH3, Lehtonen (2008); = *Echinodorus cordifolius* (Linnaeus) Grisebach – S, misapplied; > *Echinodorus berteroi* var. *berteroi* – Mo1; > *Echinodorus berteroi* var. *lanceolatus* (Engelmann ex S. Watson & Coulter) Fassett – C; ? *Echinodorus rostratus* (Nuttall) Engelmann ex A. Gray – GrPl, GW1; > *Echinodorus rostratus* (Nuttall) Engelmann ex A. Gray var. *lanceolatus* Engelmann – Tx; > *Echinodorus rostratus* var. *rostratus* – Tx.

Echinodorus cordifolius (Linnaeus) Grisebach. CREEPING BURHEAD. **Hab:** Swamps, ditches, wet thickets, especially on base-rich substrates, such as over calcareous or mafic rocks. **Dist:** MD south to c. peninsular FL, west to TX, south into tropical America (Mexico, South America, West Indies), and north in the interior (primarily in the Mississippi Embayment) to s. IL. **Phen:** (May-) Jun-Nov. **Syn:** = F, G, GrPl, GW1, Il, K1, K3, K4, Mo1, RAB, Tx, Va, WH3, Lehtonen (2008); = *Aquarius cordifolius* (Linnaeus) Christenhusz & Byng – Christenhusz, Fay, & Byng (2018); = *Echinodorus radicans* (Nuttall) Engelmann – S; > *Echinodorus cordifolius* ssp. *cordifolius* – Ar, FNA22; > *Echinodorus cordifolius* ssp. *fluitans* (Fassett) R.R. Haynes & Holm-Nielsen – NcTx; > *Echinodorus cordifolius* var. *cordifolius* – C, ETx1.

Helanthium (Bentham & Hooker f.) Engelmann ex J.G. Smith 1905 (DWARF-BURHEAD)

A genus of 2-9 species, annual and perennial herbs. Lehtonen & Myllys (2008) conducted a cladistic analysis of morphological and molecular data of *Echinodorus* and related genera and determined that *Helanthium* should be separated at the generic level. References: Haynes & Hellquist (2000a) in FNA22 (2000); Haynes, Les, & Holm-Nielsen in Kubitzki (1998b); Lehtonen & Myllys (2008).

Helanthium tenellum (Martius ex Schultes f.) Buchenau. MUD-BABIES, DWARF-BURHEAD. **Hab:** On drawdown zones of Coastal Plain ponds, pineland ponds, blackwater riverbanks, or ponds in the Mountains with Coastal Plain affinities (Augusta County, VA); also apparently adventive on drawdown zones of artificial impoundments (Lake Chatuge, sw. NC and n. GA). **Dist:** MA west to MI and KS, south to c. peninsular FL and s. TX, but widely scattered and disjunct in that range. See Belden et al. (2004) for a discussion of the species in Virginia. **Phen:** Aug-Sep. **Syn:** = K3, K4, NE, NY, Lehtonen & Myllys (2008); = *Echinodorus tenellus* (Martius) Buchenau – ETx1, FNA22, Il, K1, Meso6, Mi, Va, WH3; = *Echinodorus tenellus* (Martius ex Schultes f.) Buchenau var. *tenellus*; > *Echinodorus parvulus* Engelmann – G, GrPl, GW1, Tx; > *Echinodorus tenellus* (Martius) Buchenau var. *parvulus* (Engelmann) Fassett – C, Mo1; > *Helanthium parvulum* (Engelmann) Britton – S.

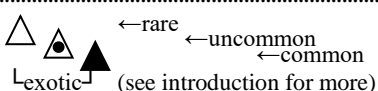

Sagittaria Linnaeus 1753 (ARROWHEAD, KATNISS, FLECHA DE AGUA)

A genus of about 25 species, herbs, primarily of the Americas. References: Adams (1961); Beal, Wooten, & Kaul (1982); Bogin (1955); Haynes & Hellquist (2000a) in FNA22 (2000); Haynes, Les, & Holm-Nielsen in Kubitzki (1998b); Sorrie & LeBlond (2008); Sorrie, Keener, & Edwards (2007); Wooten (1973).

Identification Notes: Portions of this key (and treatment) are provisional. The taxonomy and best characters to use in the linear-leaved species is particularly problematic.

- 1 Leaf blades sagittate or cordate (at least some of the leaves on a plant with sagittate or cordate basal lobes); some species are keyed both here and below).
 - 2 Leaf blades pubescent; [subgenus *Sagittaria*]*Sagittaria latifolia* var. *pubescens*
 - 2 Leaf blades glabrous.
 - 3 Sepals appressed in fruit; lower flowers bisexual, the stamens either functional or not; stamen filaments roughened with minute scales (except glabrous in *S. spatulata*); [subgenus *Lophotocarpus*].
 - 6 Petals white, immaculate; stamens of pistillate flowers functional; [inland sites, native or introduced at a given locality]*Sagittaria calycina*
 - 6 Petals white, with a purple spot at the base; stamens of pistillate flowers generally nonfunctional; [exotic, introduced around coastal ports]*Sagittaria montevidensis*
 - 3 Sepals reflexed or at least widely spreading in fruit; lower flowers pistillate; stamens glabrous (except roughened with minute scales in *S. rigida*); [subgenus *Sagittaria*].
 - 7 Leaves cordate basally, floating; stalks of the pistillate flowers stout, reflexed in fruit; stamens mostly fewer than 15.....*Sagittaria filiformis*
 - 7 Leaves sagittate basally, emersed; stalks of the pistillate flowers not notably stout, ascending in fruit; stamens 15 or more.
 - 8 Beak of the achene lateral (at a right angle to the long axis of the achene); bracts of the inflorescence 2-15 mm long, boat-shaped, obtuse or broadly acute.
 -*Sagittaria latifolia* var. *latifolia*

Key to Map
Symbology:

(see introduction for more)

- 8 Beak of the achene terminal (extending along the long axis of the achene); bracts of the inflorescence 5-40 mm long, either blunt or acuminate, not boat-shaped.
- 13 Petiole sharply 5-wing-angled in cross-section; inflorescence unbranched; fruiting heads 1.0-1.5 cm in diameter, globular..... *Sagittaria australis*
- 13 Petiole corrugated but not wing-angled in cross-section; inflorescence often branched at the base; fruiting heads (1.2-) 1.7-2.2 cm in diameter, often globular-depressed *Sagittaria brevirostra*
- 1 Leaf blades linear, lanceolate, or ovate, or modified as linear, bladeless phyllodia, these often of spongy texture.
- 14 Stalks of the pistillate flowers reflexed in fruit, often stout; stamen filaments glabrous (except roughened with minute scales in *S. platyphylla* and *S. calycina*).
- 15 Sepals appressed in fruit; lower flowers bisexual, the stamens either functional or not; [subgenus *Lophotocarpus*]. *Sagittaria calycina*
- 15 Sepals reflexed or at least widely spreading in fruit; lower flowers pistillate; [subgenus *Sagittaria*].
- 17 Plant generally with erect, emersed leaves with well-developed blades with firm texture, the blades 2-8 cm wide. *Sagittaria platyphylla*
- 17 Plant with all leaves phyllodial, if expanded at the summit, the expanded blade of weak texture, floating.
- 19 Leaves 2-10 (-30) cm long, 3-8 mm wide (sometimes with dilated tip to 20 mm wide); [tidal, fresh to brackish waters] *Sagittaria subulata*
- 19 Leaves 30-300 (or more) cm long, either 1-3 or 7-14 mm wide; [nontidal waters]. *Sagittaria filiformis*
- 14 Stalks of the pistillate flowers ascending or spreading in fruit, not notably stout; stamen filaments roughened with minute scales (except glabrous in *S. engelmanniana*, *S. papillosa*, and *S. ambigua*).
- 21 Stamen filaments linear, less thick than the anther, changing little in diameter from near base to near summit.
- 22 Leaves all phyllodial, without flattened blades; bracts of the inflorescence strongly papillose; [s. MS westward] *Sagittaria papillosa*
- 22 Leaves with flattened blades; bracts of the inflorescence smooth, papillose, or longitudinally striate; [collectively widespread]
- 25 Bracts and sepals striate-ribbed; stamen filaments 2-5 mm long; [rare, from e. SC southward] *Sagittaria lancifolia* var. *lancifolia*
- 25 Bracts and sepals papillose; stamen filaments 1.5-3.5 mm long; [common, throughout our coastal area] *Sagittaria lancifolia* var. *media*
- 21 Stamen filaments either distinctly dilated toward the base (often broadly conic) or thickened throughout, the filament (at least basally) as thick or thicker than the anther.
- 27 Leaves all phyllodia, the phyllodia terete or nearly so. *Sagittaria isoetiformis*
- 27 Leaves with blades and petioles, or if all phyllodia, the phyllodia flattened on upper surface or triangular in cross-section; [collectively widespread].
- 29 Plants with corms and/or stolons, lacking coarse rhizomes. *Sagittaria isoetiformis*
- 29 Plants with coarse rhizomes, lacking corms and stolons.
- 34 Inflorescence branched at the base (in at least some plants of a population); bracts of the inflorescence only slightly connate, the free tips narrowly triangular, 6-15 mm long..... *Sagittaria chapmanii*
- 34 Inflorescence unbranched at the base; bracts of the inflorescence slightly to almost fully connate *Sagittaria graminea*

Sagittaria australis (J.G. Smith) Small. APPALACHIAN ARROWHEAD. **Hab:** Marshes, swamps, rivershores, backwaters, margins of ponds and lakes. **Dist:** NY west to s. IN and se. MO, south to SC, Panhandle FL, and MS. **Phen:** Jun-Oct. **Syn:** = Ar, C, F, FNA22, Il, K1, K3, K4, Pa, S, Va, W, WV, Beal, Wooten, & Kaul (1982); = *Sagittaria engelmanniana* J.G. Smith ssp. *longirostra* – G, GW1, Bogin (1955), misapplied; = *Sagittaria longirostra* – RAB, misapplied; < *Sagittaria australis* (J.G. Smith) Small – WH3.

Sagittaria brevirostra Mackenzie & Bush. MIDWESTERN ARROWHEAD. **Hab:** Shores, shallow water. **Dist:** OH west to ND, south to n. VA, e. TN, AL, and TX. **Phen:** Jun-Oct. **Syn:** = Ar, C, ETx1, F, FNA22, GrPl, Il, K1, K3, K4, Mi, Mo1, NcTx, Tx, W, Beal, Wooten, & Kaul (1982); = *Sagittaria engelmanniana* J.G. Smith ssp. *brevirostra* (Mackenzie & Bush) Bogin – G, Bogin (1955). **NatureServe G5** (Secure).

Sagittaria calycina Engelm. **Hab:** Seasonally exposed shores and flats of ponds, pools, and impoundments. **Dist:** N. OH and MI west to SD and CO, south to sw. VA, c. TN, LA, TX, and Mexico; disjunct in CA. Presumably only adventive east of the Appalachians, as in NC and SC. First reported for SC by Hill & Horn (1997). **Phen:** May-Sep. **Syn:** = C, GrPl, Il, K3, K4, RAB, Va, W; = *Lophotocarpus calycinus* (Engelmann) J.G. Smith – F, WV; = *Sagittaria montevidensis* Chamisso & Schlechtendal ssp. *calycina* (Engelmann) Bogin – Ar, ETx1, FNA22, G, GW1, Meso6, NcTx, Tx, Bogin (1955); > *Sagittaria calycina* var. *calycina* – K1, Mo1.

Sagittaria chapmanii (J.G. Smith) C. Mohr. CHAPMAN'S ARROWHEAD. **Hab:** Limesink (doline) ponds with drawdown hydrology, mucky ditches. **Dist:** E. NC south to s. FL, west to s. AR and e. TX. **Phen:** May-Sep. **Tax:** Analyses of allozyme variation in the *S. graminea* complex revealed great differentiation between *S. graminea*, *S. chapmanii*, and *S. platyphylla*; *S. graminea* and *S. platyphylla* appeared to be more closely related to one another than either was to *S. chapmanii* (Hauber & Legé 1999). Therefore, it seems best to treat these three taxa at equal rank and at the species level. **Comm:** First reported for SC by Nelson & Kely (1997). Records of *S. chapmanii* from west of the Mississippi River are in error (Sorrie & LeBlond 2008). **Syn:** = K3, K4, S, Sorrie & LeBlond (2008); = *Sagittaria graminea* Michaux ssp. *chapmanii* (J.G. Smith) R.R. Haynes & C.B. Hellquist – FNA22, Sorrie, Keener, & Edwards (2007); = *Sagittaria graminea* Michaux var. *chapmani* J.G. Smith – Bogin (1955), orthographic variant; = *Sagittaria graminea* Michaux var. *chapmanii* J.G. Smith – GW1, K1, WH3, Wooten (1973). **NatureServe G5T3?** (Vulnerable).

Sagittaria filiformis J.G. Smith. **Hab:** Swiftly flowing water of blackwater rivers and streams, blackwater lake shores, tidal waters. **Dist:** As conceived here, probably ranging from MA south to s. FL, s. AL, and s. MS. **Phen:** May-Sep. **Comm:** The forms growing in swiftly flowing black water are remarkable and unlikely to be recognized as a *Sagittaria* unless in flower, with linear leaves over 100 cm long and only 1-3 mm wide, with 5-7 parallel ribbed veins, resembling *S. kurziana*. The proper taxonomic treatment and associated nomenclature to apply to these plants remains unclear (see synonymy). **Syn:** = FNA22, K1, K3, NE, NY, Pa, Va, WH3; = *Sagittaria stagnorum* Small – GW1; = *Sagittaria subulata* (Linnaeus) Buchenau var. *gracillima* (S. Watson) J.G. Smith – F, G, RAB, Bogin (1955); > *Sagittaria filiformis* J.G. Smith – S; > *Sagittaria lorata* Chapman – S; > *Sagittaria stagnorum* Small – S; < *Sagittaria subulata* (Linnaeus) Buchenau – C.

Sagittaria graminea Michaux. **Hab:** Marshes, ponds, freshwater and oligohaline tidal marshes. **Dist:** NL (Newfoundland) and NL (Labrador) west to MN and SD, south to s. FL and c. TX; West Indies. **Phen:** May-Nov. **Syn:** = Ar, ETx1, Il, K3, K4, Mi, Tx, Va, WV; = *Sagittaria graminea* ssp. *graminea* – FNA22, NY, Sorrie, Keener, & Edwards (2007); = *Sagittaria graminea* Michaux var. *graminea* – C, G, GrPl, GW1, K1, Mo1, NE, Pa, RAB, WH3, Wooten (1973); > *Sagittaria cycloptera* (J.G. Smith) C. Mohr – S; > *Sagittaria eatonii* J.G. Smith – F; < *Sagittaria graminea* Michaux – W; > *Sagittaria graminea* Michaux – F, S; < *Sagittaria graminea* Michaux var. *graminea* – Bogin (1955), (also see *S. isoetiformis*).

Sagittaria isoetiformis J.G. Smith. **Hab:** Pineland ponds, clay-based Carolina bays, other seasonally flooded depressions. **Dist:** Se. NC south to s. peninsular FL, west to s. MS (Sorrie & Leonard 1999). **Phen:** Jun-Sep. **Comm:** See Godfrey & Adams (1964) for additional discussion of this species. **Syn:** = FNA22, GW1, K1, K3, K4, S, WH3, Sorrie, Keener, & Edwards (2007), Wooten (1973); < *Sagittaria graminea* Michaux var. *graminea* – Bogin (1955); < *Sagittaria teres* S. Watson – RAB, S, misapplied.

Sagittaria lancifolia Linnaeus var. *lancifolia*. **Hab:** Marshes, swamps. **Dist:** E. SC south to s. FL, west to FL Panhandle; West Indies; n. South America. **Phen:** May-Jun. **Syn:** = C; = *Sagittaria lancifolia* – Bah, RAB; = *Sagittaria lancifolia* ssp. *lancifolia* – FNA22, GW1, K1, K3, K4, Meso6, WH3, Bogin (1955); > *Sagittaria angustifolia* Lindley – S; > *Sagittaria lancifolia* – S. [NatureServe G5?TNR](#) (Not Yet Ranked).

Sagittaria lancifolia Linnaeus var. *media* Micheli. **Hab:** Freshwater to brackish (mesohaline) tidal marshes. **Dist:** S. DE south to ne. FL, FL Panhandle, west to TX; scattered in Central America. **Phen:** Jun-Oct. **Comm:** If recognized as a species, this taxon is *S. falcata*. **Syn:** = C, Va; = *Sagittaria falcata* Pursh – F, G, RAB, S; = *Sagittaria lancifolia* ssp. *media* (Micheli) Bogin – ETx1, FNA22, GW1, K1, K3, K4, Meso6, WH3, Bogin (1955); < *Sagittaria lancifolia* – Tx. [NatureServe G5?TNR](#) (Not Yet Ranked).

Sagittaria latifolia Willdenow var. *latifolia*. **Hab:** Marshes, swamps, farm ponds, ditches, bogs. **Dist:** NS west to BC, south to tropical America (rare in the Appalachian region). **Phen:** Jul-Oct. **ID Notes:** In addition to the pubescence difference, var. *latifolia* and var. *pubescens* can be separated by the presence (var. *latifolia*) or absence (var. *pubescens*) of resin-ducts on the achene-faces. **Syn:** = C, G, GW1, Meso6, Mo1, Pa, Tx, W, Bogin (1955); = *Sagittaria latifolia* – WV; < *Sagittaria latifolia* – Ar, ETx1, FNA22, Il, K1, K3, K4, Mi, NcTx, NE, NY, Va, WH3; > *Sagittaria latifolia* – S; > *Sagittaria latifolia* Willdenow var. *latifolia* – F, RAB; > *Sagittaria latifolia* var. *obtusata* (Engelmann) Wiegand – F, RAB; > *Sagittaria ornithorhyncha* Small – S; > *Sagittaria planipes* Fernald – F; > *Sagittaria viscosa* C. Mohr – S.

Sagittaria latifolia Willdenow var. *pubescens* (Muhlenberg ex Nuttall) J.G. Smith. **Hab:** Bogs, marshes. **Dist:** C. PA, OH, and TN, south to n. FL and e. LA, primarily in the Appalachians. **Phen:** Jul-Oct. **Syn:** = C, F, G, GW1, Pa, RAB, Tx, W, Bogin (1955); = *Sagittaria pubescens* Muhlenberg ex Nuttall – S, WV; < *Sagittaria latifolia* – FNA22, K1, K3, K4, NE, Va, WH3.

* **Sagittaria montevidensis** Chamisso & Schlechtendal. **Hab:** Disturbed areas, marshes. **Dist:** Native of South America. Most of the collections from the southeastern United States are old collections around major seaports, suggesting that this plant was introduced on the ballast of sailing ships. **Phen:** Jul. **Syn:** = K1, K3, K4, Mi, RAB, S, WH3; = *Sagittaria montevidensis* ssp. *montevidensis* – FNA22, GW1, Bogin (1955). [NatureServe G5T4T5](#) (Apparently Secure).

Sagittaria papillosa Buchenau. NIPPLE-BRACT ARROWHEAD. **Hab:** Bogs, swamps, ditches, depressions. **Dist:** C. AR and se. OK south to s. LA and c. TX; rarely disjunct east of the Mississippi in se. LA and s. MS. **Phen:** Mar-Nov. **Comm:** {add synonymy}. **Syn:** = Ar, ETx1, FNA22, GW1, K1, K3, K4, NcTx, Tx. [NatureServe G5?](#) (Secure).

Sagittaria platyphylla (Engelmann) J.G. Smith. DELTA ARROWHEAD. **Hab:** Marshes, ditches, farm ponds, pondcypress wetlands, canals. **Dist:** VA, OH, IL, MO, and OK, south to FL and TX. The distribution of this species is primarily in the Mississippi drainage; occurrences east of the Appalachians may be introduced, either by humans or by waterfowl. First reported for VA by Wieboldt et al. (1998). Reported for c. FL (Orange County) by Dalager (2022, who considers it as introduced there and likely via the aquatic plant industry. **Phen:** Jun-Sep (-Oct). **Syn:** = Ar, ETx1, F, FNA22, Il, K1, K3, K4, Meso6, Mo1, NcTx, Tx, Va, WH3, Sorrie, Keener, & Edwards (2007), Wooten (1973); = *Sagittaria graminea* Michaux var. *platyphylla* Engelmann – G, GrPl, RAB, Bogin (1955); > *Sagittaria mohrii* J.G. Smith – S; > *Sagittaria platyphylla* (Engelmann) J.G. Smith – S. [NatureServe G5](#) (Secure).

Sagittaria subulata (Linnaeus) Buchenau. DWARF ARROWHEAD. **Hab:** Tidal marshes and mud flats. **Dist:** MA and NY south to n. peninsular FL and MS. **Phen:** May-Sep. **Syn:** = FNA22, GW1, K1, K3, K4, NE, NY, Pa, S, Va, WH3; = *Sagittaria subulata* var. *subulata* – G, RAB, Bogin (1955); > *Sagittaria lorata* Chapman; > *Sagittaria natans* Michaux; < *Sagittaria subulata* (Linnaeus) Buchenau – C, (also see *S. stagnorum*); > *Sagittaria subulata* var. *natans* (Michaux) J.G. Smith – F; > *Sagittaria subulata* var. *subulata* – F.

Sagittaria montevidensis

Neotropics

Sagittaria papillosa

Sagittaria platyphylla

Sagittaria subulata

32. HYDROCHARITACEAE A.L. de Jussieu 1789 (FROG'S-BIT FAMILY) [in ALISMATALES]

A family of about 18 genera and 120 species, aquatic herbs, cosmopolitan. Here circumscribed to include *Najas*, often traditionally placed in its own family, following the suggestion of Haynes, Holm-Nielsen, & Les in Kubitzki (1998b), APG (2016), and Bernardini & Lucchese (2018).

Subfamilies shown in the key follow Les, Moody, & Soros (2006) and are congruent with the phylogeny of Bernardini & Lucchese (2018).

References: Bernardini & Lucchese (2018); Catling & Dore (1982); Cook in Kubitzki (1998b); Haynes & Hellquist (1996); Haynes (2000c) in FNA22 (2000); Haynes (2000e) in FNA22 (2000); Haynes, Holm-Nielsen, & Les in Kubitzki (1998b); Les, Moody, & Soros (2006).

- 1 Leaves along the stem or at its summit.
 - 2 Leaves at only 2-3 closely spaced nodes at the summit of the stem, appearing verticillate or whorled; leaves to 10 cm long; [saltwater]; [subfamily *Hydrilloideae*] *Halophila*
 - 2 Leaves at many nodes along the stem, opposite or in whorls of 2-8, < 4 cm long; [freshwater].
 - 3 Leaves opposite or in whorls of 3 (-4) (no whorls with > 4 leaves).
 - 4 Leaves slightly narrowed or straight-sided to base, sessile; perianth present; [subfamily *Anacharoideae*] *Elodea*
 - 4 Leaves broadened and sheathing at base, narrowing upward via "shoulders"; perianth absent; [subfamily *Hydrilloideae*] *Najas*
 - 3 Leaves in whorls of (3-) 4-8 (some or most whorls with 4 or more leaves).
 - 5 Leaves mostly 2-3 cm long, finely toothed with slender, weak teeth on the margins and rarely also the midrib beneath; fresh leaves not noticeably rough to the touch; leaf whorls generally crowded on all stems; petals white, 9-11 mm long; [subfamily *Anacharoideae*] *Egeria densa*
 - 5 Leaves mostly 1-2 cm long, toothed with stout, sharp teeth on the margins and also on conical bases along the midrib beneath; fresh leaves noticeably rough to the touch; leaf whorls crowded on terminal portions of stems, remote on older stems; petals translucent, 2-5 mm long; [subfamily *Hydrilloideae*] *Hydrilla verticillata*
 - 1 Leaves basal, either elongate with parallel sides, or petiolate with a leaf blade.
 - 6 Leaves differentiated into petiole and blade, the blade ovate to orbicular.
 - 6 Leaves straplike, elongate, linear, the sides parallel and not differentiated into petiole and blade.
 - 9 Leaves to 35 cm long; [saltwater]; [subfamily *Hydrilloideae*] *Thalassia testudinum*
 - 9 Leaves usually > 40 cm long; [freshwater].
 - 10 Leaves lacking lacunae on each side of the midvein; leaves acuminate; seeds echinate; flowers bisexual; [subfamily *Anacharoideae*] *Blyxa aubertii*
 - 10 Leaves with longitudinal rows of lacunae on each side of the midvein; leaves rounded at apex; seeds smooth; flowers unisexual; [subfamily *Hydrilloideae*] *Vallisneria*

Blyxa Noroña ex Thouars 1806 (BLYXA)

A genus of 9 species, aquatic herbs, of Asia, Africa, and Australia. References: Cook in Kubitzki (1998b); Haynes (2000c) in FNA22 (2000); McNair & Alford (2014).

* *Blyxa aubertii* L.C. Richard. **Hab:** Submersed in artificial impoundments. **Dist:** Native of Asia, Africa, and Australia. **Phen:** Aug-Dec. **Comm:** See McNair & Alford (2014) for additional information. **Syn:** = FNA22, GW1, K3, K4. NatureServe GNR (Not Yet Ranked).

Blyxa aubertii

Egeria Planchon 1849 (SOUTH AMERICAN WATERWEED)

A genus of 2 species, aquatic herbs, native of tropical America (now subcosmopolitan in tropical and warm temperate regions by naturalization). *Egeria* should possibly be included in a more broadly circumscribed *Elodea* (including *Elodea*, *Egeria*, and *Apalanthe*) (Bernardini & Lucchese 2018). References: Haynes (2000c) in FNA22 (2000).

* *Egeria densa* Planchon. BRAZILIAN WATERWEED, "ELODEA", "ANACHARIS". **Hab:** Ponds and stagnant water of streams or rivers. **Dist:** Native of South America. **Phen:** May-Nov. **Comm:** This is the "Elodea" or "Anacharis" of the aquarium trade. **Syn:** = Ar, ETx1, FNA22, GW1, II, K1, K3, K4, Meso6, Mo1, NcTx, NE, NY, Pa, RAB, Tn, Tx, Va, W, WH3; = *Anacharis densa* (Planchon) Marie-Victorin - G; = *Elodea densa* (Planchon) Caspary - F, GrPl; = *Philotria densa* (Planchon) Small & St. John - S. Elodea Michaux 1803 (WATERWEED)

A genus of about 5-12 species, aquatic herbs, native of temperate America. References: Cook in Kubitzki (1998b); Cook & Urmi-König (1985); Haynes (2000c) in FNA22 (2000).

- 2 Well-developed leaves (1-) avg. 2 (-5) mm wide, mostly 2-5× as long as wide; staminate spathe 4-8 (-15) mm long, the flower at anthesis on an elongated, very slender, flexuous stalk; sepals of pistillate flowers 2-4.5 mm long.....*Elodea canadensis*
- 2 Well-developed leaves (0.3-) avg. 1.3 (-2) mm wide, mostly 5-10× as long as wide; staminate spathe 2-3 mm long, the flower at anthesis separating from the spathe (and plant) at maturity; sepals of pistillate flowers 1-1.5 mm long.....*Elodea nuttallii*

Elodea canadensis Michaux. COMMON WATERWEED. **Hab:** Rivers, lakes, ponds, stagnant waters of streams. **Dist:** QC west to SK, south to NC, Panhandle FL, n. AR, OK, NM, and CA. **Phen:** Jul-Sep. **Syn:** = Ar, C, F, FNA22, GrPl, GW1, Il, K1, K3, K4, Mi, Mo1, NE, NY, Pa, RAB, Tn, Va, W, WH3, WV, Cook, & Urmi-König (1985), Haynes (1979); = *Anacharis canadensis* (Michaux) Planchon – G; < *Philotria canadensis* (Michaux) Britton – S. NatureServe G5 (Secure).

Elodea nuttallii (Planchon) H. St. John. NUTTALL'S WATERWEED, FREE-FLOWED WATERWEED. **Hab:** Lakes, ponds, stagnant waters of streams. **Dist:** ME and QC west to MN and ID, south to NC, TN, OK, and NM. **Phen:** Jun-Sep. **Syn:** = Ar, C, F, FNA22, GrPl, GW1, Il, K1, K3, K4, Mi, Mo1, NE, NY, Pa, RAB, Tn, Va, W, WV, Cook, & Urmi-König (1985), Haynes (1979); = *Anacharis nuttallii* Planchon – G; >> *Philotria canadensis* (Michaux) Britton – S; > *Philotria linearis* Rydberg – S. NatureServe G5 (Secure).

*Halophila* Thouars 1806 (SEAGRASS)

A genus of about 10 species, seagrasses, of tropical and warm temperate waters of the Caribbean Sea and the Indian/Pacific oceans. References: Cook in Kubitzki (1998b); Haynes (2000c) in FNA22 (2000); Waycott et al (2021).

Halophila engelmannii Ascherson. ENGELMANN'S SEAGRASS. **Hab:** Estuarine waters. **Dist:** S. FL, west along Gulf Coast (MS, LA) to TX; West Indies; Mexico to Central America. **Phen:** Jan-Dec. **Syn:** = FNA22, GW1, K1, K3, K4, Meso6, S, Tx, WH3; = *Halophila engelmanni* – Bah, orthographic variant. NatureServe G3G5 (Apparently Secure).

Hydrilla L.C. Richard 1814 (HYDRILLA)

A monotypic genus, an aquatic herb, native to the Old World. References: Cook in Kubitzki (1998b); Haynes (2000c) in FNA22 (2000).

* ***Hydrilla verticillata*** (Linnaeus f.) Royle. HYDRILLA. **Hab:** Ponds, lakes, rivers, often locally abundant. **Dist:** Native of the Old World. **Phen:** Jun-Aug. **Comm:** This species has become a serious aquatic weed. Reported for SC by Nelson & Kelly (1997). **Syn:** = Ar, C, ETx1, FNA22, GW1, K1, K3, K4, Meso6, NcTx, NE, NY, Pa, Tn, Va, WH3. NatureServe GNR (Not Yet Ranked).

Limnobium L.C. Richard 1814 (FROG'S-BIT)

A genus of 1-2 species, of se. North America and tropical America. Bernardini & Lucchese (2018) follow others in suggesting the possibility of including *Limnobium* in *Hydrocharis*, based on phylogenetic sister status and similar morphology. References: Bernardini & Lucchese (2018); Catling & Dore (1982); Cook in Kubitzki (1998b); Haynes (2000c) in FNA22 (2000).

Identification Notes: This species is often free-floating, the leaves with prominently large cells below.

Limnobium spongia (Bosc) L.C. Richard ex Steudel. AMERICAN FROG'S-BIT, SPONGEPLANT. **Hab:** Swamps, marshes, ponds, pools. **Dist:** DE and MD south to s. FL, west to e. TX, north in the interior in the Mississippi Embayment to s. MO and s. IL; disjunct around the Great Lakes (as in n. IN and w. NY). **Phen:** Jun-Sep. **Tax:** Reports of *L. spongia* as also in tropical America are based on misapplication to *L. laevigatum* (Humboldt & Bonpland ex Willdenow) Heine. **Syn:** = Ar, C, ETx1, F, FNA22, G, GW1, Il, K1, K3, K4, NE, NY, RAB, S, Tn, Tx, Va, WH3; = *Hydrocharis spongia* Bosc; = *Limnobium spongia* ssp. *spongia* – Mo1. NatureServe G4 (Apparently Secure).

Najas Linnaeus 1753 (NAIAD, BUSHY-PONDWEED, WATER-NYMPH)

A genus of about 40 species, nearly cosmopolitan. Classification of subgenera and sections follows Ito et al. (2017). References: Bräuchler (2015); Crow & Hellquist (2000a); Fernald (1902); Freeman & Pfingsten (2021); Haynes & Hellquist (1996); Haynes (1979); Haynes (2000c) in FNA22 (2000); Haynes, Holm-Nielsen, & Les in Kubitzki (1998b); Ito et al (2017); Les et al (2015); Rüegg et al (2017).

Identification Notes: Counts of leaf-teeth do not include the broadened, sheathing base of the leaf. Seeds are necessary for the identification of most species.

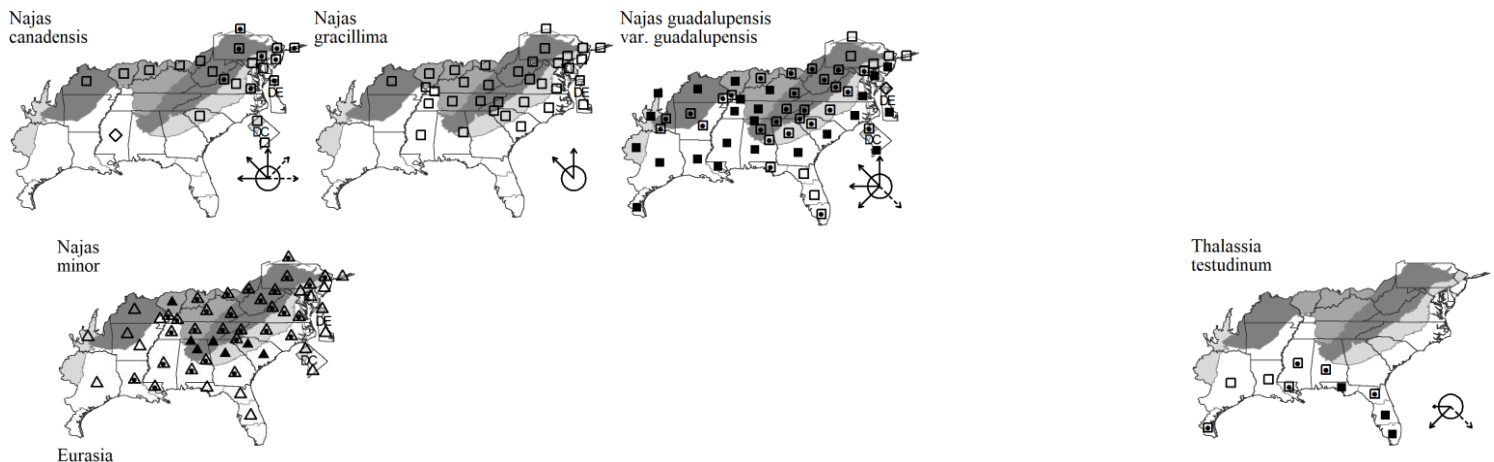

- 2 Leaf-teeth multicellular, evident at 10× magnification, 5-22 per side; leaves either ascending to spreading, or becoming recurved late in the season; seed-coat pitted.
 3 Style offset to the side of the seed apex; [section *Caulinia*] *Najas gracillima*
 3 Style centered at summit of seed apex. *Najas minor*
- 2 Leaf-teeth unicellular, not or barely evident at 10× magnification, 18-100 per side; leaves spreading to ascending; seed-coat smooth or pitted, the areoles (if present) longer than wide or about as long as wide; [section *Americanae*].
 6 Seeds smooth, glossy, obovate, broadest above the middle; anthers 1-locular. *Najas canadensis*
 6 Seeds pitted, dull, cylindric, fusiform, or elliptic, broadest at the middle; anthers 1- or 4-locular. *Najas guadalupensis* var. *guadalupensis*

Najas canadensis Michaux. NORTHERN NAIAD. **Hab:** Lakes, rivers, impoundments. **Dist:** ME and MN south to VA, OH, and IN; in the west ID, WA, and OR (at least); also in n. Europe. **Phen:** Jul-Aug. **Syn:** = *Najas muenscheri* R.T. Clausen – F; < *Naias flexilis* – S, orthographic variant; > *Najas canadensis* Michaux – NY; < *Najas flexilis* (Willdenow) Rostkovius & Schmidt – C, G, K1, K3, Pa, Va, W, WV; > *Najas guadalupensis* ssp. *guadalupensis* – FNA22, Crow & Hellquist (2000a), Haynes (1979); > *Najas guadalupensis* ssp. *muenscheri* (R.T.Clausen) R.R. Haynes & C.B. Hellquist – FNA22, Crow & Hellquist (2000a), Haynes (1979); > *Najas muenscheri* R.T. Clausen – NY.

Najas gracillima (A. Braun ex Engelmann) Magnus. SLENDER NAIAD, BUSHY NAIAD. **Hab:** Ponds, lakes, slow-moving streams. **Dist:** NS west to MN, south to NC, AL, and MO; disjunct in CA (where likely alien). **Phen:** Jul-Oct. **Comm:** Haynes (1979) reports that this species cannot tolerate pollution and is apparently declining in abundance. **Syn:** = C, F, FNA22, G, II, K1, K3, K4, Mi, Mo1, NE, NY, Pa, RAB, Tn, Va, W, WV, Crow & Hellquist (2000a), Haynes (1979). NatureServe G5? (Secure).

Najas guadalupensis (Sprengel) Magnus var. *guadalupensis*. COMMON NAIAD, SOUTHERN NAIAD. **Hab:** Lakes, rivers, impoundments. **Dist:** ME to AB and WA, south to s. FL, TX, and CA, and south through Mexico, Central America, South America; West Indies. **Phen:** Jul-Oct. **Tax:** Haynes & Hellquist (1996) and Haynes in FNA (2000) treat all infraspecific taxa of *N. guadalupensis* as subspecies rather than varieties. **Syn:** = Meso6; = *Najas guadalupensis* (Sprengel) Magnus – NY; < *Naias guadalupensis* – S, orthographic variant; < *Najas guadalupensis* (Sprengel) Magnus – Bah, ETx1, F, G, GrPl, GW1, NcTx, Pa, RAB, Tn, Tx, W, WH3; < *Najas guadalupensis* ssp. *guadalupensis* – FNA22, K1, K3, K4, Mi, Mo1, NE, Crow & Hellquist (2000a); < *Najas guadalupensis* (Sprengel) Magnus var. *guadalupensis* – Ar, C, II, Va, Haynes (1979). NatureServe G5T5 (Secure).

* ***Najas minor*** Allioni. SPINYLEAF NAIAD. **Hab:** Ponds, lakes, and reservoirs, particularly where eutrophic. **Dist:** Native of Eurasia. This species is apparently a rather recent introduction to North America, now widespread in e. North America. **Phen:** Jul-Oct. **Comm:** Haynes (1979) reports that it is becoming more abundant in e. North America because of its tolerance for polluted, eutrophic waters. **Syn:** = Ar, C, F, FNA22, G, GW1, II, K1, K3, K4, Mi, Mo1, NE, NY, Pa, RAB, Tn, Va, W, WH3, WV, Crow & Hellquist (2000a), Haynes (1979). NatureServe GNR (Not Yet Ranked).

*Thalassia* Banks & Solander ex K.D. Koenig 1805 [1806] (TURTLEGRASS)

A genus of 2 species, seagrasses, of tropical and warm temperate waters of the Caribbean Sea and the Indian/Pacific oceans. References: Cook in Kubitzki (1998b); Haynes (2000c) in FNA22 (2000).

Thalassia testudinum Banks & Solander ex K.D. Koenig. TURTLEGRASS. **Hab:** Seagrass beds in estuarine waters. **Dist:** E. coast of c. peninsular FL (Indian River County) to s. FL, north along the west coast of FL to the Panhandle, west to TX, thence south through Mexico and Central America to South America; West Indies. **Phen:** Jan-Dec. **Syn:** = Bah, FNA22, K1, K3, K4, Meso6, S, Tx, WH3. 38. POTAMOGETONACEAE

A genus of about 10 species, nearly cosmopolitan. This genus should be called *Stuckenia*, which has priority over *Coleogeton*. Lindqvist et al. (2006) provide molecular support for recognition of *Stuckenia* as a genus. References: Haynes & Hellquist (2000c) in FNA22 (2000); Haynes, Les, & Král (1998); Les & Haynes (1996); Lindqvist et al (2006); Wiegand & Kaplan (1998).

[Key adapted from FNA]

Stuckenia pectinata (Linnaeus) C. Börner. SAGO-PONDWEED. **Hab:** Calcareous or brackish waters of ponds, lakes, estuaries, sounds. **Dist:** The species is irregularly cosmopolitan. **Phen:** Jun-Sep. **Syn:** = Ar, ETx1, FNA22, IL, K1, K3, K4, NcTx, NE, NY, Tn, Va, WH3, Haynes, Les, & Král (1998); = *Coleogeton pectinatus* (Linnaeus) D.H. Les & R.R. Haynes – Les & Haynes (1996); = *Potamogeton pectinatus* Linnaeus – C, F, G, GrPl, GW1, Meso6, Mo1, Pa, RAB, S, Tx, W, WV, Wiegand & Kaplan (1998). [NatureServe G5](#) (Secure).

Zannichellia Linnaeus 1753 (HORNED PONDWEED)

A genus of about 5 species, aquatic herbs, nearly cosmopolitan. References: Haynes & Hellquist (2000d) in FNA22 (2000); Haynes & Holm-Nielsen (1987).

Identification Notes: *Zannichellia* is sometimes confused with other aquatics, such as *Ruppia* and narrow-leaved *Potamogeton*. *Potamogeton* has at least some leaves alternate; *Zannichellia* and *Ruppia* are opposite-leaved. *Zannichellia* lacks the abruptly broadened sheath of *Najas*. Also, the seeds are flattened in *Zannichellia*, and toothed down one side; *Najas* has a cylindric or elliptic fruit. *Zannichellia* has longer leaves (3-10 cm long) than *Najas* (< 4 cm long).

Zannichellia palustris Linnaeus. HORNED PONDWEED. **Hab:** Fresh or brackish water of ponds, lakes, and estuaries. **Dist:** The species occurs throughout much of the world. **Phen:** Feb-Oct. **Syn:** = Ar, C, ETx1, FNA22, G, GrPl, GW1, K1, K3, K4, Mi, Mo1, NcTx, NE, NY, Pa, RAB, S, Tn, Tx, Va, W, WH3, WV, Haynes & Holm-Nielsen (1987), Wiegand & Kaplan (1998); > *Zannichellia palustris* var. *major* (Hartman) W.D.J. Koch – F, IL; > *Zannichellia palustris* var. *palustris* – F.

40+41. CYMODOCEACEAE Vines 1895 (MANATEE-GRASS FAMILY) [in ALISMATALES]

A family of about 6 genera and 20-25 species, estuarine aquatics, of tropical and subtropical (rarely temperate) waters. Les & Tippers (2013) have made a strong case for inclusion of *Ruppia* (often placed in the monogeneric family Ruppiaceae) in Cymodoceaceae, a course followed here. References: Green & Short (2003); Haynes (1978); Haynes (2000d) in FNA22 (2000); Haynes (2000f) in FNA22 (2000); Haynes, Holm-Nielsen, & Les in Kubitzki (1998b); Kuo & McComb in Kubitzki (1998b).

- 1 Leaves terete, to 35 cm long; plants of marine habitats, growing submersed in salt water; [of FL and the Gulf Coast of AL, MS, and LA].....*Syringodium*
- 1 Leaves flat or terete, to 200 cm long; plants of fresh or brackish waters; [collectively widespread].
 - 2 Leaves flat, with a notched or tricuspidate apex; stipules absent, or if present, either free or adnate to the leaf base and forming a sheath for < 10 mm; flowers solitary; pistils 2.....*Halodule*
 - 2 Leaves filiform, terete or nearly so, with an obtuse to acute apex; stipules present, adnate to the leaf base and forming an apparently inflated sheath around the stem > 10 mm long; flowers usually 2, on a flexuous, elongate peduncle; pistils 4-16.....*Ruppia*

Halodule Endlicher 1841 (SHOAL-GRASS)

A genus of about 6 species, of tropical and subtropical regions of both hemispheres. References: Green & Short (2003); Haynes (2000f) in FNA22 (2000); Kuo & McComb in Kubitzki (1998b); McRoy & Helfferich (1977).

Halodule wrightii Ascherson. SHOAL-GRASS. **Hab:** Submerged in estuarine waters up to about 2 m deep, especially in Core and Pamlico sounds (North Carolina). **Dist:** E. NC, se. SC (reported in 2021; not known from GA); FL west to TX, and south along shores of the Gulf of México and Caribbean; also on the Pacific coast of Panama and Nicaragua. **Tax:** Haynes in FNA (2000) concludes that *H. beaudettei* is not taxonomically distinct from *H. wrightii* (the older name). Seagrasses (an informal group including species such as *Halodule wrightii*, *Zostera marina*, and *Ruppia maritima* in our area) are very important components of estuarine ecosystems, providing a large proportion of the primary productivity in such systems and providing shelter and nursery grounds for fish, shrimp, and other marine life. An estimated 80,000 hectares of seagrass beds are found in Pamlico and Core sounds, NC, most of that area having *Halodule* as the co-dominant or dominant species (Ferguson, Rivera, & Wood 1989). There is concern about the destruction of seagrass beds by pollution, dredging of waterways, and mechanical disturbance by fishing boats (Koch & Orth 2003; Green & Short 2003). **Syn:** = FNA22, K3, S, WH3, Green & Short (2003); > *Halodule beaudettei* (den Hartog) den Hartog – GW1, K1, Meso6, RAB, Tx; > *Halodule wrightii* Ascherson – Meso6. [NatureServe G5](#) (Secure).

Ruppia Linnaeus 1753 (WIGEON-GRASS)

A genus of 4-10 species, nearly cosmopolitan. References: Haynes (1978); Haynes (2000d) in FNA22 (2000); Haynes, Holm-Nielsen, & Les in Kubitzki (1998b).

Identification Notes: Separable from superficially similar species of *Potamogeton* by the stipules adnate their entire length (vs. separate at least at the tip in *Potamogeton*).

43. NARTHECIACEAE

*Lophiola* Ker Gawler 1814 (GOLDEN CREST)

A monotypic genus (as here interpreted to include *L. americana* and *L. septentrionalis*), of temperate e. North America. Often previously placed in the Haemodoraceae (as in RAB, C, G, GW), *Lophiola* clearly belongs in the Nartheciaceae, as shown by studies of anatomy, pollen ultrastructure, chemistry, and DNA (Edwards, Churchill, & Weiss 1970; Simpson & Dickison 1981; Simpson 1983; Zavada 1983; Zavada, Xu, & Edwards 1983; Ambrose 1985; Fuse, Lee, & Tamura 2012). References: Edwards, Churchill, & Weiss (1970); Fuse, Lee, & Tamura (2012); Robertson (2002) in FNA26 (2002a); Simpson (1983); Tamura in Kubitzki (1998a); Zomlefer (1997b).

Lophiola aurea Ker Gawler. GOLDEN CREST. **Hab:** Wet savannas, bogs, marshes, ditches adjacent to these natural habitats. **Dist:** FL Panhandle and sw. GA west to e. LA; se. NC (where only a few populations remain); n. DE (at least formerly) and s. NJ; disjunct in NS. **Phen:** Late May-Jun; Aug-Sep. **Syn:** = C, FNA26, K1, K3, K4, S, WH3, Zomlefer (1997b); > *Lophiola americana* (Pursh) Wood – F, G, GW1, RAB; > *Lophiola septentrionalis* Fernald – F. NatureServe G4 (Apparently Secure).

44. BURMANNIACEAE Blume 1827 (BURMANNIA FAMILY) [in DIOSCOREALES]

A family of about 13-15 genera and 130 species, pantropical and warm-temperate. References: Lewis (2002) in FNA26 (2002a); Maas-van de Kamer in Kubitzki (1998a); Wood (1983a).

- 1 Floral tube (hypanthium) terete; flowers purple or whitish with purple marks; ovary 1-locular.....*Apteria*
 1 Floral tube (hypanthium) 3-angled or 3-winged; flowers white, greenish, cream, or blue to violet; ovary 3-locular.....*Burmannia*

Apteria Nuttall 1834 (NODDING NIXIE)

A monotypic genus, the single species distributed from s. North America south to c. South America. References: Lewis (2002) in FNA26 (2002a); Maas-van de Kamer in Kubitzki (1998a).

Apteria aphylla (Nuttall) Barnhart ex Small. NODDING NIXIE. **Hab:** Wet hammocks, mesic hammocks, bay swamps, other acid swamps, mesic forests. **Dist:** E. GA west to e. TX, south to c. South America; West Indies. **Phen:** Jan-Dec. **Syn:** = ETx1, FNA26, GW1, K1, K3, K4, Meso6, S, Tx, WH3. NatureServe G4 (Apparently Secure).

*Burmannia* Linnaeus 1753 (BURMANNIA)

A genus of about 63 species, autotrophic or mycotrophic herbs, pantropical (to warm temperate). References: Lewis (2002) in FNA26 (2002a); Maas-van de Kamer in Kubitzki (1998a).

Identification Notes: Both species of *Burmannia* are very small and easy to overlook; they occasionally occur together.

- 1 Floral tube obtusely 3-angled, greenish to creamy white; flowers in a capitate cluster (solitary in depauperate individuals).....*Burmannia capitata*
 1 Floral tube 3-winged, violet or yellow to greenish; flowers in a spicate cyme (solitary in depauperate individuals)
*Burmannia biflora*

Burmannia biflora Linnaeus. VIOLET BURMANNIA. **Hab:** Pine savannas, bogs, shores of Coastal Plain depression ponds. **Dist:** Se. VA south to s. FL, west to e. TX and sw. AR. **Phen:** Aug-Mar. **Syn:** = Ar, C, ETx1, F, FNA26, G, GW1, K1, K3, K4, RAB, S, Tx, Va, WH3. NatureServe G4G5 (Apparently Secure).

Burmannia capitata (Walter ex J.F. Gmelin) Martius. WHITE BURMANNIA. **Hab:** Pine savannas, bogs, shores of Coastal Plain depression ponds. **Dist:** E. NC south to s. FL, west to e. TX and se. OK; West Indies, Central America, and South America. **Phen:** Jul-Nov. **Syn:** = ETx1, FNA26, GW1, K1, K3, K4, Meso6, NcTx, RAB, S, Tx, WH3. NatureServe G5 (Secure).

44. BURMANNIACEAE

45. DIOSCOREACEAE R. Brown 1810 (YAM FAMILY) [in DIOSCOREALES]

A family of about 3-20 genera and 600-880 species, of tropical and warm temperate regions. References: Huber in Kubitzki (1998a); Raz (2002) in FNA26 (2002a).

Dioscorea Linnaeus 1753 (YAM)

A genus of about 575-850 species, vines, of tropical and warm temperate regions of the Old World and New World. Huber in Kubitzki (1998a) advocates the division of the large and unwieldy *Dioscorea* into separate genera. *Dioscorea* (broadly defined) has a wide variety of economic uses, especially in the tropics, where it is most diverse. Various species are cultivated for their edible tubers (yams, not to be mistaken for sweet potatoes, *Ipomoea batatas*, which are often referred to colloquially as 'yams' in the southern United States), especially in Africa. Oral contraceptives were developed from extracts of *Dioscorea*. Many other uses are described in Al-Shehbaz & Schubert (1989). References: Al-Shehbaz & Schubert (1989); Huber in Kubitzki (1998a); Raz (2002) in FNA26 (2002a); Ward (1977c).

Identification Notes: *Smilax* section *Nemexia* are sometimes confused with our native *Dioscorea* (key lead 1a) because of a superficial similarity. They can be readily distinguished even in vegetative condition by *Smilax* section *Nemexia* having 3 (-5) main veins, the 3 central rejoining at the leaf apex (vs. *Dioscorea* with 7-13 main veins), and secondary veins in a complex reticulate pattern (vs. *Dioscorea* with secondary veins forming simpler and largely perpendicular cross-connections between the primary veins).

- 1 Leaves with a slightly to strongly concave section at the transition from the basal lobes to the terminal portion of the leaf; leaves alternate, opposite, or a mixture of alternate and opposite. *Dioscorea polystachya*
- 1 Leaves with continuously convex lateral margins (except just below the acute to acuminate leaf apex) or with slight undulations of straight to very slightly concave sections.
 - 3 Aerial tubers never present; perennial from rhizomes < 1.5 cm in diameter; leaves whorled, alternate, or a mixture of whorled and alternate; [native species, usually of forests and woodlands]; [section *Macropoda*]. *Dioscorea villosa*
 - 3 Aerial tubers present; perennial from large, vertically-oriented tubers; leaves alternate, or a mixture of alternate and opposite; [non-native species, usually in disturbed areas, especially in bottomlands]; [section *Enantiophyllum*]. *Dioscorea bulbifera*

* *Dioscorea bulbifera* Linnaeus. AIR YAM. **Hab:** Disturbed forests, thickets, and banks. **Dist:** Native of Africa and Asia. Reported for Camden County, GA (Carter, Baker, & Morris 2009). **Phen:** Jul-Sep. **Comm:** {add synonymy}. **Syn:** = Bah, ETx1, FNA26, K1, K3, K4, Meso6, WH3. **NatureServe GNR** (Not Yet Ranked).

* *Dioscorea polystachya* Turczaninow. CINNAMON VINE, CHINESE YAM. **Hab:** Thickets, disturbed areas, bottomland forests. **Dist:** Native of China. **Phen:** Jun-Aug. **Comm:** A serious invasive species in our region. **Syn:** = Ar, FNA26, Il, K3, K4, NE, NY, Tn, Va, WH3; = *Dioscorea batatas* Decaisne – C, F, G, Pa, RAB, W, Ward (1977c); = *Dioscorea oppositifolia* Linnaeus – K1, Mo1, Al-Shehbaz & Schubert (1989), misapplied.

Dioscorea villosa Linnaeus. WILD YAM. **Hab:** Moist forests and woodlands. **Dist:** NJ, NY, s. ON, WI, MN, and IA south to n. FL and TX. **Phen:** Apr-Jun; Sep-Nov. **Tax:** Various specific and infraspecific taxa are here combined. Ward (1977c) states that "a recent study at Duke University by Shu-fun Au, unfinished due to the death of its author, tentatively recognized *D. hirticaulis* and *D. floridana* but combined all other entities without distinction under *D. villosa*". Further study is needed. Al-Shehbaz & Schubert (1989) indicate that the lectotype of *D. villosa* has pubescent stems; nomenclatural changes would apparently be needed if varietal status of the two named varieties of *D. villosa* proves warranted. **Syn:** = Ar, ETx1, FNA26, K3, K4, Mi, NE, NY, Tn, Va, WH3; = *Dioscorea villosa* Linnaeus; > *Dioscorea glauca* Muhlenberg ex Bartlett – S; > *Dioscorea hirticaulis* Bartlett – F, G, S, Ward (1977c); > *Dioscorea quaternata* – C, F, G, K1, Mo1, NcTx, Pa, S, Tx, Al-Shehbaz & Schubert (1989), Ward (1977c); > *Dioscorea quaternata* var. *glauca* (Muhlenberg) Fernald – Il; > *Dioscorea quaternata* var. *quaternata* – Il; > *Dioscorea villosa* Linnaeus – F, G, Il, K1, Mo1, NcTx, Pa, S, Tx, W, Ward (1977c); > *Dioscorea villosa* Linnaeus var. *hirticaulis* (Bartlett) H.E. Ahles – C, RAB, Al-Shehbaz & Schubert (1989); > *Dioscorea villosa* var. *villosa* – C, RAB.

53a. *TRILLIACEAE* Chevallier 1827 (TRILLIUM FAMILY) [in LILIALES]

A family of ca. 6 genera and about 80 species, perennial herbs, of temperate Northern Hemisphere. The Trilliaceae is clearly monophyletic and strongly characterized morphologically, scarcely resembling its sibling groups (sister to Xerophyllaceae, divergence time ca. 60 million years ago); its recognition as a family seems well-warranted. References: Farmer & Schilling (2002); Floden & Schilling (2018b) in Weakley et al (2018b); Kim, Kim, & Kim (2019).

Trillium Linnaeus 1753 (TRILLIUM, TOADSHADE, WAKE-ROBIN)

A genus of about 50 species, of e. North America, w. North America, and e. Asia (especially se. North America). The genus *Trillium* in our area is difficult and complex. *Trillium* is now usually separated from the Liliaceae (along with Eurasian genera such as *Paris* into the Trilliaceae (Zomlefer 1996, Kato et al. 1995, Kawano & Kato 1995, and others) or less drastically as part of the Melanthiaceae (Chase et al. 2000; Tamura et al. 2004). The traditional division of the genus into two well-marked subgenera, subgenus *Trillium*, the pedicellate trilliums, and subgenus *Sessilium* (formerly often called *Phyllantherum*; see Reveal & Gandhi [2014]), the sessile-flowered trilliums, has been partly supported by molecular and morphological phylogenetic studies (Kawano & Kato 1995, Kato et al. 1995). These studies support the monophyly of subgenus *Sessilium*, but suggest that subgenus *Trillium* consists of several groups which are only rather distantly related (Kawano & Kato 1995, Kazempour Osaloo et al. 1999; Farmer & Schilling 2002; Lampley 2021). References: Bodkin & Reveal (1982); Bodkin & Reveal (1983); Case & Case (1997); Case (2002) in FNA26 (2002a); Farmer & Schilling (2002); Freeman (1975); Gaddy (2008); Kato et al (1995); Kawano & Kato (1995); Lampley (2021); Mitchell (1990); Patrick (1986); Patrick (1989) in W (1989); Patrick (2007); Schilling et al (2017); Schilling et al (2019a); Schilling, Floden, & Farmer (2013); Tamura in Kubitzki (1998a); Timmerman-Erskine, Dute, & Boyd (2002); Zomlefer (1996).

Identification Notes: Teratological forms are frequent in some species, as, for instance, leaves, sepals, and stamens in 2's or 4's, petals sepaloid, or sepals petaloid, and so forth. What are called "leaves" in *Trillium* are actually interpreted as bracts by some. Most species are slow-growing perennials; seedlings, juveniles, and depauperate or "tired" plants are one-leaved ("monilliums"), recognizable by the similar color, texture and venation of the single leaf to the three leaves of mature plants. In some species, such as *Trillidium undulatum* and taxa of the *Trillium pusillum* complex, individual plants remain in the single-leaf stage for long periods of time, and populations may consist largely of juvenile plants.

- 1 Leaves mottled with 2-3 different shades of green and silver (very rarely the mottling not apparent); flower sessile; [subgenus *Sessilium*] **Key A**
- 1 Leaves solid green; flower on a pedicel (the pedicel sometimes very short or essentially absent in some varieties of *T. pusillum*); [subgenus *Trillium*].
 - 2 Petals relatively thick in texture, straight-margined, maroon or white, rarely yellow or green (if white, turning brown with age); stigmas thicker at base, tapering gradually toward tip, distinct; ovary purple-black, maroon, pink, or white, 6-angled; [*Erectum* group]..... **Key B**
 - 2 Petals relatively delicate in texture, wavy-margined, white to deep pink (if white, generally fading to pink with age); stigmas thin, uniform in thickness from base to apex, somewhat fused at the base into a short style; ovary greenish-white to white, 3- or 6-angled or-lobed..... *Trillium pusillum* var. *ozarkanum*

Key A - trilliums with sessile flowers and mottled leaves (subgenus *Sessilium*)

- 4 Sepals abruptly deflexed between and below the leaves, distinctly descending below the approximately horizontal plane of the leaves; filaments about as long as incurved anthers; [*T. recurvatum* group].
 - 7 Leaves sessile or subsessile, borne in a descending or drooping manner (similar to the sepals); petals usually 4-7× as long as wide, strongly clawed *Trillium lancifolium*
 - 7 Leaves distinctly petiolate, borne in an ascending manner (strongly contrasting in position with the strongly deflexed sepals); petals usually ca. 2× as long as wide, attenuate to weakly clawed *Trillium recurvatum*
- 4 Sepals erect, ascending, or spreading, usually borne at or above the approximately horizontal plane of the leaves; filaments much shorter than the upright anthers.
 - 8 Petals spreading to horizontal, with 1-2 spiral twists (looking something like an airplane propeller); anther dehiscence extrorse (toward the outside of the flower); [*T. sessile* group] *Trillium stamineum*
 - 8 Petals erect to slightly spreading, not spirally twisted; anther dehiscence introrse (toward the inside of the flower), or latrorse (toward the side).
 - 13 Petals < 4× as long as wide, elliptic-oblancoolate to oblanceolate; [of inland provinces, rarely in the Coastal Plain]..... *Trillium cuneatum*
 - 13 Petals > 4.5× as long as wide, narrowly oblanceolate-spatulate to linear-oblancoolate; [of the Coastal Plain, rarely farther inland].
 - 19 Petals 3-5 mm wide; anther dehiscence introrse; anther connective extending 1-1.5 mm beyond the anther sacs *Trillium foetidissimum*
 - 19 Petals 4-8 mm wide; anther dehiscence latrorse; anther connective scarcely extending beyond the anther sacs *Trillium ludovicianum*

Key B - trilliums with unmottled leaves and pedicellate flowers, of the *Erectum* Group

- 1 Flowers held below the leaves (the pedicel declined below a horizontal plane)..... *Trillium flexipes*
- 1 Flowers held at or above the level of the leaves (the pedicel nearly horizontal, inclined above the horizontal, or erect).
 - *Trillium flexipes*

Trillium cuneatum Rafinesque. SWEET BETSY, PURPLE TOADSHADE, LARGE TOADSHADE, WEDGE-PETAL TRILLIUM, BLOODY BUTCHER. **Hab:** In rich soils of cove forests, moist slopes, and bottomlands, usually over mafic or calcareous rocks, locally abundant. **Dist:** Nc. NC, c. KY, and s. IL south to sc. GA, sc. AL, and s. MS. Sometimes spreading from cultivation outside of this area. **Phen:** (Jan-) Mid Mar-Apr; late May-Jun. **Comm:** Petals maroon, yellow, green, or various intermediate shades. **Syn:** = C, FNA26, IL, K1, K3, K4, Mi, Pa, Tn, W, Case & Case (1997), Freeman (1975), Patrick (1986), Patrick (2007); = *Trillium cuneatum* var. *cuneatum* – RAB; > *Trillium cuneatum* Rafinesque – F; > *Trillium hugeri* Small – S; > *Trillium underwoodii* Small – S, misapplied; > *Trillium viride* Beck – F, misapplied with respect to NC material; < *Trillium viride* var. *luteum* (Muhlenberg) Gleason – G, misapplied (also see T. luteum).

Trillium flexipes Rafinesque. BENT WHITE TRILLIUM. **Hab:** Moist coves over mafic or calcareous rocks. **Dist:** E. PA, s. ON and s. MN south to w. NC, nw. GA, n. AL, ne. MS (Tishomingo County), mostly west of the Blue Ridge, but scattered in the Blue Ridge of NC, and disjunct east of the Blue Ridge in DE, PA, and MD. **Phen:** Apr. **Comm:** Petals white or maroon. **Syn:** = Ar, C, F, FNA26, Il, K1, K3, K4, Mi, Mo1, NY, Pa, Tn, Va, W, Case & Case (1997), Patrick (1986), Patrick (2007); = *Trillium declinatum* (A. Gray) Gleason – S, misapplied; = *Trillium erectum* var. *declinatum* – WV; = *Trillium gleasoni* Fernald – G; < *Trillium erectum* var. *vaseyi* (Harbison) H.E. Ahles – RAB. **NatureServe G5** (Secure).

Trillium foetidissimum J.D. Freeman. STINKING WAKE-ROBIN. **Hab:** Bluffs, ravines, bottomlands. **Dist:** MS west to LA. **Phen:** Late Feb-early Apr. **Syn:** = FNA26, K1, K3, K4, Case & Case (1997), Freeman (1975), Patrick (1986); < *Trillium ludovicianum* Harbison – S.

Trillium lancifolium Rafinesque. LANCELEAF TRILLIUM, NARROWLEAF TRILLIUM. **Hab:** Rich forests over marble, limestone, and other calcareous substrates, floodplain forests. **Dist:** Se. TN south through w. GA and AL to Panhandle FL and se. AL. **Phen:** (Late Jan-) Mar-Apr. **Comm:** Petals purple, green, or greenish-purple. Material previously referred to this species from Kershaw County, SC represents the newly described *T. oostingii*. **Syn:** = FNA26, K1, K3, K4, Tn, WH3, Case & Case (1997), Freeman (1975), Patrick (1986), Patrick (2007); = *Trillium lanceolatum* (S. Watson) Boykin ex Small – RAB, S. **NatureServe G3** (Vulnerable).

Trillium ludovicianum Harbison. LOUISIANA WAKE-ROBIN. **Hab:** Floodplains, streambanks, ravine forests. **Dist:** MS west to e. TX. **Phen:** Early Mar-Apr. **ID Notes:** Often confused with narrow-petaled plants of *Trillium cuneatum*. Reports of this species for AL are based on specimens of *Trillium species 3*. **Syn:** = ETx1, FNA26, K1, K3, K4, Case & Case (1997), Freeman (1975), Patrick (1986); < *Trillium ludovicianum* Harbison – S.

Trillium pusillum Michaux var. *ozarkanum* (Palmer & Steyermark) Steyermark. **Hab:** Dry to dry-mesic slopes, in NC under *Quercus coccinea* and *Kalmia latifolia*. **Dist:** Centered in the Ozarks of sw. MO, nw. AR, and e. OK; disjunct eastward at scattered localities in sc. KY, nc. TN, sw. NC, and s. MS. **Phen:** Apr-May. **Comm:** Petals white to pink. **Syn:** = K1, K3, K4, Mo1, Case & Case (1997); = *Trillium ozarkanum* Palmer & Steyermark – Ar; < *Trillium pusillum* Michaux – G, RAB, S, Tn, Patrick (1986), Timmerman-Erskine, Dute, & Boyd (2002); < *Trillium pusillum* Michaux var. *pusillum* – FNA26.

Trillium recurvatum Beck. PRAIRIE TRILLIUM, RECURVED TRILLIUM, PRAIRIE WAKE-ROBIN. **Hab:** Rich soils over calcareous or mafic rocks. **Dist:** W. OH west to s. MI, s. WI, and e. IA, south to c. TN, c. AL, c. MS, n. LA, and e. TX; disjunct in the Cumberland Plateau of e. TN, e. KY, and the Blue Ridge and w. Piedmont of NC. The two known NC occurrences (Catawba and Madison counties) appear to be native. **Phen:** Mar-May. **Comm:** Petals maroon or yellow. **Syn:** = Ar, C, ETx1, F, FNA26, G, Il, K1, K3, K4, Mi, Mo1, NE, NY, Pa, S, Tn, Tx, Case & Case (1997), Freeman (1975), Patrick (1986). **NatureServe G5** (Secure).

Trillium stamineum Harbison. TWISTED TRILLIUM, HELICOPTER TRILLIUM. **Hab:** Floodplains, slopes, especially over limestone. **Dist:** Sw. KY (Logan and Todd counties; Brock 2020) and c. TN (Chester et al. 1993) south to c. AL and e. MS. **Phen:** Late Mar-mid May. **Syn:** = FNA26, K1, K3, K4, S, Tn, Case & Case (1997), Freeman (1975), Patrick (1986). **NatureServe G4** (Apparently Secure).

53d. CHIONOGRAPHIDACEAE Takhtajan 1996 (FAIRY-WAND FAMILY) [in LILIALES]

A family of 2 genera, and 5 species, perennial herbs, of e. Asia and e. North America. We here accept a narrower circumscription of Melanthiaceae (excluding Trilliaceae, Xerophyllaceae, Chionographidaceae, and Heloniaceae) than currently traditional, based on the age, phylogeny, and morphological distinctiveness of these clades (Kim, Kim, & Kim 2019). References: Kim, Kim, & Kim (2019); Tamura in Kubitzki (1998a); Utech (2002a) in FNA26 (2002a); Zomlefer (1997a).

Chamaelirium Willdenow 1808 (DEVIL'S-BIT, FAIRY-WAND)

A monotypic genus, an herb of temperate e. North America. References: Tamura in Kubitzki (1998a); Utech (2002c) in FNA26 (2002a); Zomlefer (1997a).

Chamaelirium luteum (Linnaeus) A. Gray. DEVIL'S-BIT, FAIRY-WAND. **Hab:** Moist slopes, bottomlands, wet pine savannas. **Dist:** MA west to ON, OH, s. IN, and AR, south to FL and LA. **Phen:** Mar-May; Sep-Nov. **Tax:** The ecological amplitude and morphologic variability of this species is surprising; it needs additional, more careful, study. *C. obovale* Small (or other previously unnamed entities) may warrant recognition at some level and need additional study. **Syn:** = Ar, C, F, FNA26, G, GW1, Il, K1, K3, K4, Mi, NE, NY, Pa, RAB, Tn, W, WH3, Zomlefer (1997a); > *Chamaelirium luteum* (Linnaeus) A. Gray – S; > *Chamaelirium obovale* Small – S. **NatureServe G5** (Secure).

53e. MELANTHIACEAE Batsch 1793 (BUNCHFLOWER FAMILY) [in LILIALES]

A family of about 8 genera and 80 species, mostly temperate and northern hemisphere, but extending into South America (Peru). We here accept a narrower circumscription of Melanthiaceae (excluding Trilliaceae, Xerophyllaceae, Chionographidaceae, and Heloniadaceae) than currently traditional, based on the age, phylogeny, and morphological distinctiveness of the units (Kim, Kim, & Kim 2019). References: Dahlgren, Clifford, & Yeo (1985); Kim et al (2016); Kim, Kim, & Kim (2019); Tamura in Kubitzki (1998a); Tamura et al (2004); Zomlefer (1996); Zomlefer (1997a); Zomlefer (2003); Zomlefer et al (2001).

- 1 Leaves 3, whorled at the summit of the stem; flowers 1 per plant, solitary and terminal *Trilliaceae*
- 1 Leaves many, not whorled at the summit of the stem; flowers many per plant, in spikes, racemes, or panicles.
 - 3 Main (basal) leaves obovate or oblanceolate, the main secondary veins diverging individually (at angles of < 10°) from the midvein in the lower half of the expanded blade and rejoining at the apex; flowers pink, white or cream.
 - *Chionographidaceae*
 - 3 Main (basal) leaves linear, elliptic, or obovate, the main veins parallel, all diverging at the base of the leaf and rejoining at the apex; flowers white, cream, yellowish, greenish, or brownish.
 - 5 Inflorescence a spike or raceme.
 - 7 Basal leaves 4-many, (4-) 7-10 (-23) mm wide; basal leaves not enclosed by a basal sheath (all basal leaves with blades, and the leaf bases usually white); capsule suborbicular, 5-7 mm long, 5-7 mm wide; older flowers and developing capsules turning green; bulb broadly ovoid; [widespread in our area, including Coastal Plain pine savannas]..... *Amianthium muscitoxicum*
 - 7 Basal leaves 1-3, 2-6 (-10) mm wide; basal leaves enclosed by a basal purple (bladeless) sheath 3-8 cm long; capsule conical, 7-12 mm long, 3-4 mm wide; older flowers and developing capsules turning pink; bulb cylindrical; [of Coastal Plain pine savannas and similar habitats]..... *Stenanthium densum*
 - 5 Inflorescence a panicle.
 - 8 Inflorescence axes scurfy-pubescent; seeds winged; leaves either linear or broader, < 14 cm wide.
 - *Melanthium*
 - 8 Inflorescence axes glabrous; seeds not winged (though sometimes angled); leaves linear, < 2 cm wide.
 - 10 Leaves strongly keeled, (5-) 10-20 mm wide; plant colonial, from thick, hard, horizontal, short-creeping rhizomes covered with fibrous old leaf bases; inner tepals (petals) 7-17 mm long, distinctly clawed, acute-acuminate at the tip, bearing 2 glands well above the base..... *Zigadenus glaberrimus*
 - 10 Leaves slightly or not at all keeled, 2-12 mm wide; plant solitary, from a bulbous or semibulbous base; inner tepals (petals) 3-6 or 7-12 mm long, clawed or not, bearing either a single (sometimes obscure to essentially invisible) gland near the base or a bilobed gland well above the base.
 - *Stenanthium*

Amianthium A. Gray 1837 (FLY-POISON)

A monotypic genus, an herb of temperate e. North America. Zomlefer et al. (2001) confirm that *Amianthium* should be treated as a monotypic genus. *Amianthium* has a chromosome number of $2n=32$ (Zomlefer & Smith 2002). Like other members of the family, it produces very toxic alkaloids. References: Tamura in Kubitzki (1998a); Utech (2002g) in FNA26 (2002a); Zomlefer & Judd (2002); Zomlefer (1997a).

Amianthium muscitoxicum (Walter) A. Gray. FLY-POISON. **Hab:** In a wide variety of mesic to dry forests, pine savannas, longleaf pine sandhills, meadows, from 5m to at least 1600m in elevation. **Dist:** S. NY, PA, MO, and OK, south to Panhandle FL, MS, and AR. **Phen:** May-Jul; Jul-Sep. **Syn:** = Ar, FNA26, K1, K3, Mo1, NY, Tn, Va, Zomlefer & Judd (2002); = *Amianthium muscaetoxicum* – C, F, G, GW1, K4, Pa, RAB, W, WH3, orthographic variant; = *Chrosperma muscaetoxicum* (Walter) Kuntze – S; = *Zigadenus muscitoxicus* (Walter) Regel – Zomlefer (1997a). NatureServe G4G5 (Apparently Secure).

Melanthium Linnaeus 1753 (BUNCHFLOWER)

A genus of 4 species, herbs of e. North America. While sometimes included in *Veratrum*, the best molecular study to date (Kim et al. 2016) suggests that *Melanthium* is more closely related to *Stenanthium* and *Anticlea* than to *Veratrum* s.s. References: Bodkin & Utech (2002) in FNA26 (2002a); Kim et al (2016); Tamura in Kubitzki (1998a); Zomlefer (1997a); Zomlefer (2012); Zomlefer et al (2003).

Melanthium virginicum Linnaeus. BOG BUNCHFLOWER, VIRGINIA BUNCHFLOWER. **Hab:** Pine savannas, bogs, fens, seeps, wet seepage-fed forests. **Dist:** S. NY, PA, OH, IN, IL, and IA south to c. peninsular FL and e. TX. **Phen:** May-Aug; Aug-Oct. **Syn:** = C, F, FNA26, G, GW1, IL, K1, K4, Mo1, NY, RAB, Tx, W, WV; = *Veratrum virginicum* (Linnaeus) W.T. Aiton – Ar, ETx1, K3, Pa, Tn, Va, WH3, Zomlefer (1997a); > *Melanthium dispersum* Small – S; > *Melanthium virginicum* Linnaeus – S. NatureServe G5 (Secure).

Stenanthium (A. Gray) Kunth 1843 (FEATHERBELLS, FEATHERFLEECE)

A genus of about 6 (or more) species, perennial herbs, of e. North America. *Stenanthium*, as redefined by Zomlefer & Judd (2002), has a chromosome number of $2n=20$, excludes a w. North American and an e. Asian species previously included, and includes some taxa formerly placed in *Zigadenus* (Zomlefer & Smith 2002). References: Schwartz (2002) in FNA26 (2002a); Sorrie & Weakley (2017b); Sorrie & Weakley (2018) in Weakley et al (2018a); Tamura in Kubitzki (1998a); Utech (2002f) in FNA26 (2002a); Wofford (2006); Zomlefer & Judd (2002); Zomlefer (1997a).

- 1 Tepals lanceolate, the tip acute-acuminate.

- 1 Tepals obovate, the tip rounded-obtuse.

..... *Stenanthium gramineum* var. *gramineum*

- 5 Largest leaves on a plant 3-7 mm wide (mean 4.3); inflorescence unbranched (a raceme); capsules averaging 11.0 mm long; [se. VA south to sc. peninsular FL, west to s. MS]..... *Stenanthium densum*

- 5 Largest leaves on a plant 4-12 mm wide (mean 7.1); inflorescence branched (a panicle) (rarely simple); capsules averaging 13.3 mm long; [GA and FL Panhandle west to e. TX]..... *Stenanthium texanum*

Stenanthium densum (Desrousseaux) Zomlefer & Judd. CROW-POISON, OSCEOLA-PLUME. **Hab:** Pine savannas, pine flatwoods. **Dist:** Se. VA south to c. peninsular FL and west to s. MS, on the Coastal Plain. **Phen:** Apr-early Jun; late May-Jul. **Syn:** = K4, Sorrie & Weakley (2017b); = *Zigadenus densus* (Desrousseaux) Fernald – Tx; < *Stenanthium densum* (Desrousseaux) Zomlefer & Judd – Va, WH3, Zomlefer & Judd (2002); < *Tracyanthus angustifolius* (Michaux) Small – S; < *Zigadenus densus* (Desrousseaux) Fernald – C, FNA26, GW1, K1, K3, RAB, Zomlefer (1997a); < *Zigadenus densus* – G, orthographic variant. NatureServe G5 (Secure).

Stenanthium gramineum (Ker Gawler) Morong var. *gramineum*. FEATHERBELLS. **Hab:** Dry and mesic forests and woodlands, grassy balds, serpentine barrens, to at least 1700m in elevation. **Dist:** PA west to IL and MO, south to ne. NC, Panhandle FL, and TX. **Phen:** Jul-early Sep; Aug-Oct. **Syn:** = Mo1; = *Stenanthium gramineum* (Ker Gawler) Morong – S; < *Stenanthium gramineum* (Ker Gawler) Morong – C, FNA26, G, K4, Mi, Pa, RAB, Tx, Va, W, WH3, Zomlefer (1997a); > *Stenanthium gramineum* (Ker Gawler) Morong var. *gramineum* – F, K1, WV; > *Stenanthium gramineum* var. *micranthum* – F, K1.

Stenanthium texanum (Bush) Sorrie & Weakley. CROW-POISON, BLACK DEATH-CAMAS. **Hab:** Pine savannas, pine flatwoods. **Dist:** FL Panhandle and s. GA west to e. TX, on the Coastal Plain. **Phen:** Apr-early Jun; late May-Jul. **Syn:** = K4, Sorrie & Weakley (2018) in Weakley et al (2018a); = *Stenanthium macrum* Sorrie & Weakley – Sorrie & Weakley (2017b), illegitimate name; < *Stenanthium densum* (Desrousseaux) Zomlefer & Judd – Va, WH3, Zomlefer & Judd (2002); < *Stenanthium leimanthoides* (A. Gray) Zomlefer & Judd, in part misapplied; < *Tracyanthus angustifolius* (Michaux) Small – S; < *Zigadenus densus* (Desrousseaux) Fernald – C, FNA26, GW1, K1, K3, RAB, Zomlefer (1997a); < *Zigadenus leimanthoides* A. Gray – Tx; < *Zigadenus densus* – G, orthographic variant.

Zigadenus Michaux 1803 (DEATH-CAMAS)

As redefined, a monotypic genus of se. North America. A molecular systematics study by Zomlefer et al. (2001) gives strong support to a treatment recognizing *Zigadenus* as monotypic (*Zigadenus glaberrimus*), *Anticlea* (including for our area the former *Zigadenus elegans* ssp. *glaucus*), *Stenanthium* (including for our area *Stenanthium* spp. and the former *Zigadenus densus* and *Z. leimanthoides*). *Zigadenus* (as redefined) has a chromosome number of $2n=54$ (Zomlefer, McKain, & Rentsch 2014), unique in the family. References: Schwartz (2002) in FNA26 (2002a); Tamura in Kubitzki (1998a); Zomlefer (1997a); Zomlefer et al (2001); Zomlefer, McKain, & Rentsch (2014).

Zigadenus glaberrimus Michaux. LARGE DEATH-CAMAS, SNAKEROOT. **Hab:** Sandhill seepage bogs, pine savannas, pocosin edges. **Dist:** Se. VA south to Panhandle FL, west to MS, on the Coastal Plain. Reports from montane NC (Kartesz 2020) are false reports. **Phen:** Late Jun-early Sep; Aug-Nov. **Syn:** = C, F, FNA26, GW1, K1, K3, K4, RAB, Tx, Va, WH3, Zomlefer (1997a); = *Zigadenus glaberrimus* – G, S, orthographic variant. NatureServe G5 (Secure).

55. ALSTROEMERIACEAE Dumortier 1829 (PERUVIAN-LILY FAMILY) [in LILIALES]

A family of 5 genera and about 170 species, perennial herbs, of Central and South America. References: Holmes (2002a) in FNA26 (2002a).

Alstroemeria Linnaeus 1762 (PERUVIAN-LILY, ALSTROEMERIA)

A genus of about 60 species, perennials, of South America. References: Holmes (2002a) in FNA26 (2002a).

* ***Alstroemeria pulchella*** Linnaeus f. PERUVIAN-LILY, PARROT-LILY. **Hab:** Disturbed areas, roadsides and forest understories near plantings. **Dist:** Native of Brazil. Naturalized in GA, FL, AL, MS, LA, and TX (Holmes in FNA 2002; Singhurst, Keith, & Holmes 2005). **Syn:** = ETx1, FNA26, K4, WH3; >> *Alstroemeria psittacina* Lehmann, misapplied.

56. COLCHICACEAE A.P. de Candolle 1804 (MEADOW-SAFFRON FAMILY) [in LILIALES]

As here circumscribed, a family of about 15 genera and about 250 species, nearly cosmopolitan. References: Chacón, Cusimano, & Renner (2014); Dahlgren, Clifford, & Yeo (1985); Nordenstam in Kubitzki (1998a); Vinnersten & Manning (2007).

Uvularia Linnaeus 1753 (BELLWORT, MERRYBELLS)

A genus of about 5 species, of temperate eastern North America. References: Nordenstam in Kubitzki (1998a); Utech & Kawano (2002) in FNA26 (2002a); Uttal (1991); Wilbur (1963b).

- 1 Leaves perfoliate, the margins scarious but smooth; upper stems terete in cross-section, hollow; [section *Uvularia*].
 - 2 Tepals glabrous within; leaves puberulent beneath (or rarely glabrate); leaves below the stem fork (0-) 1 (-2)..... *Uvularia grandiflora*
 - 2 Tepals conspicuously granular-papillose within; leaves glabrous and often glaucous beneath; leaves below the stem fork 2-4 *Uvularia perfoliata*
- 1 Leaves sessile, the margins scarious and minutely papillose-denticulate; upper stems angled in cross-section, solid; [section *Oakesiella*].
 - 4 Pedicel bearing a sessile, leaf-like bract 5-17 mm below the flower; capsule sessile, conspicuously beaked at apex..... *Uvularia floridana*
 - 4 Pedicel bractless; capsule on a stalk 2-4 (-6) mm long, not beaked..... *Uvularia sessilifolia*

Uvularia floridana Chapman. FLORIDA BELLWORT. **Hab:** Alluvial forests, moist ravines. **Dist:** C. SC south to ne. FL, and Panhandle FL, west to c. MS, rare and local throughout its range. **Phen:** Late Feb-early Apr. **Syn:** = FNA26, GW1, K1, K3, K4, RAB, WH3, Wilbur (1963b); = *Oakesiella floridana* (Chapman) Small – S. [NatureServe G3](#) (Vulnerable).

Uvularia grandiflora J.E. Smith. LARGE-FLOWERED BELLWORT. **Hab:** Cove forests and other moist, rich, forested sites. **Dist:** S. QC west to ND, south to w. NC, w. SC, n. GA, c. AL, MS, c. AR, and e. OK. **Phen:** Mid Apr-mid May; Jul-Aug. **Syn:** = Ar, C, F, FNA26, G, IL, K1, K3, K4, Mi, Mo1, NE, NY, Pa, RAB, S, Tn, Va, W, WV, Wilbur (1963b). [NatureServe G5](#) (Secure).

Uvularia perfoliata Linnaeus. PERFOLIATE BELLWORT. **Hab:** Moist to fairly dry hardwood forests. **Dist:** S. NH, s. ON, c. OH, and s. IL, south to Panhandle FL and LA. **Phen:** Apr-early May; Jun-Aug. **Syn:** = Ar, C, ETx1, F, FNA26, G, K1, K3, K4, NE, NY, Pa, RAB, S, Tn, Va, W, WH3, WV, Wilbur (1963b). [NatureServe G5](#) (Secure).

Uvularia sessilifolia Linnaeus. STRAW-LILY, WILD-OATS, MERRYBELLS. **Hab:** Moist hardwood forests, on slopes and mainly in bottomlands. **Dist:** NS west to ND, south to Panhandle FL and n. LA and e. TX. **Phen:** Late Mar-early May; Aug-Oct. **Syn:** = Ar, C, ETx1, F, FNA26, IL, K1, K3, K4, Mi, Mo1, NE, NY, Pa, RAB, Tn, Va, W, WH3, WV, Wilbur (1963b); = *Oakesiella sessilifolia* (Linnaeus) S. Watson – S. [NatureServe G5](#) (Secure).

59. SMILACACEAE Ventenat 1799 (GREENBRIAR FAMILY) [in LILIALES]

A family of a single genus and about 220 species, widespread in tropical, subtropical, and temperate regions. References: Conran in Kubitzki (1998a); Holmes (2002b) in FNA26 (2002a); Judd (1998); Qi et al (2013).

Smilax Linnaeus 1753 (GREENBRIAR, CARRIONFLOWER, SMILAX)

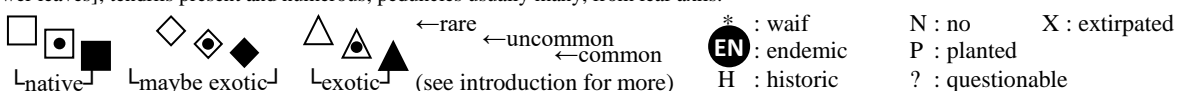

Contributed by Alan S. Weakley and Hannah Medford

A genus of about 220 species, woody vines and herbs, subcosmopolitan in temperate and tropical regions. Our deciduous species are a monophyletic group within *Smilax*, with a classic eastern North American/eastern Asian disjunction, and have been treated as section *Nemexia* or subgenus *Luiste* (Wilbur 2004, Fu et al. 2005); Li et al. (2011) found a complex phylogeny not easily reflected in a sectional taxonomy. *Smilax* berries and shoots provide important food sources for many wildlife species, including black bears (*Ursus americanus*). The clades shown in the key follow Qi et al. (2013). References: Bullard & Allen (2013); Coker (1944); Duncan (1967); Fu et al (2005); Godfrey (1988); Holmes (2002a) in FNA26 (2002a); Judd (1998); Li et al (2011); Li et al (2013); Mangaly (1968); Pennell (1916); Qi et al (2013); Sorrie (2014a); Wilbur (2003); Wilbur (2004); Wilder (2020).

Identification Notes: The carrionflowers or deciduous smilaxes (lead 1a) are sometimes mistaken for *Dioscorea* because of a superficial similarity. They can be readily distinguished even in vegetative condition by *Smilax* section *Nemexia* having 3 (-5) main veins, the 3 central rejoining at the leaf apex (vs. *Dioscorea* with 7-13 main veins), and secondary veins in a complex reticulate pattern (vs. *Dioscorea* with secondary veins forming simpler and largely perpendicular cross-connections between the primary veins). In the woody smilaxes (key lead 1b), the underground parts (while not easy or convenient to observe or collect) provide useful characters, used in the key and helpful (but not generally necessary for identification). "Tubers" are rounded, lumpy, and starch-filled thickenings (often borne in compound, rounded or elongate masses). "Rhizomes" are unthickened, straight underground stems, usually with swollen (but not tuberous) nodes. "Runners" are thinner, elongated rhizomes. "Rootstocks" are short, knotty underground stems, neither running nor tuberous. Coker (1944) remains a basic resource. Wilder (2020) provided a very valuable analysis of the morphology of *S. auriculata*, which is broadly applicable to the woody species of the genus.

- 1 Stem herbaceous, lacking prickles; ovules 2 per carpel; peduncles usually > 4 cm long; petioles 1-10 cm long; [section *Nemexia*]; [Clade C1].
 - 2 Plants erect, 0.2-1.0 m tall, even when well-developed with < 20 leaves [note that immature or depauperate individuals (nonflowering) of *S. pseudochina*, *S. herbacea*, *S. lasioneura*, and *S. pulverulenta* often have this aspect]; tendrils absent or rudimentary; peduncles usually few (usually 1-4), the lowest often from bract axils. *Smilax hugeri*
 - 2 Plants vine-like, climbing or sprawling, to 3 m tall, when well-developed with > 30 leaves [note that immature, nonflowering individuals may be much shorter and have fewer leaves]; tendrils present and numerous; peduncles usually many, from leaf axils.

Key to Map
Symbology:

59. SMILACACEAE

- 9 Leaves pale green and dull below; fruit dark blue, glaucous; peduncles (3-) 5-10× as long as the subtending petioles *Smilax lasioneura*
- 9 Leaves bright green and shiny beneath; fruit black, not glaucous; peduncles 1-2 (-3)× as long as the subtending petioles *Smilax pulverulenta*
- 1 Stem woody, usually with prickles; ovules 1 per carpel; peduncles usually < 3 cm long; petioles 0.1-2 cm long; [section *China*].
- 10 Stems and petioles tomentose, lacking prickles; leaves densely tomentose beneath; berries orangish-red, obpyriform, with an acutish beak; plant trailing or ascending, the stem rarely > 0.5 m long (with determinate growth); [Clade B4] *Smilax pumila*
- 10 Stems and petioles stellate-scurfy or glabrous, generally with prickles; leaves glabrous or papillate beneath; berries black, dark blue, dark red, or bright red, globose, subglobose, or ovoid, lacking a beak; plant climbing, ascending, or trailing, mature plants with stems generally well over 0.5 m long (with indeterminate growth).
- 11 Lower surfaces of leaves strongly white-glaucous; [Clade B5] *Smilax glauca*
- 11 Lower surfaces of leaves green (rarely very slightly glaucous).
- 12 Prickles of the larger stems abundant, thin and needle-like, shiny brown or black, colored fully (not “dipped” just at the tips) (smaller and upper stems often with few or no prickles); leaf margins often with minute, flattish, tooth-like projections (visible under 10× magnification); petioles 7-34 mm long; leaves with 5-7 primary veins that are noticeably impressed into the upper leaf surface; [Clade B2].
- 13 Leaves with basal lobes, pandurate to occasionally hastate; petioles 0.7-2.9 mm long; [Coastal Plain] *Smilax hispida* var. *australis*
- 13 Leaves with no lobes, oblong to ovate; petioles 0.7-3.4 mm long; [widespread] *Smilax hispida* var. *hispida*
- 12 Prickles of the larger stems fewer, broad-based and awl-like or catclaw-like, green, brown, or black on the tips (“dipped”); leaf margins either fully entire, or spinose as in *S. bona-nox* and *S. havenensis* (occasional marginal enations present on *S. rotundifolia*) petioles 5-22 mm long; leaves with 3-7 primary veins.
- 14 Margin of the leaf blade with a prominent marginal cartilaginous band (this appearing as a thickening, a visible vein, or an apparent revolute margin); berries with 1-3 seeds.
- 15 Inflorescence peduncle (stalk of the umbel) 11-65 mm long, > (1.5-) 2× as long as the subtending leaf petiole; stems (especially the lower) and prickles either brownish stellate-scurfy or glabrous; leaves semi-evergreen to evergreen and thin; berries usually with 1 seed; [Clade B5].
- *Smilax bona-nox* var. *bona-nox*
- 15 Inflorescence peduncle (stalk of the umbel) 1-17 mm long, about as long as or shorter than the subtending leaf petiole; stems and prickles glabrous; leaves evergreen and thick; berries usually with 2-3 seeds.
- 18 Leaf blades 4.5-6 (-8.5) cm long, 1.4-5.8 cm wide; prickles 1-4 mm long; secondary leaf veins prominently raised on lower surface; leaf blades various in shape, frequently broadened or auricled below the midpoint; [dry to moist habitats, e. NC south to s. FL, west to e. LA, Coastal Plain]; [Clade B5] *Smilax auriculata*
- 18 Leaf blades (5.2)7-13 cm long, 1.3-4 (-6) cm wide; prickles 6-12 mm long; secondary leaf veins not prominently raised on lower surface; leaf blades evenly oblong throughout (“laurel-like”); [pocosins, bogs, swamps, and other habitats, usually with saturated hydrology, NJ to s. FL, west to e. TX and se. OK, mainly Coastal Plain but also inland]; [Clade B4] *Smilax laurifolia*
- 14 Margin of the leaf blade thin, sometimes slightly revolute; berries with (1-) 2-4 seeds.
- 19 Margins of the leaves and the petioles often with minute, flattish, tooth-like projections; leaf blades 4.2-16 cm wide; leaf blades broadly ovate (< 1.5× as long as wide); berries blue-black to black; pedicel bases lacking prominent bracts; [a wide variety of upland and wetland habitats]; [clade B5] *Smilax rotundifolia*
- 19 Margins of the leaves and the petioles lacking minute, flattish, toothlike projections; leaf blades 1.5-4.8 cm wide; leaves lanceolate to ovate (> 1.5× as long as wide); berries black, or dull to bright red; pedicel bases with prominent ruffled bracts.
- 20 Leaves evergreen, mid-vein and petiole green; berries black to dull red; perianth green; [a wide variety of upland and wetland habitats]; [Clade B4] *Smilax smallii*
- 20 Leaves deciduous, often with a red mid-vein and petiole; berries bright red; perianth brownish-yellow [swamp forests, bogs, often where submersed for at least part of the year]; [clade B5] *Smilax walteri*

Smilax auriculata Walter. DUNE GREENBRIAR. **Hab:** Dunes on barrier islands, maritime scrub and thickets, dry sandy openings in maritime forests or sandhills (northward, as in the Carolinas, limited to sites near the coast). **Dist:** E. NC (Dare County) south to s. FL and west to e. LA; Bahama Islands. **Phen:** May-Jul; Oct-Nov (and persisting). **Syn:** = Bah, FNA26, GW1, K1, K3, K4, RAB, S, WH3, Bullard & Allen (2013), Coker (1944), Judd (1998); > *Smilax lata* Small. **NatureServe** G4? (Apparently Secure).

Smilax bona-nox Linnaeus var. *bona-nox*. STRETCHBERRY, FRINGED GREENBRIAR, CATBRIAR, TRAMP'S-TROUBLE. **Hab:** Dry to mesic forests and woodlands, bottomland and riparian forests, bluffs, hardwood flatwoods, pine flatwoods, prairies, old fields, fencerows, pastures, roadsides. **Dist:** MD and MO south to s. FL and TX; also in e. and s. Mexico. **Phen:** Late Apr-May; Sep-Nov. **Tax:** The Mexican material is provisionally assigned here; study is needed. **Syn:** = K3, K4, Coker (1944), Sorrie (2014a); < *Smilax bona-nox* – C, ETx1, FNA26, G, GW1, K1, Meso6, Mo1, NcTx, RAB, S, Tn, Tx, Va, W, WH3, Bullard & Allen (2013), Judd (1998); > *Smilax bona-nox* Linnaeus var. *bona-nox* – F, II; > *Smilax bona-nox* var. *exauriculata* Fernald – F; > *Smilax bona-nox* var. *hastata* (Willdenow) A.L.P.P. de Candolle – F; > *Smilax bona-nox* var. *hederaefolia* (Beyrich) Fernald – F, II. **NatureServe** G5TNR (Not Yet Ranked).

Smilax glauca Walter. WHITELEAF GREENBRIAR, WILD SARAPARILLA. **Hab:** Dry to mesic forests and woodlands, bottomland and riparian forests, bluffs, hardwood flatwoods, pine flatwoods, prairies, old fields, fencerows, pastures, roadsides; uncommon in wetlands. **Dist:** NJ, c. PA, OH, IN, MO, and KS, south to c. peninsular FL and TX, and also in e. and s. Mexico. **Phen:** Late Apr-early Jun; Sep-Nov (and persisting). **Comm:** A distinctive *Smilax* with pale (glaucous) lower leaf surface. **Syn:** = Ar, C, ETx1, FNA26, GW1, K3, K4, Meso6, Mo1, NcTx, NE, NY, Pa, RAB, S, Tn, Va, W, WH3, Bullard & Allen (2013), Coker (1944), Judd (1998); > *Smilax glauca* var. *glauca* – F, G, II, K1, Tx, WV; > *Smilax glauca* var. *leuophylla* Blake – F, G, II, K1, Tx, WV.

Smilax hispida Rafinesque var. *australis* J.B. Norton. SOUTHERN BRISTLY GREENBRIAR. **Hab:** Swamps, rich moist or dry forests and woodlands. **Dist:** E. NC south to s. FL, west to e. TX. **Phen:** Apr-May. **Comm:** Under study by H. Medford. **Syn:** = S, Coker (1944); = *Smilax hispida* Rafinesque – Tx; = *Smilax tamnoides* Linnaeus var. *tamnoides* – F; < *Smilax hispida* Rafinesque – K3, K4, RAB, Wilbur (2003); < *Smilax tamnoides* Linnaeus – ETx1, FNA26.

Smilax hispida Rafinesque var. *hispida*. BRISTLY GREENBRIAR, HELLFETTER, CHINAROOT, CHANEYROOT. **Hab:** Bottomland, riparian, and mesic upland forests, especially along brownwater rivers, and in other situations with relatively high pH and nutrients. **Dist:** CT, NY, MN, and NE south to GA and ne. TX. **Phen:** Apr-May. **Tax:** Wilbur (2003) discusses the complicated nomenclatural problems involving this plant and concludes that *S. hispida* Rafinesque is the correct name. Infrataxa sometimes recognized in the past (see synonymy) need critical examination. Var. *australis* J.B. Norton, with auriculate or more usually pandurate leaves, does seem to be largely or completely limited to the Coastal Plain from e. NC southwards. **Comm:** When the whole plant is available (often not true in herbarium specimens), the species (both varieties) is easily distinguished from our other taxa by the usually abundant presence of dark bristles on the stems. **Syn:** = S, Coker (1944); = *Smilax tamnoides* var. *hispida* (Muhlenberg) Fernald – F, II; <

59. SMILACACEAE

127

Smilax hispida Rafinesque – Ar, C, G, K3, K4, Mi, Mo1, NE, NY, Pa, RAB, Va, WV, Wilbur (2003); < *Smilax tamnoides* Linnaeus – ETx1, FNA26, GW1, K1, NcTx, Tn, W, WH3, Bullard & Allen (2013), Judd (1998), misapplied.

Smilax hugeri (Small) J.B. Norton ex Pennell. HUGER'S CARRIONFLOWER. **Hab:** Moist deciduous forests. **Dist:** S. NC and e. TN south through SC, GA, and AL to Panhandle FL. **Phen:** Mar-Apr; Aug-Oct. **Syn:** = FNA26, K1, K3, K4, Tn, W, Judd (1998), Mangaly (1968), Pennell (1916); = *Nemexia hugeri* Small – S; = *Smilax ecirrhata* (Engelmann ex Kunth) S. Watson var. *hugeri* (Small) H.E. Ahles – RAB; < *Smilax ecirrhata* – WH3; < *Smilax herbacea* Linnaeus – Li et al (2013).

Smilax lasioneura Hooker. MIDWESTERN CARRIONFLOWER. **Hab:** Moist deciduous forests, hammocks, bluff forests, pine-oak hickory submesic forests and woodlands, rich beech-magnolia forests on lower slopes, perhaps only over mafic or calcareous rocks. **Dist:** ON and MT south to w. VA (?), w. NC, Panhandle FL, MS, OK, and CO. **Phen:** Apr-May; Aug-Sep. **Tax:** Material from VA and NY is ambiguous. **Syn:** = Ar, ETx1, F, FNA26, K1, Mi, NY, Tn; = *Smilax herbacea* var. *lasioneura* (Hooker) A.L.P. de Candolle – C, G; = *Smilax herbacea* var. *lasioneuron* – Tx; = *Smilax lasioneuron* Hooker – Il, K3, K4, Mo1, WH3, Judd (1998), orthographic variant; > *Nemexia lasioneuron* (Hooker) Rydberg – S; > *Nemexia tenuis* (Small) Small; < *Smilax herbacea* Linnaeus – Li et al (2013); > *Smilax lasioneuron* Hooker – Pennell (1916), orthographic variant; > *Smilax tenuis* Small – Pennell (1916).

Smilax laurifolia Linnaeus. BLASPHEME-VINE, BAMBOO-VINE, LAUREL-LEAF GREENBRIAR. **Hab:** Pocosins, swamp forests, wooded seeps and bogs, swamps, and other wetlands, often with groundwater influence. **Dist:** Primarily a Southeastern Coastal Plain species, from NJ south to s. FL, west to w. TN, AR, and e. TX, but with substantial distribution inland in the "hard-rock" provinces; Bahamas and Cuba. **Phen:** Jul-Aug; Sep-Oct of the second year (and persisting). **ID Notes:** This *Smilax* is especially vigorous and viciously armed, larger stems black and to over 1 cm in diameter, beset with stout prickles approaching 1 cm in length. **Syn:** = Ar, Bah, C, ETx1, F, FNA26, G, GW1, K1, K3, K4, RAB, S, Tn, Tx, Va, W, WH3, Bullard & Allen (2013), Coker (1944), Judd (1998). [NatureServe G5](#) (Secure).

Smilax pulverulenta Michaux. DOWNY CARRIONFLOWER. **Hab:** Moist to dry deciduous forests, especially over mafic or calcareous rocks. **Dist:** Se. NY, se. and sc. PA, IN, MO, and e. KS south to NC, TN, and AR. **Phen:** May-Jun; Aug-Oct. **Syn:** = Ar, F, FNA26, Il, K1, K3, K4, Mo1, NY, Pa, Va, W, WV, Judd (1998), Mangaly (1968), Pennell (1916); = *Nemexia pulverulenta* (Michaux) Small – S; = *Smilax herbacea* var. *pulverulenta* (Michaux) A. Gray – C, G, RAB; < *Smilax herbacea* Linnaeus – Li et al (2013).

Smilax pumila Walter. SARSAPARILLA-VINE, DWARF SMILAX. **Hab:** Mesic to dryish hammocks and bluffs, sandy forests along streams, northward primarily in maritime-influenced mainland forests. **Dist:** Ne. SC (within a few hundred meters of Brunswick County, NC) to c. peninsular FL and west to TX. It occurs on Colkins Neck, along the NC-SC border, in maritime-influenced forests with southern affinities, now largely destroyed by golf-course development. **Phen:** Oct-Nov; Jan-Apr (and persisting). **Comm:** This unusual *Smilax* is sometimes cultivated as an ornamental ground-cover. **Syn:** = Ar, ETx1, FNA26, K1, K3, K4, RAB, S, Tx, WH3, Bullard & Allen (2013), Coker (1944), Judd (1998). [NatureServe G5?](#) (Secure).

Smilax rotundifolia Linnaeus. COMMON GREENBRIAR, BULLBRIAR, HORSEBRIAR. **Hab:** Dry-mesic to mesic forests and woodlands, bottomland and riparian forests, swamps, pond margins, bluffs, flatwoods, prairies, old fields, fencerows, pastures, roadsides. **Dist:** NS, s. ON, nc. IL, and c. MO south to n. FL and e. TX. **Phen:** Apr-May; Sep-Nov (and persisting). **Syn:** = Ar, C, ETx1, F, FNA26, G, GW1, Il, K1, K3, K4, Mi, Mo1, NcTx, NE, NY, Pa, RAB, S, Tx, Va, W, WH3, WV, Bullard & Allen (2013), Coker (1944), Judd (1998); > *Smilax rotundifolia* Linnaeus var. *crenulata* Small & A.A. Heller; > *Smilax rotundifolia* var. *quadrangularis* (Muhlenberg ex Willdenow) Wood. [NatureServe G5](#) (Secure).

Smilax smallii Morong. JACKSON-BRIAR. **Hab:** Bottomland and riparian forests, upland forests, hardwood flatwoods, pine flatwoods, wooded seeps, stream banks, roadsides. **Dist:** Ne. NC (se. VA?) to c. peninsular FL, west to s. AR and e. TX, primarily on the Coastal Plain. **Phen:** Jun-Jul; Apr-Jun of the next year. **Tax:** It has been suggested that *S. maritima* Feay ex Alph. Wood is the correct name for this species, predating *S. smallii* (1861 vs. 1894). The description of *S. maritima*, its geography, and its context relative to other species in Wood (1861) makes clear, however, that it is referring to *S. auriculata*, and no type or lectotype is available to fix its meaning contrary to a description inappropriate for *S. smallii* ("lvs. lanceolate, auriculate-hastate"). **Syn:** = Ar, ETx1, FNA26, G, GW1, K1, K3, K4, NcTx, RAB, Tx, W, WH3, Bullard & Allen (2013), Judd (1998); = *Smilax lanceolata* Linnaeus – S, Coker (1944), misapplied; = *Smilax maritima* Feay ex Alph. Wood, misapplied; > *Smilax cinnamomifolia* Small. [NatureServe G5?](#) (Secure).

Smilax walteri Pursh. CORAL GREENBRIAR, RED-BERRIED SWAMP SMILAX. **Hab:** Swamp forests, bogs, wooded seeps, often where submersed for at least part of the year. **Dist:** NJ south to c. peninsular FL and west to TN, AR, and TX. **Phen:** Late Apr-May; Sep-Nov (and persisting). **ID Notes:** In its relatively narrow leaves, *S. walteri* can resemble *S. smallii*; *S. walteri* has a thicker-textured leaf, and is almost always rounded at the base rather than cuneate. **Syn:** = Ar, C, ETx1, F, FNA26, G, GW1, K1, K3, K4, RAB, S, Tn, Tx, Va, W, WH3, Bullard & Allen (2013), Coker (1944), Judd (1998). [NatureServe G5](#) (Secure).

60. LILIACEAE A.L. de Jussieu 1789 (LILY FAMILY) [in LILIALES]

As here interpreted narrowly, the Liliaceae constitutes about 11 genera and 550 species, of the Northern Hemisphere. Subfamilial classification follows Kim & Kim (2018). There has been much investigation and re-interpretation of evidence regarding the upper-level taxonomy of the Liliales, with strong suggestions that the broad Liliaceae recognized by Cronquist (1981) is artificial and polyphyletic. Cronquist (1981) himself concurs, at least to a degree: "we still await a comprehensive reorganization of the lilies into several families more comparable to other recognized families of angiosperms." Dahlgren & Clifford (1982) and Dahlgren, Clifford, & Yeo (1985) synthesized an early phase in the modern revolution of monocot taxonomy. Since then, additional research, especially molecular (Duvall et al. 1993, Chase et al. 1993, Bogler & Simpson 1995, and many others more recently), has strongly validated the general lines (and many details) of Dahlgren's arrangement. References: Angiosperm Phylogeny Group (1998, 2003, 2009); Chen et al (2013); Kim & Kim (2018); Peruzzi (2016); Tamura in Kubitzki (1998a); Utech (2002a) in FNA26 (2002a).

Our "liliaceous" genera (members of orders placed in the Liliales) are therefore divided as shown below, largely following recent molecular analyses. [Bracketed families] are those not recently treated within the very broad interpretation of Cronquist and others supporting a very broad Liliaceae; all others have been at times in recent decades included in the "Liliaceae".

ALISMATALES

31. TOFIELDIACEAE: *Harperocallis*, *Pleea*, *Tofieldia*, *Triantha*.

DIOSCOREALES

44. NARTHECIACEAE: *Alettris*, *Lophiola*, *Narthecium*.

[45. BURMANNIACEAE: *Apteris*, *Burmanna*.]

[46. DIOSCOREACEAE: *Dioscorea*.]

PANDANALES

[49. STEMONACEAE: *Croomia*.]

LILIALES

53a. TRILLIACEAE: *Trillium*. (or included in MELANTHIACEAE)

53b. XEROPHYLLACEAE: *Xerophyllum*. (or included in MELANTHIACEAE)

53c. HELONIADACEAE: *Helonias*. (or included in MELANTHIACEAE)

53d. CHIONOGRAPHIDACEAE: *Chamaelirium*. (or included in HELONIADACEAE or further in MELANTHIACEAE)

53e. MELANTHIACEAE: *Amianthium*, *Anticlea*, *Schoenocaulon*, *Stenanthium*, *Melanthium*, *Veratrum*, *Toxicoscordion*, *Zigadenus*.

55. ALSTROEMERIACEAE: *Alstroemeria*.

56. COLCHICACEAE: *Colchicum*, *Uvularia*.

59. SMILACACEAE: *Smilax*.

61. LILIACEAE: *Clintonia*, *Erythronium*, *Lilium*, *Medeola*, *Prosartes*, *Streptopus*, *Tulipa*.

ASPARAGALES

[62. ORCHIDACEAE: *Aplectrum*, *Arethusa*, *Aspidogyne*, *Bletilla*, *Calopogon*, *Cleistisopsis*, *Corallorhiza*, *Cyclopogon*, *Cypripedium*, *Dactylorhiza*, *Encyclia*, *Epidendrum*, *Epipactis*, *Eulophia*, *Galearis*, *Goodyera*, *Habenaria*, *Hexalectris*, *Isotria*, *Liparis*, *Listera*, *Malaxis*, *Mesadenus*, *Oeceoclades*, *Orthochilus*, *Platanthera*, *Pogonia*, *Ponthieva*, *Sacoila*, *Spiranthes*, *Tipularia*, *Triphora*, *Zeuxine*.]

67. HYPOXIDACEAE: *Hypoxis*.

[71. IRIDACEAE: *Alophia*, *Calydorea*, *Crocus*, *Crocasmia*, *Gladiolus*, *Herbertia*, *Iris*, *Nemastylis*, *Sisyrinchium*.]

73c. HEMEROCALLIDACEAE: *Hemerocallis*. (or included in ASPHODELACEAE [see Applequist 2014])

74a. ALLIACEAE: *Allium*, *Nothoscordum*, *Ipheion*. (or included in AMARYLLIDACEAE)

74b. AMARYLLIDACEAE: *Crinum*, *Galanthus*, *Habranthus*, *Hippeastrum*, *Hymenocallis*, *Leucojum*, *Lycoris*, *Narcissus*, *Sternbergia*, *Zephyranthes*.

75a. ASPARAGACEAE: *Asparagus*.

75b. RUSCACEAE: *Aspidistra*, *Convallaria*, *Liriope*, *Maianthemum*, *Nolina*, *Ophiopogon*, *Polygonatum*, *Sansevieria*. (or included in a very broad ASPARAGACEAE)

75c. AGAVACEAE: *Agave* (including *Manfreda*), *Camassia*, *Chlorophytum*, *Hosta*, *Schoenolirion*, *Yucca*. (or included in a very broad ASPARAGACEAE)

75d. THEMIDACEAE: *Dichelostemma*. (or included in a very broad ASPARAGACEAE)

75e. HYACINTHACEAE: *Hyacinthoides*, *Hyacinthus*, *Muscari*, *Ornithogalum*. (or included in a very broad ASPARAGACEAE)

60. LILIACEAE

129

- 1 Leaves basal; flowers on a leafless scape; tepals yellow or white. *Erythronium*
- 1 Leaves on a stem; flowers not scapose; tepals orange, red, rose, yellow, or white.
 - 3 Leaves whorled at 1 node or more.
 - 4 Leaves occurring at several nodes, these variously whorled and/or alternate; flowers orange, red, or yellow; fruit a green to tan capsule; [subfamily *Lilioideae*; tribe *Lilieae*]..... *Lilium*
 - 4 Leaves occurring in a single whorl, with fertile plants with a second whorl of leaflike bracts subtending the flowers; flowers yellow; fruit a blue berry; [subfamily *Medeoloideae*]..... *Medeola*
 - 3 Leaves alternate at all nodes. *Lilium*

Erythronium Linnaeus 1753 (TROUT LILY)

A genus of about 25 species, north temperate and subarctic, of North America and Eurasia (especially diverse in w. North America). References: Allen & Robertson (2002) in FNA26 (2002a); Mathew (1992); Parks & Hardin (1963); Tamura in Kubitzki (1998a).

Identification Notes: Stolons are white shoots produced from the bulb. Most run horizontally, either underground or along the ground surface but beneath leaf litter. Flowering individuals often produce no stolons. The stolon characters in the key below are those of non-flowering individuals and refer to horizontal stolons only.

- 1 Perianth white (sometimes pinkish or bluish). *Erythronium albidum*
- 1 Perianth yellow.
 - 5 Capsule distinctly beaked at the apex; petals (inner tepals) with well-developed auricles at the base, each encircling a filament. *Erythronium rostratum*
 - 5 Capsule truncate, rounded, or apiculate at the apex; petals (inner tepals) with small auricles at the base, not encircling a filament. *Erythronium americanum* ssp. *harperi*

Erythronium albidum Nuttall. WHITE TROUT LILY, BLONDE LILIAN. **Hab:** Rich, mesic forests, over calcareous substrates or in very nutrient-rich alluvial soils. **Dist:** S. ON west to MN, south to n. VA, n. AL, MS, MO, OK, and ne. TX. Reports from nw. GA are erroneous (M. Medley, 2019, pers. comm.). **Phen:** Mar-May. **Syn:** = Ar, C, ETx1, Il, K1, K3, K4, Mi, Mo1, NeTx, NE, NY, Pa, S, Tn, Tx, Va, W, WV, Mathew (1992); = *Erythronium albidum* var. *albidum* – F, G. **NatureServe G5** (Secure).

Erythronium americanum* Ker Gawler ssp. *harperi (W. Wolf) C.R. Parks & Hardin. HARPER'S TROUT LILY. **Hab:** Moist forests. **Dist:** Ne. TN and nc. TN south to extreme se. TN, nw. GA, and nc. AL. **Syn:** = FNA26, GW1, K1, K3, K4, Mathew (1992), Parks & Hardin (1963); < *Erythronium americanum* – S, Tn. **NatureServe G5T4T5** (Apparently Secure).

Erythronium rostratum W. Wolf. BEAKED TROUT LILY. **Hab:** Moist bottomland or slope forests. **Dist:** C. TN, MO, and se. KS, south to c. AL, wc. LA, se. OK, and ne. TX. **Phen:** Feb-Apr. **Syn:** = ETx1, FNA26, GW1, K1, K3, K4, Mo1, Tn, Tx, Mathew (1992), Parks & Hardin (1963); < *Erythronium americanum* – S.

Lilium Linnaeus 1753 (LILY)

A genus of about 110 species, of temperate northern hemisphere (especially e. Asia). Many taxonomic problems remain in this genus of showy ornamentals. References: Adams & Dress (1982); Henry (1946); Roane & Henry (1980); Skinner & Sorrie (2002); Skinner (2002) in FNA26 (2002a); Tamura in Kubitzki (1998a); Wherry (1946).

Unkeyed waifs: *Lilium regale*

- 2 Flowers white; leaves narrowly linear or lanceolate; [exotic]. *Lilium longiflorum*
- 2 Flowers orange or yellow; leaves lanceolate, oblanceolate, or obovate; [native].
 - 4 Flowers erect, facing upward; tepals clawed. *Lilium catesbyi*
 - 4 Flowers nodding or declined, facing downward or to the side; tepals narrowed to the base, but not clawed.
 - 7 Leaves oblanceolate to obovate, alternate and whorled, in many plants 50% or more of nodes bearing a single leaf; flowers 1-4 (rarely more), nodding to pendant, fragrant. *Lilium michauxii*
 - 7 Leaves lanceolate or narrowly elliptic, not broader distally, alternate and whorled, in most plants 10-30% of nodes bearing a single leaf; flowers 1-30+, oriented variously, not fragrant.
 - 10 Style reddish, more-or-less the same color as the tepals; [e. OH, e. KY, e. TN, and nw. GA westward and northwestward, west of the Blue Ridge] *Lilium michiganense*
 - 10 Style pale green, strongly contrasting with the tepals; [collectively widespread].

- 11 Leaves 7-26 cm long, oriented horizontally, with the tips downward-arching; leaf whorls 6-24; plants 1.2-2.8 m tall; inflorescences (1-) 5-22 flowered, tepals orange to reddish; [Mountains, Piedmont, and Coastal Plain] *Lilium superbum*
- 11 Leaves 2-16 cm long, ascending or more or less horizontal, but with the tips not downward-arching; leaf whorls 1-12; plants 0.6-2.0 (-2.5) m tall; inflorescences 1-4 (-12) flowered, tepals yellow to orange (to dusky red); [Coastal Plain].
..... *Lilium iridollae*

Lilium catesbyi Walter. PINE LILY, CATESBY'S LILY, LEOPARD LILY. **Hab:** Pine savannas, sandhill seeps. **Dist:** Se. NC south to s. FL and west to e. LA, on the Coastal Plain. **Phen:** Mid Jun-Sep (-Nov); Sep-Nov. **Tax:** Traditionally spelled '*catesbaei*', this is necessarily corrected to '*catesbyi*' under provisions of the Code. **Syn:** = *Lilium catesbaei* Walter – GW1, S, Va, WH3; > *Lilium catesbaei* ssp. *asperellum* Wherry – K1, K4, misspelling; > *Lilium catesbaei* ssp. *asprellum* – Wherry (1946); > *Lilium catesbaei* ssp. *catesbaei* – K1, K4; > *Lilium catesbaei* ssp. *longii* (Fernald) Wherry – Wherry (1946); > *Lilium catesbaei* ssp. *typicum* – Wherry (1946); > *Lilium catesbaei* Walt. var. *asperellum* Wherry; > *Lilium catesbaei* var. *catesbaei* – RAB; > *Lilium catesbaei* var. *longii* Fernald – C, F, G, RAB.

Lilium iridollae M.G. Henry. PANHANDLE LILY, POT-O'-GOLD LILY. **Hab:** Bogs, acidic organic soils along small blackwater streams and drains. **Dist:** Panhandle FL west to s. AL and s. MS. **Syn:** = FNA26, GW1, K4, WH3; < *Lilium iridollae* M.G. Henry – K1. **NatureServe** G3 (Vulnerable).

* ***Lilium longiflorum*** Thunberg. EASTER LILY, NOVEMBER LILY. **Hab:** Fields and other disturbed areas, persistent and rarely spreading from cultivation. **Dist:** Native of e. Asia (s. Japan and Ryukyu Islands). **Syn:** = FNA26, K1, K3, K4. **NatureServe** GNR (Not Yet Ranked).

Lilium michauxii Poir. CAROLINA LILY, MICHAUX'S LILY. **Hab:** Dry upland forests, ridges, slopes, and ridges. **Dist:** S. VA, e. TN, n. AL, c. MS, and e. LA south to s. SC, Panhandle FL, s. AL, s. MS, s. LA, and e. TX. **Phen:** Jul-Aug; Sep-Oct. **Syn:** = C, ETx1, F, FNA26, G, GW1, K1, K3, K4, Tn, Tx, Va, W, WH3, WV, Adams & Dress (1982), Skinner & Sorrie (2002), Wherry (1946); = *Lilium carolinianum* Michaux – S; < *Lilium michauxii* Poir. – RAB, (also see *L. pyrophilum*).

Lilium michiganense Farwell. MICHIGAN LILY. **Hab:** Wet prairies and calcareous hardwood flatwoods. **Dist:** ON and MN south to e. TN, KY, nw. GA, AL, AR, and e. OK. **Phen:** May-Jul. **Comm:** Leaf margins with whitish, elongate (longer than wide) enations. **Syn:** = Ar, C, F, FNA26, Il, K1, K3, K4, Mi, Mo1, NY; = *Lilium canadense* Linnaeus ssp. *michiganense* (Farwell) Boivin & Cody; < *Lilium superbum* Linnaeus – G.

* ***Lilium regale***. ROYAL LILY. **Dist:** Native of e. Asia. **Syn:** = K4.

Lilium superbum Linnaeus. TURK'S-CAP LILY, LILY-ROYAL, SUPERB LILY. **Hab:** Cove forests and moist forests, moist ravines, blackwater stream swamps, Coastal Plain bogs. **Dist:** MA and s. NY south to ne. NC, Panhandle FL, and c. MS, southward primarily in the Appalachians, but extending across the Piedmont to the Coastal Plain of VA and ne. NC, and with a similarly odd extension south of the southern terminus of the Appalachians into the Coastal Plain of GA, w. FL, AL, and MS. **Phen:** Jul-Aug; Sep-Oct. **Tax:** Isolated populations in the southeastern Coastal Plain are not straightforward matches with typical *L. superbum* of the Appalachians and need additional investigation. For instance, the plants of blackwater swamps of se. VA and ne. NC are very narrow-leaved and yellow-tepaled; this form, atypical in habitat, range, and morphology has been referred to speculatively as "*Lilium* species 1". Further study is needed to determine whether it is a distinct taxon (species, or variety of *L. superbum*) or only a form. Other taxa from Panhandle FL and s. GA were named by Roane & Henry (1980) and warrant consideration as having taxonomic merit. **Syn:** = Ar, C, F, FNA26, GW1, Il, K1, K3, K4, Mo1, NE, NY, Pa, RAB, S, Tn, Va, W, WH3, WV, Adams & Dress (1982), Skinner & Sorrie (2002), Wherry (1946); > *Lilium fortunofulgidum* Roane & J.N. Henry – Roane & Henry (1980), invalid name (no type designation); > *Lilium gazarubrum* Roane & J.N. Henry – Roane & Henry (1980); > *Lilium maryhenryae*, valid name per ICN; > *Lilium mary-henryae* Roane & J.N. Henry – Roane & Henry (1980), orthographic variant; < *Lilium superbum* Linnaeus – G; > *Lilium superbum* Linnaeus – Roane & Henry (1980).

Medeola Linnaeus 1753 (INDIAN CUCUMBER-ROOT)

A monotypic genus, an herb of eastern North America. References: Tamura in Kubitzki (1998a); Utech (2002a) in FNA26 (2002a).

Identification Notes: *Medeola* is sometimes mistaken (when sterile) for *Isotria*; *Medeola* has a wiry stem, floccose-pubescent, *Isotria* a fleshy, glabrous stem.

Medeola virginiana Linnaeus. INDIAN CUCUMBER-ROOT. **Hab:** Moist forests, usually with acidic soils. **Dist:** QC and ON west to MN, south to GA, Panhandle FL and LA. **Phen:** Mid Apr-mid Jun; Sep-Oct. **Comm:** The tuber is white, crisp, tasting cucumber-like, usually about 5 cm long and 5 mm in diameter. Bell (1974) describes patterns of vegetative growth. Flowering plants have a second, smaller whorl of leaves; the flowers are borne on recurved pedicels beneath the top whorl of leaves. In fruit, however, the pedicels are ascending or erect, bringing the fruits above the top

60. LILIACEAE

whorl. When the berries are ripe, the leaves of the upper whorl become scarlet at the base, presumably acting as an attractant to frugivorous animals. **Syn:** = C, F, FNA26, G, GW1, II, K1, K3, K4, Mo1, NE, NY, Pa, RAB, S, Tn, Va, W, WH3, WV. [NatureServe G5](#) (Secure).

61. ORCHIDACEAE A.L. de Jussieu 1789 (ORCHID FAMILY) [in ASPARAGALES]

Scott G. Ward & Alan S. Weakley

A family of about 800 genera and 19,000 species, perennial (rarely annual), mycotrophic herbs (many epiphytic) and succulent-stemmed vines. References: Brown (2003); Brown (2020); Correll (1937); Correll (1950); Homoya (1993); Luer (1972); Luer (1975); Pridgeon et al (1999a); Pridgeon et al (1999b); Pridgeon et al (1999c); Romero-González et al (2002) in FNA26 (2002a); Schuiteman & Chase (2015).

Identification Notes: Flowering plants are necessary for use of the key to genera. We attempt to be as specific as possible in our application of orchid morphology terms. Use of the term "flowers" refers to the entire flowering parts; however, we refer to specific portions of the flowers when necessary. Perianth segments refer collectively to the sepals and petals, which sometimes differ from one another. When crucial for identification, we also specifically refer to the dorsal sepals or lateral sepals. The lip refers to the labellum, which is a highly specialized median petal often modified for insect pollination, and is often a distinct feature used in orchid identification. Given the distinct nature (and function!) of the labellum, we also refer specifically to portions of this structure (e.g. middle lobe, lateral lobe) when applicable. Resupination in epiphytic orchids refers to the orientation of the flower in accordance with its main stem axis, thus while some flowers of epiphytic species may appear upright to the viewer (e.g. *Epidendrum nocturnum*), these flowers are technically resupinate given their opposing orientation to the main stems. Conversely, in some species (e.g. *Prosthechea cochleata*), the labellum is oriented upmost on the non-resupinate flower. For epiphytic orchids bearing pseudobulbs, inflorescences originate either basally (from the base of pseudobulb) or terminally (peduncles originate from the apex of pseudobulb). Pseudobulbs are non-root, vegetative structures often appearing as thickened basal structures on stems. Pseudobulbs are common on many species of orchid and their shape, level of compression, and size are often diagnostic, especially when plants are not flowering.

- 1 Plant epiphytic, growing on the branches or trunks of trees in swamps or hammocks (rarely epilithic). *Epidendrum*
 1 Plant terrestrial, growing on soil. **Key to terrestrial orchids**

Key to terrestrial orchids - Key to Orchidaceae

- 1 Leaves absent at flowering, or with a solitary leaf with a purplish undersurface withering at about the time of flowering.
 2 Flowers with a spur. *Tipularia discolor*
 2 Flowers without a spur.
 4 Flowers white, the lip, sepals, and petals all predominantly white. *Spiranthes*
 4 Flowers pink, greenish, yellowish, or purplish, the lip sometimes white or marked with white, the sepals and petals colored.
 8 Lip with 2 fleshy keels near the base; pollinia 4; plants holomycotrophic (without chlorophyll) and never with leaves *Corallorhiza*
 8 Lip with 3-7 keels near the base or extending most of the length of the lip; pollinia 4 or 8; plants either holomycotrophic (without chlorophyll) and never with leaves, or with a plicate winter leaf withering shortly before flowering.
 9 Plants with a plicate winter leaf withering shortly before flowering (the withered remnant usually detectable); veins of the petals and sepals not strikingly different in color than the intervein areas; lip with 3 ridges; pollinia 4..... *Aplectrum hyemale*
 9 Plants never with leaves, holomycotrophic (without chlorophyll); veins of the petals and sepals strikingly different in color than the intervein areas; lip with 5-7 ridges; pollinia 8..... *Hexaletris*
 1 Leaves present at flowering (*Cleistesopsis* with a foliaceous bract at the summit of the stem).
 10 Plants with evident, above-ground pseudobulbs, sometimes enclosed by sheaths. *Malaxis*
 10 Plants without above-ground pseudobulbs (either absent or subterranean).
 20 Leaf solitary.
 21 Leaf basal.
 22 Flower with a spur. *Platanthera*
 22 Flower without a spur.
 25 Flowers relatively large, primarily pink, purple, or white; flowers arranged in loosely arranged racemes *Calopogon*
 25 Flowers relatively small, whitish; flowers arranged in densely (and sometimes also spirally) arranged spikes. *Spiranthes*
 21 Leaf cauline.
 28 Flowers in spikes or racemes, 5-many, reddish, yellowish, or greenish..... *Platanthera*
 28 Flower solitary (-4), pink (rarely nearly white); [subfamily *Vanilloideae*; tribe *Pogonieae*].
 29 Sepals brown to purple, linear or narrowly oblanceolate, 3-6.5 cm long, about 5 mm wide; leaf coriaceous..... *Cleistesopsis*
 29 Sepals pink (rarely white), elliptic or oblanceolate, 1.3-2.7 cm long, 3-11 mm wide; leaf herbaceous *Pogonia ophioglossoides*
 20 Leaves 2-many.
 30 Lip inflated, pouch-like or slipper-like, 2-6 cm long..... *Cypripedium*
 30 Lip not inflated, or if so, then 0.3-1.1 cm long.
 31 Leaves cauline.
 35 Leaves whorled, terminating the stem; [subfamily *Vanilloideae*; tribe *Pogonieae*]..... *Isotria*
 35 Leaves alternate or opposite, not terminating the stem.
 36 Leaves 2, opposite, near the middle of the stem..... *Neottia*
 36 Leaves (2-) 3-many, alternate, variously distributed on the stem.

 39 Distal portion of lip uniformly yellow; leaves linear or narrowly lanceolate, 1-8 cm long..... *Zeuxine strateumatica*
 38 Lip with a spur; leaves linear, lanceolate, or narrowly elliptic, 5-40 cm long (at least the larger > 5 cm long, except in *Aspidogyne*, with lanceolate to ovate leaves 1.5-6.5 cm long).
 40 Leaves 1.5-6.5 cm long, with inflated tubular sheaths; plants from creeping rhizomes..... *Aspidogyne querceticola*
 40 Leaves 5-40 cm long, sessile; plants from fleshy or fusiform roots.
 41 Lip divided into 3 linear divisions, the divisions not further divided, fringed, or eroded *Habenaria*
 41 Lip not divided into 3 divisions, or divided into 3 divisions but the divisions not linear.
 *Platanthera*
 31 Leaves basal (sometimes with bladeless sheaths upward on the stem).
 43 Leaves plicate.
 44 Lip oriented upward (not resupinate); flowers pink to white..... *Calopogon*
 44 Lip oriented downward (resupinate); flowers greenish, purplish-brown, maroon or yellowish.
 *Orthochilus ecristatus*
 43 Leaves smooth, often creased at the midrib, but not plicate.
 46 Lip with a spur.
 48 Flowers bicolored, the lip white, the sepals and petals pink; leaves 2..... *Galearis spectabilis*
 48 Flowers not bicolored, the lip, petals, and sepals similarly colored; leaves 2-5
 49 Lip deeply divided into 3 linear segments; leaves 3-5..... *Habenaria*
 49 Lip entire; leaves 2..... *Platanthera*
 46 Lip without a spur.
 50 Leaf blade or leaves ascending.
 *Spiranthes*
 50 Leaf blades more-or-less horizontally oriented, flat against the ground or 1-2 cm above it.
 53 Lip oriented upward (flowers not resupinate).
 *Ponthieva*
 53 Lip oriented downward (flowers resupinate).
 56 Leaves with prominent white or pale green variegation on midrib and/or veins; [subtribe *Goodyerinae*]..... *Goodyera*
 56 Leaves without prominent variegation; [subtribe *Spiranthinae*].
 *Spiranthes*

Aplectrum (Nuttall) Torrey 1826 (PUTTYROOT, ADAM-AND-EVE)

A genus of 2 species, 1 in e. North America and 1 in Japan (Sheviak & Catling in FNA 2002a). References: Correll (1950); Sheviak & Catling (2002f) in FNA26 (2002a).

Identification Notes: Like *Tipularia*, *Aplectrum* has a single, overwintering leaf, purplish on the underside, and withering prior to the appearance of the flowering stalk; they are readily separable by leaf shape, texture, and veining (see *Tipularia*).

Aplectrum hyemale (Muhlenberg ex Willdenow) Torrey. PUTTYROOT, ADAM-AND-EVE. **Hab:** Rich, mesic forests. **Dist:** QC and MN, south to SC, GA, AL, AR, and OK. **Phen:** May-Jun. **ID Notes:** *Aplectrum* leaf blades are narrowly elliptic, 10-20 cm long, the blade > 2x as long as wide, tapering to both ends, and notably plicate along the very prominent, white, cartilaginous veins (vs. *Tipularia*, with leaf blades ovate, < 10 cm long, < 2x as long as wide, truncate to cordate at the base, acute-apiculate at the apex, and not notably plicate along the veins). **Syn:** = Ar, C, F, FNA26, G, GW1, IL, K1, K3, K4, Mi, Mo1, NE, NE, NY, Pa, RAB, S, Tn, Va, W, Correll (1950), Luer (1975). **NatureServe G5** (Secure).

Aspidogyne Garay 1977 (JUG ORCHID)

A genus of about 71 species, of the New World tropics and subtropics, here circumscribed to include *Platythelys* following Chase et al. (2015) and Ormerod (2013). References: Ackerman (2002b) in FNA26 (2002a); Brown (2002); Chase et al (2015); Correll (1950); Ormerod (2013).

Aspidogyne querceticola (Lindley) Meneguzzo. JUG ORCHID, LOW GROUND ORCHID. **Hab:** Wet hammocks and swamps. **Dist:** Se. GA and n. FL south to s. FL, west to AL(?), MS, and LA; Mexico; West Indies; Central America; South America. **Phen:** Late Jul-Dec. **Syn:** = Chase et al (2015), Ormerod (2013); = *Erythroides querceticola* (Lindley) Ames – Tx, Correll (1950), Luer (1972); = *Physurus querceticola* Lindley – S; = *Platythelys latifolia* (Linnaeus) Garay & Ormerod – K3, WH3; = *Platythelys querceticola* (Lindley) Garay – Bah, FNA26, K1, K4, WI; > *Platythelys querceticola* (Lindley) Garay – Brown (2002); > *Platythelys sagreana* (A. Richard) Garay – Brown (2002). **NatureServe G3G5** (Apparently Secure).

Calopogon R. Brown 1813 (GRASS-PINK)

A genus of 5 species (one with two varieties), endemic to e. North America. References: Correll (1950); Goldman et al (2004); Goldman, Magrath, & Catling (2002) in FNA26 (2002a); Goldman, van den Berg, & Griffith (2004); Trapnell, Hamrick, & Giannasi (2004).

Identification Notes: Unlike nearly all our orchid genera, the lip is oriented upward.

61. ORCHIDACEAE

- 1 Petals wider toward the tip than toward the base; lip usually as wide as or wider than long; flowers strongly fragrant..... *Calopogon multiflorus*
- 1 Petals equal or narrower toward the tip than toward the base; lip usually narrower than long; flowers scentless or mildly fragrant.
- 2 Leaf appressed to the inflorescence during flowering; flowers < 1 cm apart; flowers not fragrant; flowers on same plant opening simultaneously..... *Calopogon barbatus*
- 2 Leaf not appressed to the inflorescence during flowering; flowers > 1 cm apart; flowers faintly to distinctly fragrant; flowers on same plant opening nearly simultaneously to sequentially.
- 3 Lateral sepals 10-15 mm long, falcate, widely spreading..... *Calopogon pallidus*
- 3 Lateral sepals 15-28 mm long, weakly falcate to straight.
- 4 Flowers of each plant opening nearly simultaneously; dilated distal portion of middle lip lobe usually much narrower than long, triangular to broadly rounded; stigma typically flat against column surface; corms elongate, forked..... *Calopogon oklahomensis*
- 4 Flowers of each plant opening sequentially; dilated distal portion of middle lip lobe usually much wider than long, typically anvil-shaped; stigma at angle to column surface; corms globose to elongate, not forked.
- *Calopogon tuberosus* var. *tuberosus*

Calopogon barbatus (Walter) Ames. BEARDED GRASS-PINK. **Hab:** Pine savannas, sandhill seeps, pitcher plant bogs. **Dist:** A Southeastern Coastal Plain endemic: se. NC south to s. FL and west to e. LA. **Phen:** (Late Nov-) Jan-early May. **Syn:** = FNA26, GW1, K1, K3, K4, NcTx, RAB, Tx, WH3, Correll (1950), Goldman, van den Berg, & Griffith (2004), Luer (1975), Trapnell, Hamrick, & Giannasi (2004); = *Limodorum parviflorum* (Lindley) Nash – S. NatureServe G4? (Apparently Secure).

Calopogon multiflorus Lindley. MANY-FLOWERED GRASS-PINK. **Hab:** Moderately well-drained soils of pine savannas and pine flatwoods (often with *Serenoa repens*, within its distribution). **Dist:** A Southeastern Coastal Plain endemic: E. NC south to s. FL, west to e. LA. **Phen:** Mar-early May. **Syn:** = FNA26, GW1, K1, K3, K4, WH3, Correll (1950), Goldman, van den Berg, & Griffith (2004), Luer (1975), Trapnell, Hamrick, & Giannasi (2004); > *Limodorum multiflorum* (Lindley) C. Mohr – S; > *Limodorum pinetorum* Small – S. NatureServe G2G3 (Imperiled).

Calopogon oklahomensis D.H. Goldman. OKLAHOMA GRASS-PINK. **Hab:** Pine savannas, prairies. **Dist:** E. SC south to s. GA, west to e. TX, north in the eastern Great Plains to MN; disjunct eastward in the Eastern Highland Rim and Cumberland Plateau of TN (Tennessee Flora Committee 2015). **Phen:** Mar-Jul. **Syn:** = Ar, ETx1, FNA26, Il, K3, K4, Mo1, NcTx, Tn, Goldman, van den Berg, & Griffith (2004), Trapnell, Hamrick, & Giannasi (2004); < *Calopogon pulchellus* R. Brown – Tx. NatureServe G2 (Imperiled).

Calopogon pallidus Chapman. PALE GRASS-PINK. **Hab:** Pine savannas, sandhill seeps. **Dist:** A Southeastern Coastal Plain endemic: se. VA south to s. FL and west to LA. **Phen:** May-Jun (-Jul); Jul-Aug. **Syn:** = C, F, FNA26, G, GW1, K1, K3, K4, RAB, Va, WH3, Correll (1950), Goldman, van den Berg, & Griffith (2004), Luer (1975), Trapnell, Hamrick, & Giannasi (2004); = *Limodorum pallidum* (Chapman) C. Mohr – S. NatureServe G4G5 (Apparently Secure).

Calopogon tuberosus (Linnaeus) Britton, Sterns, & Poggenburg var. *tuberosus*. COMMON GRASS-PINK. **Hab:** Pine savannas, wet pine flatwoods, sandhill seeps, floating peat mats, in the Piedmont and Mountains in bogs, westward in wet prairies. **Dist:** NL west to MT, south to s. FL and e. TX. **Phen:** Apr-Jul; Jul-Sep. **Syn:** = Ar, FNA26, K1, K3, K4, NE, NY, Pa, WH3, Goldman, van den Berg, & Griffith (2004), Luer (1975), Trapnell, Hamrick, & Giannasi (2004); = *Calopogon pulchellus* R. Brown – F, G, RAB, Correll (1950); = *Limodorum tuberosum* Linnaeus – S; < *Calopogon tuberosus* – C, ETx1, GW1, Il, Mi, Mo1, NcTx, Tn, Tx, Va, W. NatureServe G5T5 (Secure).

Cleistesopsis Pansarin & F. Barros 2008 (SPREADING POGONIA, ROSEBUD ORCHID)

A genus of 3 species, endemic to e. North America. As traditionally circumscribed, *Cleistes* was a genus of about 55 species, primarily of tropical America. The circumscription of this genus has been uncertain (Cameron & Chase 1999; Cameron et al. 1999; Pridgeon et al. 1999c). North American "*Cleistes*" is not closely related to South American *Cleistes* (which includes the type of the genus), and two alternative treatments are possible: the North American species can be housed in a separate genus, or alternatively, *Pogonia*, *Isotria*, and N. American "*Cleistes*" could be combined into *Pogonia* (a generic disposition popular many decades ago). Pansarin & de Barros (2008) favor the former idea, and have named the new genus *Cleistesopsis*; we follow that approach here. References: Catling & Gregg (1992); Correll (1950); Gregg & Catling (2002) in FNA26 (2002a); Gregg (1991); Pansarin & Brown (2009); Pansarin & de Barros (2008).

61. ORCHIDACEAE

134

Cleisteslopsis oricamporum P.M. Brown. SMALL DRAGONHEAD POGONIA. **Hab:** Pine savannas, longleaf pine sandhill seepage bogs. **Dist:** Coastal Plain from se. VA to c. peninsular FL and west to e. LA (and e. TX?); possibly disjunct inland in the Eastern Highland Rim (Coffee County, TN). **Phen:** Apr-Jul. **Tax:** Catling & Gregg (1992) make a convincing case for the recognition of *Cleisteslopsis bifaria* (including *C. oricamporum*) and *C. divaricata* as specifically distinct (as *Cleistes*), based on differences in morphology, range, phenology (in the sympatric portions of their ranges), and floral fragrance. The co-occurrence of *C. divaricata* and *C. oricamporum* at such sites as the Green Swamp, Brunswick County, NC, where phenologically separated, supports their taxonomic status. Where co-occurring, *C. oricamporum* flowers on average about 10 days before *C. divaricata*. Studies by Smith et al. (2004) suggested the probability that montane and Coastal Plain populations of "*C. bifaria*" represent 2 different species, a taxonomic proposition formalized by Brown & Pansarin (2009); this conclusion needs additional study, but the taxa are provisionally accepted here to draw attention to them. **Syn:** = K3, K4, Pansarin & Brown (2009); < *Cleistes bifaria* (Fernald) Catling & Gregg – ETx1, FNA26, K1, Catling & Gregg (1992), Gregg (1991); < *Cleistes divaricata* (Linnaeus) Ames – C, G, GW1, RAB, S, Tx, W, Correll (1950), Luer (1975); < *Cleistes divaricata* var. *bifaria* Fernald – F, WV; < *Cleisteslopsis bifaria* (Fernald) Pansarin & F. Barros – Va, Pansarin & de Barros (2008); < *Pogonia bifaria* (Fernald) P.M. Brown & Wunderlin – WH3.

Corallorhiza Gagnebin 1755 (CORALROOT)

A genus of about 11-15 species, distributed in north temperate regions of the Old and New World. The closest relative of *Corallorhiza* in our flora is *Aplectrum* (Freudenstein 1992). The mycotrophic nature of *Corallorhiza* is well established, but the exact means of the transfer of nutrients from the fungal hyphae to the orchid is not yet understood. References: Correll (1950); Freudenstein (1992); Freudenstein (1997); Freudenstein (1999b); Magrath & Freudenstein (2002) in FNA26 (2002a).

- 4 Sepals and petals 3-4.5 mm long; dorsal sepal < 4.5 mm long, 1-nerved; flowering Aug-Oct..... *Corallorhiza odontorhiza*
 4 Sepals and petals 5-7.5 mm long; dorsal sepal > 4.5 mm long, 3-nerved; flowering either Apr-May or mid Jul-Aug..... *Corallorhiza wisteriana*

Corallorhiza odontorhiza (Willdenow) Poir. AUTUMN CORALROOT. **Hab:** Mesic to dry forests, especially under oaks. **Dist:** The cleistogamous form (or recognized as var. *odontorhiza*) is the more common, and is widespread in e. North America, from ME, NY, s. ON, MI, and MN south to SC, c. GA, ne. FL, c. AL, n. MS, c. AR, and e. OK. **Phen:** Aug-Sep; Oct. **Tax:** Freudenstein (1997) states that *Corallorhiza odontorhiza* var. *pringlei* can be distinguished from var. *odontorhiza* by the presence of a closed perianth, a narrowly obovate-spatulate lip, and a column with two prominent auricles on the ventral surface (vs. perianth open, lip similar to perianth, and a column poorly developed or lacking). The cleistogamy seems to be a popular proxy for varietal designation; however, both flower types apparently exist within the same populations with seemingly no ecological or phenological separation. Adding to the complications is the confusing gap in lip width between *C. odontorhiza* var. *pringlei* f. *pringlei* (2.1-3.7 mm) and *C. odontorhiza* var. *pringlei* f. *radia* (1.2-1.7 mm) conveniently coinciding with the lip width in *C. odontorhiza* var. *odontorhiza* (1.7-2.2 mm). Lastly, it seems unlikely that co-occurring plants in n. North America are less related than to the plants of sc. Mexico. Freudenstein (1997) states it is desirable to recognize different morphologies, but also states that it is not clear how each variety was related, an issue still not resolved as major gaps remain regarding the geography, ecology, and phenology of *Corallorhiza odontorhiza* across its far-reaching and disjunct range. The chasmogamous form is less common, and is scattered in ne. United States and adjacent Canada, in ON, CT, PA, MI, IA, IN, DC, NC, and TN, and in Mexico (Chiapas, Distrito Federal, Guerrero, Hidalgo, Jalisco, México, Michoacán, Morelos, Oaxaca, Puebla, Sonora), Guatemala, and Nicaragua. It is sometimes recognized as var. *pringlei* (see synonymy), but does not seem to breed true and so seems better regarded as a form. The rarer chasmogamous form "var. *pringlei*" has the perianth open (chasmogamous); lip 2.1-3.7 mm wide, bent downward at a nearly right angle; column with 2 prominent auricles at the base on the ventral surface; stigma 0.7-1.0 mm wide. The more common cleistogamous form ("var. *odontorhiza*") has the perianth closed or nearly so (cleistogamous); lip 1.7-2.2 mm wide, straight; column lacking or with only poorly developed basal ventral auricles; stigma 0.2-0.5 mm wide. **Syn:** = C, ETx1, F, G, II, K3, K4, Mo1, Pa, RAB, Va, W, WH3, WV, Correll (1950), Luer (1975); > *Corallorhiza odontorhiza* var. *odontorhiza* – Ar, FNA26, K1, Mi, NE, NY, Tn, Freudenstein (1997); > *Corallorhiza odontorhiza* var. *pringlei* (Greenman) Freudenstein – FNA26, K1, Mi, NE, NY, Tn, Freudenstein (1997); > *Corallorhiza micrantha* Chapman – S; > *Corallorhiza odontorhiza* – S, orthographic variant; > *Corallorhiza pringlei* Greenman.

Corallorhiza wisteriana Conrad. SPRING CORALROOT. **Hab:** Moist to dry forests, usually in base-rich soils. **Dist:** NJ, PA, OH, IN, IL, MO, and OK south to c. peninsular FL, and TX, and also in the Rockies from MT and w. SD south to s. Mexico. **Phen:** (Late Jan-) Feb-May; Mar-Jun. **Syn:** = Ar, C, ETx1, F, FNA26, G, II, K1, K3, K4, Mo1, NcTx, Pa, RAB, Tn, Tx, Va, W, WH3, WV, Correll (1950), Freudenstein (1997), Luer (1975); = *Corallorhiza wisteriana* – S, orthographic variant. NatureServe G5 (Secure).

Cypripedium Linnaeus 1753 (LADY'S-SLIPPER)

A genus of about 51 species, north temperate in distribution. References: Case et al (1998); Correll (1950); Pridgeon et al (1999c); Sheviak (1994); Sheviak (2002a) in FNA26 (2002a); Wallace & Case (2000).

61. ORCHIDACEAE

- 4 Dorsal sepal 3.5-5.0 cm wide; pouch orifice 2.7-4.5 cm long; pouch-like lip 4.5-6.3 cm long, pale yellow or creamy white; plants robust, typically 5-8 dm tall *Cypripedium kentuckiense*
- 4 Dorsal sepal 1.1-2.9 cm wide; pouch orifice 0.5-1.7 cm long; pouch-like lip 1.5-5.8 cm long, medium to rich yellow; plants not as robust, typically 2-5 (-6) dm tall. *Cypripedium parviflorum* var. *pubescens*

Cypripedium kentuckiense C.F. Reed. KENTUCKY YELLOW LADY'S-SLIPPER. **Hab:** Sandy ravine bottoms and springhead seeps along small streams. **Dist:** KY, AR, and OK south to GA, AL, MS (ambiguous specimen), LA, and e. TX; disjunct in e. VA (Weldy et al. 1996). **Phen:** May; Jun-Aug. **Tax:** Case et al. (1998) studied isozymes of *C. kentuckiense* and related *Cypripedium* spp.; the recognition of *C. kentuckiense* as a species was supported. **Syn:** = Ar, C, ETx1, FNA26, K1, K3, K4, Tn, Va, Sheviak (1994), Wallace & Case (2000); < *Cypripedium calceolus* var. *pubescens* (Willdenow) Knight – F, G, Correll (1950); < *Cypripedium pubescens* Willdenow – S. **NatureServe G3** (Vulnerable).

Cypripedium parviflorum Salisbury var. *pubescens* (Willdenow) Knight. LARGE YELLOW LADY'S-SLIPPER, WHIPPOORWILL SHOES. **Hab:** Rich mesic forests. **Dist:** NL (Labrador) and AK south to GA, AL, MS, NM, and AZ. **Phen:** Apr-Jun; Jul-Aug. **Syn:** = Ar, FNA26, Il, K3, K4, Mi, NE, NY, Pa, Va, Sheviak (1994), Wallace & Case (2000); = *Cypripedium calceolus* var. *pubescens* (Willdenow) Knight – C, Mo1, Tx, W, Luer (1975); = *Cypripedium pubescens* Willdenow – K1, S, Tn, WV; < *Cypripedium calceolus* var. *pubescens* (Willdenow) Knight – F, G, RAB, Correll (1950). **NatureServe G5T5** (Secure).

Epidendrum Linnaeus 1759 (GREEN-FLY ORCHID)

A genus of about 1800-2400 species, epiphytic perennial herbs, of tropical (and rarely subtropical) America. References: Brown (2002); Correll (1950); Franck (2018a) in Weakley et al (2018a); Hágsater (2002b) in FNA26 (2002a); Pridgeon et al (2005).

Epidendrum conopseum W.T. Aiton. GREEN-FLY ORCHID. **Hab:** Epiphytic on limbs of trees, especially *Magnolia grandiflora*, *Quercus virginiana*, and *Taxodium* spp., in blackwater river swamps and mesic hardwood hammocks, usually on relatively horizontal limbs mixed with *Pleopeltis michauxiana*, also rarely in crevices of Altamaha Grit outcrops. **Dist:** The northernmost epiphytic orchid: se. NC south to c. peninsular FL, west to w. LA; disjunct in ne. Mexico (Nuevo León, San Luis Potosí, Tamaulipas). All other species of *Epidendrum* in the flora are limited to c. and s. FL. **Phen:** Jul-Nov. **Tax:** Hágsater (2000) argued that *E. magnoliae* Muhlenberg has nomenclatural priority over *E. conopseum* R. Brown; Franck in Weakley et al. (2018a) rebuts that argument. Two varieties are sometimes recognized (Brown 2002): var. *conopseum*, with green or yellow flowers fragrant during the day, and var. *mexicanum*, with yellow flowers with bronze and green tints fragrant at night. They need additional study. **Comm:** It is locally rather common, but rarely seen as it occurs primarily in blackwater swamps, on upper limbs of *Taxodium*, *Nyssa*, *Planera*, and other trees, typically mixed with *Pleopeltis*. See Correll (1936) for additional discussion of this species at its northern limit. **Syn:** = K3, K4, RAB, WH3, Correll (1950), Franck (2018a) in Weakley et al (2018a), Luer (1975); = *Amphiglottis conopsea* (W.T. Aiton) Small – S; = *Epidendrum magnoliae* Muhlenberg – FNA26; > *Epidendrum conopseum* var. *conopseum* – K1; > *Epidendrum conopseum* var. *mexicanum* L.O. 61. ORCHIDACEAE

Goodyera pubescens (Willdenow) R. Brown. DOWNY RATTLESNAKE-ORCHID. **Hab:** Dry to moist forests and woodlands. **Dist:** NB west to ON and MN, south to Panhandle FL, MS, and AR. **Phen:** Jun-Aug. **Comm:** One of the commonest of orchids in much of its extensive range in eastern North America. **Syn:** = Ar, C, F, FNA26, G, Il, K1, K3, K4, Mi, Mo1, NE, NY, Pa, RAB, Tn, Va, W, WH3, WV, Correll (1950), Luer (1975); = *Peramium pubescens* (Willdenow) MacMillan – S. [NatureServe G5](#) (Secure).

Habenaria Willdenow 1805 (LONGSPUR ORCHID, HABENARIA)

A genus of about 600 species, tropical and subtropical in the Old World and New World. References: Batista et al (2011); Brown (2002); Correll (1950); Pridgeon et al (1999b); Sheviak (2002c) in FNA26 (2002a).

Habenaria repens Nuttall. WATER-SPIDER ORCHID, FLOATING ORCHID. **Hab:** Blackwater swamps, pools, banks of creeks and rivers, marshes. **Dist:** NC south to s. FL and west to e. and s. TX; West Indies, Mexico, Central America, and n. South America. **Phen:** Apr-Nov. **Comm:** Reported from se. VA. **Syn:** = Ar, ETx1, FNA26, GW1, K1, K3, K4, NcTx, RAB, S, Tx, WH3, WI, Batista et al (2011), Brown (2002), Correll (1950), Luer (1975). [NatureServe G5](#) (Secure).

Hexalectris Rafinesque 1825 (CRESTED CORALROOT)

A genus of about 9 species, mycotrophic herbs, of s. North America, especially sw. United States and Mexico. We decline to follow the suggested combining of *Hexalectris* into *Bletia* (Sosa 2007; Sosa et al. 2016); Sosa & Chase 2020); the published evidence does not provide clear and convincing support that *Hexalectris* and *Bletia* are not each monophyletic and morphologically well-supported genera. References: Catling & Engel (1993); Catling (2004); Correll (1950); Goldman et al (2002) in FNA26 (2002a); Kennedy & Watson (2010); Sosa & Chase (2020); Sosa (2007); Sosa et al (2016).

Hexalectris spicata (Walter) Barnhart. CRESTED CORALROOT, BRUNETTA. **Hab:** Dry forests and woodlands, especially over mafic or calcareous rocks, such as diabase, gabbro, calcareous siltstone, and dolomite (though sometimes in distinctly acid situations), shell middens. **Dist:** MD, OH, and MO south to s. FL and w. and s. TX. McAvoy (2021) documents the species' modern occurrence in e. MD. **Phen:** Apr-Aug. **ID Notes:** The yellow-orange and purple flowers borne on a brown stem present a very peculiar and distinctive color combination. **Syn:** = K4, Va, Kennedy & Watson (2010); = *Bletia spicata* (Walter) Sosa & M.W. Chase – Sosa & Chase (2020); = *Hexalectris spicata* var. *spicata* – Ar, ETx1, FNA26, Mo1, NcTx, Catling & Engel (1993), Catling (2004); < *Hexalectris spicata* (Walter) Barnhart – C, F, G, Il, K1, RAB, S, Tn, Tx, W, WH3, WV, Correll (1950), Luer (1975). [NatureServe G5T4T5](#) (Apparently Secure).

Isotria Rafinesque 1808 (WHORLED POGONIA, FIVE-LEAVES, FIVELEAF ORCHID)

A genus of 2 species, of e. North America. Cameron & Chase (1999) indicate that *Isotria* should perhaps be included in a more broadly circumscribed *Pogonia* (as was often done prior to 1922); Chase et al. (2015) retain it as a separate genus. References: Correll (1950); Mehrhoff & Homoya (2002) in FNA26 (2002a).

Identification Notes: Sterile *Isotria* is sometimes confused with *Medeola*. *Medeola* has a wiry stem, with floccose hairiness, at least toward the base. *Isotria* has a fleshier stem, lacking hairs.

Isotria verticillata (Muhlenberg ex Willdenow) Rafinesque. LARGE WHORLED POGONIA, LARGE FIVE-LEAVES. **Hab:** Acidic, mesic to dry forests. **Dist:** ME and MI south to Panhandle FL and e. TX. **Phen:** Apr-Jul. **Syn:** = Ar, C, ETx1, F, FNA26, G, Il, K1, K3, K4, Mi, Mo1, NE, NY, Pa, RAB, S, Tn, Tx, Va, W, WV, Correll (1950), Luer (1975); = *Pogonia verticillata* (Muhlenberg ex Willdenow) Nuttall – WH3. [NatureServe G5](#) (Secure).

Malaxis Solander ex Swartz 1788 (ADDER'S-MOUTH)

As circumscribed more narrowly (Radins et al. 2014; Cameron 2005), a genus of about 120 species, terrestrial herbs, mainly of the New World and temperate Eurasia. References: Brown (2002); Cameron (2005); Catling & Magrath (2002) in FNA26 (2002a); Catling (1991); Correll (1950); Radins et al (2014).

Malaxis unifolia Michaux. GREEN ADDER'S-MOUTH. **Hab:** Bogs, moist forested slopes, in the Sandhills in longleaf-oak-hickory forests, often rooted in moss. **Dist:** NL (Newfoundland) and FL west to MN, IA, MO, e. OK, and e. TX; also in Mexico, Cuba, the West Indies, and Central America. **Phen:** Apr-Aug. **Syn:** = Ar, ETx1, F, FNA26, Il, K1, K3, K4, Mi, Mo1, NE, Tn, Tx, Va, WH3, Catling (1991); < *Malaxis unifolia* Michaux – C, G, GW1, Pa, RAB, S, W, WV, Correll (1950), Luer (1975).

Neottia Guettard 1754 (TWAYBLADE)

A genus of about 60 species, mycotrophic or autotrophic herbs, of northern Eurasia and North America. Our species, all autotrophs with a pair of green leaves on the stem, have been traditionally treated in the genus *Listera*, but it appears to be

 (see introduction for more)

61. ORCHIDACEAE

phylogenetically embedded in the fully mycotrophic *Neottia*. References: Brown (2002); Chase et al (2015); Correll (1950); Magrath & Coleman (2002) in FNA26 (2002a); Pridgeon et al (2005).

Neottia bifolia (Rafinesque) Baumbach. SOUTHERN TWAYBLADE. **Hab:** Swamps, second terraces in floodplain forests, wet woods under *Rhododendron maximum*, Coastal Plain bogs. **Dist:** Mainly a Southeastern Coastal Plain species, from NJ south to wc. peninsular FL (Kunzer et al. 2009) and west to e. TX, but also scattered inland of the Coastal Plain and north into VT and s. Canada. **Phen:** Feb-Jul; Mar-Aug. **Syn:** = K3, K4, NE, NY; = *Listera australis* Lindley – Ar, C, ETx1, F, FNA26, G, GW1, K1, Pa, RAB, Tn, Tx, Va, W, WH3, Brown (2002), Correll (1950), Luer (1975); = *Ophrys australis* (Lindley) House – S. [NatureServe G4](#) (Apparently Secure).

Orthochilus Hochstetter ex A. Richard 1850 (WILD COCO)

A genus of 30 (or more) species, of s. North America, Cuba, Colombia, and (mainly) tropical Africa (Martos et al. 2014). References: Brown (2002); Correll (1950); Martos et al (2014); Romero-González (2002b) in FNA26 (2002a).

Identification Notes: The long (to 7 dm), plicate leaves are distinctive among our orchids. Small individuals can be mistaken for *Calopogon* when not in bloom. *Orthochilus ecristatus* differs, however, in having the stem covered from node to node by a succession of sheaths (vs. the sheaths much shorter) and in having the leaves 2-3 on a separate shoot emerging from the corm before the bloom-stalk (vs. leaf 1, on the bloom-stalk).

Orthochilus ecristatus (Fernald) Bytebier. SPIKED MEDUSA, SMOOTH-LIPPED EULOPHIA. **Hab:** Mesic pinelands with blackjack oak, other sandhills and dry-mesic to mesic longleaf pinelands, also (southwards) in spodosol wet-mesic pine flatwoods, dry-prairies, and disturbed wet pastures. **Dist:** Se. NC south to FL, west to LA; West Indies (Cuba). **Phen:** Jun-Sep; Jul-Nov. **Syn:** = K4; = *Eulophia ecristata* (Fernald) Ames – RAB, Correll (1950), Luer (1975); = *Pteroglossaspis ecristata* (Fernald) Rolfe – FNA26, K1, WH3, WI, Brown (2002); = *Triorchos ecristatus* (Fernald) Small – S; > *Eulophia ecristata* (Fernald) Ames – K3; > *Eulophia pottsii* (P.M. Brown & DeAngelis) J.M.H. Shaw; > *Orthochilus ecristatus* (Fernald) Bytebier – Martos et al (2014); > *Orthochilus pottsii* (P.M. Brown & DeAngelis) Bytebier; > *Pteroglossaspis pottsii* P.M. Brown & DeAngelis – K3. [NatureServe G2G3](#) (Imperiled).

Platanthera L.C. Richard 1817 (FRINGED ORCHID, FRINGELESS ORCHID)

A genus of about 200 species, largely of the temperate northern hemisphere, extending south into tropical Central America and tropical se. Asia. The genus is very diverse, and has sometimes been split into separate genera in the past and may warrant that. We here follow Efimov (2016) in (for now) retaining a broad *Platanthera*, and also agree with his uncertainty that that is the best course. "These clades are accepted as subgenera: *Platanthera*, *Tulotis*, *Limnorchis*, *Blephariglottis* and *Fimbriella*. This is a first classification of genus *Platanthera* into subgenera; the former authors either divided genus *Platanthera* into sections or split it into several genera (as discussed in more detail in the previous chapter). I think that subgeneric rank is more appropriate here than sections, because the discriminating differences between the groups (in gynostemium, lip and tuberosities) are clear. Comparable differences in tribe Orchideae are often used to discriminate between widely accepted genera. Also, it should be noted that the general habit of some subgenera is so clearly different that I feel myself not finally comfortable to accommodate them in one genus. Phylogenetic data also do not present arguments against this: existing data reveal that all subgenera are monophyletic groups with high support...". Our species fall into all five subgenera recognized by Efimov (2016), and an additional section: Subgenus *Platanthera* section *Lysias*: *hookeri*, *macrophylla*, *orbiculata* Subgenus *Limnorchis*: *aquilonis*, *dilatata*, *huronensis* Subgenus *Tulotis*: *flava*, *herbiola* Subgenus *Fimbriella*: *grandiflora*, *lacera*, *leucophaea*, *peramoena*, *praeclara*, *psycodes*, *shrivieri* Subgenus *Blephariglottis* section *Blephariglottis*: *blephariglottis*, *chapmanii*, *ciliaris*, *cristata*, *conspicua*, *integrilabia* Subgenus *Blephariglottis* section *Gymnadeniopsis*: *clavellata*, *integra*, *nivea*. References: Ackerman & Morgan (2002) in FNA26 (2002a); Bateman et al (2009); Brown (2002); Butzin (1981); Correll (1950); Efimov (2016); Pridgeon et al (1999b); Reddich & Reddich (1993); Sheviak (2002b) in FNA26 (2002a); Wettewa, Bailey, & Wallace (2020).

Identification Notes: First generation hybrids are frequent and are not keyed; they are generally intermediate in characters and are found in mixed populations of the two parents.

- 4 Lip deeply divided into 3 similarly-sized lobes (these often further deeply fringed or sometimes merely toothed or jaggedly incised); [subgenus *Fimbriella*].
 - 5 Lobes of lip merely toothed or jaggedly incised, few (if any) of the segments > 1 mm long; flowers rose-purple.....*Platanthera peramoena*
 - 5 Lobes of lip shallowly or deeply fringed, most or all of the segments > 1 mm long; flowers rose-purple, white, cream, or greenish.*Platanthera lacera*
- 4 Lip unlobed or very shallowly 3-lobed at the apex only (the sinuses < 1 mm deep), the lip's margin entire, minutely toothed, or deeply fringed.
 - 11 Lip margin deeply fringed; flowers white, yellow, or orange; [subgenus *Blephariglottis*, section *Blephariglottis*].
 - 12 Flowers white; spur 15-50 mm long.*Platanthera conspicua*
 - 12 Flowers yellow to orange; spur 5-33 mm long.
 - 14 Spur 20-33 mm long, exceeding the 12-27 mm long ovary; undivided portion of lip 8-12 mm long.....*Platanthera ciliaris*
 - 14 Spur 4-17 mm long, equal to or shorter than the ovary; undivided portion of lip 4-6 mm long.
 - 15 Spur 8-17 mm long, about as long as the 10-19 mm long ovary; spur orifice circular.....*Platanthera chapmanii*
 - 15 Spur 4-10 mm long, shorter than the 7-13 mm long ovary; spur orifice keyhole-shaped or triangular.....*Platanthera cristata*
 - 11 Lip margin minutely denticulate or entire; flowers white, yellow-orange, green, or greenish-white.
 - 16 Spur 35-60 mm long; lip 10-15 mm long; flowers white; [subgenus *Blephariglottis*, section *Blephariglottis*].....*Platanthera integrilabia*
 - 16 Spur 2-18 mm long; lip 3-12 mm long; flowers white, yellow-orange, green, or greenish-white.

- 17 Lip uppermost (flowers not resupinate); spur 10-18 mm long, borne horizontally, parallel to the pedicel and in side view of the inflorescence crossing the rachis; [subgenus *Blephariglottis*, section *Gymnadeniopsis*] *Platanthera nivea*
- 17 Lip lowermost (flowers resupinate); spur 2-13 mm long, borne horizontally or descending, in side view crossing the rachis only in *P. clavellata*.
- 19 Flowers orange- to golden-yellow; lip minutely crenulate; [subgenus *Blephariglottis*, section *Gymnadeniopsis*] *Platanthera integra*
- 19 Flowers green, greenish-white, yellowish-green, or yellowish-white; lip entire, shallowly trilobed, proximally dilated, or eroded at the tip.
- 22 Larger stem leaves usually 1, rarely 2, near the middle of the stem; raceme 2-9 cm long, 2-3.5 cm in diameter; lip without a tubercle on the upper surface near the base, also lacking lateral auricles near the base; [subgenus *Blephariglottis*, section *Gymnadeniopsis*] *Platanthera clavellata*
- 22 Larger stem leaves usually 2 (-5), near the middle of the stem or toward its base; raceme 5-20 cm long, 1.2-2 cm in diameter; lip with a tubercle on the upper surface near the base, also usually with 2 lateral auricles; [subgenus *Tulotis*] *Platanthera flava*

Platanthera chapmanii (Small) Luer. CHAPMAN'S ORANGE-FRINGED ORCHID. **Hab:** Pine savannas. **Dist:** S. GA and n. FL; e. TX. **Phen:** Jul-Aug. **Comm:** Previously generally confused with the hybrid between *Platanthera ciliaris* × *cristata* (*P. ×channellii* J.P. Folsom); see Folsom (1984) and Brown (2004) for details. **Syn:** = ETx1, FNA26, K1, K3, K4, WH3, Brown (2002), Efimov (2016); = *Blephariglottis chapmanii* Small – S; = *Habenaria ×chapmanii* (Small) Ames – Tx, pro species. **NatureServe G2** (Imperiled).

Platanthera ciliaris (Linnaeus) Lindley. YELLOW FRINGED ORCHID. **Hab:** Pine savannas, moist roadbanks, meadows, pastures, bogs. **Dist:** NH, MI, IL, MO, and OK south to c. peninsular FL and e. TX. **Phen:** Jun-Aug. Jun-Sep. **Comm:** *P. ciliaris* is probably our most common and least habitat-specific *Platanthera*. **Syn:** = Ar, ETx1, FNA26, IL, K1, K3, K4, Mi, Mo1, NcTx, NE, NY, Pa, Tn, Va, W, WH3, Brown (2002), Efimov (2016), Luer (1975); = *Blephariglottis ciliaris* (Linnaeus) Rydberg – S; = *Habenaria ciliaris* (Linnaeus) R. Brown – C, F, G, GW1, RAB, Tx, WV, Correll (1950). **NatureServe G5** (Secure).

Platanthera clavellata (Michaux) Luer. SMALL GREEN WOOD ORCHID. **Hab:** Seepages, bogs, swamps, other wet places. **Dist:** NL (Newfoundland) and ND south to Panhandle FL and TX. **Phen:** Jun-Sep. **Syn:** = Ar, ETx1, FNA26, IL, K1, K3, K4, Mi, Mo1, NE, NY, Pa, Tn, Va, W, WH3, Brown (2002), Efimov (2016), Luer (1975); = *Gymnadeniopsis clavellata* (Michaux) Rydberg – S; = *Habenaria clavellata* (Michaux) Sprengel – C, G, GW1, Tx, WV, Correll (1950); > *Habenaria clavellata* (Michaux) Sprengel var. *clavellata* – F, RAB; > *Habenaria clavellata* var. *wrightii* Olive – RAB. **NatureServe G5** (Secure).

Platanthera conspicua (Nash) P.M. Brown. LARGE WHITE FRINGED ORCHID. **Hab:** Pine savannas, seepages, longleaf pine sandhill-pocosin ecotones. **Dist:** NC south to c. peninsular FL, west to e. TX. **Phen:** Jul-Sep. **Tax:** Brown (2006b) and Sheviak in FNA (2002a) clarify the taxonomy of this complex; previous studies (such as Hardin 1961) used different characters, and interpreted the white-fringed orchid taxa differently. **Syn:** = K3, K4; = *Blephariglottis conspicua* (Nash) Small – S; = *Habenaria blephariglottis* var. *conspicua* (Nash) Ames – C, F; = *Platanthera blephariglottis* (Willdenow) Lindley var. *conspicua* (Nash) Luer – ETx1, FNA26, K1, WH3, Brown (2002), Luer (1975); < *Habenaria blephariglottis* – GW1, Tx; < *Habenaria blephariglottis* (Willdenow) Hooker var. *blephariglottis* – RAB, Correll (1950); < *Platanthera blephariglottis* (Willdenow) Lindley – Efimov (2016). **NatureServe G5T4** (Apparently Secure).

Platanthera cristata (Michaux) Lindley. CRESTED FRINGED ORCHID, GOLDEN FRINGED ORCHID. **Hab:** Pine savannas, bogs, moist roadsides. **Dist:** *P. cristata* is more limited to the Coastal Plain than the related *P. ciliaris*, ranging from s. MA south to FL and west to e. TX, and also inland in KY, TN, AR, SC, and NC. **Phen:** Jun-Sep. **Syn:** = Ar, ETx1, FNA26, K1, K3, K4, NE, NY, Pa, W, WH3, Brown (2002), Efimov (2016), Luer (1975); = *Blephariglottis cristata* (Michaux) Rafinesque – S; = *Habenaria cristata* (Michaux) R. Brown – C, F, G, GW1, RAB, Tx, Correll (1950). **NatureServe G5** (Secure).

Platanthera flava (Linnaeus) Lindley. SOUTHERN REIN ORCHID, SOUTHERN GYPSY-SPIKE. **Hab:** Shaded wet places, such as swampy forests. **Dist:** NJ, IN, IL, MO, and OK, south to c. peninsular FL and e. TX; remarkably disjunct in s. NS, where it occurs associated with other disjuncts from the Southeastern Coastal Plain. **Phen:** Mar-Sep. **Comm:** See Homoya (1993) for additional discussion of the two taxa usually treated as varieties of *P. flava*. Reported for MD (Longbottom, Naczi, & Knapp 2016). **Syn:** =; = *Habenaria flava* – Tx; = *Habenaria flava* (Linnaeus) R. Brown var. *flava* – Ar, C, F, G, RAB, Correll (1950); = *Platanthera flava* (Linnaeus) Lindley var. *flava* – ETx1, FNA26, IL, K1, K3, K4, Mo1, Tn, Va, Brown (2002), Efimov (2016), Luer (1975); = *Tulotis flava* (Linnaeus) Senghas; < *Habenaria flava* – GW1; > *Perularia bidentata* (Elliott) Small – S; > *Perularia scutellata* (Nuttall) Small – S; < *Platanthera flava* (Linnaeus) Lindley – WH3. **NatureServe G4?T4?Q** (Apparently Secure).

Platanthera integra (Nuttall) A. Gray ex Beck. GOLDEN FRINGELESS ORCHID, YELLOW FRINGELESS ORCHID. **Hab:** Wet pine savannas in the Coastal Plain, bogs in the Mountains and Piedmont. **Dist:** Essentially endemic to the Southeastern Coastal Plain, ranging from s. NJ south to FL and west to se. TX, with disjunct occurrences in TN (Eastern Highland Rim) and in bogs at low elevations of the Blue Ridge of NC. It is apparently now extirpated in the Mountains and Piedmont of NC. **Phen:** Jul-Sep. **Syn:** = ETx1, FNA26, K1, K3, K4, Tn, WH3, Brown (2002), Efimov (2016), Luer (1975); = *Gymnadeniopsis integra* (Nuttall) Rydberg – S; = *Habenaria integra* (Nuttall) Sprengel – C, F, G, GW1, RAB, Tx, Correll (1950). **NatureServe G3G4** (Vulnerable).

Platanthera integrilabia (Correll) Luer. MONKEY-FACE ORCHID, WHITE FRINGELESS ORCHID. **Hab:** Bogs, red maple-gum swamps, seeps and streambanks. **Dist:** Endemic to KY, e. TN, sw. VA (Lee County, documentation uncertain), w. NC, nw. SC, n. and wc. GA, n. AL, and n. MS, primarily in the Cumberland Plateau. **Phen:** Jul-Sep. **Comm:** See Zettler, Ahuja, & McInnis (1996) for a discussion of pollination. **Syn:** = FNA26, K1, K3, K4, W, Efimov (2016), Luer (1975); = *Blephariglottis integrilabia* (Correll) Schrenk; = *Habenaria blephariglottis* (Willdenow) Hooker var. *integrilabia* Correll – F, RAB, Correll (1950); = *Habenaria correlliana* Cronquist – C; ? *Blephariglottis longicornis* Rafinesque; ? *Habenaria blephariglottis* var. *holopetala* (Lindley) A. Gray. **NatureServe G2G3** (Imperiled); USESA T.

Platanthera lacera (Michaux) G. Don. GREEN FRINGED ORCHID, RAGGED FRINGED ORCHID, RAGGED ORCHID. **Hab:** Swamps, bogs, seepages. **Dist:** NL (Newfoundland) west to MB, south to SC, GA, s. AL, w. LA, and ne. TX. **Phen:** Jun-Aug. **Tax:** Var. *terrae-novae* (Fernald) Luer is not distinct, and is based on hybrid swarms involving *P. lacera* and *P. psycodes* (Catling 1997). **Syn:** = Ar, ETx1, FNA26, IL, K1, K3, K4, Mi, NE, NY, Pa, Va,

61. ORCHIDACEAE

W; = *Blephariglottis lacera* (Michaux) Farwell – S; = *Fimbriella lacera* (Michaux) Butzin var. *lacera* – Butzin (1981); = *Habenaria lacera* (Michaux) R. Brown – C, G, GW1, RAB, Tx, WV, Correll (1950); > *Habenaria lacera* var. *lacera* – F; > *Platanthera lacera* var. *lacera* – Mo1, Luer (1975).

Platanthera nivea (Nuttall) Luer. SNOWY ORCHID, BOG-SPIKE. **Hab:** Wet pine savannas, acid seepages. **Dist:** Essentially a Southeastern Coastal Plain endemic, *P. nivea* ranges from s. NJ and DE (at least formerly) south to FL and west to e. TX and e. AR; disjunct inland in Coffee County, TN (Eastern Highland Rim) and w. SC (in the uppermost Piedmont in the Blue Ridge Escarpment edge). **Phen:** May-Sep. **Comm:** This species is even more irregular than most *Platanthera* in its flowering, whole populations sometimes not flowering for a number of years. This species was once locally abundant in the outer Coastal Plain of the Carolinas and farther south; Correll (1950) describes "large colonies of this species which form a blanket of white over the landscape." Also see the picture in B.W. Wells's *Natural Gardens of North Carolina*. **ID Notes:** The flowers are so white as to seem illuminated from within. **Syn:** = Ar, ETx1, FNA26, K1, K3, K4, Tn, Brown (2002), Luer (1975); = *Gymnadeniopsis nivea* (Nuttall) Rydberg – S; = *Habenaria nivea* (Nuttall) Sprengel – C, F, G, GW1, RAB, Tn, Tx, WH3, Correll (1950). NatureServe G5 (Secure).

Platanthera peramoena (A. Gray) A. Gray. PURPLE FRINGELESS ORCHID, PURPLE SPIRE ORCHID, PRIDE-OF-THE-PEAK. **Hab:** Bogs, seepages, moist forests, moist meadows. **Dist:** NJ, s. PA, OH, c. IL, and se. MO south to nw. SC, n. GA, n. AL, c. MS, and c. AR. **Phen:** Jun-Oct. **Comm:** See Spooner & Shelly (1983) for a review of information about this species. **Syn:** = Ar, FNA26, IL, K1, Mo1, Pa, Tn, Va, W, Luer (1975); = *Blephariglottis peramoena* (A. Gray) Rydberg – S; = *Fimbriella peramoena* (A. Gray) Butzin – Butzin (1981); = *Habenaria peramoena* A. Gray – C, F, G, GW1, RAB, Correll (1950); = *Platanthera fissa* Lindley – K3, K4, misapplied. NatureServe G5 (Secure).

Pogonia A.L. de Jussieu 1789 (ROSE POGONIA, POGONIA)

A genus of 3 species, of temperate e. North America and e. Asia. Cameron & Chase (1999) indicate that molecular analyses indicate that there may be merit in the traditional broad circumscription of *Pogonia* to include *Isotria* and N. American taxa of *Cleistis*; alternatively, North American "Cleistis" can be segregated as *Cleistisiopsis*, as done here. References: Correll (1950); Sheviak & Catling (2002b) in FNA26 (2002a).

Pogonia ophioglossoides (Linnaeus) Ker Gawler. ROSE POGONIA, SNAKEMOUTH, BEARFLOWER, ETTERCAP, ADDERMOUTH. **Hab:** Savannas, bogs, especially in open peaty or gravelly situations. **Dist:** NL (Newfoundland) and MB south to s. FL and e. TX. **Phen:** Mar-Jun. **Syn:** = Ar, C, ETx1, FNA26, G, GW1, IL, K1, K3, Mi, Mo1, NcTx, NE, NY, Pa, RAB, S, Tn, Tx, Va, W, WH3, WV, Correll (1950), Luer (1975); > *Pogonia ophioglossoides* var. *ophioglossoides* – F. NatureServe G5 (Secure).

Ponthieva R. Brown 1813 (SHADOW WITCH)

A genus of about 30-53 species, of tropical and warm temperate America. References: Ackerman (2002k) in FNA26 (2002a); Brown (2002); Correll (1950); Pridgeon et al (1999b).

Ponthieva racemosa (Walter) C. Mohr. SHADOW WITCH. **Hab:** Bottomlands, floodplains, moist ravines, nearly always over calcareous rock ('marl' or coquina limestone). **Dist:** Se. VA south to s. FL and west to se. TX; disjunct in the Eastern Highland Rim, TN; West Indies; Mexico and Central America to South America. **Phen:** Sep-Mar. **ID Notes:** The basal rosette of leaves, white (suffused with green) flowers in fall to winter, and habitat are distinctive. **Syn:** = C, ETx1, F, FNA26, G, GW1, K1, K3, K4, RAB, S, Tx, Va, WH3, WI, Brown (2002), Correll (1950); = *Ponthieva glandulosa* (Sims) R. Brown; = *Ponthieva racemosa* var. *racemosa* – Luer (1975). NatureServe G4G5 (Apparently Secure).

Spiranthes L.C. Richard 1817 (LADIES'-TRESSES, PEARL-TWIST, SPIRAL ORCHID)

A genus of about 30-40 species, mainly north temperate, but with species scattered in other areas. The *Spiranthes* flora of our region is still rather poorly understood, and the treatment here will undoubtedly change further. References: Brown (2002); Dueck & Cameron (2007); Dueck & Cameron (2008); Hough & Young (2021); Luer (1975); Pace & Cameron (2016); Pace & Cameron (2017); Pace (2021); Pace et al (2017); Pridgeon et al (1999c); Sheviak & Brown (2002) in FNA26 (2002a); Sheviak (1991); Ward (2012a).

Identification Notes: With few exceptions, the species cannot be identified when not in flower. Particular attention must be paid to the curvature and orientation of the lateral sepals, and various characteristics of the lip (color, papillae presence, gland shape).

- 1 Rachis of inflorescence with all hairs not glandular, tapering to a pointed tip; flowering Mar-Sep.....*Spiranthes vernalis*
- 1 Rachis of inflorescence either glabrous or with some or all hairs gland-tipped (capitate or clavate).
- 4 Lip centrally green or white with green veins.

- 5 Lip not papillate on the upper surface near the middle.
 6 Flowers 5-9 mm long, white, with green venation on adaxial surface of the lip only; primarily of pine flatwoods and savannas.....*Spiranthes praecox*
 6 Flowers 8-17 mm long, creamy green, with green venation on the adaxial surface of all perianth segments; primarily of mixed hardwood-pine forests.....*Spiranthes sylvatica*
- 5 Lip papillate on the upper surface near the middle.
 9 Leaves oblanceolate, withering at anthesis; lateral sepals spatulate, green at base; flowering Feb-May.....*Spiranthes eatonii*
 9 Leaves ovate to obovate or elliptic, spreading, present or absent at anthesis; lateral sepals acuminate, white throughout; flowering Jul-Sep.....*Spiranthes lacera* var. *gracilis*
- 4 Lip centrally yellow, cream, or entirely white.
 11 Flowers < 4.5 mm long; rachis glabrous; flowers gaping from near middle, the tubular portion < 3 mm long; lip pure white; flowering Jun-Sep.....*Spiranthes tuberosa*
 11 Flowers > 5.0 mm long; rachis glabrous or pubescent; flowers gaping only from beyond the middle, the tubular portion > 3 mm long; lip white, creamy, or yellow.
 12 Lip papillate on the upper surface near the middle.
 13 Leaves basal, ovate.
 14 Inflorescence densely pubescent.....*Spiranthes brevilabris*
 14 Inflorescence glabrous.....*Spiranthes floridana*
 13 Leaves upright, linear-lanceolate (or fugacious).....*Spiranthes magnicamporum*
- 12 Lip lacking papillae on the upper surface near the middle.
 17 Lateral sepals cupped (concave).
 18 Lip centrally white.
 19 Rostellum and viscidium absent; sepals 3.5-5 mm long.....*Spiranthes ovalis* var. *erostellata*
 19 Rostellum and viscidium present; sepals 4-6.1 mm long.....*Spiranthes ovalis* var. *ovalis*
 18 Lip centrally yellowish.....*Spiranthes laciniata*
- 17 Lateral sepals flat (not concave).
 21 Lip margin undulate.
 22 Flowers fragrant.
 23 Callosities reduced and mounded, 0.2-0.6 mm long; leaves usually absent at flowering.....*Spiranthes magnicamporum*
 23 Callosities pronounced, incurved or conical, 1-2.5 mm long; leaves present at flowering.....*Spiranthes odorata*
 22 Flowers lacking fragrance.....*Spiranthes longilabris*
- 21 Lip margin crisped and lacerate.....*Spiranthes cernua*

Spiranthes brevilabris Lindley. SHORT-LIPPED LADIES'-TRESSES. **Hab:** Pine savannas and flatwoods. **Dist:** Se. SC south to s. FL, west to se. TX. **Phen:** Dec-Feb. **Syn:** = ETx1, FNA26, K1, K3, K4, WH3, Brown (2002); = *Spiranthes brevilabris* Lindley var. *brevilabris* – Luer (1975); = *Spiranthes gracilis* (Bigelow) Beck var. *brevilabris* (Lindley) Correll – GW1, Tx. **NatureServe** G1G2 (Critically Imperiled).

Spiranthes cernua (Linnaeus) L.C. Richard. NODDING LADIES'-TRESSES. **Hab:** Bogs, swamps, ditches, usually in acidic, sphagnum situations. **Dist:** NS west to s. OH, MO, and OK, south to Panhandle FL and c. TX. **Phen:** Jul-Nov. **Tax:** *Spiranthes parksii* was shown to be an apomictic regional floral morph with little to no clear molecular, ecological, or phenological distinction from *Spiranthes cernua*. Recognition of *S. parksii* would render *S. cernua* paraphyletic. See Dueck and Cameron (2008) and Pace and Cameron (2017) for more details. **Syn:** = K4, Hough & Young (2021), Pace & Cameron (2017); < *Gyrostachys cernua* (Linnaeus) Kuntze; < *Ibidium cernuum* (Linnaeus) House – S; < *Spiranthes cernua* (Linnaeus) L.C. 61. ORCHIDACEAE

141

Spiranthes laciniata (Small) Ames. LACE-LIP LADIES'-TRESSES. **Hab:** Pond cypress depressions and savannas, swamps. **Dist:** A Southeastern Coastal plain endemic: NJ south to s. FL and west to se. TX. **Phen:** May-Aug. **Syn:** = C, ETx1, FNA26, K1, K3, K4, RAB, WH3, Brown (2002), Correll (1950), Luer (1975); = *Ibidium laciniatum* (Small) House – S; = *Spiranthes* \times *laciniata* – F, GW1, Tx. **NatureServe G4G5** (Apparently Secure).

Spiranthes longilabris Lindley. GIANT SPIRAL ORCHID, LONGHORN LADIES'-TRESSES. **Hab:** Wet pine savannas. **Dist:** A Southeastern Coastal Plain endemic: se. NC south to s. FL and west to e. TX. **Phen:** Late Oct-Dec. **Syn:** = ETx1, FNA26, GW1, K1, K3, K4, NcTx, RAB, Tx, WH3, Brown (2002), Correll (1950), Luer (1975); = *Ibidium longilabre* (Lindley) House – S. **NatureServe G3** (Vulnerable).

Spiranthes magnicamporum Sheviak. GREAT PLAINS LADIES'-TRESSES. **Hab:** Grassy barrens and glades over limestone or serpentine. **Dist:** Primarily in the Great Plains, from ND south to TX, east (often as widely disjunct populations) to sw. ON, NY, se. PA, sw. VA (Ludwig 1999), KY, w. TN (Jones 2006), and nw. GA. **Phen:** Sep-Oct. **Syn:** = Ar, C, ETx1, FNA26, IL, K1, K3, K4, Mi, Mo1, NcTx, NY, Pa, Tn, Hough & Young (2021), Luer (1975); < *Spiranthes cernua* (Linnaeus) L.C. Richard – G; < *Spiranthes cernua* var. *cernua* – F, Correll (1950).

Spiranthes odorata (Nuttall) Lindley. FRAGRANT LADIES'-TRESSES, MARSH LADIES'-TRESSES. **Hab:** Swamps and marshes, often emergent at the time of flowering in *Taxodium* and *Nyssa* swamps. **Dist:** Se. VA south to FL and west to se. TX; disjunct in c. NY (Onondaga County; McMullen et al. 2021). **Phen:** Sep-Nov. **Syn:** = Ar, ETx1, F, FNA26, G, K1, K3, K4, Tn, Va, WH3, Brown (2002), Hough & Young (2021), Luer (1975); = *Gyrostachys odorata* (Nuttall) Kuntze; = *Ibidium odoratum* (Nuttall) House – S; = *Spiranthes cernua* var. *odorata* (Nuttall) Correll – C, GW1, RAB, Tx, Correll (1950), Luer (1975).

Spiranthes ovalis Lindley var. *erostellata* Catling. OVAL LADIES'-TRESSES. **Hab:** Swamp forests, bottomland forests, hammocks, ravine forests. **Dist:** Var. *erostellata* is fairly widespread in se. North America, ranging from sc. PA, NY, MI, and IL south to Panhandle FL, s. MS, s. LA, and e. TX. **Phen:** Aug-Nov. **Syn:** = Ar, C, ETx1, FNA26, IL, K1, K3, K4, Mi, Mo1, NY, Pa, Tn, Va, W, WH3, Brown (2002); < *Ibidium ovale* (Lindley) House – S; ? *Spiranthes montana* Rafinesque; < *Spiranthes ovalis* – F, G, GW1, NcTx, RAB, Tx, WV, Correll (1950), Hough & Young (2021), Luer (1975). **NatureServe G5?T4?** (Apparently Secure).

Spiranthes ovalis Lindley var. *ovalis*. OVAL LADIES'-TRESSES. **Hab:** Swamp forests, mesic ravines. **Dist:** GA, TN, AR, and TX, south to n. peninsular FL, LA, and e. TX. **Phen:** Oct-Nov. **Syn:** = Ar, ETx1, FNA26, K1, K3, K4, WH3, Brown (2002); < *Ibidium ovale* (Lindley) House – S; < *Spiranthes ovalis* – GW1, NcTx, Tx, Correll (1950), Hough & Young (2021), Luer (1975). **NatureServe G5?T3T4** (Vulnerable).

Spiranthes praecox (Walter) S. Watson. GRASS-LEAVED LADIES'-TRESSES, GIANT LADIES'-TRESSES. **Hab:** Pine savannas, swamps, bogs. **Dist:** A Southeastern Coastal Plain endemic: NY (Long Island, ?), NJ (?), DE (?), MD (?), south to s. FL and west to TX. The more northern occurrences have been questioned as to identification. **Phen:** Mar-May (-Jun). **ID Notes:** Plants in c. and s. FL often lack green veins on the lip. **Syn:** = Ar, K4, Tx, Va, WH3, Brown (2002); < *Ibidium praecox* (Walter) House – S, (also see *S. sylvatica*); < *Spiranthes praecox* (Walter) S. Watson – C, ETx1, F, FNA26, G, GW1, K1, NcTx, RAB, W, Correll (1950), Luer (1975), (also see *S. sylvatica*).

Spiranthes sylvatica P.M. Brown. WOODLAND LADIES'-TRESSES, PALE GREEN LADIES'-TRESSES. **Hab:** Pine-oak forests and woodlands, live oak hammocks, interdune swales, rich dry forests, other woodlands. **Dist:** VA south to c. peninsular FL, west to e. TX. **Phen:** Late Mar-Jun. **ID Notes:** Compared to *Spiranthes praecox*, *Spiranthes sylvatica* has a laxer spiral (as few as 3-4 flowers per turn), much longer lip (recurved), relatively spreading sepals (oriented downward), larger flowers, with greenish veins on sepals and both lips, and the flowers overall with a more yellowish-green color (vs. bright white). **Syn:** = ETx1, K4, Va, WH3, Brown (2002); < *Ibidium praecox* (Walter) House – S; < *Spiranthes praecox* (Walter) S. Watson – C, F, FNA26, G, GW1, K1, RAB, Correll (1950), Luer (1975).

Spiranthes tuberosa Rafinesque. LITTLE LADIES'-TRESSES, LITTLE PEARL-TWIST. **Hab:** In a wide variety of habitats, especially relatively well-drained woodlands and fields, longleaf pine sandhills, dry hammocks, dry pine flatwoods. **Dist:** MA, OH, and MO south to c. peninsular FL and TX. **Phen:** Jun-Sep. **Syn:** = Ar, C, ETx1, FNA26, G, IL, K1, K3, K4, Mi, Mo1, NcTx, NE, NY, Pa, Tn, Va, W, WH3, WV, Brown (2002), Luer (1975); = *Ibidium beckii* (Lindley) House – S, misapplied; > *Spiranthes grayi* Ames – RAB, Tx, Correll (1950), Luer (1972); > *Spiranthes tuberosa* var. *grayi* (Ames) Fernald – F; > *Spiranthes tuberosa* var. *tuberosa* – F.

Spiranthes vernalis Engelman & A. Gray. SPRING LADIES'-TRESSES. **Hab:** Pine savannas, bogs, marshes, fairly dry fields. **Dist:** MA to s. FL and west to TX and SD; West Indies; Mexico and Central America. **Phen:** Mar-Jul (-early Sep in the mountains). **Syn:** = Ar, Bah, C, ETx1, F, FNA26, G, GW1, IL, K1, K3, K4, Mo1, NcTx, NE, NY, Pa, RAB, Tn, Tx, Va, W, WH3, Brown (2002), Correll (1950), Luer (1975); = *Ibidium vernale* (Engelman & A. Gray) House – S. **NatureServe G5** (Secure).

61. ORCHIDACEAE*Spiranthes ovalis*
var. *ovalis**Spiranthes*
*praecox**Spiranthes*
*sylvatica**Spiranthes*
*tuberosa**Spiranthes*
vernalis***Tipularia* Nuttall 1818 (CRANEFLY ORCHID)**

A genus of 3 species; the other species of the genus are e. Asian (1 in Japan and 1 in the Himalayas) (Catling & Sheviak in FNA 2002). References: Brown (2002); Correll (1950); Sheviak & Catling (2002e) in FNA26 (2002a).

Identification Notes: The leaves are present during the winter, withering before the flowering stalk appears, the plant thus occasionally mistaken for one of the saprophytic orchids. The leaves are usually purple underneath, a characteristic shared with *Aplectrum*, but *Tipularia* leaf blades are ovate, < 10 cm long, < 2× as long as wide, truncate to cordate at the base, acute-apiculate at the apex, and are not notably plicate along the veins (vs. *Aplectrum*, with leaf blades narrowly elliptic, 10-20 cm long, the blade > 2× as long as wide, tapering to both ends, and notably plicate along the very prominent, white, cartilaginous veins).

Tipularia discolor* (Pursh) Nuttall. CRANEFLY ORCHID. **Hab:* In a wide variety of mesic to rather dry forests. **Dist:** Se. MA, s. NY, OH, IN, and s. MI south to n. peninsular FL and TX. **Phen:** Jul-Sep. **Comm:** Hughes et al. (2019, 2021) studied the anthocyanins and their distributions in the leaves, describing 4 types: solid green above and solid purple beneath, green with raised purple spots above and solid purple beneath, dark purple above and bright purple below, and brownish purple above and below. **ID Notes:** *Tipularia discolor* is one of the commonest orchids in e. North America, a familiar and easy to identify species through the fall, winter, and spring by its ovate leaves with acute-acuminate apex, and solid purple (rarely brownish-purple or greenish-purple) leaf undersurface. **Syn:** = Ar, C, ETx1, F, FNA26, G, Il, K1, K3, K4, Mi, Mo1, NE, NY, Pa, RAB, Tn, Tx, Va, W, WH3, WV, Brown (2002), Correll (1950), Luer (1975); = *Tipularia unifolia* (Muhlenberg) Britton, Sterns, & Poggenburg – S. NatureServe G4G5 (Apparently Secure).

***Triphora* Nuttall 1818 (THREE BIRDS ORCHID, NODDING-CAPS)**

A genus of about 25 species, of e. North America, the West Indies, and Central and South America (Medley in FNA 2002). References: Brown & Pike (2006); Correll (1950); Medley (2002) in FNA26 (2002a).

***Triphora trianthophoros* (Swartz) Rydberg var. *trianthophoros*. THREE BIRDS ORCHID, NODDING POGONIA, NODDING ETTERCAP. **Hab:** Humid forests and swamps, rhododendron thickets, especially on rotten logs or on humus, in the mountains often under hemlock. **Dist:** The species is widespread (but scattered) in e. North America, and south into Central America. Var. *trianthophoros* occurs from ME and ON west to WI, south to c. peninsular FL and e. TX; disjunct in nc. Mexico; var. *mexicana* (S. Watson) P.M. Brown occurs from Mexico south to Central America. **Phen:** Jul-Sep. **Tax:** Var. *texasensis* P.M. Brown & R.B. Pike was named in 2006 (Brown & Pike (2006) and needs additional evaluation before being accepted. The correct spelling of the epithet of this species is "*trianthophoros*." **ID Notes:** The flowers are extremely ephemeral, making the species very difficult to locate.**

Syn: = NY; = *Triphora trianthophora* ssp. *trianthophora* – Ar, FNA26, orthographic variant; < *Triphora trianthophora* – C, ETx1, F, G, GW1, Il, K1, Mi, Mo1, Pa, RAB, S, Tn, W, WV, Correll (1950), Luer (1975); < *Triphora trianthophora* ssp. *trianthophora* – NE, Va, orthographic variant; > *Triphora trianthophora* var. *schaffneri* Camp – Tx; > *Triphora trianthophora* var. *texasensis* – Brown & Pike (2006); < *Triphora trianthophora* (Swartz) Rydberg var. *trianthophora* – Pa, orthographic variant; > *Triphora trianthophora* (Swartz) Rydberg var. *trianthophora* – Tx, Brown & Pike (2006), orthographic variant; < *Triphora trianthophoros* – K3, K4, WH3.

***Zeuxine* Lindley 1826 (SOLDIER ORCHID)**

A genus of about 26 species, of tropical and subtropical Old World (introduced elsewhere). References: Ackerman (2002c) in FNA26 (2002a); Correll (1950).

* ***Zeuxine strateumatica* (Linnaeus) Schlechter. LAWN ORCHID, SOLDIER ORCHID. **Hab:**** Lawns, landscaped areas, roadsides, potted plants, moving into natural communities, such as hydric hammocks. **Dist:** Native of Asia. Correll (1950) reports that *Zeuxine* was first documented in the United States on 27 January 1936 in Indian River County, FL. **Phen:** (Sep-) Dec-Feb. **Syn:** = Bah, ETx1, FNA26, GW1, K1, K3, K4, WH3, WI, Correll (1950), Luer (1972). NatureServe GNR (Not Yet Ranked).

**66. HYPOXIDACEAE R. Brown 1814 (STARGRASS FAMILY) [in ASPARAGALES]**

A family of about 9 genera and ca. 155 species, tuberous or rhizomatous perennial herbs, subcosmopolitan (though not well distributed in the northern hemisphere of the Old World, and especially diverse in South Africa). The recognition of Hypoxidaceae at the family level is supported by a variety of authors, on morphologic and molecular grounds (Kocyan et al. 2011; Judd 2000). References: Herndon (2002) in FNA26 (2002a); Judd (2000); Kocyan et al. (2011); Liu et al. (2012); Nordal in Kubitzki (1998a).

Hypoxis Linnaeus 1759 (STARGRASS)

A genus of about 50-150 species, herbs, of tropical and warm temperate regions of the Old and New World, with a center of diversity in South Africa. See Zona et al. (2009) for detailed images of the seedcoat character states of the species. References: Herndon (2002) in FNA26 (2002a); Judd (2000); Nordal in Kubitzki (1998a); Zona et al (2009).

- 1 Leaves glabrous, or with a few trichomes near the base; seeds black.
 - 3 Ovaries longer than broad, cylindric, with scattered trichomes; floral bracts (3-) 5-20 (-80) mm long; pedicels usually shorter than the floral bracts; tepals equaling or shorter than ovaries; [of Coastal Plain bottomlands]..... *Hypoxis curtissii*
 - 3 Ovaries as broad as long or nearly so, deltate, densely pubescent; floral bracts (1-) 2-10 (-17) mm long; pedicels usually $>2\times$ as long as the floral bracts; tepals much longer than ovaries; [widespread]..... *Hypoxis hirsuta*
- 1 Leaves evenly pubescent, at least near the base; seeds black or brown.
 - 4 Pedicels usually $>2\times$ as long as the bracts; seeds black; [collectively widespread]..... *Hypoxis hirsuta*
 - 4 Pedicels usually $<2\times$ as long as subtending bracts; seeds black or brown; [of Coastal Plain pinelands].
 - 6 Anthers >2 mm long; tepals longer than the pedicels; floral bracts longer than the pedicels; seeds black, pebbled with round pebbling (the exposed portion of each cell rounded)..... *Hypoxis rigida*
 - 6 Anthers <2 mm long; tepals shorter than to longer than the pedicels; floral bracts shorter than to longer than the pedicels; seeds brown, with detached, wrinkled cuticle.
 - 7 Tepals 1.5-2 \times as long as ovaries; seed coats iridescent..... *Hypoxis sessilis*
 - 7 Tepals ca. 1 (-1.5) \times the length of the ovaries; seed coats not iridescent..... *Hypoxis wrightii*

Hypoxis curtissii Rose. SWAMP STARGRASS, CURTISS'S STARGRASS. **Hab:** Swamp forests, alluvial forests, water courses, hydric hammocks.

Dist: E. NC south to c. peninsular FL, west to e. TX. **Phen:** (Late Jan-) Mar-Jun; May-Jul. **Syn:** = Ar, ETx1, FNA26, K1, K3, K4, Va, WH3, Judd (2000); = *Hypoxis hirsuta* (Linnaeus) Coville var. *leptocarpa* (Engelmann & A. Gray) Fernald – RAB, S; = *Hypoxis leptocarpa* (Engelmann & A. Gray) Small – GW1, Tx; < *Hypoxis hirsuta* (Linnaeus) Coville – C, G.

Hypoxis hirsuta (Linnaeus) Coville. COMMON STARGRASS, EASTERN STARGRASS. **Hab:** In a wide variety of dry to moist forests. **Dist:** S. ME west to SK and ND, south to GA and e. TX. **Phen:** Mar-Jun; May-Jul. **Syn:** = Ar, ETx1, FNA26, GW1, IL, K3, K4, Mi, Mo1, NcTx, NE, NY, Pa, S, Tn, Tx, Va, WV, Judd (2000); = *Hypoxis hirsuta* var. *hirsuta* – RAB; < *Hypoxis hirsuta* (Linnaeus) Coville – C, G, K1.

Hypoxis rigida Chapman. SAVANNA STARGRASS. **Hab:** Wet pine savannas. **Dist:** Se. NC south to Panhandle FL, west to e. TX. **Phen:** Apr (-later, especially in response to fire); May (-later, especially in response to fire). **Syn:** = ETx1, FNA26, GW1, K3, K4, RAB, S, Tx, WH3, Judd (2000); < *Hypoxis hirsuta* (Linnaeus) Coville – K1.

Hypoxis sessilis Linnaeus. GLOSSY-SEED STARGRASS. **Hab:** Wet pine savannas. **Dist:** NC south to s. FL, west to e. TX, s. AR, and se. OK. **Phen:** Apr (-later, especially in response to fire); May (-later, especially in response to fire). **Tax:** The potential recognition of *H. longii* needs additional assessment as its lumping is presumptive; see Weakley, Ludwig, and Townsend (2013) for discussion. **Syn:** = Ar, ETx1, FNA26, GW1, K1, K3, K4, RAB, S, Tx, Va, WH3, Judd (2000); > *Hypoxis longii* Fernald – C, F, G; > *Hypoxis sessilis* Linnaeus – C, F, G.

Hypoxis wrightii (Baker) Brackett. BRISTLESEED STARGRASS. **Hab:** Wet pine savannas. **Dist:** Se. VA south to s. FL, west to TX; disjunct in the West Indies (Cuba, Bahamas, Jamaica, Hispaniola, Puerto Rico). **Phen:** Mar-Apr (-later, especially in response to fire); Apr-May (-later, especially in response to fire). **Syn:** = Bah, FNA26, K1, K4, Va, WH3, Judd (2000); = *Hypoxis micrantha* Pollard – C, F, G, GW1, RAB, S, Tx, misapplied. NatureServe G4 (Apparently Secure).

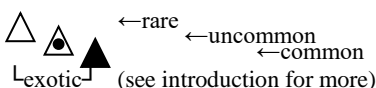

70. IRIDACEAE A.L. de Jussieu 1789 (IRIS FAMILY) [in ASPARAGALES]

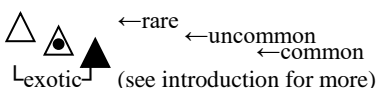

A family of about 65-82 genera and 1700-1810 species, herbs, of cosmopolitan distribution (most diverse in s. Africa). References: Goldblatt (2002a) in FNA26 (2002a); Goldblatt, Manning, & Rudall in Kubitzki (1998a).

- 1 Inflorescence a spike or panicle of spikes; plants from corms; flowers slightly zygomorphic.
 - 2 Stem usually branched, the inflorescence appearing paniculate; tepals orange to red *Crocsmia xrocsmiiflora*
 - 2 Stem unbranched, the inflorescence a spike; tepals any of a wide range of colors (including orange and red) *Gladiolus*
- 1 Inflorescence an umbellate 1-sided cyme; plants from rhizomes or bulbs; flowers actinomorphic.
 - 4 Leaves planar; plants from rhizomes (or indistinct) or a bulb (in *Iris xiphium*).
 - 5 Style branches broad, petaloid, terminating in paired crests..... *Iris*
 - 5 Style branches not broad or petaloid.
 - 6 Tepals 16-35 mm long, orange or red; seeds 4-6 mm in diameter..... *Iris domestica*
 - 6 Tepals 6-15 mm long, blue, purple, lavender, pink, magenta, white, or yellowish-white; seeds 0.6-1.3 mm in diameter *Sisyrinchium*
 - 4 Leaves plicate; plants from bulbs.
 - 7 Tepals unequal, the inner whorl $< \frac{1}{2}$ as long as the outer whorl..... *Herbertia lahue*

Symbology:

7 Tepals nearly equal in length.

9 Style branches divided for ca. ½ their length; style arms arching over or between the anthers; tepals dark purple..... *Alophia drummondii*

9 Style branches divided nearly to base; style arms extending horizontally between the anthers; tepals blue, white in the center..... *Nemastylis*

Alophia Herbert 1840 (PROPELLOR-FLOWER)

A genus of ca. 5 species, of sc. North America, Mexico, Central America, and South America. References: Goldblatt (2002d) in FNA26 (2002a).

Alophia drummondii (Graham) R.C. Foster. PROPELLOR-FLOWER, PINEWOODS-LILY, PURPLE PLEATLEAF.

Hab: Longleaf pine savannas, other sandy woodlands. **Dist:** E. LA (and MS?) west to TX and OK; Mexico; Guyana. **Phen:** May-Jul. **Syn:** = Ar, ETx1, FNA26, K1, K3, K4, Meso6, NcTx; = *Eustylis purpurea* (Herbert) Engelman & A. Gray – Tx; = *Herbertia drummondii* (Graham) Small.

Crocasmia Planchon 1851 (MONTBRETIA)

A genus of 8-9 species, herbs, native of sub-Saharan Africa. References: Goldblatt (2002g) in FNA26 (2002a); Goldblatt, Manning, & Dunlop (2004); Goldblatt, Manning, & Rudall in Kubitzki (1998a).

* *Crocasmia ×crocasmiflora* (Lemoine) N.E. Brown [aurea × pottsii]. MONTBRETIA. **Hab:** Disturbed areas, ditches, especially in moist to wet sites, including salt marshes; the parents of the hybrid both native to sub-Saharan Africa. **Dist:** Reported for Lowndes and Thomas counties, GA (Carter, Baker, & Morris 2009). **Phen:** Late Jun-Jul. **Tax:** A hybrid of *C. aurea* × *pottsii*. **Syn:** = ETx1, FNA26, K1, K3, K4, Meso6, WH3; = *Crocasmia ×crocasmiflora* – RAB, orthographic variant; = *Crocasmia aurea* × *pottsii*.

Gladiolus Linnaeus 1754 (GLADIOLUS)

A genus of about 255 species, largely of Africa. References: Goldblatt (2002i) in FNA26 (2002a); Goldblatt, Manning, & Rudall in Kubitzki (1998a).

1 Inner tepals 60-70 mm long..... *Gladiolus ×gandavensis*

1 Inner tepals < 60 mm long.

2 Tepals white, cream, orange, or red; perianth tube plus dorsal sepal 60-95 mm long..... *Gladiolus dalenii* ssp. *dalenii*

2 Tepals pink, reddish, or light purple, with white markings on the outer 3 tepals; perianth tube plus dorsal sepal 30-65 mm long.

3 Anthers 10-13 mm long; capsules oblong, 18-24 mm long; seeds winged..... *Gladiolus communis*

3 Anthers ca. 15 mm long; capsules globose, 10-12 mm long; seeds not winged *Gladiolus italicus*

* *Gladiolus communis* Linnaeus. FALSE CORN-FLAG. **Hab:** Commonly cultivated as ornamentals, rarely persisting or weakly spreading. **Dist:** Native of Mediterranean Europe and n. Africa. **Syn:** = Ar, ETx1, FNA26; > *Gladiolus byzantinus* P. Miller; > *Gladiolus communis* Linnaeus – K4; > *Gladiolus communis* Linnaeus ssp. *byzantinus* (P. Miller) A. Hamilton – K1, K3; > *Gladiolus papilio* Hooker – K1, K3, K4, RAB, misapplied.

* *Gladiolus dalenii* Van Geel ssp. *dalenii*. **Hab:** Sometimes cultivated, rarely persisting or spreading. **Dist:** Native of s. Africa. Persisting and/or naturalizing at scattered locations in the se. United States (Zomlefer et al. 2018). **Syn:** = FNA26; < *Gladiolus dalenii* Van Geel – K4. NatureServe GNRTNR (Not Yet Ranked).

* *Gladiolus ×gandavensis* Van Houtte. **Hab:** Commonly cultivated as ornamentals, rarely persisting or weakly spreading. **Dist:** Native of s. Africa. **Tax:** Goldblatt suggests that as many as 5 species are involved in the origin of the large-flowered garden gladiolus. **Syn:** = FNA26, K1, K3, K4, RAB, WH3; = *Gladiolus ×ganvadenensis* – Il, orthographic error; ? *Gladiolus dalenii* Van Geel; ? *Gladiolus hortulanus* L.H. Bailey – S.

* *Gladiolus italicus* P. Miller. **Hab:** Sometimes cultivated, rarely persisting or spreading. **Dist:** Native of Eurasia. Introduced in TN. **Syn:** = ETx1, FNA26, K1, K3, K4; ? *Gladiolus segetum* Ker-Gawler – S. NatureServe GNR (Not Yet Ranked).

Herbertia Sweet 1827 (PLEAT-LEAF IRIS)

A genus of about 5 species, herbs, in se. North America and temperate South America. References: Goldblatt (2002c) in FNA26 (2002a).

Herbertia lahue (Molina) Goldblatt. PRAIRIE-NYPH, HERBERTIA. **Hab:** Prairies, marshes, meadows. **Dist:** AL and FL west to TX; central South America. **Phen:** Mar-May. **Syn:** = ETx1, FNA26, WH3; > *Alophia drummondii* (Graham) R.C. Foster – Tx, misapplied; > *Herbertia caerulea* Herbert – S; > *Herbertia lahue* ssp. *caerulea* (Herbert) Goldblatt – K1, K3, K4, NcTx.

Iris Linnaeus 1753 (IRIS, FLAG, FLEUR-DE-LIS, BLACKBERRY-LILY)

A genus of about 225 species, herbs, of Eurasia, n. Africa, and North America. Wilson (2004) suggests that *Belamcanda* is phylogenetically nested within *Iris* and should be included there; Goldblatt & Mabberley (2005) make the appropriate nomenclatural combination. Alternatively, *Iris* may be broken up into multiple genera (Mavrodiev et al. 2014; Crespo, Martínez-Azorín, & Mavrodiev 2015; Mavrodiev et al. 2021). References: Boltenkov et al (2020); Crespo, Martínez-Azorín, & Mavrodiev (2015); Fernald (1947); Goldblatt & Mabberley (2005); Goldblatt (2002b) in FNA26 (2002a); Goldblatt, Manning, & Rudall in Kubitzki (1998a); Henderson (2002) in FNA26 (2002a); Mavrodiev et al (2014); Mavrodiev et al (2021); Wilson (2004).

Identification Notes: the petals are usually erect, smaller than the petaloid sepals (which are brightly colored, generally reflexed, and marked with a "signal"). The styles are also petaloid, arched over the sepals, and 2-cleft at the tip (except in *I. domestica*).

Belamcanda: *Belamcanda chinensis*

Iris: *Iris germanica*, *Iris pallida*, *Iris pumila*

Gattenhofia: *Gattenhofia verna* var. *smalliana*, *Gattenhofia verna* var. *verna*

Lophiris: *Lophiris cristata*

Xiphion: *Xiphion xiphium*

Limniris: *Limniris prismatica*, *L. tridentata*, *L. sanguinea*, *L. sibirica*, *L. pseudacorus*, *L. ensata*, *L. versicolor*, *L. virginica*, *L. shrevei*

Phaeiris: *Phaeiris albispiritus*, *Phaeiris brevicaulis*, *Phaeiris fulva*, *Phaeiris hexagona*, *Phaeiris giganticaerulea*, *Phaeiris kimballiae*, *Phaeiris savannarum*

- 2 Style branches not broad, petaloid, or crested; seeds black, shiny, in a blackberry-like cluster (the seeds exposed at maturity by dehiscence of the papery to chartaceous capsule walls); [genus *Belamcanda*] *Iris domestica*
- 2 Style branches broad, petaloid, terminating in paired crests; seeds tan to brown, in a capsule.
 - 3 Sepal "signal" (see above) of multicellular hairs (the "beard"), along the midrib of the claw and the base of the blade; [subgenus *Iris*; or genus *Iris*].
 - *Iris germanica*
 - 3 Sepal "signal" consisting of contrasting color, ridges, small unicellular hairs, and/or a cockscomb-like crest.
 - 6 Rhizome branches cord-like, with scale-like leaves, enlarging at the apex to produce vegetative leaves, additional branches, and flowering stems.
 - 8 Sepal "signal" a 3-ridged, toothed crest; leaves 10-25 mm wide, green, falcate; flowers not or only slightly fragrant; rhizomes surficial (one can "pull" them off the ground by gently tugging on the leaves); [generally of mesic and fertile soils]; [section *Lophiris*; or genus *Lophiris*] *Iris cristata*
 - 8 Sepal "signal" merely a primarily orange color patch (not a crest); leaves 3-13 mm wide, blue-green, straight or nearly so; flowers strongly fragrant; rhizomes deeply buried (not easily "pulled"); [generally of dry and acid soils]; [section *Limniris*, series *Vernae*; or genus *Gattenhofia*].
 - *Iris verna* var. *smalliana*
 - 6 Rhizome branches like the primary rhizome, not as above.
 - 13 Capsules 3-angled or nearly round in cross-section; [section *Limniris*; series *Laevigatae*; or genus *Limniris*].
 - 14 Perianth yellow..... *Iris pseudacorus*
 - 14 Perianth blue-violet (rarely white).
 - 17 Plants to 10 dm tall, usually with 1-2 well-developed branches; capsule 7-11 cm long *Iris shrevei*
 - 17 Plants to 6 dm tall, little or not at all branched; capsule 4-7 cm long *Iris virginica*
 - 13 Capsules 6-angled or ridged in cross-section; [section *Limniris*, series *Hexagonae*; or genus *Phaeiris*].
 - 18 Perianth dull copper or orange-brown (or dark yellow) (fading in nature or drying in the herbarium to a bluish or purplish color); petals spreading or declining..... *Iris fulva*
 - 18 Perianth blue-violet (rarely white); petals erect to spreading.
 - 19 Stems declining or semi-erect, sharply zigzag..... *Iris brevicaulis*
 - 19 Stems erect, slightly if at all zigzag.
 - 21 Capsules with 6 broad rounded lobes, indehiscent..... *Iris giganticaerulea*
 - 21 Capsules with 6 sharp or winglike ridges, dehiscent.
 - *Iris savannarum*

Iris brevicaulis Rafinesque. SHORT-STEMMED IRIS, LAMANCE IRIS, ZIGZAG IRIS. **Hab:** Swamps, bottomlands, bogs, seeps, marshes. **Dist:** OH west to KS, south to Panhandle FL and TX. **Syn:** = Ar, C, ETx1, F, FNA26, G, GW1, Il, K1, K3, K4, Mo1, Tn, Tx, WH3; = *Phaeiris brevicaulis* (Rafinesque) M.B. Crespo, Martínez-Azorín, & Mavrodiev – Crespo, Martínez-Azorín, & Mavrodiev (2015); > *Iris foliosa* Mackenzie & Bush – S; > *Iris mississippiensis* Small – S. NatureServe G4 (Apparently Secure).

Iris cristata Aiton. DWARF CRESTED IRIS. **Hab:** Moist forests, rich woods, roadbanks, streambanks. **Dist:** MD west to IN and MO, south to NC, AL, MS, AR, and e. OK. **Phen:** Apr-May; Jun-Jul. **Syn:** = C, F, FNA26, G, Il, K1, K3, K4, Mo1, NE, NY, Pa, RAB, Tn, Va, W, WV; = *Lophiris cristata* (Aiton) M.B. Crespo, Martínez-Azorín, & Mavrodiev – Crespo, Martínez-Azorín, & Mavrodiev (2015); = *Neubeckia cristata* (Aiton) Alefani – S. NatureServe G5 (Secure).

* ***Iris domestica*** (Linnaeus) Goldblatt & Mabberley. BLACKBERRY-LILY, LEOPARD-LILY. **Hab:** Dry woodlands, forests, edges of granitic flatrocks, suburban areas. **Dist:** Native of e. Asia. **Phen:** Jun-Aug. **Syn:** = Ar, K4, Mi, NE, NY, Tn, Va, WH3, Goldblatt & Mabberley (2005); = *Belamcanda chinensis* (Linnaeus) Medikus – C, ETx1, F, FNA26, G, Il, K1, K3, Mo1, Pa, RAB, S, Tx, W, WV. NatureServe GNR (Not Yet Ranked).

Iris fulva Ker Gawler. RED FLAG, COPPER IRIS. **Hab:** Swamp forests, wet hammocks, usually in shallow water. Become somewhat popular as a native wildflower in cultivation. **Dist:** S. IL, MO, and w. TN south to w. Panhandle FL, AL, and LA (introduced elsewhere). **Phen:** May-Jun. **Syn:** = C, ETx1, F, FNA26, G, GW1, IL, K1, K3, K4, Mo1, S, Tn, Tx, WH3; = *Phaeiris fulva* (Ker-Gawler) M.B. Crespo, Martínez-Azorín, & Mavrodiev – Crespo, Martínez-Azorín, & Mavrodiev (2015), Mavrodiev et al (2021). NatureServe G5 (Secure).

* *Iris germanica* Linnaeus. GERMAN IRIS, FLEUR-DE-LYS. **Hab:** Roadsides, old homesites, ditches; cultivated and rarely persistent or escaped. **Dist:** Native of Europe. **Phen:** Apr-Jun. **Syn:** = Ar, C, ETx1, F, FNA26, G, K4, Mi, Mo1, NcTx, NE, NY, Pa, RAB, Tn, Crespo, Martínez-Azorín, & Mavrodiev (2015); > *Iris × germanica* – IL, K1, WH3; > *Iris flavescens* Delile – K1, K3; > *Iris germanica* Linnaeus – K1.

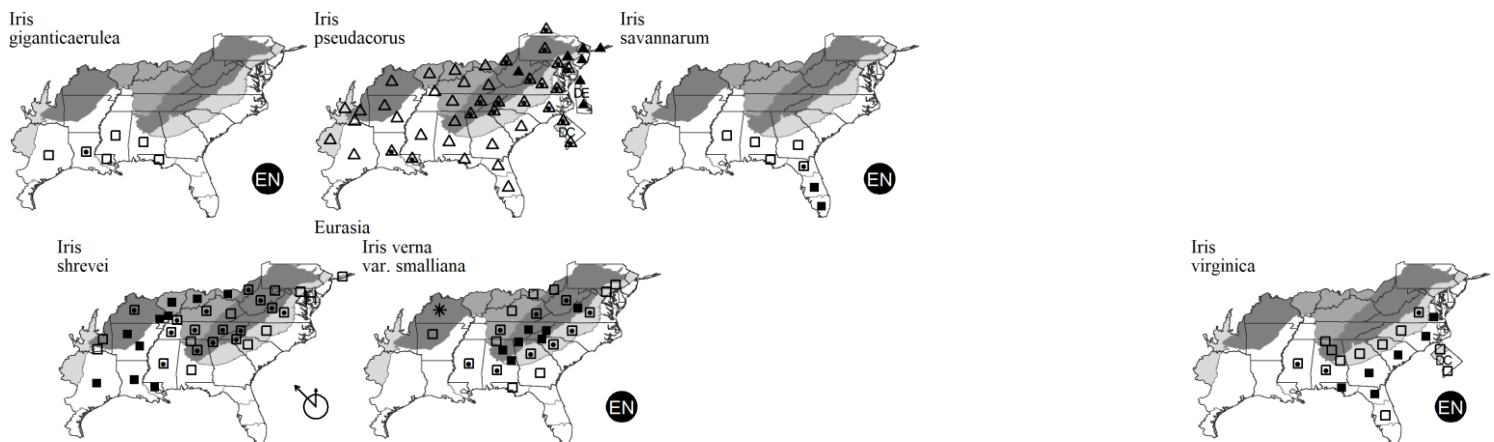

Iris giganticaerulea Small. GIANT BLUE IRIS. **Hab:** Marshes and swamps. **Dist:** Panhandle FL (L. Anderson, pers.comm., 2021) west to e. TX. **Syn:** = FNA26, K1, K3, K4; = *Phaeiris giganticaerulea* (Small) M.B. Crespo, Martínez-Azorín, & Mavrodiev – Crespo, Martínez-Azorín, & Mavrodiev (2015); > *Iris alticristata* Small – S; > *Iris aurilinea* Alexander – S; > *Iris citricristata* Small – S; > *Iris elephantina* Small – S; > *Iris fluvialis* Small – S; > *Iris miraculosa* Small – S; > *Iris paludicola* Alexander – S; > *Iris parvicaerulea* Alexander – S; > *Iris rivularis* – S; > *Iris venulosa* Alexander – S; > *Iris wherryana* Small – S.

* *Iris pseudacorus* Linnaeus. WATER FLAG, YELLOW FLAG. **Hab:** Swamps, marshes, streams, ponds, streambanks, tidal wetlands, cultivated as a water plant. **Dist:** Native of Eurasia and Africa. **Phen:** May-Jul; Aug-Oct. **Syn:** = Ar, C, ETx1, F, FNA26, G, GW1, IL, K1, K3, K4, Mi, Mo1, NcTx, NE, NY, Pa, RAB, S, Tn, Tx, Va, W, WH3, WV; = *Linniris pseudacorus* (Linnaeus) Fuss – Crespo, Martínez-Azorín, & Mavrodiev (2015). NatureServe GNR (Not Yet Ranked).

Iris savannarum Small. PRAIRIE IRIS. **Hab:** Pine savannas, Florida prairies, strand swamps, freshwater marshes. **Dist:** GA and AL south to s. FL. **Syn:** = *Phaeiris savannarum* (Small) M.B. Crespo, Martínez-Azorín, & Mavrodiev – Crespo, Martínez-Azorín, & Mavrodiev (2015); > *Iris alabamensis* Small – S; < *Iris hexagona* Walter – WH3; < *Iris hexagona* Walter var. *savannarum* (Small) R.C. Foster – K1; < *Iris savannarum* Small – FNA26; > *Iris savannarum* Small – S; < *Iris savannarum* var. *savannarum* – K3, K4.

Iris shrevei Small. **Hab:** Marshes, swamps, streams. **Dist:** Sw. QC to MN, south to w. NC, n. AL, e. TN, AR, e. TX, and e. KS. **Phen:** May-Jul; Jul-Sep. **Syn:** = G, IL, S; = *Iris virginica* Linnaeus var. *shrevei* (Small) E. Anderson – C, F, K1, K3, K4, Mo1, Tx, WV; = *Linniris shrevei* (Small) M.B. Crespo, Martínez-Azorín, & Mavrodiev – Crespo, Martínez-Azorín, & Mavrodiev (2015); < *Iris virginica* Linnaeus – ETx1, FNA26, Mi, Pa, RAB, Tn, Va, W.

Iris verna Linnaeus var. *smalliana* Fernald ex M.E. Edwards. UPLAND DWARF IRIS. **Hab:** Dry to somewhat moist, rocky or sandy woodlands and forests. **Dist:** Sc. PA and WV south to w. NC, e. TN, n. GA, se. GA, Panhandle FL, and AL; disjunct in Ouachita Mountains of AR. **Phen:** Apr-May; Jun-early Aug. **Tax:** See Fernald (1947) and Small (1931) for discussion of these two taxa, treated as varieties but warranting species rank. **Syn:** = Ar, F, FNA26, K1, K3, K4, Pa, RAB, Tn, Va, W, WH3, WV; = *Gattenhofia verna* (Linnaeus) Medikus var. *smalliana* (Fernald ex M.E. Edwards) M.B. Crespo, Martínez-Azorín, & Mavrodiev – Crespo, Martínez-Azorín, & Mavrodiev (2015); < *Iris verna* – C, G, Mo1; < *Neubeckia verna* (Linnaeus) Alefani – S. NatureServe G5T4T5 (Apparently Secure).

Iris virginica Linnaeus. SOUTHERN BLUE FLAG. **Hab:** Tidal and nontidal marshes and swamps, stream margins, flatwoods, wet meadows, bogs. **Dist:** Se. VA south to c. peninsular FL, west to MS, north in the interior to w. TN; disjunct in sc. TN. **Phen:** Apr-May; Jul-Sep. **Syn:** = G, S; = *Iris virginica* Linnaeus var. *virginica* – C, F, K1, K3, K4; = *Linniris virginica* (Linnaeus) Rodionenko – Crespo, Martínez-Azorín, & Mavrodiev (2015); < *Iris virginica* Linnaeus – FNA26, NY, RAB, Tn, Va, W, WH3.

Nemastylis Nuttall 1835 (CELESTIAL-LILY)

A genus of about 5 species, herbs, of s. North America and Central America. The circumscription of *Nemastylis* relative to *Calydorea* remains uncertain. References: Goldblatt (2002e) in FNA26 (2002a); Goldblatt, Manning, & Rudall in Kubitzki (1998a).

Sisyrinchium Linnaeus 1753 (BLUE-EYED-GRASS, IRISSETTE)

Contributed by B.A. Sorrie and A.S. Weakley

A genus of about 80 or more species, herbs, of the Americas. *Sisyrinchium* is a very difficult genus, with a number of taxonomic questions remaining in our area. References: Bicknell (1896); Bicknell (1899a); Bicknell (1899b); Cholewa & Henderson (2002) in FNA26 (2002a); Goldblatt, Manning, & Rudall in Kubitzki (1998a); Hornberger (1991); Keith (2022).

Identification Notes: For confident identification, it is necessary to collect underground parts; fibrous remains of leaves, and rhizomes (if any), are critical characters. Stem width includes wings.

Unkeyed taxa: *Sisyrinchium species 2* [chalk]

- 1 Perianth with tepals campanulate basally, flaring distally; annual; plants usually < 2 dm tall; tepals lavender, pink, white, magenta, or yellow, with a maroon blaze near the base (*S. rosulatum*) or the base wholly yellow (*S. minus*).
 - 2 Stems with 3-6 nodes; tepals yellow basally; mature capsules broadly fusiform, elliptical, or barrel-shaped, uniformly light brown; [of MS to TX] *Sisyrinchium minus*
 - 2 Stems with 1-2 (-3) nodes; tepals with maroon blaze near base; mature capsules globose, tan with purple sutures; [widespread] *Sisyrinchium rosulatum*
- 1 Perianth with tepals abruptly spreading in a plane; perennial, plants usually > 2 dm tall; tepals blue, violet, or white.
 - 3 Inflorescences paired (each inflorescence composed of 1-several flowers, their pedicels emanating from within 2 chartaceous scales; thus, there are 2 pairs of scales within the 2 outer, leaflike, green spathe bracts); outer spathe bract connate 0-1 mm.
 - 7 Ovaries drying brown to black; [various habitats, widespread] *Sisyrinchium albidum*
 - 7 Ovaries drying tan to light brown; [calcareous glades of c. TN, sc. KY, and ne. MS] *Sisyrinchium species 3*
 - 3 Inflorescence solitary, not paired (within the 2 green spathe bracts there is only one pair of chartaceous scales); outer spathe bract connate 2-6 mm (except 0-1 mm in *S. campestre*).
 - 14 Plant bases with fibrous remains of leaves (usually abundant).
 - 15 Main stems 0.5-2.1 mm wide (usually < 2 mm wide). *Sisyrinchium fuscatum*
 - 15 Main stems 1.5-6 mm wide (usually > 2 mm wide).
 - 18 Stems and branches smooth on margins; stems mostly 2.3-4.5 mm wide; plants dry dull green or brownish green; [widespread] *Sisyrinchium nashii*
 - 18 Stems and branches scabrous on margins at least distally; stems 1.5-3.0 (-3.5) mm wide; plants dry dark brown or blackish; [of the Coastal Plain]. *Sisyrinchium fuscatum*
 - 14 Plant bases without fibrous remains of leaves
 - 20 Main stems usually < 2 mm wide.
 - 21 Rhizome present and obvious (although not longer than about 3 cm), about 2 mm thick, hard, blackish; hyaline margins of inner spathe bract acute (contra *S. atlanticum*) *Sisyrinchium miamiense*
 - 21 Rhizome absent or at least not evident; hyaline margins of inner spathe bract various.
 - 22 Ovaries and capsules black, strongly contrasting with foliage (which dries pale yellowish or tan); hyaline margins of inner spathe bract obtuse or truncate apically, sometimes projecting as lobes *Sisyrinchium atlanticum*
 - 22 Ovaries and capsules pale to medium brown; foliage drying dull green or brownish; hyaline margins of inner spathe bract acute, never projecting as lobes.
 - 23 Spathe bracts and stems without spicules or papillae; outer spathe bract usually > inner by 1-2.7 mm; spathe bracts purple tinged basally and sometimes also on margins; plants usually densely cespitose *Sisyrinchium langloisii*
 - 23 Spathe bracts and stems with abundant white spicules or papillae, sometimes these +/- flattened like lenticels; outer spathe bract usually > inner by 2.5-5.5 mm; spathe bracts green; plants usually with few-several stems, not densely cespitose *Sisyrinchium pruinatum*
 - 20 Main stems usually > 3 mm wide.
 - 24 Plants light green when fresh and drying yellowish, light green, green or olive; relatively fewer stems from base, rarely to 32 stems, but averaging 5.5 stems or less; blooming from early April through October
 - 25 Stem body mostly broader than the margins, thus whole stem appears somewhat rounded with sides tapering to scarcely discernable wings; plants drying yellowish or light olive-green; stem and wings drying about the same color; ovaries and capsules dark brown or black and contrasting with the much lighter dried foliage; stems averaging 3.3 from base; blooming early April through May; occurring in moist to wet sandy or silty soils in open areas, bogs, and marshes. *Sisyrinchium atlanticum*
 - 25 Stem body as wide or narrower than the margins (body looks more like a midvein), stems appear flattened with easily discernible wings, plants drying olive or green; stem body often drying slightly lighter than wings, forming a pale "stripe" down the center; ovaries and capsules not strongly contrasting with dried foliage. *Sisyrinchium angustifolium*
 - 24 Plants dark green when fresh, drying olive to dark brown; mature plants with numerous stems from base (to 55), averaging 7.3 or more; blooming from late February through April, rarely into May.
 - 28 Surface of leaves, stems and peduncles distinctly granular (like grains of white sand); leaves and spathes scabrous on surface and margins of fresh plants (this character often lost in drying); outer spathe 18.6-34.1 mm (\bar{x} = 25.8) ; 0.4-12.4 mm longer than inner spathe (\bar{x} = 4.7); occurring in northcentral Texas on calcareous soils in remnant prairies, fields, open post oak woodlands, and adjacent roadsides and lawns *Sisyrinchium pruinatum*
 - 28 Surface of leaves, stems and peduncles glabrous, margins sometimes scabrous or denticulate (character often lost on dried plants); outer spathe shorter on average and spathes equal or outer spathe averaging much less than 4.7 mm longer than inner; occurring east and south of northcentral Texas. *Sisyrinchium species 3*

72c. HEMEROCALLIDACEAE R. Brown 1810 (DAY-LILY FAMILY) [in ASPARAGALES]

A family of about 19 genera and 85 species, herbs, largely of the Old World and especially Australia and s. Africa. APG IV (2016) recommended that Hemerocallidaceae and Xanthorrhoeaceae be included within a very broadly circumscribed Asphodelaceae, but I here follow Seberg et al. (2012) in recognizing somewhat smaller monophyletic families that are more easily circumscribed, characterized, and described. References: APG (2016); Chase, Reveal, & Fay (2009); Clifford, Henderson, & Conran in Kubitzki (1998a); Seberg et al (2012); Zomlefer (1998); Zomlefer (1999).

***Hemerocallis* Linnaeus 1753 (DAY-LILY)**

A genus of about 15-30 species, temperate, of e. Asia. References: Straley & Utech (2002c) in FNA26 (2002a); Zomlefer (1998).

- 1 Flowers tawny-orange (or many variants thereof), not fragrant; inner tepal margins wavy; tepal veins prominently reticulate..... ***Hemerocallis fulva***
 1 Flowers lemon-yellow, fragrant; inner tepal margins planar; tepal veins parallel..... ***Hemerocallis lilioasphodelus***

* ***Hemerocallis fulva*** (Linnaeus) Linnaeus. ORANGE DAY-LILY, TAWNY DAY-LILY. **Hab:** Commonly cultivated, frequently escaping to forests, streambanks, suburban woodlands, lawns, waste places. **Dist:** Native of Asia. **Phen:** Apr-Jul. **Syn:** = Ar, C, ETx1, FNA26, G, Il, K1, K3, K4, Meso6, Mi, Mo1, NcTx, NE, NY, Pa, RAB, Tn, Tx, Va, W, WH3, WV, Zomlefer (1998); > *Hemerocallis fulva* var. *fulva* – F; > *Hemerocallis fulva* var. *kwanso* Regel – F.

* ***Hemerocallis lilioasphodelus*** Linnaeus. YELLOW DAY-LILY, LEMON DAY-LILY. **Hab:** Roadsides, bottomlands, less commonly cultivated, only rarely escaping. **Dist:** Native of Asia. Reported for the Piedmont and Mountains of AL (Clebune, Cullman, Macon, and Randolph counties) by Spaulding & Triplett (2022). **Phen:** May-Jul. **Syn:** = C, ETx1, FNA26, K1, K3, K4, NE, NY, Pa, WH3, Zomlefer (1998); = *Hemerocallis flava* (Linnaeus) Linnaeus – F, G, WV; = *Hemerocallis lilio-asphodelus* – Il, Mi.

73a. ALLIACEAE Borkhausen 1797 (ONION FAMILY) [in ASPARAGALES]

A family of about 13 genera and 800 species, herbs, especially diverse in South America, n. North America, and n. Eurasia. Although included in Amaryllidaceae by APG III (2009), Seberg et al. (2012) and others make a strong case for the benefits of recognizing smaller families in the Asparagales, a course followed here. References: Dahlgren, Clifford, & Yeo (1985); Fay & Chase (1996); Meerow & Snijman in Kubitzki (1998a); Müller-Doblies & Müller-Doblies (1996); Rahn in Kubitzki (1998a).

- 1 Inflorescence a solitary flower; flowers blue, lavender, or white; fresh plant with an onion odor; [tribe *Gillesieae*]..... ***Ipheion***
 1 Inflorescence an umbel; flowers white, greenish white, cream, pink, or magenta-purple; fresh plant with or without an onion odor.
 2 Tepals 2-9 mm long; ovary 3-celled, each with 1-2 ovules; fresh plant with an onion odor; anthers < 1.5 mm long; [tribe *Allieae*]..... ***Allium***
 2 Tepals 10-15 mm long; ovary 3-celled, each with 6-10 ovules; fresh plant usually without an onion odor; anthers ca. 2 mm long; [tribe *Gillesieae*].....
 ***Nothoscordum***

***Allium* Linnaeus 1753 (ONION, GARLIC, LEEK, RAMPS, CHIVES)**

A genus of 500-700 species, herbs, of Eurasia, n. Africa, and North America (especially diverse in c. Asia). References: Mathew (1996); McNeal & Jacobsen (2002) in FNA26 (2002a); Poindexter, Weakley, & Williams (2017) in Weakley et al (2017); Rahn in Kubitzki (1998a).

- 3 Leaves cylindric (round or channeled-indent in cross section), hollow.
 4 Stem stout, usually > 10 mm in diameter; peduncles with a distinct swollen portion..... ***Allium cepa***
 4 Stem slender, < 5 mm in diameter; peduncles without a distinct swollen portion; [subgenus *Allium*]
 ***Allium vineale***
 3 Leaves variously flattened or keeled (flat or V-shaped in cross section), not hollow.
 7 Stem leafy for 1/5-2/3 its length; [subgenus *Allium*].
 8 Inflorescence of flowers only; leaves 0.5-4.5 cm wide.
 9 Tepals 4-5.5 mm long, white, pink, or purplish-red..... ***Allium ampeloprasum***
 9 Tepals 7-12 mm long, white..... ***Allium neapolitanum***
 8 Inflorescence of bulbets (and often flowers as well); leaves 0.2-4.5 cm wide.
 ***Allium sativum***
 7 Stem scapose, leafy only at its base (lowermost 1/4 or less of stem); leaves < 1.4 cm wide; [subgenus *Amerallium*].
 23 Inflorescence partly or entirely of bulbets..... ***Allium canadense***
 23 Inflorescence entirely of normal flowers.
 ***Allium mobile***

* *Allium ampeloprasum* Linnaeus. WILD LEEK, YORKTOWN ONION, ELEPHANT GARLIC. **Hab:** Roadsides and other disturbed areas. **Dist:** Native of Eurasia. **Phen:** Late May-early Jul; Jul-Aug. **Syn:** = C, ETx1, F, FNA26, G, K4, NcTx, RAB, Va, W, Mathew (1996); > *Allium ampeloprasum* var. *ampeloprasum* – K1; > *Allium ampeloprasum* var. *atroviolaceum* (Boissier) Regel – II, K1.

Allium canadense Linnaeus. WILD ONION. **Hab:** Bottomland forests, pastures, roadsides. **Dist:** NB west to ND, south to c. peninsular FL and TX. **Phen:** Mid Apr-Jun; late May-Jul. **Comm:** Though native, often appearing weedy. **Syn:** = F, G, Mi, Pa, S, W; = *Allium canadense* Linnaeus var. *canadense* – Ar, C, ETx1, FNA26, II, K1, K3, K4, Mo1, NcTx, NE, NY, RAB, Tx, Va, WH3; > *Allium continuum* Small. [NatureServe G5T5](#) (Secure).

* *Allium cepa* Linnaeus. GARDEN ONION. **Hab:** Persisting from gardens, or appearing around compost or trash piles. **Dist:** Native to c. Asia. **Phen:** May-Jun; Jul. **Syn:** = Ar, C, ETx1, FNA26, G, II, K4, Meso6, Mi, NcTx, NE, RAB; > *Allium cepa* var. *cepa* – K1, K3, Mo1.

Allium mobilense Regel. MOBILE ONION. **Hab:** Dry woodlands, prairies. **Dist:** C. NC south to ne. FL and Panhandle FL, west to TX. **Phen:** Mid Apr-May; Late May-Jun. **Tax:** This taxon is better treated as a species distinct from *Allium canadense*. The nomenclature and taxonomy within *Allium mobilense* needs additional research. It appears that the name *Allium mutabile* Michaux applies to a form of *Allium canadense* s.s. **Syn:** =; = *Allium canadense* Linnaeus var. *mobile* (Regel) Ownbey – Ar, ETx1, FNA26, K1, K3, K4, Mo1, NcTx, RAB, Tx, WH3; = *Allium mutabile* Michaux – F, II; > *Allium arenicola* Small – S; *Allium canadense* ssp. *mobile* (Regel) Traub & Ownbey; > *Allium microscordium* Small – S. [NatureServe G5T4T5](#) (Apparently Secure).

* *Allium neapolitanum* Cirillo. WHITE GARLIC, DAFFODIL GARLIC, NAPLES GARLIC. **Hab:** Suburban woodlands, other disturbed areas. **Dist:** Native of Eurasia. Reported from Franklin County, FL (Wunderlin & Hansen 2011), Marengo County, AL (Keener 2012), and other Gulf Coast states (Kartesz 2010). **Phen:** Mar-Apr. **Syn:** = ETx1, FNA26, K3, K4, NY, WH3. [NatureServe GNR](#) (Not Yet Ranked).

* *Allium sativum* Linnaeus. GARLIC. **Hab:** Gardens, trash heaps, fields; commonly cultivated, rarely occurring as a waif or persistent in gardens. **Dist:** Native of Eurasia. **Phen:** Jun-Sep. **Tax:** Döll. **Syn:** = Ar, C, ETx1, F, FNA26, G, II, K1, K3, K4, Meso6, Mi, Mo1, NcTx, Mathew (1996); > *Allium sativum* var. *ophioscorodon* (Link) Döll – NY; > *Allium sativum* var. *sativum* – NE. [NatureServe GNRTNR](#) (Not Yet Ranked).

* *Allium vineale* Linnaeus. FIELD GARLIC, ONION-GRASS, WILD ONION. **Hab:** Lawns, pastures, other disturbed places. **Dist:** Native of Eurasia. **Phen:** Late May-Jun; Jun-Aug. **Comm:** This is the common weed, often known as "onion-grass". **Syn:** = Ar, C, ETx1, F, FNA26, G, II, Mi, NE, NY, Pa, RAB, S, Va, W; > *Allium vineale* ssp. *compactum* – K1, K3, K4; > *Allium vineale* ssp. *vineale* – K1, K3, K4; > *Allium vineale* var. *capsuliferum* Syme – Mathew (1996); > *Allium vineale* var. *compactum* (Thuillier) Lejeune & Courtois – Mathew (1996); > *Allium vineale* var. *vineale* – Mathew (1996).

Ipheion Rafinesque 1836 [1837] (STAR-OF-BETHLEHEM)

A genus of 3 species, perennial herbs, native of South America. Souza, Crosa, & Guerra (2010), Sassone, Arroyo-Leuenberger, & Giussani (2014), and Arroyo-Leuenberger & Sassone (2016) separated *Ipheion* from *Tristagma*, *Nothoscordum*, and other related genera. References: Arroyo-Leuenberger & Sassone (2016); Rahn in Kubitzki (1998a); Sassone, Arroyo-Leuenberger, & Giussani (2014); Sassone, Giussani, & Arroyo-Leuenberger (2017); Souza, Crosa, & Guerra (2010).

* *Ipheion uniflorum* (Graham) Rafinesque. STAR-OF-BETHLEHEM, SPRING STAR. **Hab:** Commonly cultivated, escaping to lawns, suburban woodlands, bottomlands, disturbed places. **Dist:** Native of South America. Reported for SC by Hill & Horn (1997). **Phen:** Mar-Apr. **Tax:** The complicated nomenclature was explained by Sassone, Giussani, & Arroyo-Leuenberger (2017). **Syn:** = ETx1, K4, NcTx, RAB, Tx, WH3, Sassone, Arroyo-Leuenberger, & Giussani (2014), Sassone, Giussani, & Arroyo-Leuenberger (2017), Souza, Crosa, & Guerra (2010); = *Tristagma uniflorum* (Lindley) Traub – Ar, K1, K3, Va. [NatureServe GNR](#) (Not Yet Ranked).

Nothoscordum Kunth 1843 (GRACE GARLIC, FALSE GARLIC)

A genus of about 25 species, herbs, of the Americas (primarily South America). References: Jacobsen & McNeal (2002) in FNA26 (2002a); Rahn in Kubitzki (1998a).

73a. ALLIACEAE

151

- 1 Leaves 1-4 (-5) mm wide; tepals distinct or only slightly connate at the base; flowers 3-6 (-10) per umbel; flowers not fragrant (or sweetly fragrant) *Nothoscordum bivalve*
 1 Leaves 4-12 mm wide; tepals connate up to 1/3 of their length; flowers 10-20 per umbel; flowers fragrant (similar to cocoa)..... *Nothoscordum gracile*

Nothoscordum bivalve (Linnaeus) Britton. GRACE GARLIC, FALSE GARLIC, CROW POISON. **Hab:** Around granite flatrocks, in glades and barrens of various kinds, in open woodlands, prairies, and also weedy in fields and along roadsides. **Dist:** Se. VA west to s. OH and KS, south to c. peninsular FL, TX, and South America. **Phen:** Mid Mar-mid May, and again in Sep-Dec; May-Jun, and again in Oct-Jan. **ID Notes:** An onion-like plant in general appearance (with a membrane-coated, onion-like bulb), but lacking the odor of onion. **Syn:** = Ar, C, ETx1, F, FNA26, G, Il, K1, K3, K4, NeTx, S, Tx, W, WH3, Rahn in Kubitzki (1998a); = *Allium bivalve* (Linnaeus) Kuntze – RAB; > *Nothoscordum bivalve* var. *bivalve* – Mo1. NatureServe G4 (Apparently Secure).

* ***Nothoscordum gracile*** (Dryander ex Aiton) Stearn. FRAGRANT FALSE GARLIC. **Hab:** Disturbed areas, lawns. **Dist:** Native of South America. **Comm:** Reported as (barely) naturalized in Arkadelphia, AR (Serviss et al. 2020). **Syn:** = ETx1, FNA26, K1, K3, K4, Meso6; = *Allium fragrans* Ventenat; = *Allium inodorum* Aiton – RAB; = *Nothoscordum borbonicum* Kunth – WH3, Rahn in Kubitzki (1998a), misapplied?; = *Nothoscordum fragrans* (Ventenat) Kunth – S.

73b. AMARYLLIDACEAE J. Saint-Hilaire 1805 (AMARYLLIS FAMILY) [in ASPARAGALES]

A family of about 59 genera and 850 species, nearly cosmopolitan (especially diverse in the tropics). References: Dahlgren, Clifford, & Yeo (1985); Fay & Chase (1996); García et al (2019); Meerow & Snijman in Kubitzki (1998a); Müller-Doblies & Müller-Doblies (1996); Rahn in Kubitzki (1998a).

- 1 Corona present (a fused tubular or flattened petaloid structure in the center of the flower, above the tepals).
 2 Filaments fused with the corona; corona very membranous in texture, distinctly thinner than the tepals; flowers white; [native, of riverine or tidal shores and marshes]; [tribe *Hymenocallideae*, subtribe *Hymenocallidinae*]..... *Hymenocallis*
 2 Filaments not fused with the corona; corona membranous in texture, but similar to the tepals (in texture, though sometimes of a different color); flowers usually at least partly yellow or orange (sometimes purely white); [alien, naturalized in primarily upland and disturbed habitats]; [tribe *Narcisseae*, subtribe *Narcissinae*]..... *Narcissus*
 1 Corona absent.
 3 Flowers red; stamens about 2-2.5× as long as the tepals; [tribe *Lycoridae*]..... *Lycoris*
 3 Flowers white, yellow, copper, or white-pink; stamens shorter than or about as long as the tepals.
 4 Flowers yellow to copper. *Zephyranthes*
 4 Flowers white or white-pink.
 6 Tepals 0.4-2.5 cm long, white, with small green or yellow spots; [tribe *Galantheae*]..... *Leucojum*
 6 Tepals 3-16 cm long, white, white-pink, or pink.
 8 Tepals spreading, separate, the perianth rotate; inflorescence a several-flowered umbel terminating the stem; leaves arranged spirally; leaf margins finely toothed; [tribe *Amaryllideae*, subtribe *Crininae*]..... *Crinum*
 8 Tepals ascending, overlapping, the perianth tubular; inflorescence either of a single flower or a several-flowered umbel terminating the stem; leaves either arranged distichously or spirally; leaf margins smooth *Zephyranthes*

Crinum Linnaeus 1753 (SWAMP LILY, STRING LILY)

A genus of about 65 species, pantropical, extending locally into warm temperate regions. References: Holmes (2002b) in FNA26 (2002a); Meerow & Snijman in Kubitzki (1998a).

Identification Notes: *Crinum* can be distinguished vegetatively from *Hymenocallis* by its spiral (vs. distichous) leaf arrangement and leaf margins finely toothed (vs. entire).

Crinum americanum Linnaeus var. *americanum*. SWAMP-LILY, STRING-LILY, SEVEN-SISTERS. **Hab:** Swamp forests, freshwater marshes. **Dist:** Se. NC south to s. FL and west to e. TX; Mexico, Central America to South America; West Indies. **Phen:** Jun-Oct (-Jan). **Syn:** = ETx1, FNA26, K3; < *Crinum americanum* – GW1, K1, S, WH3; > *Crinum americanum* – Tx; > *Crinum strictum* Herbert var. *strictum* – Tx.

Hymenocallis Salisbury 1812 (SPIDER-LILY)

A genus of about 50 species, from s. North America and the West Indies south to ne. South America. The appropriate systematics and nomenclature of *Hymenocallis* in se. United States are still unstable and uncertain. Recent publications by Smith and co-workers (e.g. Smith & Garland 1996,

 * : waif EN : endemic N : no X : extirpated
 P : planted H : historic ? : questionable

2003; Smith & Flory 1990; Smith & Flory in FNA (2002a) have revolutionized our understanding of southeastern United States *Hymenocallis*.

References: Garland, Smith, & Anderson (2013); Meerow & Snijman in Kubitzki (1998a); Smith & Flory (2002) in FNA26 (2002a); Smith & Garland (2003); Smith & Garland (2009); Ward (2012a).

Identification Notes: *Hymenocallis* can be distinguished vegetatively from *Crinum* by its distichous (vs. spiral) leaf arrangement and leaf margins entire (vs. finely toothed).

9 Leaves oblanceolate, slightly to distinctly wider toward the tip.

10 Leaves not coriaceous, distinctly glaucous; scape bracts 4-7 cm long, the tip long-acuminate; bulbs non-rhizomatous; [of moist but not mucky habitats]

11 Leaves withered at anthesis.....*Hymenocallis occidentalis* var. *eulae*

11 Leaves fresh at anthesis.....*Hymenocallis occidentalis* var. *occidentalis*

10 Leaves coriaceous, not glaucous; scape bracts 3-4 (-6) cm long, the tip acute; bulbs rhizomatous; [of wet habitats].

.....*Hymenocallis choctawensis*

9 Leaves liguliform, not wider toward the tip, the margins parallel throughout.

.....*Hymenocallis lirioides*

Hymenocallis choctawensis Traub. FLORIDA PANHANDLE SPIDERLILY, CHOCTAW SPIDERLILY. **Hab:** Floodplains. **Dist:** GA (floodplain of the Ochlockonee River) and Panhandle FL west to LA. **Syn:** = FNA26, K1, K3, K4, WH3, Smith & Garland (2003), Smith & Garland (2009); < *Hymenocallis caroliniana* Herbert, misapplied; < *Hymenocallis occidentalis* (Le Conte) Kunth, misapplied; < *Hymenocallis* sp. ? – GW1.

Hymenocallis lirioides (Rafinesque) Shinnery. WESTERN MARSH SPIDERLILY; LOUISIANA MARSH SPIDERLILY. **Hab:** Swamps, bottomlands, ditches. **Dist:** AR and OK south to s. AL and TX. **Phen:** Mar-May. **Syn:** = ETx1, FNA26, K3, K4, NcTx, Tx, Smith & Garland (2003); > *Hymenocallis lirioides* (Rafinesque) Shinnery – K1. **NatureServe G4?** (Apparently Secure).

Hymenocallis occidentalis (Le Conte) Kunth var. *eulae* (Shinnery) G.L. Smith & Flory. SUMMER SPIDERLILY. **Hab:** Floodplains and seepage areas. **Dist:** AR and OK south to TX; disjunct east of the Mississippi River in the the Mississippi Delta part of MS. **Phen:** Jul-Sep. **Syn:** = Ar, ETx1, FNA26, K3, K4, Smith & Garland (2003); = *Hymenocallis eulae* Shinnery – Tx; < *Hymenocallis* sp. ? – GW1. **NatureServe G4?** (Not Yet Ranked).

Hymenocallis occidentalis (Le Conte) Kunth var. *occidentalis*. HAMMOCK SPIDERLILY, WOODLAND SPIDERLILY, NORTHERN SPIDERLILY. **Hab:** Mesic soils of slopes and floodplain forests, gabbro glades and other calcareous upland flats. **Dist:** W. NC south to Panhandle FL, west to AR, LA, and extreme e. TX. **Phen:** Jul-Sep. **Syn:** = Ar, ETx1, FNA26, K3, K4, Smith & Garland (2003); = *Hymenocallis caroliniana* Herbert – Il, K1, Mo1, NcTx, Tn, Tx, misapplied; < *Hymenocallis occidentalis* (Le Conte) Kunth – S, WH3, Smith & Garland (2009); < *Hymenocallis* sp. ? – GW1.

Leucojum Linnaeus 1753 (SNOWFLAKE)

A genus of about 10 species, of Europe, n. Africa, and w. Asia. References: Meerow & Snijman in Kubitzki (1998a); Straley & Utech (2002e) in FNA26 (2002a).

* ***Leucojum aestivum*** Linnaeus. SUMMER SNOWFLAKE. **Hab:** Naturalizing aggressively in alluvial areas, also long persistent after cultivation in upland situations. **Dist:** Native of Europe. Reported naturalized in NC by Leonard (1971b). **Phen:** Mar-Apr. **Syn:** = Ar, C, ETx1, F, FNA26, G, Il, Mo1, NcTx, NE, NY, RAB, Va; > *Leucojum aestivum* ssp. *aestivum* – K1, K3, K4.

Lycoris Herbert 1819 (MAGIC LILY)

A genus of about 20 species, primarily e. Asian. References: Hsu et al (1994); Meerow & Snijman in Kubitzki (1998a).

* ***Lycoris radiata*** (L'Héritier) Herbert var. *radiata*. HURRICANE LILY, RED SPIDER LILY, SURPRISE LILY, NAKED LADIES. **Hab:** Cultivated and persistent (or slowly spreading locally). **Dist:** Native of China. **Phen:** Sep-Oct. **Tax:** This taxon is a sterile triploid, reproducing vigorously by asexual means. **Syn:** = Hsu et al (1994); < *Lycoris radiata* (L'Héritier) Herbert – Ar, ETx1, K1, K3, NcTx, RAB, WH3.

Narcissus Linnaeus 1753 (DAFFODIL, JONQUIL, NARCISSUS, BUTTERCUP)

A genus of about 40-60 species, of Europe, n. Africa, and w. Asia. References: Hanks (2002); Jefferson-Brown (1969); Jefferson-Brown (1991); Meerow & Snijman in Kubitzki (1998a); Spaulding & Barger (2014); Stace (2010); Straley & Utech (2002f) in FNA26 (2002a).

Identification Notes: The familiar flower consists of 6 tepals spreading in more or less a plane, and a fused, tubular, corona. The hypanthial tube is below the perianth lobes. Other taxa are under cultivation and may be expected as persistent or escaped in our area. Manuals of cultivated plants and the extensive horticultural literature on *Narcissus* (such as the references listed above) should be consulted by those interested in more information on members of this genus.

- 1 Perianth lobes 10-15 mm long; corona 3-5 mm long; leaves dark green, either cylindrical and hollow or somewhat flattened and grooved; umbel (or spathe, or stem) with 3-10 flowers.
 - 2 Leaves somewhat flattened, grooved, 3-10 mm wide; tepals light lemon-yellow; corona yellow-orange, distinctly darker than the tepals *Narcissus ×intermedius*
 - 2 Leaves cylindrical (terete), 2-4 mm wide; tepals golden-yellow; corona golden-yellow, the same as the tepals or only slightly darker *Narcissus jonquilla*
- 1 Perianth lobes 20-50 mm long; corona 5-50 mm long; leaves usually glaucous, flattened, solid; umbel (or spathe, or stem) with 1-4 flowers.
 - 3 Hypanthial tube (below the tepals) parallel-sided (though sometimes suddenly expanded at its apex); corona < 10 mm long, usually wider than high; corona < 0.5× as long as the perianth lobes; corona rarely undulate; umbel (or spathe, or stem) with 1-10 flowers; stamens of 2 distinct lengths.
 - 4 Corona rim red, contrasting with the white or yellow corona (though sometimes fading when dried); umbel (or spathe, or stem) with 1 flower *Narcissus poeticus*
 - 4 Corona of a single color, all white or yellow; umbel (or spathe, or stem) with (1-) 2-8 (-20) flowers.
 - 5 Umbel (or spathe, or stem) with (1-) 2 (-3) flowers; pollen sterile *Narcissus ×medioluteus*
 - 5 Umbel (or spathe, or stem) with (2-) 3-8 (-20) flowers; pollen fertile *Narcissus tazetta*
 - 3 Hypanthial tube (below the tepals) distinctly widening toward its apex; corona usually > 10 mm long, usually as long as wide or longer than wide; corona > 0.5× as long as the perianth lobes; corona margin undulate; umbel (or spathe, or stem) with 1 flower; stamens of the same length or nearly so.
 - 8 Corona 30-50 mm long, about as long as the perianth lobes *Narcissus pseudonarcissus*
 - 8 Corona 10-25 mm long, distinctly shorter than the perianth lobes.
 - 9 Umbel (or spathe, or stem) with 1 flower; corona usually conspicuously darker in color than the tepals; leaves somewhat glaucous, > 8 mm wide; stem distinctly 2-edged *Narcissus ×incomparabilis*
 - 9 Umbel (or spathe, or stem) with (1-) 2-4 flowers; corona and tepals the same color; leaves green, < 8 mm wide; stem nearly terete *Narcissus ×odorus*

* *Narcissus ×incomparabilis* P. Miller. NONESUCH DAFFODIL. **Hab:** Cultivated as an ornamental, persistent and naturalized in lawns, roadsides, woodland borders, and disturbed areas. **Dist:** Native of Europe. **Phen:** Mar-Apr. **Syn:** = Ar, C, ETx1, FNA26, K1, K3, K4, Mo1, NcTx, Spaulding & Barger (2014), Stace (2010); = *Narcissus incomparabilis* – F, G, RAB; = *Narcissus poeticus* × *pseudonarcissus* – NY.

* *Narcissus ×intermedius* Loiseleur-Deslongchamps. STAR DAFFODIL, STAR JONQUIL. **Hab:** Cultivated as an ornamental, persistent and naturalized in lawns, roadsides, woodland borders, and disturbed areas. **Dist:** Native of Europe. **Syn:** = Ar, FNA26, K3, K4, Spaulding & Barger (2014), Stace (2010).

* *Narcissus jonquilla* Linnaeus. JONQUIL, APODANTHUS DAFFODIL. **Hab:** Cultivated as an ornamental, persistent and naturalized in lawns, roadsides, woodland borders, and disturbed areas. **Dist:** Native of Europe. **Phen:** Mar-Apr. **Syn:** = Ar, C, ETx1, F, FNA26, G, Il, K1, K3, K4, NcTx, RAB, Tx, Spaulding & Barger (2014), Stace (2010). *NatureServe GNR* (Not Yet Ranked).

* *Narcissus ×medioluteus* P. Miller. PRIMROSE-PEERLESS, TWIN-SISTERS; TWO-FLOWER NARCISSUS. **Hab:** Cultivated as an ornamental, persistent and naturalized in lawns, roadsides, woodland borders, and disturbed areas. **Dist:** Native of Europe. **Phen:** Mar-May. **Syn:** = FNA26, Il, K1, K4, Spaulding & Barger (2014), Stace (2010); = *Narcissus tazetta* × *poeticus* – RAB.

* *Narcissus ×odorus* Linnaeus (pro sp.). 73b. AMARYLLIDACEAE

*Zephyranthes* Herbert 1821 (ATAMASCO-LILY, ZEPHYR-LILY, RAIN-LILY)

A genus of about 180 species, from s. North America and the West Indies south to s. South America. Circumscription follows García et al. (2019). References: Christenhusz, Fay, & Byng (2018); Flagg, Smith, & Flory (2002a) in FNA26 (2002a); Flagg, Smith, & Flory (2002b) in FNA26 (2002a); García et al (2019); Hume (1938); Meerow & Snijman in Kubitzki (1998a).

- 2 Stigma 1, capitate.
 - 3 Perianth white (to pinkish).
 - 4 Perianth 3-4.5 cm long; perianth tube 1-4 mm long, shorter than the spathe; perianth tube shorter than the filaments *Zephyranthes candida*
 - 4 Perianth (7.3-) 9-14 (-16) cm long; perianth tube 70-130 mm long, longer than the spathe; perianth tube longer than the filaments. *Zephyranthes chlorosolen*
 - 3 Perianth yellow. *Zephyranthes citrina*
- 2 Stigmas 3 (trifid).
 - 10 Stamen filaments of 4 different lengths; flowers slightly bilaterally symmetrical. *Zephyranthes tubispatha*
 - 10 Stamen filaments of 2 lengths, or equal; flowers radially symmetrical
 - 14 Stamen filaments 0.1-0.2 mm long; perianth tube 3-4 (-4.7) cm in length, the stigmas included. *Zephyranthes drummondii*
 - 14 Stamen filaments (1.5-) 1.6-4.4 (-4.7) cm long; perianth tube 0.2-3.3 (-4) cm in length, the stigmas exerted.
 - 15 Anthers 13-22 mm long *Zephyranthes minuta*
 - 15 Anthers 3-6 (-8) mm long.
 - 16 Style and stigma as long as or shorter than the anthers; perianth segments erect-ascending at full anthesis, (4-) 4.3-8.5 (-10) cm long *Zephyranthes simpsonii*
 - 16 Style and stigmas extending beyond the anthers; perianth segments spreading at full anthesis, (5.5-) 6.6-9.5 (-11) cm long. *Zephyranthes atamasco*

Zephyranthes atamasco (Linnaeus) Herbert. COMMON ATAMASCO-LILY. **Hab:** Bottomland forests and adjacent road shoulders, wet meadows, sometimes in upland forests over mafic rocks. **Dist:** Se. and sc. VA south to n. FL, west to s. MS. **Phen:** Feb-Apr; Apr-Jun. **Comm:** The correct spelling of the epithet is apparently 'atamasco'; a conservation proposal (to resolve the uncertainty) has been made and will likely be accepted. **Syn:** = C, F, G, GW1, RAB; = *Atamosco atamasco* (Linnaeus) Greene – S; = *Hippeastrum atamasco* (Linnaeus) Christenhusz & Byng – Christenhusz, Fay, & Byng (2018); = *Zephyranthes atamasca* – FNA26, K3, K4, Va, orthographic variant; = *Zephyranthes atamasca* var. *atamasca* – K1, WH3, orthographic variant. **NatureServe** G4G5T4 (Apparently Secure).

* *Zephyranthes candida* (Lindley) Herbert. FALL RAIN-LILY. **Hab:** Cultivated, persistent or spreading from cultivation. **Dist:** Native of South America. **Phen:** Late Sep-Oct. **Syn:** = Ar, ETx1, FNA26, K1, K4, RAB, WH3; = *Atamosco candida* (Lindley) Small – S; = *Hippeastrum zephyranthum* Christenhusz & Byng – Christenhusz, Fay, & Byng (2018). **NatureServe** G4G5 (Apparently Secure).

Zephyranthes chlorosolen (Herbert) D. Dietrich. BRAZOS RAIN-LILY, EVENING RAIN-LILY, CEBOLLETA. **Hab:** Prairies and other moist to dry habitats. **Dist:** AL, MS, AR, s. KS, n. TX, and s. NM south into n. Mexico. **Phen:** May-Oct. **Syn:** = FNA26, K4; = *Cooperia chlorosolen* Herbert – K1, K3; = *Cooperia drummondii* Herbert – ETx1, GW1, NcTx, S, Tx, Hume (1938); = *Hippeastrum chlorosolen* (Herbert) Christenhusz & Byng – Christenhusz, Fay, & Byng (2018). **NatureServe** G5 (Secure).

* *Zephyranthes citrina* Baker. YELLOW ZEPHYR-LILY, CITRON RAIN-LILY. **Hab:** Disturbed areas, waif from horticultural use. **Dist:** Native of South America. **Syn:** = Bah, FNA26, K1, K3, K4, WH3; = *Hippeastrum citrinum* (Baker) Christenhusz & Byng – Christenhusz, Fay, & Byng (2018). **NatureServe** GNR (Not Yet Ranked).

Zephyranthes drummondii (Herbert) D. Don. CEBOLLETA. **Hab:** Prairies, rocky areas, eastwards in disturbed areas such as lawns. **Dist:** LA and TX south into Mexico. **Phen:** Apr-Jul. **Syn:** = FNA26, K4, WH3; = *Cooperia pedunculata* Herbert – ETx1, K1, K3, NcTx, Tx; = *Hippeastrum drummondii* (D. Don) Christenhusz & Byng – Christenhusz, Fay, & Byng (2018). **NatureServe** G4 (Apparently Secure).

* *Zephyranthes minuta* (Kunth) D. Dietrich. PINK RAIN-LILY. **Hab:** Disturbed areas. **Dist:** Native of Mexico. **Phen:** Apr-Jun. **Syn:** =; = *Hippeastrum minutum* (Kunth) Christenhusz & Byng – Christenhusz, Fay, & Byng (2018); = *Zephyranthes grandiflora* Lindley – ETx1, FNA26, K1, K3, WH3; ? *Zephyranthes carinata* Herbert – K4. **NatureServe** GNR (Not Yet Ranked).

73b. AMARYLLIDACEAE

Zephyranthes simpsonii Chapman. FLORIDA ATAMASCO-LILY, RED-MARGINED ATAMASCO-LILY. **Hab:** Dry to dry-mesic sandy soils (usually with admixture of shell hash) of coastal fringe sandhills or mainland maritime forests, usually associated with *Quercus hemisphaerica*, on barrier islands or within about 10 km of the ocean (NC, SC), pine flatwoods (FL, GA). **Dist:** Se. NC (Brunswick and Columbus counties) and ne. SC (Horry and Georgetown counties); s. GA, c. and s. peninsular FL. **Phen:** Apr-May; May-Jun. **Comm:** The disjunct populations in NC and SC may differ from *Z. simpsonii* (sensu stricto) of s. GA and c. and s. peninsular FL, and need additional study. **Syn:** = FNA26, GW1, K1, K4, RAB, WH3; = *Atamosco simpsonii* (Chapman) Greene – S; = *Hippeastrum simpsonii* (Chapman) Christenhusz & Byng – Christenhusz, Fay, & Byng (2018). **NatureServe G2G3** (Imperiled).
 * ***Zephyranthes tubispatha*** (L'Héritier) Herbert. RIO GRANDE COPPERLILY. **Hab:** Road shoulders, lawns, disturbed areas. **Dist:** Native of s. Brazil. Reported for Coastal Plain of AL (Woods & Diamond 2006), GA (Carter, Baker, & Morris 2009), MS (Barbour 2017), and FL. **Phen:** Jun-Jul (-Oct). **Syn:** = K4; = *Habranthus tubispathus* (L'Héritier) Traub – ETx1, FNA26, K1, K3, NcTx, WH3; = *Hippeastrum species 1*; > *Habranthus texanus* (Herbert) Steudel – Tx.

74a. ASPARAGACEAE A.L. de Jussieu 1789 (ASPARAGUS FAMILY) [in ASPARAGALES]

A family of a single genus and 170-300 species, widespread in Europe, Africa, Asia, and Australia (introduced elsewhere). APG IV (2016) recommends a much larger Asparagaceae, including other families recognized here (Asparagaceae, Ruscaceae, Agavaceae, Themidaceae, Hyacinthaceae). Stevens (2012) comments about the broader circumscription of Asparagaceae: "this is a highly unsatisfactory family – nothing characterises it, some of the subfamilies are difficult to recognise while others are highly apomorphic". We choose to follow Seberg et al. (2012), Nordal & Sletten BJORÅ (2016), Eggli & Nyffeler (2020), and others in recognizing smaller monophyletic families that are more homogeneous and easier to characterize. References: APG (2016); Dahlgren, Clifford, & Yeo (1985); Eggli & Nyffeler (2020); Kubitzki & Rudall in Kubitzki (1998a); Nordal & Sletten BJORÅ (2016).

Asparagus Linnaeus 1753 (ASPARAGUS)

A genus of 170-300 species, widespread in Europe, Africa, Asia, and Australia (introduced elsewhere). References: Kubitzki & Rudall in Kubitzki (1998a); Straley & Utech (2002b) in FNA26 (2002a).

- 1 Cladophylls ("leaves") flattened, 1-2 mm wide *Asparagus aethiopicus*
 1 Cladophylls ("leaves") filiform, < 0.7 mm wide. *Asparagus officinalis*

* ***Asparagus aethiopicus*** Linnaeus. SPRENGER'S ASPARAGUS-FERN, EMERALD-FERN. **Hab:** Disturbed areas, seeding down especially around plantings, especially commonly planted in coastal areas; sometimes epiphytic in palm boots. **Dist:** Native of s. Africa. Found in SC by R. Stalter (pers. comm. 2009). Kunzer et al. (2009) report several locations for Panhandle FL. Naturalization along the southeastern US coast from se. NC south to s. FL, and west to TAM is also documented on iNaturalist and in Bradley et al. [in prep]. **Comm:** This species has small axillary spines. **Syn:** = FNA26, K3, K4, WH3; ? *Asparagus densiflorus* (Kunth) Jessop – Bah, misapplied; ? *Asparagus sprengeri* Regel.

* ***Asparagus officinalis*** Linnaeus. ASPARAGUS, SPARROWGRASS, GARDEN ASPARAGUS. **Hab:** Commonly cultivated, commonly escaped to fencerows, roadsides, disturbed areas. **Dist:** Native of Eurasia. **Phen:** Apr-Jun; Jul-Oct. **Syn:** = Ar, C, ETx1, F, FNA26, G, Il, K1, K3, K4, Meso6, Mi, NcTx, NE, NY, Pa, RAB, S, Tn, Tx, Va, W, WH3; > *Asparagus officinalis* ssp. *officinalis* – Mo1. **NatureServe G5?** (Secure).

74b. RUSCACEAE M. Roemer 1840 (RUSCUS FAMILY) [in ASPARAGALES]

As here circumscribed, a family of about 28 genera and 500 species, of North America, Central America, Europe, Africa, and Asia. Following the "breakup of the Liliaceae", Ruscaceae was often defined very narrowly to include a few genera with cladodes. In APG I (1998), it was recognized more broadly as Convallariaceae. In APG II (2003), Ruscaceae was listed as an "acceptable, monophyletic alternative to the broader circumscription favoured here". In APG III (2009) and APG IV (2016), Ruscaceae was simply merged into a very broad Asparagaceae. We favor and here use a

 (see introduction for more)

74b. RUSCACEAE

'middle ground' that recognizes at family rank major clades (in our region: Asparagaceae s.s., Ruscaceae, Agavaceae, Themidaceae, and Hyacinthaceae) in Asparagaceae sensu APG III and APG IV. References: Bogler in Kubitzki (1998a); Bogler & Simpson (1995); Conran & Tamura in Kubitzki (1998a); Yamashita & Tamura (2000); Yeo in Kubitzki (1998a).

- 1 Plant with an upright or arching stem with alternate cauline leaves.
 - 3 Inflorescence terminal, a raceme or panicle; tepals separate leaves with 3 main parallel veins, acute to acuminate at the apex; leaves acute to acuminate at the apex; foliage green, not glaucous *Maianthemum*
 - 3 Inflorescence of 1-several axillary flowers; tepals fused; leaves with > 7 main parallel veins, obtuse to acute at the apex; foliage blue-green, glaucous *Polygonatum*
- 1 Plant tufted, the leaves essentially basal (although the sheathing bases form a 'false' stem in *Convallaria*).
 - 8 Flowers erect, the pedicel strict; ovary superior *Liriope*
 - 8 Flowers nodding, the pedicel recurved; ovary inferior or half-inferior *Ophiopogon japonicus*

Liriope Loureiro 1790 (LIRIOPE, LILYTURF)

A genus of 9 species, herbs, of e. and se. Asia. References: Conran & Tamura in Kubitzki (1998a); Floden & Avent (2019); Judd (2003); Nesom (2010); Roling, Howlett, & Brown (2011); Serviss et al (2016); Spaulding, Barger, & Nesom (2010).

Identification Notes: additional species are likely naturalized in our area. See references.

- 1 Plants caespitose, without stolons or weakly stoloniferous or rhizomatous; leaves 6-12 (-23) mm wide; flowers purple, lilac-purple, or lavender *Liriope muscari*
- 1 Plants colonial, from slender stolons; leaves 3-6 (-8) mm wide; tepals white to very pale violet. *Liriope spicata*

* *Liriope muscari* (Decaisne) L.H. Bailey. LIRIOPE, BIG BLUE LILYTURF. **Hab:** Commonly planted, persistent and escaping, locally abundant.

Dist: Native of China, Japan, and Taiwan. **Syn:** = K1, K3, K4, Judd (2003), Nesom (2010), Serviss et al (2016). NatureServe GNR (Not Yet Ranked).

* *Liriope spicata* Loureiro. CREEPING LILYTURF. **Hab:** Commonly planted, persistent and escaping, locally abundant. **Dist:** Native of China, Taiwan, Japan, Korea, and Vietnam. **Phen:** Aug-Oct. **Syn:** = Ar, K3, K4, WH3, Judd (2003), Nesom (2010), Serviss et al (2016); = *Liriope spicatum* – Il, K1, orthographic variant. NatureServe GNR (Not Yet Ranked).

Maianthemum F.H. Wiggers 1780 (MAYFLOWER, SOLOMON'S-PLUME)

A genus of about 28 species, herbs, of n. Europe, e. Asia, North America, and Central America. The inclusion of the traditional *Smilacina* in *Maianthemum* remains uncertain. References: Conran & Tamura in Kubitzki (1998a); Floden (2017b) in Weakley et al (2017); Judd (2003); LaFrankie (1986); LaFrankie (2002) in FNA26 (2002a); Meng, Wang, & Nie (2016).

- 1 Flowers in a terminal panicle *Maianthemum racemosum*
- 1 Flowers in a simple raceme. *Maianthemum stellatum*

Maianthemum racemosum (Linnaeus) Link. EASTERN SOLOMON'S-PLUME, MAY-PLUME, TREACLEBERRY, "FALSE SOLOMON'S-SEAL". **Hab:** Moist to dry forests. **Dist:** The species (as here circumscribed narrowly to exclude the western *M. amplexicaule*) ranges from NS west to MB, south to GA, FL Panhandle, OK, and ne. TX. **Phen:** Mid Apr-Jun; Aug-Oct. **Tax:** The circumscription of this taxon has varied, from separate taxa at species, subspecies, or varietal rank in eastern vs. western North America, to recognizing a single polymorphic species. Recent evidence supports recognition of two taxa at species rank (Floden 2017b). A variety of chromosome races are known ($2n = 36, 72, 144$). The eastern *M. racemosum* is tetraploid; *M. amplexicaule* (Nuttall) W.A. Weber is diploid and more western. Under the generic name *Smilacina*, two varieties had been described for our area, *Smilacina racemosa* var. *racemosa* and *S. racemosa* var. *cylindrata* Fernald, the former larger in nearly all respects and more northern than the latter, smaller, and more southern form (see F for details). **Syn:** = K4, Floden (2017b) in Weakley et al (2017); = *Maianthemum racemosum* (Linnaeus) Link ssp. *racemosum* – Ar, FNA26, K1, K3, Mo1, NE, NY, Va, Judd (2003), LaFrankie (1986); = *Smilacina racemosa* var. *racemosa* – Tx; < *Maianthemum racemosum* (Linnaeus) Link – ETx1, Mi, Pa, Tn, WH3; < *Smilacina racemosa* (Linnaeus) Desfontaines – C, G, Il, RAB, W; > *Smilacina racemosa* var. *cylindrata* Fernald – F, WV; > *Smilacina racemosa* var. *racemosa* – F, WV; > *Vagnera australis* Rydberg – S; > *Vagnera racemosa* (Linnaeus) Morong – S. NatureServe G5T5 (Secure).

Maianthemum stellatum (Linnaeus) Link. STARRY SOLOMON'S-PLUME, STARFLOWER. **Hab:** Alluvial forests, calcareous fens, seepage swamps. **Dist:** NL (Newfoundland) west to BC, south to NJ, w. VA, e. TN, IN, MO, and CA. **Phen:** Apr-Jun; Aug-Oct. **Syn:** = Ar, FNA26, K1, K3, K4, Mi, Mo1, NE, NY, Pa, Tn, Va, Judd (2003), LaFrankie (1986); = *Smilacina stellata* (Linnaeus) Desfontaines – C, F, G, Il, W, WV. NatureServe G5 (Secure).

***Ophiopogon* Ker Gawler 1807 (MONDO GRASS)**

A genus of 54 species, perennial herbs, of e. Asia. References: Conran & Tamura in Kubitzki (1998a); Nesom (2010); Roling, Howlett, & Brown (2011); Serviss et al (2016); Spaulding, Barger, & Nesom (2010).

* ***Ophiopogon japonicus* (Thunberg) Ker Gawler. MONDO GRASS, BLACK MONDO. **Hab:** Suburban forests. **Dist:** Native of China, Taiwan, Japan, and Korea. **Syn:** = K1, K3, K4, Nesom (2010), Serviss et al (2016).**

***Polygonatum* P. Miller 1754 (SOLOMON'S-SEAL)**

A genus of about 57 species, of temperate Eurasia and North America (most diverse in e. Asia). The *P. biflorum* complex is in need of further study. References: Conran & Tamura in Kubitzki (1998a); Eigsti (1942); Floden & Schilling (2018c); Judd (2003); Kawano & Iltis (1963); Ownbey (1944); Therman (1950); Therman (1953); Utech (2002m) in FNA26 (2002a).

- 2 Stem robust, 5-13 mm thick below the leaves; plants to 20 dm tall; lower axillary peduncles strongly flattened, with (2-) 3-6 (-15) flowers; lowest peduncle in the axil of the (3rd-) 4th-5th (-8th) leaf; larger leaves 9-25 cm long, 3.5-13 cm wide; lower leaves clasping to 300°.....***Polygonatum biflorum* var. *commutatum***
- 2 Stem slender, 1.5-5 mm in diameter; plants to 9 dm tall; lower axillary peduncles terete or nearly so, with (1-) 2-3 (-5) flowers; lowest peduncle in the axil of the (1st-) 3rd (-5th) leaf; larger leaves 5.5-15 cm long, 1.2-6 cm wide; lower leaves clasping to 90 (-180)°.....***Polygonatum biflorum* var. *biflorum***

***Polygonatum biflorum* (Walter) Elliott var. *biflorum*. SMALL SOLOMON'S-SEAL. **Hab:** Moist to dry forests. **Dist:** CT, NY, and s. ON west to MI, NE, and IN, south to n. FL, s. AL, and e. TX. **Phen:** Apr-Jun; Aug-Oct. **Tax:** In addition to the varieties recognized for our area, *P. biflorum* includes two additional varieties: var. *melleum* (Farwell) R. Ownbey of MI and ON, and var. *necopinum* R. Ownbey from the Black Hills of SD. The complex needs additional study. See var. *commutatum* for discussion of its distinction from var. *biflorum*. **Syn:** = NY, Pa, Va, Ownbey (1944); = *Polygonatum biflorum* – F, G, IL, K4, WV; < *Polygonatum biflorum* – Ar, C, ETx1, FNA26, NcTx, NE, RAB, Tn, Tx, W, WH3, Judd (2003); >> *Polygonatum biflorum* (Walter) Elliott var. *biflorum* – K3; >> *Polygonatum biflorum* (Walter) Elliott var. *commutatum* (Schultes f.) Morong – K1, Mo1; < *Polygonatum commutatum* (J.A. & J.H. Schultes) A. Dietrich – S.**

***Polygonatum biflorum* (Walter) Elliott var. *commutatum* (Schultes f.) Morong. LARGE SOLOMON'S-SEAL, KING SOLOMON'S-SEAL. **Hab:** Moist forests, roadbanks. **Dist:** NH west to s. MB, south to SC, GA, MS, LA, and TX. **Phen:** May-Jun; Sep-Oct. **Tax:** There has been a wide divergence of opinion regarding the merits (and practicality) of distinguishing this taxon from typical *P. biflorum*, and the characters considered most reliable; the two taxa may differ in chromosome number and geographical distribution; they are not, however, always readily distinguished morphologically. I prefer to recognize this taxon as a variety. See references for additional discussion. **Syn:** = Mi, NY, Va; = *Polygonatum canaliculatum* (Muhlenberg ex Willdenow) Pursh – F, G, WV, misapplied; = *Polygonatum commutatum* (J.A. & J.H. Schultes) A. Dietrich – IL, Ownbey (1944); < *Polygonatum biflorum* – Ar, C, FNA26, K4, NE, RAB, Tn, Tx, W, Judd (2003); < *Polygonatum biflorum* (Walter) Elliott var. *biflorum* – K3; < *Polygonatum biflorum* (Walter) Elliott var. *commutatum* (Schultes f.) Morong – K1, Pa; < *Polygonatum commutatum* (J.A. & J.H. Schultes) A. Dietrich – S.**

74c. AGAVACEAE Dumortier 1829 (AGAVE FAMILY) [in ASPARAGALES]

A family of about 25 genera and 640 species, herbs and rosette shrubs, of temperate and tropical America. The placement of *Camassia*, *Schoenolirion*, and *Hastingsia*, sometimes grouped as Hyacinthaceae subfamily Chlorogaloideae, has been uncertain; they are better placed in the Agavaceae, a position supported by molecular, serological, and biogeographic evidence. Hostaceae is included here based on recent molecular analyses (Steele et al. 2012). References: Bogler & Simpson (1995); Bogler & Simpson (1996); Kubitzki (1998a); Speta in Kubitzki (1998a); Steele et al (2012); Verhoek in Kubitzki (1998a); Verhoek & Hess (2002) in FNA26 (2002a).

- 1 Plants with erect stems; leaves cauline.

74c. AGAVACEAE

- 3 Ovary inferior; leaves to 25 cm wide, the margin with stout spinose teeth or entire..... *Agave*
 3 Ovary superior; leaves to 6 cm wide, the margin fibrous, entire (cartilaginous), or serrulate *Yucca*
 1 Plants acaulescent; leaves in basal rosettes or crowded very low on a short stem.
 4 Margins of leaves fraying into coarse, whitish, curly fibers; tepals about 4 cm long; leaves stiff and > 15 mm wide *Yucca*
 4 Margins of leaves entire, not fraying; tepals < 2 cm long; leaves stiff and wiry (and < 5 mm wide), herbaceous, or fleshy.
 5 Leaves oblong-acute, 2-25 cm wide, 2-20× as long as wide, fleshy or leathery.
 *Agave*
 5 Leaves linear, 0.3-1.8 cm wide, 20-100× as long as wide, herbaceous or wiry.
 *Camassia*

***Agave* Linnaeus 1753 (CENTURY PLANT, MAGUEY)**

A genus of ca. 225 species, rosette shrubs, of tropical and neotropical New World. The separation of *Manfreda* and *Polianthes* is likely not warranted, based on phylogenetic data. References: Flores-Abreu et al (2019); Franck (2012); Reveal & Hodgson (2002) in FNA26 (2002a); Speta in Kubitzki (1998a); Verhoek (2002b) in FNA26 (2002a).

***Agave virginica* Linnaeus.** EASTERN AGAVE, RATTLESNAKE-MASTER, EASTERN FALSE-ALOE. **Hab:** Granite flatrocks, diabase glades, limestone and dolomite barrens and glades, xeric woodlands over mafic or calcareous rocks, sandhill woodlands, dry roadbanks. **Dist:** E. SC, c. NC, sw. VA, w. WV, s. OH, s. IN, s. IL, and c. MO south to c. peninsular FL and TX. **Phen:** Late May-Aug; Aug-Oct. **Syn:** = C, F, RAB, WV; = *Manfreda virginica* (Linnaeus) Salisbury ex Rose – Ar, ETx1, IL, K1, Mo1, Mo1, Va, W, WH3; = *Manfreda virginica* ssp. *virginica* – K3, K4, NcTx; = *Polianthes virginica* (Linnaeus) Shinnery – Tx; > *Agave virginica* Linnaeus var. *tigrina* Engelm.; > *Manfreda tigrina* (Engelm.) Small – S; < *Manfreda virginica* (Linnaeus) Salisbury ex Rose – FNA26; > *Manfreda virginica* (Linnaeus) Salisbury ex Rose – S.

***Camassia* Lindley 1832 (WILD HYACINTH, QUAMASH LILY, CAMAS LILY)**

A genus of 6 species, of North America. The affinities of *Camassia* are with the Agavaceae, rather than the Hyacinthaceae (Fay & Chase 1996, Bogler & Simpson 1996, Speta in Kubitzki 1998a). References: Ranker & Hogan (2002) in FNA26 (2002a); Speta in Kubitzki (1998a).

***Camassia scilloides* (Rafinesque) Cory.** WILD HYACINTH, QUAMASH LILY, EASTERN CAMAS LILY. **Hab:** Moist forests, over circumneutral soils, in GA, VA, and WV on limestone, in NC on slopes and natural levees along the Roanoke River, in SC over gabbro, and westward in circumneutral prairies, oak savannas, calcareous glades and woodlands. **Dist:** W. PA and s. ON west to s. WI and e. KS, south to nw. GA (Jones & Coile 1988) and TX, nearly entirely west of the Blue Ridge, with only a few disjunct occurrences in the Piedmont and Coastal Plain. **Phen:** Apr-May (-Jun). **Syn:** = Ar, C, F, FNA26, G, IL, K1, K3, K4, Mi, Mo1, NcTx, Pa, RAB, Va, W; = *Quamasia hyacintha* (Rafinesque) Britton – S; < *Camassia scilloides* (Rafinesque) Cory – ETx1, Tx.

***Yucca* Linnaeus 1753 (YUCCA, ADAM'S-NEEDLE, ROCK-LILY)**

A genus of about 40 species, of sw. North America, n. Mexico, se. United States, and the West Indies. Many issues remain in our understanding of Southeastern United States *Yucca*. References: Clary & Adams (2021); Hess & Robbins (2002) in FNA26 (2002a); Keith (2003); Speta in Kubitzki (1998a); Ward (2004c); Ward (2006a).

Identification Notes: The taxonomy and key presented is particularly conjectural.

- 1 Plants caulescent when fully developed (an erect shrub or small tree), the lower parts of the stem readily visible because no longer clothed with leaves.
 4 Leaf margins minutely notched-serrulate, particularly toward the base; seeds 2.5 mm thick, marginless *Yucca aloifolia*
 4 Leaf margins entire, smooth, hyaline-brown or hyaline-yellow; seeds ca. 1 mm thick, margined.
 *Yucca recurvifolia*
 1 Plants acaulescent (with a cluster of basal leaves) or with a short stem < 3 dm tall above ground level and clothed with numerous leaves (no part of the aerial stem nonleafy and obviously visible).
 7 Inflorescence branches glabrous; tepals 5-7 cm long; leaves 2-6 cm wide, stiff, the apex acute-acuminate to obtuse, often concave upward at the apex, the marginal fibrils usually elongate (to 20 cm long) *Yucca filamentosa*
 7 Inflorescence branches scurfy-pubescent; tepals 3-5 cm long; leaves 1.5-4 cm wide, pliable, the apex attenuate-acuminate, not notably concave, the marginal fibrils usually short (to 4 cm long).
 8 Leaves 1.5-4 cm wide, abundantly thread-margined; [widespread] *Yucca flaccida*
 8 Leaves 1-3 cm wide, sparingly thread-margined; [mainly west of the Mississippi River, rarely in the Florida parishes of e. LA] *Yucca louisianensis*

***Yucca aloifolia* Linnaeus.** SPANISH DAGGER. **Hab:** Dunes; also cultivated and persistent. **Dist:** Se. VA south to s. FL and west to LA; Bahamas; also in Mexico (Villaseñor 2016). **Phen:** Jun-Aug; Oct-Dec. **Syn:** = Bah, FNA26, K1, K3, K4, Meso6, RAB, S, Va, WH3, Clary & Adams (2021).
 NatureServe G5 (Secure).

***Yucca filamentosa* Linnaeus.** CURLYLEAF YUCCA, SPOONLEAF YUCCA. **Hab:** Woodlands, forests, dunes, roadsides, disturbed areas. **Dist:** S. NJ south to GA, west to MS; escaped from cultivation over a broader area of e. United States. **Phen:** Late Apr-early Jun; Sep-Oct. **Syn:** = Ar, F, FNA26, K3, K4, Mi, NE, NY, S, Va, W, WV, Ward (2004c); = *Yucca filamentosa* var. *filamentosa* – RAB; = *Yucca smalliana* Fernald – IL; > *Yucca concava* Haworth – S; < *Yucca filamentosa* Linnaeus – C, G, K1; > *Yucca filamentosa* Linnaeus – S.

74c. AGAVACEAE

Yucca flaccida Haworth. WEAKLEAF YUCCA. **Hab:** Thin soils around rock outcrops, woodlands, roadsides, disturbed areas. **Dist:** Sw. VA, c. NC and TN south to s. FL and AL. **Phen:** Late Apr-Jul; Sep-Oct. **Tax:** Whether or not this taxon is valid (and if so, as a variety or as a species) has been unclear; further research is needed. **Syn:** = Ar, Il, K3, K4, Mi, S, Tx, Va, W; = *Yucca filamentosa* var. *smalliana* (Fernald) H.E. Ahles – RAB; = *Yucca smalliana* Fernald – F, Mo1, WV; < *Yucca filamentosa* Linnaeus – C, G, K1, WH3; < *Yucca flaccida* Haworth – FNA26, Pa; > *Yucca flaccida* var. *flaccida* – Ward (2004c); > *Yucca flaccida* var. *smalliana* (Fernald) D.B. Ward – Ward (2004c).

Yucca louisianensis Trelease. LOUISIANA YUCCA. **Hab:** Dry woodlands and barrens with sandy soil, such as longleaf pine and shortleaf pine woodlands. **Dist:** S. AR and s. OK south to w. LA and e. TX; reported in e. LA and s. MS. **Phen:** Apr-Jun. **Syn:** = Ar, K1, K3, K4, Tx, Clary & Adams (2021); < *Yucca flaccida* Haworth – FNA26; < *Yucca louisianensis* Trelease – ETx1.

Yucca recurvifolia Salisbury. CURVE-LEAF YUCCA. **Hab:** Dunes, dry sandy soils. **Dist:** GA and Panhandle FL west to w. LA (introduced in e. TX). **Syn:** = S; = *Yucca gloriosa* Linnaeus var. *recurvifolia* (Salisbury) Engelm – ETx1, FNA26, K3; < *Yucca gloriosa* Linnaeus – K4, WH3, Clary & Adams (2021).

74e. HYACINTHACEAE Batsch ex Borkhausen 1797 (HYACINTH FAMILY) [in ASPARAGALES]

A family of about 67 genera and 900 species, herbs, nearly cosmopolitan. References: Pfosser et al (2003); Speta in Kubitzki (1998a).

- 1 Tepals united into a perianth tube longer than the free portion; [subfamily *Hyacinthoideae*, tribe *Hyacintheae*].
 - 2 Perianth tube <2 × as long as the lobes; corolla spreading and open at the mouth..... *Hyacinthus*
 - 2 Perianth tube >2 × as long as the lobes; corolla contracted at the mouth..... *Muscari*
- 1 Tepals separate or fused only at the extreme base.
 - 3 Tepals white, with a greenish stripe on the outer surface, separate; bracts 0-1 per flower; [subfamily *Ornithogaloideae*]
 - *Ornithogalum*
 - 3 Tepals blue (less commonly white or pink), separate or fused at the extreme base; bracts either 0-1 or 2 per flower; [subfamily *Hyacinthoideae*, tribe *Hyacintheae*].
 - *Hyacinthoides*

Hyacinthoides Heister ex Fabricius 1759 (BLUEBELL)

A genus of ca. 10 species, herbs, of se. Europe and n. Africa. The narrow circumscription of *Scilla* (excluding *Hyacinthoides*) is supported by molecular phylogenetic studies (Pfosser et al. 2003). References: Grundmann et al (2010); McNeill (2002b) in FNA26 (2002a); Speta in Kubitzki (1998a); Stace (2010).

* **Hyacinthoides non-scripta** (Linnaeus) Chouard ex Rothmaler. ENGLISH BLUEBELL. **Hab:** Persistent after cultivation. **Dist:** Native of Europe. **Syn:** = K1, Stace (2010); = *Endymion non-scripta* (Linnaeus) Garcke; = *Hyacinthoides non-scripta* – FNA26, K3, NY, Grundmann et al (2010), orthographic variant; = *Scilla non-scripta* (Linnaeus) Hoffmannsegg & Link – F; = *Scilla non-scripta* (Linnaeus) Hoffmannsegg & Link – C, G. NatureServe GNR (Not Yet Ranked).

Hyacinthus Linnaeus 1753 (HYACINTH)

A genus of 3 species, herbs, of w. Asia. References: Speta in Kubitzki (1998a); Stace (2010).

* **Hyacinthus orientalis** Linnaeus. HYACINTH. **Hab:** Persistent after cultivation. **Dist:** Native of w. Asia. **Phen:** Late Feb-Mar. **Syn:** = ETx1, K1, K3, K4, NcTx, Stace (2010). NatureServe GNR (Not Yet Ranked).

Muscari P. Miller 1754 (GRAPE-HYACINTH)

A genus of about 50 species, herbs, of Europe, Mediterranean areas, and w. Asia. References: Speta in Kubitzki (1998a); Stace (2010); Straley & Utech (2002g) in FNA26 (2002a).

- 2 Leaves flat or channeled, 3-8 mm wide; corolla nearly spherical, the lobes strongly recurved..... *Muscari botryoides*
- 2 Leaves nearly terete, 1-3 mm wide; corolla ellipsoid-ovoid, distinctly longer than wide, the lobes erect.
 - *Muscari neglectum*

74e. *HYACINTHACEAE*

* ***Muscari botryoides*** (Linnaeus) P. Miller. COMPACT GRAPE-HYACINTH. **Hab:** Cultivated as an ornamental, persistent and naturalized in lawns, old fields, suburban woodlands, and disturbed areas. **Dist:** Native of Europe. **Phen:** Mar-Apr; May-Jun. **Syn:** = Ar, C, ETx1, F, FNA26, G, Il, K1, K3, K4, Mi, Mo1, NE, NY, Pa, RAB, S, Tn, Va, WV, Stace (2010). NatureServe GNR (Not Yet Ranked).

* ***Muscari neglectum*** Gussone ex Tenore. GRAPE-HYACINTH. **Hab:** Cultivated as an ornamental, persistent and naturalized in lawns, old fields, suburban woodlands, and disturbed areas. **Dist:** Native of Europe. **Phen:** Mar-May; May-Jun. **Syn:** = Ar, ETx1, FNA26, K1, K3, K4, Mi, NcTx, NE, NY, Pa, Tn, Va, WH3, Stace (2010); = *Muscari racemosum* (Linnaeus) Lamarck & A.P. de Candolle – C, F, G, Mo1, RAB, S, Tx, WV; ? *Muscari atlanticum* Boissier & Reuter – W. NatureServe GNR (Not Yet Ranked).

***Ornithogalum*** Linnaeus 1753 (STAR-OF-BETHLEHEM)

A genus of about 50 species, herbs, of Mediterranean s. Europe, n. Africa, east to w. Asia. References: Martínez-Azorín et al (2011); Speta in Kubitzki (1998a); Stace (2010); Straley & Utech (2002h) in FNA26 (2002a).

* ***Ornithogalum umbellatum*** Linnaeus. STAR-OF-BETHLEHEM, SNOWFLAKE, NAP-AT-NOON. **Hab:** Lawns, old fields, bottomlands, forests, commonly cultivated. **Dist:** Native of Europe. **Phen:** Mar-May (-Jun). **Syn:** = Ar, C, ETx1, F, FNA26, G, Il, K1, K3, K4, Mi, Mo1, NcTx, NE, Pa, RAB, S, Tn, Va, W, WV, Martínez-Azorín et al (2011); > *Ornithogalum umbellatum* ssp. *campestre* Rouy – Stace (2010); > *Ornithogalum umbellatum* ssp. *umbellatum* – Stace (2010). NatureServe G3G5 (Apparently Secure).

76. *ARECACEAE* Berchtold & J. Presl 1820 (PALM FAMILY) [in ARECALES]

Scott Zona and Alan S. Weakley

A family of about 181 genera and 2600 species, trees and shrubs, of tropical and subtropical regions of both hemispheres. References: Baker & Dransfield (2016); Dransfield & Uhl in Kubitzki (1998b); Dransfield et al (2008); Zona (2000) in FNA22 (2000).

Identification Notes: In palmate and costapalmate palms, the hastula is the triangle of tissue where the petiole joins the leaf blade, as seen on the upper (adaxial) surface.

2 Petioles armed with sharp recurved teeth; [tribe *Trachycarpeae*].

..... *Serenoa repens*

2 Petioles unarmed (though the leaf sheaths are strongly armed with long needle-like spines in *Rhapidophyllum*).

7 Leaves costapalmate (a hastula extending at least several cm into the leaf blade, especially visible on the leaf underside); [tribe *Sabaleae*]..... *Sabal*

7 Leaves palmate; [tribe *Cryosophileae*].

..... *Rhapidophyllum hystrix*

Rhapidophyllum H. Wendland & Drude 1876 (NEEDLE PALM)

A monotypic genus, a shrub of se. North America (Henderson, Galeano, & Bernal 1995). The closest relatives to *Rhapidophyllum* are apparently *Maxburretia* of se. Asia and *Chamaerops* of the Mediterranean Basin (Bacon et al. 2012). References: Clancy & Sullivan (1990); Dransfield & Uhl in Kubitzki (1998b); Dransfield et al (2008); Zona (1997); Zona (2000) in FNA22 (2000).

Rhapidophyllum hystrix (Pursh) H. Wendland & Drude. NEEDLE PALM, BLUE PALMETTO. **Hab:** Moist to wet soils of small blackwater stream swamps, especially where underlain with coquina limestone ("marl"), hydric hammocks and rich, wetland-upland transitions. **Dist:** Se. SC (Beaufort and Jasper counties) south to c. peninsular FL, and west to s. MS. Becoming somewhat popular as a hardy palm that can be grown in the Southeast, well north of its natural range. As a result, records of it naturalizing northwards should be anticipated; reported for the mountains of TN (J. Shaw., 2020, iNaturalist and pers.comm.). **Syn:** = FNA22, GW1, K1, K3, K4, S, WH3, Zona (1997); = n/a – RAB. NatureServe G4 (Apparently Secure).

***Sabal*** Adanson 1763 (PALMETTO)

A genus of about 16 species, trees and shrubs, primarily distributed around the Caribbean Basin. References: Dransfield & Uhl in Kubitzki (1998b); Dransfield et al (2008); Goldman et al (2011); Zona (1990); Zona (1997); Zona (2000) in FNA22 (2000).

Key to Map
Symbology:

* : waif
EN : endemic
H : historic

N : no
P : planted
? : questionable
X : extirpated

Identification Notes: The hastula is the triangle of tissue where the petiole joins the leaf blade, as seen on the upper (adaxial) surface.

- 1 Tree, with erect trunk (though young plants appear as trunkless shrubs, similar in habit to *S. minor*); leaves 15-30 per plant; hastula 5.3-18 cm long, acute to acuminate; margins of leaf segments with filamentose fibrils; leaf segment apices 2-cleft.

..... *Sabal palmetto*

- 1 Shrub, with subterranean, rhizomatous "trunk" (very rarely emerging as much as 1 meter from the ground); leaves 3-10 per plant; hastula 0.8-7.7 cm long, obtuse to acute; margins of leaf segments with or without filamentose fibrils; leaf segment apices either 2-cleft (*S. etonia* and *S. miamiensis*) or entire (*S. minor*).

..... *Sabal minor*

Sabal minor (Jacquin) Persoon. DWARF PALMETTO. **Hab:** Swamps, maritime forests, low moist woods, especially in calcareous soils developed from shell limestone (marl), hardwood flatwoods, marshes, saline barrens, also rarely planted as an ornamental farther inland, where persisting (and appearing native) or possibly naturalizing. **Dist:** Ne. NC (Currituck County)(or possibly se. VA?) south to c. peninsular FL, west to e. TX, c. TX, se. OK, and s. AR; disjunct in Nuevo León (Goldman 1999). This palm reaches its northern limit at Monkey Island, Currituck County, NC, and other more inland sites just a few miles south of the VA border (L. Musselman, J. Boggan, pers. comm., 2006); no other New World palm has a native range extending so far north. **Phen:** May-Jul; Sep-Nov. **Syn:** = Ar, FNA22, GW1, K1, K3, K4, NcTx, RAB, WH3; > *Sabal deeringiana* Small – S; < *Sabal minor* (Jacquin) Persoon – ETx1, Tx, Zona (1990), Zona (1997); > *Sabal minor* (Jacquin) Persoon – S.

Sabal palmetto (Walter) Loddiges ex Schultes & Schultes f. CABBAGE PALMETTO. **Hab:** Maritime forests, marsh edges, and other near-coastal communities. **Dist:** Native from se. NC south to s. FL, west to w. Panhandle FL, and in the West Indies in Cuba and the Bahamas; planted beyond that range, especially on the Gulf Coast. **Phen:** Jul; Oct-Nov. **Comm:** This palm is the state tree of South Carolina and is common and conspicuous (both as a native tree and in plantings) along the South Carolina coast; it currently reaches its northern limit as a native species in Brunswick County, NC, where it is a conspicuous part of the forest on Smith Island complex (Bald Head Island, Middle Island, Bluff Island). It is planted elsewhere (and farther north) on the coast. Periodic disturbance by hurricanes helps maintain populations of *Sabal palmetto*, which survives winds and flooding that topple or kill *Quercus virginiana*. Curtis (1883) reports that "Cape Hatteras is, or was, the northern limit of this Palm... It is to be deeply regretted, however, that a reckless indifference to the future, which has been charged as a characteristic of Americans, is likely to efface, at no very distant time, every vestige of this interesting ornament of our coast. The inner portion of the young plant is very tender and palatable, somewhat resembling the Artichoke and Cabbage in taste (hence its name of *Cabbage Tree*), and is often taken for pickling, and the stock is ruined by the process. Thus for a pound or two of pickles, no better either than many other kinds, the growth of half a century is destroyed in a moment, and posterity left to the wretched inheritance of vain mourning for the loss of the greatest beauty of our maritime forest." **Syn:** = Bah, FNA22, GW1, K1, K3, K4, RAB, WH3, Zona (1990), Zona (1997); = *Corypha palmetto* Walter; > *Sabal jamesiana* Small – S; > *Sabal palmetto* (Walter) Loddiges ex Schultes & Schultes f. – S. NatureServe G5 (Secure).

Serenoa Hooker f. 1883 (SAW PALMETTO)

A monotypic genus, a shrub, endemic to the se. United States. *Serenoa* is closely related to *Acoelorrhaphe*, of the West Indies, including s. FL (Zona in FNA 2000). References: Dransfield & Uhl in Kubitzki (1998b); Dransfield et al (2008); Zona (1997); Zona (2000) in FNA22 (2000).

Serenoa repens (Bartram) Small. SAW PALMETTO. **Hab:** Pine flatwoods, maritime forests, pine rocklands (in FL). **Dist:** Se. SC (in maritime forests in Charleston and Colleton counties, and in spodosolic flatwoods in Beaufort and Jasper counties) south to s. FL and west to e. LA. **Phen:** May-Jul; Oct-Nov. **Tax:** The species has variation in leaf color caused by differences in epicuticular waxiness, with green and gray forms. **Comm:** *Serenoa* forms extensive clonal patches, connected by underground rhizomes, and is a dominant plant in many parts of FL, in pine flatwoods or scrub. **Syn:** = FNA22, GW1, K1, K3, RAB, S, WH3, Zona (1997). NatureServe G4G5 (Apparently Secure).

78. COMMELINACEAE Mirbel 1804 (SPIDERWORT FAMILY) [in COMMELINALES]

A family of about 41 genera and 650 species, herbs, of tropical and warm temperate regions of both hemispheres. References: Bergamo (2003); Burns, Faden, & Steppan (2011); Faden in Kubitzki (1998b); Faden (2000b) in FNA22 (2000); Tucker (1989).

Identification Notes: Monocot herbs with alternate leaves with closed sheaths, the leaf blade relatively broad in most species, parallel-veined, and often slightly to strongly thickened and succulent. The flowers have 3 petals (one sometimes dwarf) in colors of white, pink, blue, or purple.

- 2 Spathes paired, terminating the stem, resembling foliage leaves in size, shape, texture, and coloration; [tribe *Tradescantieae*]..... *Tradescantia*
 2 Spathes single (or paired in *Callisia*), either terminal or axillary, differing from the foliage leaves (in *Commelina* folded, heart-shaped when spread, and usually pale-green, in *Cuthbertia* and *Murdannia* scale-like, scarious, and inconspicuous, sometimes hidden by foliage leaves in *Murdannia*).
 3 Spathe folded, heart-shaped when unfolded, usually pale-green, closely subtending and surrounding the flower pedicels; petals unequal, the 2 upper petals larger and usually more deeply colored than the lower petal (which is sometimes absent); [tribe *Commelineae*]

- 3 Spathes scale-like, scarious, and inconspicuous, not closely subtending and surrounding the flower pedicels; petals equal, in both size and coloration. *Commelina*
 *Murdannia*

Commelina Linnaeus 1753 (DAYFLOWER)

A genus of about 170 species, herbs, cosmopolitan. The key is adapted in part from Brashier (1966), Faden (1993), and Tucker (1989). References: Brashier (1966); Faden in Kubitzki (1998b); Faden (1993); Faden (2000b) in FNA22 (2000); Tucker (1989).

Identification Notes: *Commelina* has bilateral flowers, with 2 large petals (usually blue or white, but peach-colored in one species) and 1 smaller petal (often paler, and sometimes translucent). The flowers emerge from a folded spathe (very different than the leaves) which is heart-shaped if opened and spread. Only *Tinantia* (restricted to TX) is similar in these features; it differs in having 6 rather than 3) fertile stamens, and the filaments being bearded with hairs (rather than glabrous).

- 1 Spathes with margins free to the base; [introduced species, usually in weedy habitats].
 2 Spathes generally whitish or pale green toward the peduncle, with contrasting dark green veins; middle petal white or paler than the others; capsules with 2 locules (the third aborting); seeds rugose foveate-reticulate..... *Commelina communis*
 2 Spathes lacking contrasting veins; middle petal about the same color as the others; capsules with 3 locules; seeds reticulate or smooth to faintly alveolate.
 3 Spathes not at all to slightly falcate (the lower margin straight or very nearly so); upper cyme usually vestigial (rarely well-developed and 1-flowered); seeds smooth to faintly alveolate; peduncles of the spathes with hairs to 0.5 mm long..... *Commelina caroliniana*
 3 Spathes usually distinctly falcate (the lower margin curved); upper cyme in larger spathes usually well-developed and 1-several-flowered; seeds deeply reticulate; peduncles of the spathes with hairs to 0.1 mm long..... *Commelina diffusa*
 1 Spathes with margins fused basally; [native species, usually in natural habitats, or introduced and weedy].
 6 Leaf sheaths not auriculate at the summit, ciliate with coarse reddish-brown, white, or colorless hairs; middle petal blue, lilac, or lavender; [mostly of moist or wet soils].
 7 Perennial from horizontal rhizomes, often forming clonal patches of erect stems; leaf blades lance-oblong, 6-20 cm long, the apex acuminate; leaf margin and upper surface scabrous; plants lacking subterranean, cleistogamous flowers; [native, mostly of moist floodplain forests]..... *Commelina virginica*
 7 Annual from fibrous roots, the stem decumbent; leaf blades broadly elliptic-ovate, 1-9 cm long, the apex acute to obtuse; leaf margin and upper surface pubescent or glabrous; plants often bearing subterranean, cleistogamous flowers; [alien, weedy].
 *Commelina benghalensis*
 6 Leaf sheaths prolonged upwards into auricles, ciliate with white hairs; middle petal white; plant perennial from thickened, fibrous roots, not forming clonal patches; [mostly of dry, sandy or rocky soil].
 9 Larger leaves (6-) 10-15 cm long, (1.1-) 1.5-4.0 cm wide (typically 3-6× as long as wide); spathes (2.0-) 2.5-3.6 cm long..... *Commelina erecta* var. *erecta*
 9 Larger leaves 4-15 cm long, 0.4-1.4 cm wide (typically 5-12× as long as wide); spathes 1-3 cm long..... *Commelina erecta* var. *angustifolia*

* *Commelina benghalensis* Linnaeus. TROPICAL SPIDERWORT, BENGAL DAYFLOWER. **Hab:** Fields. **Dist:** Native of tropical s. Asia and becoming a serious weed. This annual, pantropical weed is well established in FL and s. GA (Faden 1993). **Comm:** Spot infestations have been reported in NC (Wayne County), SC (Beaufort, Dorchester, Edgefield, Orangeburg, Pickens counties), AL (Barger et al. 2012), and MS as well. "This annual species can be recognized by: its funnellform spathes that are often clustered; relatively broad leaves that frequently have red hairs at the summit of the sheath; and cleistogamous flowers that are borne at the base of the plant and are usually subterranean (in addition to normal, aerial, chasmogamous flowers)" (Faden 1993). **Syn:** = FNA22, K1, K4, WH3, Faden (1993). NatureServe G5 (Secure).

* *Commelina caroliniana* Walter. INDIAN DAYFLOWER. **Hab:** Moist disturbed areas, fields. **Dist:** Native of India and Bangladesh. **Phen:** Jun-Oct. **Tax:** Faden (1989, 1993) discusses in detail the taxonomy and history of this species. It was apparently introduced to our area early (perhaps as early as the late 17th century), probably as a weed in rice. **Syn:** = Ar, C, ETx1, FNA22, G, K1, K3, K4, Mo1, RAB, S, WH3, Faden (1993); < *Commelina diffusa* Burman f. – GW1, Brashier (1966), Tucker (1989); > *Commelina hasskarlii* C.B. Clarke, earliest name applied to the species (in India).

* *Commelina communis* Linnaeus. COMMON DAYFLOWER. **Hab:** Gardens, bottomlands, disturbed ground, and a common invader of rocky glades. **Dist:** Native of the Old World. **Phen:** May-Oct. **Tax:** Var. *communis* and var. *ludens* are sometimes distinguished (see synonymy): var. *communis* has flowers with larger petals pale blue and sterile anthers completely yellow, var. *ludens* has larger petals intense violet blue and sterile anthers with a brownish-purple spot. **Syn:** = Ar, C, ETx1, FNA22, GrPl, GW1, II, K3, K4, Mi, Mo1, NcTx, NE, NY, RAB, S, Tn, Tx, Va, W, WH3, Brashier (1966), Faden (1993); > *Commelina var. communis* – F, G, K1, Pa, WV, Tucker (1989); > *Commelina communis* var. *ludens* – F, G, K1, Pa, WV, Tucker (1989).

Commelina diffusa Burman f. CREEPING DAYFLOWER. **Hab:** Mudflats, alluvial margins, bottomlands, also fields and disturbed ground. **Dist:** VA west to MO, south to s. FL and s. TX, Mexico, Central America, South America, and the West Indies. Probably native in our area, but sometimes regarded as an Old World species. Encountered very early inland, so plausible as native or as an early introduction. **Phen:** Jun-Oct. **Syn:** = Bah, C, ETx1, F, G, GrPl, II, Meso6, Mo1, NcTx, Pa, RAB, Tn, Tx, Va, W, WI; = *Commelina diffusa* var. *diffusa* – Ar, FNA22, K1, K3, K4, NE, WH3, Faden (1993); = *Commelina longicaulis* Jacquin – S; < *Commelina diffusa* Burman f. – GW1, Brashier (1966), Tucker (1989). NatureServe G5T5 (Secure).

Commelina erecta Linnaeus var. *angustifolia* (Michaux) Fernald. SAND DAYFLOWER. **Hab:** Dunes and dry sand flats on barrier islands, longleaf pine sandhills, other dry sandy sites, shale barrens, other dry rocky sites. **Dist:** E. NC south to s. FL, west to TX, and north and west in the interior to IA, nw. NE, CO, and NM; also apparently in Central and South America. **Phen:** Jun-Oct. **Tax:** The taxonomy and distribution of the varieties here recognized need further study. **ID Notes:** Contrary to the specific epithet, *C. erecta* var. *angustifolia* is a trailing plant, the stems sometimes as long as 1.3 m. **Syn:** = C, ETx1, F, G, II, K1, NcTx, Tx, WV, Brashier (1966); > *Commelina angustifolia* Michaux – S; > *Commelina crispa* Wooton – S; > *Commelina elegans* Kunth – Bah; < *Commelina erecta* Linnaeus var. *angustifolia* (Michaux) Fernald – FNA22, K3, K4, Meso6, RAB, Tn, W, WH3, Faden (1993), Tucker (1989); < *Commelina erecta* Linnaeus var. *angustifolia* (Michaux) Fernald – GrPl; > *Commelina nashii* Small. 78. COMMELINACEAE

Commelina erecta Linnaeus var. *erecta*. ERECT DAYFLOWER. **Hab:** Dry openings and woodlands, especially in thin soil around rock outcrops, streambanks, riverbanks, mesic forests. **Dist:** PA west to MO and e. KS, south to FL and TX; also apparently in Central and South America. **Phen:** Jun-Oct. **Syn:** = C, ETx1, F, G, GrPl, Il, K1, Brashier (1966); = *Commelina erecta* Linnaeus var. *angustifolia* (Michaux) Fernald – S; > *Commelina elegans* Kunth – Tx; < *Commelina erecta* Linnaeus var. *angustifolia* (Michaux) Fernald – FNA22, K4, Mi, Mo1, NY, Pa, RAB, Tn, Va, W, WH3, Faden (1993), Tucker (1989); > *Commelina erecta* Linnaeus var. *erecta* – Tx; > *Commelina saxicola* Small. **NatureServe G5T5** (Secure).

Commelina virginica Linnaeus. VIRGINIA DAYFLOWER. **Hab:** Bottomlands, swamp forests, tidal swamp forests, other moist to wet forests and forest edges. **Dist:** NJ west to KS and OK, south to FL and TX. **Phen:** Jul-Oct. **ID Notes:** Our most robust species of *Commelina*. **Syn:** = Ar, C, ETx1, F, FNA22, G, GrPl, GW1, Il, K1, K3, K4, Mo1, NcTx, Pa, RAB, S, Tn, Tx, Va, W, WH3, WV, Brashier (1966), Faden (1993), Tucker (1989). **NatureServe G5** (Secure).

**Murdannia** Royle 1839 (MURDANNIA, DEWFLOWER)

A genus of about 50 species, herbs, of tropical and warm temperate regions. References: Faden in Kubitzki (1998b); Faden (2000b) in FNA22 (2000); Pellegrini, Faden, & Almeida (2016); Tucker (1989).

Identification Notes: *Murdannia* has radial, blue or lavender (to white) flowers, not borne from spathes. The flowers have 2 or 3 fertile stamens with bearded filaments, and 4 or 3 staminodes. Our species are annuals, often forming dense patches in wetlands.

- 1 Flowers solitary or in 2-4-flowered racemes borne in the upper leaf axils; capsules 8-10 mm long; seeds ca. 3 mm long; pedicels much longer than the capsule **Murdannia keisak**
- 1 Flowers in stalked cymose racemes borne terminally or in the uppermost leaf axil; capsules 4-5 mm long; seeds 1.0-1.5 mm long; pedicels about as long as the capsule. **Murdannia nudiflora**

* **Murdannia keisak** (Hasskarl) Handel-Mazzetti. MUD-ANNIE, MARSH DEWFLOWER. **Hab:** Stream banks, canals, ditches, freshwater marshes (tidal and non-tidal), swamp forests, wet disturbed places. **Dist:** Native of Asia, now widespread in the se. United States. *M. keisak* was introduced to SC and LA in the 1920s and 1930s, probably as a contaminant in rice seed, but the seeds now distributed by water and waterfowl; it is now a very serious invasive in a wide range of wetland habitats (Dunn & Sharitz 1990). **Phen:** Sep-Oct. **Syn:** = Ar, C, FNA22, G, GW1, K1, K3, K4, Tn, Va, W, WH3, Pellegrini, Faden, & Almeida (2016), Tucker (1989); = *Aneilema keisak* Hasskarl – F, RAB. **NatureServe GNR** (Not Yet Ranked).

* **Murdannia nudiflora** (Linnaeus) Brenan. NAKED-STEM DEWFLOWER. **Hab:** Moist sands, ditches, wet disturbed places. **Dist:** Native of Asia, now widespread in the tropics and subtropics of both hemispheres. This species apparently arrived in our region earlier than *M. keisak* (Small 1933, for instance, treats this species and not *M. keisak*), but has naturalized less aggressively and is distinctly less common. **Phen:** May-Oct. **Comm:** Flowers open from about 11 a.m. to 3 p.m. **Syn:** = Ar, ETx1, FNA22, GW1, K1, K3, K4, Meso6, NY, WH3, Pellegrini, Faden, & Almeida (2016), Tucker (1989); = *Aneilema nudiflorum* (Linnaeus) Sweet – RAB, S, Tx; = *Commelina nudiflora* Linnaeus. **NatureServe G5** (Secure).

**Tradescantia** Linnaeus 1753 (SPIDERWORT)

A genus of about 70 species, herbs, of the New World. References: Anderson & Woodson (1935); Faden in Kubitzki (1998b); Faden (2000b) in FNA22 (2000); Pellegrini (2017); Pellegrini (2018); Tucker (1989).

Symbology:

* : waif
EN : endemic
H : historic

N : no
P : planted
? : questionable

- 5 Plant sprawling, rooting at the nodes; leaves 2.5-5 cm long, < 4× as long as wide; [exotic]; [subgenus *Austrotradescantia*]. *Tradescantia mundula*
- 5 Plant erect or ascending, not rooting at the nodes; leaves > 4 cm long, > 5× as long as wide; [native]; [subgenus *Tradescantia*].
- 7 Leaf blades of the upper stem constricted at their bases to a narrower subpetiolar sheath, the opened sheath narrower than the leaf blade; leaf blades 6-27 cm long, 1.0-5.0 cm wide, mostly < 10× as long as wide; stomates much more abundant on the lower leaf surface than on the upper, giving the lower surface a much paler color.
- 8 Pedicels 10-17 mm long; proximal leaves petiolate; stems frequently flexuous, usually obviously zigzag; sepals 4-10 mm long; plants flowering mainly May--Sep; [WV, OH, IN, IL, MO south to e. SC, s. GA, Panhandle FL, s. AL, s. MS, and s. LA] *Tradescantia subaspera*
- 8 Pedicels (15-32 mm long; proximal leaves narrowed directly into sheath; stems not flexuous, usually straight or subtly zigzag; sepals 8-16 mm long; plants flowering mainly Feb--May; [MO, AR, OK, TX; disjunct eastwards in n. and c. AL and nw. MS]. *Tradescantia ernestiana*
- 7 Leaf blades of the upper stem not constricted to a subpetiolar sheath, the opened sheath about as wide or wider than the leaf blade; leaf blades 4-45 cm long, 0.2-2.8 (-4.5) cm wide, mostly > 10× as long as wide; stomates slightly more abundant on the lower leaf surface than on the upper, or about equally distributed on the two surfaces, the lower surface slightly to not at all paler than the upper.
- 11 Sepals glabrous or the tip with a tuft of eglandular hairs (use 10× magnification).
- 12 Plants distinctly glaucous; leaves 5-45 cm long, arcing, at an acute angle to the stem..... *Tradescantia ohiensis*
- 12 Plants green or slightly glaucous; leaves 4-11 cm long, straight, at nearly right angles to the stem..... *Tradescantia paludosa*
- 11 Sepals pubescent (use 10× magnification).
- 13 Sepals covered with eglandular hairs.
- 16 Stems usually hirsute or pilose throughout; roots 1.0-1.5 (-2.0) mm thick; sepals not inflated-turgid..... *Tradescantia hirsutiflora*
- 16 Stems glabrous, or sparsely puberulent on the upper stem only; roots (1.5-) 2.0-4.0 mm thick; sepals usually inflated-turgid *Tradescantia virginiana*
- 13 Sepals pubescent with glandular hairs.
- 23 Sepal hairs mainly eglandular, glandular hairs few, inconspicuous..... *Tradescantia hirsutiflora*
- 23 Sepal hairs mainly glandular or eglandular, glandular hairs numerous, conspicuous. *Tradescantia hirsuticaulis*

Tradescantia ernestiana E.S. Anderson & Woodson. ERNEST'S SPIDERWORT. **Hab:** Dry woodlands. **Dist:** Primarily Ozarkian (AR, MO, OK, disjunct east to nw. GA and ne. AL, and west to n. TX (Faden in FNA 2000). **Phen:** Apr-May. **Syn:** = Ar, FNA22, K1, K3, Mo1, Anderson & Woodson (1935), Pellegrini (2017), Tucker (1989); < *Tradescantia pilosa* J.G.C. Lemaire – S. *NatureServe* G3G4Q (Vulnerable).

Tradescantia hirsuticaulis Small. HAIRY SPIDERWORT. **Hab:** Dry rocky woodlands, and rock outcrops (especially granitic flatrocks and domes). **Dist:** W. NC and wc. TN south to sc. SC, s. GA, s. AL, and sc. MS; west of the Mississippi River in AR, e. OK, and nw. LA. **Phen:** Apr-Jun. **Syn:** = FNA22, K1, K3, K4, RAB, Tn, W, Anderson & Woodson (1935), Pellegrini (2017), Tucker (1989).

Tradescantia hirsutiflora Bush. **Hab:** Longleaf pine sandhills, dry hammocks. **Dist:** S. and e. GA and FL Panhandle, west to TX. **Syn:** = Ar, ETx1, FNA22, NcTx, Tx, WH3, Anderson & Woodson (1935), Pellegrini (2017), Tucker (1989); >> *Tradescantia hirsuticaulis* Small – S, misapplied; < *Tradescantia hirsutiflora* Bush – K3, K4.

* ***Tradescantia mundula*** Kunth. WANDERING JEW, SMALL-LEAF SPIDERWORT, SMALL-LEAF WANDERING JEW. **Hab:** Disturbed areas; probably at least casually escaping in the Southeast. **Dist:** Native of South America. **Tax:** Often included in *T. fluminensis*; southeastern US records of *T. fluminensis* need to be evaluated to see which are actually of *T. mundula* (Pellegrini 2018). A member of subgenus *Austrotradescantia* (Pellegrini 2017). **Syn:** = Pellegrini (2018); >> *Tradescantia albiflora* Kunth, misapplied; < *Tradescantia fluminensis* Vellozo – FNA22, K1, K3, K4, S, WH3, Tucker (1989).

Tradescantia ohiensis Rafinesque. SMOOTH SPIDERWORT, OHIO SPIDERWORT. **Hab:** Woodlands and forests, alluvial bottoms, disturbed areas, roadsides. **Dist:** MA west to MN, south to c. peninsular FL and TX, some of that range likely the result of naturalization from cultivation. **Phen:** Feb-Jul. **Syn:** = Ar, C, ETx1, F, FNA22, G, GrPl, IL, K1, K3, K4, Mi, Mo1, NcTx, NE, NY, Pa, RAB, Tn, Tx, Va, W, WH3, WV, Pellegrini (2017), Tucker (1989); ? *Tradescantia canaliculata* Rafinesque – Anderson & Woodson (1935); > *Tradescantia foliosa* Small – S; > *Tradescantia incarnata* Small – S; > *Tradescantia reflexa* Rafinesque – S. *NatureServe* G5 (Secure).

Tradescantia paludosa E.S. Anderson & Woodson. SWAMP SPIDERWORT, CONFEDERATE SPIDERWORT. **Hab:** Swamps and bottomlands. **Dist:** Coastal Plain of MS and LA west to TX and c. and sw. AR. **Phen:** Mar-May. **Syn:** = ETx1, FNA22, K1, K3, K4, Anderson & Woodson (1935), Tucker (1989); = *Tradescantia ohiensis* Rafinesque var. *paludosa* (E.S. Anderson & Woodson) D.T. MacRoberts. *NatureServe* G4?Q (Apparently Secure).

Tradescantia subaspera Ker Gawler. WIDE-LEAVED SPIDERWORT, ZIGZAG SPIDERWORT. **Hab:** Dry to mesic woodlands and forests, hammocks. **Dist:** Nc. NC, w. VA, WV, OH, IN, IL, and MO, south to NC, SC, sw. GA, Panhandle FL, and AL. **Phen:** Jun-Jul. **Tax:** Two questionable varieties are sometimes recognized. Var. *subaspera* may be distinguished by the stem conspicuously zigzag above, except on depauperate or juvenile plants (vs. the stems straight or only slightly zigzag), uppermost lateral cymes sessile or short-pedunculate (vs. pedunculate throughout), uppermost internodes very reduced, crowding the upper leaves (vs. internodes less reduced), leaves much broader than the sheath (vs. only slightly broader), and its generally greater size than var. *montana*. *T. subaspera* var. *montana* ranges from sw. VA and c. WV south to nw. SC, n. GA, and se. TN, with disjunct occurrences in c. AL and Panhandle FL. Var. *subaspera* ranges from WV west to n. IL, south to se. TN, ne. AR, and s. MO, with disjunct occurrences in NC. **Syn:** = Ar, FNA22, NY, RAB, Tn, Va, W, WH3, Pellegrini (2017); > *Tradescantia montana* Shuttleworth ex Britton; < *Tradescantia pilosa* J.G.C. Lemaire – S; > *Tradescantia subaspera* Ker-Gawler var. *montana* (Shuttleworth ex Britton) E.S. Anderson & Woodson – C, F, G, IL, K1, K3, K4, WV, Anderson & Woodson (1935), Tucker (1989); > *Tradescantia subaspera* var. *subaspera* – C, F, G, IL, K1, K3, K4, Mo1, WV, Anderson & Woodson (1935), Tucker (1989).

78. COMMELINACEAE

Tradescantia virginiana Linnaeus. VIRGINIA SPIDERWORT. **Hab:** Nutrient-rich forests and woodlands. **Dist:** ME west to MI and WI, south to n. GA, MO, and e. AR. **Phen:** Apr-Jul. **Comm:** Very variable in flower color, including deep blue, purple, pink, light pink, and pure white. **Syn:** = Ar, C, F, FNA22, G, IL, K1, K3, K4, Mi, Mo1, NE, NY, Pa, RAB, S, Tn, Va, W, WV, Anderson & Woodson (1935), Pellegrini (2017), Tucker (1989); ? *Tradescantia brevicaulis* Rafinesque – S. NatureServe G5 (Secure).

80. PONTEDERIACEAE Kunth 1815 [1816] (PICKERELWEED FAMILY) [in COMMELINALES]

A family of about 13 genera and 33 species, primarily of the tropics, but with some temperate representatives. References: Cook in Kubitzki (1998b); Haines (2021); Horn (2002a) in FNA26 (2002a); Pellegrini, Horn, & Almeida (2018); Rosatti (1987a).

- 1 Inflorescence with > 30 flowers; fruit 1-seeded, indehiscent, a utricle; seeds smooth; leaves lanceolate to ovate, 1.5-10× as long as wide, the base cordate, truncate, or cuneate *Pontederia*
- 1 Inflorescence with < 30 flowers; fruit 10-200-seeded, a capsule; seeds longitudinally winged; leaves either reniform or ovate, 0.5-1.5× as long as wide, the base cordate or rounded, or narrowly linear, 20-50× as long as wide, the base attenuate.
 - 2 Leaves membranous; petioles never expanded into air-filled floats; perianth lobes linear to oblanceolate, 0.4-2.0 cm long; stamens 3 *Heteranthera*
 - 2 Leaves coriaceous; petioles either expanded into air-filled floats or not; perianth lobes ovate, 1.3-3.7 cm long; stamens 6. *Oshuna crassipes*

Heteranthera Ruiz & Pavón 1794 (MUD-PLANTAIN)

A genus of 11-14 species, of tropical and temperate America and tropical Africa. References: Cook in Kubitzki (1998b); Horn (1998); Horn (2002c) in FNA26 (2002a); Horn (2020); Pellegrini, Horn, & Almeida (2018).

- 1 Plant producing only sessile leaves, these linear, 1-6 mm wide, > 10× as long as wide. *Heteranthera dubia*
- 1 Plant producing linear to oblanceolate sessile leaves, and also petiolate leaves, reniform, orbicular or oblong, 0.7-2× as long as wide.
 - 3 Inflorescences 1-flowered; perianth either radially or bilaterally symmetrical; leaf blades mostly 1-2× as long as wide. *Heteranthera limosa*
 - 3 Inflorescences 2-16-flowered (opening each day); perianth bilaterally symmetrical; leaf blades mostly 0.7-1× as long as wide.
 - 5 Inflorescences 5-16-flowered, the axis elongating well beyond the spathe tip, thus many of the flowers borne well beyond the spathe; perianth lobes lavender to purple; [s. IL, s. IA, se. NE south to MS, LA, and s. TX; rarely adventive eastwards, as in n. AL and c. NC] *Heteranthera missouriensis*
 - 5 Inflorescences 2-8-flowered, the axis mostly enclosed in the spathe, only 0-2 flowers of the flowers borne outside the spathe; perianth lobes white to pale lavender; [collectively widespread in our region]. *Heteranthera reniformis*

Heteranthera dubia (Jacquin) MacMillan. WATER STARGRASS. **Hab:** Streams, rivers, lakes, reservoirs, especially in areas with calcareous substrates. **Dist:** QC west to WA, south to Cuba and Central America, but rare or absent in much of the se. United States. The attribution of this species to SC is in error (as by Kartesz 1999), based on a misidentified specimen (C. Horn, pers. comm.). **Phen:** (Apr-) Jul-Oct. **Syn:** = Ar, ETx1, F, FNA26, GW1, K1, K3, K4, Mo1, NcTx, NE, NY, Pa, RAB, Tn, Va, W, WH3, WI, WV, Horn (2020); = *Zosterella dubia* (Jacquin) Small – C, G, IL, S; > *Heteranthera dubia* (Jacquin) MacMillan – Tx; > *Heteranthera liebmannii* (Buchenau ex Magnus) Shinnars – Tx. NatureServe G5 (Secure).

Heteranthera limosa (Swartz) Willdenow. BLUE MUD-PLANTAIN. **Hab:** Shallow water and muddy shores of rivers, ponds, lakes, and reservoirs, wet ditches, agricultural fields, other wet areas. **Dist:** KY, MN, SD, and CO, south to AL (Diamond & Woods 2009), MS, LA, TX, and AZ; Mexico, Central and South America, West Indies. **Phen:** Jun-Oct. **Comm:** Attributed to VA in Small (1933), but the documentation is not known. **Syn:** = Ar, C, ETx1, F, FNA26, G, IL, K1, K3, K4, Meso6, Mo1, NcTx, S, Tn, Tx, WH3, WI, Horn (1998), Horn (2020). NatureServe G5 (Secure).

Heteranthera missouriensis C.N. Horn. MISSISSIPPI MUD-PLANTAIN, MISSOURI MUD-PLANTAIN. **Hab:** In shallow, stagnant water in floodplains, or emerged on mud. **Dist:** IL west to NE, south to MS, centered in the Mississippi River Alluvial Plain. **Phen:** Jun-Oct. **Tax:** Formerly included in a broad concept of *H. multiflora*, which was considered to have three disjunct areas of distribution: *H. multiflora* s.s. (Argentina and Paraguay), *H. missouriensis* (centered in the Mississippi River Alluvial Plain), and *H. pauciflora* (Atlantic Coastal Plain from s. NJ to ne. NC). **Syn:** = K4, Horn (2020); < *Heteranthera multiflora* (Grisebach) Horn – Ar, C, FNA26, IL, K1, K3, Mo1, Tn, Horn (1998).

Heteranthera reniformis Ruiz & Pavón. KIDNEYLEAF MUD-PLANTAIN. **Hab:** In shallow, stagnant water in floodplains, or emerged on mud. **Dist:** CT west to NE, south to FL and TX and into South America; West Indies. First reported for SC by Hill & Horn (1997). **Phen:** Jun-Oct. **Syn:** = Ar, C, F, FNA26, G, GW1, IL, K1, K3, K4, Meso6, Mo1, NE, NY, Pa, RAB, S, Tn, Tx, Va, W, WH3, WV, Horn (1998), Horn (2020). NatureServe G5 (Secure).

80. PONTERIACEAE

Oshuna Haines 2021 (WATER-HYACINTH)

A monotypic genus, a floating aquatic herb, native of South America. Often included in *Eichhornia* and recently proposed to alternatively be merged into a broad *Pontederia* (Pellegrini, Horn, & Almeida 2018). Haines (2021) resolved that *Piaropus* is invalid, and a treatment (as here) which recognizes the "water-hyacinth" as generically distinct from *Pontederia* and *Eichhornia* needed a new name, which he provided. References: Haines (2021); Rosatti (1987a).

* ***Oshuna crassipes* (Martius) A. Haines. WATER HYACINTH. **Hab:** Ponds, ditches, sluggish water. **Dist:** Native of tropical America. **Phen:** Jun-Sep. **Comm:** *O. crassipes* is "generally considered the world's most serious aquatic weed" (Rosatti 1987). Originally native to tropical South America, *O. crassipes* is now a widespread naturalized weed throughout the tropics and subtropics. In the northern part our area, water hyacinth is rare, probably not long persisting. Farther south, it can be an aggressive aquatic weed. **Syn:** = Haines (2021); = *Eichhornia crassipes* (Martius) Solms-Laubach – Ar, Bah, C, ETx1, F, FNA26, G, GW1, IL, K1, K3, K4, Meso6, Mo1, NcTx, NE, NY, RAB, Tx, WH3, WI, Rosatti (1987a); = *Piaropus crassipes* (Martius) Rafinesque – S, Haines (2020b); = *Pontederia crassipes* Martius – Pellegrini, Horn, & Almeida (2018). NatureServe G5 (Secure).**

Pontederia Linnaeus 1753 (PICKERELWEED)

A genus of 6-8 species, perennial and annual herbs, from North America to South America. References: Cook in Kubitzki (1998b); Horn (2002d) in FNA26 (2002a); Lowden (1973); Pellegrini, Horn, & Almeida (2018).

- 2 Floral tube villous when young, essentially glabrous to sparsely glandular in maturity; leaves primarily ovate to triangular-lanceolate, 2.2-21 cm wide, the base generally cordate or truncate (rarely cuneate).....***Pontederia cordata* var. *cordata***
- 2 Floral tube persistently pubescent with short glandular hairs; leaves lanceolate, 0.4-8.3 cm wide, the base generally cuneate to truncate.....***Pontederia cordata* var. *lanceifolia***

***Pontederia cordata* Linnaeus var. *cordata*. HEARTLEAF PICKERELWEED. **Hab:** Swamps, seepage areas, marshes, pond-shores, lake-shores. **Dist:** NS west to MN, south to s. FL and TX; Belize; s. Brazil, Argentina, Paraguay, and Uruguay. **Phen:** May-Oct. **Tax:** The recognition of infraspecific taxa in *Pontederia cordata* is controversial and requires additional study. **Comm:** *P. cordata* exhibits tristly, an interesting breeding system. Each plant has one of 3 types of flowers: (a) a short style, 3 medium and 3 long stamens, (b) a medium style, 3 short and 3 long stamens, or (c) a long style, 3 short and 3 medium stamens. **Syn:** = GW1, Meso6, Mo1, Tx, Va, Lowden (1973); = *Pontederia cordata* – F, G, S, WV; < *Pontederia cordata* – Ar, C, ETx1, FNA26, IL, K1, K3, K4, NcTx, NE, NY, Pa, RAB, Tn, W, WH3.**

***Pontederia cordata* Linnaeus var. *lanceifolia* (Muhlenberg ex Elliott) Torrey. LANCELEAF PICKERELWEED. **Hab:** Marshes, pond-shores, lake-shores. **Dist:** S. MA (alleged to occur as far north as ME, but these reports may be entirely based on misidentifications of var. *cordata*) to s. FL, west to e. TX, mostly on the Coastal Plain, with a few records around the Great Lakes; Cuba; s. Brazil, Argentina, Paraguay, and Uruguay. **Phen:** May-Oct. **Comm:** A third variety of *P. cordata*, var. *ovalis* (Martens in Roemer & J.A. Schultes) Solms, is restricted to South America. **Syn:** = GW1, Lowden (1973); = *Pontederia cordata* var. *lanceolata* (Nuttall) Grisebach – Tx; = *Pontederia lanceolata* Nuttall – F, G, S; < *Pontederia cordata* – C, ETx1, FNA26, K1, K3, K4, NcTx, NE, Pa, RAB, Tn, W, WH3.**

81. HAEMODORACEAE R. Brown 1810 (BLOODWORT FAMILY) [in COMMELINALES]

A family of about 14 genera and 100 species, herbs, of semicosmopolitan distribution, but centered in Australia. The Haemodoraceae is primarily a family of the Southern Hemisphere; *Lachnanthes* is the only member native to e. North America. *Lophiola* has often been treated in the Haemodoraceae; it is better placed in the Nartheciaceae (or Liliaceae *sensu lato*), see *Lophiola* (Nartheciaceae) for additional details. References: Pellegrini et al (2020); Robertson (1976); Robertson (2002) in FNA26 (2002a); Simpson in Kubitzki (1998b).

87. *MARANTACEAE* R. Brown 1814 (ARROWROOT FAMILY) [in ZINGIBERALES]

A family of about 31 genera and 550 species, herbs and vines, nearly pantropical (absent from Australia), and rarely extending into subtropical and warm temperate regions. References: Andersson in Kubitzki (1998b); Kennedy (2000) in FNA22 (2000).

Thalia Linnaeus 1753 (THALIA)

A genus of 6-7 species, in subtropical and tropical America. References: Andersson in Kubitzki (1998b); Kennedy in FNA22 (2000).

Thalia dealbata Fraser ex Roscoe. POWDERY THALIA, POWDERY ALLIGATOR-FLAG. **Hab:** Swamp forests, wet ditches, brackish marshes. **Dist:** Ne. SC south to GA, west to c. TX and e. OK, north in the Mississippi Embayment to w. KY, s. IL, and se. MO. **Phen:** May-Sep; Jun-Oct. **Syn:** = Ar, ETx1, FNA22, GW1, IL, K1, K3, K4, Mo1, NcTx, RAB, S, Tx. NatureServe G4 (Apparently Secure).

90. *TYPHACEAE* A.L. de Jussieu 1789 (CATTAIL FAMILY) [in POALES]

A family of 2 genera with 16-30 species, wetland herbs, cosmopolitan. The combination of the traditional families Typhaceae and Sparganiaceae is controversial; while there is no doubt of their sister relationship, they are amply distinct and arguably best and conservatively retained as separate families. References: Kaul (2000) in FNA22 (2000); Kubitzki (1998b); Smith (2000) in FNA22 (2000); Thieret & Luken (1996).

- 1 Inflorescences headlike, globular..... *Sparganium*
- 1 Inflorescences spikelike, cylindrical..... *Typha*

Sparganium Linnaeus 1753 (BUR-REED)

A genus of about 14 species, wetland and aquatic herbs, primarily circumboreal in arctic and temperate regions, but also in the tropics of Asia, and temperate Australia. References: Beal (1960); Cook & Nicholls (1986); Cook & Nicholls (1987); Crow & Hellquist (2000b); Ito et al (2015); Kaul (2000) in FNA22 (2000); Kubitzki (1998b); Sulman et al (2013); Thieret (1982).

Sparganium americanum Nuttall. AMERICAN BUR-REED. **Hab:** Streams, marshes, ponds, pools, spring branches, often submerged. **Dist:** NL (Newfoundland) west to MN, south to c. peninsular FL and c. TX. **Phen:** May-Sep. **Tax:** Beal (1960) discusses the interesting variation in *S. americanum*, perhaps worthy of taxonomic recognition. The 'Appalachian Race' has stigmas 0.6-0.9 mm long, inflorescence branches 0-3, and relatively narrow leaves; in our area it is montane in distribution, and in general is Appalachian, Ozarkian, and northern. The 'Coastal Race' has stigmas 1.5-2.8 mm long, 2-5 inflorescence branches, and relatively wide leaves; in our area it is primarily of the Coastal Plain, disjunct to the mountains of NC and SC south of the Asheville Basin (like many Coastal Plain taxa), and in general is nearly limited to the Coastal Plain, ranging from MA south to FL, west to e. TX, and north in the interior to sc. TN, s. IN, and s. MO. The 'Ubiquitous Race' is intermediate, with stigmas 1.0-1.4 mm long; it occurs throughout the range of the species. The pattern is suggestive of imperfect evolutionary separation of two taxa and needs additional study and likely taxonomic recognition of entities. **Syn:** = Ar, C, ETx1, F, FNA22, G, GW1, IL, K1, K4, Mi, Mo1, NE, NY, Pa, RAB, S, Tn, Tx, Va, W, WH3, WV, Beal (1960), Cook & Nicholls (1986), Crow & Hellquist (2000b), Thieret (1982). NatureServe G5 (Secure).

Typha Linnaeus 1753 (CATTAIL)

A genus of 8-13 species, wetland herbs, cosmopolitan. References: Kubitzki (1998b); Smith (2000) in FNA22 (2000); Ward (2007a).

- 1 Pistillate bracteoles absent, or if present then narrower than stigmas and generally not evident at spike surface; stigmas ovate to lanceolate, persistent on mature spikes; pistillate spikes green in flower when fresh, in fruit mostly 19-36 mm thick; carpodia concealed among pistil hairs; compound pedicels on denuded axis 0.6-3.5 mm; staminate scales colorless to brown.
- 2 Pistillate bracteoles absent; stigmas ovate to ovate-lanceolate, often blackish when dry; {add}..... *Typha latifolia*
- 2 Pistillate bracteoles present (but generally evident only at 20-30× after removal from spike, resembling perigonal hairs, with brown, enlarged tips narrower than stigmas); stigmas lanceolate, brown when dry; pistillate spikes usually separated from staminate spikes by gap, in fruit mostly 19-25 mm thick; compound pedicels on denuded axis 0.6-2 mm; seeds absent or few; staminate scales brownish; pollen a mixture of tetrads, triads, dyads, and single grains, sometimes mostly single grains.
- *Typha angustifolia* × *latifolia*
- 1 Pistillate bracteoles present, many as wide as or wider than stigmas, evident at spike surface; stigmas linear (to narrowly lanceolate), sometimes deciduous and thus absent from mature spikes; pistillate spikes brown at all stages (or whitish when flowering and fresh) (*T. angustifolia* sometimes greenish in fruit when fresh), in fruit mostly 13-25 mm thick; carpodia often evident at spike surface among pistil-hair tips; compound pedicels on denuded axis 0.5-0.9 mm; staminate scales brown or straw-colored.
- 4 Mucilage glands absent from adaxial surface of blade and generally from central part of sheath near sheath summit; pistillate bracteole tips darker than (or as dark as) stigmas, very dark to medium brown, rounded (to acute), in mature spikes about equaling pistil hairs; pistil-hair tips medium brown, distinctly enlarged

at 10-20× magnification; pistillate spikes medium to dark brown; leaf sheath summits with membranous auricles (often disintegrating late in season) *Typha angustifolia*

- 4 Mucilage glands present on adaxial surface of all of sheath and usually about 1-10 cm of adjacent blade; pistillate bracteole tips much paler than to about same color as stigmas, straw-colored to light brown, mostly acute to acuminate, in mature spikes exceeding pistil hairs; pistil-hair tips colorless to usually orangish (or slightly brownish in hybrids), not evidently enlarged, or often with 1 subapical, orange, swollen cell evident at 20-30×; pistillate spikes bright cinnamon- to orange- or medium brown; leaf sheath summits tapered to blade or sometimes with membranous auricles. *Typha domingensis*

Typha angustifolia Linnaeus. HYBRID CATTAIL. **Hab:** Fresh to brackish waters of lakes, ponds, and rivers. **Phen:** May-Jul; Jun-Nov. **Comm:** C, K1, K3, and K4 apply this name to two different hybrids: *T. angustifolia* × *latifolia* and *T. domingensis* × *latifolia*. The name properly applies to *T. angustifolia* × *latifolia* (Smith in FNA 2000). **Syn:** = NY; = *Typha glauca* Godron (pro sp.) – GW1, IL, MI, NE, PA, WARD (2007a); = *Typha glauca* Godron – F, RAB; < *Typha glauca* Godron (pro sp.) – C, K1, K3, K4.

Typha angustifolia Linnaeus. NARROWLEAF CATTAIL. **Hab:** Brackish to fresh waters of marshes and swamps, usually tidal, and also inland in non-tidal wetlands (where probably only introduced). **Dist:** NS west to ND, south to SC, FL (?), LA, and TX (?); Eurasia. **Phen:** May-Jul; Jun-Nov. **Comm:** Stuckey & Salomon (1987) considered *T. angustifolia* an invasive alien in North America, but later studies suggest that it was native at least in coastal areas of ne. and Mid-Atlantic North America, and has expanded its range westward in recent decades (Shih & Finkelstein 2008). **Syn:** = Ar, C, F, FNA22, G, GW1, IL, K1, K3, K4, MI, MO1, NE, NY, PA, RAB, TN, TX, VA, W, WH3, WV, WARD (2007a); < *Typha angustifolia* Linnaeus – S, (also see *T. domingensis*).

Typha domingensis Persoon. SOUTHERN CATTAIL. **Hab:** Brackish to nearly fresh waters of marshes and swamps, usually tidal. **Dist:** DE south to s. FL, west to TX; north inland to NE and UT; and south into tropical America; Eurasia; Africa; Oceania. **Phen:** (Apr-) Jun-Jul; Jul-Nov. **Syn:** = Ar, C, ETx1, F, FNA22, G, GW1, IL, K1, K3, K4, MO1, NcTx, RAB, TX, VA, WH3, WARD (2007a); < *Typha angustifolia* Linnaeus – S.

Typha latifolia Linnaeus. COMMON CATTAIL. **Hab:** Fresh waters of ponds, lakes, ditches, marshes, including in tidal freshwater marshes. **Dist:** NL (Newfoundland) west to AK, south to FL, TX, CA, and Mexico; Central America; South America; Eurasia. **Phen:** (Apr-) May-Jul; Jun-Nov. **Syn:** = Ar, C, ETx1, F, FNA22, G, GW1, IL, K1, K3, K4, MI, MO1, NcTx, NE, NY, PA, RAB, S, TN, TX, VA, W, WH3, WV, WARD (2007a). NatureServe G5 (Secure).

91. BROMELIACEAE A.L. de Jussieu 1789 (BROMELIAD OR PINEAPPLE FAMILY) [in POALES]

A family of about 56 genera and 2600 species, herbs, shrubs, and trees, of the New World tropics and subtropics (very rarely warm temperate). References: Luther & Brown (2000a) in FNA22 (2000); Smith & Till in Kubitzki (1998b).

Tillandsia Linnaeus 1753 (AIRPLANT, WILD-PINE, SPANISH-MOSS, BALL-MOSS)

A genus of more than 650 species, herbs (mainly epiphytic or epilithic), of s. North America south to s. South America. References: Barfuss et al (2016); Donadio, Pozner, & Giussani (2015); Franck & Weakley (2018) in Weakley et al (2018a); Luther & Brown (2000b) in FNA22 (2000); Pinzón et al (2019); Smith & Till in Kubitzki (1998b).

- 2 Plants in dense, more or less spherical clusters; inflorescence scapose, exserted from the cluster, of (1-) 2 (-3) flowers; corolla violet *Tillandsia recurvata*
- 2 Plants in elongate, pendulous festoons; inflorescence sessile, of a single flower; corolla yellowish green *Tillandsia usneoides*

Tillandsia recurvata (Linnaeus) Linnaeus. BALL-MOSS, BUNCH-MOSS, GALLITOS. **Hab:** On tree branches in maritime forests (northwards) or southwards epiphytic in a wide range of situations and also on utility wires and rock faces. **Dist:** Se. GA (Duncan 1985) west to s. AL, south to s. FL; LA to AZ and south through Mexico, Central America, and South America; West Indies. Introduced in e. SC (Beaufort, Jasper, Charleston, Georgetown counties) via landscaping plants (Gramling 2010; P. McMillan, pers. comm. 2005). Plants on landscaping trees in s. MS may also be from introduction via this means. **Phen:** Jan-Dec. **Syn:** = Bah, ETx1, FNA22, K3, K4, Meso6, NcTx, TX, WH3; = *Diaphoranthema recurvata* (Linnaeus) Beer – S. NatureServe G5 (Secure).

Tillandsia usneoides (Linnaeus) Linnaeus. SPANISH-MOSS, LONG-MOSS, PASTLE. **Hab:** Branches of trees, especially in swamps, but elsewhere where air humidity is high enough, often even in dry forests (for instance, *Tillandsia* is abundant on *Quercus laevis* in an extensive very dry longleaf pine sandhills near Wilmington, NC, which receives frequent fog from the Cape Fear, Brunswick, and Northeast Cape Fear rivers). **Dist:** S. MD (historically), se. VA south to s. FL, west to s. AR, TX, and Mexico; West Indies; Central and South America. **Phen:** Feb-Aug. **Comm:** *T. usneoides* is the only member of a very large genus to occur north of s. GA. The epithet '*usneoides*' refers to its (very general and superficial) resemblance to the common epiphytic lichen *Usnea*. The inconspicuous yellowish-green flowers are intensely fragrant at night. **Syn:** = Ar, Bah, C, ETx1, F, FNA22, G, K3, K4, Meso6, NcTx, RAB, TX, VA, WH3; = *Dendropogon usneoides* (Linnaeus) Rafinesque – S. NatureServe G5 (Secure).

91. **BROMELIACEAE**93. **XYRIDACEAE** C. Agardh 1823 (YELLOW-EYED GRASS FAMILY) [in POALES]

As recognized more narrowly (excluding *Abolboda*, *Aratitiopea*, and *Orectanthe* into the Abolbodaceae), a family of 2 genera and about 300-325 species, nearly cosmopolitan (most diverse in tropical and subtropical regions, and especially South America). References: Kral in Kubitzki (1998b); Kral (2000a) in FNA22 (2000).

Xyris Linnaeus 1753 (YELLOW-EYED-GRASS)

A genus of about 300-325 species, nearly cosmopolitan (most diverse in tropical and subtropical regions, and especially South America). This 'technical' genus is known well by only a few botanists, and additional undescribed taxa are possible. References: Anderson & Kral (2008); Bridges & Orzell (1987); Bridges & Orzell (1990); Bridges & Orzell (2003); Bridges & Orzell (2020b) in Weakley et al (2020); Campbell (2011); Kral in Kubitzki (1998b); Kral & Moffett (2009); Kral (1966a); Kral (1978b); Kral (1983b); Kral (1999); Kral (2000a) in FNA22 (2000); Malme (1937); Ward (2007b).

Key adapted from Bridges & Orzell (2003), Godfrey & Wooten (1979), Kral (1966a), and Kral & Moffett (2009).

Identification Notes: In vegetative condition, *Xyris* is often confused with other monocots with equitant leaves, such as *Iris* (Iridaceae), *Lachnanthes* (Haemodoraceae), and *Tofieldia*, *Triantha*, and *Plelea* (Tofieldiaceae).

- 1 Keel of the lateral sepals shortly ciliate-scabrid (or sometimes entire in *X. brevifolia*, and then the bract tips purplish-tinged).
 - 2 Plants small, usually < 30 cm tall; principal leaves usually < 10 cm long; mature spikes < 1 cm long when mature.
 - 5 Plants perennial; leaves ascending, green with a distinct brown patch at the base; fruiting spikes ovoid, blunt, somewhat 2-edged from the strongly keeled outer bracts..... *Xyris drummondii*
 - 5 Plants annual; leaves flabellate arranged, spreading to recurved against the substrate, usually maroon; fruiting spikes often elongated and acute, not 2-edged.... *Xyris flabelliformis*
 - 2 Plants large, usually > 30 cm tall; principal leaves > 10 cm long; mature spikes > 1 cm long when mature.
 - 6 Leaves ascending, twisted, strongly grooved; spikes ovoid, the bracts and lateral sepals with a small tuft of short, reddish-brown hairs; bases of leaves abruptly expanded, pinkish or purplish (dark brown in age), the outermost leaves often scale-like, the plant base therefore appearing bulbous; [of the Mountains, Piedmont, and Coastal Plain]..... *Xyris torta*
 - 6 Leaves spreading, not twisted or only slightly so; spikes narrowly ovoid, ellipsoidal, or oblong; bracts and sepals without a small apical tuft of hairs; bases of leaves whitish, tan, pink, purplish, maroon, or dark brown, the outermost leaves not scale-like, the plant base not appearing bulbous; [typically of the Coastal Plain, rarely disjunct inland].
 - 7 Seeds lustrous, translucent, broadly ovoid; spike pale brown or tan, the scales loosely imbricate; plant bases pinkish, purplish, or tan, with dark longitudinal striations on the inner leaf bases; leaves 3-20 mm wide; petal blades obovate, 6-7 mm long, opening in early morning, usually closing by mid-day *Xyris ambigua*
 - 7 Seeds farinose, dark brown (*X. stricta*) or pale (*X. louisianica*) at maturity, narrowly ellipsoid to ovoid; spike dark brown, the scales tightly imbricate; plant bases maroon, purplish, dark-brown, or reddish-brown; leaves 2-5 mm wide; petal blades triangular-cuneate, 3-5 mm long, opening at mid-day.
 - 8 Seeds pale when mature; plant bases maroon to maroon-brown, solitary or in small clumps; upper end of scape somewhat flattened, but not nearly as broad as the spike; spike narrowly ovoid to ellipsoid, slightly pointed..... *Xyris louisianica*
 - 8 Seeds dark brown when mature; plant bases dark maroon to dark brown, densely cespitose; upper end of the scape conspicuously flattened, almost as broad as the spike; spike oblong-cylindrical, obtuse..... *Xyris stricta*
 - 1 Keel of the lateral sepals irregularly lacerate or fimbriate, or if entire then the bract tips not purplish.
 - 9 Leaves 0.5-2.0 (-2.5) mm wide, not twisted (or scarcely so); leaf bases expanded, lustrous, hard, tan to brown, neither bulbous nor deeply set in the substrate; spikes ovoid or ellipsoid, 4-15 mm long.
 - 10 Bract tips smooth-edged to denticulate, not curled away from the spike, the spike thus appearing smooth; staminodia beardless *Xyris baldwiniana*
 - 10 Bract tips ragged-lacerate, the tips curling away from the head, giving it a ragged appearance; staminodia bearded.
 - 9 Leaves (1.5-) 2.0-25 mm wide, strongly twisted to straight, the leaf bases either not expanded, lustrous, hard, and tan to brown, or, if so, then the base also either bulbous and/or deeply seated in the substrate; spikes narrowly lanceolate, ellipsoid, to broadly ovoid, 4-40 mm long.
 - 12 Keel of the lateral sepals long-fimbriate toward its apex, the fimbriate tip conspicuously exserted from the subtending bract (sometimes eroded and less conspicuous on older spikes).
 - 13 Leaves strongly twisted, 2-5 mm wide; leaf bases hardened, swollen, bulbous, dark lustrous brown; scape ridges smooth; petal blades white or yellow; [of moist to dry pinelands] *Xyris caroliniana*
 - 13 Leaves not twisted or slightly twisted, 3-25 mm wide; leaf bases either soft, not swollen, not bulbous, and pale green (*X. fimbriata*) or somewhat hardened and bulbous, deep red (*X. panacea*); scape ridges strongly scabrous or smooth; petal blades yellow; [of aquatic to very wet peaty, mucky, or sandy ponds, marshes, or other wetlands].
 - *Xyris fimbriata*
 - 12 Keel of the lateral sepals lacerate, or if very shortly fimbriate, then not conspicuously exserted from the subtending bract.
 - 15 Lateral sepals longer than and exserted from the subtending bracts (or if nearly hidden, the plants strongly rhizomatous).
 - *Xyris smalliana*

(see introduction for more)

N : no X : extirpated
P : planted
? : questionable

- 15 Lateral sepals shorter than the subtending bracts, and therefore hidden (except when the spikes open to shed seeds) AND plants never rhizomatous.
- 19 Scapes flexuous, usually spirally twisted; upper portion of leaf blades conspicuously twisted; plant bases pinkish, purplish, or dark brown, bulbous or deeply set in the substrate.
- 23 Base of plant deeply set in the substrate, without distinct outer scale leaves; leaf bases not noticeably expanded, the plant base therefore not bulbous; leaves smooth, 2-4 mm wide; petal blades ca. 3 mm long *Xyris chapmanii*
- 23 Base of plant shallowly set on the substrate, often with short, black outer scale leaves; leaf bases noticeably expanded, the plant base therefore appearing bulbous; leaves either smooth and 5-10 mm wide, or scabrous and 2-10 mm wide; petal blades ca. 5 mm long.
- 24 Leaf and scape surfaces smooth (or scabrous only along margins and ridges); petal blades obovate, white or yellow; seeds ovoid or ellipsoid, 0.5-0.6 mm long..... *Xyris platylepis*
- 24 Leaf and scape surfaces prominently papillose or tuberculate-scabrid; petal blades suborbicular, yellow; seeds narrowly ovoid or narrowly ellipsoidal, ca. 1.0 mm long..... *Xyris scabrifolia*
- 19 Scapes usually not flexuous, usually not spirally twisted; upper portion of leaf blades not conspicuously twisted; plant bases variously colored, flabellate or equitant and set at ground level.
- 25 Summit of the scape distinctly flattened and broad relative to the spike; scape ridges 2-3, the 2 most prominent comprising the flattened edge of the scape.
- 27 The 2 principal scape ridges noticeably and abruptly flattened and winglike below the spike, their combined width (on fresh material) broader than the scape proper; fruiting spikes mostly 8-15 mm long; seeds 0.4-0.6 mm long, translucent, ovoid or ellipsoidal, about 1.5× as long as wide, with lines of very fine papillae, not farinose; petals yellow *Xyris difformis*
- 27 The 2 principal scape ridges not abruptly flattened and winglike below the spike, their combined width < the scape proper, which is itself flattened (narrowly elliptic in cross-section); fruiting spikes mostly (10-) 20-25 mm long; seeds 0.8-1.0 mm long, dark when ripe, fusiform to narrowly elliptic, 2-3× as long as wide, with lines of very fine papillae, these however obscured by a farinose covering; petals yellow or white....
..... *Xyris iridifolia*
- 25 Summit of the scape nearly terete or somewhat flattened, much narrower than the spike; scape ridges several (usually > 3), at least on the mid to lower portion of the scape.
- 28 Seeds farinose, very dark; surfaces of leaves tuberculate-scabrid, the leaves strongly ascending, linear, generally > 10 cm long; leaves generally dull-colored.
- 29 Mature spikes ovoid, sharply acute; plants solitary or in small clumps; leaves 10-30 (-50) cm long, 1.5-6.0 mm wide, dark maroon or purplish at the base..... *Xyris floridana*
- 29 Mature spikes ovoid to ellipsoid, acute to obtuse; plants typically in large dense tufts; leaves 20-50 cm long, 3-12 mm wide, the older ones with dark-brown to gray bases, the younger with tan bases..... *Xyris serotina*
- 28 Seeds translucent, not farinose; surfaces of leaves smooth (or sparsely tuberculate-scabrid in *X. curtissii*, which also has leaves linear-curved and generally < 10 cm long); leaves generally a bright yellowish-green above the base.
- 30 Leaves spreading-recurved to erect, 3-13 cm long, 1-4.5 mm wide; scapes at mid-length 0.4-0.6 (-0.7) mm wide; mature spikes 3-7 (-12) mm long; fertile bracts 3-5 mm long; leaf bases various; old flowers fugacious, not persisting on spikes; seeds 0.3-0.5 mm long
..... *Xyris curtissii*
- 30 Leaves ascending to erect, 5-60 cm long, 2-5 (-15) mm wide; scapes at mid-length (0.5-) 1.0-1.5 (-2.0) mm wide; mature spikes 7-15 (-25) mm long; fertile bracts 5-7 mm long; leaf bases tan to brown; old flowers often persisting on spikes, drying blackish; seeds 0.4-0.5 mm long .
..... *Xyris jupicai*

Xyris ambigua Beyrich ex Kunth. COASTAL PLAIN YELLOW-EYED-GRASS. **Hab:** Wet pine savannas and flatwoods, pinelands, edges of depression ponds. **Dist:** Se. VA south to s. FL, west to AL and ec. TX, primarily on the Coastal Plain; also West Indies (Cuba), and Mexico south into Central America. **Phen:** May-Aug. **ID Notes:** The leaf bases of this species are typically mucilaginous (slimy). **Syn:** = Ar, C, ETx1, F, FNA22, G, K1, K3, Meso6, NcTx, RAB, Tn, Tx, Va, W, WH3, Bridges & Orzell (1987), Bridges & Orzell (2003); < *Xyris ambigua* Beyrich ex Kunth – GW1, S, Kral (1966a).

Xyris baldwiniana J.A. Schultes. GRASSLEAF YELLOW-EYED-GRASS, BALDWIN'S YELLOW-EYED-GRASS. **Hab:** Wet pine savannas, seepage bogs, sandhill seeps, wet savanna ecotones. **Dist:** Se. NC south to n. peninsular FL, west to s. AR and ec. TX, primarily on the Coastal Plain; also s. Mexico and Central America. **Phen:** Jun-Jul. **Syn:** = Ar, ETx1, FNA22, GW1, K1, K3, K4, NcTx, RAB, S, WH3, Bridges & Orzell (2003), Kral (1966a); > *Xyris baldwiniana* var. *baldwiniana* – Tx, Malme (1937); > *Xyris baldwiniana* var. *tenuifolia* (Chapman) Baldwin – Tx, Malme (1937). **NatureServe G5** (Secure).

Xyris caroliniana Walter. PINELAND YELLOW-EYED-GRASS. **Hab:** Dry to moist pine flatwoods, moist pine savannas, longleaf pine sandhills. **Dist:** Se. VA south to s. FL, west to se. TX; disjunct in s. NJ; West Indies (Cuba). **Phen:** Jun-Jul. **Tax:** White-petaled plants that have generally been included as a phase or color form of *X. caroliniana* occur in the East Gulf Coastal Plain. They are the basis of *X. pallescens* (C. Mohr) Small and may well warrant taxonomic recognition. **ID Notes:** The strongly twisted, narrow leaves, and usually dry(ish) habitat (compared to most other *Xyris* species) is distinguishing. **Syn:** = C, ETx1, FNA22, GW1, K1, K3, K4, RAB, Tx, Va, WH3, Bridges & Orzell (2003), Kral (1966a); > *Xyris arenicola* Small; > *Xyris flexuosa* Muhlenberg ex Elliott – F, G, S; > *Xyris pallescens* (C. Mohr) Small – S.

Xyris chapmanii E.L. Bridges & Orzell. CHAPMAN'S YELLOW-EYED-GRASS. **Hab:** Sandhill seepage bogs in areas of copious lateral seepage in deep muck soils. **Dist:** With a disjunct distribution in the Southeastern Coastal Plain: s. NJ (Moyer & Bridges 2015); sc. NC south to c. SC (in the fall-line Sandhills) (Sorrie, Van Eerden, & Russo 1997); wc. GA; Panhandle FL west through s. AL to s. MS; e. TX. **Phen:** Aug-Sep; Sep-Oct. **Tax:** See Bridges & Orzell (1990) for detailed information. **ID Notes:** This taxon is abundantly distinct from *X. scabrifolia* by its essentially glabrous leaves and lack of outer scale leaves and bulbous bases. **Syn:** = K3, K4, Bridges & Orzell (1990), Bridges & Orzell (2003); = n/a – RAB; < *Xyris scabrifolia* R.M. Harper – FNA22, K1, WH3, Kral (1966a).

Xyris curtissii Malme. CURTISS'S YELLOW-EYED-GRASS. **Hab:** Longleaf pine savannas, inland in acid bogs and seeps. **Dist:** Se. VA south to ne. FL, FL Panhandle, and west to s. AR and ec. TX, primarily on the Coastal Plain; disjunct in w. SC in the uppermost Piedmont (Blue Ridge Escarpment region); disjunct in s. NJ; Central America (Belize). **Phen:** Jul-Aug. **Syn:** = G, K3, K4, RAB, Va, WH3; = *Xyris difformis* Chapman var. *curtissii* (Malme) Kral – Ar, C, ETx1, FNA22, GW1, K1, Meso6, Tx, Kral & Moffett (2009), Kral (1966a); = *Xyris neglecta* Small – S; > *Xyris bayardii* Fernald – F; > *Xyris curtissii* Malme – F, Bridges & Orzell (2003). **NatureServe G5T5** (Secure).

Xyris difformis Chapman. BOG YELLOW-EYED-GRASS. **Hab:** Pine savannas, roadside ditches, pond margins, acid seeps, bogs, other wet habitats. **Dist:** New England and s. Canada south to n. peninsular FL and ec. TX. **Phen:** Aug-Oct. **Syn:** = K3, K4, Mi, Tn, Va, WH3, Bridges & Orzell (2003); = *Xyris difformis* Chapman var. *difformis* – C, ETx1, FNA22, GW1, K1, NE, NY, Tx, Kral & Moffett (2009), Kral (1966a); < *Xyris difformis* Chapman – F, G, Pa, RAB, S, W. **NatureServe** G5T5 (Secure).

Xyris drummondii Malme. DRUMMOND'S YELLOW-EYED-GRASS. **Hab:** Wet pine flatwoods, ditches. **Dist:** Se. GA south to ne. FL, west to Panhandle FL and s. MS. **Phen:** Jun-Jul. **Syn:** = ETx1, FNA22, GW1, K1, K3, K4, WH3, Bridges & Orzell (2003), Kral (1966a). **NatureServe** G3G4 (Vulnerable).

Xyris elliottii Chapman. ELLIOTT'S YELLOW-EYED-GRASS. **Hab:** Margins of drawdown zones of clay-based Carolina bays, limesinks and flatwoods swales, wet savannas. **Dist:** E. SC south to s. FL, west to s. AL; Nicaragua, Belize, Mexico (Tabasco); West Indies; South America. **Phen:** May-Jun. **Syn:** = *Xyris elliottii* var. *elliottii* – Malme (1937); < *Xyris elliottii* Chapman – FNA22, GW1, K1, K3, K4, RAB, S, WH3, Bridges & Orzell (2003), Kral (1966a).

Xyris fimbriata Elliott. FRINGED YELLOW-EYED-GRASS. **Hab:** In mucky or sandy soils of upland depression ponds, also along sandhill streams, impoundments and in deep muck of sandhills seepage slopes often just below the zone occupied by *Xyris chapmanii*. **Dist:** Se. VA south to c. peninsular FL, west (interruptedly) to se. TX; disjunct in s. NJ, DE, and c. TN. **Phen:** Sep-Oct. **ID Notes:** Where this species narrowly co-occurs with *X. panacea* in Wakulla County, FL, it can be distinguished by its shorter, wider spikes and more exerted fimbriate sepals. **Syn:** = C, ETx1, F, FNA22, G, GW1, K1, K3, K4, RAB, S, Tn, Va, WH3, Bridges & Orzell (2003), Kral (1966a). **NatureServe** G5 (Secure).

Xyris flabelliformis Chapman. FANLEAF YELLOW-EYED-GRASS. **Hab:** Wet sands of pinelands, especially seasonally wet, open, white sands of spodosol longleaf pine flatwoods (Leon series soils), margins of Carolina bay sandrims. **Dist:** Se. NC south to s. FL, west to se. LA, on the Coastal Plain; Cuba. **Phen:** May-Jun. **Syn:** = FNA22, GW1, K1, K3, K4, RAB, S, WH3, Bridges & Orzell (2003), Kral (1966a), Ward (2007b). **NatureServe** G4 (Apparently Secure).

Xyris floridana (Kral) E.L. Bridges & Orzell. FLORIDA YELLOW-EYED-GRASS. **Hab:** Pine savannas, wet pine flatwoods, ditches. **Dist:** Se. NC south to s. FL, west to se. LA; Central America. **Phen:** Aug. **ID Notes:** *Xyris floridana* can be distinguished from *X. jupicai* by its more sharply pointed, more ovate spikes with older, shriveled flowers mostly or entirely absent. The leaf bases are also strongly purple-colored. **Syn:** = K3, K4, WH3, Bridges & Orzell (2003); = *Xyris difformis* Chapman var. *floridana* Kral – FNA22, GW1, K1, Meso6, Kral & Moffett (2009), Kral (1966a). **NatureServe** G5T4T5 (Apparently Secure).

Xyris iridifolia Chapman. IRISLEAF YELLOW-EYED-GRASS. **Hab:** Marshes, upland pond margins, blackwater river channels, floodplain pools, other wet habitats. **Dist:** Se. VA south to ne. FL and FL Panhandle, west to e. TX; disjunct in c. TN and Mexico. **Phen:** Jul-Sep. **Syn:** = C, GW1, RAB, S, Tx, Va, Kral (1966a); = *Xyris laxifolia* Mart. var. *iridifolia* (Chapman) Kral – Ar, ETx1, FNA22, K1, K3, K4, Tn, WH3, Bridges & Orzell (2003). **NatureServe** G4G5T4T5 (Apparently Secure).

Xyris jupicai L.C. Richard. RICHARD'S YELLOW-EYED-GRASS. **Hab:** Acid wetlands, ditches, various wet habitats. **Dist:** NJ south to s. FL, west to TN, AR, se. OK (Singhurst, Bridges, & Holmes 2007), and TX; Mexico, Central America, South America, West Indies. **Phen:** Jul-Sep. **Tax:** Sometimes weedy and considered by some to be adventive from farther south. At least some populations in our area are native and may additionally be worthy of taxonomic recognition as distinct from "true" *X. jupicai* (P. McMillan, pers. comm., 2003). **Syn:** = Ar, C, ETx1, FNA22, GW1, IL, K1, K3, K4, Meso6, Mo1, NcTx, RAB, Tn, Tx, Va, W, WH3, Bridges & Orzell (2003), Kral & Moffett (2009), Kral (1966a); = *Xyris caroliniana* Walter – F, misapplied; > *Xyris caroliniana* Walter – G, S, misapplied; > *Xyris communis* Kunth – S; > *Xyris elata* Chapman – G, S.

Xyris louisianica E.L. Bridges & Orzell. LOUISIANA YELLOW-EYED-GRASS. **Hab:** Pine savannas, bogs, ditches and disturbed areas. **Dist:** FL Panhandle west to se. TX. **Phen:** Jun-Aug. **Tax:** See Bridges & Orzell (1987) for detailed information. **Syn:** = K1, K3, K4, WH3, Bridges & Orzell (1987), Bridges & Orzell (2003); = *Xyris stricta* Chapman var. *obscura* Kral – ETx1, FNA22; < *Xyris ambigua* Beyrich ex Kunth – GW1, S, Kral (1966a).

Xyris platylepis Chapman. BULBOUS YELLOW-EYED-GRASS. **Hab:** Sandhill seeps, pine savannas, ditches, rarely inland in acid seepage over rock. **Dist:** Se. VA south to s. FL, west to se. LA; disjunct in sw. LA and se. TX; disjunct in w. SC in the uppermost Piedmont in the Blue Ridge Escarpment region. **Phen:** Jul-Sep. **Syn:** = C, ETx1, F, FNA22, G, GW1, K1, K3, K4, RAB, S, Tx, Va, WH3, Bridges & Orzell (1990), Bridges & Orzell (2003), Kral (1966a). **NatureServe** G5 (Secure).

Xyris scabrifolia R.M. Harper. ROUGHLEAF YELLOW-EYED-GRASS. **Hab:** Sandhill seepage bogs and wet pine savannas. **Dist:** Sc. and se. NC south to Panhandle FL, west to s. AL and s. MS; disjunct in sw. LA-se. TX. **Phen:** Jun-Jul. **Tax:** See Bridges & Orzell (1990) for detailed information. **ID Notes:** This taxon is abundantly distinct from *X. chapmanii*, through its presence of outer scale leaves and bulbous bases and by having strongly papillose-scabrid leaves. **Syn:** = ETx1, GW1, K3, K4, S, WH3, Bridges & Orzell (1990), Bridges & Orzell (2003); = n/a – RAB; < *Xyris scabrifolia* R.M. Harper – FNA22, K1, Kral (1966a). **NatureServe** G3 (Vulnerable).

Xyris serotina Chapman. GRAY-LEAVED YELLOW-EYED-GRASS. **Hab:** Depression meadows, ultisol savannas (Lynchburg/Rains complex or Eulonia/Oketee), ditches. **Dist:** Se. NC south to c. peninsular FL, west to s. MS, in the Coastal Plain. **Phen:** Sep. **Syn:** = FNA22, GW1, K1, K3, K4, RAB, S, WH3, Bridges & Orzell (2003), Kral (1966a). **NatureServe** G3G4 (Vulnerable).

Xyris smalliana Nash. SMALL'S YELLOW-EYED-GRASS. **Hab:** Pond margins, ditches; often growing in standing water in the intermediate zones of basin marshes adjacent to *Hypericum fasciculatum* and *Pontederia cordata* [in peninsular FL]. **Dist:** S. ME south to s. FL, west to s. MS; disjunct to se. TX; s. Mexico south into Central America; West Indies (Cuba). **Phen:** Jul-Aug. **ID Notes:** This species typically has conspicuous pinkish-red leaf bases. **Syn:** = C, ETx1, FNA22, GW1, K1, K3, K4, Meso6, NE, NY, RAB, S, W, WH3, Bridges & Orzell (2003), Kral (1966a); > *Xyris congonii* Small – F; > *Xyris smalliana* Nash – F; > *Xyris smalliana* var. *olneyi* (Wood) Gleason – G; > *Xyris smalliana* var. *smalliana* – G. **NatureServe** G5 (Secure).

Xyris stricta Chapman. STRICT YELLOW-EYED-GRASS. **Hab:** Depression ponds, depression meadows, borrow pits, ultisol pine savannas, and ditches. **Dist:** SC south to ne. FL and Panhandle FL, west to s. MS and se. LA. Reported for our area by Kral (1966b). P. McMillan (pers. comm.) reports this species from a number of locations in the outer Coastal Plain of NC and SC. **Phen:** Jul-Sep. **Syn:** = GW1, K1, K3, K4, S, WH3, Bridges & Orzell (1987), Bridges & Orzell (2003), Kral (1966a); = *Xyris stricta* var. *stricta* – ETx1, FNA22. **NatureServe** G4 (Apparently Secure).

Xyris torta Smith. TWISTED YELLOW-EYED-GRASS, MOUNTAIN YELLOW-EYED-GRASS. **Hab:** Mountain bogs, seeps, marshes, streambanks, ditches. **Dist:** NH west to WI, south to e. VA, e. NC, w. SC, c. GA, LA, OK, and TX. **Phen:** Jun-Aug. **Comm:** This is one of the few species of *Xyris* in our area that is not strongly associated with the Coastal Plain. **Syn:** = Ar, C, FNA22, GW1, IL, K1, K3, Mi, Mo1, NE, NY, Pa, RAB, S, Tn, Tx, Va, W, WV, XB, Kral & Moffett (2009), Kral (1966a); > *Xyris torta* var. *macropoda* Fernald – F, G; > *Xyris torta* var. *occidentalis* Malme – Malme (1937); > *Xyris torta* var. *torta* – F, G, Malme (1937). **NatureServe** G5 (Secure).

94. ERIOCAULACEAE Martinov 1820 (PIPEWORT FAMILY) [in POALES]

A family of about 10 genera and 1100 species, of tropical and warm temperate regions (few in cold temperate regions), especially America, and most diverse in n. South America. References: Andriano et al (2021); Kral (1966c); Kral (2000b) in FNA22 (2000); Stützel in Kubitzki (1998b).

- 1 Scape glabrous, 10-110 cm tall at maturity; roots thickened, septate (not requiring magnification), unbranched; leaves with obvious air spaces; petals 2, fused below; stamens (3-) usually 4 (-6), the anthers black at maturity *Eriocaulon*
- 1 Scape pubescent (or glabrous), 6-40 cm tall at maturity; leaves lacking obvious air spaces; roots fibrous or spongy, not septate; petals 3 or absent; stamens 2-3, the anthers yellow at maturity.
 - 2 Scape glabrous or pubescent with eglandular hairs; roots fibrous, branched, dark; heads white, gray, or brown; leaves bright green, tapering gradually through most of their lengths, herbaceous in texture *Lachnocaulon*
 - 2 Scape pubescent with glandular hairs (or a mixture of glandular and eglandular hairs); roots spongy, unbranched, pale; heads yellowish-tan or gray; leaves bluish green, narrowly linear to the abruptly flared base, stiff in texture *Syngonanthus*

Eriocaulon Linnaeus 1753 (PIPEWORT)

A genus of about 400 species, of tropical and warm temperate regions (few in cold temperate areas). References: Gomes de Andrade et al (2010); Hare (1950); Kral (1966c); Kral (2000b) in FNA22 (2000); Stützel in Kubitzki (1998b).

Identification Notes: The roots "are pure white and translucent, soft in texture, very flexible and have a curious and characteristic vermiform appearance, owing to the presence of regularly spaced internal diaphragms" (Hare 1950).

- 1 Receptacle and/or base of flowers copiously hairy; some or most of perianth parts with chalk white hairs; heads overall appearing white, 5-20 mm in diameter when in full flower or fruit.

Symbology:

* : waif
 EN : endemic
 H : historic

N : no
 P : planted
 ? : questionable
 X : extirpated

- 2 Heads hard (little compressed by a plant press and feeling hard and knotty when squeezed between finger and thumb); leaves dark green, the tip acute to obtuse; scape sheaths shorter than most leaves; involucre bracts straw-colored, the apex acute; receptacular bracteoles pale, the apex narrowly acuminate; pistillate flower petals adaxially glabrescent; terminal cells of club-shaped hairs of the perianth whitened, the basal cells often uncongested and transparent.
- 3 Leaves to 1 cm wide, with acute to rounded tip; heads 7-15 mm in diameter; [widespread in our area]..... *Eriocaulon decangulare* var. *decangulare*
- 3 Leaves to 2 cm wide, with rounded tip; heads 13-20 mm in diameter; [of the East Gulf Coastal Plain, known from Panhandle FL and s. AL]..... *Eriocaulon decangulare* var. *latifolium*
- 2 Heads soft (much flattened by a plant press, and easily compressed when fresh between finger and thumb); leaves pale green, the tip attenuate-subulate; scape sheaths longer than most leaves; involucre bracts gray or dark, the apex rounded or obtuse; receptacular bracteoles gray to dark gray, the apex acute; pistillate flower petals adaxially villous; all cells of club-shaped hairs on perianth white.
- 4 Mature heads 10-20 mm in diameter; leaves 5-30 cm long; petals of staminate flowers conspicuously unequal; [plants primarily of seasonally flooded ponds].. *Eriocaulon compressum*
- 4 Mature heads 5-10 mm in diameter; leaves (1-) 2-5 (-7) cm long; petals of staminate flower nearly equal *Eriocaulon texense*
- 1 Receptacle and/or base of flowers glabrous or sparingly hairy; receptacular bracteoles and/or perianth parts glabrous or hairy, the hairs club-shaped, clear or white; heads dark gray or white, 3-4 mm (*E. koernickianum*, *E. parkeri*, and *E. ravenelii*), or 4-10 mm (*E. aquaticum* and *E. lineare*) in diameter when in full flower or fruit.
- *Eriocaulon lineare*

Eriocaulon compressum Lamarck. SOFT-HEADED PIPEWORT. **Hab:** Ponds, lakes, other depressions, wetter places in pine flatwoods and pine savannas, acidic seeps, Atlantic white cedar (*Chamaecyparis thyoides*) swamps. **Dist:** NJ south to s. FL, west to e. TX. **Phen:** Apr-Oct. **Syn:** = C, ETx1, F, FNA22, G, GW1, K1, K3, K4, RAB, S, Tx, W, WH3, Kral (1966c). **NatureServe G5** (Secure).

Eriocaulon decangulare Linnaeus var. *decangulare*. COMMON TEN-ANGLED PIPEWORT. **Hab:** Wet pine savannas and pine flatwoods, bogs, mafic fens and seeps, seasonally flooded ponds, seepage bogs and swamps, wind-tidal marshes, sea-level fens. **Dist:** NJ south to s. FL, west to sw. AR and e. TX; Mexico (CAM, MIC, TAB, VER), Central America. **Phen:** Jun-Oct. **Syn:** = FNA22, K1, K3, K4, Va; < *Eriocaulon decangulare* – Ar, C, ETx1, F, G, GW1, Meso6, NcTx, Pa, RAB, S, Tn, Tx, W, WH3, Kral (1966c). **NatureServe G5T5?** (Secure).

Eriocaulon decangulare Linnaeus var. *latifolium* Chapman ex Moldenke. PANHANDLE PIPEWORT. **Hab:** Seepage bogs. **Dist:** Restricted to Panhandle FL, s. AL, and s. MS; disjunct in ne. FL. **Comm:** It appears to warrant taxonomic status, but needs additional study. **Syn:** = FNA22, K1, K3, K4; < *Eriocaulon decangulare* – GW1, S, WH3, Kral (1966c). **NatureServe G5TNR** (Not Yet Ranked).

Eriocaulon lineare Small. **Hab:** Seepage bogs. **Dist:** Sw. GA south to c. peninsular FL, west to s. AL. **Comm:** *Eriocaulon lineare* was reported for NC (Kral in FNA 2000), but this is apparently in error. Kral & Sorrie (1998) proposed the conservation of the name *E. lineare* with a conserved type, as the designated type actually represents *E. texense*; this course was accepted by Brummitt (2005). **Syn:** = FNA22, GW1, K1, K3, K4, S, WH3; > *Eriocaulon pellucidum* Michaux, misidentification by Mellinger (1984); > *Eriocaulon septangulare* Withering, misidentification by Thorne (1954). **NatureServe G4** (Apparently Secure).

Eriocaulon texense Körnicke. TEXAS HATPINS. **Hab:** Sandhill seepage bogs, Altamaha Grit outcrops, seepage over the Catahoula in the West Gulf Coastal Plain, seepage over granite in the Blue Ridge Escarpment. **Dist:** Sc. NC south to w. Panhandle FL, west to e. TX; disjunct in w. SC in the uppermost Piedmont in the Blue Ridge Escarpment region. **Phen:** Apr-Jun. **Syn:** = ETx1, FNA22, GW1, K1, K3, K4, NcTx, Tx, WH3, Kral (1966c). **NatureServe G4** (Apparently Secure).

Lachnocaulon Kunth 1841 (BOGBUTTONS)

A genus of 7 species, herbs, of se. North America and Cuba. Based on work of Gomes de Andrade et al. (2010) and Adrino et al. (2010), *Lachnocaulon* is embedded within a broadly conceived *Paepalanthus* Martius. *Lachnocaulon* can be included in *Paepalanthus*, a course favored by Christenhusz, Faye, & Byng (2018) and Christenhusz et al. (2020), or, alternatively, *Paepalanthus* can be restructured into a number of smaller genera, including *Lachnocaulon*, a course being followed by specialists in the group (Andrino et al. 2021; Andrino, Sano, & Nepomuceno da Costa (2021). We follow the second course. References: Andrino et al (2021); Andrino, Sano, & Nepomuceno da Costa (2021); Christenhusz et al (2020); Christenhusz, Fay, & Byng (2018); Gomes de Andrade et al (2010); Kral (1966c); Kral (2000b) in FNA22 (2000); Stützel in Kubitzki (1998b).

- 1 Trichomes at the tips of the receptacular bracts milky white, opaque, the head therefore appearing gray to white, obscuring the brown color of the bractlets.
- *Lachnocaulon anceps*
- 1 Trichomes at the tips of the receptacular bracts translucent, the head therefore showing the brown color of the bractlets.
- *Lachnocaulon digynum*

Lachnocaulon anceps (Walter) Morong. COMMON BOGBUTTONS. **Hab:** Moist to dry sands, moist peats, in pinelands, sometimes locally abundant in open disturbed areas where competition has been removed. **Dist:** S. NJ south to s. FL, west to se. TX; rarely disjunct inland off the Coastal Plain, as in ec. TN; West Indies (Cuba). **Phen:** May-Oct. **Syn:** = C, ETx1, F, FNA22, G, GW1, K1, K3, K4, RAB, Tn, Tx, Va, WH3, Kral (1966c); = *Paepalanthus anceps* (Walter) Christenhusz & Byng – Christenhusz, Fay, & Byng (2018); > *Lachnocaulon anceps* (Walter) Morong – S; > *Lachnocaulon floridanum* – S; > *Lachnocaulon glabrum* Körnicke – S. **NatureServe G5** (Secure).

Lachnocaulon digynum Körnicke. PINELAND BOGBUTTON. **Hab:** Hillside seepage bogs, wet pine savannas. **Dist:** Panhandle FL (east to Liberty and Franklin counties) and s. AL west to s. MS; disjunct west of the Mississippi River in w. LA and extreme e. TX. **Phen:** Jun-Sep. **Syn:** = ETx1,

Key to Map Symbology: (see introduction for more)

94. ERIOCAULACEAE

FNA22, GW1, K1, K3, K4, S, WH3, Kral (1966c); = *Paepalanthus digynus* (Körnicke) Christenhusz & Byng – Christenhusz, Fay, & Byng (2018). NatureServe G3G4 (Vulnerable).

Syngonanthus Ruhland 1900 (YELLOW HATPINS)

A genus of about 200 species, primarily of tropical America, but some in Africa and Madagascar; ours is the only temperate species. References: Andrino et al (2021); Gomes de Andrade et al (2010); Kral (1966c); Kral (2000b) in FNA22 (2000); Stützel in Kubitzki (1998b).

Identification Notes: *Syngonanthus flavidulus* is distinguished from all other SEUS Eriocaulaceae by its flattened to even somewhat recurved (the leaf tips curving down into the ground at their tips) rosettes of quite narrow leaves, often with a bluish-green color. All of our other Eriocaulaceae have basal rosettes of leaves that are mostly ascending to spreading, and more of a yellowish-green to deep green (or sometimes stramineous) color. In flower, *Syngonanthus* has a more "chaffy" looking inflorescence, the bracts appearing dry. In contrast, most other US Eriocaulaceae flower heads are at least somewhat fleshy, and most species have white-clavate hairs obscuring most of the floral parts.

Syngonanthus flavidulus (Michaux) Ruhland. YELLOW HATPINS, BANTAM-BUTTONS. **Hab:** Pine savannas, pine flatwoods, borders of pineland ponds, and adjacent ditches. **Dist:** Se. NC south to s. FL, west to s. MS. **Phen:** May-Oct. **Syn:** = FNA22, GW1, K1, K3, K4, RAB, S, WH3, Kral (1966c). NatureServe G5 (Secure).

95. MAYACACEAE Kunth 1840 (BOGMOSS FAMILY) [in POALES]

A family of a single genus and 4-10 species, of tropical to warm temperate America and Africa. References: Faden (2000a) in FNA22 (2000); Stevenson in Kubitzki (1998b); Thieret (1975).

Mayaca Aublet 1775 (BOGMOSS)

A genus of 4-10 species, of tropical to warm temperate America and Africa. References: Faden (2000a) in FNA22 (2000); Stevenson in Kubitzki (1998b); Thieret (1975); Urquiola Cruz (2001).

- 1 Pedicels 5-30 mm long; plants decumbent, the leaves disposed either spirally to distichously on the stem; corolla pink (with a white 'eye'); capsule subglobose to ovoid..... *Mayaca aubletii*
- 1 Pedicels 1-5 (-10) mm long; plants erect to ascending, the leaves disposed spirally around the stem; corolla white or pink; capsules oblong-ellipsoid..... *Mayaca fluviatilis*

Mayaca aubletii Michaux. AUBLET'S BOGMOSS. **Hab:** Marshes, streams, swamp forests, shores of natural lakes (rarely in artificial impoundments), seepage areas, in saturated soil and usually associated with seepage. **Dist:** Se. NC south to c. peninsular FL, west to e. TX; West Indies (w. Cuba). **Phen:** (Dec-) May-Aug. **Comm:** The two species previously recognized have recently been usually interpreted as only different growth forms, induced by different hydrologic conditions; Urquiola (2001) disagrees and supports their recognition. The two taxa are provisionally adopted here; additional study is warranted. **Syn:** = RAB, S, Tx, Urquiola Cruz (2001); < *Mayaca fluviatilis* Aublet – ETx1, FNA22, GW1, K1, K3, K4, WH3, WI, Thieret (1975).

Mayaca fluviatilis Aublet. BOGMOSS. **Hab:** Mucky marshes, streams, swamp forests, shores of natural lakes (rarely in artificial impoundments), in saturated soil or variously submersed. **Dist:** Se. NC south to c. peninsular FL, west to e. LA; West Indies; Central America to South America. **Phen:** (Dec-) May-Nov. **Syn:** = RAB, S, Urquiola Cruz (2001); < *Mayaca fluviatilis* Aublet – FNA22, GW1, K1, K3, K4, Meso6, WH3, WI, Thieret (1975).

97. JUNCACEAE A.L. de Jussieu 1789 (RUSH FAMILY) [in POALES]

A family of about 8 genera and 350-440 species, herbs (and a few shrubs), largely of temperate regions of the Old and New World. References: Balslev in Kubitzki (1998b); Brooks & Clemants (2000a) in FNA22 (2000); Do & Závěská Drábková (2018); Závěská Drábková et al (2003).

- 2 Leaf blades terete or flat, glabrous; mature fruit many-seeded; [often in wetlands]..... **Juncus**
 2 Leaf blades flat, ciliate; mature fruit with 3 seeds; [usually in uplands] **Luzula**

Juncus Linnaeus 1753 (RUSH)

Contributed by B.A. Sorrie and W.M. Knapp

A genus of about 250-300 species, herbs, of cosmopolitan distribution. References: Balslev in Kubitzki (1998b); Bridges & Orzell (2008); Brooks & Clemants (2000b) in FNA22 (2000); Clemants (1990); Hämet-Ahti (1980); Kirschner (2002b); Kirschner (2002c); Knapp & Naczi (2008); Knapp (2014); Knapp (2016) in Naczi & collaborators (2019); Závěská Drábková et al (2003); Zika (2003); Zika (2013).

subgenus *Juncus*, section *Juncus*: *acutus* ssp. *leopoldii*, *roemerianus*

subgenus *Juncus*, section *Graminifolii*: *biflorus*, *filipendulus*, *longii*, *marginatus*, *repens*

subgenus *Juncus*, section *Iridifolii*: *polycephalus*

subgenus *Juncus*, section *Ozophyllum*: *acuminatus*, *brachycephalus*, *brevicaudatus*, *caesariensis*, *canadensis*, *megacephalus*, *militaris*, *nodosus*, *paludosus*, *pelocarpus*, *subcaudatus*, *torreyi*, *trigonocarpus*, *validus*

subgenus *Agathryon*, section *Tenageia*: *bufonius*, *ranarius*

subgenus *Agathryon*, section *Steirochloa*: *anthelatus*, *brachyphyllus*, *coriaceus*, *dichotomus*, *dudleyi*, *georgianus*, *gerardi*, *interior*, *secundus*, *tenuis*,

subgenus *Agathryon*, section *Juncotypus*: *balticus*, *filiformis*, *effusus* ssp. *effusus*, *effusus* ssp. *solutus*, *gymnocarpus*, *inflexus*, *pylaei*

Identification Notes: For identification of most rushes, it is important to collect plants with mature capsules and seeds. Stamen number is often a diagnostic character and can be determined after anthesis by counting the number of persistent filaments located behind the tepals. Care must be taken to collect specimens with uninjured heads, especially for the group of rushes in Key D; the long beaks of the capsules are often fragile and easily broken off.

- 1 Inflorescence appearing lateral; inflorescence bract erect, appearing to be a continuation of the culm..... **KEY A**
 1 Inflorescence appearing terminal; inflorescence bract not appearing to be a continuation of the culm..... **KEY B**
 2 Leaf blades non-septate..... **KEY B**
 2 Leaf blades septate (sometimes obscure in dried specimens; if so, rest leaf on hard surface and run fingernail over it lengthwise).
 3 Mature seeds distinctly tailed with elongate appendages at each end (may be obscure in *J. subcaudatus*), seeds 0.7-2.5 mm long; [subgenus *Juncus*, section *Ozophyllum*]..... **KEY C**
 3 Mature seeds without appendages, < 0.7 mm long.
 5 Heads spherical or nearly so, usually 15-60 flowered..... **KEY D**
 5 Heads turbinate to hemispherical, 3-15 flowered; [subgenus *Juncus*, section *Ozophyllum*]..... **KEY E**

KEY A

- 1 Flowers borne in heads (glomerules) of 2-6 flowers per head; leaves spine-tipped; single bracteole subtending glomerule present at base of pedicel; [plants of brackish habitats]; [subgenus *Juncus*, section *Juncus*]..... **Juncus roemerianus**
 1 Flowers borne singly on branches of inflorescence; leaves not spine-tipped; each flower subtended by two bracteoles in addition to bracteole at base of pedicel; [plants of various habitats].
 3 At least a few sheaths at base of plant with well developed blades; inflorescence bract channeled on one side; [subgenus *Agathryon*, section *Steirochloa*]..... **Juncus coriaceus**
 3 Sheaths at base of plant bladeless; bract not channeled; [subgenus *Agathryon*, section *Juncotypus*].
 4 Culms well spaced along creeping rhizomes..... **Juncus gymnocarpus**
 4 Culms cespitose or tufted on short branching rhizomes.
 7 Perianth much shorter than capsule (about ½ as long); stamens 6; [from NC and TN south to Panhandle FL]..... **Juncus gymnocarpus**
 7 Perianth > 3/4 length of capsule; stamens 6 or 3; [collectively widespread].
 9 Stems with 10-20 prominent ridges just below the inflorescence, with a firm texture; fresh upper stems dull or matte; dried stems coarsely ridged, ridges visible in high relief at 10×, dried ridges capped with shiny bulging cells; perianth 2.7-3.6 mm long, sepals slightly exceeding the petals and capsule..... **Juncus pylaei**
 9 Stems with 25-30 relatively inconspicuous ridges just below the inflorescence, with a soft texture, easily compressed; fresh upper stems shiny; dried stems with lower ridges, fine or coarse, ridges visible in low relief at 10×, dried ridges capped with low dull cells; perianth 1.9-2.8 mm long, the sepals equaling the petals..... **Juncus effusus** ssp. *solutus*

KEY B

- 1 Flowers borne in heads (glomerules) of 2 or more, individual flowers not subtended by two bracteoles (in addition to the bracteole at the base of the pedicel); [subgenus *Juncus*, section *Graminifolii*].
- 2 Perianth 6-10 mm long; plant aquatic, submersed and sterile or emersed/stranded and fertile; stems weak, creeping, mat-forming..... *Juncus repens*
- 2 Perianth < 6 mm long; plant of uplands or wetland margins, never submersed; stems erect, never creeping or mat-forming.
- 3 Heads 1-5 (-10) per culm; [calcareous glades inland, east to GA and TN]..... *Juncus filipendulus*
- 3 Heads >9 per culm; [collectively widespread].
- 4 Infructescence usually congested, (1.8-) 2.4-4.7 (-6.4) cm long; greatest distance between adjacent rhizome cataphylls (5.3-) 6.3-10.5 (-13.0) mm; rhizome width (measured between adjacent cataphylls) (0.8-) 1.0-1.4 (-1.9) mm *Juncus longii*
- 4 Infructescence usually loose, (1.4-) 17.9-103.9 (-145) cm long; greatest distance between adjacent rhizome cataphylls (0.1-) 0.4-3.0 (-4.6) mm; rhizome width (measured between adjacent cataphylls) (0.4-) 1.0-3.5 (-4.5) mm.
- 5 Widest leaf blade (2.6-) 3.1-4.5 (-7.0) mm wide; sheath of lowest leaf (3.2-) 4.3-7.8 (-9.7) cm long; tallest culm (27.2-) 50.8-81.2 (-100.7) cm; anthers (0.5-) 0.6-1.0 (-1.3) mm long, exserted; stem base (3.4-) 5.8-9.6 (-12.0) mm wide..... *Juncus biflorus*
- 5 Widest leaf blade (1.3-) 1.6-2.6 (-3.5) mm wide; sheath of lowest leaf (1.7-) 2.2-3.8 (-4.7) cm long; tallest culm (19.2-) 26.0-44.0 (-56.8) cm; anthers (0.2-) 0.3-0.5 (-0.7) mm long, concealed by tepals; stem base (0.4-) 2.0-4.4 (-6.0) mm wide..... *Juncus marginatus*
- 1 Flowers borne singly on branches of inflorescence, individual flowers subtended by two bracteoles (in addition to the bracteole at the base of the pedicel).
- 6 Plants annual, without coarse roots or persistent leaf bases; [subgenus *Agathryon*, section *Tenageia*]
- *Juncus bufonius*
- 6 Plants perennial, with coarse roots or persistent leaf bases.
- 8 Auricles 3-6 mm long at summit of leaf sheath.
- 9 Capsules < 3/4 length of perianth; unbranched terminal sections of the inflorescence with 2-5 flowers, the longest distance between the adjacent flowers (excluding the peduncle) 6-11 mm *Juncus anthelatus*
- 9 Capsules > 3/4 length of perianth; unbranched terminal sections of the inflorescence with 1-3 (-4) flowers, the longest distance between the adjacent flowers (excluding the peduncle) 0.5-5.5 mm..... *Juncus tenuis*
- 8 Auricles < 2 mm long or absent.
- 11 Leaf blades terete or channeled.
- *Juncus dichotomus*
- 11 Leaf blades flat.
- 14 Inflorescence bract shorter than inflorescence; capsules 3-locular.
- *Juncus secundus*
- 14 Inflorescence bract longer than inflorescence; capsules 1-locular to falsely 3-locular.
- 18 Mature capsules pale brown or darker; [of the Coastal Plain] *Juncus dichotomus*
- 18 Mature capsules pale tan or darker; [of prairies and plains, east to KY, se TN] *Juncus interior*

KEY C

- 3 Mature capsules 3.0-4.0 mm long, < 1.5 mm longer than perianth, light reddish brown to light brown; heads 5-50 flowered *Juncus canadensis*
- 3 Mature capsules 4.0-5.0 mm long, 2 mm longer than perianth, dark reddish purple; heads 3-7 flowered..... *Juncus trigonocarpus*

KEY D

- 1 Leaves flattened, narrowly elliptic in cross-section.
- 2 Leaves with incomplete septae; heads about 10 mm diameter; tips of dehiscent capsules united; [subgenus *Juncus*, section *Iridifolii*] *Juncus polycephalos*
- 2 Leaves with complete septae; heads about 12 mm diameter; tips of dehiscent capsules split; [subgenus *Juncus*, section *Ozophyllum*]..... *Juncus validus*
- 1 Leaves terete, not at all flattened; [subgenus *Juncus*, section *Ozophyllum*].
- 3 Plants strictly caespitose, without any short, hard, knotty rhizomes; tepals lanceolate..... *Juncus acuminatus*
- 3 Plants with at least some short, hard, knotty rhizomes; tepals lanceolate-subulate.
- 4 Capsules shorter than the tepals, clearly included within the tepals at maturity *Juncus brachycarpus*
- 4 Capsules equaling or exceeding the tepals, exserted from or only barely included within the tepals at maturity.
- 5 Capsule valves separating at the apex at maturity; stamens 6.
- *Juncus torreyi*
- 5 Capsule valves remaining united at the apex after dehiscence; stamens 3.
- 8 Uppermost cauline leaf blade much shorter than its sheath; tepals reddish to reddish brown; outer tepals significantly longer than the inner tepals; basal leaf sheaths and cataphylls deep reddish purple..... *Juncus megacephalus*
- 8 Uppermost cauline leaf blade equaling or longer than its sheath; tepals green to straw-colored; outer tepals and inner tepals of similar length; basal leaf sheaths and cataphylls straw-colored to brown.
- 9 Heads lobulate; mature capsule 2.0-3.0 mm long..... *Juncus scirpoides* var. *compositus*
- 9 Heads spherical, not lobulate; mature capsule 3.0-4.5 mm long..... *Juncus scirpoides* var. *scirpoides*

KEY E

- 1 Mature capsules 2 mm or more longer than the perianth, 4.0-5.2 mm long *Juncus diffusissimus*
- 1 Mature capsules < 1.5 mm longer than the perianth, or subequal to it.
- 2 Stamens 6.
- *Juncus acuminatus*
- 2 Stamens 3.
- 6 Mature capsules about 1/3 longer than perianth (roughly 1-1.5 mm longer)..... *Juncus debilis*
- 6 Mature capsules equaling or barely exceeding perianth.

- 7 Heads 1-50; capsules 2.4-3.6 mm long

..... *Juncus acuminatus*

- 7 Heads 30-250; capsules 1.9-2.9 mm long.

- 9 Capsules deep chestnut brown; roots with terminal tubers; inner tepals usually > 2.4 mm long; [southeastern] *Juncus elliotii*

- 9 Capsules straw colored; roots without terminal tubers; inner tepals usually 1.7-2.3 mm long; [midwestern, east to w. Panhandle FL and se. TN] *Juncus nodatus*

Juncus acuminatus Michaux. SHARP-FRUITED RUSH. **Hab:** In a range of natural and disturbed, saturated and seasonally flooded wetlands. **Dist:** ME and NS to ON and MN, south to n. peninsular FL, TX, and n. Mexico; S. Mexico and Honduras; BC to CA. **Phen:** May-Aug. **Syn:** = C, ETx1, F, FNA22, G, GrPl, GW1, Il, K1, K2, Meso6, Mi, Mo1, NcTx, NE, NY, Pa, RAB, S, Tn, Tx, Va, W, WH3, WV, Bridges & Orzell (2008), Kirschner (2002b), Kirschner (2002c). **NatureServe G5** (Secure).

Juncus antheratus (Wiegand) R.E. Brooks. LARGE PATH RUSH, GREATER POVERTY RUSH. **Hab:** Moist or wet sites, including disturbed areas such as roadsides, paths, and fields. **Dist:** NB and ME west to MN, south to GA, AR, and se. TX. **Phen:** Jul-Sep. **Comm:** The distribution as mapped here is somewhat speculative because of general historic lack of recognition. **Syn:** = Ar, ETx1, FNA22, Il, K3, K4, Mi, NE, NY, Tn, Va, Kirschner (2002b), Kirschner (2002c); = *Juncus tenuis* var. *antheratus* Wiegand – F, Mo1, WV; < *Juncus tenuis* Willdenow – G, GrPl, GW1, K1, RAB, S, Tx, W; < *Juncus tenuis* Willdenow var. *tenuis* – C, Pa.

Juncus biflorus Elliott. LARGE GRASS-LEAVED RUSH. **Hab:** Pine savannas, pine flatwoods, mesic areas in sandhill-pocosin ecotones, roadsides, low fields in the Piedmont, wet meadows, interdune swales, freshwater and oligohaline tidal marshes, ditches. **Dist:** MA to MO, south to FL, TX, Mexico and Central America, and disjunct in South America. **Phen:** Jun-Oct. **Tax:** See Knapp & Naczi (2008) for clarification of the *Juncus marginatus* complex. **Syn:** = Ar, F, Il, K1, K2, Mi, Mo1, NE, NY, RAB, Tn, Va, W, WV, Knapp & Naczi (2008); = *Juncus aristulatus* Michaux var. *biflorus* (Elliott) Small – S; < *Juncus biflorus* Elliott – C, G, Pa; < *Juncus marginatus* Rostkovius – FNA22, GW1, K3, K4, Tx, WH3, Kirschner (2002b), Kirschner (2002c).

Juncus brachycarpus Engelman. SHORT-FRUITED RUSH. **Hab:** Ditches, depressions, ponds, especially in seasonally flooded sites that draw down early in the growing season. **Dist:** MA to IL, south to SC, wc. GA, and TX. **Phen:** Jun-Sep. **Syn:** = Ar, C, ETx1, F, FNA22, G, GrPl, GW1, Il, K1, K3, K4, Mi, Mo1, NcTx, NE, NY, Pa, RAB, S, Tn, Tx, Va, WV, Bridges & Orzell (2008), Kirschner (2002b), Kirschner (2002c). **NatureServe G4G5** (Apparently Secure).

Juncus bufonius Linnaeus. TOAD RUSH. **Hab:** Wet, open ground, roadsides, dried pools, drawdown shores. **Dist:** Cosmopolitan, and polymorphic; a number of varieties and segregate species have sometimes been recognized, but need additional study. **Phen:** (May-) Jun-Nov. **Syn:** = GrPl, Mi, NE, NY; = *Juncus bufonius* var. *bufonius* – C, F, G, K1, K4, Mo1; < *Juncus bufonius* Linnaeus – Ar, ETx1, FNA22, GW1, K2, K3, Meso6, NcTx, Pa, RAB, S, Tn, Tx, Va, W, WH3, WV, Kirschner (2002b), Kirschner (2002c); > *Juncus bufonius* var. *bufonius* – Il; > *Juncus bufonius* var. *congestus* Wahlenberg – Il.

Juncus canadensis J. Gay ex Laharpe. CANADIAN RUSH. **Hab:** Lake, pond and stream margins, swamps, bogs, seepage slopes, wet meadows, ditches. **Dist:** NL (Newfoundland) to MN, south to c. peninsular FL, TN, and LA. **Phen:** Jul-Oct. **Tax:** *J. canadensis* is here treated as a single, polymorphic species. Fernald and others have described up to 5 forms and varieties of *J. canadensis*, based on variation in flower and capsule size (from 2.5 mm to nearly 4.0 mm), shape of the glomerules (densely flowered and subglobose to few-flowered and turbinate), and structure and size of the inflorescence (congested to open). Further study is necessary to determine whether any of these taxa should be recognized. **Syn:** = Ar, C, FNA22, G, GrPl, GW1, Il, K1, K3, K4, Mi, NE, NY, Pa, RAB, S, Tn, Va, W, WH3, WV, Kirschner (2002b); > *Juncus canadensis* var. *canadensis* – F, Mo1; > *Juncus canadensis* var. *euroauster* Fernald – F.

Juncus coriaceus Mackenzie. LEATHERY RUSH. **Hab:** Stream and pond margins, swamps, flatwoods depressions, roadside ditches. **Dist:** S. NJ to c. peninsular FL, west to e. TX, north in the interior to KY, AR, and OK. **Phen:** Jun-Sep. **Syn:** = Ar, C, ETx1, F, FNA22, G, GW1, K1, K3, K4, NcTx, RAB, Tn, Va, W, WH3, Kirschner (2002b), Kirschner (2002c); = *Juncus setaceus* Rostkovius – S, misapplied. **NatureServe G5** (Secure).

Juncus debilis A. Gray. WEAK RUSH. **Hab:** Marshy shores, stream and pond margins, along puddles in wet, disturbed clearings, ditches. **Dist:** RI to MO, south to n. FL and e. TX; Honduras. **Phen:** May-Aug. **Syn:** = Ar, C, ETx1, F, FNA22, G, GW1, Il, K1, K3, K4, Meso6, Mo1, NE, NY, Pa, RAB, S, Tn, Tx, Va, W, WH3, Kirschner (2002b), Kirschner (2002c). **NatureServe G5** (Secure).

Juncus dichotomus Elliott. FORKED RUSH. **Hab:** Often in disturbed, open, wet areas, ditches, wet meadows. **Dist:** MA to c. peninsular FL, west to OK and TX; Central America. **Phen:** May-Oct. **Tax:** The character used to separate *J. platyphyllus* (Wiegand) Fernald from *J. dichotomus* (flat leaf blade vs. terete leaf blade) does not appear to be reliable; leaf blades from culms in the same clump may vary from flat to slightly involute to completely terete. **Syn:** = Ar, ETx1, FNA22, GW1, K3, K4, NcTx, NE, NY, Pa, Tn, Tx, Va, W, WH3, WV, Kirschner (2002b), Kirschner (2002c); = *Juncus tenuis* var. *dichotomus* (Elliott) Alph. Wood – C, Meso6; > *Juncus dichotomus* Elliott – F, RAB; > *Juncus dichotomus* var. *dichotomus* – G, K1, S; > *Juncus dichotomus* var. *platyphyllus* Wiegand – G, K1, S; > *Juncus platyphyllus* (Wiegand) Fernald – F, RAB.

Juncus diffusissimus Buckley. DIFFUSE RUSH, SLIM-POD RUSH. **Hab:** Low, wet open areas, ditches, margins of ponds and streams. **Dist:** Originally distributed from KY, s. IN, s. IL, MO and KS south to s. AL, MS, LA, and TX, the more eastern part of the distribution apparently adventive (Lamont & Young 2005). **Phen:** May-Sep. **Syn:** = Ar, C, ETx1, F, FNA22, G, GrPl, GW1, Il, K1, K3, K4, Mo1, NcTx, NE, NY, Pa, RAB, S, Tn, Tx, Va, W, WH3, WV, Kirschner (2002b), Kirschner (2002c). **NatureServe G5** (Secure).

Juncus effusus Linnaeus ssp. **solutus** (Fernald & Wiegand) Hämet-Ahti. COMMON RUSH, SOFT RUSH. **Hab:** Moist soil, marshes, margin of streams, ponds, lakes and swamps, low meadows. **Dist:** NL (Newfoundland) to MN, south to s. FL and Mexico. **Phen:** Jun-Sep. **Comm:** Ssp. *effusus* is European, and also occurs (apparently introduced) in the ne. United States. **Syn:** = K3, K4, Mo1, NE, NY, Tn, WH3, Hämet-Ahti (1980), Kirschner (2002b), Kirschner (2002c), Zika (2003), Zika (2013); = *Juncus effusus* Linnaeus var. *solutus* Fernald & Wiegand – C, II, NcTx, Pa, Tx; > *Juncus conglomeratus* Linnaeus, misapplied; < *Juncus effusus* – Ar, ETx1, FNA22, GrPl, GW1, Mes06, Mi, RAB, S, Va, W; > *Juncus effusus* var. *compactus* – G, misapplied; > *Juncus effusus* Linnaeus var. *conglomeratus* (Linnaeus) Engelm. – K1, misapplied; > *Juncus effusus* Linnaeus var. *solutus* Fernald & Wiegand – F, K1; > *Juncus effusus* Linnaeus var. *solutus* Fernald & Wiegand – G; > *Juncus griseomii* Fernald – F, G.

Juncus elliotii Chapman. ELLIOTT'S RUSH. **Hab:** Margins of ponds and lakes, depressions in savannas and flatwoods, wet, disturbed clearings, roadside ditches. **Dist:** Coastal Plain, DE and e. MD (Knapp et al. 2011) to c. peninsular FL, west to se. TX. **Phen:** May-Sep. **Comm:** Capsules of *J. elliotii* are similar in shape to *J. acuminatus*, but the presence of tubiferous roots, shorter perianth (2.0-2.5 mm long vs. 2.5-3.5 mm) and fewer-flowered glomerules (3-8 flowered vs. 5-many flowered) clearly distinguishes *J. elliotii* from *J. acuminatus*. **Syn:** = C, ETx1, F, FNA22, G, GW1, K4, RAB, S, Tx, Va, WH3, Kirschner (2002b); > *Juncus elliotii* var. *elliotii* – K1, K2; > *Juncus elliotii* var. *polyanthemus* C. Mohr – K1, K2.

Juncus filipendulus Buckley. RINGSEED RUSH, TEXAS PLAINS RUSH. **Hab:** Seasonally wet soils of prairies and limestone barrens. **Dist:** KY, TN, and AL west to OK and TX. **Phen:** Apr-Aug. **Syn:** = ETx1, FNA22, GW1, K1, K3, K4, K4, NcTx, S, Tn, Tx, Kirschner (2002b). NatureServe G5 (Secure).

Juncus gymnocarpus Coville. SEEP RUSH. **Hab:** Bogs, seeps, streambanks and riverbanks (especially just below waterfalls). **Dist:** Local, distributed in four disjunct areas: mountains of e. PA; southern Blue Ridge of w. NC, e. TN, nw. SC and ne. GA; southern end of the Ridge and Valley in Bibb County, AL; and Coastal Plain of sw. GA, s. AL, s. MS (Sorrie & Leonard 1999), and w. Panhandle FL. **Phen:** Jul-Sep. **Comm:** In the Appalachians, *J. gymnocarpus* is scattered in mountain bogs and seeps throughout the mountain region of nw. NC, ne. TN south to nw. SC and n. GA; it reaches its most general occurrence in the escarpment gorge region of Transylvania, Macon, and Jackson counties, NC, where it also occurs along streambanks, especially just below waterfalls. **Syn:** = C, F, FNA22, G, GW1, K1, K3, K4, Pa, RAB, S, Tn, W, WH3, Kirschner (2002b), Zika (2013). NatureServe G4 (Apparently Secure).

Juncus interior Wiegand. INLAND RUSH. **Hab:** Calcareous prairies, disturbed sites. **Dist:** OH west to SK, south to e. TN, AL (Sorrie & LeBlond 2008), MS (Sorrie & LeBlond 2008), LA, TX, and NM. **Phen:** Late Apr-Oct. **Syn:** = Ar, ETx1, FNA22, G, GrPl, II, K4, NcTx, S, Tn, Tx, W, Kirschner (2002b), Kirschner (2002c); > *Juncus interior* var. *interior* – K1, K3; < *Juncus tenuis* Willdenow – GW1; < *Juncus tenuis* Willdenow var. *tenuis* – C.

Juncus longii Fernald. LONG'S RUSH. **Hab:** Usually in very wet, often inundated sites, bogs, ditches, rooting in clay or peat. **Dist:** MD south through VA, NC, SC to s. MS and se. LA (Urbatsch 2013), mainly in the Coastal Plain; disjunct inland in boggy sites, as in w. NC, nc. GA, TN, and n. AL (Knapp & Naczi 2008, more extensive distributions are based on misattribution). **Phen:** Jun-Aug. **Comm:** See Knapp & Naczi (2008) for clarification of the *Juncus marginatus* complex. **Syn:** = F, K1, K3, K4, RAB, Tn, Va, Knapp & Naczi (2008); = *Juncus aristulatus* Michaux var. *aristulatus* – S; < *Juncus biflorus* Elliott – C, G; < *Juncus marginatus* Rostkovius – FNA22, GW1, WH3, Kirschner (2002b).

Juncus marginatus Rostkovius. GRASS-LEAVED RUSH. **Hab:** Wet meadows, bogs, generally throughout in wet, sandy or peaty soil. **Dist:** NS to ON, MI, and NE, south to s. peninsular FL and TX; disjunct in CA and in South America. **Phen:** Jun-Sep. **Comm:** See Knapp & Naczi (2008) for clarification of the *Juncus marginatus* complex. **Syn:** = Ar, C, ETx1, G, GrPl, II, K1, Mi, Mo1, NcTx, NE, NY, Pa, RAB, S, Tn, Va, W, WV; < *Juncus marginatus* Rostkovius – FNA22, GW1, K3, K4, Tx, WH3, Kirschner (2002b), Kirschner (2002c), Knapp & Naczi (2008); > *Juncus marginatus* Rostkovius – G; > *Juncus marginatus* var. *marginatus* – F; > *Juncus marginatus* var. *setosus* Coville – F; > *Juncus setosus* (Coville) Small – G.

Juncus megacephalus M.A. Curtis. LARGE-HEADED RUSH. **Hab:** Brackish and freshwater marshes, bogs, wet prairies, interdune swales, ditches, wet, open places. **Dist:** Coastal Plain, e. MD (Knapp et al. 2011) and VA to s. FL, west to se. TX. **Phen:** Jun-Aug. **Syn:** = C, F, FNA22, G, GW1, K1, K3, K4, RAB, S, Tx, Va, WH3, Bridges & Orzell (2008), Kirschner (2002b), Knapp (2014). NatureServe G4G5 (Apparently Secure).

Juncus nodatus Coville. STOUT RUSH. **Hab:** Shallow water, marshes, sloughs, savannas, bogs. **Dist:** KY west to KS, south to TN, AL, w. Panhandle FL, MS (Sorrie & LeBlond 2008), LA, and TX. **Phen:** (Jun-) Jul-Sep. **Syn:** = Ar, C, ETx1, FNA22, G, GrPl, GW1, II, K1, K3, K4, Mo1, NcTx, Tn, Tx, WH3, Kirschner (2002b); ? *Juncus robustus* (Engelmann) Coville, preoccupied. NatureServe G5 (Secure).

Juncus polycephalus Michaux. MANY-HEADED RUSH. **Hab:** Sandy pond margins, ditches, pine savannas. **Dist:** Coastal Plain, NC to s. FL, west to e. TX; KS. **Phen:** Jul-Sep. **Comm:** Often confused with *J. validus*; see Knapp (in press) for discussion. **Syn:** = K4, WH3; = *Juncus polycephalus* – ETx1, F, FNA22, GW1, K1, K2, NcTx, RAB, S, Tx, Kirschner (2002b), orthographic variant. NatureServe G5 (Secure).

Juncus pylaei Laharpe. COMMON RUSH. **Hab:** Moist soil, marshes, margin of streams, ponds, lakes and swamps, low meadows (overlooked and probably more widespread and common than shown). **Dist:** Throughout eastern North America, south at least to NC and SC. The mapped distribution is unusually speculative, owing to past lumping with *Juncus effusus*. **Phen:** Jun-Sep. **Syn:** = C, K1, K3, Mi, NE, NY, Hämet-Ahti (1980), Kirschner (2002b), Zika (2003), Zika (2013); = *Juncus effusus* Linnaeus var. *pylpei* (Laharpe) Fernald & Wiegand – Pa; < *Juncus effusus* – FNA22, GW1, RAB, S, Va, W; > *Juncus effusus* var. *costulatus* St. John – F; > *Juncus effusus* Linnaeus var. *pylpei* (Laharpe) Fernald & Wiegand – F; < *Juncus effusus* Linnaeus var. *solutus* Fernald & Wiegand – G.

Juncus repens Michaux. CREEPING RUSH. **Hab:** Streams, ponds, lakes, ditches, wet depressions in flatwoods, cypress savannas. **Dist:** DE to s. FL, west to TX, north into OK and TN; Mexico (Tabasco); Cuba. **Phen:** Jun-Oct. **ID Notes:** This species commonly forms dense mats – a useful field character. **Syn:** = Ar, C, ETx1, F, FNA22, G, GW1, K1, K3, K4, Meso6, RAB, S, Tn, Tx, Va, WH3, Kirschner (2002b), Kirschner (2002c). NatureServe G5 (Secure).

Juncus roemerianus Scheele. BLACK NEEDLE RUSH. **Hab:** Coastal tidal marshes, forming dense stands at and above mean high tide, above the *Spartina alterniflora* (*Sporobolus alterniflorus*) zone. **Dist:** MD to s. FL, west to se. TX; Bahamas; Hispaniola. **Phen:** Jan-Jun; May-Oct. **Comm:** See Eleuterius (1977) for additional information on this species. **Syn:** = Bah, C, ETx1, F, FNA22, G, GW1, K1, K3, K4, RAB, S, Tx, Va, WH3, Kirschner (2002b). NatureServe G5 (Secure).

Juncus scirpoides Lamarck var. *compositus* R.M. Harper. LOBE-HEADED RUSH. **Hab:** Roadsides, wet, open, disturbed areas. **Dist:** Coastal Plain: NC, GA, FL, AL, MS, LA, SC, TX, VA. **Phen:** Jun-Oct. **Syn:** = S, Va; > *Juncus glomeratus* Batson – K1, nomen nudum; < *Juncus scirpoides* – FNA22, GW1, K1, K3, K4, NcTx, RAB, Tx, WH3, Bridges & Orzell (2008), Kirschner (2002b), Knapp (2014); <? *Juncus scirpoides* var. *meridionalis* Buchenau – F, application uncertain.

Juncus scirpoides Lamarck var. *scirpoides*. **Hab:** Wet, open, disturbed areas, ditches, sandhill pocosin ecotones and seepage bogs, savannas and wet pine flatwoods, wet meadows. **Dist:** S. NY to s. FL, mostly Coastal Plain and Piedmont; west to TX; IN to MI, MO, OK. **Phen:** Jun-Oct. **Syn:** = F, Mo1, NY, S, Va; < *Juncus scirpoides* – Ar, C, ETx1, FNA22, G, GrPl, GW1, Il, K1, K3, K4, Mi, NcTx, Pa, RAB, Tn, Tx, W, WH3, WV, Bridges & Orzell (2008), Kirschner (2002b), Kirschner (2002c), Knapp (2014).

Juncus secundus Palisot de Beauvois ex Poir. SECUND RUSH, LOP-SIDED RUSH. **Hab:** Dry woodlands and fields, rock outcrops. **Dist:** ME to IN, south to n. GA, c. AL, n. LA, and s. OK. **Phen:** Jun-Oct. **Syn:** = Ar, C, F, FNA22, G, GrPl, Il, K1, K3, K4, Mo1, NY, Pa, RAB, S, Tn, Va, W, WV, Kirschner (2002b), Kirschner (2002c). NatureServe G5? (Secure).

Juncus tenuis Willdenow. PATH RUSH, SLENDER RUSH, POVERTY RUSH. **Hab:** Dry or moist soil along roadsides and paths. **Dist:** NL (Labrador) west to AK, south to FL, TX, CA, and n. Mexico; Central and South America; introduced widely around the world. **Phen:** Jun-Sep. **Comm:** *J. tenuis* as it is here treated includes *J. tenuis* var. *williamsii* Fernald, which has a more congested inflorescence with arched to recurved inflorescence branches. **Syn:** = Ar, ETx1, FNA22, Il, K3, K4, Mi, NcTx, NE, NY, Tn, Va, Kirschner (2002b), Kirschner (2002c); < *Juncus tenuis* Willdenow – G, GrPl, GW1, K1, RAB, S, Tx, W, WH3; < *Juncus tenuis* Willdenow var. *tenuis* – C, Meso6, Mo1, Pa, WV; > *Juncus tenuis* Willdenow var. *tenuis* – F; > *Juncus tenuis* var. *williamsii* Fernald – F.

Juncus torreyi Coville. TORREY'S RUSH. **Hab:** Bogs, fens, seeps, other sites with wet soil, especially over limestone. **Dist:** NB west to BC, south to GA, TX, CA, and n. Mexico. **Phen:** Jun-Sep. **Syn:** = Ar, C, ETx1, F, FNA22, G, GrPl, GW1, Il, K1, K3, K4, Mi, Mo1, NcTx, NE, NY, Pa, S, Tn, Tx, Va, W, WV, Kirschner (2002b), Kirschner (2002c). NatureServe G5 (Secure).

Juncus trigonocarpus Steudel. REDPOD RUSH. **Hab:** Seepage slopes, bogs, along stream margins, ditches in acid, sandy landscapes. **Dist:** Coastal Plain, NC to FL Panhandle, west to e. TX. **Phen:** Jul-Oct. **ID Notes:** Young *J. trigonocarpus* and *J. canadensis* are often confused; once mature, however, the two can usually be separated by capsule color alone. Although *J. canadensis* capsules redden, they never approach the dark reddish-purple tone of *J. trigonocarpus*. Seed and capsule size are also distinct for the two taxa. **Syn:** = ETx1, FNA22, GW1, K1, K3, K4, RAB, S, Tx, WH3, Kirschner (2002b). NatureServe G4G5 (Apparently Secure).

Juncus validus Coville. VIGOROUS RUSH, ROUND-HEADED RUSH, STOUT RUSH. **Hab:** Stream and pond margins, roadside ditches, wet, open, often disturbed ground. **Dist:** NC to n. FL, west to TX, OK and MO; apparently non-native east of the Mississippi River (Knapp et al. 2011; Knapp 2014). **Phen:** Jul-Sep. **Tax:** *J. fasciatus* (M.C. Johnston) W. Knapp, endemic to TX, is better accorded species status (Knapp 2014). **Syn:** = GrPl, K4, Tn, Knapp (2014); = *Juncus validus* var. *validus* – Ar, ETx1, FNA22, K1, K3, NcTx, Tx, Va, Bridges & Orzell (2008), Kirschner (2002b); < *Juncus validus* Coville – C, F, G, GW1, Il, Mo1, RAB, S, W, WH3. NatureServe G3G5 (Apparently Secure).

97. JUNCACEAE

*Luzula* A.P. de Candolle 1805 (WOOD-RUSH)

A genus of about 75-115 species, cosmopolitan. References: Balslev in Kubitzki (1998b); Ebinger (1962); Kirschner et al (2002a); Swab (2000) in FNA22 (2000); Závěská Drábková & Vlček (2010).

- 1 Flowers borne singly (rarely paired) at the tips of elongated inflorescence branches; [subgenus *Pterodes*]. *Luzula acuminata* var. *caroliniae*
- 1 Flowers borne in dense glomerate clusters (glomerules) of 3 or more sessile or subsessile flowers; [subgenus *Luzula*, section *Luzula*].
- 4 Inflorescence branches divergent, at least some widely spreading (though less so before anthesis); glomerules capitate to broadly ovoid, not cylindric; leaves with a minute point at tip. *Luzula echinata*
- 4 Inflorescence branches erect, none widely spreading; glomerules often cylindric (less commonly merely capitate); leaves with a blunt tip in the form of an obvious callous.
- 5 Seeds 0.9-1.3 mm long; caruncles (seed appendages) 0.5-0.7 mm long; plants producing several basal bulblets (white swollen leaf bases); capsules equal to or longer than the tepals *Luzula bulbosa*
- 5 Seeds 1.1-1.7 mm long; caruncles (seed appendages) 0.2-0.5 mm long; plants not producing basal bulblets; capsules shorter than the tepals *Luzula multiflora* var. *multiflora*

Luzula acuminata Rafinesque var. *caroliniae* (S. Watson) Fernald. CAROLINA WOOD-RUSH. **Hab:** Moist forests. **Dist:** MA, NY, PA, and se. OH south to n. FL and AR. **Phen:** Apr-Aug. **Tax:** Perhaps better treated at species rank. **Syn:** = Ar, C, F, FNA22, G, GW1, K1, K3, NE, RAB, Tn, Ebinger (1962); = *Juncoides caroliniae* (S. Watson) Kuntze - S; = *Luzula acuminata* ssp. *caroliniae* (S. Watson) Z. Kaplan - K4, Kirschner et al (2002a); = *Luzula caroliniae* S. Watson; < *Luzula acuminata* - Pa, Va, W, WH3, WV. **NatureServe** G5T4T5 (Apparently Secure).

Luzula bulbosa (Wood) Smyth & Smyth. BULBOUS WOOD-RUSH. **Hab:** Dry forests and fields. **Dist:** MA, PA, IN, and NE south to GA, LA, and c. TX. **Phen:** Mar-Aug. **Syn:** = Ar, C, ETx1, F, FNA22, GrPl, GW1, Il, K1, K3, K4, NcTx, NE, NY, Pa, RAB, Tn, Tx, Va, WV, Kirschner et al (2002a); = *Juncoides bulbosum* - S; = *Luzula campestris* (Linnaeus) A.P. de Candolle var. *bulbosa* Wood - G, Mo1; < *Luzula multiflora* - W.

Luzula echinata (Small) F.J. Hermann. SPREADING WOOD-RUSH. **Hab:** Mesic to dry forests. **Dist:** Se. MA, se. NY, PA, WV, and IA south to n. FL, GA, AL, MS, and e. TX. **Phen:** Mar-Aug. **Syn:** = Ar, C, ETx1, FNA22, GrPl, GW1, Il, K1, K3, K4, NE, NY, Pa, RAB, Tn, Va, WH3, WV, Kirschner et al (2002a); = *Juncoides echinatum* Small - S; = *Luzula campestris* (Linnaeus) A.P. de Candolle var. *echinata* (Small) Fernald & Wiegand - G, Mo1; > *Luzula echinata* var. *echinata* - F; > *Luzula echinata* var. *mesochorea* F.J. Hermann - F, NcTx, Tx; < *Luzula multiflora* - W.

Luzula multiflora (Ehrhart) Lejeune var. *multiflora*. **Hab:** Forests. **Dist:** Circumboreal, in North America from NL (Newfoundland), ON, SK, and BC, south to NC, GA, AL, MS, MO, MT, and OR; Eurasia; Costa Rica. **Phen:** Mar-Aug. **Syn:** = F, Va, WV; = *Luzula campestris* (Linnaeus) A.P. de Candolle var. *multiflora* (Ehrhart) Čelakovský - G, Mesof, Mo1; = *Luzula multiflora* ssp. *multiflora* - FNA22, K3, K4, NE, NY, Kirschner et al (2002a); = *Luzula multiflora* ssp. *multiflora* var. *multiflora* - K1; < *Luzula multiflora* - C, GrPl, Il, Mi, Pa, RAB, Tn, W.

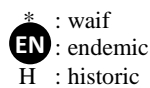

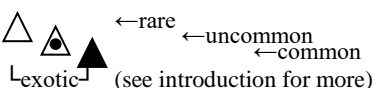

98. CYPERACEAE A.L. de Jussieu 1789 (SEDGE FAMILY) [in POALES]

A family of about 100 genera and 5000 species, mostly herbs, cosmopolitan. References: Ball, Reznicek, & Murray (2002) in FNA23 (2002b); Goetghebeur in Kubitzki (1998b); Muasya et al (2009); Tucker (1987).

- 1 Achene enclosed in a perigynium (a sac-like structure); [subfamily *Caricoideae*, tribe *Cariceae*]. *Carex*
- 1 Achene not enclosed in a perigynium.
- 2 Scales obviously and strongly distichously imbricate; spikelets either aggregated into spikes or heads (*Cyperus*, *Dulichium*, *Schoenus*), or solitary (*Abildgaardia*); [subfamily *Cyperoideae*].
- 4 Inflorescence axillary; leaves predominantly cauline, conspicuously 3-ranked; perianth bristles subtending the achene 6-9; [tribe *Dulichieae*] *Dulichium*
- 4 Inflorescence terminal, more-or-less scapose (though immediately subtended by leafy bracts); leaves predominantly basal, not 3-ranked; perianth bristles absent (*Cyperus*) or present (*Schoenus*); [tribe *Cypereae*]. *Cyperus*
- 2 Scales spirally imbricate; spikelets not usually aggregated.

Key to Map
Symbology:

N : no X : extirpated
P : planted
? : questionable

- 6 Achene (when ripe) bony and white; style base persistent on the summit of the achene, forming a differently-textured or differently-colored tubercle; spikelets all unisexual, the pistillate spikelets 1-flowered, the staminate spikelets several-flowered; [subfamily *Sclerioideae*, tribe *Sclerieae*] *Scleria*
- 6 Achene mostly brown, black, or tan; style base either persistent as a differentiated tubercle (*Bulbostylis*, *Eleocharis*, *Rhynchospora*) or not (*Cladium*, *Eriophorum*, *Fuirena*, *Isolepis*, *Cyperus*, *Schoenoplectus*, *Scirpus*, *Trichophorum*); spikelets mostly or all bisexual; [subfamily *Cyperoideae*].
- 7 Style base persistent as a differentiated tubercle (this small and inconspicuous in *Bulbostylis* and some spp. of *Rhynchospora*).
- 8 Leaves consisting of bladeless sheaths; spikelet 1 per stem, terminal (very rarely proliferating and with > 1 spikelet); [tribe *Eleocharideae*] *Eleocharis*
- 8 Leaves with well-developed blades; spikelets few to many per stem, usually subtended by foliaceous bracts.
- 9 Perianth bristles absent; spikelets several-many-flowered; leaves capillary; [tribe *Abildgaardieae*] *Bulbostylis*
- 9 Perianth bristles present (rarely absent in species without capillary leaves); spikelets 1-2-flowered (several-many-flowered in some species without capillary leaves); leaves capillary to broad; [tribe *Schoeneae*] *Rhynchospora*
- 7 Style base not persistent as a differentiated tubercle.
- 10 Achene not subtended by a modified perianth of bristles or scales (in addition to the scales of the spikelets).
- 11 Involucral bracts 1-3, the lowest erect, appearing like a continuation of the culm, the inflorescence therefore appearing lateral.
- 12 Achenes 0.5-0.7 mm long, 1.8-3× as long as wide, minutely papillose in longitudinal lines; [tribe *Cypereae*] *Cyperus*
- 12 Achenes 1.2-1.5 mm long, 1-1.4× as long as wide, minutely pitted or transversely rugose.
- 13 Achenes transversely rugose; [tribe *Fuireneae*] *Schoenoplectiella*
- 13 Achenes minutely pitted in longitudinal lines; [tribe *Cypereae*] *Isolepis*
- 11 Involucral bracts 2-several, spreading, the inflorescence therefore appearing terminal.
- 15 Plants diminutive, to 5 dm tall; leaves 3-15 cm long, to 1 mm wide; [tribe *Abildgaardieae*] *Bulbostylis*
- 15 Plants moderate to very robust, 7-30 dm tall; leaves 30-150 cm long, 1.5-15 mm wide.
- 16 Flowers 1-2 per spikelet; [tribe *Schoeneae*] *Cladium*
- 16 Flowers several-many per spikelet.
- 17 Style fimbriate; leaves 0.5-5 mm wide; [tribe *Abildgaardieae*] *Fimbristylis*
- 17 Style smooth; leaves (2-) 5-18 mm wide; [tribe *Scirpeae*] *Scirpus georgianus*
- 10 Achene subtended by a modified perianth of either bristles, 3 stalked paddle-like scales, or 1-2 broad-based scales (in addition to the scales of the spikelets).
- 18 Achene subtended by stalked paddle-like scales or broad-based scales.
- 19 Achene lacking a perianth, but subtended by 1-2 broad-based scales; plants 0.5-3 dm tall; [tribe *Cypereae*] *Cyperus*
- 19 Achene subtended by a perianth of 3 stalked paddle-like scales; plants 2-7 dm tall; [tribe *Fuireneae*] *Fuirena*
- 18 Achene subtended by bristles.
- 22 Main involucre bract 1 (rarely 2), erect, appearing as a continuation of the culm (the inflorescence thus appearing lateral, though in some species the longer inflorescence branches may overtop the bract); [tribe *Fuireneae*]
- 23 Achenes rugulose; plants annual. *Schoenoplectiella*
- 23 Achenes smooth; plants perennial. *Schoenoplectus*
- 22 Main involucre bracts 2-8, spreading and foliaceous (the inflorescence thus appearing terminal).
- 24 Spikelets 10-40 mm long, 6-12 mm in diameter, 3-50 per culm; [tribe *Fuireneae*] *Bolboschoenus*
- 24 Spikelets 2.5-19 mm long, 2-4 mm in diameter, usually > 50 per culm; [tribe *Scirpeae*] *Scirpus*

***Bolboschoenus* Palla 1905 (BULRUSH)**

A genus of about 10-16 species, herbs, cosmopolitan. Muasya et al. (2009) indicate that *Bolboschoenus* is in a clade with *Fimbristylis*, *Abildgaardia*, *Bulbostylis*, *Fuirena*, *Eleocharis*, and other genera not in our flora, and therefore not closely related to (or congeneric with) *Schoenoplectus* or *Scirpus*. References: Goetghebeur in Kubitzki (1998b); Smith (2002a) in FNA23 (2002b); Strong (1994).

Bolboschoenus robustus (Pursh) Soják. SALTmarsh BULRUSH. **Hab:** Brackish marshes; inland in saline glades and marshes. **Dist:** Along the coasts, from NS to s. FL, west to TX, and into tropical America; also in CA.

Phen: Late May-Jun (-Sep); late Jun-Sep. **Syn:** = Ar, ETx1, FNA23, NE, NY, Va; = *Schoenoplectus robustus* (Pursh) M.T. Strong – K1, K3, K4, Strong (1994); = *Scirpus maritimus* Linnaeus var. *macrostachyus* Michaux – Tx; = *Scirpus robustus* Pursh – Bah, C, F, GW1, RAB, S, W, WH3; = *Scirpus robustus* var. *robustus* – G. [NatureServe G5](#) (Secure).

***Bulbostylis* Kunth 1837 (HAIRSEdge)**

A genus of about 100 species, herbs, of tropical and warm temperate areas, concentrated especially in tropical Africa and tropical South America. References: Goetghebeur in Kubitzki (1998b); Kral (1971); Kral (2002c) in FNA23 (2002b).

- 1 Spikelets sessile, the inflorescence therefore a capitate cluster (sometimes a few spikelets pedicellate, but the pedicels not generally longer than the spikelets, the inflorescence still appearing glomerate). *Bulbostylis barbata*
- 1 Spikelets mostly on slender pedicels, the inflorescence therefore open and umbel-like.
- 4 Achenes finely transversely rugose or rugulose, tan or brown (when ripe); spikelet scales 1.5-2.5 mm long, with truncate to apiculate apices. *Bulbostylis capillaris* ssp. *capillaris*
- 4 Achenes very finely papillose and waxy, gray or dark greenish-brown (when ripe); spikelet scales 0.7-1.8 mm long, with obtuse to rounded apices.
- 6 Annual, to 1-2 (-3) dm tall; inflorescence a simple (rarely compound) umbel of few (3-9) lance-ovoid spikelets; longest involucre bract seldom exceeding the inflorescence; leaf margins usually hispidulous. *Bulbostylis ciliatifolia*

- 6 Perennial, to 1.5-4 dm tall; inflorescence a compound (rarely simple) umbel of many (8-30) oblong or lance-linear spikelets; longest involucre bract commonly exceeding the inflorescence; leaf margins usually distinctly tuberculate-scabrid..... *Bulbostylis coarctata*

* *Bulbostylis barbata* (Rottbøll) C.B. Clarke. OLD WORLD HAIRSEDEGE. **Hab:** Sandy fields, other disturbed areas. **Dist:** Native of the Old World tropics. **Phen:** Jul-Oct. **Syn:** = ETx1, FNA23, GW1, K1, K3, K4, RAB, W, WH3, Kral (1971); = *Stenophyllus barbatus* (Rottbøll) Britton – S; > *Stenophyllus floridanus* Britton. NatureServe GNR (Not Yet Ranked).

Bulbostylis capillaris (Linnaeus) Kunth ex C.B. Clarke ssp. *capillaris*. COMMON HAIRSEDEGE. **Hab:** Thin soils on rock outcrops, especially granite domes and granite flatrocks (but also on mafic rocks, such as diabase), sandy soils, fields, bogs (in FL). **Dist:** ME to MN, south to Panhandle FL and TX, and west to AZ and CA, also in Mexico, Central America, the West Indies, and s. Asia. **Phen:** Jul-Oct. **Tax:** Ssp. *insulana* M.T. Strong is endemic to the Greater Antilles. **Comm:** This species frequently has a mixture of long and very short culms, the short culms only a few cm long and thus nearly hidden amongst the leaves. **Syn:** = K1, K3, K4; < *Bulbostylis capillaris* – Ar, C, ETx1, FNA23, G, GrPl, GW1, Il, Mi, Mo1, NcTx, NE, NY, Pa, RAB, Tn, Tx, Va, W, WH3, Kral (1971); > *Bulbostylis capillaris* var. *capillaris* – F; > *Bulbostylis capillaris* var. *crebra* Fernald – F; > *Bulbostylis capillaris* var. *isopoda* Fernald – F; > *Stenophyllus capillaris* (Linnaeus) Britton – S. NatureServe G5T5 (Secure).

Bulbostylis ciliatifolia (Elliott) Fernald. SAVANNA HAIRSEDEGE. **Hab:** Moist to wet sands of savannas, roadsides, disturbed areas. **Dist:** Se. VA south to s. FL and west to s. AL. **Phen:** Jul-Oct. **Tax:** Kral (1971) describes this plant as occurring in generally wetter habitats and being much weedier than *B. coarctata*. The sympatry of this taxon and *B. coarctata* suggests that they are best recognized as species. **Syn:** = F, G, Tx, Va; = *Bulbostylis ciliatifolia* (Elliott) Fernald var. *ciliatifolia* – C, ETx1, FNA23, GW1, K1, K3, K4, NcTx, Kral (1971); = *Stenophyllus ciliatifolius* (Elliott) C. Mohr – S; < *Bulbostylis ciliatifolia* (Elliott) Fernald – RAB, WH3. NatureServe G5T3T5 (Apparently Secure).

Bulbostylis coarctata (Elliott) Fernald. ELLIOTT'S HAIRSEDEGE. **Hab:** Sandhills, usually associated with longleaf pine and wiregrass. **Dist:** Se. VA south to s. FL and west to e. TX, north in the interior to sw. TN; Cuba. **Phen:** Jul-Oct. **Tax:** The broad sympatry of this taxon and *B. ciliatifolia* suggests that they are best recognized as species. **Syn:** = F, G, Va; = *Bulbostylis ciliatifolia* (Elliott) Fernald var. *coarctata* (Elliott) Kral – Ar, C, ETx1, FNA23, GW1, K1, K3, NcTx, Tn, W, Kral (1971); = *Stenophyllus coarctatus* (Elliott) Britton – S; < *Bulbostylis ciliatifolia* (Elliott) Fernald – RAB, WH3. NatureServe G5T3T5 (Apparently Secure).

Carex Linnaeus 1753 (SEDEGE)

Contributed by Derick B. Poindexter, Alan S. Weakley, and Bruce A. Sorrie

A genus of about 2000 (or more) species, herbs, cosmopolitan, especially temperate and boreal. References: Ball & Reznicek (2002) in FNA23 (2002b); Bryson, Kral, & Manhart (1987); Derieg et al (2013); Dorey (2019); Dragon & Barrington (2009); Fernald (1942b); Frye & Lea (2002); Goetghebeur in Kubitzki (1998b); Kirschbaum (2007); Kral, Manhart, & Bryson (1987); LeBlond et al (1994); Mackenzie (1931-1935); Maguilla et al (2015); Maguilla et al (2015); Medford, Poindexter, & Weakley (2021) in Weakley et al (2021); Naczi (1993); Naczi, Bryson, & Cochrane (2002); Poindexter & Naczi (2014); Poindexter & Weakley (2018b) in Weakley et al (2018a); Rettig (1989a); Sorrie et al (2011); Uttal (1971); Ward (2012a); Ward (2021).

- 1 Spike 1 per culm, all flowers attached to the main stem in a terminal spike **Key A**
- 1 Spikes 2 or more per culm (some flowers in lateral spikes) **Key C**
- 3 Stigmas 2; achenes flat or biconvex in cross-section (lenticular)..... **Key C**
- 3 Stigmas (2-) 3 (-4); achenes trigonous or terete in cross-section. **Key D**
- 4 Body of perigynium pubescent, scabrous, hispid, or papillose (if papillose, the papillae longer than wide) **Key D**
- 4 Body of perigynium glabrous or papillose (if papillose, the papillae shorter than wide). **Key E**
- 5 Bracts sheathless or with sheath < 4 mm long (rarely longer, and then the sheath shorter than the diameter of the stem) **Key E**
- 5 Bracts (at least the lower) with sheath > 4 mm long (and longer than the diameter of the stem) **Key F**

Key A

- 2 Spike entirely staminate. [26ddd] Section 41 Pictae
- 3 Culms distinctly red or purple at the base..... [26ddd] Section 41 Pictae
- 3 Culms yellow to brown or black, without red or purple coloration. [26kkk] Section 44 Phyllostachyae
- 4 Culms shorter than the leaves; widest leaf blades > 2 mm wide..... [26o] Section 11 Stellulatae
- 4 Culms longer than the leaves; widest leaf blades < 2 mm wide..... [26o] Section 11 Stellulatae
- 2 Spike pistillate or with both pistillate and staminate flowers. [26o] Section 11 Stellulatae
- 5 Stigmas 2; achenes lenticular. [26o] Section 11 Stellulatae
- 5 Stigmas 3; achenes trigonous. [26ddd] Section 41 Pictae
- 7 Perigynia pubescent near the tip..... [26ddd] Section 41 Pictae
- 7 Perigynia glabrous. [26uu] Section 34 Squarrosae
- 8 Spikes gynecandrous; beak of perigynium with apical teeth > 0.3 mm long..... [26uu] Section 34 Squarrosae
- 8 Spikes androgynous or entirely pistillate; beak of perigynium with apex entire, emarginate, or with teeth < 0.2 mm long.

- 9 Lower pistillate scales > 10 mm long [26kkk] Section 44 *Phyllostachyae*
 9 Lower pistillate scales < 10 mm long.
 10 Perigynium beak > 2 mm long, as long as or longer than the perigynium body [26kkk] Section 44 *Phyllostachyae*
 10 Perigynium beak < 2 mm long, or if more, then tapering to the perigynium body and shorter than the body.
 *Carex leptalea* var. *harperi*

Key C

- 1 Perigynia surfaces and beak often pubescent, finely papillate [26bbb] Section 39 *Acrocystis*
 1 Perigynia glabrous, papillate or not.
 2 Lateral spikes usually pedunculate; lowermost inflorescence bracts sometimes with sheath; peduncles with prophyll at base.
 4 Pistillate scales (at least the lower) long-awned [26r] Section 13 *Phacocystis*
 4 Pistillate scales obtuse to acuminate or cuspidate.
 5 Perigynia smooth; style persistent on the achene [26qq] Section 30 *Vesicariae*
 5 Perigynia often papillose over most of the surface; style deciduous [26r] Section 13 *Phacocystis*
 2 Lateral spikes sessile; bracts sheathless; peduncles without (or rarely with) a prophyll
 6 Perigynia papillose (visible at 20× magnification).
 [26r] Section 13 *Phacocystis*
 6 Perigynia smooth.
 8 Terminal spike gynecandrous; lateral spikes gynecandrous or pistillate.
 12 Margins of perigynia flat, at least in the upper ½, flat portion (measured at the tip of the achene and base of beak) > (0.1-) 0.2 mm wider
 13 Achenes rounded at apex (style dehiscing at the surface of the achene); style conspicuously enlarged at the base
 *Carex bromoides* ssp. *bromoides*
 13 Achenes with short apiculus formed by the persistent base of the style; style not conspicuously enlarged at base [26q] Section 12 *Ovales*
 12 Margins of perigynia rounded, or with flat portion < 0.1 mm wide.
 15 Inflorescences in fruit 1-1.5× as long as wide [26q] Section 12 *Ovales*
 15 Inflorescences in fruit 1.5-2 (or more)× as long as wide.
 16 Lowermost perigynia in each spike spreading [26o] Section 11 *Stellulatae*
 16 Lowermost perigynia in each spike ascending or erect.
 17 Perigynium serrulate on the margins of the upper body and lower beak *Carex bromoides* ssp. *bromoides*
 17 Perigynium entire on the margins of the upper body and the lower beak [26q] Section 12 *Ovales*
 8 Terminal spike androgynous (rarely entirely staminate or entirely pistillate); lateral spikes androgynous, staminate, or pistillate.
 9 Sheath fronts of lower cauline leaves transversely rugose.
 10 Perigynia mostly > 2× as long as wide, widest near the base [26a] Section 1a *Vulpinae*
 10 Perigynia mostly < 2× as long as wide, widest near middle.
 11 Inflorescence usually branched, at least at the base, usually with > 15 spikes; pistillate scales usually yellow or brown, sometimes with hyaline margins, 3-veined [26c] Section 3 *Multiflorae*
 11 Inflorescence unbranched or with 1 or 2 short branches at the base, with < 15 spikes; pistillate scales greenish hyaline, 1-veined [26d] Section 4.0 *Phaetoglochin*
 9 Sheath fronts of lower cauline leaves smooth (or very weakly and indistinctly transversely rugose).
 18 Fronts of leaf sheaths dotted red, brown, or yellow.
 19 Perigynia widest near the base; culms usually > 1 mm wide [26a] Section 1a *Vulpinae*
 19 Perigynia widest near the middle; culms usually < 1 mm wide.
 20 Plants densely caespitose, with short rhizomes; pistillate scales acute to acuminate *Carex decomposita*
 20 Plants loosely caespitose, sometimes with long rhizomes; pistillate scales (at least the upper) obtuse [26c] Section 3 *Multiflorae*
 18 Fronts of leaf sheaths not dotted red, brown, or yellow.
 26 Spikes not consistently androgynous, the terminal either entirely staminate or pistillate, the lateral spikes irregularly pistillate, or staminate, or mixed [26o] Section 11 *Stellulatae*
 26 Spikes consistently androgynous, occasionally some of the lateral spikes entirely pistillate.
 27 Perigynium widest near the base, tapering from base to beak [26a] Section 1a *Vulpinae*
 27 Perigynium widest above the base, often abruptly beaked [26d] Section 4.0 *Phaetoglochin*

Key D

- 1 Pistillate spikes all from the base of the plant [26bbb] Section 39 *Acrocystis*
 1 Pistillate spikes all or in part borne on the elongate, aboveground stem.
 2 Bracts of the lowermost non-basal spike with well-developed sheath > 4 mm long.
 4 Bracts of the lowermost non-basal spike bladeless, or with a blade < 2 mm long.
 [26ddd] Section 41 *Pictae*
 4 Bracts of the lowermost non-basal spike with blade > 3 mm long (and often much longer).
 6 Achene tip with persistent, enlarged, circular style base *Carex breviculmis*
 6 Achene tip with at most a short apiculus.
 7 Leaves pubescent or pilose [26ff] Section 23 *Hymenochlaenae*
 7 Leaves usually glabrous, to scabrous on the veins.
 8 Bases of plants brown [26ll] Section 26 *Hallerianae*
 8 Bases of plants distinctly red or purple.
 9 Lowermost pistillate scales awned; leaves somewhat septate-nodulose; plants usually long-rhizomatous and forming large clonal colonies
 [26oo] Section 28 *Paludosae*
 9 Lowermost pistillate scales obtuse to acuminate; leaves not septate-nodulose; plants caespitose, short-rhizomatous
 [26ff] Section 23 *Hymenochlaenae*
 2 Bracts of the lowermost non-basal spike sheathless or with sheath < 4 mm long.

- 10 Perigynia > 10 mm long.[26rr] Section 31 Lupulinae
- 10 Perigynia < 10 mm long.
- 13 Terminal spike gynecandrous or pistillate[26ii] Section 24 Porocystis
- 13 Terminal spike staminate (or rarely androgynous).
- 16 Leaf sheaths (and usually the blades as well) pubescent.
- 17 Pistillate scales sometimes pubescent; pistillate spikes with 40-200 perigynia[26oo] Section 28 Paludosae
- 17 Pistillate scales glabrous; pistillate spikes with < 40 (-50) perigynia.
- 18 Perigynia usually < 3.2 mm long, the apex rounded and beakless, or abruptly beaked[26ii] Section 24 Porocystis
- 18 Perigynia > 3.5 mm long, the tip tapering or abruptly beaked.
- 19 Longer peduncles of pistillate spikes > 1 cm long; perigynia > 3× as long as wide, tapering gradually to the base[26ff] Section 23 Hymenochlaenae
- 19 Longer peduncles of pistillate spikes 0-1 cm long; perigynia < 3× as long as wide, abruptly contracted to a short stipe at the base.[26ll] Section 26 Hallerianae
- 16 Leaf sheaths and blades glabrous to scabrous.
- 21 Achene tip with persistent, enlarged, circular style base *Carex breviculmis*
- 21 Achene tip with at most a short apiculus.
- 23 Fronts of sheaths of lower leaves ladder-fibrillose; leaves and sheaths septate-nodulose (sometimes obscurely so)[26oo] Section 28 Paludosae
- 23 Fronts of leaf sheaths not ladder-fibrillose, sometimes breaking into longitudinal fibers; leaves and sheaths not septate-nodulose.
- 24 Perigynia strongly 12-30-veined.
- 25 Pistillate scales with 3-7 (-10) veins[26ii] Section 24 Porocystis
- 25 Pistillate scales with 1-3 veins.
- 26 Leaf blades, at least toward the tip, M-shaped in cross-section when young, the upper surface usually with 2 marginal veins more prominent than the midvein; staminate spikes 1-4[26oo] Section 28 Paludosae
- 26 Leaf blades V-shaped in cross-section when young, the upper surface lacking 2 marginal veins more prominent than the midrib; staminate spike 1[26bbb] Section 39 Acrocystis
- 24 Perigynia 0-12-veined.
- 28 Plants with at least some pistillate spikes basal; culms much shorter than the leaves[26bbb] Section 39 Acrocystis
- 28 Plants with most pistillate spikes on obvious elongated stems; culms shorter than or longer than the leaves.[26bbb] Section 39 Acrocystis

Key E

- 1 Apex of perigynium beak with 2 teeth at least (0.4-) 0.5 mm long.
- 2 Perigynia with 2 distinct marginal veins, otherwise veinless or only very faintly veined; leaves not septate-nodulose *Carex cherokeensis*
- 2 Perigynia with 5+ distinct veins; at least proximal leaves septate-nodulose, rarely not.
- 4 Pistillate scales obtuse to acuminate, awnless or at most with a rough apiculus.
- 5 Staminate spike usually 1; perigynia 15-20-veined, each 10-20 mm long[26rr] Section 31 Lupulinae
- 5 Staminate spikes usually 1-3+; perigynia 6-15 (-22)-veined, each 4-10 (-12.5) mm.[26qq] Section 30 Vesicariae
- 6 Perigynia 6-14 (-15)-veined[26qq] Section 30 Vesicariae
- 6 Perigynia 14-25-veined
- 7 Perigynia narrowly ovate to subglobose, 2-2.5× as long as wide[26oo] Section 28 Paludosae
- 7 Perigynia elliptic to ovate, 3-4.5× as long as wide[26qq] Section 30 Vesicariae
- 4 Pistillate scales, at least some, with a scabrous awn.
- 8 Perigynia (9-) 10+ mm long.[26rr] Section 31 Lupulinae
- 8 Perigynia < 9 mm long.
- 10 Upper pistillate scales with awn > ½ as long as the body[26qq] Section 30 Vesicariae
- 10 Upper pistillate scales acute to short-awned, awn < ½ as long as the body.
- 12 Staminate spikes 1 (-4); perigynium beak > 1.7 mm long[26oo] Section 28 Paludosae
- 12 Staminate spikes 1-6; perigynium beak often < 1.7 mm long.
- 13 Perigynia veined only at base; widest leaves < 4 mm wide[26oo] Section 28 Paludosae
- 13 Perigynium veined to tip of body and often into beak; widest leaves mostly > 4 mm wide.
- 14 Pistillate scales with margins serrulate distally; awn, when present, rough.
- 15 Perigynia 3.1-4.8 × 0.9-1.5 (-1.8) mm; staminate spikes 1-2[26qq] Section 30 Vesicariae
- 15 Perigynia 2.5-8 × 1.2-3.5 mm; staminate spikes usually 3-7[26oo] Section 28 Paludosae
- 14 Pistillate scales with margins entire; awn, when present, usually smooth.
- 16 Perigynia 9-15-veined[26qq] Section 30 Vesicariae
- 16 Perigynia 14-25-veined.
- 17 Perigynia narrowly ovate to subglobose, 2-2.5× as long as wide[26oo] Section 28 Paludosae
- 17 Perigynia elliptic to ovate, 3-4.5× as long as wide[26qq] Section 30 Vesicariae
- 1 Apex of perigynium beak entire, emarginate, or with 2 teeth < 0.5 mm long.
- 18 Perigynia minutely papillose, at least distally (at 20× magnification).
- 20 Leaf blades and/or sheaths pubescent, at least at junction of blade and sheath[26ii] Section 24 Porocystis
- 20 Leaf blades and sheaths glabrous.[26x] Section 17a Glaucescetes
- 18 Perigynia not papillose, essentially smooth.
- 23 Terminal spike gynecandrous.
- 24 Perigynia with distinct beak 0.5-4 mm long.[26uu] Section 34 Squarrosae

- 24 Perigynia beakless or with beak < 0.5 mm long.
 26 Adaxial side of leaves with 2 marginal veins more prominent than midvein; young leaves M-shaped in cross section.[26ff] Section 23 *Hymenochlaenae*
 26 Adaxial side of leaves without 2 marginal veins more prominent than midvein; young leaves V-shaped or rounded in cross section.[26ii] Section 24 *Porocystis*
- 23 Terminal spike staminate or androgynous.
 30 Leaves and/or sheaths pubescent, at least at junction of blade and sheath.
 32 Perigynium beak 0.5-3 mm long, often > 1 mm long, about 1/2 the length of the body; proximal pistillate scales awned[26ff] Section 23 *Hymenochlaenae*
 32 Perigynium beak absent or not more than 0.5 (-0.7) mm long, not > 1/4 the length of the body; proximal pistillate scales acute, acuminate or cuspidate.[26ii] Section 24 *Porocystis*
- 30 Leaves and sheaths usually glabrous, rarely papillose.
 33 Style persistent on achene in fruit; larger leaves and sheaths usually at least sparsely septate-nodulose, rarely not.
 34 Perigynia (9-) 10+ mm long; staminate spike usually 1[26rr] Section 31 *Lupulinae*
 34 Perigynia < 10 mm long; staminate spikes 1-5 (-7).
 35 Pistillate scales with margins serrulate distally, apex usually rough-awned.
 36 Distal pistillate scales with apex acute to short-awned, awn < 1/2 as long as the body.....[26oo] Section 28 *Paludosae*
 36 Distal pistillate scales with apex long-awned, awn > 1/2 as long as the body.....[26qq] Section 30 *Vesicariae*
 35 Pistillate scales with margins entire, apex awnless or with short, smooth awn.
 37 Perigynia not inflated, thick walled, brownish, dull.....[26oo] Section 28 *Paludosae*
 37 Perigynia slightly to strongly inflated, thin walled, yellowish to purplish, shiny.....[26qq] Section 30 *Vesicariae*
- 33 Style deciduous; larger leaves and sheaths sometimes septate-nodulose, more often not.
 38 Leaf blades, at least widest, M-shaped in cross section when young, adaxial surface with 2 marginal veins more prominent than midvein.
 40 Pistillate scales awned, longest awn > 0.5 mm long.....[26ee] Section 22 *Griseae*
 40 Pistillate scales obtuse to acuminate or short-awned, awn < 0.2 mm long[26ff] Section 23 *Hymenochlaenae*
 38 Leaf blades V-shaped in cross section when young, adaxial surface without 2 marginal veins more prominent than midvein.
 42 Plant base brown or blackish, without trace of red or purple..... [26kkk] Section 44 *Phyllostachyae*
 42 Plant base red or purple tinged, sometimes only sparsely so.[26bbb] Section 39 *Acrocystis*

Key F

- 1 Apex of perigynium beak terminated by 2 teeth, mostly > 0.5 mm long.
 2 Perigynia > 4× as long as wide (8-15 × 1-3 mm).[26ss] Section 32 *Rostrales*
- 2 Perigynia < 4× as long as wide.
 4 Perigynia > (9-) 10 mm long.
 6 Perigynia 7-11-, 5-12-, or 12-25-veined.....[26qq] Section 30 *Vesicariae*
 6 Perigynia 12-34-veined.
 7 Basal and proximal leaf sheaths reddish or purplish.....[26rr] Section 31 *Lupulinae*
 7 Basal and proximal leaf sheaths yellowish to brown, without trace of red or purple [26ss] Section 32 *Rostrales*
- 4 Perigynia < 10 mm long.
 8 At least proximal pistillate scales with long, rough awn.
 9 Perigynia with 2 strong marginal veins, otherwise veinless or veined only proximally; leaves not septate-nodulose.....[26ff] Section 23 *Hymenochlaenae*
 9 Perigynia with 5+ strong veins extending length of bodies; leaves septate-nodulose.
 11 Perigynium body obovoid, widest distally; proximal bract > 3× as long as the inflorescence.....[26uu] Section 34 *Squarrosae*
 11 Perigynium body ovoid or lanceoloid or ellipsoid, widest at middle or proximally; proximal bract usually < 2× as long as the inflorescence.
 12 Perigynium beak 0.9-1.7 mm long; mature perigynia dull[26oo] Section 28 *Paludosae*
 12 Perigynium beak 0.2-6 mm long; mature perigynia somewhat glossy[26qq] Section 30 *Vesicariae*
- 8 All pistillate scales obtuse to acuminate or cuspidate.
 13 Culms with some red or purple at base.
 14 All perigynia erect or ascending; leaves not septate-nodulose.....[26ff] Section 23 *Hymenochlaenae*
 14 At least proximal perigynia in each spike spreading or reflexed; leaves sparsely septate-nodulose[26qq] Section 30 *Vesicariae*
 13 Culms brown or black at base, without trace of red or purple.
 15 Pistillate scales with 5-7-veined center..... [26ss] Section 32 *Rostrales*
 15 Pistillate scales with 1-3-veined center.[26ff] Section 23 *Hymenochlaenae*
- 1 Apex of perigynium beak entire, emarginate, or with teeth mostly < 0.5 mm long.
 17 Leaf blades variously hairy.
 18 Plant brown or black at base[26ee] Section 22 *Griseae*
 18 Plant with at least some red or purple at base.....[26ff] Section 23 *Hymenochlaenae*
- 17 Leaf blades glabrous.
 19 Bracts without blades.[26dd] Section 21 *Careyanae*
- 19 Bracts, at least the proximal, with distinct blade.
 21 Young leaves V-shaped or rounded in cross section, adaxial surface without 2 marginal veins more prominent than midvein or other veins.
 22 Perigynium beak with 2 distinct terminal teeth, usually > 0.2 mm long.
 23 At least proximal pistillate scales awned, awn at least 1/2 as long as body; leaves conspicuously septate-nodulose.
 24 Base of culm strongly red or purple; leaves 2-4 mm wide[26qq] Section 30 *Vesicariae*
 24 Base of culm brown, without or with only trace of red or purple; leaves 4-15 mm wide.
 25 Distal pistillate scales acute, acuminate, or short-awned, awn less than 1/2 length of body.....[26oo] Section 28 *Paludosae*

 ? : questionable

- 25 Distal pistillate scales with awn at least about as long as body.....[26qq] Section 30 Vesicariae
- 23 Pistillate scales obtuse to acuminate, sometimes very shortly awned; leaves not or only weakly septate-nodulose.
..... *Carex meadii*
- 22 Perigynium beak entire, emarginate, or with 2 apical teeth < 0.2 mm long.
- 28 Perigynia rounded at base, sides proximally distinctly convex.
- 29 Perigynia with veins slightly prominent.....[26cc] Section 20 Granulares
- 29 Perigynia with veins slightly impressed.....[26ee] Section 22 Griseae
- 28 Perigynia tapering at base, sides straight or only slightly convex proximally.
- 30 Perigynia rounded at apex, beakless or with beak < 0.3 mm long.
- 31 Widest leaf blades < 5 mm wide; plants usually not caespitose..... *Carex meadii*
- 31 Widest leaf blades usually > 5 mm wide; plants usually caespitose[26bb] Section 19 Laxiflorae
- 30 Perigynia tapering to beak at least > (0.3-) 0.5 mm long.
..... *Carex meadii*
- 21 Leaf blades M-shaped in cross section when young, adaxial surface with 2 marginal veins more prominent than midvein and other marginal veins, sometimes apparent only on proximal leaves and on proximal part of blade.
- 34 Perigynium beakless or with beak < 0.5 mm long, entire or with 2 apical teeth < 0.1 mm long.
- 35 Widest leaf blades (usually basal) > 10 mm wide.
- 37 Perigynia trigonous with rounded angles in cross section.....[26bb] Section 19 Laxiflorae
- 37 Perigynia sharply trigonous in cross section[26dd] Section 21 Careyanae
- 35 Widest leaf blades < 10 mm wide, not more than 10 mm wide.
- 38 Perigynia not prominently veined, veins somewhat impressed.....[26ee] Section 22 Griseae
- 38 Perigynia at least slightly prominently veined or veinless except for 2 marginal veins.
- 39 Perigynia rounded at base, sides proximally convex.....[26cc] Section 20 Granulares
- 39 Perigynia tapering at base, sides proximally straight, concave or slightly convex.
- 41 Perigynia sharply trigonous in cross section.....[26dd] Section 21 Careyanae
- 41 Perigynia terete or with rounded angles in cross section.
- 42 Perigynia with 2 marginal veins and not more than 10 veins on faces[26ff] Section 23 Hymenochlaenae
- 42 Perigynia with more than 12 veins.
..... *Carex meadii*
- 34 Perigynium with distinct beak > 0.5 mm, usually with apical teeth > 0.1 mm long.
- 44 Perigynia with 2 distinct marginal veins, otherwise veinless or with very weak veins proximally.
- 45 Perigynium beak entire, emarginate, or with apical teeth < 0.1 mm long.....[26bb] Section 19 Laxiflorae
- 45 Perigynium beak with apical teeth 0.2-1 mm.
- 46 Perigynium beak usually < 1 mm long. *Carex meadii*
- 46 Perigynium beak sometimes > 2 mm long.....[26ff] Section 23 Hymenochlaenae
- 44 Perigynia with more than 2 veins extending most of length of bodies.
- 47 Pistillate scales with narrow, indistinct bodies, scarcely enlarged at bases[26uu] Section 34 Squarrosae
- 47 Pistillate scales with wide, flat bodies, sometimes terminating in awns.
- 48 Perigynium beak entire or emarginate.
- 49 Perigynium with not more than 5 veins extending length of body on abaxial face, veinless or weakly veined on adaxial face.....[26ff] Section 23 Hymenochlaenae
- 49 Perigynium with > 8 equally prominent veins on both faces.
- 50 Perigynia bluntly angled in cross section.....[26bb] Section 19 Laxiflorae
- 50 Perigynia sharply angled in cross section.....[26dd] Section 21 Careyanae
- 48 Perigynium beak with 2 distinct teeth at apex, usually > 0.2 mm long.
- 51 Pistillate spikes, at least the proximal, lax, proximal and middle perigynia separated by internodes at least 1/4 their length; leaves and sheaths not septate-nodulose[26ff] Section 23 Hymenochlaenae
- 51 Pistillate spikes dense, proximal and middle perigynia separated by internodes less than 1/10 their length; proximal leaves and sheaths sparingly septate-nodulose.
- 52 Pistillate scales, at least proximal, awned, awn at least 1/4 of scale body length.
- 53 Distal pistillate scales acuminate or with awn less than 1/2 body length; staminate spikes usually 2+[26oo] Section 28 Paludosae
- 53 Distal pistillate scales awned, awn usually more than 1/2 body length; staminate spikes 1, sometimes with 1 much smaller spike laterally.....[26qq] Section 30 Vesicariae
- 52 Pistillate scales obtuse to acute or apiculate, apiculus not more than 1/10 of body length.
.....[26qq] Section 30 Vesicariae

[26a] Section 1a Vulpinae - section Vulpinae

- 1 Leaf sheath fronts yellow, thickened, and not fragile at the top; leaf blades papillose adaxially (at 25× magnification)*Carex laevivaginata*
- 1 Leaf sheath fronts green or whitish, thin, and fragile at the top; leaf blades not papillose adaxially.
- 2 Leaf sheath fronts smooth.
- 3 Larger perigynia 6-8 mm long; leaves to 12 mm wide.....*Carex crus-corvi*
- 3 Larger perigynia 3-5 mm long; leaves to 7 mm wide.
..... *Carex oklahomensis*
- 2 Leaf sheath fronts rugose.
..... *Carex stipata* var. *maxima*

[26a] Section 1b Vulpinae - section Vulpinae

- 1 Beak of the perigynium shorter than the body.

- *Carex oklahomensis*
- 1 Beak of the perigynium as long as, or longer than, the body.
- 3 Ventral leaf sheath margins with orange-red dots; achene ovate-lanceolate; perigynium wall adhering to achene..... *Carex crus-corvi*
- 3 Ventral leaf sheath margins without orange-red dots; achene broadly ovate to ovate-orbicular; perigynium wall not adhering to the achene (or only slightly so).
- 4 Ventral leaf sheaths not transversely rugose, more or less concave at the apex and not prolonged upward past the base of the blade, thickened, not friable *Carex laevivaginata*
- 4 Ventral leaf sheaths transversely rugose, more or less convex at the apex and prolonged upward past the base of the blade, friable.
- *Carex stipata* var. *maxima*

[26c] Section 3 Multiflorae - section *Multiflorae*

- 1 Perigynia red-dotted *Carex triangularis*
- 1 Perigynia not red-dotted.
- 2 Perigynia golden yellow or yellowish-brown at maturity..... *Carex annectens*
- 2 Perigynia dull yellow-green or pale brown at maturity.
- 3 Leaves longer than the flowering stem; perigynia 2.0-3.2 mm long, 1.3-1.8 mm wide, the beak 1/3-1/2 the length of the body *Carex vulpinoidea*
- 3 Leaves shorter than the flowering stem; perigynia 3.2-4.0 mm long, 2.0-2.6 mm wide, the beak ca. 1/3 as long as the body.
- 4 Awn of pistillate scales 1-3 mm long; adaxial surface of perigynia with 3-5 nerves; [wet pine savannas, se. SC, south to c. peninsular FL, west to LA] *Carex fissa* var. *aristata*
- 4 Awn of pistillate scales 0.5-1.5 mm long; adaxial surface of perigynia lacking nerves; [prairies, s. IL, MO, se. KS, and OK south to AR and se. TX, and also introduced eastwards in disturbed sites] *Carex fissa* var. *fissa*

[26d] Section 4.0 Phaestoglochin - section *Phaestoglochin* (*Bracteosae*)

- 1 Sheaths loose, membranaceous, and fragile on the ventral side, septate-nodulose and usually mottled or striped with green and white on the dorsal side; widest leaves 3-10 mm.
- 2 Bodies of pistillate scales 1.5-2.5 mm long, 1.1-1.8 mm wide, mostly < 1/2 as long as the perigynia, apex obtuse to acuminate to shortly awned.
- *Carex sparganioides*
- 2 Bodies of pistillate scales 2.2-4.4 mm long, 1.2-2.4 mm wide, mostly > 1/2 as long as the perigynia, apex acuminate to awned.
- *Carex gravida*
- 1 Sheaths tight on the ventral side, neither septate-nodulose nor mottled with green and white on the dorsal side.
- 5 Perigynia not conspicuously corky-thickened at base.
- 6 Inflorescence ovoid in outline, the spikes densely aggregated, nearly indistinguishable except by the projecting setaceous bracts which subtend each spike.
- 7 Perigynia 1.3-1.7× as long as wide, widest near the broadly rounded, truncate, or even subcordate base..... *Carex leavenworthii*
- 7 Perigynia 1.6-2.5× as long as wide, widest just below the middle, the base broadly cuneate to rounded.
- 8 Pistillate scales (excluding the awns) shorter than the perigynium body; culms not greatly exceeding the leaves *Carex cephalophora*
- 8 Pistillate scales (excluding the awns) as long as or exceeding the perigynium body; culms much exceeding the leaves..... *Carex mesochorea*
- 6 Inflorescence spicate-racemose, the individual spikes readily distinguishable (often separated by an exposed internode of the axis).
- 11 Perigynia ascending, nerveless on the ventral surface; scales awned, the awns 1.5-4 mm long; lowest inflorescence bract elongate, the free portion 1-5 cm long..... *Carex austrina*
- 11 Perigynia spreading, either nerved or nerveless on the upper (ventral) surface; scales acuminate or with an awn to 1.5 (-2.0) mm long; lowest inflorescence bract short, delicate, the free portion 0.5-2 cm long.
- 12 Perigynia 3.0-3.5 mm long, nerveless on the upper (ventral) face *Carex muehlenbergii* var. *enervis*
- 12 Perigynia 3.5-4.0 mm long, nerved on both faces..... *Carex muehlenbergii* var. *muehlenbergii*
- 5 Perigynia corky-thickened in the lower 1/3 to 1/2 at maturity.
- 16 Beak of perigynium smooth; pistillate scales acuminate, early deciduous.
- 17 Average perigynium width ≥ 1.3 mm; average spongy portion of the perigynium ≥ 1.1 mm long; perigynium base distinctly nerved, bulging on the ventral surface, making the perigynium biconvex in cross-section; perigynium 2-2.5× as long as wide; perigynium gradually narrowed to a short beak; leaves 1-3 mm wide..... *Carex retroflexa*
- 17 Average perigynium width < 1.3 mm; average spongy portion of the perigynium < 1.1 mm long; perigynium base nerveless, flattened on the ventral surface, making the perigynium planoconvex in cross-section; perigynium ca. 3× as long as wide; perigynium narrowed to a conspicuous beak; leaves 0.75-1.5 mm wide..... *Carex texensis*
- 16 Beak of perigynium serrulate; pistillate scales obtuse, persistent.
- 18 Plants with creeping rhizomes, the culms arising scattered along the rhizome; perigynia 4-5× as long as wide..... *Carex socialis*
- 18 Plants densely caespitose, the culms arising from the center of clump; perigynia 2-3× as long as wide.
- 19 Widest leaves 0.9-1.7 mm wide; base of fertile culm 0.7-1.4 mm wide.
- *Carex radiata*
- 19 Widest leaves 1.7-3.0 mm wide; base of fertile culm 1.4-2.2 mm wide.
- 21 Stigmas 0.03-0.06 mm thick, straight to slightly twisted; widest leaves < 2.0 mm wide; perigynia 3-7 (-8) per spike..... *Carex radiata*
- 21 Stigmas 0.07-0.10 mm thick, mostly coiled; widest leaves > 1.7 mm wide; perigynia (6-) 7-14 (-20) per spike..... *Carex rosea*

[26o] Section 11 Stellulatae - section *Stellulatae*

- 1 Spikes usually solitary; leaves involute; anthers 2.0-3.6 mm long; [mucky bogs, south to DE and e. MD; disjunct in sc. NC and s. AL and s. MS]..... *Carex exilis*
- 1 Spikes 2-8; leaves flat or folded; anthers 0.6-2.2 (-2.4) mm long.
- 2 Perigynium beak smooth-margined (use at least 10× magnification)..... *Carex seorsa*
- 2 Perigynium beak serrulate on margin (use at least 10× magnification).
- 3 Widest leaves 2.8-5.0 mm wide.
- *Carex atlantica*

Key to Map
Symbology:

←rare ←uncommon ←common
(see introduction for more)

* : waif
EN : endemic

P : planted
? : questionable

- 3 Widest leaves 0.8-2.7 mm wide.
 8 Lower perigynia 2.0-3.0 mm wide..... *Carex atlantica*
 8 Lower perigynia 0.9-2.0 mm wide.
 11 Widest leaves 1.6-2.7 mm wide; infructescence mostly 18-45 mm long; [widespread in our area]..... *Carex atlantica*
 11 Widest leaves 0.6-1.6 mm wide; infructescence mostly 8-20 mm long; [primarily of the Coastal Plain in our area, widely scattered elsewhere] *Carex howei*

[26q] Section 12 Ovales - section *Ovales*

- 6 Pistillate scales in middle or lower portions of spikes with apex acuminate with subulate or awned tip.
 7 Perigynia 2.6-4.0× as long as wide, the bodies lanceolate, 1.2-2.0 mm wide..... *Carex scoparia*
 7 Perigynia < 2.5× as long as wide, the bodies lance-ovate, ovate, broadly elliptic, orbiculate, or obovate, 1.8-3.9 mm wide.
 11 Perigynium body obovate, often with conspicuous "shoulders"; leaves 2.5-6 mm at widest..... *Carex alata*
 11 Perigynium body elliptic, suborbiculate, or weakly obovate; leaves 1-3 (-4.2) mm at widest..... *Carex festucea*
 6 Pistillate scales with apex obtuse, acute, or acuminate (but not subulate or awned).
 15 Perigynia < 2 mm wide.
 16 Perigynia thin, often not winged to the base; leaf sheaths somewhat expanded toward the apex, bearing narrow wings continuous with the midvein and the edges of the leaf blade; leaves 3-7.5 mm wide; vegetative shoots tall, conspicuous, with numerous leaves spaced along the upper half of the culm..... *Carex sangamonensis*
 16 Perigynia thick, winged to the base; leaf sheaths with more-or-less rounded edges, not distinctly expanded toward the apex; leaves 1-4.5 mm wide (except in *C. normalis*); vegetative shoots usually inconspicuous, with relatively few leaves clustered at the tip.
 20 Perigynia (2.5-) 2.6-4 × as long as wide, the body lanceolate, distance from beak tip to top of achene 2.2-5 mm..... *Carex scoparia*
 20 Perigynia < 2.5 × as long as wide, the body obovate, orbiculate, or ovate; distance from beak tip to top of achene 0.8-2.2 mm.
 23 Perigynium body obovate, widest toward the tip (excluding the beak).
 24 Perigynium beak spreading, slender; pistillate scales acute; styles sinuous at base..... *Carex albolutescens*
 24 Perigynium beak appressed-ascending, triangular; pistillate scales obtuse; styles straight..... *Carex longii*
 23 Perigynium body ovate, elliptic, or orbiculate, widest toward the base or near the middle (excluding the beak).
 25 Inflorescences on tallest culms compact, 1.5-3 × as long as wide, erect, the spikes overlapping, the lowest internode of the inflorescence 1-6 (-7.5) mm, ½ to 1/5 (-¼) the length of the inflorescence
 27 Perigynia broadly elliptic or nearly orbiculate, the wing margin 0.4-0.8 mm wide, 0-6 veined on the inner face..... *Carex molesta*
 27 Perigynia ovate to broadly ovate, the wing margin 0.25-0.45 mm wide, 4-7 veined on the inner face..... *Carex normalis*
 25 Inflorescences on tallest culms elongate, more-or-less open toward the base, (2.5-) 3.0-5.1 × as long as wide, often arching or nodding at the tip; spikes more-or-less separate; lowermost internode (5-) 7-19 mm long, mostly 1/5-½ (-½) the length of the inflorescence.
 28 Perigynium orbiculate, widest at mid-body..... *Carex festucea*
 28 Perigynium narrowly to broadly ovate, widest below mid-body..... *Carex normalis*
 15 Perigynia > 2 mm wide.
 31 Perigynium bodies obovate, widest toward the tip; leaf sheaths green-veined adaxially nearly to the summit, or with a narrow Y-shaped hyaline area.
 32 Achenes 1.3-1.8 mm wide..... *Carex opaca*
 32 Achenes 0.75-1.2 (-1.3) mm wide.
 36 Perigynium beak spreading, slender; pistillate scales acute; styles sinuous at base..... *Carex albolutescens*
 36 Perigynium beak appressed-ascending, triangular; pistillate scales obtuse; styles straight..... *Carex longii*
 31 Perigynium bodies lanceolate, ovate, elliptic, orbicular, or reniform, widest at the middle or toward the base; leaf sheaths various, some with prominent hyaline band near the apex adaxially.
 39 Plants colonial, from creeping rhizomes; vegetative culms numerous, conspicuous, strongly 3-ranked, with 15-35 leaves when fully-developed; achenes 1.6-2 × as long as wide; larger spikes with 5-25 (-30) perigynia..... *Carex hyalina*
 39 Plants clumping; vegetative culms few, inconspicuous, usually with fewer than 15 leaves, not strikingly 3-ranked; achenes 1-1.6 (-1.7) × as long as wide; larger spikes with 15-80 perigynia.
 40 Perigynia finely granular-papillose (as seen with 30× magnification), the body reniform to orbiculate, 0.6-0.9 × as long as wide, 3.5-4.5 (-4.9) mm wide; lowermost pistillate scale obtuse-rounded..... *Carex reniformis*
 40 Perigynia smooth, the body broadly ovate, elliptic, orbicular, or slightly obovate, (0.7-) 0.9-1.7 × as long as wide, 1.5-6.1 mm wide; lowermost pistillate scales obtuse to acuminate-awned.
 47 Perigynium body narrowly to broadly ovate, greenish; pistillate scales with green midstripe, hyaline or pale margins (rarely brown tinged); leaves 2.5-6.5 mm wide, the sheaths green mottled, with mouth truncate, and prolonged to 2 mm distal to base of the leaf blades..... *Carex normalis*
 47 Perigynium body broadly ovate, broadly elliptic, or orbiculate, yellowish to tan brown; pistillate scales greenish or dark brown; leaves 1.5-4 (-5) mm wide, the sheaths usually evenly colored, with mouth concave.
 48 Leaf sheaths finely papillose (at magnification of 30-40 ×), especially near the leaf base..... *Carex festucea*
 48 Leaf sheaths smooth.
 50 Spikes on larger culms (3-) 5-7 (-11), tapered at the base, the terminal spike with a conspicuous staminate base; inflorescences typically open, 2.5-4.5 (-6.5) cm long, the lowermost internode (3-) 4-13 (-23) mm long; perigynium body (0.7-) 0.9-1.3 × as long as wide.
 51 Achenes 1.2-1.8 mm long, 1.0-1.3 mm wide; perigynia 2.5-4.2 mm long, 1.5-2.3 (-2.5) mm wide, mostly 2-4 (-6)-veined adaxially *Carex festucea*
 51 Achenes (1.6-) 1.7-2.2 mm long, (1.2-) 1.4-1.8 mm wide; perigynia 3.2-5.5 mm long, 2.5-3.6 mm wide, veinless or faintly 1-5 (-7)-veined adaxially.
 52 Perigynia 3.2-4.8 (-5.2) mm long; beak 0.8-1.5 mm long; pistillate scales 3.3-4.0 (-4.3) mm long, acute; achenes 1.0-1.3 (1.4) × as long as wide..... *Carex brevior*

N : no
 P : planted
 ? : questionable

X : extirpated

- 52 Perigynia (5.6-) 6.0-7.1 mm long; beak (1.2-) 1.5-2.1 (-2.3) mm long; pistillate scales (3.6-) 3.9-5.0 mm long, obtuse to acute *Carex opaca*
- 50 Spikes on larger culms 2-4 (-5), rounded at the base, the terminal spike usually lacking a conspicuous staminate base; inflorescences compact, 1.2-3.0 (-3.6) cm long, the lowermost internode 1.5-7 (-13) mm long; perigynium body (0.7-) 0.9-1.6 × as long as wide.
- 53 Achenes of larger perigynia ellipsoid to narrowly oblong, 0.9-1.3 mm wide, 1.3-1.6 × as long as wide; perigynia (25-) 30-80 per spike, squarrose-spreading at maturity, 1.8-3.0 mm wide..... *Carex molesta*
- 53 Achenes of larger perigynia broadly oblong to nearly orbicular, 1.35-1.8 mm wide, 1-1.3 × as long as wide; perigynia (10-) 15-40 (-45) per spike, appressed-ascending at maturity, (2.1-) 2.5-3.4 (-3.5) mm wide.
- 54 Perigynia veinless or faintly and irregularly 1-5-veined over the achene adaxially, more-or-less orbicular, the bodies (2-) 2.3-3.2 mm long, (0.7-) 0.9-1.1 (-1.3) × as long as wide; pistillate scales mostly acute, about as long as to 0.7 (-0.9) mm shorter than the subtended perigynium (flattened and measured separately)..... *Carex brevior*
- 54 Perigynia strongly 4-6-veined over the achene adaxially, broadly ovate to broadly elliptic, (or rarely nearly orbicular), the bodies (2.7-) 3-4 mm long, (0.9-) 1.0-1.6 × as long as wide; pistillate scales mostly obtuse, 0.7-1.7 mm shorter than the subtended perigynium (flattened and measured separately)..... *Carex molestiformis*

[26r] Section 13 Phacocystis - section *Phacocystis* (*Cryptocarpae* and *Acutae*)

- 1 Lowest spike erect or ascending. *Carex stricta*
- 1 Lowest spike pendent.
- 6 Pistillate scales awnless, the sides black or deep purple-brown..... *Carex torta*
- 6 Pistillate scales awned, the sides dark reddish-brown, light golden-brown, tan, or clear.
- 7 Sheath backs glabrous [prickles 0-1 (-5) per mm² of sheath surface 5 cm from base]; perigynia somewhat inflated, obovoid, rounded above to an abrupt beak; lowest bract of the infructescence 1.7-6.2 dm long.
- 8 Perigynia strongly obovoid, 3-4.5 mm long, 2-3 mm wide; achene symmetrical..... *Carex crinita* var. *brevicrinis*
- 8 Perigynia ellipsoid to slightly obovoid, 2-3 (-3.5) mm long, 1-2 mm wide; achene usually shortened on one side, slightly to strongly asymmetrical..... *Carex crinita* var. *crinita*
- 7 Sheath backs scabrous [prickles (1-) 5-54 per mm² of sheath surface 5 cm from base]; perigynia flattened, elliptic to ovoid, tapering from near or below the middle to a minute beak; lowest bract of the infructescence 0.7-3.5 dm long. *Carex mitchelliana*

[26x] Section 17a Glaucescentes - section *Glaucescentes* (*Pendulinae*)

- 1 Awn of the pistillate scale tapering gradually into the scale; perigynium 2-ribbed, and also distinctly and evenly nerved between the ribs; [of swamps and marshes] ... *Carex joorii*
- 1 Awn of the pistillate scale emerging from a retuse notch in the apex of the scale; perigynium 2-ribbed, obscurely nerved between the ribs; [generally of acid seepages, pocosins, and blackwater situations, often associated with *Pinus serotina*].
- 2 Lowest pistillate spike drooping, on a peduncle 1-4 cm long; perigynia reddish-glaucous, lacking nerves; achenes slightly longer than wide *Carex glaucescens*
- 2 Lowest pistillate spike erect, sessile or with a peduncle up to 1 cm long; perigynia white-glaucous, rather distinctly 6-8 nerved; achenes as wide as long..... *Carex verrucosa*

[26bb] Section 19 Laxiflorae - section *Laxiflorae*

- 2 Perigynium with a short, bent beak, usually abruptly bent to one side.
- 3 Spikes loosely flowered, most perigynia not overlapping. *Carex albursina*
- 3 Spikes densely flowered, the perigynia overlapping.
- 5 Basal sheaths purple when fresh, weathering to brown; uppermost bract rarely overtopping the staminate spike; staminate spike usually long-stalked *Carex gracilescens*
- 5 Basal sheaths brown; uppermost bract overtopping the staminate spike; staminate spike sessile or short-stalked
- 6 Widest bract of the uppermost lateral spike 0.5-3.4 mm wide *Carex blanda*
- 6 Widest bract of the uppermost lateral spike (2.9-) 3.2-8.3 mm wide..... *Carex kraliana*
- 2 Perigynium tapering to a straight or slightly curved beak (or a long, curved beak in *C. radfordii*) (note: some beaks may curve in pressing).
- 8 Basal sheaths purple or wine-red (may weather to brown in *C. gracilescens*). *Carex gracilescens*
- 8 Basal sheaths brown, not purple or wine-red.
- 11 Mature perigynia obovoid.
- 12 Spikes overlapping, densely flowered; staminate spike more-or-less obscured; plant green..... *Carex crebriflora*
- 12 Spikes scattered, loosely flowered; staminate spike prominently exserted; plant usually glaucescent *Carex laxiflora*
- 11 Mature perigynia fusiform.
- 13 Spikes overlapping, the staminate more-or-less obscured and overtopped by the uppermost bract..... *Carex crebriflora*
- 13 Spikes scattered, the staminate prominent and exceeding the uppermost bract.
- 14 Spikes densely flowered; perigynium beaks curved; lowest spike exserted on a long, arching, peduncle *Carex styloflexa*
- 14 Spikes loosely flowered; perigynium beaks straight; lowest spike on a short, erect or ascending, peduncle
- 15 Widest leaf on vegetative shoots (including overwintered leaves) 2.0-6.0 (-6.9) mm wide; medial pistillate spikes more loosely flowered, the ratio of the number of perigynia to spike length (measured in mm) (0.20-) mean 0.41 (-0.52)..... *Carex ignota*
- 15 Widest leaf on vegetative shoots (including overwintered leaves) 5.7-11.3 mm; medial pistillate spikes more densely flowered, the ratio of the number of perigynia to spike length (measured in mm) (0.47-) mean 0.57 (-0.90) *Carex striatula*

[26cc] Section 20 Granulares - section *Granulares*

- 1 Plants with long-creeping rhizomes, the culms therefore mostly solitary; terminal spike and uppermost lateral spike usually separated.
 2 Staminate scales with apex rounded to obtuse; widest leaves 1.8-3.0 (-4.4) mm wide; perigynium beak 0.1-0.3 mm long; [widespread]..... *Carex crawei*
 2 Staminate scales with apex acute to awned; widest leaves 2.8-8.3 mm wide; perigynium beak 0.3-0.9 mm long; [of Panhandle FL and AL westward]
 *Carex microdonta*
 1 Plants with short rhizomes, the culms therefore clumped; terminal and uppermost lateral spike usually overlapping.
 *Carex granularis*

[26dd] Section 21 Careyanae - section *Careyanae*

- 7 Terminal spikes (1.0-) 1.2-2.7 mm wide; staminate scales acute, those from the middle region of the staminate spike 3.6-5.5 mm long; vegetative shoots shorter than or slightly taller than the culms, the tallest vegetative shoot 0.5-1.3 (-1.8)× as tall as the tallest culm.
 8 Terminal spike usually surpassing the bract blade of the distalmost lateral spike; longest (per plant) peduncle of terminal spike (6.3-) 8.1-15.9 cm long; widest leaf blade 2.0-2.9 (-3.5) mm wide; each perigynium face 7-10-nerved *Carex digitalis* var. *macropoda*
 8 Terminal spike usually surpassed by the bract blade of the distalmost lateral spike; longest (per plant) peduncle of terminal spike 0.9-7.2 (-11.4) cm long; widest leaf blade 2.7-4.5 (-5.3) mm wide; each perigynium face (8-) 11-15-nerved.
 9 Perigynia 2.5-3.3 mm long, the apex barely excurved..... *Carex digitalis* var. *digitalis*
 9 Perigynia 3.2-4.2 mm long, the apex noticeably excurved..... *Carex digitalis* var. *floridana*
 7 Terminal spikes 0.6-1.4 (-1.6) mm wide; staminate scales obtuse, those from the middle region of the staminate spike 2.6-3.6 (-3.8) mm long; vegetative shoots much taller than the culms, the tallest vegetative shoot (1.4-) 1.7-3.7 (-4.9)× as tall as the tallest culm.
 10 Perigynia spirally imbricate; longer lateral spikes with (6-) 8-13 perigynia; peduncles of proximal spikes usually erect, the longest (per plant) peduncle (7.0-) 15-42 (-49) mm long; bract blade of distalmost lateral spike 5.6-17 (-26) × as long as wide; loosely or densely cespitose; [primarily of the Coastal Plain in our area, though extending rarely into the Piedmont and Mountains] *Carex abscondita*
 10 Perigynia distichously imbricate; longer lateral spikes with 4-8 (-9) perigynia; peduncles of proximal spikes usually drooping or nodding, the longest (per plant) peduncle (28-) 44-84 (-91) mm long; bract blade of distalmost lateral spike (12-) 17-51 × as long as wide; densely cespitose; [primarily of the Mountains and Piedmont]..... *Carex cumberlandensis*

[26ee] Section 22 Griseae - section *Griseae* (*Oligocarpae*)

- 1 Culm bases brown.
 4 Leaf blades glaucous; pistillate scales awnless or awn < 1 (-1.9) mm long.
 5 Perigynia (4.0-) 4.2-5.5 (-6.0) mm long; achene bodies 0.37-0.5× as long as the perigynia; pistillate spikes (5-) 5.7-8 (-9.6) mm wide; achene beak straight to bent less than 30° from the vertical *Carex flaccosperma*
 5 Perigynia 3.2-4.5 (-4.7) mm; achene bodies 0.5-0.63 (-0.67)× as long as the perigynia; pistillate spikes (3.3-) 4.2-6.1 (-7.3) mm wide; achene beak usually bent 30-90° from vertical.
 6 Perigynia 3.2-4.0 (-4.1) mm long, (1.5-) 1.8-2.3 (-2.5)× as long as wide; longest pistillate spike with (14-) 19-45 (-65) flowers, densely flowered, with the ratio [mm of spike length/number of flowers] = (0.56-) 0.67-1.1 (1.3); longest peduncle of staminate spike 0.5-15 (-31) mm long..... *Carex glaucodea*
 6 Perigynia (3.7-) 3.9-4.5 (-4.7) mm long, (1.9-) 2.1-2.6 (-2.8)× as long as wide; longest pistillate spike with 11-25 (-28) flowers, rather loosely flowered, with the ratio [mm of spike length/number of flowers] = (0.97-) 1.0-1.3 (1.6); longest peduncle of staminate spike (1.5-) 7.5-37 (-62) mm long
 *Carex pigra*
 4 Leaf blades deep or light green; pistillate scales usually with awns (0-) 1.2-3.7 (-6) mm long.
 8 Widest leaf blades 2.6-4.0 mm wide; ligules of proximal bracts 0.4-1.8 (-3.6) mm long; perigynium apex bent; achene beaks bent
 *Carex impressinervia*
 8 Widest leaf blades (3.7-) 4.2-8.2 (-9.1) mm wide; ligules of proximal bracts (1.8-) 4.0-10.7 (-12.9) mm long; perigynium apex straight; achene beaks straight.
 9 Perigynia obtusely triangular in cross section, (2.2-) 2.5-3.1 × as long as wide, 1.5-1.9 (-2.2) mm wide; achenes (1.3-) 1.5-1.7 (-1.8) mm wide; achene stipes (0.3-) 0.4-0.6 mm long..... *Carex amphibola*
 9 Perigynia orbicular to suborbicular in cross section, 1.8-2.3 (-2.6)× as long as wide, (1.8-) 2-2.6 mm wide; achenes 1.7-2.1 (-2.2) mm wide; achene stipes (0.2-) 0.3-0.4 (-0.5) mm long..... *Carex grisea*
 1 Culm bases purple-red
 11 Perigynia spirally imbricate; proximal bracts with sheaths loose; ligules (0.9-) 2-12.9 mm
 13 Perigynia (1.8-) 2.0-2.6 mm wide, orbicular to suborbicular in cross section; achene bodies (2.6-) 3.1-3.5 (-3.7) mm long; achene stipes (0.2-) 0.3-0.4 (-0.5) mm; achene bodies 4.8-9.7 (-12)× as long as the stipes *Carex grisea*
 13 Perigynia 1.5-2.3 (-2.4) mm wide, obtusely triangular in cross section; achene bodies 1.8-2.3 (-2.4) mm long; achene stipes (0.3-) 0.4-0.6 mm; achene bodies 3.2-5.8 (-7.3)× as long as the stipes.
 14 Perigynia 4.2-5.0 (-5.2) × 1.5-1.9 (-2.2) mm, (2.2-) 2.5-3.1× as long as wide; achene bodies broadly obovoid to oblong-obovoid, widest at a point 0.55-0.67 (-0.70) from base to tip of body *Carex amphibola*
 14 Perigynia (3.6-) 3.9-4.5 (-4.7) × (1.7-) 1.8-2.3 (-2.4) mm, 1.8-2.3 (-2.5)× as long as wide; achene bodies broadly obdeltoid-obovoid, widest at a point (0.6-) 0.65-0.80 from base to tip of body..... *Carex corrugata*
 11 Perigynia distichously imbricate; proximal bracts with sheaths tight; ligules 4-4.9 (-9.6) mm (to 2.2 mm in *C. bulbostylis*).
 15 Perigynia much inflated, orbicular or suborbicular in cross section, (1.8-) 2.0-2.5 (-2.8) mm wide, 1.6-2.0 (-2.1)× as long as wide.....
 *Carex bulbostylis*
 15 Perigynia tightly enveloping achene or slightly inflated, obtusely triangular in cross section, 1.4-2.1 (-2.3) mm wide, (1.7-) 2.1-3.3× as long as wide.
 18 Perigynia (1.7-) 2.1-2.6× as long as wide, apex usually abruptly contracted; beak (0.3-) 0.5-1.2 mm long; longest lateral spike with 2-8 (-10) perigynia (including undeveloped or aborted ones)
 *Carex oligocarpa*
 18 Perigynia (2.4-) 2.5-3.3× as long as wide, apex gradually tapering; beakless or the beak 0.1-0.4 mm; longest lateral spike with (5-) 7-14 perigynia (including undeveloped or aborted ones)
 *Carex planispicata*

[26ff] Section 23 Hymenochlaenae - section *Hymenochlaenae* -- Key to Groups

- 1 Terminal spike staminate; lateral spikes staminate, androgynous, or pistillate; base of culms tan, brown, or ivory.
 2 Plants without rhizomes or with very short ones, densely caespitose.....[26ff] Section 23c *Hymenochlaenae*
 2 Plants with short-creeping rhizomes, loosely caespitose or colonial..... *Carex cherokeensis*
- 1 Terminal spike staminate or gynecandrous; lateral spikes pistillate, gynecandrous or rarely distal spike staminate; base of culms usually covered with dark maroon bladeless sheaths (often missing or very short in *C. prasina*).
 3 Perigynia 2-ribbed but otherwise veinless or nearly so, green to yellow at maturity.....[26ff] Section 23c *Hymenochlaenae*
 3 Perigynia 2-ribbed and veined between ribs, often conspicuously so, green to olive-green at maturity, usually red dotted.
 4 Perigynia fusiform to narrowly lance-ovoid, > 5 mm long, including the elongate beak; leaves generally < 5 mm wide; leaf sheaths usually glabrous, at least on back.....[26ff] Section 23c *Hymenochlaenae*
 4 Perigynia ovoid-oblong to lance-ovoid, 2-6 mm (mostly < 5 mm long) tapering to a beak shorter than the body or beakless; leaves 2.5-12 mm wide; leaf sheaths glabrous or pubescent.
 5 Terminal spike usually gynecandrous, rarely staminate.....[26ff] Section 23b *Hymenochlaenae*
 5 Terminal spike usually staminate, rarely gynecandrous.
 6 Lateral pistillate spikes erect at maturity, narrowly oblong to cylindric, to 25 × 2.5-9 mm, on stiff peduncles.....[26ff] Section 23b *Hymenochlaenae*
 6 Lateral pistillate spikes drooping at maturity, short cylindric to linear, 8-80 × 3-5 mm, on slender arching peduncles.....[26ff] Section 23c *Hymenochlaenae*

[26ff] Section 23b Hymenochlaenae - section *Hymenochlaenae* (the "*Gracillimae*" group)

- 2 Perigynia strongly trigonous, the lateral ribs at the angles, broadest below the middle; basal sheaths brownish or greenish; leaf sheaths glabrous on the hyaline ventral portion..... *Carex prasina*
 2 Perigynia terete to obscurely trigonous, the lateral ribs not at the angles, broadest near the middle; basal sheaths purplish or red; leaf sheaths pubescent on the hyaline ventral portion (glabrous in *C. gracillima*).
 *Carex oxylepis*

[26ff] Section 23c Hymenochlaenae - section *Hymenochlaenae* (the "*Sylvaticae*" group)

- 3 Internodes between the perigynia mostly 1.0-1.5 mm; sheaths of the pistillate bracts puberulent at the mouth..... *Carex oblita*
 3 Internodes between the perigynia mostly 2.0-4.0 (-6.0) mm; sheaths of the pistillate bracts glabrous at the mouth.
 *Carex debilis*

[26ii] Section 24 Porocystis - section *Porocystis* (*Virescentes*)

- 2 Perigynia densely pubescent; larger lateral spikes 2-4 mm wide; ligules longer than wide.
 3 Terminal spikes 5-15 (-20) mm long; anthers 0.7-1.3 (-1.6) mm long..... *Carex swanii*
 3 Terminal spikes (18-) 20-35 mm long; anthers (1.0-) 1.6-2.0 (-2.8) mm long..... *Carex virescens*
- 2 Perigynia glabrous, or minutely papillose, or with few scattered hairs; larger lateral spikes (3.5-) 4-8 mm wide; ligules as wide as long.
 4 Perigynia papillose, with a short but definite beak, 2.5-4.0 mm long; anthers 2.5-3.5 mm long; pistillate scales about equal to perigynia or slightly longer; pistillate spikes 6-10 mm wide..... *Carex bushii*
 4 Perigynia not papillose, beakless or with a short but definite beak [*C. caroliniana*], 2.0-3.5 mm long; anthers 1.3-2.5 mm long; pistillate scales usually much shorter than perigynia; pistillate spikes 4-7 mm wide.
 5 Perigynia with a short but distinct beak, when mature more-or-less rounded in ×-section and with no faces flattish; blades glabrous or glabrate *Carex caroliniana*
 5 Perigynia beakless, when mature more-or-less triangular in ×-section (or hemispheric) and with the inner face flattish, blades glabrous or glabrate [*C. complanata*] or densely hirtellous [*C. hirsutella*].
 6 Blades glabrous or glabrate, especially on lower surface, sheaths glabrate to pubescent (if so, pubescence dense only in summit region); [mostly Coastal Plain and Piedmont]..... *Carex complanata*
 6 Blades and sheaths densely hirtellous throughout; [mostly Coastal Plain, Piedmont, and Mountains] *Carex hirsutella*

[26ll] Section 26 Hallerianae - section *Hallerianae*

- 2 Perigynia densely white-villous apically, glabrous basally; achene body 2.0-2.7 mm long, long-stipitate *Carex dasycarpa*
 2 Perigynia puberulent throughout; achene body 3.0-3.3 mm long, sessile..... *Carex tenax*

[26oo] Section 28 Paludosae - section *Paludosae*

- 1 Perigynium body pubescent..... *Carex striata* var. *striata*
 1 Perigynium body glabrous..... *Carex hyalinolepis*

[26qq] Section 30 Vesicariae - section *Vesicariae* [including 52 - *Pseudocypereae*]

- 1 Pistillate scales with a prominent, scabrous awn (the body of the scale often ciliate as well).
 3 Perigynia 6-12-nerved, the nerves separate nearly to the beak apex; perigynium bodies broadly ellipsoid to more or less globose, (1.8-) 2.0-4.2 mm wide; achenes rough-papillate. *Carex lurida*
 3 Perigynia 12-25-nerved, the nerves (except for 2 prominent laterals) confluent at or below the middle of the beak; perigynium bodies ellipsoid to lance-ovoid, 1.1-2.2 mm wide; achenes smooth. *Carex comosa*
 1 Pistillate scales smooth-margined, obtuse to acuminate, awnless (rarely the lowermost scales awned in *C. utriculata*).
 9 Perigynium beaks finely scabrous (at least near the tip and on the teeth), 2.4-4.2 (-4.8) mm long; widest leaves 1.8-4.3 (-5) mm wide. *Carex bullata* var. *greenei*
 9 Perigynium beaks smooth, 1-4.5 mm long; widest leaves 1.5-15 mm wide. *Carex elliotii*

[26rr] Section 31 Lupulinae - section *Lupulinae*

- 1 Sheath of uppermost leaf absent or <1.5 (-2.5) cm long; beak of perigynia 1.5-4.2 mm long; achenes with elliptic or obovate sides.
 2 Perigynia rhombic-ovoid, cuneate to the base, 8-35 per spike, radiating in all directions and therefore forming a globular spike *Carex grayi*
 2 Perigynia lanceoloid to ovoid, convex to the base, 1-12 (-20) per spike, ascending to spreading (the lowest sometimes slightly reflexed) and therefore forming an ovoid to obovoid spike. *Carex intumescens* var. *intumescens*
 1 Sheath of uppermost leaf usually >1.7 cm long; beak of perigynia 4.5-10 mm long; achenes with rhombic or nearly triangular sides.
 4 Achenes distinctly wider than long, widest above the middle; perigynia stiffly spreading at right angles to the rachis. *Carex gigantea*
 4 Achenes as wide as long or longer, widest near the middle; perigynia ascending.
 5 Angles of the achenes pointed, often even knobbed, with nipple-like points; achenes (2.2-) 2.4-3.4 mm wide, often nearly as wide as long *Carex lupuliformis*
 5 Angles of the achenes smoothly curved, not pointed or knobbed; achenes 1.7-2.6 (-2.8) mm wide, distinctly longer than wide.
 6 Staminate peduncle (3-) 6-18 cm long, usually exceeding the uppermost spike by 2-12 cm; plants loosely colonial by long slender rhizomes. *Carex louisianica*
 6 Staminate peduncle 0.5-6 (-7) cm long, shorter than to exceeding the uppermost pistillate spike by < 2 cm; plants solitary or loosely caespitose in small clumps connected by stout, short rhizomes. *Carex lupulina*

[26ss] Section 32 Rostrales - section *Rostrales* (*Folliculatae*)

- 1 Perigynia 6.4-10.7 mm long, 2.6-3.9× as long as wide. *Carex turgescens*
 1 Perigynia (8.3-) 10.5-15.6 mm long, 4-7× as long as wide. *Carex lonchocarpa*

[26uu] Section 34 Squarrosae - section *Squarrosae*

- 1 Terminal spike usually entirely staminate; pistillate scales with an awn equaling or surpassing the perigynium; achenes 1.2-2.1 mm long.
 2 Pistillate scales 0.4-0.9 (-1.1) mm wide, the body wide and translucent; staminate scales 0.9-1.6 mm wide, tightly imbricate in the spike; plants colonial, long-rhizomatous. *Carex aureolensis*
 2 Pistillate scales 0.1-0.4 mm wide, the body narrow and indistinct; staminate scales 0.3-0.8 mm wide, irregularly imbricate with spreading tips; plant caespitose, short-rhizomatous. *Carex frankii*
 1 Terminal spike gynecandrous, mainly pistillate; pistillate scales awnless, or with a short awn not surpassing the perigynium; achenes 2.0-3.0 mm long.
 3 Achene 1.9-2.5× as long as wide; style persistent, strongly kinked at the base; spikes 1-2 (-3) per stem. *Carex squarrosa*
 3 Achene 1.2-1.9× as long as wide; style deciduous, straight or slightly curved; spikes (1-) 2-4 (-6) per stem. *Carex typhina*

[26bbb] Section 39 Acrocystis - section *Acrocystis* (*Montanae*)

- 1 Primary culm accompanied by pistillate spikes borne on short or elongate peduncles from the same sheathed base (referred to as subradical or basal spikes). *Carex umbellata*
 1 Primary culm solitary (i.e., lacking additional basal spikes originating from the same sheaths, excepting hybrids); however, some taxa may exhibit deceptively short individual culms (e.g., *C. emmonsii*, *C. nigromarginata*, *C. reznicekii*).
 10 Body of the perigynium subglobose to obovoid, usually about as wide as long; achene angles broadly rounded. *Carex communis*
 10 Body of the perigynium ellipsoid, distinctly longer than wide; achene angles narrow to slightly rounded.
 18 Plants with conspicuously long rhizomes, forming clonal patches; perigynia typically papillate; [collectively of the Coastal Plain and, less commonly, Piedmont].
 19 Achene body (1.1-) 1.2-1.3 (-1.4) mm long, trigonous; fertile culms 20-43 cm tall, equaling or exceeding the leaves; basal sheaths usually not fibrillose; pistillate scales (2.3-) 2.6-3.0 (-3.4) mm long. *Carex albicans* var. *australis*
 19 Achene body (1.4-) 1.5-1.7 (-2.0) mm long, biconvex, trigonous, or both; fertile culms 7-17 cm tall, usually much shorter than the leaves; basal sheaths usually very fibrillose; pistillate scales (2.7-) 3.0-3.7 (-4.2) mm long. *Carex floridana*
 18 Plants caespitose (sometimes loosely so from slender rhizomes in *C. novae-angliae* and *C. peckii*); perigynia papillae not evident to rather conspicuous; [collectively widespread in our area].
 22 Achene body (1.3-) 1.4-1.6 (-1.7) mm long; fertile culms mostly 2-20 cm tall; pistillate scales 2.6-4.3 mm long.

 (see introduction for more)

N : no X : extirpated
 P : planted
 ? : questionable

- 23 Culms usually variable in length, (4.5-) 6.6-38 (-51) cm tall; widest leaf (1.9-) 2.3-4.5 mm wide; at least some pistillate scales often with reddish to purplish/black color below the distal tip extending laterally from near the margin to the green or brown longitudinal mid-stripe on either side of midvein..... *Carex nigromarginata*
- 23 Culms subequal in length, height 1.9-9.9 (-13.7) cm tall, widest leaf 1.2-2.2 (-2.5) mm wide; any reddish color on pistillate scales below the distal tip not extending laterally from near the margin to the green or brown longitudinal mid-stripe on either side of midvein..... *Carex reznicekii*
- 22 Achene body (0.9-) 1.2-1.3 (-1.5) mm long; fertile culms mostly 17-35 cm tall; pistillate scales 2.0-3.4 mm long.
- 24 Scales of the median portion of the staminate spike with obtuse apices and with minute teeth rarely present on the midrib; staminate spike (7.8-) 8.0-12.5 (-13.5) mm long with peduncles mostly 1.0-6.0 mm; culms erect, subequal to the leaves; [mostly of loamy or clayey soils of the Piedmont and Mountains]..... *Carex albicans* var. *albicans*
- 24 Scales of the median portion of the staminate spike with acute-acuminate to aristate apices and with minute teeth usually present on the midrib; staminate spike (1.6-) 3.6-8.5 (-9.1) mm long with peduncles mostly 0.3-1.9 mm, exceeding uppermost pistillate spikes by 1.1-5.9 mm; culms lax to erect, often shorter than and curving under the leaves; [mostly of acid, sandy soils of the Coastal Plain]..... *Carex emmonsii*

[26ddd] Section 41 *Pictae* - section *Pictae*

- 1 Plants monoecious, with 3-8 spikes per stem; leaf blades 4-8 mm wide, glaucous on the upper surface; [of the East Gulf Coastal Plain, east to sw. GA and Panhandle FL]..... *Carex baltzellii*
- 1 Plants dioecious, with a single unisexual spike per stem; leaf blades 2-4.5 mm wide, green on the upper surface; [of areas west of area, east to c. TN and nc. GA] *Carex picta*

[26kkk] Section 44 *Phyllostachyae* - section *Phyllostachyae*

- 3 Achenes subglobose, 1-1.5× as long as wide; staminate scales more or less truncate..... *Carex jamesii*
- 3 Achenes ellipsoid, 1.5-2.0× as long as wide; staminate scales obtuse to acute.
- 6 Tallest culm 0.18-0.38× as tall as plant; perigynia (7.0-) 7.5-10.8 mm long; perigynium beaks (3.6-) 4.1-6.4 mm long; culms erect; peduncles usually erect to spreading..... *Carex superata*
- 6 Tallest culm 0.41-0.87× as tall as plant; perigynia 4.5-8.0 mm long; perigynium beaks 1.7-4.3 mm long; culms erect to spreading; peduncles usually widely spreading to nodding.
- 7 Longest staminate portion of terminal spikes 12.7-25.6 mm long; perigynia 5.8-8.0 mm long; perigynium beaks 2.5-4.3 mm long; achenes (2.4-) 2.6-3.4 mm long..... *Carex basiantha*
- 7 Longest staminate portion of terminal spikes 4.9-5.7 (-6.5) mm long; perigynia 4.5-5.7 (-6.5) mm long; perigynium beaks 1.7-2.6 (-2.8) mm long; achenes 1.8-2.6 mm long..... *Carex willdenowii*

***Carex abscondita* Mackenzie.** THICKET SEDGE. **Hab:** Bottomlands, other mesic forests, seepage swamps. **Dist:** MA south to Panhandle FL, west to TX and OK, and scattered inland. **Phen:** Apr-Jun. **Tax:** *C. abscondita* is highly variable and needs additional study. Notably, a second species, *C. magnifolia* Mackenzie, has sometimes been recognized. *C. magnifolia* differs morphologically from *C. abscondita* in its larger perigynia, longer leaves, and much more strongly glaucous leaves; it has a more southern distribution and occurs in wetter, boggy habitats in a more restricted range (NC to FL, and disjunct inland in Henderson Co. NC). Manhart (1984) found that *C. magnifolia* differed chemically from *C. abscondita*. Further study is needed to verify its taxonomic status. **Comm:** Naczi (1999b) reports a chromosome number of $n = 24$. **Syn:** = Ar, ETx1, FNA23, K1, K3, K4, Mo1, NcTx, NE, NY, Pa, Tn, Va, W, WH3; < *Carex abscondita* Mackenzie – C, G, RAB; > *Carex abscondita* Mackenzie – S, Mackenzie (1931-1935); > *Carex abscondita* var. *abscondita* – F; > *Carex abscondita* var. *rostellata* Fernald – F; > *Carex magnifolia* Mackenzie – S, Mackenzie (1931-1935).

***Carex alata* Torrey.** BROAD-WINGED SEDGE. **Hab:** Bottomland forests, beaver ponds, oligohaline tidal marshes, other freshwater marshes, depression ponds. **Dist:** NH, MI, and MO south to c. peninsular FL and TX. **Phen:** May-Jun. **Syn:** = Ar, C, ETx1, F, FNA23, G, GW1, K1, K3, K4, Mi, Mo1, NE, NY, Pa, RAB, Tn, Tx, Va, W, WH3; < *Carex alata* Torrey – S.

***Carex albicans* Willdenow ex Sprengel var. *albicans*.** WHITE-TINGED SEDGE, ARCHITECTURAL SEDGE. **Hab:** Dry woodlands, forests, and clearings. **Dist:** ME west to IL, and OK, south to DE, NC, SC, n. GA (Jones & Coile 1988), TN, and MO. **Phen:** Apr-May. **Syn:** = Ar, C, FNA23, K1, K3, K4, Mi, Mo1, NE; = *Carex albicans* – NY, Pa, Tn, Va; = *Carex artitecta* Mackenzie – GrPl, RAB, W, Mackenzie (1931-1935); = *Carex nigro-marginata* Schweinitz var. *muhlenbergii* (A. Gray) Gleason – G; > *Carex artitecta* var. *subtilirostris* F.J. Hermann – F; < *Carex varia* Muhlenberg ex Willdenow – S.

***Carex albicans* Willdenow ex Sprengel var. *australis* (L.H. Bailey) J. Rettig.** SOUTHERN WHITE-TINGED SEDGE, BELLOW'S-BEAK SEDGE. **Hab:** Dry woodlands. **Dist:** Se. VA south to ne. FL and FL Panhandle, west to AR, OK, TX, and Mexico. **Phen:** Apr-May. **Syn:** = Ar, ETx1, FNA23, K1, K3, K4, Mo1, NcTx, WH3; = *Carex emmonsii* Dewey ex Torrey var. *muhlenbergii* (A. Gray) J. Rettig – Rettig (1989a); = *Carex nigromarginata* Schweinitz var. *muhlenbergii* (A. Gray) Gleason; = *Carex physorhyncha* Liebmann ex Steudel – F, RAB, S, Tn, Tx, Va, W, Mackenzie (1931-1935), misapplied; = *Carex varia* Muhlenberg ex Willdenow; > *Carex artitecta* Mackenzie var. *artitecta*; > *Carex artitecta* Mackenzie var. *subtilirostra* F.J. Hermann.

***Carex albolutescens* Schweinitz.** GREENISH-WHITE SEDGE. **Hab:** Low fields, bottomlands. **Dist:** MA, NY, WI, and MO, south to Panhandle FL and TX. **Phen:** May-Jun. **Syn:** = Ar, C, ETx1, F, FNA23, GrPl, K1, K3, K4, Mi, Mo1, NcTx, NE, NY, Pa, Tn, Tx, Va, WH3; < *Carex albolutescens* Schweinitz – G, GW1, RAB, W; ? *Carex straminea* Willdenow ex Schkuhr, misapplied.

Carex albursina E. Sheldon. WHITE BEAR SEDGE. **Hab:** Nutrient-rich cove forests (and less commonly in drier forests), over mafic or calcareous rocks. **Dist:** VT and s. QC west to MN, south to SC (P. McMillan pers. comm. 2003, specimen at CLEMS), nw. GA, MS (Dorey & Bryson 2016), and AR. **Phen:** Apr-Jun. **Comm:** Naczi (1999b) reports a chromosome number of $n = 22$. **Syn:** = Ar, C, F, FNA23, GrPl, K1, K3, K4, Mi, Mo1, NE, NY, Pa, RAB, S, Tn, Va, W, Mackenzie (1931-1935); = *Carex laxiflora* var. *latifolia* F. Boott – G. NatureServe G5 (Secure).

Carex amphibola Steudel. EASTERN NARROWLEAF SEDGE. **Hab:** Moist loamy forests, bottomlands, slopes, uplands. **Dist:** MA, s. ON, MI, IL, MO, and OK, south to GA, AL, MS, LA, and TX. **Phen:** May-Jun. **Syn:** = Ar, ETx1, FNA23, G, K3, K4, Mi, Mo1, NE, NY, Pa, RAB, S, Tn, Va, Mackenzie (1931-1935); = *Carex amphibola* var. *amphibola* – F, K1, Ward (2012a); < *Carex amphibola* Steudel – GW1, Tx; > < *Carex bulbostylis* Mackenzie, misapplied.

Carex annectens (E.P. Bicknell) E.P. Bicknell. YELLOW-FRUITED SEDGE. **Hab:** Marshes, bottomland forests, drier forests and woodlands. **Dist:** S. ME west to MN, south to FL and TX. **Phen:** Jul-Aug. **Comm:** See Cusick (1996). **Syn:** = Ar, ETx1, FNA23, K1, K3, K4, Mi, NE, NY, Pa, RAB, S, Tn, Va, W; = *Carex vulpinoidea* var. *ambigua* – C; > *Carex annectens* (E.P. Bicknell) E.P. Bicknell – Mackenzie (1931-1935); > *Carex annectens* var. *annectens* – F, G, GrPl, Mo1; > *Carex annectens* (E.P. Bicknell) E.P. Bicknell var. *xanthocarpa* (Küenthall) Wiegand – F, G, GrPl, Mo1; > *Carex brachyglossa* Mackenzie – Mackenzie (1931-1935); < *Carex vulpinoidea* Michaux – GW1, Tx, WH3.

Carex atlantica L.H. Bailey. PRICKLY BOG SEDGE. **Hab:** Bogs and seepages. **Dist:** NS west to MI and nw. IN, south to ne. FL, Panhandle FL, and e. TX. **Phen:** May-Jun. **Tax:** Reznicek & Ball (1980) found the distinction of *C. incompta* from *C. atlantica* to be untenable. Intermediates between *C. atlantica* and *C. howei* (often treated as *C. atlantica* ssp. *capillacea*) occur in portions of their ranges, especially in the southern Coastal Plain. In most other areas they are sharply distinct, and sometimes grow together (as in the mountains of our area and farther north) with no evidence of intergradation or hybridization. I prefer to treat them at the species level. **Syn:** = GW1, Va; = *Carex atlantica* ssp. *atlantica* – Ar, FNA23, K1, K3, K4, Mi, Mo1, NE, NY, Pa, Tn, WH3; = *Carex atlantica* var. *atlantica* – C, ETx1; < *Carex atlantica* L.H. Bailey – Tx; > *Carex atlantica* L.H. Bailey – F, G, RAB, S, W, Mackenzie (1931-1935); > *Carex atlantica* L.H. Bailey var. *incompta* (E.P. Bicknell) F.J. Hermann; > *Carex incompta* E.P. Bicknell – F, G, RAB, S, W, Mackenzie (1931-1935).

Carex aureolensis Steudel. SOUTHERN FRANK'S SEDGE, BROAD-SCALED SEDGE, GOLDEN CATTAIL SEDGE. **Hab:** Floodplain forests and marshes. **Dist:** VA, KY, IL, and NE south to n. peninsular FL, Panhandle FL, TX, NM, Coahuila, and Nuevo León; South America. **Phen:** May-Jul. **ID Notes:** Recognizably different in gestalt from *Carex frankii* by its more rhizomatous habit and obviously smaller and less "bristly" spikelets (the pistillate scales often shorter than the spikelets, so fewer things "sticking out"). **Syn:** = Ar, FNA23, K4, Tn; < *Carex frankii* Kunth – C, ETx1, F, G, GW1, K1, K3, RAB, S, Tx, W, WH3, Mackenzie (1931-1935).

Carex austrina Mackenzie. SOUTHERN SEDGE. **Hab:** Dry calcareous prairies, meadows, and forests, also roadsides, apparently introduced eastwards with hay and/or seed mixes used for erosion control. **Dist:** Native from IA and NE south to LA and TX; more eastern occurrences are at least in part introduced. **Phen:** May. **Comm:** First reported for areas east of the Mississippi by Bryson et al. (1996). Reported for DE (Longbottom, Naczi, & Knapp 2016). **Syn:** = Ar, ETx1, F, FNA23, K1, K3, K4, Mo1, NcTx, Tn, Mackenzie (1931-1935); = *Carex muhlenbergii* var. *australis* Olney – C, G, GrPl; = *Carex muhlenbergii* var. *austrina* Small; < *Carex muhlenbergii* – S, Tx. NatureServe G4? (Apparently Secure).

Carex baltzellii Chapman. BALTZELL'S SEDGE. **Hab:** Steepheads, beech-magnolia slopes, and mesic to dry-mesic hammocks. **Dist:** Sw. GA and Panhandle FL west to s. AL and s. MS. **Syn:** = FNA23, K1, K3, K4, S, WH3, Mackenzie (1931-1935). NatureServe G3 (Vulnerable).

Carex basiantha Steudel. SOUTHERN WILDENOW'S SEDGE, WIDOW SEDGE. **Hab:** Mesic forests, bottomlands, and lower slopes, over calcareous rocks or sediments. **Dist:** Se. NC south to n. peninsular FL, Panhandle FL, west to e. TX, and north to nw. GA, c. TN, and c. AR. **Phen:** Apr-Jun. **Syn:** = Ar, ETx1, FNA23, K1, K3, K4, NcTx, Tn, WH3; < *Carex willdenowii* – S, Tx, orthographic variant; < *Carex willdenowii* Schkuhr ex Willdenow – RAB; < *Carex willdenowii* Schkuhr ex Willdenow var. *megarrhyncha* Hermann; ? *Carex willdenowii* var. *pauciflora* Olney ex L.H. Bailey in J.M. Coulter.

Carex blanda Dewey. EASTERN WOODLAND SEDGE, CHARMING SEDGE. **Hab:** Cove forests, bottomlands, and other mesic, nutrient-rich forests. **Dist:** ME and s. QC west to ND, south to c. GA (Jones & Coile 1988), n. peninsular FL, Panhandle FL, and TX. **Phen:** Apr-Jun. **Tax:** Naczi (1999b) reports chromosome numbers of $n = 15-18$. **Syn:** = Ar, C, ETx1, F, FNA23, GrPl, K1, K3, K4, Mi, Mo1, NcTx, NE, NY, Pa, RAB, S, Tn, Tx, Va, W, WH3, Mackenzie (1931-1935); = *Carex laxiflora* var. *blanda* (Dewey) F. Boott – G. NatureServe G5 (Secure).

* **Carex breviculmis** R. Brown. BLUE SEDGE. **Hab:** Cemeteries, lawns, disturbed areas. **Dist:** Native of e. Asia, se. Asia, and Australia. **Comm:** See Majure & Bryson (2008) for additional information. **Syn:** = K4.

E. and se. Asia

Carex brevior (Dewey) Mackenzie ex Lunell. SHORTBEAK SEDGE. **Hab:** Prairies, dry forests, and woodland margins. **Dist:** ME west to BC, south to n. GA, c. TN, MS, TX, Tamaulipas, and AZ. **Phen:** May-Jun. **Syn:** = Ar, ETx1, F, FNA23, G, GrPl, K1, K3, K4, Mi, Mo1, NcTx, NE, NY, Pa, Tn, W; < *Carex brevior* (Dewey) Mackenzie ex Lunell – C; < *Carex festucacea* Schkuhr ex Willdenow – GW1, RAB; < *Carex festucacea* Schkuhr ex Willdenow var. *brevior* (Dewey) Fernald; < *Carex reniformis* (L.H. Bailey) Small – Tx.

Carex bromoides Willdenow *ssp. bromoides*. COMMON BROME SEDGE. **Hab:** Swamp forests, bogs, seeps, hydric hammocks, other wetlands, often associated with base-rich soils. **Dist:** *Ssp. bromoides* ranges from NB west to e. MN, south to c. peninsular FL and e. TX; disjunct in s. Mexico. **Phen:** Feb-Jul. **Comm:** Naczi (1999b) reports a chromosome number of $n = 32-34$. **Syn:** = Ar, FNA23, K1, K3, K4, Mo1, NE, NY, Tn, Va; = *Carex bromoides* var. *bromoides* – Pa; < *Carex bromoides* – C, ETx1, F, G, GW1, Mi, RAB, S, W, WH3, Mackenzie (1931-1935). *NatureServe* G5T5 (Secure).

Carex bulbostylis Mackenzie. GLOBOSE SEDGE. **Hab:** Moist deciduous forests, prairies, open meadows, especially in calcareous areas. **Dist:** MS west to TX and OK; disjunct in sw. TN. **Phen:** Apr-May. **Comm:** Reports for GA in Jones & Coile (1988) are based on misidentifications. **Syn:** = Ar, ETx1, FNA23, K1, K3, K4, NcTx, Tn; = *Carex amphibola* Steudel var. *globosa* (L.H. Bailey) L.H. Bailey; < *Carex amphibola* Steudel – Tx.

Carex bullata Schkuhr ex Willdenow var. *greenii* (Boeckeler) Fernald. GREENE'S SEDGE. **Hab:** Highly acidic wetlands, primarily in the Coastal Plain. **Dist:** NS south to e. GA, with scattered outliers inland, as in OH, w. NC, ne. TN, Eastern Highland Rim of TN, ne. MS, and AR. **Phen:** May-Jun. **Tax:** See Poindexter & Weakley (2018b) for detailed discussion. **Syn:** = Poindexter & Weakley (2018b) in Weakley et al (2018a); = *Carex bullata* var. *greenii* – G, K4, orthographic variant; < *Carex bullata* Schkuhr ex Willdenow – Ar, C, F, FNA21, GW1, K1, K3, NE, NY, Pa, S, Tn, Va.

Carex bushii Mackenzie. BUSH'S SEDGE. **Hab:** Moist to wet (rarely dry) prairies, meadows, fields, and alluvial areas, usually in moderately to strongly base-rich soils. **Dist:** MA and s. NY west to MO and KS, south to NC, sw. NC (Bradley et al. [in prep.]), GA (Jones & Coile 1988), MS, and TX; disjunct in MI. **Phen:** May-Jun. **Syn:** = Ar, C, ETx1, F, FNA23, G, GrPl, K1, K3, K4, Mi, Mo1, NcTx, NE, NY, Pa, RAB, S, Tn, Tx, Va, W, Mackenzie (1931-1935); ? *Carex caroliniana* Schweinitz var. *cuspidata* (Dewey) Shinnars. *NatureServe* G4 (Apparently Secure).

Carex caroliniana Schweinitz. CAROLINA SEDGE. **Hab:** Floodplain forests, depression swamps, less commonly in mesic to dry-mesic forests. **Dist:** NJ, PA, MO, and OK south to SC, e. GA, and TX; apparently disjunct in Panhandle FL and adjacent sw. GA. **Phen:** Apr-Jun. **Syn:** = Ar, C, ETx1, F, FNA23, G, GrPl, GW1, K1, K3, K4, Mo1, NcTx, NY, Pa, RAB, S, Tn, Tx, Va, W, WH3, Mackenzie (1931-1935). *NatureServe* G5 (Secure).

Carex cephalophora Muhlenberg ex Willdenow. OVAL-LEAVED SEDGE. **Hab:** Mesic to dry forests, especially oak-hickory forests. **Dist:** ME west to MN, south to Panhandle FL and TX. **Phen:** (Late Mar-) May-Jul. **Syn:** = Ar, ETx1, F, FNA23, K1, K3, K4, Mi, Mo1, NcTx, NE, NY, Pa, S, Tn, Mackenzie (1931-1935); = *Carex cephalophora* var. *cephalophora* – C, G, GrPl; < *Carex cephalophora* Muhlenberg ex Willdenow – RAB, Tx, W, WH3.

Carex cherokeensis Schweinitz. CHEROKEE SEDGE, WOLFTAIL SEDGE. **Hab:** Predominantly in moist, rich, calcareous or subcalcareous forests, though introduced populations are not restricted to such settings. **Dist:** Se. NC, nw. SC, sw. NC, nc. TN, se. MO, and OK, south to n. peninsular FL, Panhandle FL, and west to e. TX and se. OK; disjunct in the Mountains of VA, where perhaps introduced (Belden et al. 2004). **Phen:** Apr-Jun. **Syn:** = Ar, ETx1, FNA23, G, GW1, K1, K3, K4, Mo1, NcTx, RAB, S, Tn, Tx, Va, W, WH3, Mackenzie (1931-1935). *NatureServe* G4G5 (Apparently Secure).

Carex communis L.H. Bailey. FIBROUS-ROOTED SEDGE. **Hab:** Dry woodlands and forests, bluffs, rich forests, streambanks. **Dist:** PE west to MN, south to n. SC, c. GA (Jones & Coile 1988), and AR. **Phen:** May-Jun. **Tax:** *Carex amplisquama* F.J. Hermann was originally described to include plants with longer beak teeth and pistillate scales than typical *C. communis*. Despite considerable cytogenetic and morphological variation with this species, current molecular sampling across its range does not reveal significant patterns that would justify taxonomic recognition of segregate taxa. Additional study is needed. **Syn:** = C, F, G, Mi, RAB, S, Tn, Va, Mackenzie (1931-1935); > *Carex amplisquama* F.J. Hermann – W; > *Carex communis* L.H. Bailey – W; > *Carex communis* L.H. Bailey var. *amplisquama* (F.J. Hermann) J. Rettig – FNA23, K1, K3, K4; > *Carex communis* var. *communis* – Ar, FNA23, K1, K3, K4, Mo1, NE, NY, Pa.

Carex comosa F. Boott. BOTTLEBRUSH SEDGE, BRISTLY SEDGE. **Hab:** Tidal freshwater and oligohaline marshes, tidal and alluvial swamps, calcareous spring marshes, beaver wetlands, and ditches and other wet disturbed areas. **Dist:** QC west to MN, south to s. FL, LA, se. OK (Hoagland & Buthod 2012), and ne. TX; also in w. North America. **Phen:** Apr-Jun. **Syn:** = Ar, C, ETx1, F, FNA23, G, GrPl, GW1, K1, K3, K4, Mi, Mo1, NE, NY, Pa, RAB, S, Tn, Va, W, WH3, Mackenzie (1931-1935). *NatureServe* G5 (Secure).

Carex complanata Torrey & Hooker. HIRSUTE SEDGE. **Hab:** Bottomland forests and swamps, depression swamps, drier barrens. **Dist:** NJ and s. PA south to n. peninsular FL and Panhandle FL, west to TX and MO; apparently disjunct in AZ. **Phen:** May-Jun. **Syn:** = ETx1, F, FNA23, GrPl, K1, K3, K4, Mo1, NcTx, S, Tn, Tx, Va, Mackenzie (1931-1935); = *Carex complanata* var. *complanata* – C, G; < *Carex complanata* Torrey & Hooker – GW1, RAB, W, WH3, (also see *C. hirsutella*).

Carex corrugata Fernald. PRUNE-FRUITED SEDGE. **Hab:** Large-stream and river bottomlands, wet calcareous forests. **Dist:** Se. VA, KY, and s. OH south to Panhandle FL and AL, west to TX. **Phen:** May-Jun. **Comm:** See Hill (1992). **Syn:** = Ar, ETx1, F, FNA23, K1, K3, K4, Mo1, NcTx, Tn, Va, WH3; < *Carex amphibola* Steudel – GW1, Tx; ? *Carex amphibola* Steudel var. *turgida* Fernald; < *Carex grisea* Wahlenberg – G, RAB, S, Mackenzie (1931-1935).

Carex crawei Dewey. CRAWE'S SEDGE. **Hab:** Calcareous barrens, usually in gravelly areas with ephemeral or periodic seepage. **Dist:** QC west to BC, south to NJ, w. VA, c. TN, AL, AR, OK, CO, and AZ. First reported for VA by Ludwig (1999). **Tax:** Naczi (1999b) reports a chromosome number of $n = 30$. **Syn:** = Ar, C, F, FNA23, G, GrPl, K1, K3, K4, Mi, Mo1, NE, NY, S, Tn, Va, Mackenzie (1931-1935). *NatureServe* G5 (Secure).

IL south to c. NC, c. SC, c. GA, sc. AL, e. MS, and w. TN; disjunct in nw. AR. **Phen:** May-Jul; Jun-Aug. **Syn:** = FNA23, K4, Tn, Va; < *Carex abscondita* Mackenzie – Ar, C, G, K1, K3, Pa, RAB, S, W, Mackenzie (1931-1935); < *Carex abscondita* var. *abscondita* – F.

Carex dasycarpa Muhlenberg. VELVET SEDGE. **Hab:** Maritime forests, hammocks, other sandy forests. **Dist:** E. SC south to n. peninsular FL, west to MS. Gaddy & Rayner (1980) report this species from a number of barrier islands in Beaufort and Charleston counties, SC; it has since been found in Georgetown County, SC, as well. **Phen:** May-Jun. **Syn:** = FNA23, K1, K3, K4, RAB, S, WH3, Mackenzie (1931-1935). NatureServe G4? (Apparently Secure).

Carex debilis Michaux. WHITE-EDGED SEDGE, WEAK SEDGE. **Hab:** Swamps, bogs, other moist to wet habitats. **Dist:** MA west to s. IN, south to n. peninsular FL, Panhandle FL, and TX. **Phen:** May-Aug. **Comm:** For other taxa often treated as varieties of *C. debilis*, see *C. allegheniensis* and *C. flexuosa*. **Syn:** = NcTx, S, Tn, Tx, Va, Mackenzie (1931-1935); = *Carex debilis* var. *debilis* – Ar, C, F, FNA23, G, K1, K3, K4, Mi, Mo1, NE, NY, Pa, RAB; < *Carex debilis* Michaux – ETx1, GW1, W, WH3.

Carex decomposita Muhlenberg. CYPRESS-KNEE SEDGE, EPIPHYTIC SEDGE. **Hab:** Blackwater swamp forests, often growing on cypress knees, cypress bases, or fallen logs (often at or near water level), river sloughs, beaver marshes, less typically inland in sloughs or in depressions in bedrock river scour. **Dist:** NY west to MI, south to sw. GA (Jones & Coile 1988), Panhandle FL, and TX; rarely disjunct inland from the Coastal Plain, especially in river sloughs or beaver marshes (Bradley et al. [in prep.]). **Phen:** Apr-Jul. **Comm:** See Gaddy & Rayner (1980). **Syn:** = Ar, C, ETx1, F, FNA23, G, GW1, K1, K3, K4, Mi, Mo1, NY, RAB, S, Tn, Tx, Va, WH3, Mackenzie (1931-1935). NatureServe G3G4 (Vulnerable).

Carex digitalis Willdenow var. **digitalis**. SLENDER WOODLAND SEDGE. **Hab:** Mesic to dry forests. **Dist:** ME west to WI, south to FL and e. TX. **Phen:** Apr-Jun. **Comm:** Naczi (1999b) reports a chromosome number of $n = 24$. **Syn:** = Ar, FNA23, K1, K3, K4, NE, NY, Tn, Va; < *Carex digitalis* – C, F, G, Mi, Mo1, Pa, RAB, S, Tx, W, WH3, Mackenzie (1931-1935). NatureServe G5T5 (Secure).

Carex digitalis Willdenow var. **floridana** (L.H. Bailey) Naczi & Bryson. SOUTHERN SLENDER WOODLAND SEDGE. **Hab:** Rich forests. **Dist:** MD south to FL, west to TX. **Phen:** Apr-Jun. **Tax:** Perhaps warranting species rank (C. Bryson, pers. comm., 2019). **Comm:** Naczi (1999b) reports a chromosome number of $n = 24$. **Syn:** = Ar, ETx1, FNA23, K3, K4, Va; = *Carex digitalis* var. *asymmetrica* Fernald – F, K1; < *Carex digitalis* – C, G, RAB, S, Tx, W, WH3, Mackenzie (1931-1935). NatureServe G5T4T5 (Apparently Secure).

Carex digitalis Willdenow var. **macropoda** Fernald. LONG-SPIKED SLENDER WOODLAND SEDGE. **Hab:** Moist to dry forests. **Dist:** PA and IL south to FL and TX. **Phen:** Apr-Jun. **Tax:** Perhaps warranting species rank (C. Bryson, pers. comm., 2019). **Comm:** Naczi (1999b) reports a chromosome number of $n = 24$. **Syn:** = Ar, ETx1, FNA23, K1, K3, K4, Tn, Va; = *Carex macropoda* (Fernald) Mohlenbrock – IL; < *Carex digitalis* – C, F, G, Mo1, Pa, RAB, S, Tx, W, WH3, Mackenzie (1931-1935). NatureServe G5TNR (Not Yet Ranked).

Carex elliotii Schweinitz & Torrey. ELLIOTT'S SEDGE. **Hab:** Bogs. **Dist:** E. NC south to c. pen. FL and west to s. AL. **Phen:** May-Jun. **Syn:** = FNA23, GW1, K1, K3, K4, RAB, S, WH3, Mackenzie (1931-1935). NatureServe G4? (Apparently Secure).

Carex emmonsii Dewey ex Torrey. EMMONS'S SEDGE. **Hab:** Longleaf pine sandhills, maritime forests, moist pine flatwoods, mesic upland forests, sandy woodlands. **Dist:** NS west to ON and WI, south to SC, GA, AL, MS, and AR. **Phen:** Apr-May. **Syn:** = F, NY, Pa, RAB, Tn, Va, W; = *Carex albicans* – Mackenzie (1931-1935), misapplied; = *Carex albicans* Willdenow ex Sprengel var. *emmonsii* (Dewey ex Torrey) J. Rettig – C, FNA23, K1, K3, K4, Mi, NE, Rettig (1989a); = *Carex nigro-marginata* Schweinitz var. *minor* (F. Boott) Gleason – G; < *Carex varia* Muhlenberg ex Willdenow – S.

Carex exilis Dewey. MEAGER SEDGE, EXILED SEDGE. **Hab:** Peaty seepage bogs. **Dist:** NL (Newfoundland) and NL (Labrador) west to ON and n. MN, south to NJ, DE, MD, NY, n. MI, n. WI, and n. MN; disjunct southward in the Atlantic Coastal Plain of sc. NC and in the Gulf Coastal Plain of se. MS and sw. AL. The southern occurrences are remarkably disjunct from the Canadian, northern Coastal Plain, and Great Lakes distribution. **Phen:** May-Jun. **Syn:** = C, F, FNA23, G, K1, K3, K4, Mi, NE, NY, RAB, Mackenzie (1931-1935). **NatureServe** G5 (Secure).

Carex festuacea Schkuhr ex Willdenow. FESCUE SEDGE. **Hab:** Bottomland forests, depression ponds and swamps, wet meadows. **Dist:** VT west to MN, south to GA, Panhandle FL, AL, MS, LA, and TX. **Phen:** Apr-Jun. **Syn:** = Ar, C, ETx1, F, FNA23, GrPl, K1, K3, K4, Mi, Mo1, NcTx, NE, NY, Pa, Tn, Va, WH3; < *Carex festuacea* Schkuhr ex Willdenow – G, GW1, RAB, W, (also see *C. straminea*).

Carex fissa Mackenzie var. *aristata* F.J. Hermann. HAMMOCK SEDGE. **Hab:** Wet pine savannas, roadside banks and ditches. **Dist:** Extreme se. SC (Jasper Co.), s. GA (Clinch County) (Carter, Baker, & Morris 2009; Sorrie 1998b) south to c. peninsular FL, west to FL Panhandle and s. MS (Bryson et al. 1996). **Comm:** Probably a species distinct from *C. fissa*. **Syn:** = FNA23, GW1, K1, K3, K4, WH3; < *Carex fissa* – Mackenzie (1931-1935). **NatureServe** G4?T4? (Apparently Secure).

Carex fissa Mackenzie var. *fissa*. WESTERN HAMMOCK SEDGE. **Hab:** Prairie depressions, eastwards introduced in disturbed areas, including roadside ditches, sediment control ponds, and old railroad stockyards (well-established). **Dist:** S. IL, MO, se. KS, and OK south to AR and se. TX. **Phen:** May-Jun. **Comm:** See Simmons, Strong, & Parrish (2008) for additional information about the VA occurrence, and Knapp et al. (2011) and Longbottom, Naczi, & Knapp (2016) about the MD and DE occurrences. **Syn:** = Ar, FNA23, K1, K3, K4, Mo1; = *Carex fissa* – GrPl; < *Carex fissa* – ETx1, NcTx, Mackenzie (1931-1935). **NatureServe** G4?T3T4 (Vulnerable).

Carex flaccosperma Dewey. MEADOW SEDGE. **Hab:** Mesic forests, well-drained bottomlands. **Dist:** Se. VA south to Panhandle FL, west to TX, north in the interior to s. MO and IL. **Phen:** Mar-Jun. **Comm:** {distribution and abundance needing additional herbarium investigation}. **Syn:** = Ar, ETx1, FNA23, IL, K1, K3, K4, Mo1, NcTx, Tn, Va; = *Carex flaccosperma* var. *flaccosperma* – F, Ward (2012a); < *Carex flaccosperma* Dewey – C, G, GW1, RAB, S, Tx, WH3, Mackenzie (1931-1935). **NatureServe** G5TNR (Not Yet Ranked).

Carex floridana Schweinitz. FLORIDA SEDGE. **Hab:** Mesic hammocks, dry hammocks, maritime forests. **Dist:** S. NJ south to c. peninsular FL, west to TX. See McAvoy (2021) for discussion of the occurrence of this species in NJ, MD, DE, and VA. **Phen:** (Feb-) Mar-May. **Syn:** = FNA23, K1, K3, K4, S, Va, Mackenzie (1931-1935), Sorrie et al (2011); = *Carex nigromarginata* Schweinitz var. *floridana* (Schweinitz) Kükenthal – Ar, ETx1, F, Mo1, RAB, Tx, WH3. **NatureServe** G5? (Secure).

Carex frankii Kunth. FRANK'S SEDGE, CATTAIL SEDGE. **Hab:** Bottomland forests, other wet to moist forests and disturbed areas. **Dist:** W. NY and s. ON west to MI and se. NE, south to GA, AR, and OK. **Phen:** May-Jul. **Syn:** = Ar, FNA23, GrPl, K4, Mi, NY, Tn, Va; < *Carex frankii* Kunth – C, F, G, GW1, K1, K3, Mo1, NcTx, Pa, RAB, S, W, Mackenzie (1931-1935).

Carex gigantea Rudge. GIANT SEDGE. **Hab:** Swamps, bottomland forests, cypress depressions. **Dist:** DE south to s. FL, west to e. TX, north in the interior to nw. GA (Jones & Coile 1988), IN and OK. **Phen:** Jun-Jul. **Syn:** = Ar, C, ETx1, F, FNA23, G, GW1, K1, K3, K4, Mo1, RAB, S, Tn, Tx, Va, WH3, Mackenzie (1931-1935). **NatureServe** G4 (Apparently Secure).

Carex glaucescens Elliott. BLUE SEDGE, SOUTHERN WAXY SEDGE. **Hab:** Blackwater swamps, pocosins, wet pine savannas, seepage bogs, depression ponds, pondcypress savannas, other acid and peaty situations. **Dist:** E. MD south to c. peninsular FL, west to e. TX and se. OK (Buthod & Hoagland 2013); disjunct in nw. GA (Jones & Coile 1988) and c. TN. **Phen:** May-Jun. **Syn:** = Ar, C, ETx1, F, FNA23, G, GW1, K1, K3, K4, RAB, S, Tn, Tx, Va, WH3, Mackenzie (1931-1935); >> *Carex grandis* L.H. Bailey. **NatureServe** G4 (Apparently Secure).

Carex glaucoidea Tuckerman ex Olney. BLUE SEDGE. **Hab:** Prairies, upland woodlands, especially in hardpan situations with alternating wet and dry conditions. **Dist:** MA and ON west to s. IN and MO, south to NC, sc. TN, and AR. **Phen:** May-Jun. **Comm:** {distribution and abundance needing additional herbarium investigation}. **Syn:** = Ar, ETx1, FNA23, K1, K3, K4, Mo1, NcTx, NE, NY, Pa, Tn, Va; < *Carex flaccosperma* Dewey – C, GW1, RAB, Tx; < *Carex flaccosperma* Dewey var. *glaucoidea* (Tuckerman ex Olney) Kükenthal – F; < *Carex glaucoidea* Tuckerman ex Olney – G, S, Mackenzie (1931-1935). NatureServe G5T5 (Secure).

Carex gracilescens Steudel. SLENDER LOOSE-FLOWERED SEDGE. **Hab:** Moist, nutrient-rich forests, calcareous hammocks. **Dist:** VT and s. QC west to WI, south to SC, AL, LA, and e. TX; disjunct in sw. GA and Panhandle FL. **Phen:** May-Jun. **Comm:** Naczi (1999b) reports a chromosome number of $n = 17, 19, 20$. **Syn:** = Ar, F, FNA23, GrPl, K1, K3, K4, Mi, Mo1, NE, NY, Pa, RAB, S, Tn, Tx, Va, W, WH3, Mackenzie (1931-1935); = *Carex laxiflora* var. *gracillima* F. Boott – G; < *Carex gracilescens* Steudel – C, (also see C. *ormostachya*).

Carex granularis Muhlenberg ex Willdenow. LIMESTONE MEADOW SEDGE, CORNCOB SEDGE. **Hab:** Moist, nutrient-rich forests, especially bottomlands, mostly over calcareous rocks (limestone, dolostone, coquina limestone) or mafic rocks (diabase). **Dist:** ME and QC west to SK, south to GA, FL (Ward 2021), OK, and ne. TX. **Phen:** May-Jun. **Tax:** *C. haleana* Olney [= *C. granularis* var. *haleana* (Olney) Porter] is alleged to differ primarily in its more slender perigynia (1.0-1.5 mm wide vs. 1.5-2.5 mm) (see F and M for additional information). Here interpreted to include *C. haleana* Olney. Naczi (1999b) found little correlation between the morphological and cytological variability of *C. granularis*, and also little correlation of that variability with geography; he concluded that there was little support for recognition of infraspecific taxa. **Syn:** = Ar, C, ETx1, FNA23, G, K1, K3, K4, Mi, NcTx, NE, NY, Tn, Tx, Va, W; = *Carex granularis* var. *granularis* – Ward (2012a); < *Carex granularis* Muhlenberg ex Willdenow – GW1, RAB, S; > *Carex granularis* Muhlenberg ex Willdenow – Mackenzie (1931-1935); > *Carex granularis* var. *granularis* – F, GrPl, Mo1, Pa; > *Carex granularis* var. *haleana* (Olney) Porter – F, GrPl, Mo1, Pa; > *Carex haleana* Olney – Mackenzie (1931-1935).

Carex grvida L.H. Bailey. PREGNANT SEDGE, HEAVY SEDGE. **Hab:** Damp or mesic calcareous prairies, fields, pastures, roadsides. **Dist:** ON west to SK, south to TN, MS, AR, TX, and NM, rarely introduced eastward. **Phen:** (Late Apr) May-Jun. **Tax:** Two varieties or species (see synonymy) are sometimes distinguished: var *grvida* with perigynia 4-5 mm long, 2× as long as wide, nerveless or very obscurely nerved on the dorsal face, and var. *lunelliana*, with perigynia 3-4.5 mm long, 1.3-1.5× as long as wide, strongly few-nerved on the dorsal face. **Comm:** Steury (1999) reported var. *lunelliana* as new to MD (Calvert County). Reported for DE (Longbottom, Naczi, & Knapp 2016). **Syn:** = Ar, ETx1, FNA23, K3, K4, Mi, Mo1, NcTx, Va; > *Carex grvida* L.H. Bailey – Mackenzie (1931-1935); > *Carex grvida* var. *grvida* – C, F, G, GrPl, K1, Tn; > *Carex grvida* var. *lunelliana* – C, F, G, GrPl, K1, RAB, Tn; > *Carex lunelliana* Mackenzie – Mackenzie (1931-1935).

Carex grayi Carey. GRAY'S SEDGE. **Hab:** Bottomland forests, tidal swamps. **Dist:** Sw. QC west to WI and IA, south to nw. GA and OK; disjunct in Panhandle FL. **Phen:** May-Jun. **Syn:** = Ar, C, FNA23, GrPl, K1, K3, K4, Mi, Mo1, NE, NY, Pa, RAB, Tn, Va, W, WH3; = *Carex asa-grayi* L.H. Bailey – S; = *Carex grayii* – G, GW1, Mackenzie (1931-1935), orthographic variant; > *Carex grayii* var. *grayii* – F; > *Carex grayii* var. *hispidula* A. Gray – F. NatureServe G4G5 (Apparently Secure).

Carex grisea Wahlenberg. INFLATED NARROWLEAF SEDGE. **Hab:** Well-drained floodplain forests, other mesic to dry-mesic forests, especially over base-rich substrates. **Dist:** NB west to MN and SD, south to VA, TN, MS, LA, and TX. **Phen:** May-Jun. **Comm:** {habitats, distribution and abundance in our area needing additional herbarium investigation}. **Syn:** = Ar, ETx1, FNA23, K1, K3, K4, Mi, Mo1, NcTx, NE, NY, Pa, Tn, Va; = *Carex amphibola* Steudel var. *turgida* Fernald – GrPl; < *Carex amphibola* Steudel – C, GW1, Tx; < *Carex grisea* Wahlenberg – G, RAB, S, Mackenzie (1931-1935).

Carex hirsutella Mackenzie. HAIRY-LEAVED SEDGE, FUZZY SEDGE. **Hab:** Dry-mesic oak-hickory forests, other mesic to dry forests, woodlands, and barrens. **Dist:** ME, s. ON, and IA, south to GA and ne. TX. **Phen:** May-Jun. **Syn:** = Ar, F, FNA23, GrPl, K1, K3, K4, Mi, Mo1, NE, NY, Pa, S, Tn, Va, Mackenzie (1931-1935); = *Carex complanata* Torrey & Hooker var. *hirsuta* (L.H. Bailey) Gleason – C, G; < *Carex complanata* Torrey & Hooker – GW1, RAB, W.

Carex howei Mackenzie. HOWE'S SEDGE, PRICKLY BOG SEDGE. **Hab:** Bogs and seepages, often growing in *Sphagnum*. **Dist:** NS west to MI and nw. IN, south to c. peninsular FL and e. TX, predominantly (but by no means strictly) on the Coastal Plain. **Phen:** May-Jun. **Tax:** See *C. atlantica* for discussion of the relationship between the two taxa. **Syn:** = F, G, GW1, RAB, Va, W, Mackenzie (1931-1935); = *Carex atlantica* L.H. Bailey ssp. *capillacea* (L.H. Bailey) Reznicek – Ar, FNA23, K1, K3, K4, Mi, NE, NY, Pa, Tn, WH3; = *Carex atlantica* var. *capillacea* (L.H. Bailey) Cronquist – C, ETx1; = *Carex capillacea* L.H. Bailey, illegitimate; = *Carex triceps* Michaux, illegitimate; < *Carex atlantica* L.H. Bailey – Tx; > *Carex howei* Mackenzie – S; > *Carex mohriana* Mackenzie – S. NatureServe G5T5? (Secure).

Carex hyalina F. Boott. **Hab:** Bottomland forests. **Dist:** TN, AR, and OK, south to MS, LA, and TX. **Phen:** Mar-May (-Jun). **Syn:** = Ar, ETx1, FNA23, K1, K3, K4, NcTx, Tn, Tx, Mackenzie (1931-1935). NatureServe G4 (Apparently Secure).

Carex hyalinolepis Steudel. SHORELINE SEDGE. **Hab:** Tidal marshes, tidal and nontidal swamp forests. **Dist:** NJ south to Panhandle FL, west to TX, north in the interior to KS and NE; disjunct around the Great Lakes in MI, IN, and s. ON. **Phen:** May-Jun. **Syn:** = Ar, C, ETx1, F, FNA23, K1, K3, K4, Mi, Mo1, NcTx, Pa, RAB, S, Tn, Tx, Va, WH3, Mackenzie (1931-1935); = *Carex hyalinolepis* – GW1, misspelling; = *Carex lacustris* Willdenow var. *laxiflora* Dewey – G; > > *Carex riparia* M.A. Curtis, misapplied. NatureServe G4G5 (Apparently Secure).

Carex ignota Dewey. INCOGNITO SEDGE, INCOGNITO LINED SEDGE. **Hab:** Mesic slope and ravine forests, upper terraces of floodplains in bottomland hardwood forests. **Dist:** E. SC south to n. FL, west to w. TN, e. TX, and AR. **Phen:** Apr. **Tax:** See Dorey (2019) for detailed information. **Syn:** = Dorey (2019); < *Carex laxiflora* Lamarck – S; < *Carex striatula* Michaux – Ar, ETx1, FNA23, K1, K3, K4, NcTx, RAB, Tn, Tx, WH3, Mackenzie (1931-1935).

Carex impressinervia Bryson, Kral, & Manhart. **Hab:** Moist forests. **Dist:** Sc. NC south to AL and west to MS, apparently very rare and widely scattered. **Phen:** Apr-May. **Comm:** See Bryson, Kral, & Manhart (1987) for additional information on this species. **Syn:** = FNA23, K1, K3, K4. NatureServe G2 (Imperiled).

Carex intumescens Rudge var. *intumescens*. BLADDER SEDGE, PREGNANT SEDGE. **Hab:** Bogs, fens, seeps, wet forests. **Dist:** NS west to WI, south to c. peninsular FL and e. TX. **Phen:** (Mar-) May-Jul. **Comm:** See discussion of var. *intumescens* and var. *fernaldii* under *Carex intumescens* var. *intumescens*. **Syn:** = F, Tn, Medford, Poindexter, & Weakley (2021) in Weakley et al (2021), Uttal (1971); < *Carex intumescens* – Ar, C, ETx1, FNA23, G, GrPl, GW1, K1, K3, K4, Mi, Mo1, NcTx, NE, NY, Pa, RAB, S, Tx, Va, W, WH3, Mackenzie (1931-1935). NatureServe G5T5 (Secure).

Carex jamesii Schweinitz. JAMES'S SEDGE. **Hab:** Nutrient-rich bottomlands and mesic slopes over calcareous or mafic rocks. **Dist:** MD and NY west to MI, MN, and e. NE, south to c. SC, GA, and LA. **Phen:** May-Jun. **Comm:** Naczi (1999b) reports chromosome numbers of $n = 33, 35$. **Syn:** = FNA23, Mi, Mo1, NY, Pa, Tn, Va; < *Carex jamesii* Schweinitz – Ar, C, F, G, GrPl, K1, K3, K4, RAB, S, W, Mackenzie (1931-1935).

Carex joorii L.H. Bailey. JOOR'S SEDGE, HUMMOCK SEDGE, CYPRESS-SWAMP SEDGE. **Hab:** Swamps, upland depression swamps in the Piedmont, sphagnum wetlands. **Dist:** E. MD south to n. peninsular FL and Panhandle FL, west to e. TX, north in the interior to TN, MO, and OK. **Phen:** Jun-Oct. **Syn:** = Ar, C, ETx1, F, FNA23, G, GW1, K1, K3, K4, Mo1, RAB, S, Tn, Tx, Va, WH3, Mackenzie (1931-1935). NatureServe G4G5 (Apparently Secure).

Carex kraliana Naczi & Bryson. KRAL'S SEDGE. **Hab:** Mesic forests, slightly acidic to circumneutral. **Dist:** MD, WV (Vanderhorst et al. 2019), OH, and IN south to Panhandle FL and TX. **Phen:** Apr-May. **Tax:** See Naczi, Bryson, & Cochrane (2002). **Syn:** = Ar, ETx1, FNA23, K3, K4, Tn, Va, WH3. NatureServe G5 (Secure).

Carex laevivaginata (Kükenthal) Mackenzie. SMOOTH-SHEATHED SEDGE. **Hab:** Marshes, swamp forests, alluvial forests. **Dist:** MA, MI, and MN, south to Panhandle FL, AL, and MO. **Phen:** May-Jun. **Syn:** = Ar, C, F, FNA23, G, GrPl, GW1, K1, K3, K4, Mi, Mo1, NE, NY, Pa, RAB, Tn, Va, W, WH3, Mackenzie (1931-1935); = *Carex laevi-vaginata* – S, orthographic variant. NatureServe G5 (Secure).

Carex laxiflora Lamarck. BROAD LOOSE-FLOWERED SEDGE. **Hab:** In a wide range of moist to dry, acidic to nutrient-rich forests. **Phen:** May-Jun. **Tax:** Varieties have been recognized; their appropriate disposition is uncertain. Var. *laxiflora* ranges from ME and s. QC west to WI and IN, south to NC, TN, and AL; allegedly also in s. Mexico. Var. *serrulata* F.J. Hermann has been reported for our area by Hill & Horn (1997). Its range is stated by F to be NY and PA to MI, IN, and TN. It differs in being distinctly scabrous (vs. smooth to scaberulous), and in having the bract sheaths with serrulate angles (vs. entire or erose angles). **Syn:** = Ar, C, FNA23, K3, K4, Mi, NE, NY, Pa, RAB, Tn, Va, W, Mackenzie (1931-1935); ? *Carex heterosperma* Wahlenberg – S; < *Carex laxiflora* var. *laxiflora* – G; > *Carex laxiflora* var. *laxiflora* – F, K1, Mo1; > *Carex laxiflora* var. *serrulata* F.J. Hermann – F, K1.

Carex leavenworthii Dewey. LEAVENWORTH'S SEDGE. **Hab:** Dry forests, especially in sandy soils. **Dist:** NY, ON, and NE south to Panhandle FL and TX. **Phen:** May-Jun. **Comm:** Reported for DE (Longbottom, Naczi, & Knapp 2016), and considered "likely non-native" there. **Syn:** = Ar, C, ETx1, F, FNA23, G, GrPl, K1, K3, K4, Mi, Mo1, NcTx, NY, Pa, RAB, S, Tn, Va, W, Mackenzie (1931-1935); < *Carex cephalophora* Muhlenberg ex Willdenow – WH3.

Carex leptalea Wahlenberg var. *harperi* (Fernald) Weatherby & Griscom. HARPER'S SEDGE. **Hab:** Bogs, seeps, blackwater bottomlands, usually in saturated conditions with *Sphagnum* spp. **Dist:** NJ south to c. peninsular FL, west to TX, inland in the interior to IN and AR. **Phen:** May-Jun. **Comm:** Var. *harperi* is considered to differ from the typical variety in its larger perigynia, larger spikes, more aristate pistillate scales, and more southern range; it needs additional study. **Syn:** = F, G, Va; = *Carex harperi* Fernald; = *Carex leptalea* ssp. *harperi* (Fernald) W. Stone – ETx1, FNA23, K1, K3, K4; < *Carex leptalea* – Ar, C, GrPl, GW1, Pa, RAB, S, Tn, Tx, W, WH3, Mackenzie (1931-1935).

Carex lonchocarpa Willdenow. SOUTHERN LONG SEDGE. **Hab:** Pocosin margins, small blackwater stream swamps, bogs. **Dist:** S. MD south to ne. FL and Panhandle FL, west to e. TX; rarely inland, as in sc. TN. **Phen:** May-Jul. **Comm:** Recognition of *C. lonchocarpa* at the species level is supported by its distinctive achene micromorphology (Wujek & Menapace 1986). **Syn:** = ETx1, FNA23, K1, K3, K4, Tn, Va, WH3, Mackenzie (1931-1935); = *Carex folliculata* Linnaeus var. *australis* L.H. Bailey – C, F, G, RAB, Tx; = *Carex smaliana* Mackenzie – S; < *Carex folliculata* Linnaeus – GW1.

Carex longii Mackenzie. LONG'S SEDGE. **Hab:** Bogs, low fields, bottomlands. **Dist:** NS west to WI, south to s. FL and TX. **Phen:** May-Sep. **Syn:** = Ar, C, ETx1, F, FNA23, K1, K3, K4, Mi, NcTx, NE, NY, Pa, Tn, Tx, Va, WH3; < *Carex albulotescens* Schweinitz – G, GW1, RAB, W.

Carex louisianica L.H. Bailey. LOUISIANA SEDGE. **Hab:** Floodplain forests and other wet forests. **Dist:** S. NJ south to ne. FL, Panhandle FL, west to TX, north in the interior to KY, IN, and MO; disjunct in ne. OH. McAvoy (2021) documents the occurrence of the species in DE. **Phen:**

May-Jul. **Syn:** = Ar, C, ETx1, F, FNA23, G, GW1, K1, K3, K4, Mo1, NcTx, RAB, S, Tn, Va, W, WH3, Mackenzie (1931-1935); < *Carex lupulina* Muhlenberg ex Willdenow – Tx.

Carex lupuliformis Sartwell ex Dewey. UMBO SEDGE, FALSE HOP SEDGE. **Hab:** Wet forests, floodplain pools, swamps, riverbanks, especially in or around seasonal ponded areas. **Dist:** VT and QC west to se. WI, south to s. FL and e. TX. **Phen:** Jun-Jul. **Syn:** = Ar, C, ETx1, F, FNA23, G, K1, K3, K4, Mi, Mo1, NE, NY, Pa, RAB, Tn, Va, WH3, Mackenzie (1931-1935); < *Carex lupulina* Muhlenberg ex Willdenow – GW1, Tx.

Carex lupulina Muhlenberg ex Willdenow. HOP SEDGE. **Hab:** Bottomland forests, wet meadows, marshes, swamps. **Dist:** NS west to MN, south to ne. FL and e. TX. **Phen:** Jun-Sep. **Syn:** = Ar, C, ETx1, FNA23, G, GrPl, K1, K3, K4, Mi, Mo1, NcTx, NE, NY, Pa, RAB, S, Tn, Va, W, WH3, Mackenzie (1931-1935); < *Carex lupulina* Muhlenberg ex Willdenow – GW1, Tx; > *Carex lupulina* var. *lupulina* – F; > *Carex lupulina* var. *pedunculata* A. Gray – F.

Carex lurida Wahlenberg. SALLOW SEDGE. **Hab:** Bogs, fens, swamps, marshes, ditches, and other wetlands. **Dist:** NS west to MN, south to c. peninsular FL, Panhandle FL, and Mexico. **Phen:** Apr-Sep. **Syn:** = Ar, C, ETx1, F, FNA23, G, GrPl, GW1, K1, K3, K4, Mi, Mo1, NcTx, NE, NY, Pa, RAB, S, Tn, Tx, Va, WH3, Mackenzie (1931-1935). NatureServe G5 (Secure).

Carex meadii Dewey. MEAD'S SEDGE. **Hab:** Mesic to wet prairies, limestone barrens and glades, on low, moist clayey soils over mafic or ultramafic rocks (such as diabase or serpentine) or calcareous rocks. **Dist:** S. NY, NJ, MI, and SK, south to nc. SC, nw. GA, sw. LA, and se. TX. **Phen:** May-Jun. **Tax:** Naczi (1999b) reports a chromosome number of $n = 28$. **ID Notes:** The species forms large clonal patches with a distinctive bluish cast at the time of flowering and fruiting. **Syn:** = Ar, C, ETx1, F, FNA23, G, GrPl, K1, K3, K4, Mi, Mo1, NcTx, NE, NY, Pa, RAB, S, Tn, Tx, Va, W, Mackenzie (1931-1935). NatureServe G4G5 (Apparently Secure).

Carex mesochorea Mackenzie. MIDLAND SEDGE. **Hab:** Mesic to dry forests and woodlands, dry grassy areas. **Dist:** MA, ON, and NE south to GA, AL, and TX. First reported for South Carolina by Hill & Horn (1997). **Syn:** = Ar, F, FNA23, K3, K4, Mi, Mo1, NcTx, NE, NY, Pa, S, Tn, Va, Mackenzie (1931-1935); = *Carex cephalophora* Muhlenberg ex Willdenow var. *mesochorea* (Mackenzie) Gleason – C, G, GrPl; < *Carex cephalophora* Muhlenberg ex Willdenow – RAB, Tx, W.

Carex microdonta Torrey & Hooker. LITTLE-TOOTH SEDGE. **Hab:** Limestone glades, calcareous prairies. **Dist:** AL and Panhandle FL west to MO, KS, OK, TX, NM, and AZ. **Phen:** Apr-Jul. **Syn:** = Ar, ETx1, FNA23, GrPl, K1, K3, K4, Mo1, NcTx, S, Tx, WH3, Mackenzie (1931-1935). NatureServe G4 (Apparently Secure).

Carex mitchelliana M.A. Curtis. MITCHELL'S SEDGE. **Hab:** Swampy woodlands and forests, seeps. **Dist:** Se. MA west to PA and KY, south to Panhandle FL, n. AL, and sc. TN. **Phen:** May-Jun. **Comm:** This species has a scattered distribution throughout its range, and is apparently rare. Bruederle, Fairbrothers, & Hanks (1989) and Bruederle (1999) provide additional information about this species. Allozyme studies suggest that *C. mitchelliana* is less closely related to *C. gynandra*, *C. crinita* var. *crinita*, and *C. crinita* var. *brevicrinis* than they are to one another. **Syn:** = C, F, FNA23, K1, K3, K4, NE, NY, Pa, S, Tn, Va, WH3, Mackenzie (1931-1935); = *Carex crinita* Lamarck var. *mitchelliana* (M.A. Curtis) Gleason – G, GW1, RAB; < *Carex crinita* – W.

Carex molesta Mackenzie ex Bright. TROUBLESOME SEDGE. **Hab:** Dry to moist calcareous soils in calcareous glades and open woodlands. **Dist:** NH west to ND, south to VA, AL, MS, and OK. **Phen:** May-Jul. **Syn:** = Ar, F, FNA23, G, GrPl, K1, K3, K4, Mi, Mo1, NE, NY, Pa, Tn, Va; < *Carex brevior* (Dewey) Mackenzie ex Lunell – C.

Carex molestiformis Reznicek & P.E. Rothrock. FRIGHTFUL SEDGE. **Hab:** Bottomland forests, wet meadows, ditches, ravines, especially over calcareous substrates. **Dist:** W. VA, WV, s. OH, c. KY, and c. MO south to nw. NC, n. GA, c. TN, n. MS, sw. AR, and se. OK (likely to be more widespread after further study). **Phen:** May-June. **Tax:** See Rothrock, Reznicek, & Bryson (2011). **Comm:** {synonymy incomplete}. **Syn:** = Ar, FNA23, K1, K3, K4, Mo1, Tn, Va; < *Carex brevior* (Dewey) Mackenzie ex Lunell – C, G.

Carex muhlenbergii Schkuhr ex Willdenow var. *enervis* W. Boott. MUEHLENBERG'S SEDGE. **Hab:** Dry and often acidic woodlands and meadows. **Dist:** NH west to MN and NE, south to GA, AL, MS, and TX. **Phen:** Apr-May. **Syn:** = Ar, ETx1, FNA23, K1, K3, K4, Mi, Mo1, NcTx, NE, NY, Va; = *Carex muhlenbergii* var. *enervis* – F, G, GrPl, orthographic variant; = *Carex plana* Mackenzie – S, Mackenzie (1931-1935); < *Carex muhlenbergii* – Pa, RAB, Tx, W, orthographic variant; < *Carex muhlenbergii* var. *muhlenbergii* – C. NatureServe G5T5 (Secure).

Carex muhlenbergii Schkuhr ex Willdenow var. *muhlenbergii*. MUEHLENBERG'S SEDGE. **Hab:** Dry to dry-mesic hammocks and woodlands. **Dist:** ME, ON, and MN south to Panhandle FL and TX. **Phen:** Apr-May. **Syn:** = Ar, ETx1, FNA23, K1, K3, K4, Mi, Mo1, NcTx, NE, NY, Va; = *Carex muhlenbergii* – Mackenzie (1931-1935); = *Carex muhlenbergii* var. *muhlenbergii* – F, G, orthographic variant; < *Carex muhlenbergii* – Pa, RAB, S, Tx, W, WH3, orthographic variant; < *Carex muhlenbergii* var. *muhlenbergii* – C. NatureServe G5T5 (Secure).

Carex nigromarginata Schweinitz. BLACK-EDGED SEDGE. **Hab:** Dry woodlands and forests. **Dist:** DE and NJ west to WI, south to SC, GA, and TX. **Phen:** Mar-May. **Syn:** = C, FNA23, K1, K3, K4, NE, NY, Pa, Tn, Va, W, Mackenzie (1931-1935); = *Carex nigro-marginata* – S; = *Carex nigromarginata* var. *nigromarginata* – Ar, ETx1, F, Mo1, RAB; = *Carex nigro-marginata* var. *nigro-marginata* – G. NatureServe G5 (Secure).

Carex normalis Mackenzie. GREATER STRAW SEDGE. **Hab:** Mesic to wet forests, moist prairies. **Dist:** ME, QC, and ON south to GA and AR. **Phen:** May-Jul. **Syn:** = Ar, C, F, FNA23, G, GW1, K1, K3, K4, Mi, Mo1, NE, NY, Pa, RAB, Tn, Va, W. NatureServe G5 (Secure).

Carex oblita Steudel. SOUTHERN DARK GREEN SEDGE. **Hab:** Bogs, seeps, sphagnum swamps, and other wet habitats. **Dist:** NY (Long Island) and NJ south to sc. GA, west to w. LA, mostly on the Coastal Plain, but extending much less commonly inland to the Piedmont and Mountains. **Syn:** = S, Tn, Va, Mackenzie (1931-1935); = *Carex venusta* Dewey var. *minor* Böckler – C, F, G, K1; < *Carex venusta* Dewey – FNA23, GW1, K3, K4, NY, W, WH3, Muasya et al. (2009), Tucker (1987). NatureServe G4T4 (Apparently Secure).

Carex oklahomensis Mackenzie. OKLAHOMA SEDGE. **Hab:** Seepages, disturbed wetlands, roadside ditches, eastwards probably adventive. **Dist:** Se. MO west to KS, south to AR, and ne. TX; disjunct (and apparently adventive) in various scattered sites east of the Mississippi River, as in AL, MS, GA, w. NC (Graham County) and w. VA (Giles County). **Phen:** Apr-Jun. **Comm:** First reported for VA by Wieboldt et al. (1998). See Bryson & Rothrock (2010) for further discussion; they consider that this species is "introduced during highway and reservoir construction or maintenance in contaminated hay, grass seeds or on construction, maintenance, and mowing equipment." **Syn:** = Ar, ETx1, F, FNA23, GrPl, K1, K3, K4, Mo1, NE, Tn, Va, Mackenzie (1931-1935); = *Carex stipata* Muhlenberg ex Willdenow var. *oklahomensis* (Mackenzie) Gleason – G; < *Carex stipata* – S.

Carex oligocarpa Schkuhr ex Willdenow. EASTERN FEW-FRUITED SEDGE. **Hab:** Rich forests, over calcareous or mafic rocks. **Dist:** MA west to MN, south to FL and TX. *C. oligocarpa* sensu stricto is in SC (P. McMillan, pers. comm., specimen at CLEMS). **Phen:** May-Jun. **Syn:** = Ar, C, F, FNA23, G, GrPl, K1, K3, K4, Mi, Mo1, NE, NY, Pa, Tn, Tx, Va, W; = *Carex oligocarpa* var. *oligocarpa* – Ward (2012a); < *Carex oligocarpa* Schkuhr ex Willdenow – RAB, S, Mackenzie (1931-1935).

Carex opaca (F.J. Hermann) P.E. Rothrock & Reznicek. **Hab:** Prairies, eastwards in disturbed areas, such as introduced at old railroad livestock yard and well-established. **Dist:** Native of sc. United States. IL and KS south to MS, AR, and OK. **Phen:** Apr-Jul. **Syn:** = Ar, FNA23, K3, K4; = *Carex bicknellii* Britton var. *opaca* F.J. Hermann – K1, Mo1; < *Carex bicknellii* Britton – Mackenzie (1931-1935). NatureServe G5T4 (Apparently Secure).

Carex oxylepis Torrey & Hooker. SHARP-SCALED SEDGE. **Hab:** Bottomlands, calcareous forests. **Dist:** VA, KY, IL, MO, and OK south to c. peninsular FL and TX. **Phen:** Mar-Jun. **Tax:** A distinction is sometimes made between var. *oxylepis* (with glabrous perigynia) and var. *pubescens* (with pubescent perigynia). Var. *oxylepis* is widespread in the Southeast; var. *pubescens* is more restricted, from KY and s. IL south to AL and MS. **Syn:** = Ar, C, ETx1, F, FNA23, G, GW1, K4, Mo1, NcTx, RAB, S, Tx, Va, W, WH3, Mackenzie (1931-1935); > *Carex oxylepis* var. *oxylepis* – K1, K3, Tn; > *Carex oxylepis* var. *pubescens* J.K. Underwood – K1, K3, Tn.

Carex picta Steudel. PAINTED SEDGE. **Hab:** Dry to dry-mesic oak-hickory forests. **Dist:** S. IN south through KY and c. TN to nc. GA (Jones & Coile 1988), c. AL, and LA. **Comm:** Reported (erroneously?) for VA (Kartesz 1999). Locally abundant and forming "doughnut clumps", sometimes aggregated to form a coarse turf. **Syn:** = C, F, FNA23, G, K1, K3, K4, S, Tn, Mackenzie (1931-1935). NatureServe G4G5 (Apparently Secure).

Carex pigra Naczi. LAZY SEDGE. **Hab:** Moist forests, bottomlands. **Dist:** Se. VA west to se. and sc. TN, south to n. FL, s. AL, and ne. MS. **Phen:** May-Jun. **Comm:** See Naczi (1997) for additional information. **Syn:** = FNA23, K1, K3, K4, Tn, Va; = *Carex flaccosperma* var. *pigra* (Naczi) D.B. Ward – Ward (2012a); < *Carex flaccosperma* Dewey – G, GW1, RAB, WH3; < *Carex flaccosperma* Dewey var. *glaucodea* (Tuckerman ex Olney) Kükenhthal – F; < *Carex glaucodea* Tuckerman ex Olney – S.

Carex planispicata Naczi. FLAT-SPIKED SEDGE. **Hab:** Rich to fairly acid mesic forests, on slopes and floodplains. **Dist:** C. NJ west to s. IN, se. MO, and se. OK, south to c. GA, s. MS, and se. TX. **Phen:** May-Jun. **Tax:** See Naczi (1999a) for additional information. **Syn:** = Ar, ETx1, FNA23, K3, K4, Mo1, Pa, Tn, Va; = *Carex amphibola* var. *rigida* (L.H. Bailey) Fernald – F, K1; = *Carex grisea* Wahlenberg var. *rigida* L.H. Bailey; < *Carex amphibola* Steudel – Tx.

Carex prasina Wahlenberg. DROOPING SEDGE. **Hab:** Seepage swamps, brook banks, rocky stream margins. **Dist:** ME, ON, and WI south to GA, MS, and AR; in nearly all TN counties adjacent to NC and VA. **Phen:** May-Jun. **Syn:** = Ar, C, F, FNA23, G, GW1, K1, K3, K4, Mi, Mo1, NE, NY, Pa, RAB, S, Tn, Va, W, Mackenzie (1931-1935). NatureServe G4 (Apparently Secure).

Carex radiata (Wahlenberg) Small. EASTERN STAR SEDGE. **Hab:** Mesic to wet-mesic forests. **Dist:** NS west to MB, south to SC, AL, LA, and OK. **Phen:** May-Jun. **Syn:** = Ar, C, FNA23, K1, K3, K4, Mi, Mo1, NE, NY, Pa, Tn, Va; = *Carex rosea* Schkuhr ex Willdenow – F, S, Mackenzie (1931-1935), misapplied; < *Carex rosea* Schkuhr ex Willdenow – G, GrPl, RAB, W.

Carex reniformis (L.H. Bailey) Small. KIDNEY SEDGE. **Hab:** Floodplain forests (including blackwater), marshes, ditches, other wet areas. **Dist:** VA, IL, and OK south to FL Panhandle and TX. **Phen:** May-Jun. **Syn:** = Ar, C, ETx1, F, FNA23, G, GW1, K1, K3, K4, Mo1, NcTx, RAB, S, Tn, Va, WH3; < *Carex reniformis* (L.H. Bailey) Small – Tx.

Carex retroflexa Muhlenberg ex Willdenow. REFLEXED SEDGE. **Hab:** Dry to mesic forests, especially over base-rich substrates. **Dist:** ME, MI and IA, south to n. peninsular FL and TX. **Phen:** May-Jun. **Tax:** See Downer & Hyatt (2003). **Syn:** = Ar, ETx1, F, FNA23, GrPl, K1, K3, K4, Mi, Mo1, NcTx, NE, NY, Pa, S, Tn, Va, Mackenzie (1931-1935); = *Carex retroflexa* var. *retroflexa* – C, G; < *Carex retroflexa* Muhlenberg ex Willdenow – RAB, Tx, W, WH3, (also see *C. texensis*).

Carex reznicekii Werier. REZNICEK'S SEDGE. **Hab:** Dry to mesic forests and woodlands. **Dist:** RI, NY, PA, KY, and MO, south to SC, sw. GA, se. AL, Panhandle FL, n. MS and AR. To be expected in WV. **Tax:** See Werier (2006) for detailed information. **Comm:** {add to synonymy; section *Acrocystis*}. **Syn:** = Ar, K3, K4, NE, NY, Tn, Va; < *Carex nigromarginata* Schweinitz – Pa; >> *Carex umbellata* Schkuhr ex Willdenow, possibly in part misapplied.

Carex rosea Schkuhr ex Willdenow. ROSY SEDGE. **Hab:** Dry to dry-mesic hardwood forests, especially over basic substrates. **Dist:** NS west to MB, south to FL Panhandle and TX. **Phen:** May-Jun. **Syn:** = Ar, C, ETx1, FNA23, K1, K3, K4, Mi, Mo1, NE, NY, Pa, Tn, Va; = *Carex convoluta* Mackenzie – F, GrPl, S, Mackenzie (1931-1935); ? *Carex flaccidula* Steudel; < *Carex rosea* Schkuhr ex Willdenow – G, RAB, W, WH3, (also see *C. appalachica* and *C. radiata*).

Carex sangamonensis (Cloy) Mohlenbrock. MIDWESTERN BLUNT BROOM SEDGE. **Hab:** Bottomland forests, marshes. **Dist:** OH, IL, and KS, south to SC, AL, LA, and TX. **Phen:** May-Jun. **Tax:** Judged to perhaps warrant specific rank (Tennessee Flora Committee 2015), as treated here. **Syn:** = Il, K4; = *Carex tribuloides* Wahlenberg var. *sangamonensis* Cloy – Ar, ETx1, FNA23, G, K1, K3, Tn, Va; < *Carex tribuloides* Wahlenberg – C, F, GW1, Mo1, NcTx, RAB, W. NatureServe G5T4T5 (Apparently Secure).

Carex scoparia Schkuhr ex Willdenow. BROOM SEDGE. **Hab:** Bogs, swamp forests, marshes, seepy ledges, ditches. **Dist:** NL (Newfoundland) west to BC, south to GA, MS, and CA. **Phen:** May-Jun. **Tax:** *C. scoparia* var. *tesselata* Fernald & Wiegand, endemic to NB and ME, is now recognized as *C. waponahkikensis* M. Lovit & A.A. Haines (Lovit & Haines 2012). Tennessee Flora Committee (2015) mentions unresolved variation that may warrant taxonomic recognition. **Syn:** = K3, K4, Mi, Mo1, NY, Tn; = *Carex scoparia* var. *scoparia* – Ar, F, FNA23, K1, NE, Pa, Va; < *Carex scoparia* Schkuhr ex Willdenow – C, G, GrPl, GW1, RAB, W. NatureServe G5T5 (Secure).

Carex seorsa Howe. WEAK STELLATE SEDGE. **Hab:** Swamp forests in acid, organic soils. **Dist:** MA south to GA and Panhandle FL in the Coastal Plain, scattered inland westward to NY, OH, MI, IN, AR, and TN. **Phen:** May-Jun. **Syn:** = Ar, C, FNA23, G, GW1, K1, K3, K4, Mi, NE, NY, Pa, RAB, S, Tn, Va, W, WH3, Mackenzie (1931-1935). NatureServe G5 (Secure).

Carex socialis Mohlenbrock & Schwegman. LOW WOODLAND SEDGE. **Hab:** Blackwater and brownwater swamp forests and bottomlands, forested seepage areas. **Dist:** Se. and sc. NC south to e. GA, west to e. TX, and north in the interior to s. IN, s. IL, and se. MO. **Phen:** Apr-May. **Syn:** = Ar, C, ETx1, FNA23, K1, K3, K4, Mo1, NcTx, Tn. NatureServe G4 (Apparently Secure).

Carex sparganioides Muhlenberg ex Willdenow. BUR-REED SEDGE. **Hab:** Dry to moist, usually nutrient-rich forests. **Dist:** ME, ON, MN, and SD south to GA, AR, and KS. **Phen:** May-Jun. **Comm:** Records entangled with *C. aggregata*. **Syn:** = Ar, F, FNA23, GrPl, K1, K3, K4, Mi, Mo1, NE, NY, Pa, RAB, Tn, Va, W, Mackenzie (1931-1935); = *Carex sparganioides* var. *sparganioides* – C, G.

Carex squarrosa Linnaeus. SQUARROSE SEDGE. **Hab:** Bottomland forests, tidal swamps. **Dist:** CT west to se. ME and NE, south to NC, n. SC, and AR. **Phen:** Apr-Jul. **Syn:** = Ar, C, F, FNA23, G, GrPl, GW1, K1, K3, K4, Mi, Mo1, NE, NY, Pa, RAB, S, Tn, Va, W, Mackenzie (1931-1935). NatureServe G4G5 (Apparently Secure).

Carex stipata Muhlenberg ex Willdenow var. *maxima* Chapman. LARGE STALK-GRAIN SEDGE. **Hab:** Marshes, ditches, sloughs, alluvial forests, cypress-gum forests. **Dist:** NJ south to c. peninsular FL, west to TX, north in the interior to s. MO, s. IN, w. TN, and w. KY, primarily on the Coastal Plain. **Phen:** May-Jun. **Tax:** The validity of this variety needs additional study. **Syn:** = C, F, FNA23, G, K1, K3, K4, Pa, RAB, Tn, Va; = *Carex uberior* (C. Mohr) Mackenzie – S, Mackenzie (1931-1935); < *Carex stipata* – GW1, Tx, W, WH3.

Carex striata Michaux var. *striata*. WALTER'S SEDGE, POCOSIN SEDGE. **Hab:** Pocosins, limesink ponds, small depression ponds, clay-based Carolina bays, acid peaty swamps, wet savannas (dominated by *Pinus serotina* and/or *Taxodium ascendens*). **Dist:** SC south to c. FL and Panhandle FL. **Phen:** May-Jun. **Syn:** = C, FNA23, K1, K3, K4; = *Carex walteriana* var. *walteriana* – F, G; < *Carex striata* – WH3; < *Carex walteriana* L.H. Bailey – GW1, RAB, S, Mackenzie (1931-1935). NatureServe G4G5T4T5 (Apparently Secure).

Carex striatula Michaux. LINED SEDGE. **Hab:** Bottomland and other nutrient-rich forests. **Dist:** CT, se. NY, PA, s. OH, and w. KY south to n. FL, Panhandle FL, and s. MS. Former attribution of a wider distribution to the west (west of the Mississippi River) represents *Carex ignota*. **Phen:**

98. CYPERACEAE

May-Jun. **Syn:** = Dorey (2019); < *Carex laxiflora* Lamarck – S, misapplied; < *Carex laxiflora* var. *angustifolia* Dewey – G; < *Carex striatula* Michaux – Ar, C, ETx1, F, FNA23, K1, K3, K4, NcTx, NE, NY, Pa, RAB, Tn, Va, W, WH3, Mackenzie (1931-1935).

Carex stricta Lamarck. TUSSOCK SEDGE, UPRIGHT SEDGE. **Hab:** Bogs, sedge meadows, seeps, swamps, depression ponds, old beaver ponds. **Dist:** QC and NS west to MB, south to GA, AL, MS, and TX. **Phen:** May-Jun. **Syn:** = Ar, C, ETx1, FNA23, GrPl, GW1, K1, K3, K4, Mi, Mo1, NE, NY, Pa, RAB, Tn, Tx, Va, W; = *Carex stricta* var. *stricta* – G; > *Carex stricta* Lamarck – S, Mackenzie (1931-1935); > *Carex stricta* var. *stricta* – F; > *Carex stricta* var. *strictior* (Dewey) Carey – F; > *Carex strictior* Dewey – S, Mackenzie (1931-1935).

Carex styloflexa Buckley. BENT SEDGE. **Hab:** Bogs, wet forests, acid stream swamps. **Dist:** CT west to s. OH, south to c. peninsular FL and se. TX. **Phen:** Apr-Jun. **Syn:** = C, ETx1, F, FNA23, G, K1, K3, K4, NE, NY, Pa, RAB, S, Tn, Va, W, WH3, Mackenzie (1931-1935). NatureServe G4G5 (Apparently Secure).

Carex superata Naczi, Reznicek, & B.A. Ford. LIMESTONE FOREST SEDGE. **Hab:** Calcareous forests and woodlands. **Dist:** Sc. NC, nc. SC, sw. VA, sc. KY, and ne. MS, south to Panhandle FL and s. AL. Reported for sw. VA (as *C. willdenowii* var. *megarrhyncha*) by Wieboldt et al. (1998). **Phen:** Apr-Jun. **Syn:** = FNA23, K1, K3, K4, Tn, Va, WH3; < *Carex willdenowii* – C, G, S, Mackenzie (1931-1935), orthographic variant; < *Carex willdenowii* Schkuhr ex Willdenow – F, RAB; < *Carex willdenowii* Schkuhr ex Willdenow var. *megarrhyncha* Hermann.

Carex swanii (Fernald) Mackenzie. SWAN'S SEDGE. **Hab:** Nutrient-rich forests, woodlands, and openings. **Dist:** NS, s. MI, s. WI, south to nw. SC and ne. AR. **Phen:** May-Jun. **Syn:** = Ar, C, F, FNA23, G, K1, K3, K4, Mi, Mo1, NE, NY, Pa, RAB, S, Tn, Va, W, Mackenzie (1931-1935); = *Carex virescens* Muhlenberg ex Willdenow var. *swanii* Fernald. NatureServe G5 (Secure).

Carex tenax Chapman. WIRY SEDGE. **Hab:** Longleaf pine sandhills. **Dist:** Sc. NC south to Panhandle FL, west to MS; also in sw. LA and se. TX. **Phen:** Mar-Jun. **Syn:** = ETx1, FNA23, K1, K3, K4, RAB, Tx, WH3, Mackenzie (1931-1935); ? *Carex validior* Mackenzie – S. NatureServe G5? (Secure).

Carex texensis (Torrey ex L.H. Bailey) L.H. Bailey. TEXAS SEDGE. **Hab:** Lawns, pastures, roadsides, usually weedy, especially in rocky or sandy soils. **Dist:** NY, OH, and KS south to FL and TX. **Phen:** Apr-May. **Tax:** See Downer & Hyatt (2003). **Syn:** = Ar, ETx1, F, FNA23, GrPl, K1, K3, K4, Mi, Mo1, NcTx, NY, Pa, S, Tn, Va, Mackenzie (1931-1935); = *Carex retroflexa* var. *texensis* (Torrey ex L.H. Bailey) Fernald – C, G; < *Carex retroflexa* Muhlenberg ex Willdenow – RAB, Tx.

Carex torta F. Boott ex Tuckerman. STREAMBED SEDGE, TWISTED SEDGE. **Hab:** Rocky streambeds, often dominant in patches in the beds of mountain streams, along their banks, and on rocky or cobbly islands. **Dist:** NS west to ON, south to sc. NC, SC (Gaddy 1981), nc. GA (Jones & Coile 1988), AL, TN, and OH. **Phen:** Apr-May. **Syn:** = Ar, C, F, FNA23, G, K1, K3, K4, Mo1, NE, NY, Pa, RAB, S, Tn, Va, W, Mackenzie (1931-1935). NatureServe G5 (Secure).

Carex triangularis Boeckeler. EASTERN FOX SEDGE. **Hab:** Moist forests, ditches, other wet sites. **Dist:** SC and GA west to KS and TX. **Phen:** Apr-Jun. **Syn:** = Ar, ETx1, F, FNA23, G, GrPl, K1, K3, K4, Mo1, NcTx, RAB, S, Tn, Mackenzie (1931-1935); < *Carex vulpinoidea* Michaux – GW1, Tx; < *Carex vulpinoidea* var. *vulpinoidea* – C.

Carex turgescens Torrey. PINEBARREN SEDGE. **Hab:** Sandhill seepage bogs, streamhead pocosins, pocosin-sandhill ecotones, canebrakes, cypress domes and stringers, in highly acidic, sandy-peaty soils. **Dist:** Sc. NC south to Panhandle FL, west to se. LA, a Southeastern Coastal Plain endemic. **Phen:** May-Jun. **Syn:** = FNA23, GW1, K1, K3, K4, RAB, S, WH3, Mackenzie (1931-1935). NatureServe G4G5 (Apparently Secure).

Carex typhina Michaux. CATTAIL SEDGE. **Hab:** Bottomland forests, swamp forests. **Dist:** ME and QC west to WI and se. MN, south to GA, Panhandle FL, and e. TX. **Phen:** May-Aug. **Syn:** = Ar, C, ETx1, F, FNA23, G, GrPl, GW1, K1, K3, K4, Mi, Mo1, NE, NY, Pa, RAB, S, Tn, Tx, W, WH3, Mackenzie (1931-1935). NatureServe G5 (Secure).

Carex umbellata Schkuhr ex Willdenow. PARASOL SEDGE. **Hab:** Old fields, other habitats. **Dist:** Greenland west to AK, south through MN to TX and eastward. **Phen:** Dec-Mar. **Tax:** Molecular data (unpublished) indicate that *C. microrhyncha* is deeply embedded within *C. umbellata*. This group is receiving critical study by D.B. Poindexter. **Syn:** = Ar, FNA23, G, Mi, Mo1, NE, NY, Pa, Tn, Va, Sorrie et al (2011); = *Carex abdita* E.P. Bicknell – F; > *Carex microrhyncha* Mackenzie – ETx1, GrPl, K1, K3, K4, NcTx, Tx, Mackenzie (1931-1935); < *Carex umbellata* Schkuhr ex Willdenow – C, RAB, W; > *Carex umbellata* Schkuhr ex Willdenow – GrPl, K1, K3, K4, Mackenzie (1931-1935).

98. CYPERACEAE

205

Carex verrucosa Muhlenberg. **Hab:** Pocosins, wet pinelands, pond cypress ponds, domes, and stringers. **Dist:** Se. NC south to south to s. FL, west to w. LA and e. TX. **Phen:** Jul-Sep. **Syn:** = ETx1, FNA23, GW1, K1, K3, K4, RAB, S, WH3, Mackenzie (1931-1935); = *Carex glaucescens* Elliott var. *androgyna* M.A. Curtis. **NatureServe G4** (Apparently Secure).

Carex virescens Muhlenberg ex Willdenow. RIBBED SEDGE. **Hab:** Nutrient-rich forests, woodlands, and openings. **Dist:** S. ME, NY, and s. MI, south to e. VA, w. NC, nw. SC, and MO. **Phen:** May-Jun. **Syn:** = C, F, FNA23, G, K1, K3, K4, Mi, Mo1, NE, NY, Pa, RAB, S, Tn, Va, W, Mackenzie (1931-1935). **NatureServe G5** (Secure).

Carex vulpinoidea Michaux. FOX SEDGE. **Hab:** Low fields, ditches, fens, seeps, tidal freshwater marshes, other wet (and especially disturbed) sites. **Dist:** NL (Labrador) west to BC, south to FL, TX, SON, and CA. **Phen:** Jul-Aug. **Syn:** = Ar, ETx1, F, FNA23, G, GrPl, K3, K4, Mi, Mo1, NcTx, NE, NY, Pa, RAB, S, Tn, Va, W, Mackenzie (1931-1935); < *Carex vulpinoidea* Michaux – GW1, Tx, WH3; < *Carex vulpinoidea* var. *vulpinoidea* – C, K1.

Carex willdenowii Schkuhr ex Willdenow. WILLDENOW'S SEDGE. **Hab:** Calcareous mesic forests, but also in more acidic dry-mesic upland oak forests. **Dist:** MA, VT, NY, s. ON, and c. IN, south to nc. SC, n. AL, and s. IL; disjunct in c. AR. **Phen:** May-Jun. **Comm:** Naczi (1999b) reports chromosome numbers of $n = 31, 39$. **Syn:** = Ar, FNA23, K1, K3, K4, NE, NY, Tn, Va; < *Carex willdenovii* – C, G, Mo1, Pa, S, Mackenzie (1931-1935), orthographic variant; < *Carex willdenowii* Schkuhr ex Willdenow – F, RAB, W.

Cladium P. Browne 1756 (SAWGRASS, TWIG-RUSH, TWIG-SEEDGE)

A genus of 3-4 species, herbs, subcosmopolitan. References: Bridges, Orzell, & Burkhalter (1993); Goetghebeur in Kubitzki (1998b); Tucker (2002a) in FNA23 (2002b).

- Plants 1-3 m tall, coarse, from short rhizomes, forming dense tussocks; leaves 3-15 dm long, 5-12 mm wide, stiff and flat (or broadly V-shaped), the margins and midrib (beneath) harshly serrate (saw-toothed); inflorescence a narrow panicle 3-9 dm long, the branches bearing several fascicles of spikelets; achene base broadly rounded to truncate; [of tidal freshwater to brackish marshes or outer coastal plain calcareous savannas] ***Cladium jamaicense***
- Plants 0.4-1 m tall, relatively delicate, from creeping rhizomes, forming loosely tufted colonies; leaves 1-3 dm long, 1-3 mm wide, flat to channeled (terete apically), margins only slightly scabrous; inflorescence 0.5-3 dm long, of 2-4 umbelliform cymes, the branches rigidly ascending and bearing simple glomerules of spikelets; achene base squarely truncate to slightly flaring; [of Coastal Plain acidic seepages and tidal freshwater to slightly brackish marshes, Mountain fens or bogs] ***Cladium mariscoides***

Cladium jamaicense Crantz. SAWGRASS. **Hab:** In circumneutral to alkaline situations, including brackish marshes, and rarely inland in pine savannas underlain by coquina limestone (NC) or in salt glades (s. AR). **Dist:** Se. VA south to s. FL, west to sc. AR and e. TX; West Indies. **Phen:** Jul-Oct. **Tax:** *C. jamaicense* is sometimes treated as one component (*C. mariscus* ssp. *jamaicense*) of a multi-continental *C. mariscus* complex. Unresolved taxonomic issues also relate to the circumscription of *C. jamaicense* and *C. californicum* (S. Watson) O'Neill, particularly as regards inland populations in the sw. United States and n. Mexico, extending east to the Edwards Plateau in TX. **Comm:** This is, of course, the famous sawgrass which dominates many square miles in the Everglades of s. FL (where underlain by oolite). The leaves can cut flesh or clothing. **Syn:** = Ar, Bah, C, ETx1, F, FNA23, G, GW1, RAB, Tx, Va, WH3; = *Cladium effusum* Torrey; = *Mariscus jamaicensis* (Crantz) Britton – S; < *Cladium mariscus* (Linnaeus) Pohl ssp. *jamaicense* (Crantz) Kükenthal – K1, K3, K4, NcTx.

Cladium mariscoides (Muhlenberg) Torrey. TWIG-RUSH, FEN-SEEDGE, SMOOTH SAWGRASS. **Hab:** In strongly acidic to circumneutral situations, including acidic seepage at the margins of brackish marshes, in wet flats under *Pinus serotina* and *Taxodium ascendens* (Gaddy & Rayner 1980), in mucky seepage bogs in the fall-line sandhills, in peaty fens and bogs in the Mountains (especially over mafic or ultramafic rocks, such as amphibolite), in oligohaline tidal marshes and interdune ponds. **Dist:** NL (Newfoundland) west to SK Widespread and rather common north of the glacial boundary, with scattered and disjunct occurrences southward in VA, NC, SC, GA, Panhandle FL, n. KY (Clark et al. 2005), s. AL, se. MS (Sorrie & Leonard 1999), and e. TX. **Phen:** Jul-Sep. **Comm:** Bridges, Orzell, & Burkhalter (1993) discuss in detail the phylogeography of this plant, particularly in reference to its southern occurrences, which are curiously fragmented and disjunct. **Syn:** = C, ETx1, F, FNA23, G, IL, K1, K3, K4, Mi, NcTx, NE, NY, Pa, RAB, Va, W, WH3; = *Mariscus mariscoides* (Muhlenberg) Kuntze – S. **NatureServe G5** (Secure).

98. CYPERACEAE

*Cyperus* Linnaeus 1753 (UMBRELLA SEDGE)

Contributed by John C. Kees, Richard Carter, and Alan S. Weakley

A genus of about 600-700 species, herbs, of tropical and warm temperate areas. The circumscription of *Cyperus* has been expanded recently to include a number of genera found to be phylogenetically embedded within it, notably (for our area), *Kyllinga*, *Lipocarpus*, *Oxycaryum*, and *Remirea* (Larridon et al. 2011a, 2011b, 2011c, 2014; Bauters et al. 2014; Reynders 2011). References: Bauters et al (2014); Bruhl & Tucker (2002) in FNA23 (2002b); Bruhl (2002b) in FNA23 (2002b); Bryson & Carter (1992); Bryson & Carter (1994); Bryson et al (1996); Bryson et al (1997); Bryson, Maddox, & Carter (2008); Carter & Bryson (1991); Carter & Bryson (2000); Carter & Jarvis (1986); Carter & Jones (1997); Carter & Kral (1990); Carter & Mears (2000); Carter (1988); Carter (1990); Carter (1993); Carter et al (1996); Carter et al (1999); Carter et al (2016); Carter, Allen, & Lewis (2009); Carter, Baker, & Morris (2009); Carter, Bryson, & Lipscomb (1987); De Castro et al (2015); Delahoussaye & Thieret (1967); Goetghebeur in Kubitzki (1998b); Goetghebeur & Van den Borre (1989); Goetghebeur & Van den Borre (1989); Jones, Wipff, & Carter (1996); Larridon et al (2014); McKenzie et al (1998); Reid (2016); Reid et al (2017); Reid, Carter, & Urbatsch (2014); Rosen et al (2012); Rosen, Carter, & Bryson (2006); Schippers, Ter Borg, & Bos (1995); Tucker & Gandhi (2019); Tucker (1983); Tucker (1984); Tucker (1987); Tucker (1994); Tucker (2002a) in FNA23 (2002b); Tucker (2002b) in FNA23 (2002b); Tucker, Marcks, & Carter (2002) in FNA23 (2002b); Wipff & Jones (1994).

Identification Notes: This treatment draws heavily on Tucker, Marcks, & Carter in FNA (2002b) and other sources for detailed measurements. Several of the major subgenera (*Pycnostachys*, *Cyperus*, *Pycneus*) used in the keys are not monophyletic as currently circumscribed (Reid 2016, Larridon et al. 2014). To facilitate field identification, characters which can be readily observed with a hand lens or in macro photos are emphasized in the key; however, a dissecting scope with magnification of 40-50× is useful for detailed examination of individual scales and achenes, and microscopic characters are often used as secondary characters and for closely related species. Mature fruiting material is required for reliable identification of *Cyperus* species. Because of the indeterminate growth of spikelets, florets can usually be found near the spikelet apex. The culm (main stem) in *Cyperus* species ranges from trigonous (triangular in cross-section, with flat or convex faces) or triquetrous (sharply triangular in cross-section, with concave faces), to nearly terete (circular in cross-section), and is terminated by a whorl of leaflike bracts, subtending an inflorescence of 1-many spikelets. Spikelets consist of 1-many floral scales (referred to as glumes in some treatments) arranged along a rachilla that may be winged; each floral scale subtends a single bisexual (usually) floret with perianth 0, stamens 1-3, and a pistil with a 2-3-branched style. Characters related to scale posture are based on fruiting material; in some species, particularly sect. *Laxiglumi*, scales are initially appressed and spread, the spikelet becoming compressed, as the achenes mature. Scales may be deciduous (falling from the rachilla at senescence with the achenes) or persistent (remaining attached to the rachilla); rachillas may be persistent (remaining attached to the plant) or deciduous (articulating at or near the base or below each scale). Scales have a thickened midrib that may be bicarinate (2-keeled) basally or project apically as a mucro, cusp, or awn, and 0-many lateral nerves (veins). Achene surfaces (at 40-50×) may be smooth, reticulate, papillose, or punctulate (pitted); the achene may be sessile, short-stipitate, or have an enlarged spongy base; the style base may persist as a minute apiculus or longer beak. *Cyperus* often have highly branched inflorescences. Spikelets may be borne in spikes along an elongate rachis, or in digitate clusters or glomerulate or umbellate heads. These spikes, heads, or other clusters may be sessile or borne at the end of rays (pedunculate), in some species with 3 or 4 orders of branching. The plant base is often helpful for identification, as some species reproduce vegetatively from scaly, indurate rhizomes; slender, subterranean stolons, often terminated by tubers; proliferous spikelets; or enlarged, cormose culm bases.

Unkeyed taxa: *Cyperus squarrosus* var. *squarrosus*

- 1 Floral scales spirally imbricate.
 - 3 Spikelets many, in densely globose to pyramidal heads, these borne on elongate rays or sessile; rhizomatous perennials, forming extensive floating mats; [section *Oxycaryum*]..... *Cyperus blepharoleptus*
 - 3 Spikes [actually consisting of numerous highly reduced, spirally imbricate spikelets each with 1-2 (-3) scales] 1-5, terminal and capitate on the culm; terrestrial, often diminutive annuals; [subgenus *Lipocarpus*]..... **Key A**
- 1 Floral scales 2-ranked and distichously imbricate.
 - 4 Spikelets reduced, 1(-2)-flowered with 2-3 scales, flattened, ovoid or lanceoloid, mostly < 5 mm long; rays absent, spikes 1-4, very dense, ovoid to oblong; stigmas 2; achenes biconvex; [subgenus *Kyllinga*]..... **Key B**
 - 4 Spikelets 1-many-flowered (if all only 1-3-flowered then subterete to quadrangular in cross-section and ellipsoid to linear); rays present or absent, inflorescence mostly not as above.
 - 5 Stigmas 2; achenes laterally flattened, lenticular (to compressed-subterete), borne with an edge to the rachilla, spikelets thus laterally flattened. **Key C**
 - 5 Stigmas 3 (2 in subg. *Juncellus* species, sometimes 2 and 3 in *C. alopecuroides*); achenes either trigonous or dorsiventrally compressed and borne with a face to the rachilla; spikelets terete or quadrangular to strongly compressed-quadrangular or compressed-subterete.
 - 7 Rachilla corky-thickened, transversely articulated at the base of each scale, the spikelets at maturity separating into 1-fruited dispersal units, each with 1 scale, the rachilla segment and wings, conspicuously clasping the achene (spikelets visibly “jointed”, at maturity breaking apart); spikelets linear, terete or scale tips slightly spreading. *Cyperus odoratus* var. *odoratus* **Key D**
 - 7 Rachilla not transversely articulated; scales persistent or deciduous; rachilla wings present or absent, not corky, clasping the achene or not; spikelets ovoid to linear, compressed, quadrangular, or terete.
 - 10 Spikelets in dense glomerulate heads or digitate clusters, the rachis essentially absent; spikelets strongly laterally compressed; [subgenus *Pycnostachys*]..... **Key D**
 - 10 Spikelets in spikes (sometimes sessile and capitate), arranged along a well-developed rachis, this sometimes obscured but evident upon dissection; spikelets quadrangular or terete to moderately compressed. **Key E**

(see introduction for more)

* : waif
EN : endemic
H : historic

N : no X : extirpated
P : planted
? : questionable

Key A - Key to subgenus *Lipocarpha*

- 1 Inflorescence terminal, the bracts 2-3, deflexed to ascending; spikes (1-) 2-5, each 2-10 (-12) mm long; achenes narrowly obovoid, 3.3-5× as long as wide; anthers ca. 0.25 mm long, or longer; [section *Lipocarpha*] *Cyperus neotropicalis*
- 1 Inflorescence appearing lateral, the bracts 1-2 (-3), the longest held vertical and appearing as a continuation of the culm; spikes 1-2 (-3), each 1-5 (-8) mm long; achenes obovoid or ellipsoid, 1.5-2.5× as long as wide; anthers 0.1-0.2 mm long. *Cyperus subsquarrosus*

Key B - Key to subgenus *Kyllinga*

- 2 Plants with culms arising singly along a scaly, creeping rhizome; spikes green.
- 3 Central spike 8-10 mm wide, globose, solitary; inflorescence bracts deflexed to spreading (divaricate); style 0.6-1.2 mm long; anthers 2-3; scale keel entire *Cyperus brevifolioides*
- 3 Central spike 3-7 mm wide, ovoid to oblong, often branched; longest inflorescence bract held vertical on most culms; style 1.8-2.2 mm long; anther 1; scale keel denticulate *Cyperus brevifolius*
- 2 Plants caespitose or with very slender, easily broken stolons and cormose culm bases; spikes white (except *C. hortensis*).
- 4 Spikes green; plants caespitose, fibrous-rooted annuals; scale keels denticulate; achene light brown, oblong, 2× as long as wide *Cyperus hortensis*
- 4 Spikes whitish; plants caespitose or stoloniferous perennials; scale keels entire; achenes various. *Cyperus sesquiflorus*

Key C - Key to subgenus *Pycneus* – stigmas 2; achenes lenticular; achenes laterally flattened, borne with an edge toward the rachilla

- 1 Scales awned or cuspidate, cusp 0.3-0.5 mm long, excurved; achenes 0.6 mm long; [section *Pumili*] **Key ZA**
- 1 Scales obtuse to slightly mucronate, apex not notably excurved; achenes (0.7-)1-1.6 mm long.
- 2 Floral scales divaricate (thus the spikelet margin appearing coarsely dentate), with whitish or hyaline margins; coarse, erect plants 30-75cm tall, inflorescence diffuse; [section *Albomarginati*] *Cyperus flavicomus*
- 2 Floral scales with tips appressed (proximal sometimes spreading in *C. polystachyos*), lacking hyaline border; plants mostly smaller.
- 3 Achenes oblong, subterete, often only slightly compressed, apex truncate, apiculate; scales 3-5-nerved; spikelets mostly <2 mm wide (except *C. filicinus*); [section *Pycneus*].
- 4 Scales 2.5-3.6 mm long, 1.6-1.8 mm wide; achenes 1.2-1.6 mm long, 0.6-0.9 mm wide, narrowly obovoid; [beaches, maritime habitats] *Cyperus filicinus*
- 4 Scales 1.3-2.4 mm long, 1.0-1.4 mm wide; achenes 0.8-1.2 mm long, 0.4-0.6 mm wide; [habitats various] *Cyperus polystachyos*
- 3 Achenes ovoid, ellipsoid, or obovoid, biconvex, apex rounded to acute; scales bicarinate medially; spikelets mostly > 2mm wide.
- 6 Achenes black to dark reddish brown, with encrusted transverse whitish lines, epidermal cells longitudinally elongate, rectangular; scales pale brown or yellowish, the dark achenes strongly contrasting and visible through the spikelets in life (without backlighting); fibrous-rooted annuals; [section *Zonati*] *Cyperus flavescens*
- 6 Achenes black to brownish, without transverse lines, epidermal cells square or isodiametric; plants either perennials or scales darker.
- 7 Scales uniformly pale yellowish to yellowish brown; caespitose perennials, rhizomes short; [section *Propinqui*] *Cyperus lanceolatus*
- 7 Scales with anthocyanic (reddish-brown or purplish) pigmentation; fibrous-rooted annuals (except *C. sanguinolentus*); [section *Vestiti*].
- 9 Floral scales firmer, subcoriaceous, not bilaterally sulcate; reddish pigmentation ±uniformly distributed or concentrated basally and medially; floral scales 2.5-3 mm long; annuals, culms usually <25 (35) cm long *Cyperus bipartitus*
- 9 Floral scales membranous, each side with a narrowly elliptic, shallow, pale, translucent groove outlined at least marginally by reddish pigmentation; floral scales 1.8-2.7 mm long; annuals or perennials. *Cyperus sanguinolentus*

Key D - Key to subgenus *Pycnostachys* -- stigmas 3; achenes trigonous; rachis essentially absent, spikelets borne in digitate clusters or in umbellate or glomerulate heads

- 1 Scales cuspidate, with an excurved, awnlike tip (0.3-) 0.5-1 (-1.3) mm long **Key ZA**
- 1 Scales rounded to minutely mucronate (mucro <0.3mm), incurved to excurved.
- 2 Leaves mostly reduced to bladeless sheaths; inflorescence bracts 18-22 subequal, large and conspicuous; [the “umbrella sedge” common in the nursery trade]; [section *Alternifolii*] *Cyperus involucreatus*
- 2 Leaf blades present (absent in *C. haspan* and *C. prolifer*); inflorescence bracts 2-10 (rarely more, then markedly unequal).
- 3 Scales with 1 central nerve on back, 2-keeled in lower 30-60%, nerves absent elsewhere or scales with 1 lateral rib on each side; spikelets with scales closely overlapping, aggregated into numerous dense glomerulate heads borne on elongate rays; [section *Luzuloidei*] **Key ZB**
- 3 Scales conduplicate their entire length, or broadly rounded on back, not 2-keeled as above, 5-11 nerved, medially 3-nerved, or occasionally with 2 indistinct lateral ribs and a single main keel nerve; spikelets in loose digitate clusters, or inflorescence congested into a single capitate cluster; [sections *Fusci*, *Haspani*, and *Diffusi*] **Key ZC**

Key E - Key to subgenus *Cyperus* – stigmas 3; achenes trigonous; spikelets borne in spikes on a well-developed rachis; rachilla continuous, or articulate only at the base

- 3 Spikelets quadrangular to subterete, 1-1.5× as wide as thick; floral scales 1-8, persistent and tightly appressed (rarely slightly ascending); rachilla articulate at the base, the whole spikelet falling as a unit at maturity **Key ZD**

98. CYPERACEAE

- 3 Spikelets compressed-quadrangular or compressed-subterete, mostly 2× or more as wide as thick (less compressed in *C. erythrorhizos* and some forms of *C. esculentus* and *C. rotundus*); scales 1-many, deciduous or persistent; rachilla persistent or deciduous after the scales.
- 4 Spikes long-cylindric, with (25-) 35-80+ spikelets, and well-developed branches or 2nd order rays; scales deciduous, minute, (1.1-) 1.3-1.8 mm long, (6-) 12-20 (-30) per spikelet; spikelets quadrangular, slightly compressed (subterete in *C. alopecuroides*); achenes (0.4) 0.7-1 (-1.2) mm long, often moderately dorsiventrally compressed or plano-convex; plants coarse perennials, culms 5-25 dm tall, 5-50 mm in diameter (*C. erythrorhizos* keyed under both leads).
- 5 Stigmas 2, or 2 and 3 on a plant; spikes narrowly cylindric, the rachis obscured by the densely packed, ascending, imbricate spikelets; spikelets subterete, somewhat compressed, ovoid to oblong; rachilla wings absent to 0.1 mm wide; achene lenticular, its face against the rachilla [rare waif, FL]; [section *Alopecuroides*]..... *Cyperus alopecuroides*
- 5 Stigmas 3; spikes less dense, spikelets spreading to divaricate; spikelets quadrangular, linear; rachilla winged, wings 0.3 mm wide; achenes not as above [collectively widespread]; [section *Fastigiati*]..... *Cyperus erythrorhizos*
- 4 Spikes not as above; scales persistent or deciduous, mostly > 1.8 mm long (except sections *Iriodei* and *Aristati*); achenes > 1 mm long, trigonous (dorsiventrally compressed in *C. nipponicus* and *C. serotinus*); culms mostly < 10 dm tall, < 7.5 mm in diameter (except *C. prolixus*).
- 8 Scales strongly 5-nerved, obovate-orbiculate, 1-1.5 mm long, divaricate, scarcely overlapping, apex emarginate and mucronulate; style < 0.1 mm long; inflorescence diffuse, secondary rays present, spikelets widely spaced on elongate rachises; [weedy exotics]; [section *Iriodei*]..... *Cyperus iria*
- 8 Scales variously nerved, but at least 1.8 mm long (if shorter, with an excurved cusp > 0.5 mm long), not emarginate; style at least 0.5 mm long; inflorescence generally more congested.
- 10 Scales cuspidate to awned, midrib excurrent at least 0.3 mm, conspicuously excurved (straight in *C. compressus* and *C. nipponicus*); plants either diminutive fibrous-rooted annuals, culms often decumbent, or caespitose perennials (section *Elegantes*) with involute leaves and vegetative parts viscid (sticky)..... **Key ZA**
- 10 Scales acute, midrib not notably projecting, apices not excurved; plants erect, rhizomatous, stoloniferous, cormose-based, or caespitose perennials, vegetative parts not viscid, leaves plane or V-shaped (cuspidate perennial species also keyed above).
..... **Key ZE**

Key ZA - Key to *Cyperus* of various affinities -- Scales cuspidate to awned

- 1 Leaves, bracts, and culms viscid (sticky); leaves involute; achenes (1.4-) 1.8-2.4 mm long, either with an elongate beak or a whitish overlay and spongy stipitate base; relatively robust plants, culms 1-7 dm tall; [subgenus *Cyperus*, section *Elegantes*]
- 2 Scales 6-22, with stout, slightly excurved mucros 0.2-0.3 mm long at apex; achenes black to reddish-brown (1.4-) 1.8-2 mm long × 0.91 mm wide, broadly obovoid, surfaces with a whitish-gray overlay (sometimes sloughing off in age)..... *Cyperus elegans*
- 2 Scales 10-20 (-40), with cusps 0.2-0.8 mm long; usually narrow, awn-like and recurved at least in the upper scales; achenes brown, 2-2.4 mm long × 0.5-0.8 mm wide, narrowly obovoid..... *Cyperus oxylepis*
- 1 Plants not viscid; leaves flat or V-shaped; achenes 0.6-1.5 mm long, without a spongy stipe or whitish overlay, obtuse to apiculate, not beaked; mostly diminutive annuals.
- 5 Longest inflorescence bract vertical, appearing as a continuation of the culm; scales with stout, excurved, mucronate apices at most 0.3 mm long; scales with 1 central keel, bicarinate in the basal 1/3, otherwise nerveless or with 2 obscure lateral ribs; [subgenus *Pycnostachys*, section *Luzuloidei*]..... *Cyperus acuminatus*
- 5 Longest inflorescence bract ascending; scales with narrow, awnlike cusp (0.3-) 0.5-1 (-1.3) mm long; scales not bicarinate in the basal 1/3, conduplicate to broadly rounded, variously nerved.
- 7 Floral scales weakly 3-9-nerved, laterally greenish to whitish; scale tips with straight to slightly excurved cusp at most 0.7 mm long; achenes broadly obovoid (*C. compressus*) or oblong-obovoid, dorsiventrally compressed (*C. nipponicus*).
..... *Cyperus compressus*
- 7 Floral scales strongly (5-) 7-13-nerved nearly to the margins, or medially 3-ribbed, often orange to reddish brown laterally at maturity; scale tips with conspicuously excurved cusp 0.5-1 (-1.3) mm long; achenes narrowly ellipsoid to oblong, trigonous.
..... *Cyperus cuspidatus*

Key ZB - Key to *Cyperus*, subgenus *Pycnostachys*, section *Luzuloidei* -- Spikelets in glomerulate heads; scales with midrib bicarinate in basal 1/3, laterally nerveless or 2-ribbed.

- 1 Culms triquetrous (sharply trigonous with concave faces), harshly retrorsely scabrid on the angles (very rarely smooth); leaf blades, sheaths and bracts nodulose, with cross-ribs between veins.
- 2 Inflorescence congested, primary rays 3-5, secondary and tertiary rays absent; scales ovate, 1.4-1.6 mm long; spikelets 1.5-2.2 mm wide, in dense globose clusters; achenes 1.0-1.2 mm long, < 0.7× as long as the subtending floral scale..... *Cyperus drummondii*
- 2 Inflorescence broad, diffuse, primary rays 6-12, secondary and often tertiary rays present; scales oblanolate, (1.3-) 1.5-2.0 (-2.4) mm long, spikelets 2-3.2 mm wide, in hemispheric to irregularly globose clusters; achenes 1.2-1.5 mm long, at least 0.7× as long as the subtending floral scale *Cyperus virens*
- 1 Culms not scabrid on the angles, smooth or slightly scabrous across the faces, obtusely trigonous to nearly terete, rarely with only slightly concave faces; leaf blades and bracts not nodulose.
- 3 Bracts 1-3, < 3 mm wide, the largest erect, appearing as a continuation of the culm; culms slender, 1-2 mm in diameter; plants caespitose, fibrous-rooted annuals (perennial in *C. reflexus*).
- 4 Scales yellowish green or straw-colored, sometimes with an orange tinge, apices incurved to straight; stems and rays scabridulous with retrorse prickles, rough to the touch (rarely with only a few prickles); spikelet clusters mostly loosely and irregularly fasciculate..... *Cyperus surinamensis*
- 4 Scales either dark reddish-brown laterally, often with contrasting green keels or mucronate and conspicuously excurved apically; culms glabrous (rarely scabridulous in *C. acuminatus*); spikelet clusters densely globose to ovoid or pyramidal.
..... *Cyperus acuminatus*
- 3 Bracts (3-) 6-12, the larger > 3 mm wide, spreading to ascending; culms coarser, 2-5 mm in diameter; plants rhizomatous or caespitose perennials.
- 7 Spikelets elliptic to orbiculate-ovate, ≤ 5 mm long, very densely packed in subglobose, lobulate heads; achenes linear, 4-5× as long as wide, falcate; scales oblong-spatulate, (1.5-) 2-2.5 mm long, apices often excurved..... *Cyperus pseudovegetus*
- 7 Spikelets lanceolate to linear, usually > 5 mm long, heads usually looser; achenes narrowly to broadly ovoid or ellipsoid, not falcate, < 4× as long as wide; scales ovate to lanceolate, to 2 (-2.3) mm long, apices straight to incurved (excurved in *C. eragrostis*).

(see introduction for more)

* : waif
EN : endemic
H : historic

N : no X : extirpated
P : planted
? : questionable

- 8 Scales declined 60-90 degrees from the rachilla, blunt, incurved; achenes ellipsoid, < 3× as long as wide, narrowed to a distinct stipe; achene surfaces distinctly honeycomb-reticulate, often iridescent..... *Cyperus ochraceus*
- 8 Scales declined 30-45 (-60) degrees from the rachilla; achenes very narrowly ellipsoid, 3-4× as long as wide, stipe absent to poorly developed (ellipsoid with distinct stipe in *C. eragrostis*); achene surfaces dull, smooth to punctulate or obscurely reticulate.
- 9 Spikelets > 3 mm wide; scales 2-2.3 mm long, excurved apically; heads 20-40 mm in diameter, densely globose, lacking secondary rays; achenes broadly ellipsoid, < 2.5× as long as wide, with a distinct stipe..... *Cyperus eragrostis*
- 9 Spikelets < 3 mm wide; scales < 2 mm long, incurved to straight; heads mostly ≤ 20 mm in diameter, usually with secondary rays; achenes narrowly ovoid or ellipsoid, 3-4× as long as wide, stipe absent.
- 10 Culms smooth (or rarely with sparse retrorse prickles); plants robust perennials, with thick deeply set rhizomes; culms mostly > 5 dm tall, bases purplish black; floral scales diverging about 30 degrees from the rachilla, pale green; heads usually tightly globose *Cyperus entrerianus*
- 10 Culms scabrid (at least apically) with abundant retrorse prickles; plants short-lived caespitose perennials, rhizomes absent; culms mostly < 5 dm tall, bases reddish or brownish; floral scales usually diverging at least 45 degrees from the rachilla, yellowish to yellowish-green; heads mostly loosely and irregularly fasciculate, with flattened spikelets fanned out like a deck of cards..... *Cyperus surinamensis*

Key ZC - Key to *Cyperus*, subgenus *Pycnostachys*, sections *Fusci*, *Diffusi*, and *Haspani* -- Spikelets in digitate clusters or glomerulate heads; scales broadly rounded or conduplicate

- 1 Scales orbiculate or broadly obovate, to 1.1 mm long and wide, about as broad as long, minutely mucronate at the tip ("bead-like"); achenes 0.6-0.9 mm long × 0.3-0.4 mm wide, not much exceeded by the scales; plants fibrous-rooted annuals; [sect. *Fusci*]
- 2 Heads very dense, spikelets 30-120 per head; scales 0.6-0.8 mm long × 0.6-0.8 mm wide, greenish; styles 0.1 mm long..... *Cyperus difformis*
- 2 Heads looser, spikelets 3-12 per head; scales 0.9-1.1 mm long × 1 mm wide, light brown, bronze, whitish, or purplish brown; styles 0.3-0.4 mm long..... *Cyperus fuscus*
- 1 Scales ovate to lanceolate, (1.1-) 1.6 mm long or longer, mucronate or not; achenes, if < 1.5 mm, much exceeded by (<1/2 the length of) the scales; plants perennial, often with cormose bases, stolons, or rhizomes.
- 3 Leave involute; live plants viscid; scales with a mucronate to cuspidate apex at least 0.2 mm long, usually excurved; achenes with beaks 0.5-1.2 mm long or a whitish overlay and spongy stipitate base; [subgenus *Cyperus*, section *Elegantes*; keyed here as failsafes] **Key ZA**
- 3 Leaves flat or V-shaped; live plants not viscid; scales obtuse to acute (minutely mucronate in *C. dentatus*); achenes at most 1 mm long (longer in the obscurely spicate subg. *Cyperus* species keyed here as failsafes), without a beak or spongy stipitate base.
- 5 Spikelets in dense spikes, inflorescence often capitate; scales divaricate at maturity, rounded on the keel, weakly 5-13-nerved; achenes (1-) 1.4-2.5 mm long; plants mostly with hardened cormose culm bases, sometimes also rhizomatous; [dry, sandy habitats]; [subgenus *Cyperus*, section *Laxiglumi*; keyed here as failsafes]..... **Key ZE**
- 5 Spikelets in loose digitate clusters, rays elongate (except some forms of *C. haspani*); scales closely appressed, conduplicate and weakly 1-3 (-5)-ribbed; achenes 0.3-1 mm long; plants stoloniferous or rhizomatous; [mostly in wetlands]; [section *Haspani*]
- 6 Leaf blades usually absent; bracts 2 (-4), usually much reduced; achenes 0.3-0.6 mm long, globose to obovoid..... *Cyperus haspani*
- 6 Leaf blades present; bracts 3-5, well-developed and often exceeding the inflorescence; achenes 0.7-1 mm long..... *Cyperus lecontei*

Key ZD - Key to *Cyperus*, subgenus *Cyperus* -- Spikelets quadrangular to subterete; scales 1-8, persistent rachillas deciduous, articulate as the base

- 2 All but the uppermost spikelets strongly (-weakly in some forms of *C. hystricinus*) reflexed; scales (3.8-) 4-4.9 (-5.4) mm long, terminal involute and prolonged distally, midrib often bent downward; achenes linear to linear-oblong, (2.2-) 2.5-3 (-2.3) mm long; [section *Umbellati*, subsection *Longistylis*, *C. retrofractus* complex]
- 3 Spikes mostly at least 2× as long as wide, slightly (or not) narrowed to base, spikelets reflexed to spreading; culms, leaves, and bracts glabrous except for marginal prickles on leaves and bracts; rachilla wing clasping achene for its entire length (concealing it in abaxial view); floral scales golden-brown when mature *Cyperus hystricinus*
- 3 Spikes mostly about as long as wide and strongly narrowed to the base, spikelets reflexed; culms scabrous, bracts scabridulous and also often hirtellous; rachilla wing clasping achene for <3/4 its length; floral scales greenish to brown or reddish-purple-striped.
- 4 Rays scabrid throughout their lengths; leaves and bracts puberulent; longest ray equal to or longer than the longest bract; culms roundly trigonous to subterete; terminal scale spinose distally; scales 1-2 (-3); spikes tight, burlike, turbinate *Cyperus plukenetii*
- 4 Rays glabrous or rarely with a few hairs just below the spike; leaves and bracts with hairs confined to abaxial midrib; longest ray shorter than longest bract; culm sharply trigonous; terminal scale involute but not spinose; scales (2-)3-6; spikes often loose, sometimes more elongate..... *Cyperus retrofractus*
- 2 Spikelets ascending to spreading, or reflexed in the lower half of spike; scales 1.8-5.3 mm long, terminal scale not modified as above; achenes ellipsoid to narrowly oblong, 1.2-2.4 (-2.6) mm long (linear-oblong in *C. refractus*).
- 5 Spikes densely cylindric, all sessile or 1-3 (-5) lateral spikes on short horizontal rays; spikelets ellipsoid (rarely oblong-ellipsoid), with 1-2 (-4) scales; [section *Umbellati*, subsection *Brevistylis*]..... *Cyperus aggregatus*
- 5 Spikes oblong to ovoid (cylindric in *C. tetragonus*), primarily on well-developed rays; spikelets oblong-lanceoid to linear, with (1-) 2-8 scales.
- 7 Spikelets very closely spaced, obscuring the rachis in life and when pressed; [section *Umbellati*, subsection *Brevistylis*]
- 8 Spikes broadly and appearing (because of longer spikelets) relatively loosely ellipsoid to ovoid-cylindric, 2.5-7 cm long × 1.5-6 cm wide; spikelets (11-) 12-25 (-28) mm long; achenes 2.2-3 mm long (if < 2.5 mm long, noticeably falcate).
- 9 Spikes dense, ellipsoid to obovoid, convex, with 50-90 spikelets; scales 3-6 (-7), each 4-4.6 mm long, not red-purple striate; achenes 3-4× as long as wide, falcate *Cyperus lancastriensis*
- 9 Spikes loose, broadly ovoid or ellipsoid to ovoid-cylindric, with 13-75 spikelets; scales 4-8 (-11), each 4.5-5.3 mm long, red-purple striate; achenes 4-5× as long as wide, straight *Cyperus refractus*
- 8 Spikes tightly globose or to oblong, not more than 2.5 cm long or 2 cm wide; spikelets 2-8 mm long; achenes < 2.3 mm long, straight.
- 10 Spikes uniformly convex throughout, globose or globose-ellipsoid, so dense as to appear nearly smooth in silhouette; scales 3.5-4.6 (-4.8) mm long, acute *Cyperus echinatus*
- 10 Spikes cylindric, oblong, ellipsoid, or ovoid, mostly less dense; scales 1.8-3.6 mm long (or, if longer, mucronate).

Symbology:

←rare ←uncommon ←common
(see introduction for more)

* : waif
EN : endemic
H : historic

N : no X : extirpated
P : planted
? : questionable

- 11 Terminal scale of spikelet reduced, sterile, involute, with a minute but distinct mucro to 0.3 mm long, usually uncinete (hooked); fertile scales (if more than one) not overlapping on the same side of the rachilla, usually red-brown or orangeish laterally at maturity; leaf blades 1-3 mm wide; [*Cyperus retroflexus* complex]
- 12 Fertile floral scales 1.9-3.0 (-3.3) mm long; rachilla wing usually membranaceous throughout; rachilla lacking lateral nerves; longest spikelets 2.8-5.8 (-8.0) mm long; terminal sterile floral scale of spikelet often much reduced, less than 2/3 the length of fertile floral scales; longest peduncle less than 2.7 (-3.9) cm long; plants diminutive, culms 3-35 (-45) cm tall *Cyperus retroflexus* var. *pumilus*
- 12 Fertile floral scales (2.8-) 3.0-3.9 mm long; rachilla wing usually chartaceous beyond clasped achene angle, border membranaceous; rachilla with two lateral nerves, one along each side of the median; longest spikelets 4.9-9.0 (-11.3) mm long; terminal sterile floral scale usually not greatly reduced, 2/3 or more the length of fertile floral scales; longest peduncle (0.5-) 2.4-6.8 cm long; plants more robust, culms usually >25 cm tall..... *Cyperus retroflexus* var. *retroflexus*
- 11 Terminal scale of spikelet not differentiated; scales acute, greenish-hyaline to brownish or straw-colored laterally; scales overlapping; leaf blades 1.5-5 mm wide.
- 13 Spikes relatively loosely ovoid, 8-20 mm wide, with (5-) 10-50 (-70) spikelets, lacking basal branches; spikelets (2.2-) 3.5-10 mm long, angular in x-section, greenish-hyaline to pale yellow-green; bracts horizontal..... *Cyperus croceus*
- 13 Spikes densely oblong-ellipsoid to ovoid, 6-8 (-10) mm wide, with (13-) 30-200 (-274) spikelets, occasionally with short basal branches; spikelets 2.2-4 (-4.5) mm, subterete, straw-colored to brown at maturity; bracts horizontal or ascending to erect; [*Cyperus retrorsus* complex]
- 14 Achenes oblong-fusiform, stipitate, narrowed to both ends; spikes densely oblong to oblong-cylindric, often 3× or more as long as wide; scales ascending (the tips free), usually straw-colored; bracts horizontal..... *Cyperus ovatus*
- 14 Achenes oblong, usually abruptly constricted at the ends; spikes ovoid to oblong, to 2× as long as wide (rarely longer in *C. retrorsus*); scales appressed, usually reddish-brown at maturity; bracts ascending to erect (sometimes horizontal in *C. nashii*).
- 15 Spikes > 1.5× as long as wide, each with (42-) 50-200 (-274) spikelets; achenes 0.4-0.5 (-0.6) mm wide; stems moderately caespitose; [widespread and weedy]..... *Cyperus retrorsus*
- 15 Spikes < 1.5 × as long as wide, each with (13-) 30-92 spikelets; achenes 0.5-0.7 mm wide; stems single to slightly caespitose; [Florida scrub, northward and westward in coastal dunes] *Cyperus species 1*
- 7 Spikelet attachments spaced apart at least proximally, rachis not obscured when pressed and usually also visible in life.
- 17 Fertile floral scales 1-3 (-5), not overlapping on the same side of the spikelet (if more than one); terminal scale reduced, sterile and involute, mucro usually uncinete; achenes (1.7-) 1.9-2.6 mm long; [section *Umbellati*, *Cyperus retroflexus* complex]
- 18 Longest spikelets 10-21 mm long, strongly contorted; distal scales with scabrid midrib and mucro 0.6-1.9 mm long; longest floral scale of spikelet (3.5-) 3.7-4.8 mm long; anthers 0.5-1.3 mm long; achenes > 3× as long as wide; [TX]..... *Cyperus floribundus*
- 18 Longest spikelets usually < 10 mm long, at most somewhat flexuous with curved tips; distal scales with glabrous midrib and mucro 0.1-0.3 (-0.5) mm long; longest floral scale of spikelet (2.1-) 2.5-3.5 (-4.0) mm long; anthers 0.3-0.5 (-0.6) mm long; achenes 2-3 (-3.3)× as long as wide; [more widespread]..... *Cyperus retroflexus* var. *retroflexus*
- 17 Fertile floral scales 3-8, reaching the next scale or overlapping on the same side of the spikelet; terminal scale not involute and sterile, mucro straight; achenes various.
- 19 Scales 3.2-5.3 mm long, acute; spikes broadly ovoid-cylindric to ellipsoid, spikelets 5-30mm long; achenes narrowly oblong to linear, 3-6× as long as wide; culm bases cormose.
- 20 Spikelets ±terete; scales 4.5-5.3 mm long, persistent, laterally reddish brown or tinted with reddish brown if paler and stramineous; achenes usually at least half as long as floral scale; achenes linear-oblong, 2.6-3 mm long, 5-6× as long as wide, > 0.5 mm wide; anthers 1-1.5 mm long; spikes usually broadly and convexly ellipsoid or ovoid, usually unbranched (or rarely with 1-2 reduced proximal branches); [section *Umbellati*, subsection *Brevistylis*]..... *Cyperus refractus*
- 20 Spikelets flattened; scales 3.2-4.5 (-6) mm long, laterally golden yellow to stramineous; achenes less than half as long as floral scale; achenes oblong, (1.5-) 1.8-2.4 mm long, 3-4× as long as wide, < 0.4 mm wide; anthers 0.3-0.5 mm long; spikes usually parallel-sided, ovoid-cylindric, frequently branched; [section *Strigosi*]..... *Cyperus strigosus*
- 19 Scales (2-) 2.5-3.2 (-4) mm long, acute to cuspidate; spikes narrowly cylindric to ovoid, spikelets mostly 4-8mm long (if longer, scales mucronate); achenes ellipsoid, 2-3× as long as wide; culm bases not cormose. *Cyperus thyrsoiflorus*

Key ZE - Key to *Cyperus*, subgenus *Cyperus* of various affinities -- Spikelets compressed; scales deciduous or persistent; rachilla persistent or deciduous after the scales

- 3 Rachilla wingless (except *C. prolixus* and *C. grayi*); spikelets at maturity 2-4 mm wide, scales divaricate (the spikelet appearing coarsely serrate in outline).
- 4 Rachis hispidulous; spikes loosely oblong-ovoid, with spikelets spreading, the elongate, well-developed rachis clearly visible; scales 1.8-2 mm long, light brown to yellowish; achenes 1-1.2 mm long; [sect. *Proceri*]..... *Cyperus pilosus*
- 4 Rachis glabrous; spikes densely ovoid or globose, or umbellate to oblong, the rachis elongate to nearly absent; scales 1.8-3.2 mm long; achenes 1.5-2.4 mm long (1-1.2 mm long in *C. cephalanthus*).
- 8 Anthers 0.8-1 mm long; achenes 0.5-0.8 mm wide, narrowly oblong; scales usually yellowish to yellowish brown; leaves very narrow, 0.5-2 mm wide *Cyperus filiculmis*
- 8 Anthers 0.3-0.6 mm long; achenes 0.8-1.2 mm wide, ±ellipsoid; scales usually off-white to pale tan to light reddish brown; leaves often broader, 1-4 mm wide. *Cyperus lupulinus* var. *lupulinus*
- 3 Rachilla winged, wings at least 0.4 mm wide; spikelets at most 2.2 mm wide, scales overlapping, tips closely imbricate, the margin appearing smooth or slightly serrate (some forms of *C. strigosus* have looser scales).
- 13 Scales 1-1.5 mm long, deciduous; spikes cylindric, with (20-) 40-80+ spikelets, often with secondary rays; fibrous-rooted annuals, but often robust, roots reddish; [sect. *Fastigiati*]..... *Cyperus erythrorhizus*
- 13 Scales 1.8-4.5 (-6) mm, deciduous or persistent; spikes ovoid, with (2-) 3-50 spikelets; stoloniferous, rhizomatous, cormose-based, or (*C. sphacelatus*) caespitose perennials.
- 14 Plants with cormose culm bases; scales 3.2-4.5 (-6) mm, 3-11 per spikelet, pale greenish-brown to straw-colored, dull; spikelets strongly compressed (at maturity), the scales loosely overlapping, tips spreading; achenes narrowly oblong, (1.5-) 1.8-2.4 mm long; [section *Strigosi*]..... *Cyperus strigosus*
- 14 Plants lacking cormose culm bases; scales 1.8-4 (-4.4) mm long, 6-36 (-42) per spikelet, various; spikelets often only slightly compressed, scales closely imbricate, tips appressed; achenes ellipsoid to oblong, 1.1-2 mm long.

Key to Map
Symbology:

←rare ←uncommon ←common
(see introduction for more)

* : waif
EN : endemic
H : historic

N : no X : extirpated
P : planted
? : questionable

- 16 Culms terete at least towards the base, nodose-septate, with internal partitions every 5-50 mm, more frequent upwards; leaves usually all reduced to bladeless sheaths; bracts 2 (-4), erect, reduced, mostly < 2 cm long *Cyperus articulatus*
- 16 Culms trigonous to rounded-trigonous, not nodose-septate; leaf blades present; bracts (2-) 3-8, spreading to ascending, well-developed.
- 17 Scales deciduous, (2.2-) 2.7-4.5 (-6) mm, mostly reddish-brown; robust perennials 5-10 dm tall from thick, indurate rhizomes, lacking tubers; achenes maturing, oblong *Cyperus setigerus*
- 17 Scales persistent, 1.8-3.4 mm long, mostly yellowish or dark glossy purplish; plants mostly 1-6 dm tall (rarely taller in *C. esculentus*), with slender stolons 1-2 mm in diameter, these producing terminal tubers; achenes ellipsoid or not maturing.
- 18 Spikelets (2-) 3-14 per spike, bracts often not exceeding the inflorescence; scales glossy dark purplish, with green keels and hyaline border; culm bases indurate, stolons wiry, horizontal, 1-2 mm in diameter, producing irregular, often elongate tubers *Cyperus rotundus*
- 18 Spikelets (3-) 10-28 per spike, bracts exceeding the inflorescence; scales yellowish to dull reddish-brown; culm bases not indurate, stolons spongy, weak, 1 mm in diameter, producing globose tubers; [*Cyperus esculentus* complex] *Cyperus esculentus* var. *leptostachyus*

Cyperus acuminatus Torrey & Hooker ex Torrey. POINTED FLATSEDEGE. **Hab:** Wet meadows or depressions, especially in glades, barrens, or woodlands over limestone. **Dist:** IL west to ND, south to w. LA, TX, and n. Mexico; disjunct from WA to s. CA; disjunct eastward at scattered localities in VA, NC, GA (Echols 2007), TN, KY, and OH (where probably native), and NY and NH (where probably introduced). **Phen:** May-Oct. **ID Notes:** The combination of pseudolateral inflorescences, spikelets in glomerulate heads, and excurved-mucronate scale apices is diagnostic. Forms of *C. surinamensis* with erect bracts may superficially resemble *C. acuminatus*, but lack excurved scale apices and usually have taller, densely antrorsely scabridulous culms. **Syn:** = Ar, C, ETx1, F, FNA23, G, GrPl, GW1, IL, K1, K3, K4, Mi, Mo1, NcTx, NE, NY, Pa, Tn, Tx, W, Carter (1990). NatureServe G5 (Secure).

* ***Cyperus aggregatus*** (Willdenow) Endlicher. **Hab:** Disturbed areas, apparently introduced on ballast, perhaps only a waif and no longer present in some places in our region. **Dist:** Native of tropical America. **Syn:** = ETx1, FNA23, K1, K3, WH3; = *Cyperus cayennensis* (Lamarck) Britton - S; = *Cyperus flavus* (Vahl) Nees; = *Cyperus huarmensis* (Kunth) M.C. Johnston - Tx, misapplied.

* ***Cyperus alopecuroides*** Rottbøll. **Hab:** Disturbed wet areas. **Dist:** Native of Old World tropics. Reported for FL in FNA and for MS in Kartesz (2010). **ID Notes:** Individuals of *C. alopecuroides* often have a mixture of 2 and 3 styles on the same plant, unique among our southeastern *Cyperus*. Plants are conspicuous in the field, up to 2.5 m tall with branched, densely cylindric spikes bearing usually erect-ascending, compressed-subterete spikelets. **Syn:** = FNA23, K4, WH3, Carter et al (1996).

Cyperus articulatus Linnaeus. CHINTUL. **Hab:** Marshes, tidal and non-tidal. **Dist:** Se. SC (formerly) south to s. FL west to e. TX, and south into tropical America. **Phen:** Jul-Sep. **Syn:** = ETx1, FNA23, GW1, K1, K3, K4, NcTx, RAB, S, Tx, WH3. NatureServe G4G5 (Apparently Secure).

Cyperus bipartitus Torrey. SLENDER FLATSEDEGE, SHINING FLATSEDEGE. **Hab:** Depression ponds, low fields, ditches, marshes, muddy river shores, along streams, especially in seasonally flooded situations. **Dist:** ME and QC west to MN and WA, south to FL (Wakulla County) (Kunzer et al. 2009), GA, LA, TX, NM, AZ, and CA. **Phen:** Jul-Oct. **Syn:** = Ar, C, ETx1, FNA23, GW1, IL, K1, K3, K4, Mi, Mo1, NE, NY, Pa, Tn, Va, W, WH3; ? *Cyperus rivularis* Kunth - F, G, GrPl, RAB, S, WV. NatureServe G5 (Secure).

* ***Cyperus blepharoleptos*** Steudel. CUBAN-BULRUSH. **Hab:** Ponds and marshes, especially in floating vegetation mats, ditches. **Dist:** Very likely accidentally introduced in the Southeastern US via shipping (first known occurrences in Mobile, AL in 1882 and New Orleans, LA in 1889). **Syn:** = K4; = *Oxycaryum cubense* (Poeppig & Kunth) Lye - Ar, FNA23, K3, WH3; = *Scirpus cubensis* Poeppig & Kunth - GW1, S, Tx. NatureServe G5? (Secure).

Cyperus brevifolius Thieret & Delahoussaye. ASIATIC GREENHEAD SEDGE. **Hab:** River sand bars, tidal marshes, tidal shores, moist soils of pastures and ditches. **Dist:** Apparently introduced and native of e. Asia. Its distribution in North America is still somewhat obscure (because of confusion with *C. brevifolius*), but it is currently known from scattered locations in NC, SC, VA, CT, PA, MD, TN, AL, GA, NJ, DE, AR, MS, and KY. Reported for SC by Hill & Horn (1997), as *K. brevifolioides*. **Tax:** See Bryson et al. (1996). *Kyllinga gracillima* Miquel (1866) appears to be the oldest valid combination in the genus *Kyllinga*, predating *K. brevifolioides* (Thieret & Delahoussaye) Tucker. **Syn:** = C, GW1, K4, NY, Pa, RAB, W, Carter et al (2016), Goetghebeur & Van den Borre (1989); = *Kyllinga brevifolioides* (Thieret & Delahoussaye) Tucker - Tucker (1987); = *Kyllinga gracillima* Miquel - Ar, FNA23, K1, K3, Mo1, NE, Tn, Va; < *Cyperus brevifolius* (Rottbøll) Endlicher ex Hasskarl - F.

Cyperus brevifolius (Rottbøll) Endlicher ex Hasskarl. PERENNIAL GREENHEAD SEDGE. **Hab:** Moist soils of fields, ditches, lawns. **Dist:** Pantropical, north in North America to n. NC, se. OK, and CA. Likely to occur in s. VA. **Phen:** Jun-Sep. **Syn:** = Bah, GW1, K4, RAB, Tx, Carter et al (2016), Delahoussaye & Thieret (1967); = *Kyllinga brevifolia* Rottbøll - Ar, ETx1, FNA23, K1, K3, NcTx, S, WH3, Tucker (1984), Tucker (1987); < *Cyperus brevifolius* (Rottbøll) Endlicher ex Hasskarl - F, G.

Cyperus compressus Linnaeus. POORLAND FLATSEDEGE. **Hab:** Sandy fields, disturbed areas. **Dist:** Pantropical and warm temperate, north in North America to s. NY, s. OH, s. IL, and e. TX, the northern extent of the native range uncertain. **Phen:** Jul-Sep. **ID Notes:** Occasionally mistaken for a member of subgenus *Pycneus*. The dark black, obviously trigonous achenes and mucronate scales distinguish it easily under a hand lens. **Syn:** = Ar, Bah, C, ETx1, F, FNA23, G, GW1, IL, K1, K3, K4, Mo1, NcTx, NY, Pa, RAB, S, Tn, Tx, Va, W, WH3. NatureServe G5 (Secure).

Cyperus croceus Vahl. BALDWIN'S FLATSEDEGE. **Hab:** Pine savannas, pine flatwoods, disturbed areas. **Dist:** NJ and MO south through the New World tropics. **Phen:** Jul-Oct. **Tax:** See Carter and Kral (1990) for clarification of nomenclature. Circumscription and identification are complicated by introgression, especially with *C. retrorsus* (Carter in prep.). **Comm:** {problems in circumscription; check specimens}. **Syn:** = Ar, C, ETx1, FNA23, K4, Mo1, NcTx, Tn, Va, WH3; = *Cyperus globulosus* Aublet - Bah, F, G, GW1, Tx, W, misapplied; > *Cyperus croceus* Vahl - K3; > *Cyperus globosus* - RAB, S; > *Cyperus multiflorus* (Britton) Small - S; > *Cyperus plankii* Britton - S; > *Cyperus retrorsus* Chapman var. *robustus* (Böckeler) Kükenthal - K1, RAB.

98. CYPERACEAE

212

Cyperus cuspidatus Kunth. **Hab:** Sandy fields, disturbed areas. **Dist:** S. SC south to FL, west to LA; New World tropics. **Phen:** Jul. **Tax:** A supposed record of *Cyperus breviculmis* from MS (Lauderdale County) (Kartesz 2021) is apparently a misidentification of *Cyperus cuspidatus*. **Syn:** = Ar, FNA23, GW1, K1, K3, K4, RAB, S, WH3. **NatureServe G4G5** (Apparently Secure).

* **Cyperus difformis** Linnaeus. VARIABLE FLATSEDEGE, SMALLFLOWER UMBRELLA SEDGE. **Hab:** Disturbed areas. **Dist:** Native of Old World tropics. **Phen:** Jul-Oct. **Comm:** See Bryson et al. (1996), Carter, Baker, & Morris (2009). **Syn:** = Ar, C, ETx1, F, FNA23, G, GW1, K1, K3, K4, NcTx, NY, Pa, Tn, Va, WH3. **NatureServe GNR** (Not Yet Ranked).

Cyperus drummondii Torrey & Hooker. DRUMMOND'S FLATSEDEGE. **Hab:** Flatwoods ponds, savannas, coastal prairies, ditches, disturbed depressions. **Dist:** SC south to Panhandle FL, west to e. TX; West Indies; Central America; South America. **Phen:** Jun-Sep. **Comm:** Reported for several counties in the GA Coastal Plain (Carter, Baker, & Morris 2009). Reported for SC, GA, FL, AL, MS, LA, and TX (USDA Plants 2009). **Syn:** = ETx1, FNA23, K3, K4, WH3, Carter (1990); = *Cyperus virens* Michaux var. *drummondii* (Torrey & Hooker in Torrey) Kükenthal; < *Cyperus virens* Michaux – GW1, K1, RAB, S. **NatureServe G5TNR** (Not Yet Ranked).

Cyperus echinatus (Linnaeus) Alph. Wood. ROUND-HEADED FLATSEDEGE, GLOBE FLATSEDEGE. **Hab:** Sandy woodlands, forests, fields, thin soils on outcrops, sand and gravel bars. **Dist:** CT and NY west to s. OH, IL, and se. KS, south to n. FL, TX, and ne. Mexico. **Phen:** Jul-Sep. **Tax:** See Carter and Jarvis (1986) for clarification of nomenclature. **Syn:** = Ar, C, ETx1, FNA23, IL, K1, K3, K4, Mo1, NcTx, NE, Pa, Tn, Va, WH3; = *Cyperus ovularis* (Michaux) Torrey – G, GrPl, GW1, RAB, S, Tx, W, WV; > *Cyperus ovularis* var. *ovularis* – F; > *Cyperus ovularis* var. *sphaericus* Böckler – F. **NatureServe G5** (Secure).

Cyperus elegans Linnaeus. ROYAL FLATSEDEGE, STICKY FLATSEDEGE. **Hab:** Ditches, wet open areas, coastal rock barrens. **Dist:** FL, AL, MS, TX, and NM, south to South America. **Phen:** Jul-Nov. **ID Notes:** The combination of involute leaves, viscid surfaces, and excurrent-mucronate scale apices is sufficient to distinguish *C. elegans* from all other *Cyperus* except *C. oxylepis*. In the field, the dark, broadly obovoid achenes of *C. elegans* are conspicuous, visible through the pale olivaceous scales as circular blackish spots. **Syn:** = Bah, ETx1, FNA23, K3, K4, NcTx, WH3; > *Cyperus elegans* var. *elegans* – Tx. **NatureServe G5** (Secure).

* **Cyperus enterianus** Boeckeler. WOODRUSH FLATSEDEGE. **Hab:** Bottomland hardwood forests, coastal grasslands, marshes, vacant lots, disturbed areas. **Dist:** Native of temperate South America. Established from E. GA south to s. FL and west to e. and s. TX. Carter (1990), Rosen, Carter, & Bryson (2006), and Carter, Baker, & Morris (2009) discuss the spread of this noxious weed in the Southeastern United States. Bradley et al. [in prep.] report for Coastal Plain of SC (Jasper County). **Phen:** Jul-Sep. **Tax:** Culm usually smooth, but rarely with scattered retrorse teeth, a possible result of introgression with *C. surinamensis* (Carter 1990). **Syn:** = ETx1, FNA23, K1, K3, K4, WH3, Carter (1990). **NatureServe G5** (Secure).

* **Cyperus eragrostis** Lamarck. LOVEGRASS FLATSEDEGE. **Hab:** Disturbed wetlands. **Dist:** Native of tropical America. **Comm:** See Bryson et al. (1996), Brown & Marcus (1998), Kunzer et al. (2009). **Syn:** = FNA23, K1, K3, K4, WH3. **NatureServe G5** (Secure).

Cyperus erythrorhizos Muhlenberg. REDROOTED FLATSEDEGE. **Hab:** Marshes, ditches, shores, mud flats. **Dist:** MA west to ND and WA, south to n. FL, LA, TX, AZ, and CA. **Phen:** Jul-Dec. **ID Notes:** This species is frequently confused with *C. odoratus*, with which it is often closely associated. The neatly quadrangular spikelets with tiny (≤ 1.5 mm), closely imbricate scales (vs. terete, jointed spikelets with > 2 mm, loosely spaced scales) easily distinguish even depauperate plants of *C. erythrorhizos* at a glance. **Syn:** = Ar, C, ETx1, F, FNA23, G, GrPl, GW1, IL, K1, K3, K4, Mi, Mo1, NcTx, NE, NY, Pa, RAB, Tn, Tx, Va, W, WH3, WV; > *Cyperus erythrorhizos* Muhlenberg – S; > *Cyperus halei* Torrey ex Britton – S. **NatureServe G5** (Secure).

Cyperus esculentus Linnaeus var. *leptostachyus* Boeckeler. YELLOW NUTSEDEGE, YELLOW NUTGRASS, WILD CHUFA, EARTH-ALMOND. **Hab:** Fields, roadsides, shores, other disturbed areas. **Dist:** The species is widespread in tropical and warm temperate North, Central, and South America. **Phen:** Jul-Oct. **Syn:** = Ar, ETx1, FNA23, IL, K3, NE, NY, Pa, Va, De Castro et al (2015), Schippers, Ter Borg, & Bos (1995); < *Cyperus esculentus* – Bah, C, F, G, GrPl, GW1, K4, Mi, Mo1, NcTx, RAB, Tn, Tx, W, WH3, WV; > *Cyperus esculentus* – S; > *Cyperus esculentus* Linnaeus var. *leptostachyus* Boeckeler – K1; > *Cyperus esculentus* var. *sativus* Böckler – K1; > *Cyperus lutescens* Torrey & Hooker – S.

Cyperus filicinus Vahl. FERN FLATSEDEGE. **Hab:** Brackish marshes, other maritime habitats. **Dist:** ME to s. FL, west to LA; West Indies. **Phen:** Jul-Sep. **ID Notes:** Often difficult to separate from *C. polystachyos* and occurring in similar habitats. Detailed examination of the individual scales and achenes (see key to subgenus *Pycnus*) is required. **Syn:** = C, F, FNA23, G, IL, K1, K3, K4, NE, NY, Pa, RAB, S, Va; = *Cyperus nuttallii* Eddy; = *Cyperus polystachyos* Rottbøll var. *filicinus* (Vahl) C.B. Clarke; < *Cyperus polystachyos* Rottbøll – GW1, WH3.

Cyperus filiculmis Vahl. SOUTHEASTERN FLATSEDGE. **Hab:** Longleaf pine sandhills, other sandy or rocky woodlands, forests, and fields. **Dist:** DE and MD south to s. peninsular FL, west to e. TX. Reported as new for DE (Longbottom, Naczi, & Knapp 2016). **Phen:** Jul-Oct. **Syn:** = ETx1, FNA23, RAB, Tx, Va, WH3; < *Cyperus lupulinus* (Sprengel) Marcks, sometimes misapplied; < *Cyperus lupulinus* Marcks ssp. *lupulinus* – K1, K3, K4.

Cyperus flavescens Linnaeus. YELLOW FLATSEDGE. **Hab:** Low fields, ditches, marshes, especially where seasonally flooded. **Dist:** Pantropical and warm temperate, north in North America to MA, MI, MO, and KS. **Phen:** Jul-Sep. **Syn:** = Ar, C, ETx1, FNA23, G, GW1, IL, K1, K3, K4, Mi, NcTx, NE, NY, Pa, RAB, S, Tn, Tx, Va, W, WH3, WV; > *Cyperus flavescens* var. *poiformis* (Pursh) Fernald – F, Mo1.

Cyperus flavicomus Michaux. WHITE-EDGED FLATSEDGE. **Hab:** Ditches, marshes, natural or artificial ponds, especially where seasonally flooded. **Dist:** Se. VA and KY south through the New World tropics. **Phen:** Jul-Oct. **ID Notes:** This species is unlikely to be confused with any other subgenus *Pycurus*, but may superficially resemble some species in subgenus *Cyperus*. The lenticular achenes and 2-branched styles are diagnostic. **Syn:** = Ar, C, ETx1, FNA23, K1, K3, K4, Mo1, NY, Tn, Va, W, WH3; = *Cyperus albomarginatus* (Martius & Schrader ex Nees) Steudel – F, G, GW1, RAB, Tx; ? *Cyperus sabulosus* (Martius & Schrader ex Nees) Steudel – S.

Cyperus floribundus (Kükenthal) R. Carter & S.D. Jones. **Hab:** Prairies and marshes. **Dist:** S. TX south to Mexico. **Phen:** Jun-Sep. **Syn:** = ETx1, K3, K4, Carter & Jones (1997); = *Cyperus uniflorus* Torrey & Hooker – Tx. **NatureServe GNR** (Not Yet Ranked).

* **Cyperus fuscus** Linnaeus. BLACK GALINGALE, BROWN GALINGALE. **Hab:** Wet, disturbed areas. **Dist:** Native of temperate Eurasia. **Tax:** See McKenzie et al. (1998). **ID Notes:** *C. fuscus* is occasionally confused with *C. bipartitus*, and may occur in the same habitats. The two are in separate subgenera, *C. fuscus* is easily separated by its much denser, glomerulate heads of spikelets (vs. loose spikes); spikelets with bead-like, orbiculate, emarginate scales; and minute, trigonous achenes. **Syn:** = Ar, C, F, FNA23, G, GrPl, K1, K3, K4, Mi, Mo1, NE, NY. **NatureServe GNR** (Not Yet Ranked).

Cyperus haspan Linnaeus. SHEATHED FLATSEDGE. **Hab:** Tidal marshes, other marshes, ponded depressions, low fields, ditches, waterfowl impoundments, weed in rice fields. **Dist:** Pantropical in distribution, north in North America to se. VA (MD?), sc. TN, c. AR, and c. TX. **Phen:** Jul-Oct. **Syn:** = Ar, C, ETx1, FNA23, G, GW1, K1, K3, K4, NcTx, RAB, S, Tn, Tx, Va, WH3; > *Cyperus haspan* var. *americanus* Böckler – F. **NatureServe G5** (Secure).

Cyperus hortensis (Salzmann ex Steudel) Dorr. ANNUAL GREENHEAD SEDGE. **Hab:** Moist soils of fields, ditches, lawns, shores of ponds and rivers. **Dist:** Pantropical, north in North America to e. PA, MO, and e. KS. **Phen:** Jul-Oct. **Tax:** Dorr (2014) indicated that the correct name for this taxon in *Cyperus* appears to be *C. hortensis*; the basionym predates *C. tenuifolius* by a year. **ID Notes:** Frequently confused with *C. brevifolius*, which occurs in similar habitats. In addition to the rhizomes, which may be inconspicuous on immature or densely matted plants, *C. brevifolius* has scale keels that are entire and most culms with the longest bract held vertical. **Syn:** = K4, NY; = *Cyperus tenuifolius* (Steudel) Dandy – C, F, G, GrPl, GW1, Pa, RAB, Tx, W, Delahoussaye et al. (1989); = *Kyllinga pumila* Michaux – Ar, ETx1, IL, K1, K3, Mo1, NcTx, S, Tn, Va, WH3, WV, Tucker (1984), Tucker (1987); > *Cyperus densicaespitosus* Mattfeld & Kükenthal – Carter et al (2016).

Cyperus hystricinus Fernald. BRISTLY FLATSEDGE. **Hab:** Dry woodlands and forests. **Dist:** NJ south to n. FL, west to e. TX, mostly on the Coastal Plain. **Phen:** Jul-Sep. **Tax:** See Carter and Jarvis (1986) for clarification of nomenclature. **Comm:** {check specimens of this and relatives – discrepancy between mapped and stated ranges}. **Syn:** = Ar, C, ETx1, FNA23, K1, K3, K4, Mo1, NcTx, S, Va, WH3; = *Cyperus retrofractus* (Linnaeus) Torrey var. *hystricinus* (Fernald) Kükenthal – F, G; < *Cyperus retrofractus* (Linnaeus) Torrey – RAB, W, misapplied.

* **Cyperus involucratus** Rottbøll. UMBRELLA-PLANT. **Hab:** Cultivated and persistent, also naturalizing in disturbed areas. **Dist:** Native of Africa. Naturalized north at least to Panhandle FL (Kunzer et al. 2009). **Phen:** Jun-Nov. **Syn:** = ETx1, FNA23, K1, K3, K4, NcTx, NY, WH3; ? *Cyperus alternifolius* Linnaeus – Tx, misapplied. **NatureServe GNR** (Not Yet Ranked).

* **Cyperus iria** Linnaeus. RICE-FIELD FLATSEDGE. **Hab:** Marshes, ditches, disturbed wet areas, sandbars and gravelbars. **Dist:** Native of Old World. **Phen:** Jul-Oct. **Syn:** = Ar, C, ETx1, F, FNA23, G, GW1, IL, K1, K3, K4, Mo1, NE, NY, RAB, S, Tn, Tx, Va, WH3. **NatureServe GNR** (Not Yet Ranked).

Cyperus lancastris Porter ex A. Gray. MANY-FLOWERED FLATSEDGE, PORTER'S FLATSEDGE. **Hab:** Dry woodlands, forests, and fields. **Dist:** NJ west to WV, OH, and MO, south to GA, c. MS (Morris & MacDonald 2012), and AR. **Phen:** Jul-Sep. **Syn:** = Ar, C, F, FNA23, G, GrPl, Il, K1, K3, K4, Mo1, Pa, RAB, S, Tn, Va, W, WV. NatureServe G5 (Secure).

* *Cyperus lanceolatus* Poiret. **Hab:** Wet places. **Dist:** Se. GA and ne. FL west to LA and c. TX (?), south into the Neotropics; also Africa. **Phen:** Jun-Sep. **Syn:** = Ar, ETx1, FNA23, GW1, K1, K3, K4, NcTx, WH3; ? *Cyperus densus* Link – S; > *Cyperus lanceolatus* Poiret var. *compositus* J. Presl & K. Presl – Tx.

Cyperus lecontei Torrey ex Steudel. **Hab:** Limesink ponds, low pinelands. **Dist:** Se. NC south to s. FL, west to w. LA. **Phen:** Jul-Sep. **Comm:** Sorrie (1998b) reports it for e. GA (Glynn County). **Syn:** = Ar, FNA23, GW1, K1, K3, K4, RAB, S, WH3. NatureServe G4? (Apparently Secure).

Cyperus lupulinus (Sprengel) Marcks var. *lupulinus*. GREAT PLAINS FLATSEDGE. **Hab:** Dry sterile soils in fields and meadows. **Dist:** MA and VT west to MN, south to NC, n. SC, TX; disjunct in ID, WA, and OR. **Phen:** Jul-Sep. **Syn:** = K4, NE; = *Cyperus filiculmis* Vahl var. *filiculmis* – F, G, Mo1, WV; = *Cyperus lupulinus* Marcks ssp. *lupulinus* – FNA23, GrPl, K1, K3, NY, Va; < *Cyperus filiculmis* Vahl – RAB, W; >< *Cyperus filiculmis* Vahl – S; < *Cyperus lupulinus* (Sprengel) Marcks – Ar, C, ETx1, Il, Mi, NcTx, Pa, Tn; > *Cyperus martindalei* Britton – S.

Cyperus neotropicalis Alain. AMERICAN LIPOCARPHA, AMERICAN HALFCHAFF. **Hab:** Riverine sandbars, depression ponds, interdune swales and ponds, borrow pits, impoundment shores, ditches, other moist exposed soil. **Dist:** Se. VA south to s. FL, west to AL. **Phen:** Jul-Sep. **Syn:** = K4, Batters et al (2014); = *Lipocarpa maculata* (Michaux) Torrey – C, F, FNA23, G, GW1, Il, K1, RAB, S, Va, WH3, Goetghebeur & Van den Borre (1989), Tucker (1987). NatureServe G5 (Secure).

Cyperus ochraceus Vahl. **Hab:** Marshes, ditches, wet disturbed areas. **Dist:** Se. GA (Jones & Coile 1988), s. FL, s. AL, s. MS, LA, TX, south into Mexico, Central America, and South America. **Phen:** (May-) Jun-Nov. **Syn:** = Bah, ETx1, FNA23, GW1, K1, K3, K4, S, Tx, WH3, Carter (1990). NatureServe G5 (Secure).

Cyperus odoratus Linnaeus var. *odoratus*. FRAGRANT FLATSEDGE. **Hab:** Low fields, marshes, ditches, sandbars. **Dist:** Pantropical, north in North America to MA, se. ME, ON, MN, KS, NM, AZ, and CA. **Phen:** Jul-Sep. **Tax:** *C. macrocephalus* Liebm. and *C. eggersii* Boeckeler are striking in the field and sometimes recognized, occurring in our area in s. TX. *C. macrocephalus* is distinguished by inflorescences congested into a single globose capitate cluster 2-3 cm in diam., ellipsoid (vs. oblong) achenes, and sharply trigonous culms; *C. eggersii* by penicillate spikes with very densely fascicled, erect-appressed spikelets (vs. looser spikes, the spikelets spaced out along the rachis and divaricate). **ID Notes:** This is a widespread, weedy and highly polymorphic species, frequently confused with the equally common, widespread, and variable *C. erythrorhizos* and *C. strigosus*. In addition to the rachilla characters given in the main key, *C. strigosus* has cormose culm bases (vs. annual with fibrous roots) and spikelets with longer [3.2-4.5 mm vs. (2.0-) 2.2-2.8 (-3.2) mm] scales that are initially quadrangular, becoming strongly compressed at maturity; differences from *C. erythrorhizos* are discussed under that species. **Syn:** = Va; = *Cyperus odoratus* – G, GW1, Mi, Pa; > *Cyperus ferax* L.C. Richard – S; > *Cyperus ferruginescens* Boeckeler – F, RAB; > *Cyperus longispicatus* J.B.S. Norton – S; > *Cyperus macrocephalus* Liebm. – Tx; < *Cyperus odoratus* – Ar, C, ETx1, FNA23, GrPl, Il, K1, K3, K4, Mo1, NcTx, NE, NY, Tn, W, WH3; > *Cyperus odoratus* – F, RAB, Tx; > *Cyperus odoratus* Linnaeus var. *odoratus* – Tucker & Gandhi (2019); > *Cyperus odoratus* Linnaeus var. *squarrosus* (Britton) S.D. Jones, Wipff, & R. Carter – Tucker & Gandhi (2019); > *Cyperus speciosus* Vahl – S; < *Torulinum confertum* Desvaux ex Hamilton – Bah.

Cyperus ovatus Baldwin. **Hab:** Sandy beaches, maritime forests, and pinelands. **Dist:** Se. NC south to s. FL, west to s. AL. **Phen:** Jul-Oct. **ID Notes:** Because of similarities in habit and inflorescence form, *Cyperus ovatus* var. *ovatus* has been confused with *C. retrorsus*, from which it can be readily distinguished by its 3-5 fruited spikelets; apically conduplicate, ascending, whitish yellow to golden brown or stramineous floral scales; narrowly elliptic to fusiform achenes; yellow-green to light green foliage; and typically spreading to divaricate (rarely ascending) primary inflorescence bracts. *Cyperus ovatus* var. *ovatus* varies along a south-north cline. An extreme form with longer spikelets, broader nearly globose spikes, and generally fewer inflorescence rays is restricted to southern peninsular Florida and has been called *C. winkleri*. The incidence of this form decreases northward as the more common and more widespread form becomes predominant. Hybrids between *C. retrorsus* and *C. ovatus* do occasionally occur, and it seems likely that some of the variation observed in *C. ovatus* is the result of introgression between southern Florida populations of *C. ovatus*, where the *winkleri*-form is more common, northward into populations of *C. retrorsus*. Hybrids between *C. ovatus* var. *ovatus* and *C. croceus*, *C. retrorsus*, and *C. strigosus* have been observed. **Syn:** = FNA23, K1, K4, WH3; >< *Cyperus cylindricus* Elliott; > *Cyperus deeringianus* Britton ex Small – S; < *Cyperus retrorsus* Chapman – C, G, GW1, W; ? *Cyperus retrorsus* Chapman var. *cylindricus* (Elliott) Fernald & Griscom; > *Cyperus retrorsus* var. *deeringianus* (Britton ex Small) Fernald ex Griscom – RAB; > *Cyperus winkleri*.

* *Cyperus oxylepis* Nees ex Steudel. SHARP-SCALE FLATSEDGE. **Hab:** Disturbed wet areas, marshes, saline areas. **Dist:** Native of South America. **Phen:** Jun-Nov. **Tax:** See Bryson et al. (1996). **ID Notes:** Forms with relatively short spikelets may be mistaken for *C. elegans*; see comments under that species. **Syn:** = Ar, ETx1, FNA23, GW1, K1, K3, K4, Tx, WH3. NatureServe G5? (Secure).

* *Cyperus pilosus* Vahl. **Hab:** Rice fields, ditches. **Dist:** Native of e. Asia. **Comm:** See Carter, Baker, & Morris (2009). **Syn:** = FNA23, K1, K4, WH3. NatureServe GNR (Not Yet Ranked).

Cyperus plukenetii Fernald. STARBURST FLATSEDGE, PLUKENET'S FLATSEDGE. **Hab:** Longleaf pine sandhills, sandy woodlands, thin soils of rock outcrops, and dry, disturbed areas. **Dist:** NJ, KY, se. MO, and se. OK, south to c. peninsular FL and e. TX. **Phen:** Jul-Oct. **Tax:** See Carter and Jarvis (1986) for clarification of nomenclature and Carter (1993) for notes on animal dispersal. **Syn:** = Ar, C, ETx1, F, FNA23, K1, K3, K4, Mo1, NcTx, Pa, RAB, Tn, Va, W, WH3; = *Cyperus retrofractus* (Linnaeus) Torrey – S, misapplied; = *Cyperus retrofractus* var. *retrofractus* – G, misapplied.

Cyperus polystachyos Rottbøll. COAST FLATSEDGE. **Hab:** Low fields, ditches, and marshes. **Dist:** Panropical and warm temperate, north in North America to ME, MA, KY, MO, and OK. **Phen:** Jul-Oct. **Tax:** A highly polymorphic species for which the infraspecific nomenclature should be examined critically: There are at least three infraspecific entities that R. Carter (pers.comm., 2022) refers to under the working names of *C. polystachyos polystachyos*, *C. polystachyos hahnianus*, and *C. polystachyos texensis*. Var. *texensis* is well known. It is a shorter plant than the others and is more widely distributed, occurring well beyond the coastal plain. *C. polystachyos polystachyos* is a much taller plant that appears to be restricted to the outer coastal plain – common throughout peninsular FL, northward into the FL panhandle, s GA, s AL, s MS, s LA, se TX (and probably in SC). *C. polystachyos hahnianus* is similar to *C. polystachyos polystachyos* in habit and most other respects except for the orientation of its spikelets: They are conspicuously fastigiate-penciliform. In Florida, *C. p. polystachyos* and *C. p. hahnianus* do sometimes occur in mixed populations, which suggests that – as strikingly different as these plants are – *C. p. hahnianus* might better be treated as a form. Kükenthal's description seems to match these plants going under the working name of *C. p. hahnianus*, and the type locality is Martinique ("insula Martinica"). However, I have not been able to access photographs of the type of *Cyperus hahnianus* Boeckeler, Flora 61: 138. 1878 [= *Cyperus polystachyos* var. *hahnianus* (Boeckeler) Kük.]. --Type: "Hahn. Herb. No. 700 – (Vidi in hb. reg. Berlin.) Insula Martinica." -- Presumably at B. **ID Notes:** Often difficult to separate from *C. filicinus* and occurring in similar habitats, although *C. filicinus* is generally more coastal. A highly polymorphic species; depauperate plants may resemble species in subgenus *Cyperus*, check carefully for 2-branched styles and biconvex achenes. **Syn:** = Ar, ETx1, FNA23, Il, NcTx, NE, Pa, Tn, Va; > *Cyperus microdantus* Torrey – S; > *Cyperus odoratus* – S, misapplied; > *Cyperus paniculatus* Rottbøll – S; < *Cyperus polystachyos* Rottbøll – GW1, WH3; > *Cyperus polystachyos* Rottbøll var. *holosericeus* (Link) C.B. Clarke – K4; > *Cyperus polystachyos* var. *paniculatus* (Rottbøll) C.B. Clarke; > *Cyperus polystachyos* Rottbøll var. *texensis* (Torrey) Fernald – Bah, C, F, G, K1, K3, Mo1, RAB, Tx, W.

Cyperus pseudovegetus Steudel. GREEN FLATSEDGE, MARSH FLATSEDGE. **Hab:** Marshes, ditches, depressions. **Dist:** NJ and MA, west to s. IL, s. MO, and OK, south to FL and TX. **Phen:** Jun-Oct. --Oct. **Syn:** = Ar, C, ETx1, FNA23, G, GrPl, GW1, Il, K1, K3, K4, NcTx, NE, NY, RAB, S, Tn, Tx, Va, W, WH3, Carter (1990); = *Cyperus virens* Michaux – F, misapplied; > *Cyperus pseudovegetus* var. *pseudovegetus* – Mo1.

Cyperus refractus Engelmann ex Boeckeler. REFLEXED FLATSEDGE. **Hab:** Dry sandy or rocky woodlands and forests, also in somewhat moister sites. **Dist:** NJ west to OH and MO, south to SC, GA, AL, and AR. **Phen:** Jul-Sep. **ID Notes:** Flowering material of the much more common *C. strigosus* is sometimes misidentified as this species; see Key ZD. **Syn:** = Ar, C, F, FNA23, G, K1, K3, K4, Mo1, Pa, RAB, S, Tn, Va, W. [NatureServe G5](#) (Secure).

Cyperus retroflexus Buckley var. *pumilus* (Britton) R. Carter & S.D. Jones. **Hab:** Cropped fields, seasonally damp, disturbed areas. **Dist:** AL west to NM, south to Mexico. **Phen:** Jul-Sep. **ID Notes:** Spikes are quite similar to *C. retrorsus* at a glance. The sterile, reduced terminal scales, usually with a minute, uncinat mucro are diagnostic. *C. retrorsus* is a more robust plant with erect or strongly ascending bracts, and broader leaves and bracts. **Syn:** = Carter & Jones (1997); < *Cyperus retroflexus* Buckley – Ar, ETx1, FNA23, GrPl, K1, K3, K4, Mo1, NcTx.

Cyperus retroflexus Buckley var. *retroflexus*. **Hab:** Cropped fields, seasonally damp, disturbed areas. **Dist:** AL west to NM, south to Mexico. **Phen:** Jul-Sep. **Syn:** = Carter & Jones (1997); < *Cyperus retroflexus* Buckley – Ar, ETx1, FNA23, GrPl, K1, K3, K4, Mo1, NcTx.

Cyperus retrofractus (Linnaeus) Torrey. ROUGH FLATSEDGE. **Hab:** Dry sandy or rocky woodlands and fields. **Dist:** NJ west to s. OH, and se. MO, south to GA, AL, and AR. **Phen:** Jul-Sep. **Tax:** See Carter and Jarvis (1986) for clarification of nomenclature. **ID Notes:** *C. lancastriensis* is occasionally confused with this species, which, unlike other members of the *C. retrofractus* complex, often has multiple fertile scales; *C. lancastriensis* has spikelets reflexed only in the proximal half of the spike, lacking prolonged, involute terminal scales, and oblong-falcate (vs. narrowly oblong and straight) achenes. **Syn:** = Ar, C, FNA23, K1, K3, K4, Mo1, Pa, Tn, Tx, Va, WH3; = *Cyperus dipsaciformis* Fernald – F, RAB, S, W; = *Cyperus retrofractus* (Linnaeus) Torrey var. *dipsaciformis* (Fernald) Kükenthal – G.

Cyperus retrorsus Chapman. PINELAND FLATSEDGE. **Hab:** Dry woodlands, forests, and rock outcrops. **Dist:** S. NY south to FL, west to TX, mostly on the Coastal Plain, but north in the interior to KY and se. OK. **Phen:** Jul-Oct. **Syn:** = Ar, C, ETx1, FNA23, G, GW1, Il, K3, K4, NcTx, NE, NY, Pa, Tn, Va, W, WH3; = *Cyperus retrorsus* Chapman var. *retrorsus* – F, K1, RAB; > *Cyperus retrorsus* Chapman – S; > *Cyperus torreyi* Britton – S. [NatureServe G5T5](#) (Secure).

* **Cyperus rotundus** Linnaeus. PURPLE NUTSEGE, NUTGRASS, COCOGRASS, TULLILO. **Hab:** Gardens, fields, disturbed areas. **Dist:** Panropical and warm temperate in distribution (though extending less far north than *C. esculentus*). **Phen:** Jul-Apr. **Syn:** = Ar, Bah, C, ETx1, F, FNA23, G, GrPl, GW1, K1, K3, K4, Mo1, NcTx, NY, RAB, S, Tn, Tx, Va, WH3. [NatureServe G5](#) (Secure).

* *Cyperus sanguinolentus* Vahl. **Hab:** Ditches, disturbed wet areas. **Dist:** Native of Asia, known in North America from e. GA west to LA. **Comm:** See Carter & Bryson (2000) for detailed information. **Syn:** = FNA23, K4; > *Cyperus louisianensis* Thieret – K1.

Cyperus sesquiflorus (Torrey) Mattfeld & Kükenthal. WHITEHEAD SEDGE. **Hab:** Moist soils of fields, ditches, lawns, shores of ponds and rivers, sand and gravel bars. **Dist:** Pantropical, north in North America to ne. NC and se. AR. **Phen:** Jul-Sep. **Comm:** Likely to occur in se. VA. **ID Notes:** In flower this species may superficially resemble *C. hortensis*. **Syn:** = C, GW1, K4, RAB, Tx, Carter et al (2016), Delahoussaye et al. (1989); = *Kyllinga odorata* Vahl – Ar, ETx1, K1, K3, S, WH3, Tucker (1984), Tucker (1987).

Cyperus setigerus Torrey & Hooker. LEAN FLATSEDEGE. **Hab:** Ditches, pondshores. **Dist:** MO and NM south to MS, TX. **Phen:** May-Sep. **Syn:** = ETx1, GrPl, K3, K4, NcTx, Tx. **NatureServe G3G5** (Apparently Secure).

Cyperus species 1. DIMINUTIVE FLATSEDEGE. **Hab:** Infrequent to locally abundant (following soil disturbance) on Florida scrub, stabilized dunes, and sandridges, generally on open white sands, near the coast but also inland on riverine (and aeolian?) dunes. **Dist:** Se. VA south to s. FL, west to s. MS. **Phen:** Jul-Oct. **Tax:** Under study by Richard Carter. **ID Notes:** Previously, this plant has been variously included within the concepts of *C. retrorsus*, *C. retrorsus* var. *nashii*, or *C. nashii*. **Syn:** = *Cyperus diminutus* R. Carter, in prep.; < *Cyperus nashii* Small – S; < *Cyperus retrorsus* Chapman – C, FNA23, G, Va, WH3; < *Cyperus retrorsus* var. *nashii* (Britton) Fernald – F.

Cyperus squarrosus Linnaeus var. *squarrosus*. AWNEED FLATSEDEGE. **Hab:** Moist depressions and seepages on granitic and other rocks, drawdown riverbanks, swales, shores, coastal rock barrens, other moist disturbed sites. **Dist:** Nearly cosmopolitan in distribution, in Old World and New World. **Phen:** May-Oct. **Tax:** Similar to the closely related *C. granitophilus*. **Syn:** = Wipff & Jones (1994); = *Cyperus aristatus* Rottbøll var. *aristatus* – Tx; < *Cyperus aristatus* Rottbøll – GW1; < *Cyperus inflexus* Muhlenberg – F, S, WV; < *Cyperus squarrosus* Linnaeus – Ar, C, ETx1, FNA23, GrPl, Il, K1, K3, K4, Mi, Mo1, NcTx, Pa, Tn, Va, WH3.

Cyperus strigosus Linnaeus. STRAW FLATSEDEGE, FALSE NUTSEDEGE. **Hab:** Marshes, ditches, wet flatwoods, wet disturbed areas. **Dist:** QC west to SD, south to FL and TX; also in w. North America. **Phen:** Jul-Oct. **Tax:** *Cyperus strigosus* is a widespread and polymorphic taxon. Robust plants with larger spikelets and longer floral scales have been called *C. strigosus* var. *stenolepis*. Most have not chosen to give such plants formal taxonomic status, because this variation appears to be continuous. However, our (R. Carter, R. Mears) field observations and an examination of vouchers of markedly robust plants with larger spikelets and longer floral scales, growing on black mucky soils in southern peninsular Florida, would indicate that these plants have taxonomic status. Similar plants have been found in Louisiana (Chris Reid, pers. comm.). **ID Notes:** This species is often confused with *C. esculentus*; the two are not closely related (see Key ZE). Small, looser-spiked plants of *C. strigosus* are easily distinguished at a glance by their longer, more spreading and loosely imbricate scales, greenish in flower and maturing dull stramineous or light brown laterally (vs. yellowish, occasionally light reddish-brown); in flower *C. strigosus* has shorter anthers (0.3-0.5 mm vs. 1 mm or more). **Syn:** = Ar, C, ETx1, FNA23, GW1, Il, K1, K3, K4, Mi, Mo1, NcTx, NE, NY, Pa, RAB, Tn, Tx, Va, W, WH3, WV; > *Cyperus praelongatus* Steudel – S; > *Cyperus stenolepis* – S; > *Cyperus strigosus* Linnaeus – S; > *Cyperus strigosus* var. *robustior* Britton – F; > *Cyperus strigosus* var. *stenolepis* (Torrey) Kükenthal – G; > *Cyperus strigosus* var. *strigosus* – F, G.

Cyperus subsquarrosus (Muhlenberg) Bauters. SMALLFLOWER HALFCHAFF. **Hab:** Riverbank draw-down zones, other moist sandy areas. **Dist:** ME west to ON and MN, south to s. FL and TX; south into tropical America. **Phen:** Jul-Aug. **Syn:** = K4, NY, Bauters et al (2014); = *Hemicarpha micrantha* (Vahl) Pax – F, GrPl, GW1, Il, RAB, S; = *Hemicarpha micrantha* var. *micrantha* – C, Tx; = *Hemicarpha micrantha* var. *minor* (Schrader) Friedland – G; = *Lipocarpa micrantha* (Vahl) G. Tucker – ETx1, FNA23, K3, Mi, Mo1, NcTx, NE, Pa, Tn, Va, WH3, Goetghebeur & Van den Borre (1989), Tucker (1987); < *Hemicarpha micrantha* (Vahl) Pax – K1.

Cyperus surinamensis Rottbøll. **Hab:** Marshes, pond edges, disturbed wet areas. **Dist:** Se. NC south to s. FL, west to KS, OK, TX, and south into Mexico and tropical America. **Phen:** Sep-Nov. **ID Notes:** Occasionally *C. entrerianus* may have somewhat scabridulous culms (Carter (1990)). It is generally a much more robust plant, with denser, globose heads and indurate rhizomes; see characters given in Key ZB. **Syn:** = Ar, Bah, ETx1, FNA23, GrPl, GW1, K1, K3, K4, NcTx, RAB, S, WH3, Carter (1990). **NatureServe G5** (Secure).

Cyperus thyrsiflorus Junghuhn. SOUTHERN FLATSEDEGE. **Hab:** Calcareous woodlands/hammocks, swamp edges, and shell middens. **Dist:** E. SC south to s. FL, west to se. TX; West Indies; South America. **Phen:** May-Sep. **ID Notes:** *C. pseudothyrsiflorus* is sometimes confused with this species. *C. pseudothyrsiflorus* is a more robust plant, with mucronate scales, maturing reddish-brown (vs. pale olivaceous); see Key ZD. *C. tenuis*, a Central American species, has been reported from southern Texas, probably based on material of this species; it has much denser ovoid (vs. oblong-cylindric, parallel-sided) spikes, slightly flattened spikelets, and greenish scales overlapping at least 1/4-1/3 of the next distal scale. **Syn:** = ETx1, FNA23, K1, K3, K4, WH3, Carter & Jones (1997); = *Cyperus hermaphroditus* (Jacquin) Standley – S, misapplied. **NatureServe G5** (Secure).

Cyperus vires Michaux. **Hab:** Marshes and ditches. **Dist:** E. NC south to c. peninsular FL, west to TX; Mexico to Argentina. Also as a chrome ore waif in VA. **Phen:** May-Nov. **ID Notes:** Easily identified in the field by its triquetrous culms with abundant retrorse prickles on the

angles (sharp enough to slice open a finger moved up the stem, a hazard when collecting voucher specimens); other species in sect. *Luzuloidei* are mostly bluntly and obscurely trigonous. **Syn:** = Ar, ETx1, FNA23, K3, K4, Tx, WH3, Carter (1990); < *Cyperus virens* Michaux – GW1, K1, RAB, S.

***Dulichium* Persoon 1805 (THREEWAY SEDGE)**

A genus of 1-2 species, perennial herbs, North American. References: Goetghebeur in Kubitzki (1998b); Mastrogioiuseppe (2002) in FNA23 (2002b).

Identification Notes: The combination of the distichous *Cyperus*-like spikelets and numerous, distinctly 3-ranked, short, cauline leaves makes *Dulichium* distinctive.

***Dulichium arundinaceum* (Linnaeus) Britton var. *arundinaceum*.** THREEWAY SEDGE. **Hab:** Streambanks, marshes, bogs, ditches. **Dist:** Var. *arundinaceum* ranges from NL (Newfoundland) west to MN, south to FL and TX; also from MT and BC south to CA. **Phen:** Jul-Oct. **Tax:** A second variety, var. *boreale* Lepage, is endemic in QC. **ID Notes:** Recognizable (even when sterile) by the strongly 3-ranked leaves and culms round in cross-section and hollow. **Syn:** = Ar, FNA23, K3, K4, NE, NY, Pa, Va; < *Dulichium arundinaceum* – C, ETx1, F, G, GrPl, GW1, Il, K1, Mi, Mo1, RAB, S, Tn, Tx, W, WH3, WV. [NatureServe G5T5](#) (Secure).

***Eleocharis* R. Brown 1810 (SPIKERUSH, SPIKESEDGE)**

Contributed by Bruce A. Sorrie and Alan S. Weakley

A genus of about 120-200 species, herbs, cosmopolitan. A molecular study supported the monophyly of subgenus *Limnochloa* (Roalson & Friar 2000). References: Angelo, Rosen, & Lange (2020); Bruhl (2002a) in FNA23 (2002b); Brunton, Campbell, & Reznicek (2018); Gibbons & McMullen (2019); Goetghebeur in Kubitzki (1998b); Hinchliff & Roalson (2009); Roalson & Friar (2000); Rosen (2006); Rosen, Hatch, & Carter (2007); Smith et al (2002) in FNA23 (2002b); Socorro González-Elizondo & Peterson (1997); Yashiro & Endo (2021).

98. CYPERACEAE

- 1 Culms proliferating from vegetative shoots produced from sterile spikelets at the apex of the culms, often forming large many-branched masses; normally formed fertile spikelets with achenes very rarely produced; typically submersed aquatics, but occasionally spreading on moist exposed soil **Key A**
- 1 Culms erect or reclining, not proliferating from vegetative shoots at the apex of the culms, mat-forming or not; forming normal spikelets at the culm apices; terrestrial or emergent wetland plants.
 - 2 Spike 1-2 (-2.5)× as thick as the culm immediately below the spike, gradually expanded from the culm, the base of the spike narrowly cuneate; spike (3-) 4-8× as long as wide; [subgenus *Limnochloa*] **Key B**
 - 2 Spike > 2× as thick as the culm immediately below the spike, abruptly expanded from the culm, the base of the spike broadly cuneate, rounded, or truncate; spike 1-3 (-4)× as long as wide.
 - 3 Achenes with several distinct longitudinal ribs or low ridges, the intervening spaces with abundant, very narrow, horizontally elongate cells; [subgenus *Scirpidium*] **Key C**
 - 3 Achenes without longitudinal ribs, the surface smooth, granular, or honeycomb-like (*E. tortilis* and *E. tuberculosa* have indistinct ribs, but intervening cells are honeycomb-like, not thin horizontally; *E. tricostrata* has 3 keel-like ribs, but achene surface appears granular).
 - 4 Achenes lenticular or biconvex; styles 2-branched **Key D**
 - 4 Achenes trigonous or nearly terete; styles 3-branched **Key E**

Key A - spikerushes proliferating vegetatively, with no fertile spikelets present {key provisional and needing additional testing}

- 1 Each culm producing secondary or tertiary whorls. *Eleocharis vivipara*
- 1 Each culm producing a single whorl of proliferations.
 - 3 Upper portion of sheath firm, the edge closely red-dotted; sheath tip < 1 mm long *Eleocharis vivipara*
 - 3 Upper portion of sheath thin and scarious, the edge not differently colored; sheath tip 1-2 mm long; plants usually more filiform and capillary than *E. vivipara*.
 - 4 Spikelet proliferations distichous; lowest scale much shorter than the others *Eleocharis baldwinii*
 - 4 Spikelet proliferations polystichous or spirally disposed; lowest scale longer than others.
 - 5 Perianth bristles 0.6-1.0 mm long (shorter than to equaling the achene); proximal scale of the spikelets 0.8-1.0 mm wide *Eleocharis microcarpa* var. *filiculmis*
 - 5 Perianth bristles 0.2-0.4 mm long (shorter than the achene); proximal scale of the spikelets 0.4-0.5 mm wide *Eleocharis microcarpa* var. *microcarpa*

Key B - spikerushes with the spike about as thick as the culm (subgenus *Limnochloa*)

- 1 Culm transversely nodose-septate (appearing jointed); culms 2-9.5 mm in diameter. *Eleocharis equisetoides*
- 1 Culm not transversely nodose-septate (septa incomplete, if present); culms 1-5.5 mm in diameter.
 - 5 Spike 3-5 mm in diameter, to 5 cm long, rounded to obtuse at the tip, densely flowered, the flowers (scales) 50-100 per spike, arranged in obvious spiral rows; culm 2-5 mm in diameter; [of estuarine and riverine marshes, or brackish interdune swale ponds on barrier islands].
 - 6 Culms 3-5 mm in diameter, live culms terete when fresh; tubercle base confluent with the summit of the achene *Eleocharis cellulosa*
 - 6 Culms 2-4 mm in diameter, sharply 3-4-angled when fresh; tubercle base distinctly constricted, forming a "waist" *Eleocharis quadrangulata*
 - 5 Spike 1-2 mm in diameter, to 2.5 cm long, sharply pointed at the tip, loosely flowered, the flowers (scales) 10-25, few enough that the spiral arrangement is not readily apparent; culm 0.5-1.5 (-2) mm in diameter; [of limesink (doline) ponds and Carolina bay lakes of the mainland].
 - 7 Achene body 0.8-1.5 mm long; scales mostly ca. 3.5 mm long; culms terete when fresh *Eleocharis elongata*
 - 7 Achene body 1.5-2.5 mm long; scales mostly ca. 5 mm long; culms 3-angled when fresh *Eleocharis robbinsii*

Key C - spikerushes with achenes with several distinct longitudinal ribs with very narrow horizontal cells between (subgenus *Scirpidium*)

- 1 Culms about 0.5 mm thick, firm, not wrinkling in drying; spikes 3-6 mm long; [widespread] *Eleocharis acicularis*
- 1 Culms 0.6-1.0 mm thick, becoming wrinkled in drying; spikes 2-4 mm long; [of the Coastal Plain, known from Virginia Beach in 1934] *Eleocharis radicans*

Key D - spikerushes with achenes lenticular or biconvex and styles 2-branched

- 1 Apex of sheath thin, membranous, hyaline, often with a torn edge.
 - 2 Culms 0.1-0.3 mm in diameter; achenes whitish to pale brown; leaf sheaths of the upper culm closely sheathing the stem, not wrinkled, the apex acute *Eleocharis bicolor*
 - 2 Culms 0.3-0.6 mm in diameter; achenes rufous- or olivaceous-brown to black; leaf sheaths of the upper culm usually prominently wrinkled, inflated, membranous, and disintegrating.
 - 3 Achenes rufous-brown to reddish-purple to black, (0.3-) 0.4-0.6 mm wide; longer bristles retrorsely barbed, shorter than to equaling achene body *Eleocharis flavescens* var. *flavescens*
 - 3 Achenes olivaceous-brown to black, 0.5-0.7 (-0.8) mm wide; longer bristles either retrorsely barbed and equaling to exceeding the tubercle, or smooth and shorter than the tubercle. *Eleocharis olivacea* var. *olivacea*
- 1 Apex of sheath firm, somewhat thickened, opaque, with a definite edge.
 - 5 Rhizomatous perennials growing from thick horizontal rhizomes.
 - 6 Basal (sterile) scales 2-3, the lowest not encircling the base of the spike; [of the Mountains, rarely the Piedmont] *Eleocharis palustris*
 - 6 Basal (sterile) scale solitary and spathiform, encircling the base of the spike; [of either the Mountains, upper Piedmont, or outer Coastal Plain].
 - 7 Achenes prominently reticulate-pitted; [of the outer Coastal Plain] *Eleocharis ambigens*
 - 7 Achenes smooth to faintly reticulate; [of the Mountains, rarely Piedmont, or outer Coastal Plain]. *Eleocharis erythropoda*
 - 5 Tufted or caespitose annuals without thick horizontal rhizomes.

Symbology:

N : no X : extirpated
 P : planted
 ? : questionable

- 9 Tubercle nearly or actually as broad as the achene, and appearing confluent with it, broader than high.
 10 Tubercle flat-deltoid, 1/4 as high as the achene; bristles shorter than the achene body; [plants of clay soils only]..... *Eleocharis engelmannii*
 10 Tubercle short-conic, 1/3-1/2 as high as the achene; bristles much exceeding the tubercle; [plants of a variety of soils] *Eleocharis obtusa*
 9 Tubercle < 2/3 as broad as the achene, conic, taller than broad.
 12 Spikes lance-ovoid to subcylindric; achene body .5-0.6 mm long..... *Eleocharis atropurpurea*
 12 Spikes ovoid to subglobose; achene body 0.7-1.0 mm long..... *Eleocharis geniculata*

Key E - spikerushes with achenes trigonous or nearly terete and styles 3-branched

- 1 Achenes roughly and coarsely honeycomb-reticulate; plants usually forming dense, broad tussocks.
 2 Tubercle much narrower than the achene; culms 'lazy', often reclining, distinctly 3-angled, twisted *Eleocharis tortilis*
 2 Tubercle as broad or broader than the achene; culms ascending to erect, subterete, not twisted..... *Eleocharis tuberculosa*
 1 Achenes smooth to finely honeycomb-reticulate.
 3 Tubercle confluent with the achene summit, not constricted at the base.
 4 Achenes bicolored, body black, tubercle whitish, depressed; [plant of freshwater ponds and Carolina bays]..... *Eleocharis melanocarpa*
 4 Achenes unicolored, body and tubercle light brown or olive brown; [plants of brackish to saline marshes].
 5 Plants diminutive, culms slender, rounded, 1-7 cm long, not arching and rooting..... *Eleocharis parvula*
 5 Plants robust, culms broad, flattened, 20-80 (or more) long, at least some arching and rooting at tips..... *Eleocharis rostellata*
 3 Tubercle not confluent with the achene summit, constricted at the base.
 6 Achenes with prominent keel-like angles or ribs..... *Eleocharis tricornata*
 6 Achenes with rounded angles.
 7 Scales 2-ranked; spikes usually 2-4-flowered..... *Eleocharis baldwinii*
 7 Scales spirally imbricate; spikes many-flowered.
 8 Achenes white or very pale gray.
 9 Bristles none.
 *Eleocharis brittonii*
 9 Bristles present.
 11 Tubercle depressed-deltoid; scales rounded, appressed..... *Eleocharis brittonii*
 11 Tubercle conic or deltoid; scales acute to attenuate, the tips free
 12 Perianth bristles 0.6-1.0 mm long (shorter than to equaling the achene); proximal scale of the spikelets 0.8-1.0 mm wide *Eleocharis microcarpa* var. *filiculmis*
 12 Perianth bristles 0.2-0.4 mm long (shorter than the achene); proximal scale of the spikelets 0.4-0.5 mm wide..... *Eleocharis microcarpa* var. *microcarpa*
 8 Achenes yellowish, brown, or olive.
 13 Horizontal rhizomes absent.
 *Eleocharis vivipara*
 13 Horizontal rhizomes present.
 15 Achenes not honeycomb-reticulate.
 *Eleocharis albida*
 15 Achenes honeycomb-reticulate.
 19 Mature achenes with bristles; achenes yellow or brown; culms 0.6-1.0 mm thick; [rare, on outer Coastal Plain of NC and SC] *Eleocharis montevidensis*
 19 Mature achenes without bristles (present when immature, but drop off); achenes olive (yellow in *E. elliptica*); culms slender-wiry, 0.2-0.4 mm wide (0.4-0.8 in *E. tenuis* var. *pseudoptera*); [collectively widespread].
 21 Rhizomes (1.1-)1.4-1.9(-2.3) mm wide, appearing thick relative to short internode lengths of (0.9-) 1.3-2.6 (-4.4) mm, scales of rhizome (1.4-) 2.3-3.3 (-4.6) mm long; tubercles typically 3/4 the width of achene, greatly depressed, rarely pyramidal; achenes 0.6-0.7 (-0.9) mm in length to base of tubercle by 0.5 (-0.7) mm wide, coarsely (to finely) rugose to cancellate (at 10× magnification); [e. PA and NJ south to GA, west to e. NE, OK, and TX]..... *Eleocharis verrucosa*
 21 Rhizomes 0.6-1.4 (-1.9) mm wide, appearing delicate or slender relative to long internode lengths of (2.6-) 3.5-7.7 (-10.0) mm, scales of rhizome (3.7-) 4.4-8.5 (-10.2) long; tubercles typically less than 3/4 the width of achene, pyramidal to depressed; achenes (0.6-) 0.7-1.1 mm in length to base of tubercle by (0.4-) 0.5-0.8 mm wide, finely rugulose to finely cancellate (at 10× magnification).
 *Eleocharis tenuis* var. *tenuis*

Eleocharis acicularis (Linnaeus) Roemer & J.A. Schultes. NEEDLE SPIKERUSH. **Hab:** Drawdown shores of lakes, ponds, and rivers, marshes, ditches. **Dist:** Greenland, NL (Newfoundland), NU, and AK south to GA, TX, CA; Mexico, Central America, n. South America, Eurasia. **Phen:** Jul-Sep. **Syn:** = Ar, C, ETx1, FNA23, G, GrPl, GW1, K1, K3, Mi, Mo1, NcTx, NE, NY, Pa, RAB, S, Tn, Va, WH3; < *Eleocharis acicularis* (Linnaeus) Roemer & J.A. Eleocharis equisetoides (Elliott) Torrey. HORSETAIL SPIKERUSH. **Hab:** Quiet waters of limesink (doline) ponds, natural lakes, borrow pits, ditches, artificial millponds. **Dist:** MA south to c. peninsular FL, west to se. TX, AR, s. MO, and se. OK; also near the Great Lakes from NY west to MI, MO. Reported for OK (Buthod & Hoagland 2017). **Phen:** Jun-Sep. **Syn:** = Ar, C, ETx1, F, FNA23, G, GW1, IL, K1, K3, K4, Mi, Mo1, NE, NY, RAB, Tn, Tx, Va, WH3, Angelo, Rosen, & Lange (2020), Brunton, Campbell, & Reznicek (2018); < *Eleocharis equisetoides* (Elliott) Torrey – S.

Eleocharis erythropoda Steudel. BALD SPIKERUSH. **Hab:** Streambanks, marshes, ponds, swamps. **Dist:** NS and AK south to NC, MS, TX, AZ, and OR. **Phen:** Jul-Sep. **Syn:** = Ar, ETx1, FNA23, GrPl, GW1, IL, K1, Mi, Mo1, NE, NY, Pa, RAB, Tn, Va; > *Eleocharis calva* Torrey – F, G, S, WV, invalid name; < *Eleocharis palustris* (Linnaeus) Roemer & J.A. Schultes – C, K3, K4, NcTx.

Eleocharis flavescens (Poir.) Urban var. *flavescens*. PALE SPIKERUSH, YELLOW SPIKERUSH. **Hab:** Coastal Plain ponds, pools. **Dist:** DE south to s. FL, west to TX; West Indies; South America. **Phen:** Jun-Sep. **Tax:** Var. *thermalis* (Rydberg) Cronquist occurs inland in w. United States. **Syn:** < *Eleocharis flavescens* – F, GW1, K1, NcTx, RAB, Tx, Va, WH3; < *Eleocharis flavescens* (Poir.) Urban var. *flavescens* – Ar, C, ETx1, FNA23, G, K3, K4.

Eleocharis geniculata (Linnaeus) Roemer & J.A. Schultes. **Hab:** Marshes, moist disturbed areas. **Dist:** Widespread but scattered across much of the United States; West Indies, Central America, South America, Asia, Africa. **Phen:** Jun-Sep. **Syn:** = ETx1, F, FNA23, G, GW1, IL, K1, K3, K4, Mi, NcTx, Pa, WH3; > *Eleocharis caribaea* (Rottbøll) S.F.Blake – Bah, C, GrPl, RAB, S, Tx.

Eleocharis lanceolata Fernald. OZARK SPIKERUSH. **Hab:** Wet areas, disturbed areas. **Dist:** MO and KS south to MS (J.R. Rigby, pers.comm. 2020), LA, and TX; disjunct in c. TN (Montgomery Co., Western Highland Rim). **Phen:** Jun-Oct. **Comm:** {not yet keyed}. **Syn:** = Ar, ETx1, FNA23, GrPl, K1, K3, K4, Mo1, NcTx, Tn, Tx. **NatureServe G4G5** (Apparently Secure).

Eleocharis macrostachya Britton. LARGE SPIKERUSH. **Hab:** Wet ditches, marshes, shorelines. **Dist:** QC to AK south to WV, AL, MS, TX, CA, and Mexico; South America. **Phen:** Jul-Oct. **Comm:** Mapping is especially conjectural. {not yet keyed; add to synonymy}. **Syn:** = Ar, ETx1, FNA23, GrPl, IL, K1, Tx; < *Eleocharis palustris* (Linnaeus) Roemer & J.A. Schultes – C, K3, K4, Mo1.

Eleocharis melanocarpa Torrey. BLACK-FRUITED SPIKERUSH. **Hab:** Coastal Plain ponds, cypress meadows, sinkhole ponds in the Shenandoah Valley. **Dist:** MA south to n. peninsular FL, west to s. MS; disjunct in e. TX, s. MI, and n. IN (Sorrie & Leonard 1999). **Phen:** Jul-Sep. **Syn:** = C, ETx1, F, FNA23, G, GW1, K1, K3, K4, Mi, NE, NY, RAB, S, Tx, Va, WH3. **NatureServe G4** (Apparently Secure).

Eleocharis microcarpa Torrey var. ***filiculmis*** Torrey. TORREY'S SPIKERUSH. **Hab:** Bogs, wet pine savannas. **Dist:** MA and MI south to FL west to TX. **Phen:** Jun-Sep. **Syn:** = Ar, F, FNA23, Mi, NE, NY, Tn, Va; = *Eleocharis torreyana* Böckeler – S; < *Eleocharis microcarpa* Torrey – C, ETx1, G, GW1, K1, K3, K4, NcTx, Pa, RAB, Tx, WH3.

Eleocharis microcarpa Torrey var. ***microcarpa***. **Hab:** Wet pine savannas, Coastal Plain bogs. **Dist:** SC south to FL, west to LA; West Indies. **Phen:** Jun-Sep. **Syn:** = F, FNA23, Tn; = *Eleocharis microcarpa* Torrey – S; < *Eleocharis microcarpa* Torrey – C, G, GW1, K1, K3, K4, RAB, Tx, WH3.

Eleocharis minima Kunth. SMALL SPIKERUSH. **Hab:** Pond margins. **Dist:** GA and FL west to TX; West Indies, Central America, South America, Asia, Australia (FNA). **Phen:** Apr-Oct. **Syn:** = ETx1, FNA23; < *Eleocharis minima* Kunth – K1, K3, K4, Tx; ? *Eleocharis uncialis* Chapman – S.

Eleocharis montevidensis Kunth. SAND SPIKERUSH. **Hab:** Maritime wet grasslands, ponds, swales, ditches. **Dist:** E. NC south to FL, west to TX and CA; Mexico, South America. **Phen:** Jul-Sep. **Comm:** Reported for SC by Nelson & Kelly (1997) and discussed for GA by Carter, Baker, & Morris (2009). **Syn:** = Ar, ETx1, FNA23, GrPl, GW1, K1, K3, K4, NcTx, RAB, Tx, WH3. [NatureServe G5](#) (Secure).

Eleocharis obtusa (Willdenow) J.A. Schultes. BLUNT SPIKERUSH. **Hab:** Ditches, marshes, disturbed wet areas. **Dist:** NS west to BC, south to FL, TX, and CA. **Phen:** Late Apr-Oct. **Syn:** = Ar, ETx1, FNA23, G, GW1, Il, K1, K3, K4, Mi, NcTx, S, Tn, Tx, Va, WH3, WV; > *Eleocharis obtusa* var. *ellipsoidalis* Fernald – F; > *Eleocharis obtusa* var. *jejuna* Fernald – F; > *Eleocharis obtusa* var. *obtusata* – F, GrPl, NE, NY, Pa; > *Eleocharis obtusa* var. *ovata* – GrPl; > *Eleocharis obtusa* var. *peasei* Svenson – NE, Pa; < *Eleocharis ovata* (Roth) Roemer & J.A. Schultes – C, Mo1, RAB.

Eleocharis olivacea Torrey var. ***olivacea***. OLIVE SPIKERUSH. **Hab:** Coastal Plain ponds, pools. **Dist:** NS west to MN, south to FL and TX. **Phen:** Jun-Sep. **Syn:** = K1, K3; > *Eleocharis flaccida* (Reichenbach) Urban – S; < *Eleocharis flavescens* – RAB, Tx; < *Eleocharis flavescens* (Poiret) Urban var. *olivacea* (Torrey) Gleason – Ar, C, ETx1, FNA23, G, K4, Mi, NE, NY; < *Eleocharis olivacea* – F, GW1, Il, Pa, WH3; > *Eleocharis olivacea* – S.

Eleocharis palustris (Linnaeus) Roemer & J.A. Schultes. COMMON SPIKERUSH, SMALL'S SPIKERUSH. **Hab:** Marshes. **Dist:** NL (Labrador) west to AK, south to FL, TX, CA, and Mexico; Eurasia. **Phen:** Jun-Sep. **Tax:** As discussed by Smith et al. in FNA (2002b), variable in geographically correlated ways and probably warranting recognition of varieties or segregate species. *E. smallii* is sometimes separated as the eastern North American member of the north temperate *E. palustris* complex. **Syn:** = Ar, ETx1, FNA23, G, Il, K1, Mi, Mo1, NY, Pa, Tn, Va; < *Eleocharis palustris* (Linnaeus) Roemer & J.A. Schultes – C, K3, K4, NcTx, RAB; > *Eleocharis palustris* ssp. *palustris* – NE; > *Eleocharis palustris* ssp. *vogens* (L.H. Bailey) A. Haines – NE; > *Eleocharis palustris* var. *major* Sonder – F; > *Eleocharis palustris* var. *palustris* – F; > *Eleocharis smallii* Britton – F, GrPl, WV; > *Eleocharis xyridiformis* – GrPl.

Eleocharis parvula (Roemer & J.A. Schultes) Link ex Bluff, Nees, & Schauer. DWARF SPIKERUSH, SMALL SPIKERUSH. **Hab:** Tidal brackish and freshwater marshes, inland salt marshes, shallow waters of managed impoundments. **Dist:** NS, NL (Newfoundland), and MI south to c. peninsular FL and LA; BC south to CA; Mexico, Central America, South America, Eurasia, Africa. **Phen:** Jul-Sep. **Syn:** = Ar, ETx1, FNA23, G, GW1, Il, K1, K3, K4, Mi, Mo1, NcTx, NE, NY, Pa, RAB, Tn, Tx, Va, WH3; = *Eleocharis parvula* var. *parvula* – C, F; > *Eleocharis coloradoensis* (Britton) Gilly; > *Eleocharis parvula* var. *anachaeta* (Torrey) Svenson – GrPl; > *Eleocharis parvula* var. *coloradoensis* (Britton) Beetle; > *Eleocharis parvula* var. *parvula* – GrPl.

Eleocharis quadrangulata (Michaux) Roemer & J.A. Schultes. SQUARESTEM SPIKERUSH. **Hab:** Pools, marshes. **Dist:** MA west to ON and MI, south to n. FL and TX. **Phen:** Jun-Sep. **Syn:** = Ar, C, ETx1, FNA23, GrPl, GW1, Il, K1, K3, K4, Mi, Mo1, NcTx, NE, NY, Pa, RAB, S, Tn, Tx, Va, WH3, WV, Angelo, Rosen, & Lange (2020); > *Eleocharis quadrangulata* var. *crassior* Fernald – F, G; > *Eleocharis quadrangulata* var. *quadrangulata* – F, G.

Eleocharis radicans (A. Dietrich) Kunth. ROOTING SPIKERUSH. **Hab:** Interdune ponds, seeps, bogs. **Dist:** Widely scattered in North America; n. Mexico, West Indies, Central America, South America. **Phen:** Jun-Oct. **Syn:** = C, ETx1, F, FNA23, G, GW1, K1, K3, K4, Mi, Tx, Va, WH3. [NatureServe G5](#) (Secure).

Eleocharis robbinsii Oakes. ROBBINS'S SPIKERUSH. **Hab:** Quiet waters of limesink (doline) ponds, natural lakes, millponds. **Dist:** NS and NB west to ON, south to s. MS (Sorrie & Leonard 1999); also near the Great Lakes, from NY west to IN, WI, and MN. **Phen:** Jul-Aug. **Syn:** = C, F, FNA23, G, GW1, K1, K3, K4, Mi, NE, NY, Pa, RAB, S, Va, WH3, Angelo, Rosen, & Lange (2020). [NatureServe G4G5](#) (Apparently Secure).

Eleocharis rostellata (Torrey) Torrey. BEAKED SPIKERUSH. **Hab:** Brackish and freshwater tidal marshes, sea-level fens. **Dist:** ME, ON, and BC south to FL, TX, CA, and Mexico; West Indies. Reported for WV (Harmon, Ford-Werntz, & Grafton 2006). **Phen:** Jul-Sep. **Syn:** = C, ETx1, F, FNA23, G, GrPl, GW1, Il, K1, K3, K4, Mi, NE, NY, Pa, RAB, Tx, Va, WH3. [NatureServe G5](#) (Secure).

Eleocharis tenuis (Willdenow) J.A. Schultes var. ***tenuis***. SLENDER SPIKERUSH, KILL-COW. **Hab:** Bogs, marshes. **Dist:** NS and QC south to NC and s. AL. **Phen:** Jun-Sep. **Tax:** See Gibbons & McMullen (2019) for detailed discussion of the *E. tenuis* complex. **Syn:** = C, F, FNA23, G, K1, K3, K4, NE, NY, Pa, Tn, Va, Gibbons & McMullen (2019); < *Eleocharis capitata* (Linnaeus) R. Brown – S; < *Eleocharis tenuis* (Willdenow) J.A. Schultes – RAB. [NatureServe G5T5](#) (Secure).

Eleocharis vivipara Link. VIVIPAROUS SPIKERUSH. **Hab:** Coastal Plain ponds. **Dist:** NC south to FL, west to TX. **Phen:** Jul-Sep. **Syn:** = C, ETx1, F, FNA23, GW1, K1, K3, K4, RAB, S, Va, WH3; > *Eleocharis curtisii* Small; > *Eleocharis vivipara* Link – S. [NatureServe G5](#) (Secure).

Eleocharis wolfii (A. Gray) A. Gray ex Britton. WOLF'S SPIKERUSH. **Hab:** Oak flatwoods, shallow ephemeral pools on granitic flatrocks, prairies. **Dist:** OH, WI, MN, and ND south to GA, AL, TN, LA, and TX. **Phen:** May-Jul. **Comm:** {not yet keyed}. **Syn:** = Ar, C, ETx1, F, FNA23, G, GrPl, Il, K1, K3, K4, Mo1, NY, Tn, Tx, Va. [NatureServe G3G5](#) (Apparently Secure).

***Fimbristylis* Vahl 1806 (FIMBRY)**

A genus of about 250-300 species, herbs, primarily warm temperate and tropical. References: Goetghebeur & Van den Borre (1989); Kral (1971); Kral (2002b) in FNA23 (2002b); Rosen et al (2012).

- 1 Style branches 3; achene trigonous or terete; plant an annual.
 - 2 Achene trigonous; spikelets linear-oblong to lanceolate, 3-7 mm long; ligule present, as a line of short, pale hairs *Fimbristylis autumnalis*
 - 2 Achene terete; spikelets subglobose to ovoid, 2-4 mm long; ligule absent *Fimbristylis littoralis*
- 1 Style branches 2; achene lenticular or terete; plant an annual or perennial.
 - 3 Plants diminutive annuals, the culms 1-6 (-30) cm tall; leaf blades < 1 mm wide. *Fimbristylis vahlilii*
 - 3 Plants small to large annuals or perennials, the culms (6-) 15-150 cm tall; leaf blades > 1 mm wide.
 - 7 Plant a medium-sized to robust perennial, the culms generally 5-15 dm tall, either caespitose, with a hardened base, and deeply set in the substrate, or rhizomatous, the rhizomes either slender or thick
 - 8 Plant caespitose, lacking rhizomes; bases of leaves hard, leathery, dark brown, deeply set in the substrate, the base of the plant generally 5-15 cm below the ground surface; achene (1.3-) 1.5-2 mm long *Fimbristylis castanea*
 - 8 Plant rhizomatous, the rhizomes either thick and knotty or slender and scaly (rarely with both); bases of leaves often somewhat thickened, hardened, and brownish, the base of the plant not especially deeply set; achene 0.8-1.2 (-1.3) mm long.
 - 9 Plant a robust perennial to 15 (-20) dm tall, with elongate, slender, scaly, pale-to-reddish rhizomes (excavate carefully); leaves usually flat or keeled, 2-5 mm wide; stem usually flattened and scabrous-edged above; ligule present, a line of short, pale hairs *Fimbristylis caroliniana*
 - 9 Plant a medium-sized perennial to 10 dm tall, rhizomatous, the rhizomes either short, thick, and knotty or also with slender rhizomes; leaves usually involute, ca. 1 mm wide; stem usually terete or oval in cross-section, smooth; ligule either absent or present. *Fimbristylis puberula*
 - 7 Plant a small to medium-sized annual or perennial, the culms to 8 dm tall, neither rhizomatous (except *F. brevivaginata*) nor with a hardened base deeply set in the substrate.
 - 11 Spikelets pale, usually solitary (-3) on the scape (and thus appearing somewhat like an *Eleocharis*) *Fimbristylis schoenoides*
 - 11 Spikelets dark, usually in a complex inflorescence.
 - 12 Face (one side) of the achene with 15 or more longitudinal rows of rounded pits, the achene margin noticeably paler *Fimbristylis tomentosa*
 - 12 Face (one side) of the achene with 13 or fewer longitudinal rows of rectangular pits, the achene margin not noticeably paler.
 - 13 Plant a perennial; leaves spreading, 2-5 mm wide; achenes lacking warts. *Fimbristylis dichotoma*

Key to Map
Symbology:

* : waif
 EN : endemic
 H : historic

N : no
 P : planted
 ? : questionable
 X : extirpated

13 Plant an annual; leaves spreading or ascending, 1-4 mm wide; achenes with or without warts.

15 Achenes lacking warts or with warts scattered over the entire surface; primary rays of umbel spreading or ascending, the inflorescence generally longer than broad; leaves relatively soft..... *Fimbristylis annua*

15 Achenes with a few low warts on the edges; primary rays of umbel stiffly spreading (even deflexed), the inflorescence therefore often as broad as long or broader; leaves relatively hard, broad (averaging 2 mm wide), and spreading subdistichously..... *Fimbristylis decipiens*

Fimbristylis annua (Allioni) Roemer & J.A. Schultes. ANNUAL FIMBRY. **Hab:** Wet, disturbed areas, thin soils of rock outcrops; variously interpreted as entirely alien or partly native. **Dist:** SE. PA, WV, s. IN, s. IL, MO, e. KS, south to n. peninsular FL, s. TX, s. AZ, and south through Mexico to Central and South America; West Indies; Eurasia, Africa, etc. **Phen:** Jul-Sep. **Syn:** = Ar, C, ETx1, FNA23, G, GrPl, GW1, Il, K1, K3, K4, Mo1, NcTx, Pa, Tn, Tx, Va, W, Kral (1971); ? *Fimbristylis baldwiniana* (J.A. Schultes) Torrey – F, S; < *Fimbristylis dichotoma* (Linnaeus) Vahl – RAB, WH3.

Fimbristylis autumnalis (Linnaeus) Roemer & J.A. Schultes. SLENDER FIMBRY. **Hab:** Moist to wet disturbed areas. **Dist:** ME west to MN and SD and south to s. FL and TX; New World tropics. **Phen:** Jun-Oct. **Syn:** = Ar, C, ETx1, FNA23, G, GrPl, GW1, Il, K1, K3, K4, Meso6, Mi, Mo1, NcTx, NE, NY, Pa, RAB, Tn, Tx, Va, W, WH3, Kral (1971); > *Fimbristylis autumnalis* (Linnaeus) Roemer & J.A. Schultes – S; > *Fimbristylis autumnalis* var. *autumnalis* – F; > *Fimbristylis autumnalis* var. *mucronulata* (Michaux) Fernald – F, WV; > *Fimbristylis geminata* (Nees) Kunth – S. **NatureServe G5** (Secure).

Fimbristylis caroliniana (Lamarck) Fernald. CAROLINA FIMBRY. **Hab:** Brackish or alkaline sands of marsh edges and dune swales, less typically in pine savannas or pine flatwoods. **Dist:** NJ south to s. FL and west and south to TX; Yucatan Peninsula; West Indies. **Phen:** Jul-Sep. **Comm:** This species often grows in proximity to *F. castanea*, which, however, occupies the brackish marsh itself. **Syn:** = Bah, C, ETx1, F, FNA23, GW1, K1, K3, K4, Meso6, Tx, Va, WH3, Kral (1971); < *Fimbristylis caroliniana* (Lamarck) Fernald – G; > *Fimbristylis harperi* Britton ex Small – S; < *Fimbristylis spadicea* (Linnaeus) Vahl – RAB.

Fimbristylis castanea (Michaux) Vahl. MARSH FIMBRY. **Hab:** Brackish marshes and dune swales. **Dist:** NY (Long Island) south to s. TX and adjacent Mexico; Yucatan peninsula; West Indies. **Phen:** Jul-Sep. **Comm:** Replaced in most of the New World tropics by the related *F. spadicea*. **Syn:** = C, ETx1, F, FNA23, G, GW1, K1, K3, K4, NY, S, Tx, Va, Kral (1971); < *Fimbristylis spadicea* (Linnaeus) Vahl – Bah, RAB, WH3.

Fimbristylis decipiens Kral. TRICKY FIMBRY. **Hab:** Wet, disturbed areas. **Dist:** E. NC south to n. FL and west to e. TX. **Phen:** Jul-Sep. **Syn:** = ETx1, FNA23, GW1, K1, K3, K4, Kral (1971). **NatureServe G4** (Apparently Secure).

* ***Fimbristylis dichotoma*** (Linnaeus) Vahl. **Hab:** Wet, disturbed areas. **Dist:** Presumably introduced, probably native of Asia. The species is now pantropical and subtropical. **Phen:** Jul-Sep. **Syn:** = Bah, ETx1, FNA23, GW1, K1, K3, K4, Meso6, Kral (1971); < *Fimbristylis dichotoma* (Linnaeus) Vahl – RAB, WH3; ? *Fimbristylis diphylla* (Retzius) Vahl – S.

* ***Fimbristylis littoralis*** Gaudichaud-Beaupré. **Hab:** Disturbed wet ground. **Dist:** Native of Asia. Kral (1971) suggests that it may have been introduced into se. United States early, in association with rice. In North America, now ranging from Central America and the West Indies north to NC, KY, and AR. **Phen:** Jul-Sep. **Tax:** The name *F. miliacea* has been rejected as a nomen ambiguum (Brummitt 2005). **Syn:** = Ar, K3, K4, Meso6, WH3, W1; = *Fimbristylis miliacea* (Linnaeus) Vahl – C, ETx1, FNA23, GW1, NcTx, RAB, S, Tn, Tx, W, Kral (1971), nomen ambiguum; > *Fimbristylis littoralis* var. *littoralis* – Mo1.

Fimbristylis puberula (Michaux) Vahl. HAIRY FIMBRY. **Hab:** Pine savannas, pine flatwoods, bogs, wet meadows or prairie-like areas, granite outcrops. **Dist:** Long Island, NY south to s. FL and west to TX, KS, and NE. **Phen:** Jul-Sep. **Syn:** = Mi; = *Fimbristylis puberula* (Michaux) Vahl var. *puberula* – Ar, C, ETx1, FNA23, GrPl, K1, K3, K4, Mo1, NcTx, NY, Pa, Tx, Va, Kral (1971); > *Fimbristylis anomala* Böckler – S; > *Fimbristylis drummondii* (Torrey & Hooker) Böckler – F; < *Fimbristylis puberula* (Michaux) Vahl – GW1, Tn, WH3; > *Fimbristylis puberula* (Michaux) Vahl – S; > *Fimbristylis puberula* var. *drummondii* (Torrey & Hooker) D.B. Ward – Il; < *Fimbristylis spadicea* (Linnaeus) Vahl – RAB, W.

* ***Fimbristylis schoenoides*** (Retzius) Vahl. **Hab:** Disturbed wetlands. **Dist:** Native of Asia. Reported for sw. GA (Jones & Coile 1988) and also occurs in se. GA (B.A. Sorrie, pers. comm.). Also reported for Ocracoke Island, Hyde County, NC (Sorrie & LeBlond 2008). **Syn:** = Bah, FNA23, GW1, K1, K3, K4, WH3. **NatureServe GNR** (Not Yet Ranked).

* ***Fimbristylis tomentosa*** Vahl. **Hab:** Wet, disturbed areas. **Dist:** Presumably introduced, probably native of e. and se. Asia. Ranging north to NC and AR. **Phen:** Jul-Sep. **Syn:** = Ar, ETx1, FNA23, GW1, K1, K3, K4, Tx, Kral (1971); < *Fimbristylis dichotoma* (Linnaeus) Vahl – RAB, WH3.

98. CYPERACEAE

May-Jun. **Syn:** = Ar, ETx1, FNA23, K1, K3, K4, Mo1, NcTx, Tn, Va, WH3, Muasya & Simpson (2002); = *Isolepis carinatus* – Il, orthographic variant; = *Isolepis koilolepis* Steudel; = *Scirpus carinatus* (Hooker & Arnott ex Torrey) A. Gray – S, (not *S. carinatus* Sm.); = *Scirpus koilolepis* (Steudel) Gleason – C, F, G, GrPl, GW1, RAB, Tx. **NatureServe G5** (Secure).

Isolepis pseudosetacea (Daveau) Gandoger. **Hab:** Altamaha grit outcrops, moist soils. **Dist:** E. GA (Carter, Baker, & Morris 2009) west to sw. MO, AR, and c. TX. Reported for MS (J.R. Rigby, pers. comm., 2018). **Comm:** This species often grows intermixed with *I. carinata* and may be more widespread in our area. **Syn:** = Ar, ETx1, FNA23, K3, K4, Muasya & Simpson (2002); ? *Isolepis molesta* (M.C. Johnston) S.G. Smith – K1, Mo1, NcTx; ? *Scirpus molestus* M.C. Johnston – Tx.

**Rhynchospora** Vahl 1805 (BEAKSEDGE, BEAKRUSH)

Contributed by Richard J. LeBlond

A genus of about 250 species, subcosmopolitan, but concentrated in tropical and warm temperate America. See Thomas (1984) for the reasons for the inclusion of *Dichromena* in *Rhynchospora*. References: Bridges & Orzell (2000); Gale (1944); Goetghebeur in Kubitzki (1998b); Kral (1996); Kral (1999); Kral (2002e) in FNA23 (2002b); McMillan (2007); Naczi & Moyer (2017); Naczi, Knapp, & Moore (2010); Naczi, Knapp, & Thomas (2012); Sorrie, LeBlond, & Weakley (2018a) in Weakley et al (2018b); Ward (2012a).

Identification Notes: Measurements and descriptions of the achene are of the achene body only, *not* including the tubercle, unless otherwise indicated.

- 1 Tubercles 3-23 mm long; style simple or bifid only at the tip; [subgenus *Haplostylae*] **Key A**
- 1 Tubercles < 3 mm long; style divided into 2 slender stigmatic branches; [subgenus *Diplostylae*].
- 2 Inflorescence bracts several, foliaceous, basally bright white, reflexed to horizontally spreading; [subgenus *Diplostylae*; section *Dichromena*] **Key B**
- 2 Inflorescence bracts 0-several, capillary to foliaceous, green throughout (stramineous in age), variously oriented.
- 3 Bristles present, plumose (at least towards their bases); [subgenus *Diplostylae*; section *Plumosae*]..... **Key C**
- 3 Bristles absent, or present and smooth or minutely barbed.
- 4 Bristles present, retrorsely barbed (at least towards their tips), or antrorsely barbed and straplike (flattened); [subgenus *Diplostylae*; section *Albae*] **Key D**
- 4 Bristles absent, or present and smooth, or antrorsely barbed and filiform.
- 5 Achene surface smooth, minutely pitted, or finely striate (not ridged, rugose, or reticulate); [subgenus *Diplostylae*; sections *Chapmaniae*, *Fasciculares*, and *Fuscae*]..... **Key E**
- 5 Achene surface transversely ridged, rugose, or honeycombed-reticulate (sometimes faintly so); [subgenus *Diplostylae*; sections *Globulares*, *Harveyae*, *Mixtae*, *Psilocarya*, *Pusillae*, and *Rariflorae*]..... **Key F**

Key A - beaksedges with tubercles 3-23 mm long
[subgenus *Haplostylae*; sections *Longirostres* and *Polycephalae*]

- 1 Spikelets arranged in globose or subglobose clusters; tubercle 3-5 mm; leaf blades 2-8 mm wide. *Rhynchospora tracyi*
- 1 Spikelets in > 4 paniculate or corymbose clusters; tubercle 10-23 mm long; leaf blades 6-20 mm wide; [section *Longirostres*].
- 3 Longest bristles shorter than the achene..... *Rhynchospora corniculata*
- 3 Longest bristles longer than or equaling the achene.
- 4 Plants caespitose; primary clusters with 10-50 (rarely 7 or fewer) densely clustered spikelets; achene (4.5-) 5-6 mm long..... *Rhynchospora macrostachya*
- 4 Plants rhizomatous; primary clusters with 1-6 loosely clustered spikelets; achene (3.5-) 4.0-4.8 mm long.
- 5 Bristles 2-8 mm long, the central bristle longest on one face, shortest or absent on the other..... *Rhynchospora careyana*
- 5 Bristles 7-12 mm long, essentially of equal length *Rhynchospora inundata*

Key B - beaksedges with basally-white bracts (White-bracted Sedges) [subgenus *Diplostylae*; section *Dichromena*]

- 3 Inflorescence bracts 3-6 (-7); basal bract (1.4-) 2-5 mm wide, the white portion (2.5-) 9-25 mm long, tapering gradually into the green portion; rhizomes slender, straight, (0.6-) 0.7-1.7 (-2.1) mm in diameter; achene 1.0-1.2 mm wide; tubercle broadly truncate on achene..... *Rhynchospora colorata*
- 3 Inflorescence bracts (5-) 6-10; basal bract 5-12 mm wide, the white portion 22-55 mm long, tapering abruptly into the green portion; rhizomes often bent and swollen at the nodes, 1.4-3.8 mm in diameter; achene 1.2-1.5 mm wide; tubercle decurrent on achene..... *Rhynchospora latifolia*

Key C - beaksedges with plumose bristles [subgenus *Diplostylae*; section *Plumosae*]

- 1 Spikelets borne singly or a few together in loose clusters, some or all spikelets on slender stalks; achene 1.7-2.6 mm long, 1.2-2.0 mm wide.

Key to Map
Symbology:

←rare ←uncommon
←common
(see introduction for more)

N : no X : extirpated
P : planted
? : questionable

- 2 Achene obovoid, 1.7-2.0 mm long, 1.2-1.5 mm wide, the tubercle seated on its summit without a constriction or basal flange; longer bristles < 1/2 as long as the achene *Rhynchospora galeana*
- 2 Achene broadly elliptic, 1.9-2.6 mm long, 1.5-2.0 mm wide, its summit constricted below a collar-like flange at the base of the tubercle; longer bristles three-fourths to exceeding the length of the achene..... *Rhynchospora oligantha*
- 1 Spikelets borne several to many in clusters, none of the spikelets on slender stalks; achene 1.3-2.2 mm long, 0.9-1.7 mm wide
- 5 Basal sheaths shiny, dark brown; bristles longer than the tubercle; bristles plumose in a basal zone that extends 4-20% of the length of the bristle, then with a smooth zone, the terminal zone minutely denticulate; [Gulf Coastal Plain of FL, AL, and MS]..... *Rhynchospora marliniana*
- 5 Basal sheaths dull, light to medium brown; bristles shorter than the tubercle; bristles plumose in a basal zone that extends 40-90% of the length of the bristle, the terminal zone minutely denticulate (lacking a smooth middle zone); [widespread in the Atlantic and Gulf Coastal Plain from NC south to FL, west to TX] *Rhynchospora plumosa*

**Key D - beaksedges with bristles retrorsely barbed (at least distally)
or antorsely barbed and straplike (flattened) [subgenus *Diplostylae*; section *Albae*]**

- 1 Bristles 8-25, retrorsely barbed distally, antorsely barbed proximally; spikelets white, turning tan with age. *Rhynchospora macra*
- 1 Bristles 6 or fewer, either retrorsely or (rarely) antorsely barbed their entire length; spikelets variously brown, rufous, or tan (or very rarely white).
- 3 Spikelets 1-fruited, the solitary achene terminating the axis; clusters 1-7, globose to turbinate.
- 4 Clusters globose to turbinate; achene (measured from base of bristles) 1.3-1.8 mm long, 0.65-0.95 mm wide; tubercle 0.7-1.6 mm long.
- 5 Clusters turbinate to hemispheric (rarely subglobose), the lowest spikelets usually spreading-ascending to spreading; larger leaves < 2 mm wide; achene 1.6-1.8 mm long; tubercle 1.0-1.6 mm long..... *Rhynchospora chalarocephala*
- 5 Clusters globose to subhemispheric, the lowest spikelets usually reflexed; larger leaves > 2 mm wide; achene 1.3-1.6 mm long; tubercle 0.7-1.2 mm long... *Rhynchospora microcephala*
- 4 Clusters globose to hemispherical; achene (measured from base of bristles) 1.8-2.6 mm long, 1.1-1.8 mm wide; tubercle 1.4-2.4 mm long.
- 6 Achene 1.1-1.2 mm wide, 1.8 mm long..... *Rhynchospora cephalantha* var. *attenuata*
- 6 Achene 1.2-1.8 mm wide, 2.1-2.6 mm long..... *Rhynchospora cephalantha* var. *cephalantha*
- 3 Spikelets 1-5 fruited (if 1-fruited, then the axis terminated by a sterile floret); clusters 2-many, ovoid to turbinate (rarely globose).
- 7 Clusters numerous, usually 20 or more; tubercle 1.3-1.8 mm long; achene 0.9-1.5 mm wide, 1.5-2.0 mm long, the summit narrowly truncate, the faces umbonate, the margin thickened and wire-like; leaves 2.5-7 mm wide *Rhynchospora glomerata*
- 7 Clusters 2-8; tubercle 0.4-1.2 mm long; achene 0.6-1.2 mm wide, 1.1-2.0 mm long, the summit more rounded than truncate, the faces lenticular, a wire-like margin narrow or not evident; leaves 0.2-3.5 mm wide.
- 11 Longer bristles 0.4 mm shorter than to 0.3 mm longer than the tubercle; tubercle 0.9-1.4 (-1.6) mm long, on average 0.69× as long as achene body; glomerules 3-5 (-6), 6-13 mm wide; [widespread in our area]..... *Rhynchospora capitellata*
- 11 Longer bristles 0.3-1.0 mm longer than the tubercle; tubercle 0.8-1.1 mm long, on average 0.57× as long as achene body; glomerules 4-8, 4-8 mm wide; [of the Coastal Plain]..... *Rhynchospora leptocarpa*

**Key E - beaksedges with bristles smooth, or antorsely barbed and filiform,
or absent, the achene surface smooth, minutely pitted, or finely striate
[subgenus *Diplostylae*; sections *Chapmaniae*, *Fasciculares*, and *Fuscae*]**

- 1 Bristles 12; [section *Fasciculares*]..... *Rhynchospora baldwinii*
- 1 Bristles 6 or fewer.
- 2 Leaves with a short taper at the tip, blunt to acute, but not long-acuminate; achene surface minutely pitted near the margin; [section *Chapmaniae*].
..... *Rhynchospora ciliaris*
- 2 Leaves long-acuminate at the tip; achene surface smooth or finely striate.
- 4 Bristles absent or 1-3 rudimentary; scales white to pale tan (or pale reddish-brown in *R. brachychaeta*); [section *Chapmaniae*].
..... *Rhynchospora brachychaeta*
- 4 Bristles present (if rudimentary, then 4-6); scales tan, rufous, or brown.
- 7 Achene 0.6-1.1 mm wide, pyriform, obovoid, or narrowly elliptic, pale to dark brown but not blackish; tubercle margin setose.
- 9 Achene narrowly elliptic or narrowly obovoid, 1.2-1.5 mm long by 0.6-0.7 mm wide, twice as long as wide; tubercle 0.8-1.2 mm long..... *Rhynchospora curtissii*
- 9 Achene broadly elliptic to obovoid or pyriform, < 2× as long as wide; tubercle 0.4-1.5 mm long.
- 10 Leaves 2-4 (-5) mm wide; stipe subtending achene 0.5-1.0 mm long..... *Rhynchospora crinipes*
- 10 Leaves 0.2-1.5 (-2) mm wide; stipe subtending achene < 0.4 mm long.
- 11 Leaves to 1.5 (-2) mm wide; achene 1.0-1.7 mm long, 0.9-1.1 mm wide; tubercle 0.5-1.5 mm long.
..... *Rhynchospora harperi*
- 11 Leaves filiform, < 1 mm wide; achene 0.8-1.3 mm long, 0.6-0.9 mm wide; tubercle 0.4-0.8 mm long.
- 13 Culms without rhizomes; spikelets 2.5-5 mm long; achene translucent centrally; tubercle 0.4-0.7 mm long.
..... *Rhynchospora filifolia*
- 13 Culms with delicate rhizomes; spikelets 5-7 mm long; achene uniformly opaque; tubercle 0.6-0.8 mm long..... *Rhynchospora pleiantha*
- 7 Achene > 1 mm wide (except 0.8 mm wide in *R. fernaldii* with a blackish surface), suborbicular or broadly ellipsoid; tubercle margin smooth or roughened but not setose; [section *Fasciculares*].
- 15 Achene 0.9-1.0 mm long, 0.8 mm wide, blackish..... *Rhynchospora fernaldii*
- 15 Achene 1.3-4.2 mm long, 1.1-3.6 mm wide, brown to dark brown.
- 16 Achene 2.0-4.2 mm long, 2.0-3.6 mm wide.
- 17 Leaves 2-4 mm wide; achene 2.0-2.7 mm long, 2.0-2.5 mm wide..... *Rhynchospora grayi*
- 17 Leaves 4-8 mm wide; achene 3.0-4.2 mm long, 3.0-3.6 mm wide..... *Rhynchospora megalocarpa*
- 16 Achene 1.3-2.0 mm long, 1.1-1.7 mm wide.
- 18 Tubercle 1.0-2.6 mm long, long-attenuate to subulate *Rhynchospora gracilentia*

Key to Map
Symbology:

(see introduction for more)

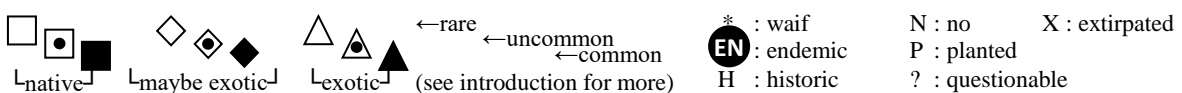

N : no X : extirpated
P : planted
? : questionable

- 18 Tubercle 0.2-0.8 mm long, triangular to triangular-attenuate or with a strap-like beak.
 19 Bristles rudimentary to ½ as long as the achene body.
 20 Larger leaves to 1 mm wide; mature culms to 4.5 dm long; floral fascicles 1 (-2); tubercle 0.2-0.5 mm long *Rhynchospora debilis*
 20 Larger leaves 2-4 mm wide; mature culms to 13 dm long; floral fascicles (1-) 2-4; tubercle 0.4-0.7 mm long *Rhynchospora fascicularis*
 19 Bristles > ½ as long to exceeding the achene body.
 21 Basal leaves filiform to (rarely) 1.3 mm wide, the longer approaching length of culm; tubercle narrowed above the base into a strap-like beak..... *Rhynchospora wrightiana*
 21 Basal leaves 1.3-4 mm wide, all much shorter than the culm; tubercle triangular to triangular-attenuate.
 22 Longer bristles equaling to exceeding the achene body; achene body elliptic, 1.1-1.3 mm wide; tubercle triangular-attenuate; larger basal leaves 1.3-2.5 mm wide *Rhynchospora distans*
 22 Longer bristles < ½ as long to exceeding achene body; achene suborbicular, 1.2-1.5 mm wide; tubercle triangular; larger basal leaves 2-4 mm wide..... *Rhynchospora fascicularis*

**Key F - beaksedges with bristles smooth, or antrorsely barbed and filiform, or absent,
 the achene surface transversely ridged, rugose, or honeycombed-reticulate
 [subgenus *Diplostylae*; sections *Globulares*, *Harveyae*, *Mixtae*, *Psilocarya*, *Pusillae*, *Rariflorae*]**

- 1 Bristles absent (or apparently so at 10×); achene 0.5-0.7 mm wide; tubercle 0.1-0.2 mm long, skull-cap like; [section *Pusillae*].
 3 Achene surface smooth, faintly reticulate, not transversely ridged..... *Rhynchospora divergens*
 3 Achene surface rough, distinctly transversely ridge *Rhynchospora pusilla*
 1 Bristles present or absent; if absent, then the achene > 1 mm long or > 0.7 mm wide, and tubercle triangular to subulate.
 4 Culms and leaves filiform.
 6 Bristles subequaling to exceeding the tubercle; tubercle 0.75-1.4 mm long..... *Rhynchospora stenophylla*
 6 Bristles shorter than the achene body; tubercle 0.3-1.0 mm long..... *Rhynchospora rariflora*
 4 Culms stouter; leaves wider, not filiform.
 8 Achene faces flat or concave; when one face is concave, the opposite face is sometimes slightly convex (slightly biconvex *R. decurrens* and *R. microcarpa* are keyed here for convenience).
 9 Achene at least twice as long as wide, elliptic-oblong; tubercle subulate, 0.8-1.2 mm long; [section *Mixtae*]..... *Rhynchospora inexpansa*
 9 Achene < twice as long as wide, obovate; tubercle triangular, 0.2-0.9 mm long.
 10 Longer bristles exceeding the achene body.
 12 Larger leaves (3-) 4-6 mm wide; bristles exceeding tubercle; achene faces flattened..... *Rhynchospora elliottii*
 12 Larger leaves 1-3 (-4) mm wide, bristles half as long as achene to equaling tubercle; achene faces slightly convex *Rhynchospora microcarpa*
 10 Longer bristles shorter than to equaling achene body, or absent.
 13 Larger leaves 3-5 mm wide; achene 1.4-1.6 mm wide; tubercle 0.6-0.8 mm long, abruptly rising from a flaring basal collar; [section *Globulares*] *Rhynchospora compressa*
 13 Larger leaves 1-3 (-4) mm wide; achene 0.7-1.3 mm wide; tubercle 0.15-0.5 mm long, without a flaring basal collar; [section *Mixtae*].
 14 Bristles rudimentary or absent *Rhynchospora perplexa*
 14 Bristles one-half as long to equaling achene.
 15 Achene 1.3-1.8 mm long, 0.9-1.2 mm wide, the faces flat with 10-12 transverse ridges *Rhynchospora torreyana*
 15 Achene 0.8-1.4 mm long, 0.7-1.2 mm wide, the faces slightly biconvex with 6-12 transverse ridges.
 16 Clusters elongate; achene 1.0-1.4 mm long, 0.8-1.0 mm wide, narrowly obovate to elliptic, averaging 8-12 transverse ridges; most tubercle bases convexly seated on the achene summit and somewhat decurrent along the achene margins, the tubercle surface often whitish-waxy..... *Rhynchospora decurrens*
 16 Clusters usually compact; achene 0.8-1.2 mm long, 0.7-1.2 mm wide, suborbicular to elliptic, averaging 6-7 transverse ridges; most tubercle bases flat across the achene summit, not decurrent, the tubercle surface usually dark, not waxy..... *Rhynchospora microcarpa*
 8 Achenes biconvex or tumid.
 17 Achene 1.4-4.2 mm long, 1.2-3.6 mm wide, the summit with a thickened bony to crustaceous rim surrounding the base of the tubercle; [section *Harveyae*].
 19 Leaves 4-8 mm wide; achene 3.0-4.2 mm long, 3.0-3.6 mm wide..... *Rhynchospora megalocarpa*
 19 Leaves 2-4 mm wide; achene < 2.7 mm long and < 2.5 mm wide.
 20 Achene 2.0-2.7 mm long, 2.0-2.5 mm wide *Rhynchospora grayi*
 20 Achene 1.5-1.9 mm long, 1.4-1.7 mm wide *Rhynchospora harveyi*
 17 Achene 0.7-1.8 mm long, 0.7-1.5 mm wide, the summit without a textured rim surrounding the base of the tubercle (if the base of the tubercle is rim-like, then it is distinguished from the summit of the achene by a constriction or articulation).
 21 Bristles absent; achene 0.7-1.0 mm long; [section *Psilocarya*].
 22 Tubercle triangular-lanceolate, as long as broad or longer; achene weakly transversely ridged..... *Rhynchospora scirpoides*
 22 Tubercle depressed, broader than long; style not persistent; achene strongly transversely ridged *Rhynchospora nitens*
 21 Bristles present (occasionally detached in *R. decurrens* and *R. miliacea* with achenes 1.0-1.4 mm long); achene 0.8-1.9 mm long.
 24 Bristles not exceeding the achene body.
 25 Cluster branches flexuous; bristles one-half as long to equaling the achene (or longer in *R. microcarpa*); achene slightly biconvex, 0.8-1.4 mm long, 0.7-1.0 (-1.2) mm wide; [section *Mixtae*].
 26 Clusters elongate; achene narrowly obovate to elliptic, averaging 8-12 transverse ridges; most tubercle bases convexly seated on the achene summit and somewhat decurrent along the achene margins, the tubercle surface often whitish-waxy *Rhynchospora decurrens*
 26 Clusters usually compact; achene suborbicular to elliptic, averaging 6-7 transverse ridges; most tubercle bases flat across the achene summit, not decurrent, the tubercle surface usually dark, not waxy *Rhynchospora microcarpa*
 25 Cluster branches stiff; bristles < 1/3 to ¼ (-1) as long as the achene; achene tumid above, often somewhat compressed below, 1.0-1.9 mm long, 1.0-1.7 mm wide; [section *Globulares*].

Key to Map
 Symbology:

- 27 Achenes 1.5-1.9 mm long, 1.4-1.7 mm wide, the transverse ridging faint to absent; tubercle grayish-tan to bony white, and buttressed at the base by a thick bony-white rim; leaves to 3 mm wide *Rhynchospora harveyi*
- 27 Achenes 1.0-1.9 mm long, 1.0-1.7 mm wide, the transverse ridging evident; tubercle grayish to dark brown, without a bony-white buttress; leaves to 3 or 5 mm wide.
- 28 Larger culm leaves to 5 mm wide; achenes (1.2-) 1.4-1.6 (-1.9) mm long, (1.1-) avg. 1.4 (-1.75) mm wide; achene surface alveoli longitudinally narrow; tubercle 0.3-0.7 mm long, base 0.6-1.0 mm wide..... *Rhynchospora cymosa*
- 28 Larger culm leaves to 3 mm wide; achenes (1.0-) avg. 1.3 (-1.5) mm long and wide; if achene surface alveoli longitudinally narrow, then tubercle 0.2-0.4 mm long and base 0.5-0.7 mm wide (*R. globularis*).
- 29 Longer bristles $\frac{1}{3}$ - $\frac{1}{2}$ (- $\frac{3}{4}$) \times the length of the achene; achene surface alveoli longitudinally narrow (typically 0.02-0.05 mm wide between the longitudinal walls), the latitudinal walls raised into horizontal ridges; tubercle 0.2-0.4 mm long, the base 0.5-0.7 mm wide *Rhynchospora globularis*
- 29 Longer bristles $\frac{2}{3}$ -1 \times the length of the achene; achene surface alveoli nearly as wide as long (typically 0.05-0.1 mm wide between the longitudinal walls), the latitudinal walls obscurely or not at all raised into horizontal ridges; tubercle 0.35-0.7 mm long, the base 0.7-0.9 mm wide *Rhynchospora pinetorum*
- 24 Bristles equaling or longer than the tubercle.
- 30 Primary branches of the inflorescence spreading at right angles from the culm, each spikelet or small cluster on slender spreading or reflexed stalks; [section *Mixtae*] *Rhynchospora miliacea*
- 30 Primary branches of the inflorescence ascending.
- 32 Tubercle 0.4-0.8 mm long, the edges setose or uneven with waxy or crusty irregular protuberances; [section *Mixtae*].
- 33 Achene obovate to suborbicular, 1.2-1.6 mm wide, latitudinal alveoli walls strongly raised into transverse ridges *Rhynchospora caduca*
- 33 Achene slenderly obovoid, 0.8-1.0 mm wide, latitudinal alveoli walls weakly or not at all raised into transverse ridges *Rhynchospora mixta*
- 32 Tubercle 0.2-0.5 mm long, the edges smooth. *Rhynchospora microcarpa*

Rhynchospora baldwinii A. Gray. BALDWIN'S BEAKSEDGE. **Hab:** Wet pine savannas, seepages. **Dist:** Se. NC south to s. FL and west to LA. **Phen:** Jul-Aug. **Syn:** = C, FNA23, GW1, K1, K3, K4, RAB, WH3, Gale (1944), McMillan (2007); = *Rhynchospora baldwinii* - S. NatureServe G4 (Apparently Secure).

Rhynchospora brachychaeta C. Wright. **Hab:** Cypress ponds, other depressions. **Dist:** E. SC south to Panhandle FL and s. AL and s. MS; West Indies (w. Cuba, Hispaniola, Puerto Rico; Central America (Belize, Nicaragua). **Comm:** The first report of this species for SC was by McMillan & Porcher (2005) and McMillan (2007). Kral in FNA considers this species possibly adventive, but McMillan & Porcher (2005) and McMillan (2007) provide good reasons for considering it native in our area. **Syn:** = FNA23, K1, K3, K4, Gale (1944), McMillan (2007); < *Rhynchospora wrightiana* - S. NatureServe GNR (Not Yet Ranked).

Rhynchospora caduca Elliott. ANGLE-STEM BEAKSEDGE. **Hab:** Tidal swamps, pine savannas and flatwoods, hardwood swamps, interdune ponds, acidic meadows and seeps, other wet areas. **Dist:** E. and c. VA south to s. FL and west to TX, OK, and AR, north in the interior to sc. TN. This species is found at a few sites in the mountains of GA. **Phen:** Apr-Sep. **Comm:** See notes under *R. miliacea*. **Syn:** = Ar, C, ETx1, F, FNA23, G, GW1, K1, K3, K4, RAB, Tn, Tx, Va, W, WH3, Gale (1944), McMillan (2007); > *Rhynchospora caduca* - S; > *Rhynchospora patula* A. Gray - S. NatureServe G5 (Secure).

Rhynchospora capitellata (Michaux) Vahl. BROWNISH BEAKSEDGE. **Hab:** Bogs and fens, seepages, and wet rock outcrops in the Mountains and upper Piedmont, also in wet habitats in the Coastal Plain of ne. NC and e. VA, also found in a variety of wet habitats. **Dist:** NB west to WI and n. NE, south to GA, AL, MS; disjunct in sw. OR and CA. **Phen:** Jul-Sep. **Tax:** Sorrie (2000) clarified the relationships and distinctions of this taxon with *R. leptocarpa*. **Comm:** The only common beaksedge in the higher Mountains of our region. **Syn:** = Ar, C, F, G, GrPl, Il, K3, K4, Mi, Mo1, NE, NY, Pa, Tn, Va, W, WV, McMillan (2007), Naczi & Moyer (2017); = *Rhynchospora glomerata* (Linnaeus) Vahl var. *minor* Britton; = *Rhynchospora capitellata* - S; < *Rhynchospora capitellata* (Michaux) Vahl - FNA23, GW1, K1, RAB, Tx, Gale (1944); < *Rhynchospora glomerata* (Linnaeus) Vahl, often misapplied.

Rhynchospora careyana Fernald. CAREY'S HORNED BEAKSEDGE. **Hab:** Limesink (doline) depression ponds and in intermittently flooded depression meadows, mucky pondshores. **Dist:** Apparently ranging from se. NC south to FL, but the range poorly known because of confusion with *R. inundata*, from which it is perhaps not specifically distinct. **Phen:** Jul-Sep. **Syn:** = FNA23, K1, K3, K4, McMillan (2007); = *Rhynchospora careyana* - S; < *Rhynchospora corniculata* (Lamarck) A. Gray - GW1; < *Rhynchospora inundata* (Oakes) Fernald - RAB, WH3.

Rhynchospora cephalantha A. Gray var. *attenuata* Gale. SMALL BUNCHED BEAKSEDGE. **Hab:** Pine savannas, sandhill seeps, openings in streamhead pocosins. **Dist:** The range of this variety is poorly known; it is reported by Gale (1944) from NC, SC, AL, and MS. Recent collections from MD and VA extend the range. See discussion in Sorrie et al. (1997). **Phen:** Jul-Oct. **Syn:** = Va, Gale (1944), McMillan (2007); < *Rhynchospora cephalantha* - C, FNA23, GW1, K1, K3, K4, RAB; < *Rhynchospora axillaris* (Lamarck) Britton - S.

Rhynchospora cephalantha A. Gray var. *cephalantha*. COMMON BUNCHED BEAKSEDGE. **Hab:** Pine savannas, wet roadsides, ditches, wet powerline rights-of-way. **Dist:** S. NJ south to s. FL and west to e. TX. **Phen:** Jul-Oct. **Comm:** This taxon is often weedy. **Syn:** = Va, McMillan (2007); < *Rhynchospora cephalantha* - C, ETx1, FNA23, GW1, K1, K3, K4, NY, RAB, WH3; > *Rhynchospora cephalantha* A. Gray var. *cephalantha* - F, G; > *Rhynchospora cephalantha* var. *pleiocephala* Fernald & Gale - F, G, Gale (1944); > *Rhynchospora cephalantha* A. Gray var. *typica* Fernald & Gale - Gale (1944); < *Rhynchospora axillaris* (Lamarck) Britton - S.

(see introduction for more)

Rhynchospora chalarocephala Fernald & Gale. LOOSE-HEADED BEAKSEDEGE. **Hab:** Pine savannas, limesink ponds, and swamps, often weedy and occurring in abundance on wet roadsides and in powerline corridors. **Dist:** S. NJ south to c. FL and west to LA; disjunct in nw. GA (Jones & Coile 1988) and sc. TN (Coffee and Warren counties). **Phen:** Jul-Sep. **Syn:** = C, ETx1, F, FNA23, G, GW1, K1, K3, K4, NY, RAB, Tn, Va, W, WH3, Gale (1944), McMillan (2007). NatureServe G5 (Secure).

Rhynchospora ciliaris (Michaux) C. Mohr. FRINGED BEAKSEDEGE. **Hab:** Pine savannas, longleaf pine sandhill seeps. **Dist:** Se. NC south to s. FL and west to e. LA. **Phen:** Jul-Sep. **Syn:** = FNA23, GW1, K1, K3, K4, RAB, WH3, Gale (1944), McMillan (2007); = *Rhynchospora ciliaris* – S. NatureServe G4 (Apparently Secure).

Rhynchospora colorata (Linnaeus) H. Pfeiffer. NARROWLEAF WHITETOP SEDGE. **Hab:** Wet pine savannas, ditches, dune swales, calcareous glades, usually in places with some source of alkalinity (calcareous rocks, shell, brackish water). **Dist:** Se. VA south to FL and west to TX; Mexico (Tabasco, Chiapas, Yucatán), Belize, Guatemala, Costa Rica, Venezuela; West Indies. **Phen:** May-Sep. **Syn:** = Ar, C, ETx1, FNA23, K1, K3, K4, NcTx, Va, WH3, McMillan (2007); = *Dichromena colorata* (Linnaeus) A.S. Hitchcock – Bah, F, G, GW1, RAB, S, Tx.

Rhynchospora compressa Carey ex Chapman. PAGODA BEAKSEDEGE. **Hab:** Pine savannas. **Dist:** Se. NC south to Panhandle FL, west to e. LA. This species was reported for SC (Kartesz 1999), based on the South Carolina Plant Atlas (<http://cricket.biol.sc.edu/herb/>); McMillan (pers. comm.) states that the record is in error, based on a misidentified specimen. The species occurs in sc. GA (Jones & Coile 1988) and has since been found in SC by McMillan (2003) and in NC by E. Ungberg (specimen at NCU). **Syn:** = FNA23, GW1, K1, K3, K4, WH3, Gale (1944), McMillan (2007); = *Rhynchospora compressa* – S, orthographic variant. NatureServe G4 (Apparently Secure).

Rhynchospora corniculata (Lamarck) A. Gray. SHORT-BRISTLED HORNED BEAKSEDEGE. **Hab:** Pondcypress savannas in Carolina bays, swamp forests, other wetlands. **Dist:** Sometimes divided into two varieties: var. *corniculata* ranges from DE south to FL and west to LA, extending north into KY and MO; also in the West Indies. **Phen:** Jul-Sep. **Tax:** Var. *interior*, probably not worth recognition, is distinguished by a shorter and narrower achene, the summit barely broader than the base of the tubercle, and occurs in the Mississippi drainage. **Syn:** = Ar, ETx1, FNA23, GW1, Il, K1, K3, K4, Mo1, RAB, Tn, Va, WH3, McMillan (2007); = *Rhynchospora corniculata* – S, orthographic variant; > *Rhynchospora corniculata* var. *corniculata* – C, F, G; > *Rhynchospora corniculata* var. *interior* Fernald – C, F, G, NcTx, Tx.

Rhynchospora crinipes Gale. ALABAMA BEAKSEDEGE. **Hab:** Sand-clay bars and peaty stream banks of blackwater streams. **Dist:** Jul-Sep. Sc. NC (Sorrie et al. 1997) through sc. GA to FL Panhandle, west to s. AL; very scattered in occurrence. **Tax:** This very rare species is related to *R. filifolia*, but is a coarser plant, readily distinguishable by characters of the achene, culm, and leaves. Anderson (1988) discusses its systematics, habitat, and rarity. **Syn:** = FNA23, GW1, K1, K3, K4, WH3, Gale (1944), McMillan (2007). NatureServe G3 (Vulnerable).

Rhynchospora curtissii Britton. **Hab:** Pine flatwoods and bogs. **Dist:** An East Gulf Coastal Plain endemic, in Panhandle FL, AL, and s. MS (Sorrie & Leonard 1999); also reported from SC by Kral (1996) and for NC and SC by Kartesz (1999), but specimens so annotated are misidentified. **Syn:** = FNA23, GW1, K1, K3, K4, WH3, Gale (1944), McMillan (2007); = *Rhynchospora smallii* – S. NatureServe G4 (Apparently Secure).

Rhynchospora cymosa Elliott. CYMOSE BEAKSEDEGE. **Hab:** Wet to dry low grounds, diabase glades, ditches, powerline corridors, pine savannas, moist seepage on rock outcrops, other saturated areas. **Dist:** NJ south to FL, west to TX, north in the interior to nc. TN and around the Great Lakes; CA; West Indies; Central America. **Phen:** Jun-Sep. **Tax:** As explained by Kral (1999), this taxon warrants specific status. As explained by McMillan (2007), the name that should be applied to this taxon at species rank is *R. cymosa* Elliott. **Syn:** =; = *Rhynchospora globularis* (Chapman) Small var. *recognita* Gale – C, F, G, GrPl, Mo1, WV, Gale (1944); = *Rhynchospora recognita* (Gale) Kral – Ar, ETx1, FNA23, K1, K3, K4, Mi, NY, Pa, Va, McMillan (2007); = *Rhynchospora cymosa* Elliott – S, misapplied; < *Rhynchospora globularis* (Chapman) Small – NcTx, RAB, W, WH3; < *Rhynchospora globularis* var. *globularis* – GW1.

Rhynchospora debilis Gale. SAVANNA BEAKSEDEGE. **Hab:** Pine savannas, longleaf pine sandhill seeps, acid seeps and flatwoods inland. **Dist:** Se. VA south to n. peninsular FL and west to se. TX (Brown & Marcus 1998). **Phen:** Jul-Sep. **Comm:** Like a small version of *R. fascicularis*, often with several ascending, cespitose culms, each terminated by a single glomerule. **Syn:** = C, ETx1, F, FNA23, GW1, K1, K3, K4, RAB, Tn, Va, WH3, Gale (1944), McMillan (2007). NatureServe G4? (Apparently Secure).

Rhynchospora decurrens Chapman. SWAMP-FOREST BEAKSEDEGE. **Hab:** Swamp forests and river marshes, especially along blackwater rivers. **Dist:** Se. NC and e. SC (McMillan & Porcher 2005) south to c. peninsular FL and west to s. MS (Sorrie & Leonard 1999). **Phen:** Jul-Aug. **Syn:** = FNA23, GW1, K1, K3, K4, RAB, WH3, Gale (1944), McMillan (2007); = *Rhynchospora decurrens* – S, orthographic variant. NatureServe G3G4 (Vulnerable).

Rhynchospora distans (Michaux) Vahl. NARROW-FRUITED FASCICLED BEAKSEDEGE. **Hab:** Pine savannas and limesink ponds. **Dist:** Se. VA south to s. FL and west to s. MS (Sorrie & Leonard 1999); West Indies. **Phen:** Jun-Sep. **Comm:** Appearing to merge with *R. wrightiana* on the outer Coastal Plain of NC. **Syn:** = Va, McMillan (2007); = *Rhynchospora fascicularis* (Michaux) Vahl var. *distans* (Michaux) Chapman – F, K1, Gale (1944); =

98. CYPERACEAE

Rhynchospora distans – S, orthographic variant; < *Rhynchospora fascicularis* (Michaux) Vahl – FNA23, G, GW1, K3, K4, RAB, WH3. [NatureServe G5T4?](#) (Apparently Secure).

Rhynchospora divergens Chapman ex M.A. Curtis. WHITE-SEEDED BEAKSEEDGE. **Hab:** Wet pine savannas, especially in exposed sands. **Dist:** Se. NC south to s. FL and west to se. TX; Bahamas; Mexico (Chiapas), Belize. **Phen:** May-Sep. **ID Notes:** *Rhynchospora pusilla*, *Rhynchospora divergens*, and *Rhynchospora thornei* are all small, grass-like plants, very similar in appearance to one another. **Syn:** = Bah, ETx1, FNA23, GW1, K1, K3, K4, RAB, Tx, WH3, McMillan (2007); = *Rhynchospora divergens* – S, orthographic variant. [NatureServe G4](#) (Apparently Secure).

Rhynchospora elliottii A. Dietrich. ELLIOTT'S BEAKSEEDGE. **Hab:** Pine savannas, ditches, other wet habitats, often weedy. **Dist:** Se. NC south to c. peninsular FL and west to e. TX; Bahamas. **Phen:** Jul-Sep. **ID Notes:** The achenes are typically flat or concave on one face, and flat or slightly convex on the other. See note under *R. microcarpa*. **Syn:** = Bah, ETx1, FNA23, GW1, K1, K3, K4, Tx, WH3, McMillan (2007); = *Rhynchospora schoenoides* (Elliott) Wood – RAB, Gale (1944); = *Rhynchospora schoenoides* – S. [NatureServe G5](#) (Secure).

Rhynchospora fascicularis (Michaux) Vahl. FASCICLED BEAKSEEDGE. **Hab:** Pine savannas, limesink ponds, ditches. **Dist:** Se. VA south to s. FL and west to se. TX; West Indies. **Phen:** Jun-Sep. **Syn:** = Va, McMillan (2007); = *Rhynchospora fascicularis* (Michaux) Vahl var. *fascicularis* – F, K1, Gale (1944); = *Rhynchospora fascicularis* – S; < *Rhynchospora fascicularis* (Michaux) Vahl – ETx1, FNA23, G, GW1, K3, K4, RAB, Tx, WH3. [NatureServe G5T3T5](#) (Apparently Secure).

Rhynchospora fernaldii Gale. FERNALD'S BEAKSEEDGE. **Hab:** Pine flatwoods. **Dist:** S. GA south to s. FL, west to s. MS. **Syn:** = FNA23, GW1, K1, K3, K4, WH3, Gale (1944), McMillan (2007). [NatureServe G3G4](#) (Vulnerable).

Rhynchospora filifolia A. Gray. THREADLEAVED BEAKSEEDGE. **Hab:** Sandy shores of limesink (doline) depressions, especially at the lower margin, wet pine savannas. **Dist:** S. NJ south to c. FL and west to e. TX; Cuba, Mexico (Tabasco), Belize, Nicaragua. **Phen:** Jul-Sep. **Syn:** = C, ETx1, F, FNA23, G, K1, K3, K4, RAB, Tx, Va, WH3, Gale (1944), McMillan (2007); = *Rhynchospora filifolia* – S; < *Rhynchospora filifolia* A. Gray – GW1.

Rhynchospora galeana Naczi, W.M. Knapp, & Gerry Moore. SHORT-BRISTLE BEAKSEEDGE. **Hab:** Wet pine savannas and associated wetlands. **Dist:** Se. NC south to s. FL and west to s. MS; West Indies. **Phen:** Jul-Sep. **Tax:** See Naczi, Knapp, and Moore (2010) for discussion of the need to replace the name *R. breviseta* because of an earlier-named Asian species. **Comm:** This species will colonize disturbances (roadsides, powerline corridors), but not aggressively. The leaf tips of *R. galeana* are acute and minutely serrulate, while those of the closely related *R. oligantha* are blunt and smooth; these characters are, however, often difficult to determine. **Syn:** = K3, K4, Naczi, Knapp, & Moore (2010); = *Rhynchospora breviseta* (Gale) Channell – FNA23, GW1, K1, RAB, WH3, Bridges & Orzell (2000), McMillan (2007), illegitimate name (a later homonym); = *Rhynchospora oligantha* A. Gray var. *breviseta* Gale – Gale (1944); < *Rhynchospora oligantha* A. Gray – F, G; < *Rhynchospora oligantha* – S.

Rhynchospora globularis (Chapman) Small. GLOBE BEAKSEEDGE. **Hab:** Sandy or peaty depressions, wet ditches, powerline corridors, pine savannas, inland in acidic seeps and flatwoods. **Dist:** DE south to s. FL and west to c. TX and OK; north in the interior to nc. TN; disjunct around the Great Lakes. **Phen:** Jun-Sep. **ID Notes:** Both *R. globularis* and *R. pinetorum* tend to produce shorter plants with smaller glomerules than *R. recognita*. Occasional achenes of *R. globularis* exhibit the wide alveoli of *R. pinetorum* near the base or summit, with little or no horizontal ridging, but centrally have narrow alveoli with pronounced horizontal ridges. The opposite condition occasionally occurs in *R. pinetorum* achenes, with narrow alveoli and horizontal ridging basally or at the summit, but wide alveoli and little or no ridging centrally. **Syn:** = C, F, FNA23, G, II, K3, K4, Tn, Tx, Va, Gale (1944), McMillan (2007); = *Rhynchospora globularis* – S, orthographic variant; < *Rhynchospora globularis* (Chapman) Small – RAB, W, WH3; < *Rhynchospora globularis* var. *globularis* – Ar, ETx1, GW1, K1, NcTx.

Rhynchospora glomerata (Linnaeus) Vahl. CLUSTERED BEAKSEEDGE. **Hab:** Pine savannas, bogs, acidic seeps inland, other wet habitats. **Dist:** S. NJ south to ne. FL, FL Panhandle, and west to e. TX, and inland in KY, TN, AR, and KS. **Phen:** Jul-Sep. **Syn:** = K4, Sorrie, LeBlond, & Weakley (2018a) in Weakley et al (2018b); = *Rhynchospora glomerata* (Linnaeus) Vahl var. *glomerata* – K1, Va, McMillan (2007); = *Rhynchospora glomerata* (Linnaeus) Vahl var. *typica* Gale – Gale (1944); < *Rhynchospora cymosa* Elliott; < *Rhynchospora glomerata* (Linnaeus) Vahl – Ar, C, ETx1, F, FNA23, G, GW1, II, K3, NcTx, RAB, Tn, Tx, W, WH3, Naczi & Moyer (2017); < *Rhynchospora glomerata* – S, orthographic variant. [NatureServe G5T5?](#) (Secure).

Rhynchospora gracilentia A. Gray. SLENDER BEAKSEEDGE. **Hab:** Pine savannas, bogs, seeps. **Dist:** NJ south to ne. FL, FL Panhandle, and west to e. TX, north in the inland to nc. TN, se. KY (Brock 2020), and AR; Cuba; Mexico (Chiapas), Belize, Nicaragua. **Phen:** Jul-Sep. **Syn:** = Ar, C, ETx1, F, FNA23, G, GW1, K1, K3, K4, Pa, RAB, Tn, Tx, Va, W, WH3, Gale (1944), McMillan (2007); = *Rhynchospora gracilentia* – S, orthographic variant. [NatureServe G5](#) (Secure).

Rhynchospora grayi Kunth. GRAY'S BEAKSEEDGE. **Hab:** Longleaf pine sandhills and other dry, sandy sites, pine rocklands. **Dist:** Se. VA south to s. FL, west to e. TX. **Phen:** Jun-Sep. **Syn:** = C, ETx1, F, FNA23, G, K1, K3, K4, RAB, Tx, Va, WH3, Gale (1944), McMillan (2007); = *Rhynchospora grayi* – S. [NatureServe G4](#) (Apparently Secure).

Rhynchospora harperi Small. HARPER'S BEAKSEEDGE. **Hab:** Peaty limesink depression ponds (dolines), from standing water to the upper margins of the pond-shore. **Dist:** Se. NC south to sc. peninsular FL and west to s. AL and s. MS (Sorrie & Leonard 1999); Belize. See Nelson (1993)

98. CYPERACEAE

for first SC record, and LeBlond (1997) for additional information on the species, especially its distribution. **Phen:** Jul-Sep. **Syn:** = FNA23, K1, K3, K4, WH3, Gale (1944), McMillan (2007); = *Rhynchospora harperi* – S; < *Rhynchospora filifolia* A. Gray – GW1.

Rhynchospora harveyi W. Boott. HARVEY'S BEAKSEDGE. **Hab:** Pine savannas in the Coastal Plain, seepage bogs in the Sandhills, bogs in the Mountains and Piedmont. **Dist:** Se. VA south to ne. FL, FL Panhandle, and west to TX and OK, and north in the interior to nc. TN and MO. **Phen:** Jul-Aug. **Syn:** = C, ETx1, F, G, GrPl, GW1, K1, Mo1, NcTx, RAB, Tn, Tx, Va, W, Gale (1944), McMillan (2007); = *Rhynchospora harveyi* var. *harveyi* – Ar, FNA23, K3, K4; = *Rhynchospora harveyi* – S; < *Rhynchospora harveyi* W. Boott – WH3. **NatureServe G4** (Apparently Secure).

Rhynchospora inexpansa (Michaux) Vahl. NODDING BEAKSEDGE. **Hab:** Wet pine savannas, streamhead pocosins where frequently burned, usually in peaty situations, often weedy, colonizing disturbances. **Dist:** Se. VA south to ne. FL, FL Panhandle, and west to e. TX, AR, and se. OK (Singhurst, Mink, & Holmes 2012); West Indies. **Phen:** Jul-Sep. **Syn:** = Ar, C, ETx1, F, FNA23, G, GW1, K1, K3, K4, RAB, Tx, Va, WH3, Gale (1944), McMillan (2007); = *Rhynchospora inexpansa* – S. **NatureServe G5** (Secure).

Rhynchospora inundata (Oakes) Fernald. NARROW-FRUIT HORNED BEAKSEDGE. **Hab:** In water of limesink dolines and clay-based Carolina bays. usually found in shallow water or at the lower margins of pond-shores, typically producing large colonies. **Dist:** Apparently ranging from e. MA south to s. FL and west to e. TX (the range, however, obscured by confusion with *R. careyana*) (Singhurst, Mink, & Holmes 2010). See Reid (2021) for information about its occurrence in Vermilion Parish, w. Louisiana. **Phen:** Jul-Sep. **Comm:** The relation of this species to *R. careyana* and to more northern entities of *R. inundata* remain unresolved. **Syn:** = C, F, FNA23, G, GW1, K1, K3, K4, NE, NY, McMillan (2007); = *Rhynchospora inundata* – S; < *Rhynchospora inundata* (Oakes) Fernald – RAB, WH3.

Rhynchospora latifolia (Baldwin ex Elliott) W.W. Thomas. BROADLEAF WHITETOP SEDGE. **Hab:** Wet pine savannas. **Dist:** A Southeastern Coastal Plain endemic: se. NC south to s. FL and west to se. TX; disjunct in sc. TN (Coffee County). **Phen:** May-Sep. **Syn:** = ETx1, FNA23, K1, K3, K4, WH3, McMillan (2007); = *Dichromena latifolia* Baldwin ex Elliott – GW1, RAB, S, Tx. **NatureServe G5** (Secure).

Rhynchospora leptocarpa (Chapman ex Britton) Small. **Hab:** Seepage bogs, pocosins, especially in openings. **Dist:** Coastal Plain: E. NC south to ne. FL, Panhandle FL, west to se. LA; disjunct in s. NJ. **Phen:** Jul-Sep. **Comm:** It appears that *R. leptocarpa* is a valid species, a southeastern Coastal Plain relative of the more northern and montane *R. capitellata* (Sorrie 2000; Moyer & Naczi 2016; Naczi & Moyer 2016). Its occurrence in NC is reported by Sorrie et al. (1997). Its occurrence in NJ is reported by Moyer & Naczi (2016). **Syn:** = K3, K4, WH3, McMillan (2007), Naczi & Moyer (2017); = *Rhynchospora leptocarpa* – S; < *Rhynchospora capitellata* (Michaux) Vahl – ETx1, FNA23, GW1, K1, RAB, Tx, Gale (1944).

Rhynchospora macra (C.B. Clarke) Small. SOUTHERN WHITE BEAKSEDGE. **Hab:** *Sphagnum* bogs in frequently-burned streamhead pocosins, and in sandhill seepage bogs. **Dist:** Sc. NC south to ne. FL, FL Panhandle, and west to se. TX; Nicaragua; Puerto Rico. **Phen:** Jul-Sep. **Comm:** *R. macra* is a robust southern relative of *R. alba*. Like *R. alba* and *R. pallida*, it has scales which are at first bright white, "fading" in age to a medium tan or light brown. These three species are thus superficially most distinctive (from other *Rhynchospora*) in June, July, and August. The occurrence of this species in NC and SC is discussed by Sorrie et al. (1997). **Syn:** = ETx1, FNA23, GW1, K1, K3, K4, Tx, WH3, Gale (1944), McMillan (2007); = *Rhynchospora macra* – S. **NatureServe G3G4** (Vulnerable).

Rhynchospora macrostachya Torrey ex A. Gray. TALL HORNED BEAKSEDGE. **Hab:** Marshes, tidal marshes, swamps, upland depression ponds, other wetlands. **Dist:** E. MA south to ne. FL and west to e. TX, north in the interior to sc. TN, s. MI, MO, and KS; disjunct (historically) in s. ME. **Phen:** Jul-Sep. **Tax:** The recognition of varieties does not seem to be warranted. **Comm:** This is most readily distinguished from *R. corniculata*, *R. inundata*, and *R. careyana* by the large glomerules composed of numerous spikelets. **Syn:** = Ar, C, ETx1, FNA23, G, GrPl, GW1, K1, K3, K4, Mi, NcTx, NE, NY, RAB, Tn, Tx, Va, WH3, McMillan (2007); = *Rhynchospora macrostachya* – S; > *Rhynchospora macrostachya* var. *colpophila* – F; > *Rhynchospora macrostachya* var. *macrostachya* – F, Mo1.

Rhynchospora marliniana Naczi, W.M. Knapp, & W.W. Thomas. MARLINS' BEAKSEDGE. **Hab:** Wet pine savannas and Florida wet prairies. **Dist:** FL Panhandle west through AL to MS; Central America in se. Mexico (Tabasco), Belize, ne. Honduras, and ne. Nicaragua. **Phen:** May-Aug. **Tax:** See Naczi, Knapp, & Thomas (2012) for more detailed information. *R. semiplumosa* Small seems to be this species by description and key (Small 1933), but the type specimen is *R. plumosa* (W. Knapp, pers. comm. 2012). **Syn:** = K3, K4, Naczi, Knapp, & Thomas (2012); = *Rhynchospora semiplumosa* A. Gray – S, as to description, but not type; < *Rhynchospora plumosa* Elliott – FNA23, GW1, K1, RAB, WH3, Bridges & Orzell (2000), McMillan (2007).

Rhynchospora megalocarpa A. Gray. SANDHILL BEAKSEDGE. **Hab:** Xeric longleaf pine sandhills, Florida scrub. **Dist:** Se. NC south to s. FL, west to MS. **Phen:** Jun-Aug. **Syn:** = FNA23, K1, K3, K4, RAB, WH3, Gale (1944), McMillan (2007); = *Rhynchospora dodecandra* Baldwin ex A. Gray – S. **NatureServe G5** (Secure).

Rhynchospora microcarpa Baldwin ex A. Gray. SOUTHERN BEAKSEDGE. **Hab:** Swamp forests, clay-based Carolina bays, marl prairies, strand swamps, cypress woodlands. **Dist:** E. NC south to s. FL and west to TX; West Indies (Cuba, Puerto Rico), Bahamas, Belize. **Phen:** Jul-Aug. **Tax:**

98. CYPERACEAE

This species is easily confused with *R. elliotii* and *R. perplexa*. *R. elliotii* is distinguished by leaves 4-6 mm wide, bristles longer than the tubercle, flattish achene faces, and a tubercle that is longer than broad. *R. microcarpa* and *R. perplexa* have leaves 1-3 mm wide and tubercles as broad as long or broader. In *R. microcarpa*, the achene is biconvex and the bristles are half as long as the achene to equaling the tubercle. In *R. perplexa*, the achene faces are flattish and the bristles are absent or rudimentary (< ½ as long as the achene). **Syn:** = Ar, ETx1, F, FNA23, GW1, K4, RAB, Tx, WH3, Gale (1944), McMillan (2007); < *Rhynchospora microcarpa* Baldwin ex A. Gray – Bah, K1, K3; > *Rhynchospora edisoniana* Britton in Small – S; > *Rhynchospora microcarpa* – S.

Rhynchospora microcephala (Britton) Britton ex Small. SMALL-HEADED BEAKSEDEGE. **Hab:** Pine savannas, sandhill-pocosin ecotones. **Dist:** S. NJ south to s. FL and west to MS; Cuba. **Phen:** Jul-Oct. **Syn:** = C, F, FNA23, G, GW1, K1, K3, K4, RAB, Va, WH3, Gale (1944), McMillan (2007); = *Rhynchospora cephalantha* A. Gray var. *microcephala* (Britton) Kükenthal; = *Rhynchospora microcephala* – S. **NatureServe G5T5** (Secure).

Rhynchospora miliacea (Lamarck) A. Gray. MILLET BEAKSEDEGE. **Hab:** Swamp forests, including maritime swamp forests. **Dist:** Se. VA south to s. FL and west to e. TX; West Indies. **Phen:** Jul-Aug. **Comm:** The inflorescence branches of *R. mixta* and (less commonly) *R. caduca* can spread at right angles from the culm, superficially resembling *R. miliacea*. The three can be separated by tubercle length: the tubercle of *R. miliacea* is 0.2-0.4 mm long, while those of *R. mixta* and *R. caduca* are 0.4-0.9 mm long. **Syn:** = C, ETx1, F, FNA23, G, GW1, K1, K3, K4, RAB, Va, WH3, Gale (1944), McMillan (2007); = *Rhynchospora miliacea* – S. **NatureServe G5** (Secure).

Rhynchospora mixta Britton. MINGLED BEAKSEDEGE. **Hab:** Swamp forests, marshes. **Dist:** Ne. NC south to c. peninsular FL and west to e. TX. **Phen:** Jun-Aug. **Comm:** See notes under *R. miliacea*. **Syn:** = ETx1, FNA23, GW1, K1, K3, K4, RAB, S, Tx, WH3, Gale (1944), McMillan (2007); > *Rhynchospora mixta* – S; > *Rhynchospora prolifera* Small – S. **NatureServe G5** (Secure).

Rhynchospora nitens (Vahl) A. Gray. SHORT-BEAKED BEAKSEDEGE. **Hab:** Wet pine savannas, limesink (doline) ponds, ditches, disturbed wet areas, often weedy. **Dist:** Primarily a Coastal Plain endemic: MA south to s. FL and west to se. TX; lowlands around the Great Lakes; West Indies, Belize, Nicaragua. **Phen:** Jul-Aug. **Syn:** = C, ETx1, FNA23, K1, K3, K4, Mi, NcTx, NE, NY, Va, WH3, McMillan (2007); = *Psilocarya nitens* (Vahl) Wood – F, G, GW1, RAB, S, Tx. **NatureServe G4?** (Apparently Secure).

Rhynchospora oligantha A. Gray. FEATHER-BRISTLED BEAKSEDEGE. **Hab:** Wet pine savannas, sandhill-pocosin ecotones, sandhill seepage bogs, sea-level fens, usually in rather peaty, acid places. **Dist:** S. NJ south to ne. FL, Panhandle FL, and west to se. TX; Belize, Nicaragua. Considered to be absent between NC and NJ prior to its discovery in e. VA (Fleming & Ludwig 1996). **Phen:** May-Aug. **ID Notes:** The leaf tips of *R. oligantha* are blunt and smooth, while those of the closely related *R. galeana* are acute and minutely serrulate; these characters are often difficult to determine, however. **Syn:** = C, ETx1, FNA23, GW1, K1, K3, K4, RAB, Tx, Va, WH3, Bridges & Orzell (2000), McMillan (2007); = *Rhynchospora oligantha* var. *oligantha* – Gale (1944); < *Rhynchospora oligantha* A. Gray – F, G; < *Rhynchospora oligantha* – S.

Rhynchospora perplexa Britton. PINELAND BEAKSEDEGE. **Hab:** Pine savannas, sandhill seepage bogs, inland in seepage bogs and acidic flatwoods. **Dist:** E. NC south to ne. FL, FL Panhandle, and west to TX, and north in the interior to ec. TN; West Indies. **Phen:** Jul-Sep. **Tax:** Var. *virginiana* Fernald, alleged to be endemic to se. VA, is alleged to differ in several characters, including larger spikelets (2.5-3.0 mm long vs. 2.0-2.5), the achene tubercles broadly rounded at the tip (rather than deltoid and acute). Also see note under *R. microcarpa*. **Syn:** = C, ETx1, FNA23, G, GW1, K1, K3, K4, RAB, Tn, Tx, Va, WH3, Gale (1944), McMillan (2007); = *Rhynchospora perplexa* – S; < *Rhynchospora microcarpa* Baldwin ex A. Gray – Bah; > *Rhynchospora perplexa* var. *perplexa* – F; > *Rhynchospora perplexa* var. *virginiana* Fernald – F.

Rhynchospora pinetorum Britton & Small. SMALL'S BEAKSEDEGE. **Hab:** Wet calcareous pine savannas, maritime wet grasslands. **Dist:** FL west to MS (Sorrie & Leonard 1999) and e. TX, apparently somewhat disjunct to se. NC and ne. SC, and also in the West Indies. **Phen:** Jun-Sep. **Comm:** See note under *R. globularis*. **Syn:** = K3, K4, McMillan (2007); = *Rhynchospora globularis* (Chapman) Small var. *pinetorum* (Small) Gale – ETx1, FNA23, GW1, K1, Gale (1944); = *Rhynchospora pinetorum* – S; < *Rhynchospora globularis* (Chapman) Small – WH3.

Rhynchospora pleiantha (Kükenthal) Gale. COASTAL BEAKSEDEGE. **Hab:** Sandy margins of limesink depression ponds (dolines), typically in shallow water or at the lower margins of pond-shores. **Dist:** Se. NC south to c. peninsular FL, and Panhandle FL, west to se. AL; also in Cuba. **Phen:** Jul-Sep. **Syn:** = FNA23, GW1, K1, K3, K4, RAB, WH3, Gale (1944), McMillan (2007); = *Rhynchospora fusca* – S, misapplied. **NatureServe G2G3** (Imperiled).

Rhynchospora plumosa Elliott. PLUMED BEAKSEDEGE. **Hab:** Pine savannas, sandhill-pocosin ecotones, especially where the sandy surface dries out in summer (on spodosols such as the Leon soil series). **Dist:** NC south to s. FL and west to se. TX; West Indies (Cuba); Belize, Honduras, Nicaragua. **Phen:** May-Aug. **Syn:** = Naczi, Knapp, & Thomas (2012); < *Rhynchospora plumosa* Elliott – Ar, ETx1, FNA23, GW1, K1, K3, K4, RAB, Tx, WH3, Bridges & Orzell (2000), McMillan (2007); > *Rhynchospora plumosa* – S; > *Rhynchospora semiplumosa* A. Gray – S, (as to type). **NatureServe G5** (Secure).

Rhynchospora pusilla Chapman ex M.A. Curtis. DWARF BEAKSEDEGE. **Hab:** Wet pine savannas, especially in exposed wet sands of disturbed ground, such as roadsides. **Dist:** E. NC south to s. FL and west to e. TX; West Indies, Mexico (Tabasco, Chiapas), Belize, Guatemala, Nicaragua. **Phen:** Jun-Sep. **ID Notes:** *Rhynchospora pusilla*, *Rhynchospora divergens*, and *Rhynchospora thornei* are all small, grass-like plants, very similar in

appearance to one another. **Syn:** = ETx1, FNA23, GW1, K1, K3, K4, Tx, WH3, McMillan (2007); = *Rhynchospora intermixta* C. Wright – RAB; = *Rhynchospora intermixta* – S. [NatureServe G4G5](#) (Apparently Secure).

Rhynchospora rariflora (Michaux) Elliott. FEW-FLOWER BEAKSEDGE. **Hab:** Wet pine savannas, seepage bogs in the fall-line Sandhills, bogs in the Piedmont and Mountains. **Dist:** S. NJ south to s. FL and west to e. TX; rarely inland, as in ec. TN, w. NC, nw. SC, n. GA, etc.; West Indies; Belize, Honduras, Nicaragua. **Phen:** Jul-Sep. **Comm:** Resembling *R. galeana* and *R. oligantha*, but the spikelets conspicuously smaller. **Syn:** = Ar, C, ETx1, F, FNA23, G, GW1, K1, K3, K4, RAB, Tx, Va, WH3, Gale (1944), McMillan (2007); = *Rhynchospora rariflora* – S. [NatureServe G5](#) (Secure).

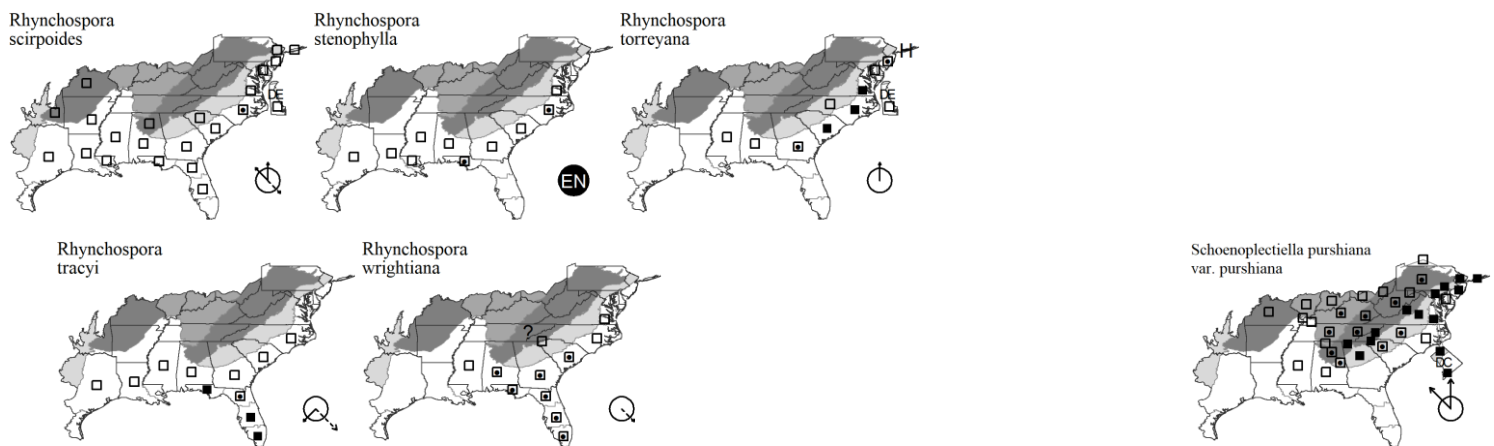

Rhynchospora scirpoides (Torrey) Grisebach. LONG-BEAK BEAKSEDGE. **Hab:** Limesink ponds, usually at the lower margins of pond-shores, wet pine savannas, beaver ponds, and other wetlands with "drawdown" hydrology. **Dist:** Se. MA south to n. peninsular FL, Panhandle FL, s. MS (Sorrie & Leonard 1999), se. OK, and TX (Singhurst, Bridges, & Holmes 2007); disjunct in the lowlands around the Great Lakes. **Phen:** Jul-Sep. **Syn:** = Ar, C, ETx1, FNA23, K1, K3, K4, Mi, NE, NY, Va, WH3, McMillan (2007); = *Psilocarya corymbifera* (C. Wright) Britton; = *Psilocarya scirpoides* Torrey – GW1, RAB, S; > *Psilocarya scirpoides* var. *grimesii* Fernald & Griscom – F, G; > *Psilocarya scirpoides* var. *scirpoides* – F, G. [NatureServe G4](#) (Apparently Secure).

Rhynchospora stenophylla Chapman. COASTAL BOG BEAKSEDGE. **Hab:** Peaty seepage bogs, streamhead pocosins, savanna-pocosin ecotones, usually growing in *Sphagnum*, especially where frequently burned. **Dist:** Se. NC south to nw. FL and west to s. MS; disjunct in se. VA (Southampton Co.) (Belden et al. 2004). Reported for GA by Sorrie (1998b). **Phen:** Jul-Sep. **Syn:** = ETx1, FNA23, GW1, K1, K3, K4, RAB, Va, WH3, Gale (1944), McMillan (2007); = *Rhynchospora stenophylla* – S. [NatureServe G4](#) (Apparently Secure).

Rhynchospora torreyana A. Gray. TORREY'S BEAKSEDGE. **Hab:** Pine savannas, seepage bogs, often weedy. **Dist:** Se. MA south to GA, AL, and MS. **Phen:** Jul-Sep. **Syn:** = C, F, G, GW1, K1, K3, K4, NE, NY, RAB, Va, Gale (1944), McMillan (2007); = *Rhynchospora torreyana* – S. [NatureServe G4](#) (Apparently Secure).

Rhynchospora tracyi Britton. TRACY'S BEAKSEDGE. **Hab:** Cypress savannas and graminoid-dominated depressions, in small, clay-based Carolina bays or shallow limesink ponds (dolines), typically in shallow water or at the lower margins of pond-shores; in s. FL often a monospecific dominant in marl prairies and marshes. **Dist:** S. NC south to s. FL, west to s. MS (Sorrie & Leonard 1999); disjunct in sw. LA and e. TX; West Indies (Bahamas, Cuba, Hispaniola); Central America (Belize). **Phen:** Jun-Sep. **Syn:** = Bah, ETx1, FNA23, GW1, K1, K3, K4, RAB, WH3, WI, McMillan (2007); = *Rhynchospora tracyi* – S. [NatureServe G4](#) (Apparently Secure).

Rhynchospora wrightiana Boeckeler. WRIGHT'S BEAKSEDGE. **Hab:** Wet pine savannas. **Dist:** Se. VA south to c. FL and west to s. AL and s. MS; West Indies (Cuba, Puerto Rico). **Phen:** Jul-Sep. **Tax:** Appearing to merge with *R. fascicularis* var. *distans* on the outer Coastal Plain of NC. Leaves are most frequently filiform and < 1 mm wide; rarely flat and to 1.3 mm wide. **Syn:** = FNA23, GW1, K1, K3, K4, RAB, Va, WH3, WI, Gale (1944), McMillan (2007); < *Rhynchospora wrightiana* – S. [NatureServe G5](#) (Secure).

Schoenoplectiella K. Lye 2003 (LITTLE BULRUSH, LITTLE BULSEDGE)

A genus of ca. 45 species, annual (rarely perennial) herbs, subcosmopolitan, but especially tropical/subtropical and Asian. As demonstrated by Lye (2003), Jung & Choi (2010), Muasya et al. (2009), Shiels & Monfils (2012), and Shiels et al. (2014), *Schoenoplectiella* is morphologically, genetically, and phylogenetically distinct from *Schoenoplectus* and warrants generic status. The circumscription corresponds to *Schoenoplectus* sections *Supini* and *Actaeogeton*. References: Jung & Choi (2010); Lye (2003); Muasya et al (2009); Shiels & Monfils (2012); Shiels et al (2014); Smith (2002b) in FNA23 (2002b).

Schoenoplectiella purshiana (Fernald) K. Lye var. *purshiana*. BLUNTSCALE BULRUSH. **Hab:** Fens, depression marshes, marshes, shores. **Dist:** ME west to MN, south to nc. GA (Jones & Coile 1988), AL, MS, TN, and KY. **Phen:** Late Jun-Aug; Jul-Oct. **Syn:** = K3, K4, NY, Shiels & Monfils

***Schoenoplectus* (Reichenbach) Palla 1888 (BULRUSH, BULSEDGE)**

A genus of about 50 species, herbs, cosmopolitan in distribution. Micromorphologic, anatomic, and molecular studies have confirmed earlier opinions based on morphology that *Schoenoplectus* is not closely related to *Scirpus* (Strong 1994, Smith 1995, Schuyler, pers. comm.). Most investigators now also favor the separation of *Bolboschoenus* from *Schoenoplectus* (Pignotti & Mariotti 2004). References: Goetghebeur in Kubitzki (1998b); Pignotti & Mariotti (2004); Shiels et al (2014); Smith (1995); Smith (2002b) in FNA23 (2002b); Strong (1994).

- 1 Main involucre bracts 2-8, spreading and foliaceous (the inflorescence thus appearing terminal); rhizomes bearing ovoid tubers; bristles persistent on the achene; achenes 2.5-5 mm long (including body and apiculus)..... ***Bolboschoenus***
- 1 Main involucre bract 1 (rarely with an additional 1-2 lateral bracts), erect and terete or triangular, appearing as a continuation of the culm (the inflorescence thus appearing lateral, though in some species the longer inflorescence branches may overtop the bract); rhizomes not bearing tubers; bristles falling from the achene; achenes 1.0-4.5 mm long (including body and apiculus).
- 2 Spikelets on stalks of varying lengths, at least some clearly not sessile.
 - 3 Culms distinctly triangular in cross-section, more sharply so above than below, nearly terete near the base; [section *Malacogeton*] ***Schoenoplectus etuberculatus***
 - 3 Culms terete throughout, or obscurely triangular above; [section *Schoenoplectus*].
 - 5 Perianth bristles plumose; spikelets acute; culms obscurely triangular near the inflorescence..... ***Schoenoplectus californicus***
 - 5 Perianth bristles retrorsely barbed; spikelets obtuse; culms terete throughout their length ***Schoenoplectus tabernaemontani***
- 2 Spikelets all sessile, in a cluster at one point (rarely with 1 or 2 short branches to 5 mm long).
- 7 Cespitose annual or perennial; culms terete (or acutely triangular in *Schoenoplectiella mucronata*), 1-6 dm tall..... ***Schoenoplectiella***
- 7 Rhizomatous perennial; culms triangular in cross-section, usually 5-20 dm tall.
 - 9 Sides of the culm strongly concave, wing-angled; culms 3-10 mm in diameter; main involucre bract 1-2.5 (-6) cm long; spikelet scale with apical notch 0.1-0.4 mm deep..... ***Schoenoplectus americanus***
 - 9 Sides of the culm flat, slightly concave, or slightly convex; culms 1-6 mm in diameter; main involucre bract (1-) 3-20 cm long; spikelet scale with apical notch (0.3-) 0.5-1 mm deep.
 - 10 Spikelets 3-35; achenes 1.9-2.6 mm long, biconvex; styles 2-fid ***Schoenoplectus deltarum***
 - 10 Spikelets 1-5 (-10); achenes (2.0-) 2.5-3.5 mm long, biconvex or trigonous; styles 2-3-fid.
 - 11 Styles 3-fid; achenes thickly lenticular to bluntly trigonous; spikelet scales brown to tan ***Schoenoplectus pungens* var. *longispicatus***
 - 11 Styles 2-fid; achenes lenticular; spikelet scales brown ***Schoenoplectus pungens* var. *pungens***

Schoenoplectus americanus (Persoon) Volk ex Schinz & R. Keller. OLNEY THREESQUARE. **Hab:** Tidal freshwater to brackish marshes. **Dist:** NS west to WA, south to South America. **Phen:** Late May-Jun; Jun-Sep. **Tax:** Schuyler (1974) discussed the need to replace the name *S. olneyi* (as traditionally applied) with *S. americanus*, traditionally applied to what must now be called *S. pungens*. Because of this nomenclatural change, the interpretation of much information and records is now uncertain. **Syn:** = ETx1, FNA23, GrPl, II, K1, K3, K4, Mi, Mo1, NE, NY, Va, WH3, Strong (1994); = *Scirpus americanus* Persoon – C; = *Scirpus olneyi* – F, G, GW1, RAB, S, Tx.

Schoenoplectus californicus (C.A. Meyer) Soják. GIANT BULRUSH, SOUTHERN BULRUSH, TULE, CALIFORNIA BULRUSH. **Hab:** Marshes. **Dist:** SC south to s. FL, west to TX, and extending s. into the New World tropics; on the west coast, from CA southward. **Phen:** Jul-Oct. **Syn:** = Ar, ETx1, FNA23, II, K1, K3, K4, NcTx, Tx, WH3; = *Scirpus californicus* (C.A. Meyer) Steudel – GW1, S. NatureServe G5 (Secure).

Schoenoplectus deltarum (Schuyler) Soják. DELTA BULRUSH. **Hab:** Brackish marshes and other wetlands. **Dist:** AL and FL west to KS and se. TX. **Phen:** Jul-Oct. **Syn:** = FNA23, II, K1, K3, K4, Mo1, WH3; = *Scirpus deltarum* Schuyler. NatureServe G3G4 (Vulnerable).

Schoenoplectus etuberculatus (Steudel) Soják. SWAMP BULRUSH, CANBY'S BULRUSH. **Hab:** Beaver ponds, on peat in small depression ponds, in flowing blackwater streams. **Dist:** DE south to c. peninsular FL and west to e. TX (the distribution rather discontinuous); substantially disjunct in s. MO and RI. **Phen:** Jul-Aug; Aug-Sep. **Comm:** The hybrid *S. etuberculatus* × *subterminalis* has been collected in Hoke Co, NC and Lexington County, SC; it has sterile, malformed achenes. **Syn:** = ETx1, FNA23, K1, K3, K4, Mo1, NE, Va, WH3, Strong (1994); = *Scirpus etuberculatus* (Steudel) Kuntze – C, F, G, GW1, RAB, S. NatureServe G3G4 (Vulnerable).

Schoenoplectus pungens (Vahl) Palla var. *longispicatus* (Britton) S.G. Smith. WESTERN THREE-SQUARE. **Hab:** Marshes, fens. **Dist:** ON, NT, and BC south to TX, NM, AZ, CA, and Mexico. **Syn:** = FNA23, K3, K4, Mo1; = *Scirpus americanus* Persoon var. *longispicatus* Britton – Tx; < *Schoenoplectus pungens* – ETx1, NcTx; < *Scirpus pungens* – GrPl. NatureServe G5T5 (Secure).

Schoenoplectus pungens (Vahl) Palla var. *pungens*. COMMON THREESQUARE, CHAIRMAKER'S RUSH, SWORDGRASS. **Hab:** Tidal marshes, other marshes, inland salt marshes, rocky river beds, wet meadows, lake edges, moist fields. **Dist:** The species is circumboreal, ranging in North America from NL (Newfoundland) west to AK, south to South America; var. *pungens* is widespread. **Phen:** Mid May-Jun; Jun-Sep. **Tax:** This taxon has traditionally had the name *Scirpus americanus* applied to it; this name, however, is properly applied to the traditional *Scirpus olneyi*. *Schoenoplectus pungens* (or *Scirpus pungens*) becomes the correct name for this plant (Schuyler 1974). **Syn:** = FNA23, K1, K3, K4, Mo1, NE, NY, Va, Smith (1995); =

***Scirpus* Linnaeus 1753 (BULRUSH, BULSEDGE)**

A genus of about 20 species, herbs, of circumboreal distribution, also with species in Australia, Malaysia, and South America. The complex of species including *S. atrovirens*, *S. georgianus*, *S. hattorianus*, *S. flaccidifolius* are difficult to identify, and some have doubted their validity. Although further work on this group is needed, they do generally appear to behave as biological species despite their morphological similarity. Schuyler (1967) writes that "the remaining species in the key differ in minute characteristics and often the most satisfactory means of identification is by carefully comparing specimens of them. Despite the close morphological similarity of these species, their characteristics are reasonably constant even in areas where they coexist and occasionally hybridize." References: Schuyler (1967); Strong (1994); Whittemore & Schuyler (2002) in FNA23 (2002b).

- 1 Bristles smooth, without teeth along the margins, strongly contorted and greatly exceeding the achenes when extended.
- 2 Scales usually with prominent green midribs; mature bristles mostly contained within the scales; achenes 1.0-1.3 mm long, brown to purplish-brown when mature.
 - 3 Perianth bristles (extended) shorter than, equal to, or slightly exceeding the achene; mature culms lax, the inflorescences lopping over to (or nearly to) the ground, with 2-3 lateral inflorescences in addition to the terminal one; rays of the inflorescence scabrous throughout their lengths, ascending to divergent, with axillary bulblets..... *Scirpus lineatus*
 - 3 Perianth bristles (extended) exceeding the achene by 2-3x; mature culms rigid, nearly upright, with 0-2 lateral inflorescences in addition to the terminal one; rays of the inflorescence glabrous for most of their lengths (moderately scabrous toward outer end), ascending, lacking axillary bulblets *Scirpus pendulus*
- 2 Scales usually with inconspicuous midribs; mature bristles exceeding the scales and giving the inflorescence a woolly appearance; achenes 0.6-1.0 mm long, whitish, pale, brown, dark brown or black.
 - *Scirpus cyperinus*
- 1 Bristles with retrorse or antrorse teeth along the margins, strongly contorted to nearly straight, shorter than to greatly exceeding the achenes when extended (or bristles absent or nearly so in *S. georgianus*).
 - 7 Spikelets all solitary with distinct pedicels; mature scales with broad green midribs; achenes with protruding angles and concave sides *Scirpus divaricatus*
 - 7 Spikelets all or mostly in glomerules with the pedicels scarcely developed; mature scales with midribs not usually green; achenes less sharply trigonous, the sides convex, flat, or slightly concave.
 - 8 Culms with 10-20 leaves; spikelets broadly ovate; scales reddish-brown and, excluding the tips, about as wide as long *Scirpus polyphyllus*
 - 8 Culms with 2-10 leaves; spikelets broadly ovate to narrowly ovate; scales brown or black and, excluding the tips, mostly longer than wide.
 - 12 Bristles 0-3, shorter than the achenes; teeth, if present, concentrated near the tips of the bristles..... *Scirpus georgianus*
 - 12 Bristles usually 5-6, shorter than to slightly longer than the achenes; teeth extending basally from the tips of all or at least some of the bristles.
 - *Scirpus atrovirens*

Scirpus atrovirens Willdenow. BLACK BULRUSH. **Hab:** Marshes, bogs, wet meadows. **Dist:** NL (Newfoundland) west to MN, south to GA and TX; disjunct in AZ. **Phen:** Late Jun-Sep. **Syn:** = Ar, ETx1, FNA23, GrPl, Il, K1, K3, K4, Mi, Mo1, NcTx, NE, NY, Pa, Tn, Va, Schuyler (1967); = *Scirpus atrovirens* var. *atrovirens* – Tx; < *Scirpus atrovirens* Willdenow – GW1, RAB, S, W; < *Scirpus atrovirens* var. *atrovirens* – C, F, G, WV.

Scirpus cyperinus (Linnaeus) Kunth. WOOLLY BULRUSH, WOOLGRASS BULRUSH. **Hab:** Marshes, ditches, beaver ponds, disturbed wet ground. **Dist:** NL (Newfoundland) west to BC, south to c. peninsular FL, e. TX, and OR. **Phen:** (Jul-) Aug-Sep. **Tax:** The varieties (see synonymy) may be worthy of recognition. **Syn:** = Ar, FNA23, GrPl, GW1, K1, K3, K4, Mi, Mo1, NcTx, NE, NY, Pa, RAB, Tn, W, WH3; < *Scirpus cyperinus* (Linnaeus) Kunth – C; > *Scirpus cyperinus* (Linnaeus) Kunth – G, S; > *Scirpus cyperinus* var. *cyperinus* – F, Il, Va, WV; > *Scirpus cyperinus* var. *pelius* Fernald – F, Il, Va, WV; > *Scirpus cyperinus* var. *rubricosus* (Fernald) Gilly – Tx; > *Scirpus ephoranthum* Michaux – G, S; > *Scirpus rubricosus* Fernald – F, Il, WV.

Scirpus divaricatus Elliott. **Hab:** Swamp forests. **Dist:** Se. VA south to Panhandle FL, west to e. TX, s. TN, and s. MO. **Phen:** Jul-Sep. **Syn:** = Ar, C, ETx1, F, FNA23, G, GW1, K1, K3, K4, Mo1, RAB, S, Tn, Va, WH3, Schuyler (1967). NatureServe G5 (Secure).

Scirpus georgianus R.M. Harper. GEORGIA BULRUSH. **Hab:** Marshes, wet areas, ditches. **Dist:** PE west to NE, south to GA and e. TX. **Phen:** May-Sep. **Syn:** = Ar, ETx1, FNA23, GrPl, Il, K1, K3, K4, Mi, Mo1, NcTx, NE, NY, Pa, S, Tn, Tx, Va, Schuyler (1967); = *Scirpus atrovirens* Willdenow var. *georgianus* (R.M. Harper) Fernald – F, G, WV; < *Scirpus atrovirens* Willdenow – GW1, RAB, W; < *Scirpus atrovirens* var. *atrovirens* – C.

Scirpus lineatus Michaux. DROOPING BULRUSH. **Hab:** Swamp forests over limestone. **Dist:** Se. VA south to c. peninsular FL, west to LA. Reported for a single county (Tucker County) in WV (Harmon, Ford-Werntz, & Grafton 2006); this record here discounted. **Phen:** May-Jul. **Syn:** =

Scleria P.J. Bergius 1765 (NUTRUSH, NUTSEGE)

Contributed by Richard J. LeBlond

A genus of about 250 species, herbs, pantropical, extending into temperate regions. Recent work has brought clarity to portions of this genus occurring in the eastern United States, including the *S. ciliata* complex, where work remains to be done with *S. pauciflora*. Investigation of the *S. triglomerata* complex has led to the recognition of two older species, *S. nitida* and *S. flaccida*. When present, the hypogynium at the base of the achene is a critical identifying feature for many *Scleria* taxa. In some taxa, such as *S. baldwinii* and *S. georgiana*, the hypogynium is absent from the achene but remains attached to the summit of the pedicel. This little-understood condition may have descriptive potential. Hardened achenes are necessary for reliable identification to species. In the key, achene length includes hypogynium when present. The scale character applies only to the ultimate bracteate structure clasping the achene.

References: Bauters et al (2016); Bauters, Larridon, & Goetghebeur (2019); Core (1936); Fairey (1967); Goetghebeur in Kubitzki (1998b); Kessler (1987); LeBlond, Tessel, & Poindexter (2015); Reznicek, Fairey, & Whittemore (2002) in FNA23 (2002b).

Identification Notes: *Scleria* superficially resembles *Rhynchospora* in the field, but mature specimens are readily recognized by the terete white, gray, or black bony achenes. Hardened achenes are necessary for reliable identification to species. In the key, **achene length includes the achene body and hypogynium (when present)**. The scale character applies only to the ultimate bracteate structure clasping the achene.

- 1 Base of achene without hypogynium (a circular, angular, lobed, or tuberculate disk differing in texture and structure from the achene body), the achene base constricted, pitted, and/or ribbed, but appearing as a continuation of the achene body.
 - 3 Inflorescence of 2-9 sessile clusters along an axis up to 13 cm long, the individual spikelets 2-5 mm long; bracts (at least above proximal cluster) setaceous; [subgenus *Hypoporum*, section *Hypoporum*].
 - 4 Plants perennial with rhizomes; leaf blades usually pubescent, 1.5-5 mm wide; bract and scale margins long-ciliate; spikelets 4-5 mm long; achenes smooth *Scleria distans* var. *distans*
 - 4 Plants annual with fibrous roots; leaf blades glabrous, 0.5-2 mm wide; bract and scale margins eciliate; spikelets 2-3 (-4) mm long; achenes reticulate-papillose to reticulate-verrucose..... *Scleria verticillata*
 - 3 Inflorescence of a single cluster, the individual spikelets 4-10 mm long; bracts foliaceous; [subgenus *Trachylomia*, section *Trachylomia*].
 - 5 Triangular base of achene lacking pits in the three concave sides; achene 3-4 mm long.....*Scleria baldwinii*
 - 5 Triangular base of achene with a pair of pits on each of the three sides; achene 2-3 mm long..... *Scleria georgiana*
- 1 Base of achene with hypogynium.
 - 6 Achene body smooth (often longitudinally ribbed); hypogynium with 0, 8, or 9 tubercles.
 - 7 Hypogynium with 8 or 9 tubercles, the tubercle surface minutely papillate; [subgenus *Trachylomia*, section *Trachylomia*]..... *Scleria oligantha*
 - 7 Hypogynium not divided into tubercles, either smooth and angled/lobed, or minutely papillate and continuous (not lobed).
 - 13 Plants caespitose to short-rhizomatous; sheaths brown or stramineous to reddish, glabrous to glabrate on the ventral surface except for a pubescent and usually thickened summit; inflorescences terminal and lateral; achenes 2.0-3.3 mm long, (1.12-) avg. 1.25 (-1.38)× as long as wide; hypogynium surface with laterally and apically rounded papillae; [of wet to mesic pinelands].....*Scleria triglomerata*
 - 13 Plants long-rhizomatous or caespitose; sheaths purple to reddish, the ventral surface uniformly pubescent; inflorescences terminal only or terminal and lateral; achenes 2.5-4.0 mm long, (1.35-) avg. 1.45 (-1.54)× as long as wide; hypogynium surface with rounded or flattened papillae; habitats various.

* : waif
EN : endemic
H : historic

N : no X : extirpated
P : planted
? : questionable

- 14 Plants usually cespitose; inflorescence terminal and lateral (a few culms in a clump can be terminal only); hypogynium surface with laterally flattened and apically triangular-acute to acuminate papillae, often resembling shards of glass or porcelain; [of coastal hammocks, oak woods near saltwater, and blackwater swamps] *Scleria flaccida*
- 14 Plants usually long-rhizomatous; inflorescence terminal only; hypogynium surface with laterally and apically rounded papillae; [mostly of dry to dry-mesic pinelands and barrens] *Scleria nitida*
- 6 Achene reticulate or papillose, rarely smooth (most often from apparent abortion or abnormal development); hypogynium with 3 tongue-shaped lobes, or 3 or 6 tubercles.
- 15 Hypogynium of 3 tongue-shaped lobes appressed to the underside of the achene (appearing nearly bract-like); achene reticulate, the pits generally squarish or rectangular and arranged regularly in rows, rarely smooth (apparently by abortion or abnormal development); [subgenus *Scleria*, section *Foveolidia*].
- 16 Achene pubescent (occasionally becoming glabrate); lower lateral inflorescences on long, filiform, usually drooping peduncles; bract of the uppermost lateral inflorescence usually reaching from 1/3-3/4 the length of the terminal internode; terminal internode 6-30 cm long *Scleria muehlenbergii*
- 16 Achene glabrous; lower lateral inflorescences sessile or on short-erect peduncles; bract of the uppermost lateral panicle usually reaching 3/4 the length of to exceeding the terminal internode; terminal internode 3-8 cm long *Scleria reticularis*
- 15 Hypogynium with 3 or 6 tubercles; achene papillose, sometimes reticulate (if so, the pits generally variable in shape and not forming regular rows), or rarely smooth; [subgenus *Trachylomia*, section *Trachylomia*].
- 17 Leaves 1-2.5 mm wide; hypogynium with 6 tubercles; achene 1.0-2.5 mm long, the body papillate or roughened-reticulate.
- 18 Culms, leaves, and bracts copiously villous-ciliate with spreading hairs 0.5-1.0 mm long *Scleria pauciflora* var. *caroliniana*
- 18 Culms, leaves, and bracts glabrous or sparsely hirtellous with hairs no more than 0.4 mm long *Scleria pauciflora* var. *pauciflora*
- 17 Leaves 1-7 mm wide; hypogynium with 3 (sometimes deeply lobed) tubercles, achene papillate or roughened-reticulate, 2.0-3.5 mm long; or hypogynium tubercles 6 and achene epapillate and smoothish, 2.5-3.4 mm long.
- 20 Leaf blades (2.5-) 3-6 mm wide, at least some adaxial surfaces puberulent throughout, often ciliate with stiff hairs on margins and primary veins; terminal inflorescence primary bract 1.2-4.1 mm wide at widest point, its longer cilia 0.7-1.1 (-1.3) mm long; hypogynium disk 1.1-1.4 (-1.6) mm wide, (0.1-) 0.2-0.4 (-0.5) mm thick *Scleria ciliata* var. *elliottii*
- 20 Leaf blades 1-3 (-3.5) mm wide, adaxial surface glabrous and eciliate, or glabrous and ciliate on margins, or puberulent and ciliate; terminal inflorescence primary bract 0.4-2.2 mm wide at widest point, its longer cilia (0-) 0.1-0.7 (-0.9) mm long; hypogynium disk (0.6-) 0.8-1.3 (-1.5) mm wide, 0.1-0.2 (-0.3) mm thick.
- 21 Plants ciliate (sometimes sparsely so) on leaf blade margins (also sometimes on primary nerves), culm angles, and margins of terminal inflorescence primary bract, the surfaces between margins or angles glabrous to puberulent *Scleria ciliata* var. *ciliata*
- 21 Plants glabrous on leaf blade and culm surfaces, angles, and margins (terminal inflorescence primary bract often ciliate or scabrous on margins, rarely smooth); sheaths, especially lowest, usually puberulent *Scleria ciliata* var. *glabra*

Scleria baldwinii (Torrey) Steudel. BALDWIN'S NUTRUSH. **Hab:** Wet pine or pondcypress savannas, under *Pinus serotina*, *P. palustris*, and/or *Taxodium ascendens*. **Dist:** Se. NC south to s. FL and west to se. TX; also in Cuba and the Bahamas (Sorrie & LeBlond 1997). **Phen:** Jun-Jul. **ID Notes:** *Scleria baldwinii* is a more robust plant, with larger achenes, than *S. georgiana*. **Syn:** = ETx1, FNA23, GW1, K1, K3, K4, RAB, Tx, WH3, WI, Fairey (1967); > *Scleria baldwinii* (Torrey) Steudel – S; > *Scleria costata* (Britton) Small – S. **NatureServe G4** (Apparently Secure).

***Scleria ciliata* Michaux var. *ciliata*.** HAIRY NUTRUSH. **Hab:** Wet to dry sandy thickets and pine flatwoods, typically on sandy soil. **Dist:** VA south to FL, west to MO and TX; West Indies; Mexico and Central America. **Phen:** May-Aug. **Syn:** = Ar, ETx1, FNA23, GrPl, S, Va, WI, Fairey (1967), LeBlond, Tessel, & Poindexter (2015); < *Scleria ciliata* – C, F, G, GW1, K3, K4, Mo1, NcTx, RAB, Tn, Tx, W, WH3; < *Scleria ciliata* Michaux var. *ciliata* – K1. **NatureServe G5TNR** (Not Yet Ranked).

Scleria ciliata* Michaux var. *elliottii (Chapman) Fernald. BROAD-LEAVED HAIRY NUTRUSH. **Hab:** Pine savannas, pine flatwoods, pine-oak woodlands, meadows, bogs, and clay-based Carolina bays, typically on loamy sands. **Dist:** VA south to FL, west to TX, MO, OK. **Phen:** May-Sep. **Tax:** The descriptions of *S. elliottii* in S and of *S. ciliata* Michaux var. *elliottii* (Chapman) Fernald in F do not include the entity here treated as *S. bellii*. **Syn:** = ETx1, F, FNA23, GrPl, WI, Fairey (1967), LeBlond, Tessel, & Poindexter (2015); = *Scleria elliottii* Chapman – S, Va; < *Scleria ciliata* – C, G, GW1, K3, K4, Mo1, NcTx, RAB, Tx, W, WH3; < *Scleria ciliata* Michaux var. *ciliata* – K1.

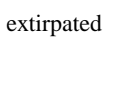

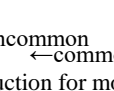

Scleria ciliata* Michaux var. *glabra (Chapman) Fairey. SMOOTH NUTRUSH. **Hab:** Pine savannas and pine flatwoods. **Dist:** E. NC south to s. FL, west to e. TX. **Tax:** Plants with minor to moderate amounts of pubescence on culms and leaves are frequent in some areas, and not readily assignable to either *S. ciliata* var. *ciliata* or var. *glabra*. Glabrous/glabrate plants are more common on the outer Coastal Plain. *S. ciliata* var. *curtissii* (Britton) Kessler (= *S. pauciflora* Muhl. ex Willd. var. *curtissii* (Britton) Fairey) is currently of uncertain taxonomic standing. It is distinguished by its reticulate, non-papillose achenes, but such a condition has been observed in achenes with the hypogynium lobing of both *S. ciliata* and *S. pauciflora* (as suggested by the synonymy), and may only represent a form or condition. {not yet mapped}. **Syn:** = ETx1, FNA23, K1; = *Scleria brittonii* Core ex Small – K3, K4, S, Tx; = *Scleria glabra* Chapman; < *Scleria ciliata* – C, F, G, RAB, Tx, W; > *Scleria ciliata* (Britton) Kessler – Fairey (1967), Kessler (1987); < *Scleria ciliata* Michaux var. *glabra* (Chapman) Fairey – WH3; > *Scleria ciliata* Michaux var. *glabra* (Chapman) Fairey – Fairey (1967), Kessler (1987); > *Scleria pauciflora* Muhl. ex Willd. var. *curtissii* (Britton) Fairey – K1.

***Scleria distans* Poirer var. *distans*.** RIVERSWAMP NUTRUSH. **Hab:** Moist sandy or peaty soil of pine savannas and flatwoods, boggy areas, and wet openings along roads. **Dist:** GA south to s. FL west to TX; West Indies; Mexico, Central and South America; Africa. **Phen:** May-Oct. **Syn:** = Bauters, Larridon, & Goetghebeur (2019); < *Scleria distans* Poirer – ETx1, FNA23, K3, K4, WH3, WI; < *Scleria hirtella* Swartz – GW1, K1, S, Fairey (1967), Kessler (1987), misapplied; ? *Scleria nutans* Kunth – Tx.

Scleria flaccida Steudel. FLACCID NUTRUSH. **Hab:** Coastal hammocks, maritime forests, oak woods and thickets near saltwater, blackwater swamps. **Dist:** Scattered along the outer Coastal Plain from se. VA to s. FL and west to LA. **Tax:** This is a poorly known species, with more

(see introduction for more)

locations likely to be found upon re-examination of *S. triglomerata* and *S. nitida* specimens. The often pendulous and capillary lateral peduncles suggest *S. oligantha*, another swamp species. *S. oligantha* is most readily separated by its 8-9-lobed hypogynium with minute rounded papillae. **Syn:** = F; < *Scleria nitida* Willdenow – G; < *Scleria triglomerata* Michaux – C, FNA23, GW1, K1, K3, K4, RAB, S, WH3.

Scleria georgiana Core. GEORGIA NUTRUSH. **Hab:** Pine savannas, cypress savannas, depression meadows, mostly on the outer Coastal Plain. **Dist:** E. NC south to s. FL, west to TX; and in the West Indies, Central and South America. **Phen:** Jun-Aug. **Comm:** See note under *S. baldwinii*. **Syn:** = ETx1, FNA23, GW1, K1, K3, K4, RAB, Tx, WH3, Fairey (1967); = *Scleria gracilis* Elliott – S, name preoccupied. **NatureServe G4** (Apparently Secure).

Scleria muehlenbergii Steudel. PITTED NUTRUSH. **Hab:** Open wet sand, pine savannas and flatwoods, depression meadows, cypress savannas, limesink ponds, bogs. **Dist:** NY (Long Island), NJ, and NC south to FL, west to TX, north in the interior to MO and IN; West Indies and Bahamas (Sorrie & LeBlond 1997); Mexico and Central America. **Phen:** Jun-Sep. **Tax:** Also see notes under *S. reticularis*. In normal specimens, the achene reticulation ridges are sharp-edged and steeply sloped (compare *S. reticularis*). The achene pubescence is often tawny, and achenes appearing superficially glabrous often have a tawny residue under magnification. **Comm:** *S. muehlenbergii* is adapted to a variety of freshwater wetland habitats, while *S. reticularis* is primarily restricted to the drawdown zones of limesink (doline) ponds and clay-based Carolina bays. **Syn:** = Ar, ETx1, FNA23, IL, K1, K3, K4, NY, Tn, Va; = *Scleria muehlenbergii* Steudel – F, Tx, orthographic variant; = *Scleria reticularis* var. *pubescens* Britton – G, Mo1, Fairey (1967); = *Scleria setacea* Poiret – S; < *Scleria muehlenbergii* Steudel – Pa; < *Scleria reticularis* Michaux – Bah, C, GW1, RAB, W, WH3.

Scleria nitida Willdenow. SHINING NUTRUSH. **Hab:** Dry sandy or rocky soil of pine/scrub oak woodlands, ridgetop forests at lower elevations in the Mountains such as pine/oak heaths, and heath balds. **Dist:** MA, VA, and KY south to FL, west to LA and MO (also see note under *S. triglomerata*); reported from LA, but documentation not located. Although widespread at least historically in the Carolinas, it does not appear to be common anywhere. **Phen:** May-Oct. **Syn:** = F; < *Scleria nitida* Willdenow – G; < *Scleria triglomerata* Michaux – C, FNA23, GW1, K1, K3, K4, Mo1, NE, RAB, S, W, WH3, Fairey (1967).

Scleria oligantha Michaux. FEW-FLOWERED NUTRUSH. **Hab:** Dry to moist forests and woodlands, swamp forests. **Dist:** NJ and MO south to c. peninsular FL and TX; Puerto Rico; Mexico and Central America. Reported as new to MD (Longbottom, Naczi, & Knapp 2016). **Phen:** Jun-Sep. **Comm:** The long, filiform, arching lateral peduncles are distinctive (but see *S. flaccida*). **Syn:** = Ar, C, ETx1, F, FNA23, G, GW1, IL, K1, K3, K4, Mo1, NcTx, RAB, S, Tn, Tx, Va, W, WH3, Fairey (1967), LeBlond, Tessel, & Poindexter (2015). **NatureServe G5** (Secure).

Scleria pauciflora Muhlenberg ex Willdenow var. *caroliniana* Alph. Wood. CAROLINA NUTRUSH. **Hab:** Pine savannas. **Dist:** NH west to MI, south to n. FL, TN, and MO. **Phen:** Jun-Sep. **Syn:** = Ar, F, FNA23, G, GrPl, IL, K1, K3, K4, NE, Tn, Va, Fairey (1967), LeBlond, Tessel, & Poindexter (2015); < *Scleria ciliata* – WH3; < *Scleria pauciflora* – C, GW1, Mo1, NY, Pa, RAB, S, W.

Scleria pauciflora Muhlenberg ex Willdenow var. *pauciflora*. PAPILLOSE NUTRUSH. **Hab:** Wet to dry pine flatwoods, pine savannas, depression meadows. **Dist:** NJ west to KS, south to FL and TX; Cuba. **Phen:** Jun-Sep. **Tax:** Typification of *S. pauciflora* is controversial and unresolved at this time (Fairey & Whittemore 1999). **Syn:** = Ar, F, FNA23, G, GrPl, IL, K1, K3, K4, Mi, NE, Tn, Va, Fairey (1967), LeBlond, Tessel, & Poindexter (2015); < *Scleria ciliata* – WH3; < *Scleria pauciflora* – C, ETx1, GW1, Mo1, Pa, RAB, S, Tx, W.

Scleria reticularis Michaux. NETTED NUTRUSH. **Hab:** Limesink ponds, clay-based Carolina bays. **Dist:** MA south to FL, west to e. LA, north to IN, MI, and WI. Reports from Mexico are based on *S. muehlenbergii*. **Phen:** Jun-Sep. **Comm:** See notes under *S. muehlenbergii*. In normal specimens, the achene reticulation ridges are soft-edged and obliquely sloped. Occasional stipitate-capitate fungal growth on the achene has been mistaken for pubescence (a condition perhaps restricted to herbarium specimens), apparently contributing to the unwarranted agglomeration of this distinctive taxon and *S. muehlenbergii*. There is controversy about typification of the name *Scleria reticularis* (Camelbeke, Reznicek, & Goetghebeur 2003). **Syn:** = ETx1, F, FNA23, K1, K3, K4, Mi, NE, NY, S; = *Scleria reticularis* var. *reticularis* – G, Fairey (1967); < *Scleria muehlenbergii* Steudel – Pa; < *Scleria reticularis* Michaux – C, GW1, RAB, W, WH3.

Scleria triglomerata Michaux. TALL NUTRUSH. **Hab:** Wet to mesic pine flatwoods, pine savannas, and hardwood forests. **Dist:** VT and ON west to MN, south to s. FL and TX; *S. triglomerata* sensu lato also occurs in Puerto Rico and Mexico, and may include *S. nitida* and *S. flaccida*. **Phen:** May-Sep. **Syn:** = F, G, IL, Tn, Va; < *Scleria triglomerata* Michaux – Ar, C, ETx1, F, FNA23, GrPl, GW1, K1, K3, K4, Mi, Mo1, NcTx, NE, NY, Pa, RAB, S, Tx, W, WH3, WV, Fairey (1967).

Scleria verticillata Muhlenberg ex Willdenow. SAVANNA NUTRUSH, LOW NUTRUSH. **Hab:** Wet calcareous pine savannas of the outer Coastal Plain, freshwater marshes and maritime wet grasslands on barrier islands influenced by salt spray and shell deposits, wet calcareous or mafic fens or seepages in the mountains, calcareous grasslands, also apparently spreading to ditches along Coastal Plain 'marl' roads (made from coquina limestone gravel). This species is a distinct calciphile, with only scattered occurrences in most of our area (north of FL). **Dist:** MA and ON west to MN, south to FL and TX. Previous reports of a much broader distribution (West Indies; Mexico, Central America, and South America) are based on other species segregated from *S. verticillata*. **Phen:** Jul-Sep. **ID Notes:** The roots are strongly fragrant. **Syn:** = Ar, Bah, C, ETx1, F, FNA23, G, GW1, IL, K1, K3, K4, Mi, Mo1, NE, NY, Pa, RAB, S, Tn, Tx, Va, WH3, Bauters, Larridon, & Goetghebeur (2019), Fairey (1967). **NatureServe G5** (Secure).

98. CYPERACEAE*Scleria pauciflora*
var. *caroliniana**Scleria pauciflora*
var. *pauciflora**Scleria*
*reticularis**Scleria*
*triglomerata**Scleria*
verticillata**103. POACEAE** Barnhart 1895 (GRASS FAMILY) [in POALES]

A family of about 771 genera and 12,074 species, herbs (and some shrubs and trees), cosmopolitan. Tribal classification largely follows FNA (2003a, 2007a), with some changes based on subsequent research, as for instance in the Chloridoideae (Peterson, Romaschenko, & Johnson 2010a). Key to genera adapted in large part from FNA. References: Blomquist (1948); Clark & Kellogg (2007) in FNA24 (2007a); HC; Peterson, Romaschenko, & Johnson (2010a, 2010b).

Grass classification from Soreng et al. (2015). Genera and upper-level taxa with one or more native species in bold.

Identification Notes: key based on Stapleton (2007). Other genera are grown and may be expected to persist and vegetatively spread or potentially truly naturalize in our area.

- 1 Plant a shrub or tree (the culms perennial, woody, to 25 m tall), with complex branching systems from the upper nodes; leaves strongly dimorphic, those of the main culm sheathing, those of the branches or culm tips pseudopetiolate **Key A**
- 1 Plant an herb (the culms annual, not truly woody, to 5 m tall), lacking complex branching systems from the upper nodes; leaves not dimorphic, none of them pseudopetiolate.
 - 2 Plant a robust grass, culms usually > 2 m tall and usually > 5 mm in diameter at the base **Key B**
 - 2 Plant a small to medium grass, culms < 2 m tall and usually also < 5 mm in diameter at the base.

Key to Map
Symbology:

- 3 Spikelets either modified into asexual, purplish bulblets, or partially or wholly concealed either by spines, hooks, and/or involucre, or partially or wholly concealed by being imbedded in a fleshy rachis or cob.
- 4 Fertile spikelets either absent (spikelets modified into asexual, purplish bulblets) or variously spiny or bead like..... **Key C**
- 4 Fertile spikelets embedded in a fleshy rachis (resembling a rattail) or a cob..... **Key D**
- 3 Spikelets apparent, not covered, concealed, embedded, or modified by spines, hooks, or involucre.
- 5 Spikelets 2-flowered, often dorsally compressed, falling entire at maturity (the abscission below the glumes), the upper floret usually bisexual, the lower one male or sterile.
- 6 Glumes often as long as or longer than the lemmas and concealing the florets; spikelets usually arranged in obvious pairs or triplets, with 1 spikelet sessile or shortly pedicellate and the other 1 (or 2) spikelets pedicellate (the pedicellate sometimes vestigial or absent)..... **Key E**
- 6 Glumes (the lower or both) shorter than the lemmas (or the glumes absent); spikelets not organized in pairs or triplets **Key F**
- 5 Spikelets 1-, 2-, or many-flowered, usually terete or somewhat laterally compressed, either abscising at maturity above the glumes or if 2-flowered then both florets bisexual, or the upper sterile.
- 7 Inflorescence of one or more spikes, the spikelets sessile (or very short-pedicelled) on the spike axis, 1-more per node, characteristically in 2-more ranks (these either on opposite sides of the axis or crowded on one side), the individual spikelets borne more-or-less touching one another.
- 8 Spikelets borne in a single terminal spike or raceme (an extension of the culm), usually 2-ranked on opposite sides of the axis **Key G**
- 8 Spikelets borne on 1-many spikes (the spikes themselves arranged digitately, subdigitately, or racemously on the culm) in 2 (or more) rows; spikelets often on one side of the spike axis..... **Key H**
- 7 Inflorescence paniculate, sometimes somewhat to very congested, but then not as above.
- 9 Spikelets with a single bisexual floret, and no staminate, sterile, or reduced florets present.
- 10 Glumes absent or reduced to tiny rudiments; palea 1-keeled; [of wetlands]..... **Key I**
- 10 Glumes present; palea various; [habitats various].
- 11 Inflorescences dense and spikelike, symmetrical, cylindrical or ovoid, unbranched..... **Key J**
- 11 Inflorescences loose and open, or if relatively dense, then with discernible branches, and thus lobed or asymmetrical.
- 12 Lemmas awnless **Key K**
- 12 Lemmas awned..... **Key L**
- 9 Spikelets with 2-many florets, including bisexual, staminate, reduced, or sterile flowers.
- 13 Glumes (one or both) nearly equaling or surpassing the most apical lemma of the spikelet, therefore partially or completely concealing the florets..... **Key M**
- 13 Glumes (both) shorter than the most apical lemma of the spikelet, therefore the florets largely visible..... **Key N**

Key A - bamboo grasses (woody trees and shrub grasses) (tribe *Bambuseae*)

- 2 Mid-culm branches consistently 2, unequal, rarely with a smaller central third branch..... *Phyllostachys*
- 2 Mid-culm branches not consistently 2, initially 1-9. *Arundinaria*

Key B - robust herbaceous grasses

- 1 Inflorescence an array of spikes, the spikelets closely imbricate in 2 rows along the rachis of the spikes, the spikes alternate along the primary inflorescence axis; [tribe *Zoysieae*; subtribe *Sporobolinae*]..... *Spartina*
- 1 Inflorescence otherwise, either the spikelets embedded or in grooves in an thickened rachis, or the inflorescence a slender or broad panicle.
- 2 Spikelets embedded in the thickened rachis (the inflorescence thus like an ear of corn), or fitting into grooves in the thickened rachis (the inflorescence thus cylindrical and resembling a rat's tail). Spikelets unisexual, with male and female spikelets in separate inflorescences or in different parts of the same inflorescence; [tribe *Andropogoneae*].
- 3 Racemes of mixed sex (female below, male above)..... *Tripsacum*
- 3 Racemes of single sex *Zea*
- 2 Spikelets not embedded or fitting into grooves in the rachis, the inflorescence a slender or broad panicle (the spikelets visibly separate and often pedicelled).
- 4 Spikelets with a single floret, this unisexual (either pistillate or staminate); plants with aerenchymatous culms, [plants of seasonally or tidally flooded wetlands]; [tribe *Oryzaceae*].
- 5 Pistillate spikelets on the upper branches of the panicle, staminate spikelets on the lower branches; lemmas and paleas clasping along their margins; plants annual *Zizania*
- 5 Pistillate and staminate spikelets intermingled on the same branches of the inflorescence; lemma margins free; plants perennial..... *Zizaniopsis*
- 4 Spikelets with 2 or more florets, at least some of these bisexual; plants without aerenchymatous culms, [plants of uplands or temporarily to seasonally flooded wetlands].
- 6 Spikelets with 2-8 florets, these bisexual.
- 8 Lemmas pilose; rachilla glabrous; plants short-rhizomatous (somewhat clumped); culms to 10 m tall; [plants of uplands or saturated or temporarily flooded wetlands]..... *Arundo*
- 8 Lemmas glabrous; rachilla sericeous; plants long rhizomatous; culms to 4 m tall; [plants of uplands or saturated, tidally flooded, or seasonally flooded wetlands]..... *Phragmites*
- 6 Spikelets almost always with 2 florets, the lower florets sterile or staminate (sometimes reduced to lemmas or completely absent).
- 9 Spikelets falling separately, not attached to rachis segments, stalks, or bristles; spikelets <2× as long as wide; [tribe *Panicaceae*].
- 10 Spikelets (at least the terminal) subtended by 1-many stiff, terete bristles *Setaria*
- 10 Spikelets not subtended by stiff bristles.
- 11 Fertile lemma rugose with cross-venation..... *Megathyrsus*
- 11 Fertile lemma smooth or hairy, not rugose..... *Panicum*
- 9 Spikelets falling with attached rachis segments, stalks, or bristles; spikelets >3× as long as wide; [tribe *Andropogoneae*].
- 12 Pedicelled spikelet differing from the sessile in shape and sex (sometimes represented only by a pedicel).
- 13 Inflorescence of 2-13 digitate (whorled) racemes borne at the summit of a peduncle, the peduncle subtended by a raceme sheath *Andropogon*
- 13 Inflorescence a panicle, the branches not subtended by sheaths.
- 14 Pedicelled spikelet represented by pedicel only; apex of sheath bearing 2 auricles 1-10 mm long; [native]..... *Sorghastrum*

- 14 Pedicelled spikelet present, staminate; apex of sheath truncate; [alien].....*Sorghum*
 12 Pedicelled spikelet similar to the sessile spikelet, both fertile.
 15 Spikelets falling separately from the persistent rachis.....*Miscanthus*
 15 Spikelets falling in pairs together with sections of the disarticulating rachis
 16 Spikelets awned with awns 10-26 mm long; anthers 2; [native, collectively common and widespread].....*Erianthus*
 16 Spikelets unawned or with awns to 5.2 mm long; anthers 3; [alien, rarely encountered]
*Tripidium*

Key C - bur, bead, or bulblet grasses of various tribes

- 1 Fertile spikelets absent (spikelets modified into asexual, purplish bulblets) or variously spiny or bead like; [tribe *Poeae*].....*Poa*
 1 Fertile spikelets variously spiny or bead-like.
 2 Pistillate spikelets concealed within a hard, beadlike shell, this white, black, or variously colored; [tribe *Andropogoneae*].....*Coix*
 2 Spikelets concealed in a variously spiny bur, this green or tan, sometimes with pink or purple shading.
*Cenchrus*

Key D - rattail or cob grasses

- 1 All spikelets unisexual, the pistillate and staminate spikelets either in separate inflorescences, or the pistillate spikelets below the staminate spikelets in the same inflorescence; leaves 9-120 mm wide; [tribe *Andropogoneae*].
 2 Pistillate spikelets below the staminate in the same inflorescence.....*Tripsacum*
 2 Pistillate and staminate spikelets in separate inflorescences, the pistillate inflorescences axillary, staminate inflorescences terminal.....*Zea*
 1 Some spikelets bisexual; leaves 1-25 mm wide.
 4 Culms 2-45 cm tall; leaves 1-6 mm wide; plants annual (perennial in *Eremochloa* and *Stenotaphrum*).
 5 Plants obviously and prominently rhizomatous (*Eremochloa*) or stoloniferous (*Stenotaphrum*); lower glume with pectinate margins (*Eremochloa*) or irregularly toothed (*Stenotaphrum*)
 6 Plant rhizomatous; lower glume with pectinate margins; [commonly naturalized turf grass and roadside weed]; [tribe *Andropogoneae*].....*Eremochloa*
 6 Plant stoloniferous; lower glume irregularly toothed; [naturalized turf grass and allegedly also native]; [tribe *Paniceae*].....*Stenotaphrum*
 5 Plants annual; lower glume with smooth and cartilaginous margins (or absent); [rare waifs]; [tribe *Poeae*].
*Parapholis*
 4 Culms 30-400 cm tall; leaves 2-25 mm wide; plants annual or perennial; [tribe *Andropogoneae*].
 8 Lower glumes of the sessile spikelets rough, rugose, pitted, tuberculate or alveolate between the keels*Mnesithea*
 8 Lower glumes of the sessile spikelets smooth or scabrous.
 9 Pedicels at least partially fused to the rame axes
*Rottboellia*
 9 Pedicels appressed, but not fused, to the rame axes.
 11 Pedicellate spikelets 4-8 mm long.....*Elionurus*
 11 Pedicellate spikelets 1-3 mm long.....*Mnesithea*

Key E - grasses of tribe *Andropogoneae* (also including grasses also keyed in Keys B, C, and D)

- 1 Leaves ovate-lanceolate, 2-10 cm long, 2.5-7× as long as wide; plants weak-stemmed annuals, branching, decumbent, rooting at the lower nodes; [alien weeds].
 2 Leaves cordate-clasping at base; spikelets not paired, unaccompanied by a vestige.....*Arthraxon*
 2 Leaves tapering to a broadly cuneate base; spikelets paired (one of the pair sometimes vestigial).....*Microstegium*
 1 Leaves lanceolate to linear, either longer or proportionately narrower; plants either perennial or coarse annuals with erect and mostly unbranched culms.
 3 Spikelets embedded in the thickened rachis (the inflorescence thus like an ear of corn), or fitting into grooves in the thickened rachis (the inflorescence thus cylindrical and resembling a rat's tail), or the pistillate inflorescences enclosed in a hard, bead-like, pearly-white, modified bract.
 4 Spikelets unisexual, with male and female spikelets in separate inflorescences or in different parts of the same inflorescence.
 5 Internode narrower than and more-or-less enclosed by the female spikelet.....*Coix*
 5 Internode broader than and more-or-less enclosing the female spikelet.
 6 Racemes of mixed sex, female flowers below, and male above.....*Tripsacum*
 6 Racemes of single sex, the female inflorescences ("ears") borne on axillary branches, the male inflorescences ("tassels") terminal on the culm.....*Zea*
 4 Spikelets, or at least one of each pair, bisexual.
 7 Culms 2-45 cm tall; leaves 1-5 mm wide; plants perennial, obviously and prominently rhizomatous; lower glume with pectinate margins; [commonly naturalized turf grass and roadside weed].....*Eremochloa*
 7 Culms 30-400 cm tall; leaves 2-25 mm wide; plants annual or perennial, caespitose or short-rhizomatous; lower glume winged or not, but not pectinate.
 8 Lower glumes of the sessile spikelets rough, rugose, pitted, tuberculate or alveolate between the keels.....*Mnesithea*
 8 Lower glumes of the sessile spikelets smooth or scabrous.
 9 Pedicels at least partially fused to the rame axes.....*Rottboellia*
 9 Pedicels appressed, but not fused, to the rame axes
 10 Pedicellate spikelets 4-8 mm long.....*Elionurus*
 10 Pedicellate spikelets 1-3 mm long.....*Mnesithea*
 3 Spikelets not embedded or fitting into grooves in the rachis, the rachis slender (the spikelets visibly separate and often pedicelled).
 11 Pedicelled spikelet similar to the sessile spikelet, both fertile.
 12 Spikelets falling separately from the persistent rachis.
 13 Panicle contracted, spikelike; glumes membranous.....*Imperata*
 13 Panicle loose; glumes cartilaginous or coriaceous.....*Miscanthus*
 12 Spikelets falling in pairs together with sections of the disarticulating rachis.
 14 Spikelets awned with awns 10-26 mm long; anthers 2; [native, collectively common and widespread].....*Erianthus*

- 14 Spikelets unawned or with awns to 5.2 mm long; anthers 3; [alien, rarely encountered] *Tripsidium*
- 11 Pedicelled spikelet differing from the sessile in shape and sex (sometimes represented only by a pedicel).
16 Spikelets awned, the awn 10-20 cm long. *Heteropogon*
- 16 Spikelets awned or not, if awned the awn < 5 cm long.
18 Inflorescence a panicle, the branches not subtended by sheaths.
19 Pedicelled spikelet represented by pedicel only; apex of sheath bearing 2 auricles 1-10 mm long; [native] *Sorghastrum*
19 Pedicelled spikelet present, staminate; apex of sheath truncate; [alien] *Sorghum*
- 18 Inflorescence of 1-13 digitate (whorled) racemes borne at the summit of a peduncle, the peduncle subtended by a raceme sheath.
20 Racemes 1 per peduncle and raceme sheath *Schizachyrium*
20 Racemes 2-13 per peduncle and raceme sheath.
21 Pedicels of the pedicelled (reduced or absent) spikelets terete or slightly flattened and grooved on one side only *Andropogon*
21 Pedicels of the pedicelled (reduced or absent) spikelets strongly flattened and grooved on both sides, the central portion thin or membranous *Bothriochloa*

Key F - grasses of tribe Paniceae (also including grasses keyed as well in Keys B, C, D, and H)

- 1 Inflorescences spike-like branches, the spikelets partially embedded in the rachises *Stenotaphrum*
- 1 Inflorescences panicles or spikes (if spikes, the spikelets not embedded).
2 Spikelets (at least the terminal) subtended by 1-many stiff, terete bristles.
3 Bristles persistent on the inflorescence, each spikelet disarticulating above the bristles *Setaria*
3 Bristles falling with the spikelets at maturity (the disarticulation at the base of the fascicles) *Cenchrus*
- 2 Spikelets not subtended by stiff bristles.
4 Inflorescences of spike-like branches 1-3.7 cm long, the branch extending 2.5-4 mm beyond the attachment of the distal spikelets *Setaria*
4 Inflorescences not as above.
6 Lower glumes or lower lemmas awned.
7 Leaves > 10× as long as wide; ligules absent or of hairs *Echinochloa*
7 Leaves < 8× as long as wide; ligules present, membranous or of hairs. *Oplismenus*
- 6 Lower glumes and lower lemmas unawned.
9 Lemma margins flat, hyaline; lower glumes absent or < ¼ the length of the upper glume.
11 Inflorescence a narrow panicle with the branches strongly ascending to appressed; spikelets ellipsoid to obovoid; [of Coastal Plain pinelands] *Anthenantia*
11 Inflorescence either a panicle with digitate or subdigitate clusters of spike-like branches or a broad panicle with widely divergent branches; [widespread] *Digitaria*
- 9 Lemma margins not hyaline, frequently involute; lower glumes various (absent, < ¼ the length, to longer than the upper glume).
12 Spikelets subtended by a cuplike callus *Eriochloa*
12 Spikelets not subtended by a cuplike callus.
13 Leaves primarily lacking ligules (at least the upper, and often all, leaves without ligules, if vestigial ligules present, these of hairs) *Echinochloa*
- 13 Leaves with ligules, these either membranous or of hairs.
14 Lower (sterile) palea indurate and expanding the spikelet at maturity, as long as the lower (sterile) lemma; lower and upper florets standing apart from one another at maturity; outer surface of the upper (fertile) palea with compound papillae *Steinchisma*
14 Lower (sterile) palea membranous, not expanding the spikelet at maturity, usually shorter than lower (sterile) lemma, or absent; lower and upper florets closely appressed at maturity; outer surface of the upper (fertile) palea lacking compound papillae.
15 Inflorescence of 1-sided, spike-like primary branches.
16 Spikelets with lower lemmas (and lower glumes, if present) adjacent to the branch axes.
17 Lower glumes absent *Axonopus*
17 Lower glumes present on at least most spikelets *Urochloa*
- 16 Spikelets with upper lemmas (and upper glumes, if present) adjacent or appressed to the branch axes.
19 Lower glumes usually absent; upper lemmas smooth to slightly rugose *Paspalum*
19 Lower glumes present; upper lemmas rugose and verrucose *Urochloa*
- 15 Inflorescence either paniculate with well-developed secondary branchlets or if the primary branches spike-like, then the spikelets not borne in a 1-sided arrangement on the spicate branches.
20 Inflorescences dense, the spikelets obscuring most of the internal branches *Sacciolepis*
20 Inflorescences open panicles, or if narrowed, all or nearly all the panicle branches readily visible.
21 First glume 5-7.5 mm long, nearly as long as sterile lemma; fertile lemma 1/3 length of sterile lemma; rachilla prolonged between the florets *Phanopyrum*
21 First glume shorter, or if this long, then at most 3/4 length of sterile lemma; fertile lemma > ½ the length of the sterile lemma; rachilla not prolonged between the florets.
22 Plant developing a terminal ("spring") inflorescence usually before mid-summer, followed by lateral ("autumnal") inflorescences from lower, mid, and/or upper nodes, these often included or hidden among the fascicles of smaller "autumnal" leaves; often developing a rosette of overwintering basal leaves *Dichanthelium*
22 Plant developing a terminal inflorescence usually after mid-summer, the lateral inflorescences, when present, from the upper nodes, usually appearing at the same time as the terminal panicle, and not hidden by dense fascicles of smaller leaves; plants lacking a rosette of overwintering basal leaves.
23 Spikelets tuberculate *Kelloggloa*
23 Spikelets smooth, not tuberculate.
24 Panicle < 2 cm wide at maturity.
25 Spikelets > 4.5 mm long; first glume > 2.4 mm long; ligule 4-6 mm long; [of coastal dunes] *Panicum*
25 Spikelets < 4 mm long; first glume < 2.1 mm long; ligule < 2 mm long; [not of coastal dunes].

Key to Map
Symbology:

←rare ←uncommon ←common
(see introduction for more)

N : no X : extirpated
P : planted
? : questionable

- 26 Blades involute, 1.5-4 mm wide; culms wiry *Coleataenia*
 26 Blades flat, the larger 6-20 mm wide; culms stout.
 27 Panicles constricted, 0.3-1.6 cm wide; spikelets subsessile to short-pedicel; summit of fertile palea not enclosed by fertile lemma *Panicum*
 27 Panicles > 1 cm wide; spikelets short to long-pedicel; summit of fertile palea enclosed by fertile lemma *Coleataenia*
 24 Panicle > 2 cm wide at maturity.
 28 Fertile lemmas rugose with cross-venation between the main parallel veins *Megathyrus*
 28 Fertile lemmas not rugose.
 29 Lower primary panicle branches in whorls of 4-7 at the nodes, stiffly spreading, naked on the proximal ½, the axils strongly pilose; lower culm internodes appressed papillose-pubescent; first glume acuminate, ½ as long as spikelet; fertile lemma chestnut brown at maturity *Panicum*
 29 Plants without the above combination of characters.
 30 Plants from a cluster of fibrous roots, without rhizomes or hard knotty crowns, annual *Panicum*
 30 Plants with rhizomes or hard knotty crowns, perennial.
 31 Plants with hard crowns, lacking rhizomes; fertile lemma 1.2-1.6 mm long *Coleataenia*
 31 Plants with rhizomes; fertile lemma 1.6-4 mm long.
 32 Rhizomes about 1 cm thick with pubescent scale-like leaves; lower portion of culm hard, nearly woody .
 32 Rhizomes less than 1 cm thick with glabrous scale-like leaves; culms not woody.
 33 First glume truncate apically *Panicum*
 33 First glume acute to obtuse.
 34 Culms slightly compressed below; ligules 0.5 mm long or less; spikelet pedicels appressed, the spikelets subsecund, usually some obliquely bent above the first glume; fertile lemma 1.8-2.2 mm long *Coleataenia*
 34 Culms terete; ligules 1-6 mm long; at least some spikelet pedicels spreading, spikelets not at all secund, essentially straight; fertile lemma 2-4 mm long *Panicum*

Key G - wheat grasses of tribe *Triticeae* (and a few unrelated mimics)

- 1 Spikelets 2-7 at all or most nodes; [tribe *Triticeae*].
 2 Spikelets 2-5 at each node (if 3, all 3 sessile) *Elymus*
 2 Spikelets 3 at each node (the central spikelets usually sessile, the lateral pedicellate) *Hordeum*
 1 Spikelets 1 at all or most nodes.
 3 Spikelets borne on peduncles 0.5-2 mm long; [tribe *Brachypodieae*] *Brachypodium*
 3 Spikelets sessile.
 6 Spikelets placed edgewise to the rachis; first glume lacking except in the terminal spikelet; [tribe *Poeae*] *Lolium*
 6 Spikelets placed flatwise to the rachis; first glume present; [tribe *Triticeae*].
 7 Plants annuals; glumes often with lateral teeth or awns; glumes rounded or keeled; [aliens, rare out of cultivation] *Triticum*
 7 Plants perennials; glumes without lateral teeth or awns; glumes keeled; [natives or aliens] *Elymus*

Key H - finger grasses

- 1 Spikelets 2-flowered, often dorsally compressed, falling entire at maturity (the abscission below the glumes), the upper floret usually bisexual, the lower one male or sterile; [tribe *Paniceae*]
 2 Lemma margins hyaline, flat; lower glumes various (absent, < ¼ the length, or longer than the upper glume) *Digitaria*
 2 Lemma margins not hyaline, frequently involute; lower glumes absent or < ¼ the length of the upper glume.
 3 Spikelets with lower lemmas (and lower glumes, if present) adjacent to the branch axes.
 4 Lower glumes absent *Axonopus*
 4 Lower glumes present on at least most spikelets *Urochloa*
 3 Spikelets with upper lemmas (and upper glumes, if present) adjacent or appressed to the branch axes.
 6 Lower glumes usually absent; upper lemmas smooth to slightly rugose *Paspalum*
 6 Lower glumes present; upper lemmas rugose and verrucose *Urochloa*
 1 Spikelets 1-, 2-, or many-flowered, usually terete or somewhat laterally compressed, either abscising at maturing above the glumes or if 2-flowered then both florets bisexual, or the upper sterile; [tribes *Cynodonteae* and *Zoysieae*]
 7 Spikes normally solitary (rarely 2), divergent at the summit of the culm; second glume with a recurved spine arising from the back; fresh plants aromatic with a citrus odor; [tribe *Cynodonteae*; subtribe "incertae sedis"] *Ctenium*
 7 Spikes normally 2 or more, alternate, digitate, subdigitate, or verticillate along the main inflorescence axis; second glume lacking a recurved spine; fresh plants not aromatic with a citrus odor.
 8 Spikes arranged along the central inflorescence axis alternately, solitary at each node.
 9 Spikelets with 1 bisexual floret, sometimes also with modified male, sterile, or rudimentary florets above the fertile floret.
 10 Spikelets with modified male, sterile, or rudimentary florets above the fertile floret; [plants of uplands]; [tribe *Cynodonteae*; subtribe *Boutelouinae*] *Bouteloua*
 10 Spikelets lacking any modified florets; [plants of wetlands, primarily saline and coastal]; [tribe *Zoysieae*; subtribe *Sporobolinae*] *Spartina*
 9 Spikelets with 2 or more bisexual florets (sometimes also with additional reduced florets); [tribe *Cynodonteae*; subtribe *Eleusininae*].
 11 Ligules 4-8 (-15) mm long, acute to attenuate, entire (lacerate only by tearing) *Diplachne*
 11 Ligules 0.3-5.4 mm long, truncate to obtuse, erose or entire.
 12 Lemmas 3-veined; ligule (0.2-) 0.5-5.5 (-7.0) mm long; apex erose or entire *Dinebra*

- 12 Lemmas 5-veined; ligule 0.8-2.2 mm long, apex erose.....*Disakisperma*
- 8 Spikes arranged along the central inflorescence axis in a digitate, subdigitate, or verticillate manner, all or most nodes with 2 or more spikes; [tribe *Cynodonteae*].
- 13 Spikelets with 1 fertile floret (there may also be 1 or more sterile florets); [tribe *Cynodonteae*; subtribe *Eleusininae*].
- 14 Spikelets lacking sterile florets..... *Cynodon*
- 14 Spikelets with 1 or more sterile florets.
- 15 Lowest lemmas awned (rarely unawned); upper glumes acute to acuminate, mucronate or short-awned..... *Chloris*
- 15 Lowest lemmas unawned (or with an awn to 1.2 mm long); upper glumes truncate or bilobed, sometimes short-awned from between the lobes..... *Eustachys*
- 13 Spikelets with 2 or more fertile florets.
- 16 Spikes to 7 cm long, terminating in a point (the spikes acuminate); [tribe *Cynodonteae*; subtribe "incertae sedis"]..... *Dactyloctenium*
- 16 Spikes to 22 cm long, terminating in a functional or rudimentary spikelet (the spikes acute to obtuse); [tribe *Cynodonteae*; subtribe *Eleusininae*].
- 17 Lemmas glabrous..... *Eleusine*
- 17 Lemmas pubescent, at least towards the base..... *Disakisperma*

Key I - rice grasses, of tribe *Oryzeae* (also including grasses keyed as well in Key B)

- 1 Lemma margins free; plants perennial.
- 2 Plants either < 1 m tall or a floating aquatic with lax stems to 1.5 m long..... *Luziola*
- 2 Plants 1-4 m tall, emergent, the stems stout, not lax..... *Zizaniopsis*
- 1 Lemmas and paleas clasping along their margins; plants annual or perennial.
- 3 Spikelets either pistillate or staminate, the upper branches of the panicle with pistillate spikelets, the lower branches with staminate spikelets; grains terete..... *Zizania*
- 3 Spikelets bisexual; grains laterally flattened.
- 4 Glumes absent and also lacking glume-like sterile florets subtending the floret; lemmas and paleas pectinately ciliate-hispid on the margins; [native]..... *Leersia*
- 4 Glumes absent or greatly reduced, glume-like sterile florets subtending the fertile floret; lemmas and paleas glabrous or pubescent, but not pectinately ciliate hispid on the margins; [introduced]..... *Oryza*

Key J - dense spike grasses

- 2 Glumes awned; [tribe *Poeae*].
- 4 Glume awn 0.7-3 mm long; lemmas not awned *Phleum*
- 4 Glume awn 3-8 mm long; lemmas awned *Polypogon*
- 2 Glumes unawned..... *Alopecurus*

Key K - grasses with 1 floret and unawned lemmas

- 1 Spikelets 18-32 mm long; [tribe *Poeae*] *Avena*
- 1 Spikelets 0.7-10.8 mm long.
- 4 Lemma 1-veined; ligule of hairs; grain becoming mucilaginous when wet; [tribe *Zoysieae*; subtribe *Sporobolinae*]..... *Sporobolus*
- 4 Lemma 1-5-veined; ligule a membrane (the summit sometimes ciliolate); grain not becoming mucilaginous when wet.
- 5 Lemmas faintly 5-veined; lower glume longer than the lemma; palea much shorter than the lemma (or absent); [tribe *Poeae*]..... *Agrostis*
- 5 Lemmas strongly 3-veined; lower glume shorter than (rarely equaling) the lemma; palea about equaling the lemma; [tribe *Cynodonteae*; subtribe *Muhlenbergiinae*]..... *Muhlenbergia*

Key L - grasses with 1 floret and awned lemmas

- 1 Lemma awn 3-branched (the lateral 2 sometimes very reduced compared to the central); [tribe *Aristideae*] *Aristida*
- 1 Lemma awned with a simple awn.
- 2 Upper glumes present, 1-veined; lower glumes absent or much shorter than the upper glumes and veinless; [tribe *Brachyelytreae*] *Brachyelytrum*
- 2 Both glumes present, 1-many-veined.
- 3 Lemma hardened, distinctly different than the glumes in texture when mature; [tribe *Stipeae*].
- 5 Leaves > 4 mm wide..... *Nassella*
- 5 Leaves < 4 mm wide.
- 8 Florets 6-13 mm long; awns 30-120 mm long.
- 9 Palea flat, shorter than or equal to the lemma; lemma margin convolute or not overlapping; [alien species, rare in our area] *Nassella*
- 9 Palea grooved, longer than the lemma; lemma margins involute, fitting into the paleal groove; [native species, collectively widespread in our area] .. *Piptochaetium*
- 8 Florets 1.5-4.5 mm long; awns 1-35 mm long..... *Nassella*
- 3 Lemma neither hardened nor distinctly different than the glumes in texture when mature.
- 12 Spikelets 18-32 mm long; [tribe *Poeae*]..... *Avena*
- 12 Spikelets 1.1-8 mm long.
- 13 All spikelets sessile or subsessile and arrayed along inflorescence axes (racemes) divergent from the central axis (but not both overlapping one another and clearly ranked on one side of the axis, so as to be keyed under Key H).

Key to Map
Symbology:

N : no X : extirpated
P : planted
? : questionable

- 14 Lower glumes 0.9-4 mm long; spikelets disarticulating below the glumes, the spikelet falling as a whole; spikelets appressed to divergent from the raceme axes; sheaths not strongly overlapping; [tribe *Cynodonteae*; subtribe *Eleusininae*].....*Dinebra*
- 14 Lower glumes (2-) 3.5-7 mm long; spikelets disarticulating above the glumes (which remain on the inflorescence); spikelets strongly appressed to the raceme axes; sheaths strongly overlapping (at least on the upper culm), hiding the culm; [tribe *Cynodonteae*; subtribe "*incertae sedis*"].....*Gymnopogon*
- 13 Spikelets pedicellate and arrayed in a more complex and open panicle.
- 16 Spikelets articulated below the glumes, the spikelet falling intact, leaving a naked pedicel; [tribe *Poeae*].....*Cinna*
- 16 Spikelets articulated above the glumes, the floret falling, leaving the glumes attached to the pedicels.
- 17 Lemmas faintly 5-veined; awn from the back of the lemma; lower glume longer than the lemma; palea much shorter than the lemma (or absent); [tribe *Poeae*].....*Agrostis*
- 17 Lemmas strongly 3-veined; awn from the tip of the lemma; lower glume shorter than (rarely equaling) the lemma; palea about equaling the lemma; [tribe *Cynodonteae*; subtribe *Muhlenbergiinae*].....*Muhlenbergia*

Key M - grasses with 2+ florets, these exceeded and usually concealed by the glumes

- 1 Spikelets disarticulating below the glumes, the spikelets falling as a whole or in clusters; [tribe *Poeae*].....*Holcus*
- 1 Spikelets disarticulating above the glumes, the glumes remaining attached to the pedicel.
- 2 Spikelets dimorphic, paired, each pair consisting of a lower spikelet with sterile florets and an upper spikelet one with fertile florets; [tribe *Poeae*].....*Cynosurus*
- 2 Spikelets monomorphic.
- 3 Spikelets each with 1 fertile (bisexual) floret, with 1-several sterile florets, either towards the base or towards the tip of the spikelet.
- 4 Fertile floret basal, with 1-several sterile florets towards the tip of the spikelet; [tribe *Cynodonteae*; subtribe "*incertae sedis*"].....*Gymnopogon*
- 4 Fertile floret terminal, with 1-several sterile florets towards the base of the spikelet (the sterile florets sometimes knoblike or like tufts of hairs, and not obviously like florets); [tribe *Poeae*].
- 5 Spikelets with 2 florets, the lower floret staminate and of similar size as the upper, pistillate or bisexual floret; lemma of the lower floret awned; lemma of the upper floret unawned or awned.....*Arrhenatherum*
- 5 Spikelets with 2-3 florets, the lower 1-2 florets staminate or sterile, either highly reduced to knobs or tufts of hairs, or shorter than to longer than the terminal, bisexual floret; lemma of the lower florets either awned or unawned; lemma of the upper floret unawned.
- 6 Lower sterile florets 2, shorter than to exceeding the bisexual floret; fresh leaves with sweet vanilla odor when crushed; lemma of the lower florets awned or unawned.....*Anthoxanthum*
- 6 Lower sterile florets 1-2, either highly reduced to knobs or tufts of hairs, or consisting of linear to lanceolate lemmas up to $\frac{3}{4}$ as long as the bisexual floret; all lemmas unawned.....*Phalaris*
- 3 Spikelets each with 2 or more fertile florets.
- 8 Spikelets 18-50 mm long; glumes 9-11-veined; [tribe *Poeae*].....*Avena*
- 8 Spikelets 2.5-20 mm long; glumes 1-7-veined.
- 9 Lemma awns apical or dorsal (arising from the apex of the lemma or from the back of the lemma in its upper half).
- 10 Spikelets 7-20 mm long, with 3-12 florets; ligule of hairs; lemma awn 5-15 mm long; [collectively widespread in our area]; [tribe *Danthoniinae*].....*Danthonia*
- 10 Spikelets 5-7.5 mm long, with 2 (-3) florets; ligule membranous, 0.5-4 mm long; lemma awn 3-8 mm long; [rare disjunct on a few high elevation peaks, disjunct from the north]; [tribe *Poeae*].....*Trisetum*
- 9 Lemma awns basal (arising from the lower half of the lemma); [tribe *Poeae*].....*Aira*

Key N - grasses with 2+ florets, these readily visible by extending past the glumes

- 1 Plants dioecious; plants strongly rhizomatous-clonal; [plants of saline situations, coastal or more rarely inland]; [tribe *Cynodonteae*; subtribe *Monanthochloinae*].....*Distichlis*
- 1 Plants bisexual; plants caespitose or weakly short- rhizomatous; [plants of various habitats, including saline].
- 2 Lemmas 1-3-nerved, the nerves strong and obvious; spikelets 1-27 mm long.
- 3 Lemma nerves hairy; lemmas slightly to strongly 2-lobed, the midnerve shortly excurrent between the 2 lobes; [tribe *Cynodonteae*; subtribe *Tridentinae*].
- 4 Palea glabrous or with hairs < 0.5 mm long; plants perennial; inflorescences exserted, conspicuous.....*Tridens*
- 4 Palea long-ciliate on the upper half, the hairs 0.5-2 mm long; plants annual; inflorescences often largely hidden in the upper sheath.....*Triplasis*
- 3 Lemma nerves glabrous; lemmas not at all lobed.
- 6 Florets 3-34 per spikelet; lemmas unawned; [tribe *Eragrostideae*; subtribe *Eragrostidinae*].....*Eragrostis*
- 6 Florets 2-3 per spikelet; lemmas awned or unawned; [tribe *Poeae*].....*Sphenopholis*
- 2 Lemmas 5-many-nerved, the nerves often obscure; spikelets 2-70 mm long.
- 7 Sheaths united for at least $\frac{1}{2}$ their length.
- 8 Spikelets in dense one-sided clusters on a few stiff branches; spikelets strongly flattened; [tribe *Poeae*].....*Dactylis*
- 8 Spikelets in open or somewhat congested panicles, not as above; spikelets slightly to not at all flattened.
- 9 Lemmas awned.....*Bromus*
- 9 Lemmas unawned.
- 11 Lower glumes 1-veined; [plants of wetlands].....*Glyceria*
- 11 Lower glumes 3-7-veined; [plants of mesic to dry habitats].....*Melica*
- 7 Sheaths completely free or united at most up to $\frac{1}{2}$ their length.
- 12 Basal 1-8 florets of the spikelet sterile.
- 13 Ligule membranous (the membrane apex ciliate); lower 1-4 florets sterile; disarticulation above the glumes and between the florets; [of various, usually moist, habitats, collectively widespread]; [tribe *Centotheceae*].....*Chasmanthium*
- 13 Ligule of hairs; lower 2-8 florets sterile; disarticulation below the glumes (the spikelet falling whole); [of coastal dunes, from se. VA southward and westward]; [tribe *Eragrostideae*; subtribe *Uniolinae*].....*Uniola*

12 Lowermost florets of the spikelet fertile; [tribe *Poeae*].

14 Lemmas about as broad as long, spreading at a ca. 90° angle to the rachilla *Briza*

14 Lemmas longer than broad, ascending at an acute angle to the rachilla.

17 Callus of the lemmas hairy *Poa*

17 Callus of the lemma glabrous.

18 Lemmas awned.

19 Plant annual; stamen 1 *Festuca*

19 Plant perennial; stamens 3.

20 Leaf blades often involute, 0.2-3 mm wide, not auriculate at the base *Festuca*

20 Leaf blades flat, 3-12 mm wide, auriculate at the base *Lolium*

18 Lemmas unawned.

21 Leaf tips blunt, cupped like the prow of a row-boat *Poa*

21 Leaf tips acuminate, planar or keeled (but not as above).

22 Leaf blades often involute, 0.2-3 mm wide, or flat and 3-12 mm wide, not auriculate at the base *Festuca*

22 Leaf blades flat, 3-12 mm wide, auriculate at the base *Lolium*

Agrostis Linnaeus 1753 (BENTGRASS)

A genus of about 220 species, primarily temperate. References: Harvey (2007a) in FNA24 (2007a); Tucker (1996).

1 Palea 1/2-3/4 as long as the lemma, 0.6-1.2 mm long; plants introduced, often (though not always) in disturbed habitats; plants flowering Jun-Oct; [subgenus *Agrostis*].

2 Ligule mostly 0.5-2 mm long, truncate; panicle branches naked toward the base, diffuse when in fruit, the spikelets well-separated *Agrostis capillaris*

2 Ligule mostly 2.5-6 mm long, acute, rounded, or truncate; panicle branches (some of them) with spikelets to near the base, the spikelets usually agglomerated.

3 Leaves 3-8 mm wide; inflorescence triangular-ovoid, the branches widely spreading at maturity, usually reddish; plant with rhizomes, without stolons *Agrostis gigantea*

3 Leaves mostly 1-3 mm wide; inflorescence narrowly ovoid, the branches ascending at maturity, usually tan; plant without rhizomes, with or without stolons *Agrostis stolonifera*

1 Palea < 2/5 as long as the lemma, 0-0.5 mm long; plants native, typically in more or less natural habitats; plants flowering Mar-Nov; [subgenus *Vilfa*].

4 Lemma usually awned (sometimes unawned), the awn inserted near the tip, 4-10 mm long, straight, very delicate and flexuous; annual, flowering Apr-Jun *Agrostis elliottiana*

4 Lemma awned or not, the awn (when present) inserted either near the middle of the lemma or near the apex, 0-6 mm long, straight or bent, neither delicate nor

flexuous; perennial, flowering Mar-Nov.

7 Spikelets 1.2-2 mm long; anthers 0.3-0.6 mm long; lemma never awned; plants flowering Mar-Jul *Agrostis hyemalis*

7 Spikelets 1.8-3.5 (-3.7) mm long; anthers 0.3-1.5 mm long; lemma awnless or awned; plants flowering Jun-Nov.

8 Leaves (at least the basal) mostly involute, 1-2 (-3) mm wide; panicle branches mostly forking well beyond the middle; anthers 0.4-0.8 mm long *Agrostis scabra*

8 Leaves flat, 2-6 mm wide; panicle branches mostly forking at or below the middle; anthers 0.3-1.2 mm long.

9 Lemma 1.8-3 mm long, minutely but copiously scabrous (at 20× or more); anthers 0.7-1.2 mm long; spikelets (2.3-) 2.7-3.5 (-3.7) mm long, usually

clustered near the tips of the branchlets; panicle branches scabrous; culms to 15 dm tall; [of wet savannas and other wet habitats of the Coastal Plain].... *Agrostis altissima*

9 Lemma 1.4-2 mm long, glabrous; anthers 0.3-0.6 mm long; spikelets (1.8-) 2.2-2.7 (-3.2) mm long, usually not clustered near the tips of the branchlets;

panicle branches glabrous to scabrous; culms to 10 dm tall; [of various habitats, nearly throughout our area] *Agrostis perennans*

Agrostis altissima (Walter) Tuckerman. COASTAL BOG BENTGRASS. **Hab:** Wet pine savannas, sinkhole ponds, edges of swamp forests. **Dist:** MA (?) and NJ south to se. LA, primarily on the Coastal Plain. **Phen:** Oct-Nov. **Syn:** = F, HC, Pa, Va, Tucker (1996); = *Agrostis perennans* var. *elata* (Pursh) A.S. Hitchcock – C, G, S; < *Agrostis perennans* (Walter) Tuckerman – FNA24, GW1, K1, K4, RAB, WH3.

* ***Agrostis capillaris*** Linnaeus. RHODE ISLAND BENTGRASS, COLONIAL BENTGRASS, BROWNTOP. **Hab:** Meadows, roadsides, disturbed areas. **Dist:** Native of Europe (and possibly n. North America). **Phen:** Jun-Aug. **Syn:** = C, FNA24, II, K1, K3, K4, Meso6, Mi, Mo1, NE, NY, Pa, Tn, Va, Tucker (1996); = *Agrostis tenuis* Sibthorp – G, HC, RAB, S, W, WV; > *Agrostis tenuis* Sibthorp var. *aristata* (Parnell) Druce; > *Agrostis tenuis* var. *tenuis* – F.

Agrostis elliottiana J.A. Schultes. ELLIOTT'S BENTGRASS, SOUTHERN BENTGRASS. **Hab:** Dry soils of barrens, fields, and rock outcrops. **Dist:** MD west to s. OH, and e. KS, south to Panhandle FL (Gadsden County) and c. TX. **Phen:** Apr-Jun. **Syn:** = Ar, C, ETx1, F, FIGr, FNA24, G, HC, II, K1, K3, K4, Mo1, NcTx, NE, Pa, RAB, S, Tn, Tx, Va, W, WH3, Tucker (1996). NatureServe G5 (Secure).

* ***Agrostis gigantea*** Roth. REDTOP, BLACK BENTGRASS. **Hab:** Fields, pastures, roadsides, disturbed areas. **Dist:** Native of Eurasia. **Phen:** Jun-Oct. **Syn:** = Ar, C, F, FNA24, II, K1, K3, K4, Meso6, Mi, Mo1, NE, NY, Pa, Tn, Va, W, Tucker (1996); = *Agrostis alba* – HC, WV, misapplied; = *Agrostis stolonifera* Linnaeus var. *major* (Gaudin) Farwell – G; >> *Agrostis alba* – S, misapplied; < *Agrostis stolonifera* Linnaeus – GW1, RAB, WH3.

Agrostis hyemalis (Walter) Britton, Sterns, & Poggenburg. TICKLEGRASS, SMALL BENTGRASS, HAIRGRASS. **Hab:** Moist to dry fields, meadows, and roadsides, sometimes also in barrens or thin soils over outcrops. **Dist:** ME west to WI, south to FL and TX. **Phen:** Mar-Jul. **Syn:** = Ar, ETx1, F, FIGr, FNA24, II, K1, K3, K4, Mi, NE, NY, Pa, Tn, Tx, Va, WH3, WV, Tucker (1996); = *Agrostis hiemalis* – GW1, HC, orthographic variant; = *Agrostis hyemalis* var. *hyemalis* – C, G, Mo1; < *Agrostis hiemalis* – NcTx, S, W, orthographic variant; < *Agrostis hyemalis* (Walter) Britton, Sterns, & Poggenburg – RAB; ~ *Trichodium laxiflorum* Muhl..

*Andropogon* Linnaeus 1753 (BROOMSEDGE, BLUESTEM)

A genus of about 100-110 species, mainly tropical. Campbell's work (1983, 1986, 2003) has greatly clarified the taxonomy of *Andropogon* in e. North America. Great confusion and disagreement were previously the rule in dealing with the *Andropogon virginicus*-*A. glomeratus* complex. Campbell's careful morphologic work has provided workable technical characters which distinguish the taxa he recognizes. I have generally followed Campbell (1983, et seq.) in his circumscriptions of taxa, but have differed in decisions of rank; see Weakley et al. (2011) for discussion. Taxa differing in numerous morphologic characters, with different (though overlapping) geographic ranges, with different ecological preferences (often rather narrowly segregated by hydrology), and (when they do occur in proximity to one another) showing little or no sign of introgression or hybridization are probably better treated as biological species. Thus, I have treated a number of Campbell's varieties as species. Several of his "variants" also warrant taxonomic recognition, at varietal or specific rank (Campbell 1986; Weakley et al. 2011). The issue of the separation of *Schizachyrium* from *Andropogon*, the membership of each genus, the morphological characters that are key and diagnostic (when characters are in conflict), and the reciprocal monophyly of each genus remain very uncertain. For now, I retain the predominant usage of recent decades of separating the two genera, and allocate the species to genera on the pragmatic character of single racemes (*Schizachyrium*) vs. 2 or more racemes (*Andropogon*), but that may well prove erroneous. References: Bridges & Orzell (2018a); Bridges & Orzell (2020a) in Weakley et al (2020); Campbell (1983); Campbell (1986); Campbell (2003) in FNA25 (2003a); Deshmuke, Shende, & Reddy (2022); Sorrie (2020b) in Weakley et al (2020); Weakley & Schori (2018) in Weakley et al (2018a); Weakley et al (2011); Wipff & Shaw (2018d).

While the dispersal units are still attached to one another, the rachis internodes form a continuous and more-or-less straight rachis. The dispersal units attached together in an unbranched sequence are termed a raceme, whose length is a useful character. Two or more racemes are attached digitately at the summit of the peduncle (in *Schizachyrium* only a single raceme is found). The number of racemes attached is an important character. A raceme sheath subtends the peduncle, often more or less surrounding the peduncle and the racemes. The length of the peduncle (distance between the points of attachment of the raceme sheath and the racemes) is an important character. The length and width (at its widest point, and spread and flattened) of the raceme sheath are very useful characters, used throughout the key. The racemes, peduncle and subtending raceme sheath make up an inflorescence unit. The overall inflorescence is more-or-less complexly branched; its overall size and shape are very useful in recognizing the various taxa, but variation in such a subjective (and environmentally plastic) character has added to the taxonomic confusion in *Andropogon*. The use of inflorescence shape in the key has been minimized, but is often mentioned in the discussion of each species. The number of inflorescence units per plant varies from species to species, in some species rarely exceeding 10, in others ranging upward to 500 or 600. The absence or presence of hairs immediately below the raceme sheath is useful in some groups.

There are several important characters of the foliage. *Andropogon capillipes*, *A. dealbatus*, and *A. cretaceus* have culm sheaths and leaf blades that are strongly glaucous; this is usually very obvious, but can be tested for by running the finger along the surface of the leaf (a white coating of wax will come off on the finger). The key often calls for the ligule length; measure the longest portion of the undivided portion of the ligule. The ligule often has an erose or ciliate upper margin; measure the length of the cilia. The length of leaf blade is measured from the ligule to the leaf apex; do not include the leaf sheath, which is often long and (especially late in the year) only loosely sheathing the culm or even divergent it. Whether the leaf sheaths are antrorsely scabrous or smooth is better determined by touch than by sight. Choose several mid-culm sheaths, run one's finger downward and upward along the sheath surface (near the collar is best). If the sheath is antrorsely scabrous one will feel a somewhat greater resistance to moving the finger downward than upward.

103. POACEAE

Identification Notes: A thorough understanding of the architecture of the inflorescences of *Andropogon* is necessary in order to identify them successfully. The parts will be described, beginning from the apex of a branch of the inflorescence. Spikelets occur in pairs, the sessile spikelet (usually just referred to as the spikelet) and the pedicelled spikelet, which is usually vestigial or absent (except in *A. gerardi*) and sterile (except in *A. gerardi*, where it is staminate). The first or lower glume of the sessile spikelet has two keels, and the presence and location of antrorse prickly hairs (scabrousness) is an important character in the *A. glomeratus* complex. The length of the sessile spikelet is an important character; it should be measured exclusive of the awn, borne at the apex of the lemma. Awn length is also a useful taxonomic character. The pedicelled spikelet is borne on the pedicel, which is attached at the base of the sessile spikelet and typically angles away from it at about a 45 degree angle. The rachis internode extends from the base of one sessile spikelet to the next sessile spikelet above, breaking apart (upon dehiscence) just below the next spikelet and remaining attached to the sessile spikelet below. The dispersal unit consists of a sessile spikelet sitting in the V shape formed by (on one side) the pedicel and pedicelled spikelet and (on the other side) the rachis internode. Both the pedicel and the rachis internode are usually pubescent with long hairs, and the color of those hairs and their distribution are useful characters. Sometimes culm sheath scabrousness is discernible by touch only near the sheath summit.

- 1 Pedicellate spikelet staminate, as large as the sessile, fertile spikelet; sessile spikelets > 7 mm long; [section *Andropogon*] *Andropogon gerardi*
- 1 Pedicellate spikelet sterile, vestigial or absent; sessile spikelets < 7 mm long; [section *Leptopogon*].
 - 3 Leaves strongly glaucous (often nearly white with a powdery wax that can be rubbed off on the fingers), glabrous.
 - 4 Ligule membrane (0.9-) 1.5 (-2.0) mm long, with cilia 0-0.2 mm long; leaf blades usually (33-) avg. 40 (-75) cm long; pubescence beneath raceme sheaths moderate to dense; raceme sheaths (2.0-) 2.4-3.6 (-4.4) cm long, (1.3-) 2.0-2.5 (-3.0) mm wide. *Andropogon cretaceus*
 - 4 Ligule membrane (0.2-) 0.4 (-0.5) mm long, with cilia 0.3-1.2 mm long; leaf blades (12-) avg. 19 (-38) cm long; pubescence beneath raceme sheaths absent to dense; raceme sheaths (2.1-) 2.9-4.3 (-6.0) cm long, (2.7-) 3.1-3.8 (-5.5) mm wide. *Andropogon dealbatus*
 - 3 Leaves green (to somewhat glaucous, but never powdery white), pubescent or glabrous.
 - 6 Upper culm sheaths distinctly broadened and strongly overlapping, often largely hiding the raceme sheaths before senescence (but in some forms with the raceme sheaths strongly exerted); culms mostly < 1 m tall (to 1.4 m tall) *Andropogon gyrans*
 - 6 Upper culm sheaths reduced, not strongly overlapping, not hiding the raceme sheaths after anthesis; culms mostly > 1 m tall (except *A. perangustatus*, *A. tracyi*, *A. subtenius*, and small forms of *A. virginicus*).
 - 7 Many or all peduncles longer than the subtending raceme sheaths at maturity, racemes then fully exerted above the apex of the raceme sheath.
 - 9 Inflorescence branches arching outward in pronounced curves; racemes (1.2-) 1.5-2.1 (-2.6) cm long; lemma awns (2-) avg. 7 (-11) mm long; spikelets (4.1-) 4.4-4.6 (-5.0) mm long. *Andropogon brachystachyus*
 - 9 Inflorescence branches erect; racemes (2.2-) 2.5-6 cm long; lemma awns 5-20 mm long; spikelets (3.8-) 4.4-6.5 (-7.5) mm long.
 - 10 Stems < 0.9 m tall; leaves < 2 mm wide; some racemes usually fully included within raceme sheaths at maturity on peduncles < 10 mm long; anthers often marcescent *Andropogon subtenius*
 - 10 Stems > 1 m tall; leaves usually > 3 mm wide; racemes rarely included within raceme sheaths at maturity, peduncles rarely < 15 mm long; anthers rarely marcescent. *Andropogon ternarius*
 - 7 Peduncles all shorter than the subtending raceme sheaths at maturity, at least the bases of the racemes not exerted above the apex of the raceme sheath.
 - 16 Inflorescence units with (2-) 4-7 (-13) racemes; raceme sheaths (4.1-) 5.3-8.0 (-10-1) mm wide; hairs of the rachis internode and pedicel yellow-tawny when dry *Andropogon mohrii*
 - 16 Inflorescence units with 2-5 (-7) racemes; raceme sheaths (1.5-) 2.0-4.8 (-6.3) mm wide; hairs of the rachis internode and pedicel gray to whitish when dry.
 - 17 Post-flowering peduncles (at least some of them) > 15 mm long.
 - 18 Culm sheaths antrorsely scabrous (often hirsute as well).
 - 20 Ligules (1.0-) 1.2 (-2.0) mm long, with cilia 0-0.3 mm long; keels of first glume scabrous only above middle *Andropogon glomeratus*
 - 20 Ligules (0.6-) 0.8 (-1.3) mm long, with cilia 0.2-0.9 mm long; keels of first glume often scabrous below middle *Andropogon tenuispathus*
 - 18 Culm sheaths not scabrous (often hirsute).
 - 21 Culms usually > 1.2 m tall; leaf blades often > 30 cm long and > 3 mm wide; inflorescence units usually > 20/culm.
 - 22 Inflorescence branches arching outward in pronounced curves; awn mostly < 1 cm long; spikelets (4.1-) 4.4-4.6 (-5.0) mm long; anther > 1.7 mm long *Andropogon brachystachyus*
 - 22 Inflorescence branches erect; awn mostly > 1 cm long; spikelets (3.0-) 3.3-3.8 (-4.5) mm long; anther < 1.5 mm long. *Andropogon tenuispathus*
 - 21 Culms < 1.2 m tall; leaf blades < 30 cm long and < 3 mm wide; inflorescence units rarely > 20/culm.
 - 25 Ligules (0.2-) 0.4 (-0.5) mm long, with cilia (0.1-) 0.2-0.8 mm long; spikelets (4-) 4.8-5.0 (5.5) mm long; racemes 2 per inflorescence unit *Andropogon tracyi*
 - 25 Ligules (0.4-) 0.6 (-1.1) (-1.5) mm long, with cilia 0-0.3 mm long; spikelets (3-) 3.4-5.1 (-5.5) mm long; racemes 2-4 per inflorescence unit.
 - 26 Ligules (0.4-) 0.6 (-0.8) mm long, with cilia 0-0.3 mm long. *Andropogon subtenius*
 - 26 Ligules (0.8-) 1.1 (-1.5) mm long, with cilia 0-0.1 mm long. *Andropogon perangustatus*
 - 17 Post-flowering peduncles < 10 mm long.
 - 27 Culm sheaths antrorsely scabrous (often hirsute as well); leaf blades usually > 35 cm long.
 - 28 Ligules (0.6-) 0.8 (-1.3) mm long (usually < 1 mm long), with cilia 0.2-0.9 mm long; raceme sheaths (1.5-) 2.0-2.5 (-3.0) mm wide (usually < 2.5 mm wide); keels of first glume often scabrous below the middle *Andropogon tenuispathus*
 - 28 Ligules (0.7-) 1.2 (-2.2) mm long (usually > 1 mm long), with cilia 0.0-0.3 mm long; raceme sheaths (2.0-) 2.4-3.4 (-4.7) mm wide (usually > 2.5 mm wide); keels of first glume scabrous only above the middle, smooth below.
 - 29 Inflorescences oblong to obpyramidal; spikelets (3.8-) 4.1-4.4 (-5.0) mm long; anthers usually not marcescent within spikelet; mature peduncles (4-) 11-35 (-60) mm long (usually some of them > 10 mm long) *Andropogon glomeratus*
 - 29 Inflorescences (linear to) oblong; spikelets (3.4-) 3.6-3.8 (-4.6) mm long; anthers usually marcescent within spikelets; mature peduncles (2-) 3-5 (-8) mm long *Andropogon hirsutior*
 - 27 Culm sheaths not scabrous (often hirsute); leaf blades < 35 cm long (except in *A. glomeratus* var. *pumilus*).
 - 31 Leaves glabrous.
 - 32 Ligules (0.8-) 1.1 (-1.5) mm long, with cilia 0-0.1 mm long; basal leaves often filiform, < 1.5 mm wide, strongly erect *Andropogon perangustatus*
 - 32 Ligules (0.2-) 0.5 (-0.8) mm long, with cilia 0.2-1.3 mm long; basal leaves usually > 2 mm wide, soon arching.

Symbology:

- 34 Stems < 1 m tall; inflorescence units < 14 per stem; spikelets (3.5-) 4.0-4.5 (-5.2 mm long; raceme sheaths (4.0-) 4.9-7.9 (-9.5) cm long, (1.5-) 2.5-4.3 (-5.0) mm wide; peduncles (1-) 5-25 (-50) mm long; racemes 2-4 (-7) per inflorescence unit, at least some inflorescence units (especially at culm and branch apices) with 3 or more racemes *Andropogon subtenius*
- 34 Stems > 1 m tall; inflorescence units usually > 14 per stem; spikelets (3.0-) 3.5-3.7 (-4.2) mm long; raceme sheaths (2.8-) 3.3-4.7 (-6.7) cm long, (3.0-) 3.2-3.8 (-5.2) mm wide; peduncles (2-) 3-4 (-6) mm long; racemes 2-4 (-7) per inflorescence unit, at least some inflorescence units (especially at culm and branch apices) with 3 or more racemes *Andropogon virginicus* var. *1*
- 31 Leaves pubescent, at least on the margin near the collar.
- 35 Keels of first glume often scabrous below the middle; leaves usually > 44 cm long *Andropogon tenuispathus*
- 35 Keels of first glume scabrous only above middle; leaves usually < 31 cm long.
- *Andropogon virginicus* var. *virginicus*

Andropogon brachystachyus Chapman. SHORTSPIKE BLUESTEM. **Hab:** Moist to wet pinelands, natural pond margins, bogs, disturbed roadsides. **Dist:** Se. SC (McMillan et al. 2002) south to FL, south to s. FL, west to e. FL Panhandle. *A. brachystachyus* has been considered by some to range north to NC. **Phen:** Jul-Dec. **Syn:** = FlGr, FNA25, K1, K3, K4, WH3, Campbell (1983); = *Andropogon brachystachyus* – GW1, HC, S, orthographic variant. **NatureServe G4** (Apparently Secure).

Andropogon cretaceus Weakley & Schori. PURPLE BLUESTEM, CHALKY BLUESTEM. **Hab:** Wet pine savannas, pine flatwoods, maritime forests, ditches, wet disturbed sites. **Dist:** Se. VA south to c. peninsular FL and west to e. TX (Singhurst, Sorrie, & Holmes 2012). **Phen:** Aug-Nov. **Tax:** Although sometimes included in the past in either *A. glomeratus* or *A. virginicus*, this species is distinctive and easily recognized in the field (even from a car at 60 m.p.h.) by the combination of blue color, height of well over 1 m (taller than the other glaucous bluestems), and semi-bushy inflorescence. See Weakley et al. (2018a) for explanation of the need for a new name for this species, *A. glaucopsis* being preoccupied. **Syn:** = FlGr, K4, Sorrie (2020b) in Weakley et al (2020), Weakley & Schori (2018) in Weakley et al (2018a); = *Andropogon glaucopsis* Elliott ex Beal – GW1, K1, K3, Va, Weakley et al (2011), misapplied; = *Andropogon glomeratus* var. *glaucopsis* (Elliott ex Beal) A.S. Hitchcock – FNA25, WH3, Campbell (1983); = *Andropogon virginicus* var. *glaucopsis* (Elliott) A.S. Hitchcock – F, HC; < *Andropogon glomeratus* (Walter) Britton, Sterns, & Poggenburg – ETx1, S; < *Andropogon virginicus* Linnaeus – RAB; >> *Andropogon virginicus* var. *glaucus* Hackel – Ar, misapplied.

Andropogon dealbatus (C. Mohr) Weakley & LeBlond. WETLAND WHITE BLUESTEM. **Hab:** Wet pine savannas, ditches adjacent to savannas, depressional wetlands. **Dist:** S. NJ south to s. FL and west to e. TX; also in the Bahamas (Sorrie & LeBlond 1997). **Phen:** Aug-Dec (-Jul). **Tax:** Campbell (1983) informally described two "variants" of *A. virginicus* var. *glaucus*. *A. capillipes* is clearly a species distinct from *A. virginicus*; moreover, the substantial morphological and ecological differences between Campbell's two "variants" (which he describes as nearly always sharply distinct, even when growing in close proximity) warrant recognition as good species (Weakley et al. 2011). **Syn:** = FlGr, Weakley & Schori (2018) in Weakley et al (2018a), Weakley et al (2011); = *Andropogon virginicus* var. *dealbatus* Mohr; = *Andropogon virginicus* var. *glaucus* "wetlands variant" – Campbell (1983); < *Andropogon capillipes* Nash – GW1, K1, K3, S; < *Andropogon dealbatus* (C. Mohr) Weakley & LeBlond – K4; < *Andropogon virginicus* Linnaeus – RAB; < *Andropogon virginicus* var. *glaucopsis* (Elliott) A.S. Hitchcock – HC; < *Andropogon virginicus* var. *glaucus* Hackel – F, FNA25, WH3.

Andropogon gerardi Vitman. BIG BLUESTEM, TURKEYFOOT. **Hab:** In a wide variety of habitats, usually rather dry, such as longleaf pine sandhills, glades, cliffs, and rock outcrops, in the Piedmont in woodlands, former prairie-like sites, woodlands, open forests, and river-scour grasslands, in the Mountains in glades, riverside scour areas, and rarely in grassy balds, ascending to at least 1600 m over mafic rocks (on Old Field Bald, Watauga and Ashe counties, NC). **Dist:** QC west to SK, south to FL and AZ. **Phen:** Jul-Nov. **Tax:** Some favor treating *A. hallii* Hackel as a subspecies of *A. gerardi* (Wipff 1996c); I do not agree, but if that course is followed, then our eastern taxon becomes *A. gerardi* ssp. *gerardi*. **Syn:** = G, HC, K3, K4, NY, Tx, WV; = *Andropogon furcatus* Muhlenberg ex Willdenow; = *Andropogon gerardii* Vitman – Ar, C, FlGr, FNA25, GW1, Il, K1, Mi, NE, Pa, RAB, Tn, Va, W, WH3, orthographic variant; = *Andropogon gerardii* ssp. *gerardii* – ETx1, NcTx; = *Andropogon provincialis* Lamarck – S; > *Andropogon gerardi* var. *gerardi* – F; > *Andropogon gerardii* var. *chrysocomus* – Mo1; > *Andropogon gerardii* var. *gerardii* – Mo1. **NatureServe G5** (Secure).

Andropogon glomeratus (Walter) Britton, Sterns, & Poggenburg. COMMON BUSHY BLUESTEM. **Hab:** Swamps, wet pine savannas, pine flatwoods, bogs, fens, depression ponds, wet disturbed sites. **Dist:** S. MA south to c. peninsular FL and west to s. MS, primarily on the Coastal Plain, but scattered inland to w. PA, WV, c. KY, c. TN and AR. **Phen:** Aug-Nov. **Syn:** = Ar, K4, Sorrie (2020b) in Weakley et al (2020), Weakley et al (2011), Wipff & Shaw (2018d); = *Andropogon glomeratus* (Walter) Britton, Sterns, & Poggenburg var. *glomeratus* – FlGr, FNA25, K1, K3, NE, NY, Va, WH3, Campbell (1983), Campbell (1986); = *Andropogon virginicus* var. *abbreviatus* (Hackel) Fernald & Griscom – C, F, G, GW1, WV; < *Andropogon glomeratus* (Walter) Britton, Sterns, & Poggenburg – ETx1, HC, Il, Pa, S, Tn, Tx, W; < *Andropogon virginicus* Linnaeus – RAB.

Andropogon gyrans W.W. Ashe. ELLIOTT'S BLUESTEM. **Hab:** Dry to moist forests, woodlands, longleaf pine sandhills, pine savannas, fields, and disturbed areas. **Dist:** S. NJ west to s. IN, s. IL, s. MO, south to s. FL and TX. **Phen:** Jul-Nov. **Tax:** Campbell (1983) argued that the name *A. elliotii* should be replaced by *A. gyrans*; Ward (2004c) argues for retention of the traditional *A. elliotii*. We here follow Campbell (1983). **Syn:** = C, Il, NcTx, Pa, Tn, Va, W; = *Andropogon elliotii* Chapman – WV; = *Andropogon gyrans* var. *gyrans* "common variant" – Campbell (1983); > *Andropogon campyloracheus* Nash – RAB, S; < *Andropogon elliotii* Chapman – HC, Tx; > *Andropogon elliotii* Chapman – RAB, S; > *Andropogon elliotii* var. *elliotii* – F, G; > *Andropogon elliotii* var. *gracilior* Hackel – F, G; > *Andropogon elliotii* var. *projectus* Fernald & Griscom – G; < *Andropogon gyrans* var. *gyrans* – ETx1, FlGr, FNA25, K1, K3, K4, Mo1, WH3.

Andropogon hirsutior (Hackel) Weakley & LeBlond. HAIRY BLUESTEM. **Hab:** Wet pine savannas, pine flatwoods, adjacent ditches, other wet disturbed sites. **Dist:** E. MD south to c. peninsular FL, west to se. LA. Material west of the Mississippi River appears to be of this taxon, but needs additional study. **Phen:** Sep-Nov. **Tax:** See discussion in Weakley et al. (2011) for reasons for recognition of this taxon at specific rank. **Syn:** = FlGr, K3, K4, Sorrie (2020b) in Weakley et al (2020), Weakley et al (2011); = *Andropogon glomeratus* (Walter) Britton, Sterns, & Poggenburg var. *hirsutior* (Hackel) C. Mohr – FNA25, K1, Va, WH3, Campbell (1983); = *Andropogon virginicus* var. *hirsutior* (Hackel) A.S. Hitchcock – Tx; < *Andropogon glomeratus* (Walter) Britton,

Sterns, & Poggenburg – ETx1, HC, S, Tn; < *Andropogon virginicus* Linnaeus – RAB; ? *Andropogon virginicus* var. *glaucopsis* (Elliott) A.S. Hitchcock – G, misapplied.

Andropogon mohrii (Hackel) Hackel. TAWNY BLUESTEM, BOG BLUESTEM. **Hab:** Wet pine savannas, sphagnum bogs. **Dist:** Se. VA south to n. FL, west to LA. **Phen:** Sep-Nov. **Syn:** = C, F, FIgr, G, GW1, HC, K1, K3, K4, RAB, S, Va; = *Andropogon liebmanni* Hackel var. *pungensis* (Ashe) C.S. Campbell – FNA25, WH3, Campbell (1983). **NatureServe G4?** (Apparently Secure).

Andropogon perangustatus Nash. NARROWLEAF BLUESTEM. **Hab:** Wet pinelands, clay-based Carolina bays, other depression wetlands, and boggy wetlands. **Dist:** E. VA south to c. peninsular FL, west to e. TX. **Phen:** Aug-Dec. **Comm:** Growth form, general appearance, and habitat (dense bluish tussocks with very narrow leaves and long ligules, growing in wet areas such as clay-based Carolina bays) make *A. perangustatus* readily recognizable. **Syn:** = FIgr, HC, S, Va; = *Andropogon elliottii* Chapman var. *stenophyllus* (Hackel) D.B. Ward; = *Andropogon gyrans* Ashe var. *stenophyllus* (Hackel) C.S. Campbell – ETx1, FNA25, K1, K3, K4, WH3, Campbell (1983). **NatureServe G5T4** (Apparently Secure).

Andropogon subtenuis Nash. NASH'S BLUESTEM. **Hab:** Longleaf pine flatwoods, dry-mesic to mesic southern Florida grasslands. **Dist:** Se. NC south to c. peninsular FL, west to se. LA. **Phen:** Sep-Nov. **Syn:** = Tx, by mention; = *Andropogon gyrans* var. *gyrans* "tenuous variant" – Campbell (1983); < *Andropogon elliottii* Chapman – HC, RAB, S; < *Andropogon gyrans* var. *gyrans* – FIgr, FNA25, K1, K4, WH3.

Andropogon tenuispathus (Nash) Nash. MARITIME BUSHY BLUESTEM. **Hab:** Maritime wet grasslands, brackish marsh edges, calcareous wet grasslands, interdune swales and ponds, seepages in limestone areas, prairies, moist disturbed sites. **Dist:** Se. VA and c. OK south to s. FL and c. and s. TX, south into Central America; West Indies. **Phen:** Aug-Nov. **Tax:** Excluded from the concept of *A. tenuispathus* is *A. eremicus* Wipff & Shaw (Wipff & Shaw 2018d), of sw. United States. **Syn:** = K4, Va, Sorrie (2020b) in Weakley et al (2020), Wipff & Shaw (2018d); = *Andropogon glomeratus* (Walter) Britton, Sterns, & Poggenburg var. *pumilus* Vasey ex Dewey – FIgr, FNA25, K1, K3, WH3, Campbell (1986); = *Andropogon glomeratus* (Walter) Britton, Sterns, & Poggenburg var. *pumilus* "robust variant" Vasey ex Dewey – Campbell (1983); < *Andropogon glomeratus* (Walter) Britton, Sterns, & Poggenburg – Bah, ETx1, HC, NcTx, S, Tx; < *Andropogon virginicus* Linnaeus – RAB.

Andropogon ternarius Michaux. SPLITBEARD BLUESTEM. **Hab:** Longleaf pine sandhills, dry to moist soils of woodlands and openings. **Dist:** DE west to KY and s. MO, south to FL and TX. **Phen:** Sep-Oct. **Tax:** *A. cabinisii* Hackel, sometimes treated as *A. ternarius* var. *cabinisii* (Hackel) Fernald & Griscom, is endemic in s. and c. peninsular FL. **Syn:** = HC, K4, S, Tx; = *Andropogon ternarius* var. *ternarius* – Ar, FIgr, FNA25, K1, Mo1, Va, Campbell (1983); < *Andropogon ternarius* Michaux – C, ETx1, G, IL, K3, NcTx, RAB, Tn, W, WH3; > *Andropogon ternarius* var. *glaucescens* (Lamson-Scribner) Fernald & Griscom – F; > *Andropogon ternarius* var. *ternarius* – F. **NatureServe G5T5?** (Secure).

Andropogon tracyi Nash. TRACY'S BLUESTEM. **Hab:** Dry sandy or clayey soils of longleaf pine sandhills, Florida scrub, disturbed sites. **Dist:** E. NC south to s. FL and west to MS. **Phen:** Sep-Nov. **Syn:** = FIgr, FNA25, HC, K1, K3, K4, S, WH3, Campbell (1983). **NatureServe G4?** (Apparently Secure).

Andropogon virginicus Linnaeus var. *1*. SMOOTH BLUESTEM. **Hab:** Longleaf pine savannas. **Dist:** NC south to peninsular FL, west to e. LA. Known from NC and SC (Berkeley and Marion counties; P. McMillan, pers. comm.). **Tax:** This entity has glaucous stem internodes and glabrous leaves. Although treated by Campbell (1983) as the informal 'smooth variant', decades of additional observations of this taxon by Southeastern Coastal Plain field botanists suggest that it warrants formal taxonomic recognition. **Syn:** = *Andropogon virginicus* Linnaeus var. *virginicus* "smooth variant" – Campbell (1983), Campbell (1986); < *Andropogon virginicus* Linnaeus – RAB, S; < *Andropogon virginicus* Linnaeus var. *virginicus* – FIgr, FNA25, HC, K1, K3, K4, WH3.

Andropogon virginicus Linnaeus var. *virginicus*. OLD-FIELD BROOMSTRAW, BROOMSEGE, "SEGE GRASS", "SAGE GRASS", "BROOM SAGE". **Hab:** Old fields, roadbanks, disturbed sites. **Dist:** MA west to MI and e. KS, south to FL and e. TX; West Indies; Central America. **Phen:** Sep-Oct (-Dec). **Tax:** Campbell (1983) recognized 3 'variants' within *A. virginicus* var. *virginicus*; the 'deceptive variant' he later (1986) described formally as var. *decipiens* (see above). The 'old-field variant' is the common 'variant' in much of our area, occurring abundantly and weedy. It has green stem internodes and the leaves usually pubescent, at least on the margins near the collar. The 'smooth variant' is known only from the Coastal Plain and is apparently rare in our area. **Syn:** = Ar, Mo1, NY; = *Andropogon virginicus* Linnaeus var. *virginicus* "oldfield variant" – Campbell (1983), Campbell (1986); < *Andropogon virginicus* Linnaeus – Bah, ETx1, IL, MI, NcTx, Pa, RAB, S, Tn, W; > *Andropogon virginicus* var. *tetrastachyus* (Elliott) Hackel – F; < *Andropogon virginicus* Linnaeus var. *virginicus* – C, FIgr, FNA25, G, HC, K1, K3, K4, NE, Tx, Va, WH3, WV; > *Andropogon virginicus* Linnaeus var. *virginicus* – F.

Anthenantia Palisot de Beauvois 1812 (SILKYSCALE)

A genus of 4-5 species, of se. North America and tropical America, if *Leptocoryphium* is included in *Anthenantia*, as it appears it should be (Acosta et al. 2014). Clayton & Renvoize (1986) state that "*Anthenantia* is the etymologically correct version of three alternative spellings given by

103. POACEAE

Beauvois". *Anthenantia* has a C4 photosynthetic pathway. References: Acosta et al (2014); Clayton & Renvoize (1986); Crins (1991); Kral (2004); Wipff & Shaw (2018e); Wipff (2003f) in FNA25 (2003a).

- 2 Leaves weakly if at all geniculate and auriculate at junction of blade and sheath, ascending to erect (lacking a sharp bend outward at the summit of the sheath), medium green; blade (3-) 4-8 (-10) mm wide, the proximal margins glabrous or sometimes ascending pilose-ciliate; pigmentation of leaves, spikelets and their trichomes variously reddish or purplish; fertile lemma red-brown to nearly black, leaf tip with a very short taper to a blunt or rounded apex; lower sheaths crowded and keeled (therefore distichous).....*Anthenantia rufa*
- 2 Leaves strongly geniculate and auriculate at junction of blade and sheath, spreading, usually squarrose (with a sharp bend outward at the summit of the sheath), yellowish green; blade 4-10 (-15) mm wide, the proximal margins ciliate at least basally with ascending strumose-hirsute cilia; pigment of leaves, spikelets and their trichomes usually with little or any red; fertile lemma brown; leaf tip with a long taper to a sharp apex; lower sheaths not crowded, keeled, or distichous*Anthenantia villosa*

Anthenantia rufa (Elliott) J.A. Schultes. PURPLE SILKYSKALE. **Hab:** Wet pine savannas in the outer Coastal Plain, seepage bogs and moist sandhill-pocosin ecotones in the fall-line sandhills. **Dist:** Se. NC south to n. FL and west to w. LA. **Phen:** Sep-Oct. **Comm:** *A. rufa* inhabits much wetter habitats than the similar *A. villosa*, and is more typical of the outer Coastal Plain. Plants without culms are reminiscent of the Liliaceae. **Syn:** = FIGr, FNA25, Kral (2004); = *Anthenantia rufa* (Elliott) J.A. Schultes – GW1, HC, K1, RAB, S, Tx, WH3, Crins (1991), orthographic variant; < *Anthenantia rufa* (Elliott) J.A. Schultes – K3, K4.

Anthenantia villosa (Michaux) Palisot de Beauvois. GREEN SILKYSKALE. **Hab:** Longleaf pine sandhills, especially in submesic swales. **Dist:** Se. NC south to s. FL and west to e. TX. **Phen:** Sep-Oct. **Comm:** *A. villosa* is found in drier habitats than *A. rufa*, most typically in upland swales in the sandhills. Kral (2004) has segregated a new species, *A. texana* Kral, of the w. Gulf Coastal plain, previously confused with *A. villosa*. **Syn:** = ETx1, FIGr, K3; = *Anthenantia villosa* var. *villosa* – K4; < *Anthenantia villosa* (Michaux) Palisot de Beauvois – HC, K1, RAB, S, Tx, WH3, Crins (1991), orthographic variant; < *Anthenantia villosa* (Michaux) Palisot de Beauvois – FNA25. NatureServe G4G5 (Apparently Secure).

***Anthoxanthum*** Linnaeus 1753 (VERNAL GRASS)

A genus of about 10 species (as here circumscribed to exclude *Hierochloe* and *Ataxia*), perennials and annuals, of temperate and Mediterranean Eurasia. Tucker (1996), Soreng et al. (2003), and Allred & Barkworth in FNA (2007a) all include *Hierochloe* into a more broadly circumscribed *Anthoxanthum*, but this has been challenged and now appears premature or unwise. We here follow a circumscription that accepts *Anthoxanthum* s.s., *Hierochloe*, and *Ataxia* (which does not occur in our area). References: Allred & Barkworth (2007) in FNA24 (2007a); Soreng et al (2003); Tucker (1996).

- 2 Annual, geniculate; ligules 0.5-2 mm long; glumes glabrous; leaves 1-2 mm wide.....*Anthoxanthum aristatum*
- 2 Perennial, erect; ligules (1-) 2-3 mm long; glumes villous throughout or at least on the keel; leaves 2-5 mm wide.....*Anthoxanthum odoratum*

* ***Anthoxanthum aristatum*** Boissier. ANNUAL VERNAL GRASS. **Hab:** Roadsides, disturbed areas. **Dist:** Native of Europe. **Phen:** Apr-Jun. **Tax:** This taxon has sometimes been treated at varietal or subspecific rank under *A. ovatum* Lagasca y Segura or under *A. odoratum* Linnaeus. Morphological, cytological, and molecular evidence are not in concordance, and it seems best to retain it at species rank and flexible affinities. **Syn:** = Ar, C, ETx1, FIGr, FNA24, G, HC, Il, K1, K4, Pa, RAB, S, Va, WH3, Tucker (1996); = *Anthoxanthum ovatum* Lagasca y Segura var. *aristatum* (Boissier) Pérez Lara – K3, NE, NY; = *Anthoxanthum puelii* Lecoq & Lamotte – F, WV. NatureServe G4G5 (Apparently Secure).

* ***Anthoxanthum odoratum*** Linnaeus. SWEET VERNAL GRASS. **Hab:** Lawns, roadsides, disturbed areas. **Dist:** Native of Europe. **Phen:** Apr-Jun. **Comm:** *A. odoratum* is a familiar grass of suburban areas and roadsides, and its pollen is known as a major cause of spring hay fever. From a letter from Charles Darwin to J.D. Hooker, in June 1855: "Have just made out my first grass, hurrah! hurrah! I must confess that fortune favours the bold, for, as good luck would have it, it was the easy *Anthoxanthum odoratum*: nevertheless it is a great discovery; I never expected to make out a grass in all my life, so hurrah! It has done my stomach surprising good...". **Syn:** = Ar, C, ETx1, F, FNA24, G, HC, Il, K3, Meso6, Mi, Mo1, NE, NY, Pa, RAB, S, Tn, Va, W, WV, Tucker (1996); = *Anthoxanthum odoratum* ssp. *odoratum* – K1. Aristida Linnaeus 1753 (THREE-AWN GRASS)

A genus of about 250-300 species, widespread in the tropics, subtropics, and warm temperate zones. Cerros-Tlatilpa, Columbus, & Barker (2011) discuss the phylogeny of the genus. References: Allred (1984); Allred (1985); Allred (1986); Allred (2003d) in FNA25 (2003a); Henrard (1929); Kesler, Anderson, & Hermann (2003); Peet (1993); Ward (2001).

Identification Notes: The awns must be dry and relatively mature to assume their characteristic positions (immature awns and moist mature awns are erect and parallel). It is sometimes useful to dry a collection unpressed. Beware, however, that drying followed by dispersal can take place very quickly under the right conditions (such as the dashboard of a hot car!).

- 1 Plant a perennial, forming dense tussocks, the leaves primarily basal, usually very numerous, mostly > 3 dm long, either 0.5-1.5 mm wide and almost always tightly involute, or 1-3 mm wide and flat or folded; flowering only in the growing season following fire. *Aristida beyrichiana*
- 1 Plant an annual or perennial, forming small tufts (or solitary), the leaves primarily cauline, usually few, mostly < 3 dm long (if as long as 3 dm then > 2 mm wide), flat to slightly folded, but not wiry; flowering not strongly triggered by fire.
 - 4 First glume 3-7 nerved.
 - 5 Central awn of the lemma (8-) 12-65 (-70) mm long, the lateral awns as long or nearly so *Aristida oligantha*
 - 5 Central awn of the lemma (9-) 12-25 (-30) mm long, the lateral awns 1-4 mm long (or even lacking) *Aristida ramosissima*
 - 4 First glume 1-2-nerved.
 - 6 Central awns spirally coiled at the base (above the awn column), like a corkscrew, ½ to 3 full turns (when dry).
 - 7 Lateral awns 5-13 mm long, spreading *Aristida basiramea*
 - 7 Lateral awns 1-4 mm long, erect
 - 8 First glume 1/2 to 2/3 as long as the second glume; lemma 6-11 mm long, glabrous to scaberulous *Aristida curtissii*
 - 8 First glume as long as or nearly as long as the second glume; lemma 3-8 mm long, sparsely appressed-pubescent *Aristida dichotoma*
 - 6 Central awns straight to curved (or contorted at the base).
 - 9 Lateral awns < ½ as long as the central awn.
 - 12 Lemmas 8-22 mm long; central awn curved ca. 180 degrees at the base *Aristida ramosissima*
 - 12 Lemmas 2.5-10 mm long; central awn curved ca. 90 degrees at the base.
 - 13 Central awn (8-) 12-27 mm long; lateral awns (1-) 6-18 mm long *Aristida geniculata*
 - 13 Central awn mostly 1-10 (-14) mm long; lateral awns 0-5 (-8) mm long *Aristida longespica*
 - 9 Lateral awns > ½ as long as the central awn.
 - 14 Sheaths lanose or floccose (the hairs kinked and intertwined); nodes of the panicle axis with tufts of lanose or floccose hairs *Aristida lanosa*
 - 14 Sheaths glabrous to pilose (the hairs straight and usually appressed, not intertwined); nodes of the panicle axis glabrous or pilose.
 - 15 Awn column (the connivent awns twisted together) or lemma beak (slender, narrowed, and twisted portion of lemma body below the awns) 7-30 mm long; lemma body (including the beak, if present) separated from the awns (or awn column) by an articulation zone, the awns (or awn column) disarticulating at maturity from the lemma.
 - 16 Panicle spiciform, broadest near the middle, dense, the spikelets overlapping strongly; awns (10-) 20-30 mm long, borne at the summit of a twisted lemma beak 7-30 mm long; culms simple or with very few branches; plants perennial *Aristida spiciformis* var. *spiciformis*
 - 16 Panicle almost corymbiform, broadest above the middle, open, the spikelets overlapping only slightly; awns 30-40 mm long, not including the 8-15 mm long column formed by the twisting together of the 3 awn bases; culms often much-branched; plants annual *Aristida tuberculosa*
 - 15 Awn column or lemma beak absent or < 7 mm long; lemma body not separated from the awns by an articulation zone.
 - 17 Main lower branches of the panicle divergent from the culm and with pulvini *Aristida purpurea* var. *longiseta*
 - 17 Main lower branches of the panicle (or pedicels in racemose species) ascending to appressed and lacking pulvini.
 - 18 Spikelets borne singly at each node of the main axis, the inflorescence thus a spike or raceme *Aristida mohrii*
 - 18 Spikelets 2 or more per node of the main axis at most nodes (a few nodes may have single spikelets), often with side branches present as well, the inflorescence thus a panicle (less commonly a raceme).
 - 20 Central awn 15-40 mm long; first glume prominently 2-keeled, (8-) 9-14 mm long when mature *Aristida palustris*
 - 20 Central awn 8-25 mm long; first glume either 1-keeled and 6-14 mm long, or weakly 2-keeled and 5.5-9 (-10) mm long when mature.
 - 21 Central awn about 2× as thick as the lateral awns, divergent to reflexed; first glume 1-keeled or weakly 2-keeled; [moist to wet habitats].
 - 22 Basal internode of the culm 0.3-0.6 mm wide; most nodes of the inflorescence with 1-2 spikelets; all awns spreading, the central spirally twisted basally and often contorted by as much as 180 degrees (best seen in fresh material); central awn 15-20 mm long, lateral awns 11-16 mm long, the ratio of the lateral:central awn length 0.69-0.80; lemma callus beard 0.6-1.0 mm long *Aristida simpliciflora*
 - 22 Basal internode of the culm 0.7-1.2 mm wide; most nodes of the inflorescence with 3 or more spikelets; central awn spreading to slightly deflexed, not spirally twisted basally, the lateral awns ascending to erect (best seen in fresh material); central awn 13-22 mm long, lateral awns 8-15 mm long, the ratio of the lateral:central awn length 0.55-0.69; lemma callus beard 0.2-0.6 mm long *Aristida virgata*
 - 21 Central awn < 1.5× as thick as the lateral awns, erect to divergent; first glume 1-keeled (rarely weakly 2-keeled); [dry habitats].
 - 23 Culms mostly > 10 dm tall and 3-6 mm in diameter near the base; awns 8-15 mm long; panicle branches > 4 cm long; callus ca. 1.0 mm long *Aristida condensata*
 - 23 Culms 5-8 (-10) dm tall and 1-4 mm in diameter near the base; awns 12-25 mm long; panicle branches 1-4 cm long; callus 0.4-0.8 mm long.
 - 24 First glume 1-4 mm longer than the second glume (rarely about equal to it); awns 15-25 mm long, straight or slightly contorted at the base; leaf blades 1-3 mm wide, usually curling *Aristida purpurascens*
 - 24 First glume shorter than or about equal to the second glume; awns 12-18 mm long, spirally contorted at the base; leaf blades about 1 mm wide, usually not curling *Aristida tenuispica*

Aristida basiramea Engelman ex Vasey. FORKTIP THREE-AWN. **Hab:** Sandy soils; introduced eastwards. **Dist:** Native of mw. United States. ME and ON south to SC (FNA), AL, TX, and CO (FNA). **Phen:** Jul-Oct. **Syn:** = ETx1, F, FIgr, FNA25, G, HC, IL, K1, K3, K4, Mi, Mo1, NcTx, NE, NY; = *Aristida basiramea* var. *basiramea* – C; < *Aristida basiramea* Engelman ex Vasey – Tx.

Aristida beyrichiana Trinius & Ruprecht. SOUTHERN WIREGRASS. **Hab:** Sandhills, savannas, from very dry to seasonally saturated soils. **Dist:** S. SC south to s. FL, west to s. MS. **Phen:** Sep-Nov. **Comm:** See Peet (1993) for discussion of the taxonomy and ecology of this species; also see comments under *A. stricta*, which also apply here. Ward (2001) proposes varietal status for *A. stricta* and *A. beyrichiana*. **Syn:** = K1, K3, K4, Peet (1993); = *Aristida stricta* Michaux var. *beyrichiana* (Trinius & Ruprecht) D.B. Ward – WH3, Ward (2001); < *Aristida stricta* Michaux – FNA25, GW1, HC, RAB, S, Allred (1986), Kesler, Anderson, & Hermann (2003).

Aristida condensata Chapman. BIG THREE-AWN. **Hab:** Dry sandy soils of longleaf pine sandhills, sandy pine rocklands of s. FL. **Dist:** Sc. NC south to s. FL, west to s. MS (Sorrie & Leonard 1999). **Phen:** Aug-Oct. **Syn:** = FIgr, FNA25, HC, K1, K3, K4, RAB, S, WH3, Allred (1986). NatureServe G4? (Apparently Secure).

Aristida curtissii (A. Gray ex S. Watson & Coulter) Nash. CURTISS'S THREE-AWN. **Hab:** Roadsides, disturbed areas, bare eroding soil. **Dist:** ME west to WY, south to n. FL, AR, OK, and CO, perhaps largely or adventive east of the Mississippi River. **Phen:** Jul-Oct. **Tax:** See Allred (1986) for a discussion of the rationale for reducing *A. curtissii* to a variety of *A. dichotoma*. Cronquist (1991) reduces it to a variety of the more western *A. basiramea* Engelman ex Vasey. For now, and for simplicity, I prefer to retain the two as species. **Syn:** = G, HC, IL, K4, RAB, S, Va; = *Aristida basiramea* Engelman ex Vasey var. *curtissii* (A. Gray ex S. Watson & Coulter) Shinnars – Ar, C; = *Aristida dichotoma* Michaux var. *curtissii* A. Gray – F, FIgr, FNA25, K1, K3, Pa, Tn, W, WH3, WV, Allred (1986); < *Aristida basiramea* Engelman ex Vasey – Tx.

Aristida dichotoma Michaux. FORK-TIP THREE-AWN. **Hab:** Roadsides, fields, disturbed areas, bare eroding soil. **Dist:** ME west to WI, south to n. FL and TX. **Phen:** Aug-Nov. **Comm:** See *A. curtissii* for comments. **Syn:** = C, ETx1, G, HC, IL, K4, Mi, Mo1, NcTx, RAB, S, Tx, Va; = *Aristida dichotoma* var. *dichotoma* – Ar, F, FIgr, FNA25, K1, K3, NE, NY, Pa, Tn, W, WH3, WV, Allred (1986). NatureServe G5T5? (Secure).

Aristida geniculata Rafinesque. NORTHEASTERN SLIM-SPIKE THREE-AWN. **Hab:** Dry open habitats, disturbed areas. **Dist:** The distribution and habitats of *A. geniculata* and *A. longespica* in our area are poorly known, pending further field and herbarium investigation. **Phen:** Aug-Oct. **Comm:** The phylogenetic study of Cerros-Tlatilpa, Columbus, & Barker (2011) suggests that this taxon is not closely related to *A. longespica*, and should be given species rank. **Syn:** = NY; = *Aristida longespica* var. *geniculata* (Rafinesque) Fernald – Ar, C, ETx1, FIgr, HC, K1, Mo1, NcTx, NE, Pa, Va, WH3; > *Aristida intermedia* Lamson-Scribner & C.R. Ball – F, G, S, Tx; > *Aristida intermedia* var. *intermedia* – IL; < *Aristida longespica* Poiret – RAB, W, WV; > *Aristida longespica* Poiret – G, Tx; < *Aristida longespica* var. *geniculata* (Rafinesque) Fernald – FNA25, K3, Allred (1986); > *Aristida longespica* var. *geniculata* (Rafinesque) Fernald – F, IL.

Aristida lanosa Muhlenberg ex Elliott. WOOLLYSHEATH THREE-AWN. **Hab:** Dry sandy soils of longleaf pine sandhills and fields. **Dist:** NJ south to FL, west to TX, north in the interior to MO and OK. **Phen:** Aug-Nov. **Comm:** Var. *macera*, usually dismissed as yet another Fernaldian "variety" known only from se. VA, needs further evaluation. **Syn:** = Ar, C, ETx1, FIgr, FNA25, IL, K1, K3, K4, NcTx, RAB, S, Tn, Tx, Va, WV, Allred (1986); > *Aristida lanosa* var. *lanosa* – F, G, HC; > *Aristida lanosa* var. *macera* Fernald & Griscom – F, G, HC. NatureServe G5 (Secure).

Aristida longespica Poiret. SOUTHEASTERN SLIM-SPIKE THREE-AWN. **Hab:** Disturbed areas. **Dist:** The distribution and habitats of *A. geniculata* and *A. longespica* in our area are poorly known, pending further field and herbarium investigation. **Phen:** Aug-Oct. **Syn:** = NY, S; = *Aristida longespica* var. *longespica* – Ar, C, ETx1, F, FIgr, FNA25, HC, K1, K3, Mo1, NcTx, NE, Pa, Va, WH3, Allred (1986); ~ *Aristida gracilis* Ell.; < *Aristida longespica* Poiret – G, RAB, Tx, W, WV; > *Aristida longespica* var. *longespica* – IL; < *Aristida longespica* – Mi, orthographic variant. NatureServe G5T5? (Secure).

Aristida mohrii Nash. MOHR'S THREE-AWN. **Hab:** Longleaf pine sandhills, Florida scrub, dry pine flatwoods. **Dist:** Panhandle FL and sw. GA west to s. AL; apparently disjunct in SC (Chesterfield and Richland counties). **Phen:** Aug-Oct. **Syn:** = FIgr, FNA25, HC, K1, K3, K4, S, WH3, Allred (1986). NatureServe G1 (Critically Imperiled).

Aristida oligantha Michaux. PRAIRIE THREE-AWN. **Hab:** Rock outcrops in thin soil, roadsides, fields, disturbed areas. **Dist:** VT west to SD, south to FL and TX, scattered elsewhere as a weed. **Phen:** May-Nov. **Syn:** = Ar, C, ETx1, F, FIgr, FNA25, G, HC, IL, K1, K3, K4, Mi, Mo1, NcTx, NE, NY, Pa, RAB, S, Tn, Tx, Va, W, WH3, WV, Allred (1986). NatureServe G5 (Secure).

Aristida palustris (Chapman) Vasey. LONGLEAF THREE-AWN. **Hab:** Wet pine savannas and flatwoods, limesink depressions. **Dist:** Se. NC south to FL, west to TX; apparently disjunct on the Cumberland Plateau of KY. **Phen:** Aug-Oct. **Syn:** = C, ETx1, FIgr, FNA25, K1, K3, K4, S, WH3, Allred (1986); = *Aristida affinis* (J.A. Schultes) Kunth – F, G, GW1, HC, RAB, Tx, misapplied. NatureServe G4 (Apparently Secure).

Aristida purpurascens Poiret. ARROWFEATHER. **Hab:** Dry habitats, especially in dry sandy or rocky soils. **Dist:** MA west to WI and KS, south to FL and TX. **Phen:** Aug-Oct (-Jul). **Comm:** In the Sandhills of NC and SC occurring in two forms, one green, the other strongly glaucous-blue. **Syn:** = C, G, HC, IL, Mi, NcTx, Pa, RAB, S, Tx, Va, W, WV; = *Aristida purpurascens* var. *purpurascens* – Ar, ETx1, FIgr, FNA25, K1, K3, K4, Mo1, NE, NY, Tn, WH3, Allred (1986); > *Aristida purpurascens* var. *minor* Vasey – F; > *Aristida purpurascens* var. *purpurascens* – F. NatureServe G5T5 (Secure).

 (see introduction for more)

***Aristida purpurea* Nuttall var. *longiseta* (Steudel) Vasey.** RED THREE-AWN. **Hab:** Rocky and sandy areas, eastwards adventive in disturbed areas. **Dist:** MB west to BC, south to TX, CA, and Mexico; adventive eastwards. Also reported from NC, but the collection is from a Soil Conservation Service test nursery, and there is no evidence of naturalization. **Phen:** Aug-Oct. **Syn:** = C, ETx1, FNA25, K1, K3, K4, NcTx, Allred (1986); = *Aristida longiseta* Steudel – G, HC, Tx; > *Aristida longiseta* var. *robusta* Merrill – F. **NatureServe G5T5?** (Secure).

***Aristida ramosissima* Engelman ex A. Gray.** S-CURVE THREE-AWN. **Hab:** Pine flatwoods, dry upland soils. **Dist:** OH, s. IN, s. IL, c. MO. se. KS south to Pamhandle FL (Bay County) (Wunderlin & Hansen 2011), nc. MS (Morris & MacDonald 2012), LA, and c. TX. **Phen:** Aug-Oct. **Syn:** = Ar, C, ETx1, F, FlGr, FNA25, G, HC, IL, K1, K3, K4, Mo1, S, Tn, Tx; > *Aristida ramosissima* var. *chaseana* Henrard – WH3. **NatureServe G5** (Secure).

***Aristida simpliciflora* Chapman.** SOUTHERN THREE-AWN, CHAPMAN'S THREE-AWN. **Hab:** Wet pine savannas. **Dist:** Sw. GA west through the FL Panhandle and c. AL to s. MS (Sorrie & Leonard 1999), and south into c. peninsular FL; northward apparently as a rarity in se. NC and e. SC. **Phen:** Oct-Nov. **Comm:** SC (Berkeley County) (McMillan & Porcher 2005) and se. NC. *A. simpliciflora* was believed to be a Gulf Coastal Plain endemic until found by R. LeBlond in 1999 in wet savannas in se. NC (Green Swamp savannas, Brunswick County; Old Dock Savanna, Columbus County; and The Neck Savanna, Pender County). It is reported for sw. GA (Jones & Coile 1988, Kartesz 1999). Harper also reports it for c. GA. **Syn:** = FlGr, FNA25, HC, K1, K3, K4, S, WH3, Allred (1986). **NatureServe G3G4** (Vulnerable).

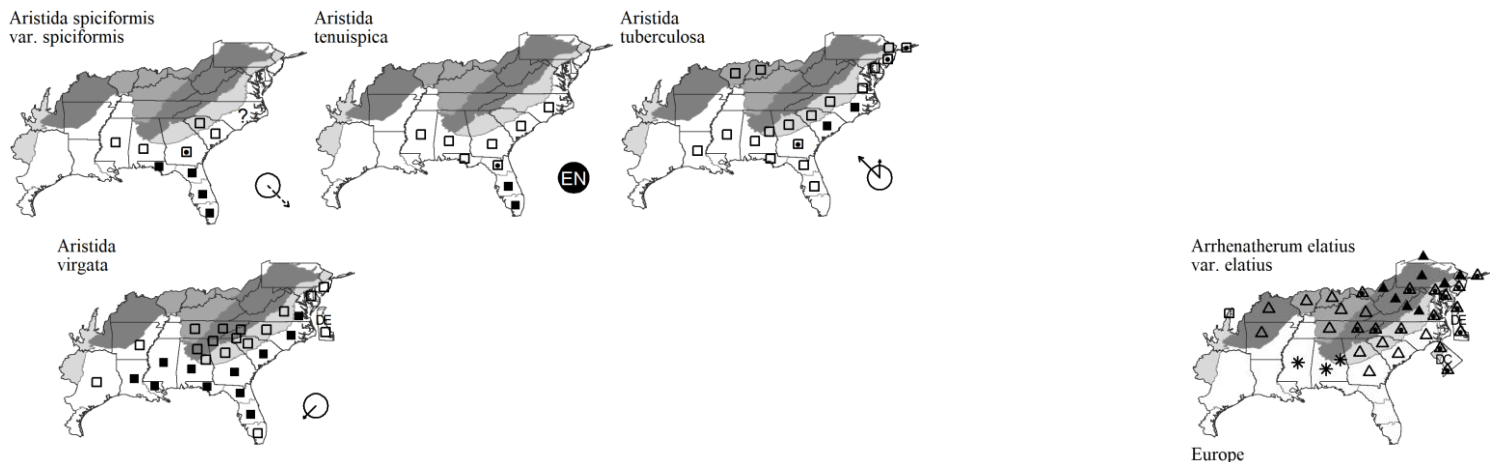

***Aristida spiciformis* Elliott var. *spiciformis*.** BOTTLEBRUSH THREE-AWN, SPIKE THREE-AWN. **Hab:** Wet pine savannas and seepage areas. **Dist:** E. SC (McMillan et al. 2002) south to s. FL, west to MS; West Indies (Cuba, Puerto Rico). **Phen:** Aug-Oct. **Comm:** Allred (1986) also reports this species from NC, but the documentation is unknown to me. A second variety, var. *antillarum* Catasús, is endemic to Cuba and Puerto Rico. **Syn:** = WI; < *Aristida spiciformis* – FNA25, GW1, HC, K1, K4, RAB, S, WH3, Allred (1986).

***Aristida tenuispica* A.S. Hitchcock.** SOUTHERN ARROWFEATHER. **Hab:** Pine flatwoods, Florida wet prairies, other sandy habitats. **Dist:** NC south to FL and west to MS. **Phen:** Jun-Dec. **Syn:** = HC, S; = *Aristida purpurascens* Poiret var. *tenuispica* (A.S. Hitchcock) Allred – FlGr, FNA25, K1, K3, K4, WH3, Allred (1986).

***Aristida tuberculosa* Nuttall.** DUNE THREE-AWN, SAND THREE-AWN, SEASIDE NEEDLEGRASS. **Hab:** Longleaf pine sandhills, coastal dunes, other dry, sandy habitats such as sandy roadsides. **Dist:** Se. NH south to NJ and disjunct in e. VA in the outer Coastal Plain; from sc. NC south to c. FL and Panhandle FL, west to s. MS (Sorrie & Leonard 1999), mostly in the inner Coastal Plain; and also near the Great Lakes in sw. MI, n. IN, n. IL, s. WI, se. MN, and e. IA. **Phen:** Aug-Oct. **Comm:** The curious trimodal distribution is unexplained. Voss & Reznicek (2012) comment that "the distinctive twisted column of awns is shorter in material from near the head of Lake Michigan than in specimens from the East Coast of the United States". **Syn:** = C, F, FNA25, G, HC, IL, K1, K3, K4, Mi, NE, NY, RAB, S, Va, WH3, Allred (1986). **NatureServe G5** (Secure).

***Aristida virgata* Trinius.** **Hab:** Moist to wet pine savannas, wet pine flatwoods, mountain bogs (Henderson Co., NC), other moist habitats. **Dist:** S. NJ south to FL, west to TX, primarily on the Coastal Plain; Central America. **Phen:** Jul-Nov. **Tax:** The phylogenetic study of Cerros-Tlatilpa, Columbus, & Barker (2011) appears to confirm that this taxon is not closely related to *A. purpurascens*, and should therefore be accorded species rank. **Syn:** = C, F, G, GW1, HC, RAB, S, Tx, Va; = *Aristida purpurascens* Poiret var. *tenuispica* (A.S. Hitchcock) Allred – Meso6, misapplied; = *Aristida purpurascens* Poiret var. *virgata* (Trinius) Allred – Ar, ETx1, FlGr, FNA25, K1, K3, K4, Tn, WH3, Allred (1986).

***Arrhenatherum* Palisot de Beauvois 1812 (FALSE OATGRASS)**

A genus of about 6 species, perennials, of the Mediterranean region and e. Asia. References: Hatch (2007b) in FNA24 (2007a); Tucker (1996).

***Arrhenatherum elatius* (Linnaeus) Palisot de Beauvois ex J. Presl & C. Presl var. *elatius*.** TALL OATGRASS. **Hab:** Meadows, fields, roadsides. **Dist:** Native of Europe. **Phen:** May-Jun. **Comm:** Documented for SC (Bradley et al. [in prep.]). **Syn:** = Ar, C, F, G, HC, K1, K3, K4, Mo1, S, Va, WV,

Arthraxon Palisot de Beauvois 1812 (BASKET GRASS)

A genus of about 7 species, annuals and perennials, native of the tropical and subtropical Old World. References: Kiger (1971); Thieret (2003d) in FNA25 (2003a); van Welzen (1981).

Identification Notes: Sometimes confused (especially before flowering) with *Microstegium*, but *Arthraxon* has distinctly cordate-clasping leaves, which *Microstegium* lacks. Also vegetatively similar to *Oplismenus*.

E. and se. Asia

* *Arthraxon hispidus* (Thunberg) Makino var. *hispidus*. BASKET GRASS. **Hab:** Moist ditches, bottomlands, disturbed areas. **Dist:** Native of se. Asia. **Phen:** Sep-Nov. **Comm:** Like *Microstegium*, *Arthraxon* is steadily and aggressively increasing its abundance across most of our region. **Syn:** = ETx1, FNA25, NY, Va, van Welzen (1981); < *Arthraxon hispidus* – C, FlGr, GW1, IL, K1, K3, Mo1, NE, Pa, TN, WH3, Kiger (1971); > *Arthraxon hispidus* var. *cryptatherus* (Hackel) Honda – F, G, HC, RAB, W.

Arundinaria Michaux 1803 (CANE)

Contributed by Alan S. Weakley and Jimmy K. Triplett

A genus of 3 species, woody grasses (bamboos), native of se. United States. *Arundinaria* was much reduced by the foraging of free-range livestock in the eighteenth and early nineteenth centuries and by fire suppression in the late nineteenth century and throughout the twentieth century.

"Canebrakes," large areas dominated by cane, were described in many historical accounts and apparently occupied large parts of the landscape of the Coastal Plain, also occurring in the Piedmont and low Mountains. References: Clark & Triplett (2007) in FNA24 (2007a); Judziewicz et al (2000); McClure (1963); McClure (1973); Triplett, Weakley, & Clark (2006); Tucker (1988); Ward (2009c).

Unkeyed taxa: *Arundinaria species 1*

- 1 Primary branches with 0-1 compressed basal internodes (in the basalmost 1 cm or so); culm internodes usually sulcate (with a groove extending upward from the node, sometimes partly obscured by the branch); culm leaves deciduous; culms to 10 m tall; rhizomes lacking air canals; foliage leaf blades 0.8-1.3 cm wide *Arundinaria gigantea*
- 1 Primary branches with 2-5 compressed basal internodes (in the basalmost 1 cm or so); culm internodes usually terete; culm leaves persistent to tardily deciduous; culms to 4 m tall; rhizomes with or without longitudinal air canals (visible in cross-section as a cylinder of hollow canals 1 mm or less from the outer surface); foliage leaf blades 0.8-2 cm wide. *Arundinaria tecta*

Arundinaria gigantea (Walter) Muhlenberg. GIANT CANE, RIVER CANE. **Hab:** Bottomland and riparian forests, lower slopes and bluffs along streams, seeps, stream banks, and extending into less mesic and even dry settings on circumneutral or alkaline soils over limestone or dolomite, or in loess deposits along the Mississippi River. **Dist:** S. OH south to FL and e. TX. **Phen:** Apr-Jul. **Tax:** There has been much disagreement over the recognition of one, two, or several taxa of cane in the Southeastern United States. This species reaches heights of 6-7 (-10) m and is supposed to flower only once every 40-50 years. *A. macrosperma* Michaux is controversial; it has sometimes been considered to be a synonym of *A. gigantea* or to represent hybridization or introgression between *A. gigantea* and *A. tecta*. **Syn:** = F, FlGr, FNA24, HC, IL, K3, K4, Mo1, NcTx, S, TN, Va, WV, Triplett, Weakley, & Clark (2006), Tucker (1988); = *Arundinaria gigantea* ssp. *gigantea* – ETx1, K1, McClure (1973); = *Arundinaria macrosperma* Michaux – Ward (2009c); < *Arundinaria gigantea* (Walter) Muhlenberg – C, GW1, RAB, WH3; > *Arundinaria gigantea* ssp. *gigantea* – Judziewicz et al (2000); > *Arundinaria gigantea* (Walter) Muhlenberg ssp. *macrosperma* (Michaux) McClure – Judziewicz et al (2000).

Arundinaria species 1. ALABAMA CANE. **Hab:** As far as known, endemic to AL. **Comm:** This species seems to be a stabilized species of hybrid origin between *A. gigantea* and *A. tecta*. Under study by Jimmy Triplett. {not yet keyed}.

Arundinaria tecta (Walter) Muhlenberg. SWITCH CANE, SMALL CANE, MUTTON GRASS. **Hab:** Pine savannas, pocosins, canebrakes, blackwater swamps, Piedmont seeps, generally (but not solely) in wetlands. **Dist:** Primarily of the Southeastern Coastal Plain, but extending to the eastern Gulf Coastal plain and also Piedmont: e. MD to FL and s. AL. **Phen:** Apr-Jul. **Tax:** *A. tecta* is a smaller plant than *A. gigantea* (normally 1-2 m tall, but reaching heights of up to 4 m where fire-suppressed), and flowers more frequently, supposedly every 3-4 years (Tucker 1988), probably actually in response to fire. Taxon sampling suggests that even if *A. tecta* was at one time distributed west along the coastal plain from Florida to Louisiana, many contemporary populations of switch-cane-like plants may in fact be admixed with *A. gigantea*. Additional investigations are necessary to determine the extent to which *A. tecta* in the Gulf Coast region has been replaced by hybrids (see *Arundinaria species 1*). **Syn:** = FlGr, FNA24, K3, K4, TN, Va, Triplett, Weakley, & Clark (2006); = *Arundinaria gigantea* (Walter) Muhlenberg – Ward (2009c); = *Arundinaria gigantea* (Walter) Muhlenberg var. *tecta* (Walter) Lamson-Scribner; < *Arundinaria gigantea* (Walter) Muhlenberg – C, GW1, RAB, WH3; < *Arundinaria gigantea* ssp. *tecta* (Walter) McClure – K1, Judziewicz et al (2000), McClure (1973); < *Arundinaria tecta* (Walter) Muhlenberg – F, HC, S, Tucker (1988). NatureServe G5T5 (Secure).

Arundo Linnaeus 1753 (GIANT REED)

A genus of 3 species, widespread in the tropics, subtropics and warm-temperate areas. References: Allred (2003b) in FNA25 (2003a); Hardion et al (2014).

* *Arundo donax* Linnaeus. GIANT REED. **Hab:** Roadsides, waste dumps, other disturbed areas. **Dist:** Native of the Old World (most likely w. Asia) (Hardion et al. 2014). **Phen:** Sep-Aug. **Tax:** Horticultural forms with leaves transversely striped white and green have been treated as var. *versicolor*, but are better considered as only a form or cultivar. **Syn:** = Ar, Bah, ETx1, F, FlGr, FNA25, Il, K1, K3, K4, Meso6, Mo1, NcTx, RAB, S, Tn, Tx, Va, WH3; > *Arundo donax* var. *donax* – HC; > *Arundo donax* var. *versicolor* (P. Miller) Stokes – HC.

*Avena* Linnaeus 1753 (OATS)

A genus of about 29 species, native of temperate and boreal Eurasia and n. Africa. References: Baum (2007) in FNA24 (2007a); Tucker (1996).

- 1 Florets disarticulating from the glumes at maturity (the glumes remaining attached to the plant); lemmas pubescent with brown hairs; lemmas with long bent awns; callus bearded with hairs up to ¼ as long as the lemmas..... *Avena fatua*
 1 Florets not disarticulating from the glumes at maturity; lemmas glabrous or scabrous (rarely sparsely strigose); lemmas unawned or with relatively straight awns; callus glabrous..... *Avena sativa*

* *Avena fatua* Linnaeus. WILD OATS. **Hab:** Disturbed areas. **Dist:** Native of Europe and c. Asia. **Phen:** May-Sep. **Comm:** {needs herbarium checks; no records shown on VA Atlas}. **Syn:** = Ar, C, ETx1, F, FNA24, G, HC, Il, K1, K3, K4, Meso6, Mi, NcTx, NE, NY, Pa, WH3; = *Avena fatua* var. *fatua* – Mo1, Tx. NatureServe GNR (Not Yet Ranked).

* *Avena sativa* Linnaeus. OATS. **Hab:** Fields and disturbed areas, commonly planted but not long-persistent. **Dist:** Native of Middle East. **Phen:** Mar-Jul. **Comm:** An important crop, but apparently only a weed until transported from the Middle East to the moister central Europe, where cultivated beginning about 3000 BP (Hancock 2004). **Syn:** = Ar, ETx1, FlGr, FNA24, G, HC, Il, K1, K3, K4, Meso6, Mi, NcTx, NE, NY, Pa, RAB, S, Tn, W, Tucker (1996); = *Avena fatua* ssp. *sativa* – Tx; = *Avena fatua* Linnaeus) var. *sativa* (Linnaeus) Haussknecht – Mo1; > *Avena sativa* var. *orientalis* (Schreber) Alefeld – F; > *Avena sativa* var. *sativa* – F. NatureServe GNR (Not Yet Ranked).

*Axonopus* Palisot de Beauvois 1812 (CARPETGRASS)

A genus of ca. 100 species, primarily tropical and subtropical. Phylogenetic studies suggest that *Axonopus* may be included in *Paspalum*. References: Barkworth (2003n) in FNA25 (2003a).

- 1 Spikelets 4-6 mm long..... *Axonopus furcatus*
 1 Spikelets 1.5-2.8 mm long.
 2 Spikelets 2.0-3.5 mm long; leaf blades mostly (3-) 8-10 (-20) mm wide..... *Axonopus compressus*
 2 Spikelets 1.5-2.2 (-2.8) mm long; leaf blades mostly 2-4 (-6) mm wide..... *Axonopus fissifolius*

Axonopus compressus (Swartz) Palisot de Beauvois. SOUTHERN CARPETGRASS, TROPICAL CARPETGRASS. **Hab:** Moist disturbed areas, lawns. **Dist:** Probably native in the se. United States, from SC south to s. FL, west to TX; West Indies; Mexico to South America. Reported for VA by Hitchcock & Chase (1951). **Phen:** May-Nov. **Comm:** Sometimes used as a lawn grass in the deep South. **Syn:** = Bah, ETx1, FNA25, GW1, HC, K1, K3, K4, Meso6, S, Tx, WH3; = *Anastrophus compressus* (Swartz) Schlechtendal; = *Paspalum compressum* (Swartz) Raspail; > *Anastrophus platycaulis* (Poiret) Nash. NatureServe G5 (Secure).

Axonopus fissifolius (Raddi) Kuhlmann. COMMON CARPETGRASS. **Hab:** Pine flatwoods, sandy forests, fields, roadsides, lawns. **Dist:** VA south to FL, west to TX and OK, and extending into tropical America (to Argentina). **Phen:** May-Dec. **Syn:** = Ar, ETx1, FlGr, FNA25, K1, K3, K4, Meso6, NcTx, Va, WH3; = *Paspalum fissifolium* Raddi; ? *Axonopus affinis* Chase – GW1, HC, RAB, Tx, W. NatureServe G5 (Secure).

Axonopus furcatus (Flüggé) A.S. Hitchcock. BIG CARPETGRASS. **Hab:** Maritime forests, other sandy forests, bottomlands, roadsides, calcareous wet meadows, lawns. **Dist:** Se. VA south to FL, west to TX and AR, mainly Coastal Plain but scattered inland; apparently adventive in e. MD (Knapp et al. 2011). **Phen:** Mar-Dec. **Syn:** = Ar, C, ETx1, F, FlGr, FNA25, G, GW1, HC, K1, K3, K4, RAB, S, Tx, Va, WH3; = *Paspalum furcatum* Flüggé; > *Anastrophus paspaloides* (Michaux) Nash. NatureServe G5 (Secure).

103. POACEAE

*Beckmannia* Host 1805 (SLOUGH GRASS)

A genus of 2 species, of the temperate Northern Hemisphere. References: Hatch (2007a) in FNA24 (2007a).

* *Beckmannia syzigachne* (Steudel) Fernald. AMERICAN SLOUGH GRASS. **Hab:** Exposed reservoir shores and bottoms, disturbed areas. **Dist:** NL (Labrador) and NS west to YT and AK, south to ME, NY, n. OH, IL, KS, NM, AZ, and CA; disjunct in sw. TN and n. MS; Asia. Scattered occurrences south and east of its main distribution are likely adventive introductions by waterfowl or humans. Reported for Hardin County, TN (K3, FNA). Uncommon on an exposed reservoir bottom in n. MS with *Alopecurus carolinianus* (J.R. Rigby, pers.comm., April 2017). **Phen:** Mar-Sep. **Syn:** = C, F, FNA24, G, IL, K3, K4, Mi, NE, NY. NatureServe G5 (Secure).

*Bothriochloa* Kuntze 1891 (BEARDGRASS, CANE BLUESTEM)

A genus of ca. 35 species, widespread in tropical and subtropical regions of the Old and New World. References: Allred & Gould (1983); Allred (2003g) in FNA25 (2003a); Scrivanti & Antón (2011); Vega (2000).

- 1 Sessile spikelets 4.5-8.5 mm long *Bothriochloa barbinodis*
- 1 Sessile spikelets 3-4.5 mm long.
 - 3 Pedicellate spikelets much shorter than the sessile spikelets.
 - 4 Panicles reddish when mature; hairs below the sessile spikelets sparse and ca. 1/4 as long as the spikelets, not obscuring the spikelets *Bothriochloa bladhii*
 - 4 Panicles silvery-white or tannish when mature, hairs below the sessile spikelets dense and > 1/2 as long as the spikelets, somewhat obscuring the spikelets
 - 5 Panicles 4-12 (-14) cm long; sessile spikelets 3-4× as long as thick; leaves basally disposed; culm usually < 2 mm in diameter *Bothriochloa torreyana*
 - 5 Panicles 9-20 cm long; sessile spikelets 4-6× as long as thick; leaves evenly distributed on the culm; culm usually 2-4 mm in diameter *Bothriochloa longipaniculata*
 - 3 Pedicellate spikelets about as long as the sessile spikelets.
 - 6 Rachises longer than the branches *Bothriochloa bladhii*
 - 6 Rachises shorter than the branches.
 - 7 Lower glumes of the sessile spikelets with a dorsal pit *Bothriochloa pertusa*
 - 7 Lower glumes of the sessile spikelets without a dorsal pit *Bothriochloa ischaemum* var. *songarica*

Bothriochloa barbinodis (Lagasca y Segura) Herter. CANE BLUESTEM, PINHOLE BLUESTEM. **Hab:** Sandy or rocky limestone soils, eastward in disturbed areas, including roadsides. **Dist:** OK and TX west to CA, south into Mexico. **Phen:** May-Oct. **Syn:** = FIGr, FNA25, K1, K3, K4, WH3; > *Andropogon barbinodis* Lagasca y Segura – HC; > *Andropogon perforatus* Trinius ex E. Fournier – HC; > *Bothriochloa barbinodis* var. *barbinodis* – ETx1, NcTx, Tx; > *Bothriochloa barbinodis* (Lagasca y Segura) Herter var. *perforata* (Trinius ex E. Fournier) Gould – ETx1, NcTx, Tx; > *Bothriochloa perforata* (Trinius ex E. Fournier) Herter – Vega (2000). NatureServe G5 (Secure).

* *Bothriochloa bladhii* (Retzius) S.T. Blake. AUSTRALIAN BLUESTEM. **Hab:** Road medians, pastures, other disturbed areas. **Dist:** Native of subtropical Asia and Africa. Reported from e. TN (according to specimen cited by FNA and Z) and Alachua County, FL. **Phen:** Jun-Dec. **Syn:** = Ar, ETx1, FIGr, FNA25, IL, K1, K3, K4, Mo1, WH3, Vega (2000); = *Bothriochloa intermedia* (R. Brown) A. Camus – Tx.

* *Bothriochloa ischaemum* (Linnaeus) Keng var. *songarica* (Ruprecht ex Fischer & C.A. Meyer) Celarier & Harlan. KING RANCH BLUESTEM, KR BLUESTEM, YELLOW BLUESTEM. **Hab:** Highway medians and margins, other disturbed places. **Dist:** Native of s. Europe and w. Asia. Reported for SC (Kartesz 1999) and GA (Carter, Baker, & Morris 2009). Reported for s. MO (Thomas 2017). "This species, along with *B. laguroides* [torreyana], appear to be spreading steadily, especially along the I-81 corridor where they are conspicuous during the late Summer and Fall flowering and fruiting season" (Virginia Botanical Associates 2019). **Phen:** May-Nov (-Apr). **Syn:** = ETx1, K1, NcTx, Tx, WH3, Vega (2000); < *Andropogon ischaemum* Linnaeus – HC; < *Bothriochloa ischaemum* – Ar, FIGr, FNA25, K3, K4. NatureServe G5TNR (Not Yet Ranked).

Bothriochloa longipaniculata (Gould) Allred & Gould. LONGSPIKE SILVER BLUESTEM. **Hab:** Grasslands, woodlands, disturbed areas, roadsides. **Dist:** LA to TX, south to Mexico and Panama. Reported for GA (Zomlefer et al. 2018). Reported for SC Coastal Plain (Bradley et al. [in prep.]). **Phen:** May-Nov. **Syn:** = ETx1, FNA25, K1, K3, K4; = *Bothriochloa saccharoides* (Swartz) Rydberg var. *longipaniculata* (Gould) Gould – Tx; < *Andropogon saccharoides* Swartz – HC. NatureServe G4 (Apparently Secure).

* *Bothriochloa pertusa* (Linnaeus) A. Camus. PITTED BLUESTEM. **Hab:** Disturbed areas, especially over calcareous substrates (like roadsides, pastures, and disturbed prairies of the Black Belt). **Dist:** Native of Eurasia. Introduced at scattered sites in e. North America, including FL, LA, MD, MS (FNA, Kartesz 1999), and AL (Diamond, England, & Dykes 2013). **Phen:** Oct-Jan. **Syn:** = Bah, FIGr, FNA25, K1, K3, K4, Tx, WH3, Vega (2000); = *Andropogon pertusus* (Linnaeus) Willdenow – HC. NatureServe GNR (Not Yet Ranked).

103. POACEAE

Bothriochloa torreyana (Steudel) Scriver & Antón. SILVER BLUESTEM. **Hab:** Dry, sandy prairies and other grasslands, eastwards in road medians and other disturbed areas. **Dist:** MO and NV south to w. LA, TX, CA, and Mexico; adventive elsewhere (the exact boundaries of the native distribution obscure). Reported for SC (Kartesz 1999), ne. GA (Jones & Coile 1988; Allred & Gould 1983), e. TN, and c. TN (Chester et al. 1993), s. MO (Thomas 2017), in some cases as *B. saccharoides* var. *torreyana*. **Phen:** May-Nov. **Tax:** The morphological distinctions and geography provide a strong basis for treating this taxon at specific rank, a case argued for and with additional chemical evidence by Scriver & Antón (2011). **Syn:** = Scriver & Antón (2011); = *Bothriochloa laguroides* (A.P. de Candolle) Herter ssp. *torreyana* (Steudel) Allred & Gould – Ar, ETx1, FlGr, FNA25, K1, K3, K4, Mo1, NcTx, Tn, WH3, Allred & Gould (1983), Vega (2000); = *Bothriochloa saccharoides* (Swartz) Rydberg var. *torreyana* (Steudel) Gould – Tx; < *Andropogon saccharoides* Swartz, misapplied; < *Bothriochloa laguroides* – Il. **NatureServe G5T5** (Secure).

***Bouteloua*** Lagasca y Segura 1805 (GRAMA)

A genus of about 40 species, of the Western Hemisphere. The genus has recently been treated broadly, as by Peterson, Romaschenko, & Herrera Arrieta (2015), but Wipff (2021) and others prefer narrower genera. Sectional classification follows Peterson, Romaschenko, & Herrera Arrieta (2015). References: Columbus (1999); Gould (1979); Herrera Arrieta, Peterson, & de la Cerda Lemus (2004); Peterson, Romaschenko, & Herrera Arrieta (2015); Snow (2003c) in FNA25 (2003a); Wipff (2003b) in FNA25 (2003a); Wipff (2021).

Bouteloua curtipendula (Michaux) Torrey var. *curtipendula*. SIDE-OATS GRAMA. **Hab:** Prairies, dry rocky slopes and bluffs over calcareous rocks (such as limestone, dolomite, or calcareous shale) or ultramafic rocks (such as serpentine or metabasalt), limestone glades. **Dist:** S. CT west to MT, south to VA, e. TN, nw. GA, AL, Panhandle FL (Gadsden County), TX, AZ, and CA; also in Central and South America. The older literature refers to *B. curtipendula* as introduced in SC, but the single specimen documenting its occurrence there appears to be from experimental plantings at Clemson University; there is apparently no evidence of its establishment there. *B. curtipendula* is now sometimes included in seed mixes, and appears as a waif or short-term introduction, including in the Piedmont of SC (K. Bradley, pers.comm., 2020). *B. curtipendula* occurs on serpentine in the Piedmont of GA (J. Allison, pers. comm.). **Phen:** Jul-Sep. **ID Notes:** Var. *caespitosa* Gould & Kapadia is caespitose rather than rhizomatous and enters our region only along its western edge. **Syn:** = Ar, C, ETx1, FlGr, FNA25, K1, K3, K4, Mo1, NcTx, NE, NY, Tx, Va, Gould (1979); < *Antheropogon curtipendulus* (Michaux) Fournier; < *Bouteloua curtipendula* – F, G, HC, Il, Mi, Pa, RAB, S, Tn, Tx, W, WH3, WV, Peterson, Romaschenko, & Herrera Arrieta (2015). **NatureServe G5T5** (Secure).

***Brachyelytrum*** Palisot de Beauvois 1812 (SHORTHUSK)

The only other species of the genus is *B. japonicum* Hackel, of s. Japan, Korea, and ec. China (Saarela et al. 2003, Tucker 1988). References: Campbell, Garwood, & Specht (1986); Saarela et al (2003); Stephenson & Saarela (2007) in FNA24 (2007a); Stephenson (1971); Tucker (1988); Voss (1972).

Brachyelytrum erectum (Schreber) Palisot de Beauvois. COMMON SHORTHUSK. **Hab:** Mesic forests, in the Mountains at lower elevations than *B. aristosum*. **Dist:** MA, NY, OH, MI, and s. WI south to Panhandle FL and e. TX. **Phen:** Jun-Aug. **Syn:** = Ar, ETx1, FlGr, FNA24, Il, K1, K3, K4, Mi, Mo1, NE, NY, Pa, Tn, Va, WH3, WV, Saarela et al (2003), Tucker (1988); = *Brachyelytrum erectum* var. *erectum* – C, F; < *Brachyelytrum erectum* (Schreber) Palisot de Beauvois – G, HC, RAB, S, W.

***Brachypodium*** Palisot de Beauvois 1812

A genus of about 18 species, mainly Mediterranean Europe and n. Africa. References: Piep (2007) in FNA24 (2007a).

* ***Brachypodium pinnatum*** (Linnaeus) Palisot de Beauvois. HEATH FALSE BROME, TOR GRASS. **Syn:** = FNA24, K3, K4, NE. **NatureServe GNR** (Not Yet Ranked).

Eurasia

Briza Linnaeus 1753 (QUAKING GRASS)

A genus of 3 species, annuals and perennials, native of Eurasia. The genus is here circumscribed following Essi, Longhi-Wagner, & de Souza-Chies (2017), removing the South American species often formerly included. References: Essi, Longhi-Wagner, & de Souza-Chies (2017); Isabel, Quintanar, & Medina (2018); Snow (2007a) in FNA24 (2007a); Tkach et al (2020); Tucker (1996).

* ***Briza minor*** Linnaeus. LESSER QUAKING GRASS. **Hab:** Fields, roadsides, powerline rights-of-way, other disturbed areas. **Dist:** Native of Europe. **Phen:** Apr-Jun. **Syn:** = Ar, C, ETx1, F, FNA24, G, GW1, HC, II, K1, K3, K4, Meso6, NcTx, NE, RAB, S, Tx, Va, WH3, Essi, Longhi-Wagner, & de Souza-Chies (2017), Isabel, Quintanar, & Medina (2018), Tucker (1996). **NatureServe GNR** (Not Yet Ranked).

*Bromus* Linnaeus 1753 (BROME-GRASS, BROME)

A genus of about 150 species, north temperate and South American. References: McKenzie & Ladd (1995); McNeill (1976); Pavlick & Anderton (2007) in FNA24 (2007a); Pavlick (1995); Sales (1993); Sales (1994); Tucker (1996).

Unkeyed waifs: *Bromus carinatus* var. *marginatus*, *Bromus madritensis*

- 1 Lemmas compressed and strongly keeled (the whole spikelet thus strongly laterally flattened); first glume 3-9-nerved; [section *Ceratochloa*] *Bromus catharticus* var. *catharticus*
- 1 Lemmas rounded or weakly keeled (the whole spikelet therefore terete to somewhat laterally flattened); first glume either 3-5-nerved or 1-3-nerved.
 - 2 First glume 3-5 nerved (at least 3 nerves well-developed).
 - 4 Panicle compact, the lateral branches erect or ascending, the pedicels < 10 mm long (shorter than the spikelets) *Bromus hordeaceus* ssp. *hordeaceus*
 - 4 Panicle relatively open, the lateral branches erect, ascending, or spreading, the pedicels > 15 mm long (longer than the spikelets).
 - 6 Margins of the lemmas involute in fruit, wrapping around the grain, exposing the rachilla *Bromus secalinus*
 - 6 Margins of the lemmas gaping, overlapping in fruit.
 - 8 Panicle branches stiff; lemma awns 5-12 mm long, straight *Bromus commutatus*
 - 8 Panicle branches flexuous and lax; lemma awns 7-15 mm long, flexuous *Bromus japonicus*
 - 2 First glume 1 (-3) nerved (only 1 nerve well-developed).
 - 9 Longer lemma awns 10-60 mm long; plants annual; [introduced species of disturbed habitats]; [section *Genea*].
 - 11 First glume 13-20 mm long; second glume 20-30 mm long; lemma awns 35-60 mm long *Bromus rigidus*
 - 11 First glume 5-14 mm long; second glume 8-17 mm long; lemma awns 10-30 mm long.
 - 9 Longer lemma awns 1-6 (-8) mm long; plants perennial; [native and introduced species, collectively of disturbed and natural habitats]; [section *Bromopsis*].
 - 13 Plants with creeping rhizomes, forming clonal colonies; both surfaces of leaves glabrous or glabrescent *Bromus inermis*
 - 13 Plants not strongly rhizomatous, the stems solitary or tufted; surfaces of leaf blades usually pubescent (sometimes sparsely so).
 - 14 Pedicels erect or ascending, mostly shorter than the spikelet; leaves 2-3 mm wide; [introduced, of disturbed habitats] *Bromus erectus*
 - 14 Pedicels ascending at first, later arching-drooping, mostly longer than the spikelet; leaves 4-15 mm wide; [native, mostly of forests].
 - *Bromus pubescens*

* ***Bromus carinatus*** Hooker & Arnott var. *marginatus* (Nees) Barkworth & Anderton. MOUNTAIN BROME. **Dist:** Reported by Jones & Coile (1988) for nc. GA and by FNA for MS. **Comm:** {not yet keyed}. **Syn:** = FNA24, K3; = *Bromus marginatus* Nees – K1, NE; = *Bromus sitchensis* Trinius var. *marginatus* (Nees ex Steudel) Boivin – K4; < *Bromus carinatus* – Meso6; > *Bromus carinatus* – II; < *Bromus catharticus* – C; > *Bromus marginatus* Nees – II.

* ***Bromus catharticus*** Vahl var. *catharticus*. RESCUE GRASS. **Hab:** Cultivated fields, roadsides, disturbed areas. **Dist:** Native of South America. **Phen:** Mar-Jul. **Syn:** = FNA24, K4, Va; ? *Bromus catharticus* – Ar, ETx1, F, FlGr, G, HC, II, K1, Meso6, NcTx, RAB, Tn, W, WH3, Pavlick (1995), Tucker (1996); ? *Bromus unioloides* Kunth – S; > *Bromus willdenowii* Kunth – C, Mo1. **NatureServe GNRTNR** (Not Yet Ranked).

* ***Bromus commutatus*** Schrader. HAIRY CHESS, MEADOW BROME. **Hab:** Disturbed areas. **Dist:** Native of Europe. The relationship and relative distribution of this species and *Bromus racemosus* is poorly known for our area. **Phen:** Apr-Aug. **Comm:** See *Bromus racemosus* for further comments. **Syn:** = Ar, C, F, FlGr, FNA24, HC, II, K1, Mi, Mo1, NE, NY, Pa, S, Tn, Tx, WH3, WV, Pavlick (1995), Tucker (1996); < *Bromus commutatus* Schrader – RAB; < *Bromus racemosus* Linnaeus – G, K3, K4, W.

* ***Bromus erectus*** Hudson. SHORT-BRANCHED BROME. **Hab:** Disturbed areas. **Dist:** Native of Europe. **Syn:** = C, F, FNA24, G, HC, II, K1, K3, K4, Mi, NE, NY, S, WV, Pavlick (1995); = *Bromopsis erecta* (Hudson) Fourrier. **NatureServe GNR** (Not Yet Ranked).

* ***Bromus hordeaceus*** Linnaeus ssp. *hordeaceus*. SOFT CHESS, LOPGRASS. **Hab:** Fields, disturbed areas. **Dist:** Native of Europe. **Phen:** Jun-Jul. **Comm:** See Bradley et al. [in prep.] for discussion about its occurrence in SC. **Syn:** = Ar, FNA24, II, K1, K3, K4, Mi, Mo1, NE, NY, Va, Pavlick (1995); < *Bromus hordeaceus* – C, ETx1, NcTx, Pa, Tn, Tucker (1996); ? *Bromus mollis* Linnaeus – F, G, HC, RAB, misapplied.

NatureServe GNRTNR (Not Yet Ranked).

Bromus secalinus

Bromus tectorum

Cenchrus Linnaeus 1753 (BURGRASS, SANDSPUR)

A genus of about 90-150 species, primarily tropical and subtropical. The circumscription of *Cenchrus* is here treated broadly, including *Pennisetum* (Chemisquy et al. 2010). Others have disagreed, including Wipff & Shaw (2018a), who prefer to treat our species in *Cenchrus* s.s., *Pennisetum*, and *Cenchropsis*. References: Chemisquy et al (2010); Crins (1991); Donadio et al (2009); Herrera Arrieta & Peterson (2018); Stieber & Wipff (2003) in FNA25 (2003a); Verloove (2012); Ward (2010b); Wipff & Shaw (2018a); Wipff (2003k) in FNA25 (2003a).

Identification Notes: Spikelets of *Cenchrus* are subtended by an involucre of spines and/or bristles which are (in many of our species) fused into a bur. Bristles are narrow-based and terete. Spines are broad-based, and somewhat flattened (not terete) in cross-section, at least basally.

Unkeyed taxa: *Cenchrus polystachios* ssp. *setosus*

1 Bristles plumose or antrorsely scabrous, free or fused < ½ their lengths.

2 Primary bristles (immediately subtending each spikelet) scabrous.

..... *Cenchrus purpureus*

2 Primary bristles conspicuously long-ciliate.

- 5 Fascicles not disarticulating from the rachises; fascicles 33-160 per cm of inflorescence; panicles 4-200 cm long; leaves 7-70 mm wide *Cenchrus americanus*
- 5 Fascicles disarticulating from the rachises at maturity; fascicles 8-37 per cm of inflorescence; panicles 2-32 cm long; leaves 2-13 mm wide.
- 7 Inner bristles fused for $<1/4$ of their length; many outer bristles exceeding the spikelets; terminal bristles 10.5-23 mm long, noticeably longer than the other bristles in the fascicle..... *Cenchrus ciliaris*
- 7 Inner bristles fused for $1/3-1/2$ of their length; outer bristles not exceeding the spikelets; terminal bristles 2.9-6.5 mm long, usually not noticeably exceeding the other bristles in the fascicle..... *Cenchrus setiger*
- 1 Bristles glabrous, retrorsely scabrous, or strigose, usually at least some bristles fused $> 1/2$ their lengths.
- 9 Spines in a single whorl, subtended by numerous smaller, narrower, free outer bristles..... *Cenchrus echinatus*
- 9 Spines in multiple whorls or irregular in their disposition (if few and in a single whorl, then not subtended by smaller, narrower bristles).
- 12 Plants perennial, long-lived, clump-forming; burs not imbricate, usually glabrous; leaf blades 1-3.5 mm wide..... *Cenchrus gracillimus*
- 12 Plants annual or perennial, short-lived and not clump-forming; burs imbricate, usually pubescent, leaf blades (1-) 3-14.2 mm wide.
- 13 Burs (excluding the spines) 9-16 mm long, 4-6 mm wide, the spines 4-8 mm long; spikelets 1 (-2) per bur, concealed; leaf blades 3-14 mm wide..... *Cenchrus tribuloides*
- 13 Burs (excluding the spines) 5.5-12 mm long, 2.5-6 mm wide, the spines 2-7 mm long; spikelets 2-4 per bur, exserted at the tip; leaf blades 1-5 (-7) mm wide.
- 14 Spines stout, 6-10 (-40), 2-5 mm long; spikelets 3.5-6 mm long..... *Cenchrus incertus*
- 14 Spines slender, 45-75, 3.5-7 mm long; spikelets 6-8 mm long..... *Cenchrus longispinus*

* *Cenchrus americanus* (Linnaeus) Morrone. PEARL MILLET. **Hab:** Fallow fields, other disturbed areas. **Dist:** Native of the Old World (Africa and tropical Asia). **Phen:** May-Dec. **Syn:** = FlGr, K3, K4, Chemisquy et al (2010); = *Cenchrus spicatus* (Linnaeus) Cavanilles – Verloove (2012); = *Pennisetum americanum* (Linnaeus) Leeke; = *Pennisetum glaucum* (Linnaeus) R. Brown – ETx1, FNA25, HC, IL, K1, RAB, Tn, Va, WH3; = *Setaria glauca* (Linnaeus) Palisot de Beauvois – WV; ? *Chaetochloa lutescens* (Weigel) Stuntz – S; > *Pennisetum americanum* (Linnaeus) Leeke ssp. *americanum* – Mo1.

* *Cenchrus ciliaris* Linnaeus. BUFFELGRASS. **Hab:** Disturbed areas. **Dist:** Native of Africa. **Phen:** Apr-Nov. **Syn:** = Bah, FlGr, K3, K4, Mo1, Tx, Chemisquy et al (2010); = *Pennisetum ciliare* (Linnaeus) Link – ETx1, FNA25, HC, Wipff & Shaw (2018a); = *Pennisetum ciliare* var. *ciliare* – K1. NatureServe GNR (Not Yet Ranked).

Cenchrus echinatus Linnaeus. SOUTHERN SANDSPUR, BRISTLY SANDSPUR, HEDGEHOG GRASS, CADILLO. **Hab:** Fields, roadsides, disturbed areas. **Dist:** NC (and DC?) south to FL, west to CA, south into the tropical America. The basis for the record for w. VA in FNA is not clear. **Phen:** Jun-Oct (-May). **Syn:** = Bah, C, ETx1, FlGr, FNA25, HC, K1, K3, K4, NcTx, RAB, S, Tx, WH3, Crins (1991), Ward (2010b). NatureServe G5 (Secure).

Cenchrus gracillimus Nash. SANDHILL SANDSPUR. **Hab:** Longleaf pinelands, other sandy habitats. **Dist:** N. FL, s. and e. GA, s. AL, and s. MS; West Indies (Cuba, Jamaica). **Syn:** = Bah, FNA25, HC, K1, K4, S, WH3, Ward (2010b). NatureServe G4? (Apparently Secure).

Cenchrus incertus M.A. Curtis. COASTAL SANDSPUR, GRASSBUR. **Hab:** Fields, roadsides, disturbed areas. **Dist:** VA south to FL, west to AR and KS; West Indies; Mexico to South America. **Phen:** (May-) Jul-Oct. **Tax:** Ward (2010b) argues convincingly that the name *C. spinifex* is very uncertainly applied to our species and should not be taken up. **Syn:** = Bah, C, F, G, HC, K3, K4, RAB, S, Tx, Va, Crins (1991), Ward (2010b); = *Cenchrus spinifex* Cavanilles – Ar, ETx1, FlGr, FNA25, K1, NcTx, NE, NY, Tn, WH3. NatureServe GNR (Not Yet Ranked).

Cenchrus longispinus (Hackel) Fernald. NORTHERN SANDSPUR, COMMON SANDSPUR. **Hab:** Fields, roadsides, disturbed areas, lawns. **Dist:** ME west to OR, south to FL, TX, and CA. **Phen:** May-Oct. **Syn:** = Ar, C, ETx1, F, FlGr, FNA25, IL, K1, K3, K4, Mi, Mo1, NcTx, NE, NY, Pa, RAB, Tn, Tx, Va, W, Crins (1991); = *Cenchrus pauciflorus* Benth – G, HC, S, WV, misapplied. NatureServe G5 (Secure).

* *Cenchrus polystachios* (Linnaeus) O. Morrone ssp. *setosus* (Swartz) P.M. Peterson & Y. Herrera. MISSION GRASS. **Hab:** Pine flatwoods, moist disturbed pastures, and roadsides. **Dist:** Native of tropical Africa. **Phen:** Jun-Nov. **Comm:** Considered invasive in our area. **Syn:** = Herrera Arrieta & Peterson (2018); = *Pennisetum polystachion* (Linnaeus) Schultes ssp. *setosum* (Swartz) Brunken – FNA25; < *Cenchrus polystachios* (Linnaeus) O. Morrone – K3, K4; < *Cenchrus polystachos* – FlGr, orthographic error; < *Pennisetum polystachion* (Linnaeus) J.A. Schultes.

* *Cenchrus purpureus* (Schumacher) Morrone. ELEPHANT GRASS, NAPIER GRASS. **Hab:** Swamps, wet grasslands, disturbed areas. **Dist:** Native of Africa. Naturalized in FL north to the FL-GA border, and in AL (Diamond & Woods 2009). **ID Notes:** A giant grass, to 4 m tall. **Syn:** = K3, K4, Chemisquy et al (2010), Verloove (2012); = *Pennisetum purpureum* Schumacher – Bah, ETx1, FNA25, HC, K1, WH3. NatureServe GNR (Not Yet Ranked).

* *Cenchrus setiger* Vahl. **Hab:** Disturbed areas. **Dist:** Native of Africa. Known in our area from ne. FL, ec. MS, and se. and s. TX. **Syn:** = Chemisquy et al (2010); = *Cenchrus setigerus* – K3, K4; = *Pennisetum ciliare* (Linnaeus) Link var. *setigerum* (Vahl) Leeke – K1; = *Pennisetum setigerum* (Vahl) J. Wipff – FNA25, Wipff & Shaw (2018a). NatureServe GNR (Not Yet Ranked).

Cenchrus tribuloides Linnaeus. DUNE SANDSPUR. **Hab:** Dunes, sandy fields, sandy woodlands in the outer Coastal Plain. **Dist:** NY (Long Island) south to FL, west to TX, south into tropical America. **Phen:** Aug-Oct. **Comm:** This is the sandspur so familiar to (and disliked by) beachgoers in much of our area. **Syn:** = Bah, C, F, FlGr, FNA25, HC, K1, K3, K4, NY, Pa, RAB, S, Va, W, WH3, Crins (1991), Ward (2010b). NatureServe G5 (Secure).

103. POACEAE

*Chasmanthium* Link 1827 (SPANGLEGRASS, SPIKEGRASS)

A genus of 5 species, perennials, endemic to se. North America. References: Sánchez-Ken & Clark (2003) in FNA25 (2003a); Wipff & Jones (1994); Yates (1966a); Yates (1966c).

- 1 Panicle branches elongate, pendulous; spikelets (15-) 20-40 mm long, with 6-20 flowers *Chasmanthium latifolium*
- 1 Panicle branches short, erect or ascending; spikelets 5-18 mm long, with 2-8 (-11) flowers.
- 2 Fully-developed spikelets 12-18 mm long, 8-12 mm wide. *Chasmanthium ornithorhynchum*
- 2 Fully-developed spikelets 4-9 mm long, 3-7 mm wide.
- 4 Collar (junction of leaf and sheath) glabrous or nearly so; leaves 3-7 mm wide *Chasmanthium laxum*
- 4 Collar (junction of leaf and sheath) pilose; leaves 6-12 mm wide. *Chasmanthium sessiliflorum* var. *sessiliflorum*

Chasmanthium latifolium (Michaux) Yates. RIVER OATS, FISH-ON-A-STRINGER. **Hab:** Riverbanks, streambanks, bottomland forests, seepages and glades over mafic or calcareous rock, usually in nutrient-rich soils, also now cultivated widely as a native plant ornamental, but can be quite aggressive. **Dist:** NJ, OH, IL, and KS south to ne. and Panhandle FL and TX. **Phen:** Jun-Oct. **Syn:** = Ar, C, ETx1, FIGr, FNA25, GW1, IL, K1, K3, K4, Mi, Mo1, NcTx, Pa, Tn, Tx, Va, W, WH3, Yates (1966a), Yates (1966c); = *Uniola latifolia* Michaux – F, G, HC, RAB, S, WV. **NatureServe G5** (Secure).

Chasmanthium laxum (Linnaeus) Yates. SLENDER SPIKEGRASS. **Hab:** Savanna-pocosin ecotones, sandhill-pocosin ecotones, moist hardwood swamps, other moist habitats. **Dist:** S. NY, KY, and OK south to s. FL and e. TX. **Phen:** May-Oct. **Comm:** See *C. sessiliflorum* for comments on the suggestion that these two taxa are only varietally or subspecifically distinct. **Syn:** = Ar, C, ETx1, FNA25, GW1, K1, K3, K4, NY, Pa, Tn, Tx, Va, W, Yates (1966a), Yates (1966c); = *Chasmanthium laxum* ssp. *laxum* – Mo1; = *Chasmanthium laxum* var. *laxum* – NcTx, WH3, Wipff & Jones (1994); = *Uniola laxa* (Linnaeus) Britton, Sterns, & Poggenburg – F, G, HC, RAB, S. **NatureServe G5** (Secure).

Chasmanthium ornithorhynchum (Steudel) Yates. BIRDBILL SPIKEGRASS. **Hab:** Blackwater swamp forests. **Dist:** S. AL and w. FL Panhandle west to e. LA (Florida Parishes). Also reported for NC and SC (FNA 2003a; Kartesz 2020), apparently in error, as no evidence has been found to support a distribution in the Carolinas. **Phen:** Jun-Sep. **Syn:** = FIGr, FNA25, GW1, K1, K3, K4, WH3, Yates (1966a), Yates (1966c); = *Uniola ornithorhyncha* Steudel – S. **NatureServe G4** (Apparently Secure).

Chasmanthium sessiliflorum (Poirét) Yates var. *sessiliflorum*. LONGLEAF SPIKEGRASS. **Hab:** Moist to dryish hardwood forests, swamps, other moist habitats. **Dist:** Se. VA, n. TN, n. AR, and e. OK south to sc. peninsular FL and ec. TX. **Phen:** Aug-Oct. **Tax:** This species and *C. laxum* are morphologically somewhat similar, but their treatment as infrataxa of a single species is completely unwarranted. They frequently co-occur (especially on the Gulf Coastal Plain), growing side by side, and show no sign of intergradation. **Syn:** < *Chasmanthium laxum* ssp. *sessiliflorum* (Poirét) L.G. Clark – Mo1; < *Chasmanthium laxum* (Linnaeus) Yates var. *sessiliflorum* (Poirét) L. Clark – NcTx, WH3, Wipff & Jones (1994); < *Chasmanthium sessiliflorum* (Poirét) Yates – Ar, C, FIGr, FNA25, GW1, K1, K3, K4, Tn, Tx, Va, W, Yates (1966a), Yates (1966c); < *Uniola longifolia* Lamson-Scribner – S; < *Uniola sessiliflora* Poirét – F, G, HC, RAB.

*Chloris* Swartz 1788 (FINGER-GRASS, CHLORIS)

A genus of 55-60 species, annuals or perennials, mainly tropical and Southern Hemisphere. References: Barkworth (2003e) in FNA25 (2003a); Peterson, Romaschenko, & Herrera Arrieta (2015); Wipff & Shaw (2018a).

Unkeyed taxa: *Chloris barbata*, *Chloris gayana*

Unkeyed waifs: *Chloris pectinata*

Chloris barbata Swartz. SWOLLEN WINDMILL-GRASS. **Hab:** Lower Rio Grande Valley; eastwards in disturbed areas, waste areas near wool-combing mills. **Dist:** Native of West Indies, e. Mexico, Central America, and South America. **Phen:** Jan-Dec. **Syn:** = Bah, FIGr, FNA25, K1, K3, K4, WH3; = *Chloris inflata* Link – Tx. **NatureServe G5?** (Secure).

***Cinna*** Linnaeus 1753 (WOODREED)

A genus of about 4 species, of temperate Eurasia, North America, and South America. References: Brandenburg & Thieret (2000); Brandenburg (2007c) in FNA24 (2007a); Brandenburg, Blackwell, & Thieret (1991); Tucker (1996).

Cinna arundinacea Linnaeus. COMMON WOODREED, SWEET WOODREED. **Hab:** Bottomland forests, rocky bars in rivers, tidal freshwater marshes, other low, wet habitats. **Dist:** NB and MN south to s. GA (Carter, Baker, & Morris 2009) and TX. **Phen:** Jul-Oct. **Syn:** = Ar, C, ETx1, FNA24, G, GW1, IL, K1, K3, K4, Mi, Mo1, NE, NY, Pa, RAB, S, Tn, Tx, Va, W, WV, Tucker (1996); > *Cinna arundinacea* var. *arundinacea* – F, HC; > *Cinna arundinacea* var. *inexpansa* Fernald & Griscom – F, HC.

***Coix*** Linnaeus 1753 (JOB'S-TEARS)

A genus of about 5 species, native to tropical Asia. References: Thieret (2003g) in FNA25 (2003a).

* ***Coix lacryma-jobi*** Linnaeus. JOB'S-TEARS. **Hab:** Disturbed areas, perhaps merely a waif. **Dist:** Native of tropical Asia. Reported for se. PA (Rhoads & Block 2007), TN (Thieret in FNA 2003a), c. KY (Kartesz 2010), and s. NJ (Kartesz 1999; Kartesz 2010). **Phen:** Jul-Sep. **Syn:** = ETx1, FNA25, K1, K3, K4, NY, Pa, S. NatureServe GNR (Not Yet Ranked).

***Coleataenia*** Grisebach 1879

Contributed by Richard J. LeBlond

A genus of 8 species, perennials, of s. North America and the West Indies to South America. Named as *Sorengia* by Zuloaga, Scataglini, & Morrone (2010), but this name proved to be illegitimate, and was replaced by *Coleataenia* (Soreng 2010). References: Freckmann & Lelong (2003c) in FNA25 (2003a); LeBlond (2018a) in Weakley et al (2018a); Lelong (1986); Mabberley (2020); Soreng (2010); Weakley et al (2011); Zuloaga & Morrone (1996); Zuloaga, Scataglini, & Morrone (2010).

- 1 Glumes and sterile lemmas not keeled along midvein; apices of fertile lemmas glabrous; panicle < 1 cm wide, 3-12 cm long; leaf blades 4-19 cm long, 1-4 mm wide, involute at maturity; culms wiry..... ***Coleataenia tenera***
- 1 Glumes and sterile lemmas keeled along midvein; apices of fertile lemmas with a minute tuft of stiff hairs; panicles < 1 to > 20 cm wide, 9-40 cm long; leaf blades 8-50 cm long, 2-12 mm wide, flat (sometimes drying involute); culms wiry to stout.
 - 2 Plants with rhizomes; fertile lemma 1.6-4.0 mm long.
 - 3 Rhizomes short and stout, usually < 4 cm long, > 4 mm wide and ascending; spikelets (2.5-) 2.7-3.9 mm long, acuminate, often falcate distally; first glume with 3-5 prominent nerves; leaves to 50 cm long and 18 mm wide..... ***Coleataenia anceps* ssp. *anceps***
 - 3 Rhizomes long and slender, usually > 3 cm long, < 5 mm wide and spreading; spikelets 2.2-2.8 mm long, acute to short-acuminate, not noticeably falcate distally; first glume with 1-3 prominent nerves; leaves to 30 (-40) cm long and 10 mm wide..... ***Coleataenia anceps* ssp. *rhizomata***
 - 2 Plants with hard crowns, caespitose, lacking rhizomes; fertile lemma 1.2-2.0 mm long.
 - 5 Ligule of white hairs 0.5-3 mm long; culms to 1 m long; cauline blades 2-8 mm wide, usually pilose adaxially near the base; spikelets 2.0-4.0 mm long; upper leaves usually shorter than the panicle.
 - 6 Ligules 0.5-1.5 mm long; spikelets 2.4-4.0 mm long, 3.5-5× as long as wide, erect on pedicels; first glume 1.3-2.9 mm long, > 1/2-3/4 as long as the spikelet..... ***Coleataenia longifolia* ssp. *combsii***
 - 6 Ligules 1-3 mm long; spikelets 2.4-4.0 mm long, 2.5-4 × as long as wide, often obliquely set on pedicels; first glume 0.9-1.4 mm long, about 2/5-1/2 as long as the spikelet..... ***Coleataenia longifolia* ssp. *longifolia***
 - 5 Ligule a tawny membrane 0.5-1.0 mm long, often erose or lacerate, or with a minute ciliate fringe; culms to 1.8 m long; cauline blades 4-12 mm wide, usually glabrous; spikelets 1.6-2.8 mm long; upper leaves usually equaling or exceeding the panicle.
 - 7 Spikelets 2.4-2.8 mm long, long-acuminate, usually < 0.7 mm wide; fertile lemma often conspicuously stipitate..... ***Coleataenia pulchra***

Ctenium Panzer 1813 (TOOTHACHE GRASS)

A genus of about 20-22 species, of tropical and subtropical Africa and the Americas. References: Barkworth (2003h) in FNA25 (2003a); Longhi-Wagner & Renvoize (2004).

Ctenium aromaticum (Walter) Alph. Wood. TOOTHACHE GRASS, ORANGE GRASS, WILD GINGER. **Hab:** Wet savannas, pocosin-savanna ecotones, seepage bogs, sandhill-pocosin ecotones, sandhill seeps. **Dist:** Southeastern Coastal Plain endemic: se. VA south to FL and west to LA and e. TX (Singhurst, Keith, & Holmes 2005). **Phen:** May-Aug (or later in response to late summer fires). **Comm:** The entire plant is aromatic and numbs the mouth, tongue, and lips when chewed, hence the specific epithet and common names. Like many species of the longleaf pine ecosystem, toothache grass generally flowers only following fire (MacRoberts & MacRoberts 1992). Sterile clumps can be recognized by the rather broad, bicolored leaves (bluish on the upper surface, bright green on the lower surface). **Syn:** = C, F, FIGr, FNA25, G, GW1, HC, K1, K3, K4, RAB, Va, WH3; = *Campulosus aromaticus* (Walter) Trinius – S. NatureServe G5 (Secure).

Cynodon L.C. Richard 1805 (BERMUDA GRASS)

A genus of ca. 9 species, native to the tropical Old World. References: Barkworth (2003i) in FNA25 (2003a).

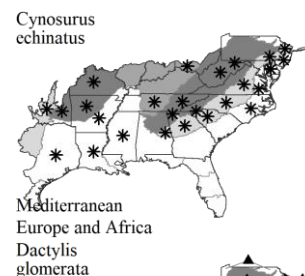

* ***Cynodon dactylon*** (Linnaeus) Persoon. BERMUDA GRASS, SCUTCH GRASS. **Hab:** Lawns, gardens, roadsides, pastures, fields, disturbed areas. **Dist:** Native of Eurasia. **Phen:** May-Oct. **Tax:** *C. dactylon* is here treated broadly; various authors have recognized additional taxa at specific or varietal rank (see discussion in FNA). **Syn:** = Ar, Bah, C, ETx1, F, G, HC, Il, K1, K3, Meso6, Mi, Mo1, NcTx, Pa, RAB, Tn, Tx, W, WH3, WV; < *Capriola dactylon* (Linnaeus) Kuntze – S; > *Cynodon affinis* Caro & Sanchez; > *Cynodon dactylon* var. *affinis* (Caro & Sanchez) Romero Zarco – K4; < *Cynodon dactylon* var. *dactylon* – K4; > *Cynodon dactylon* var. *dactylon* – FNA25, NE, NY, Va. NatureServe GNRTNR (Not Yet Ranked).

Cynosurus Linnaeus 1753 (DOGTAIL)

A genus of 8 species, annuals and perennials, native of the Mediterranean region and w. Asia. References: Long (2007) in FNA24 (2007a); Tucker (1996).

* ***Cynosurus echinatus*** Linnaeus. ROUGH DOGTAIL, BRISTLY DOGTAIL. **Hab:** Lawns, roadsides. **Dist:** Native of s. Europe. **Phen:** May-Jun. **Syn:** = Ar, C, ETx1, F, FNA24, HC, K1, K3, K4, Mi, Mo1, NY, Pa, RAB, Va, WV, Tucker (1996). NatureServe GNR (Not Yet Ranked).

Dactylis Linnaeus 1753 (ORCHARD GRASS)

A genus of 1 variable species, perennial, native of Eurasia. References: Allred (2007a) in FNA24 (2007a); Tucker (1996).

* ***Dactylis glomerata*** Linnaeus. ORCHARD GRASS, COCK'S-FOOT. **Hab:** Pastures, fields, woodland edges, roadsides. **Dist:** Native of Europe. **Phen:** Apr-Oct. **Tax:** In Europe there are various chromosome races, often accorded subspecies or species status. Their status in North America has been little investigated. Haines (2011) reports that only tetraploids have been found in New England. See various references cited in Tucker (1996) for further information about these taxa in Europe. **Syn:** = Ar, C, ETx1, FIGr, FNA24, G, HC, Il, Meso6, Mi, Mo1, NcTx, NE, NY, Pa, RAB, S, Tn, Tx, Va, W, WH3, WV; > *Dactylis aschersoniana* Graebner; > *Dactylis glomerata* ssp. *aschersoniana* (Graebner) Thellung – K1; > *Dactylis glomerata* ssp. *glomerata* – K1, K3, K4, Tucker (1996); > *Dactylis glomerata* ssp. *lobata* (Drejer) Lindberg – K3, K4; > *Dactylis glomerata* var. *ciliata* Petermann – F; > *Dactylis glomerata* var. *detonsa* Fries – F; > *Dactylis glomerata* var. *glomerata* – F.

Dactyloctenium Willdenow 1809 (CROWFOOT GRASS)

A genus of 10-13 species, of Africa and Australia. References: Hatch (2003b) in FNA25 (2003a).

* *Dactyloctenium aegyptium* (Linnaeus) Willdenow. CROWFOOT GRASS. **Hab:** Beach dunes, coastal strands, and other coastal areas, lawns, roadsides, disturbed areas. **Dist:** Native of Old World tropics. **Phen:** Jun-Nov. **Syn:** = Ar, Bah, C, ETx1, F, FNA25, G, HC, IL, K1, K3, K4, Meso6, NcTx, NE, NY, RAB, S, Tx, Va, WH3. NatureServe G5 (Secure).

*Danthonia* A.P. de Candolle 1805 (OAT-GRASS)

A genus of about 20 species, of North America, Europe, and the Americas, but the generic limits are unclear. References: Darbyshire (2003) in FNA25 (2003a).

- 1 Lemma teeth (flanking the awn) 0.8-1.8 mm long, triangular, acuminate; glumes 8-13 mm long..... *Danthonia spicata*
 1 Lemma teeth (flanking the awn) (1.8-) 2.0-4.5 mm long, setaceous; glumes 9-19 mm long..... *Danthonia sericea*

Danthonia sericea Nuttall. SILKY OAT-GRASS, DOWNY DANTHONIA. **Hab:** Dry woodlands, especially common in sandy soils in the Coastal Plain, dry oak, oak-pine, and pine forests in the Piedmont and low Mountains, and on dry acidic cliffs and rock outcrops, roadsides and woodland margins. **Dist:** Primarily a Coastal Plain species northward, ranging from e. MA south to FL and west to LA. **Phen:** Mar-Jun. **Comm:** Reported for WV by Vanderhorst et al. (2013). **Syn:** = Ar, ETx1, F, FIgr, HC, K1, K3, K4, S, Tx, Va, W, WH3; = *Danthonia sericea* var. *sericea* – C, G, RAB; < *Danthonia sericea* Nuttall – FNA25, Tn.

Danthonia spicata (Linnaeus) Palisot de Beauvois ex Roemer & J.A. Schultes. POVERTY OAT-GRASS, MOONSHINE GRASS, 'CURLY DAN'. **Hab:** Dry woodlands, rock outcrops, shale barrens. **Dist:** NL (Newfoundland) and BC south to FL and NM. **Phen:** May-Aug. **Syn:** = Ar, C, ETx1, FIgr, FNA25, G, HC, IL, K1, K3, K4, Mi, Mo1, NcTx, NE, NY, Pa, RAB, S, Tn, Tx, Va, W, WH3, WV; > *Danthonia allenii* Austin – F; > *Danthonia spicata* var. *longipila* Lamson-Scribner & Merrill – F; > *Danthonia spicata* var. *spicata* – F. NatureServe G5 (Secure).

*Desmazeria* Dumortier 1822

A genus of about 7 species, annuals, native of the Mediterranean region. References: Soreng et al (2003); Tucker (2007b) in FNA24 (2007a).

* *Desmazeria rigida* (Linnaeus) Tutin. FERN GRASS. **Hab:** Shell mounds (SC), railroad tracks, stock pens, waste areas around wool-combing mills, other disturbed areas, perhaps only a waif in the northern parts of our area. **Dist:** Native of Mediterranean Europe. **Phen:** Mar-May. **Syn:** = ETx1, FIgr, FNA24, K1, NcTx, NE, WH3; = *Catapodium rigidum* (Linnaeus) Dony – K3, K4, Tx, Soreng et al (2003); = *Scleropoa rigida* (Linnaeus) Grisebach; > *Catapodium rigidum* ssp. *rigidum* – NY. NatureServe GNR (Not Yet Ranked).

*Dichanthelium* (A.S. Hitchcock & Chase) Gould 1974 (WITCHGRASS)

Contributed by Richard J. LeBlond

A genus of 70-100 species, perennials, of temperate and tropical America. Hitchcock & Chase (1910) established *Dichanthelium* as a subgenus, and it was elevated to genus by Gould (1974). Radford et al. (1968) significantly reduced the number of *Dichanthelium* taxa recognized by Hitchcock & Chase (1910, 1950), especially in the groups treated as sections *Dichanthelium* (formerly section *Dichotoma*) and *Lanuginosa* in Freckmann & Lelong (2003). Gould & Clark (1978) made further reductions in the number of recognized taxa. Subsequent work has determined the reductions were excessive. Gould & Clark nearly admitted as much. In their treatment of one species group, they wrote: "The recognition of only four species and six varieties in this complex to which almost 50 species names have been applied admittedly is somewhat arbitrary and certainly not entirely satisfactory".

Dichanthelium is one of the most complex and confusing genera in our region. A taxon that is distinct in one part of its range may be indistinguishable from another taxon elsewhere. This is particularly true of Coastal Plain species adapted to natural (and now human) disturbances. Although hybridization is frequently suspected in *Dichanthelium*, documentation of natural hybrids is rare. The genus requires careful collection and close observation of several characters. Mature spikelets are essential; in most species, autumnal spikelets have the same dimensions as vernal

103. POACEAE

spikelets. When collecting plants in the autumnal stage, try to select specimens still possessing their vernal leaf blades and panicles, even though these will be senescent. It is also important to collect the whole plant, with the basal rosette intact (whether senescent or of current year's growth). When several plants are growing together, compare the culm, leaf, and spikelet features for differences, as multiple species are often present in the same microhabitat.

When analyzing the character of the culm internodes and nodes, begin with the first elongate internode above the base (the lowest internode is often very short and uncharacteristic). Determining whether a node is bearded is often difficult. A bearded node usually is characterized by pubescence that is longer, denser, and/or of a different orientation or structure than adjacent pubescence on the internode. Nodes with short and appressed pubescence generally are not regarded as bearded. Lower nodes are more likely to be bearded than upper nodes. Some internodes are described as "crisp-puberulent". This condition is characterized by a dense covering of minute hairs mostly less than 0.1 mm long, and usually crimped or curved; glandular hairs or protuberances are often intermixed. When analyzing sheaths, look at those on the lower half of the culm. Senescent vernal sheaths often lose their pubescence (though in some species hair papillae are evident). All references in the key to sheath glabrousness or pubescence is without regard to the presence or absence of marginal hairs (cilia). A sheath that is glabrous except for marginal cilia is called glabrous. All culm leaves should be analyzed for blade characters; in general, the key relies on the size and character of the vernal blades. A "cordate" blade is one where the basal lobes of the blade extend outward and partially surround the culm when the culm is enclosed by the sheath. As with sheaths, references in the key to blade glabrousness or pubescence is without regard to marginal cilia. The ligule is an important diagnostic character for many *Dichanthelium* taxa; at least three ligules per specimen should be examined before making conclusions about its structure and length. Ligules form a distinct ring from a cartilaginous base at the inner summit of the sheath; in some species the ligule is membranous, but in most it is ciliate. Care must be taken to distinguish the pubescence of the ligule from any pubescence emanating from the inner surface of the blade base, and from marginal cilia. Ligules of senescent vernal leaves frequently lose their integrity. Spikelet shape as well as length should be determined only from mature spikelets. Measure the length from the base of the first glume (usually at an articulation) to the apex of the second glume or sterile lemma (whichever is longer). A micrometer is essential for determining the length of spikelets, first glumes, ligules, and various pilosity features. Sometimes one-tenth of a millimeter is important in separating two *Dichanthelium* taxa.

Certain characters, particularly node bearding, cordate/non-cordate blade bases, and ligule length, can be quite variable, and an effort has been made to account for this variability in the key. Nonetheless, some specimens just will not "fit", and the road not taken may have to be reconsidered. Wipff (2020) made new combinations for 15 entities previously named as species in *Panicum*, but provided no arguments or discussion for the recognition. They are here included in synonymy until their validity can be determined. References: Davidse & Pohl (1992); Freckmann & Lelong (2002); Freckmann & Lelong (2003a) in FNA25 (2003a); Freckmann (1981); Gould & Clark (1978); Gould (1974); Hansen & Wunderlin (1988); Hitchcock & Chase (1910); LeBlond (2001a); LeBlond (2011) in Weakley et al (2011); LeBlond (2016); LeBlond (2017a) in Weakley et al (2017); LeBlond (2017b) in Weakley et al (2017); LeBlond (2017c) in Weakley et al (2017); LeBlond (2018b) in Weakley et al (2018a); LeBlond (2019a) in Weakley et al (2019a); LeBlond (2020); LeBlond et al (2017); LeBlond, Townsend, & Ludwig (2020); Lelong (1984); Schuyler (1996); Silveus (1942); Thomas (2008); Thomas (2021); Wipff (2020).

Identification Notes: *Dichanthelium* is most readily (though not consistently) separated from *Panicum* by the following combination of features: plants producing over-wintering rosettes of leaves often shorter and broader than the culm leaves; plants producing simple culms with terminal panicles in spring or early summer, then producing terminal panicles on primary branches, followed by often hidden or obscured panicles on secondary (etc.) branching. Virtually all treatments refer to two flowering phases: vernal (or primary), and autumnal (or secondary). Little understood is that almost all taxa in the genus appear to have three flowering periods. An intermediate stage between vernal and autumnal was recognized by Hitchcock & Chase (1910), who wrote: "In this group there is an intermediate stage of branching, in which the plants do not show the characteristic vernal nor autumnal habit". Silveus (1942) also recognized the intermediate stage, and described its features for several taxa. The three floral stages are, in phenological order: panicle terminating the culm (vernal stage), panicles terminating the primary branches (intermediate or aestival stage), and panicles on secondary branches (autumnal stage). Complicating matters, the three stages tend to overlap, and the autumnal stage in most species begins in summer, not autumn. Also, the autumnal stage can rebranch two or more times. As in the terminal vernal inflorescences, the intermediate stage panicles at the ends of the primary branches tend to disarticulate later in the season. On most specimens collected in the autumnal stage, the only evidence of the primary branching stage (besides the branch itself) is the presence of some intermediate-sized blades subtending the later autumnal fascicles, along with evidence of the branch having lost its terminal portion. Autumnal inflorescences are usually short-exserted and more-or-less hidden among the fascicled leaves, sometimes even partly included in the sheaths. This treatment relies on the vernal and autumnal stages for distinguishing among the many taxa, as key characters from the intermediate stage have not been developed. Care must be taken to distinguish the pubescence of the ligule from any pubescence emanating from the inner surface of the blade base, and from marginal cilia. Some taxa have what is referred to as a double ligule: a dense ring of short hairs 0.5-1 mm long at the ventral summit of the sheath, and behind it a ring of longer hairs 1-5 mm long called the pseudoligule, which is attached to the base of the blade. At first glance, the hairs appear to form a single structure. The true, short ligule is most easily seen toward the edges (excluding cilia), and by tilting the blade away from the sheath axis.

- 1 Plants densely tufted, often cushion-forming; leaves basally disposed, the blades ascending or spreading-ascending, not forming a distinct rosette of basal leaves shorter than the culm leaves; autumnal culms branching basally or from the lower nodes **Key A**
- 1 Plants less densely or sparsely tufted, not cushion-forming; leaves well-distributed on the culm, usually much longer than the short, often broad and spreading basal rosette leaves; autumnal culms usually branching from the leaves and upper nodes.
 - 2 Spikelets 3.3-5.2 mm long..... **Key B**
 - 2 Spikelets 0.8-3.2 mm long.
 - 3 Spikelets 2.1-3.2 mm long.
 - 4 Larger culm blades 13-25 mm wide..... **Key C**
 - 4 Larger culm blades < 13 mm wide.
 - 5 Culm nodes (at least the lower) bearded..... **Key D**
 - 5 Culm nodes not bearded, the lowermost sometimes puberulent or sparsely hairy **Key E**
 - 3 Spikelets 0.8-2.0 mm long.
 - 6 Lower culm internodes variously hairy..... **Key F**
 - 6 Lower culm internodes glabrous..... **Key G**

Key A - Plants densely tufted, often cushion-forming; leaves basally disposed, the blades ascending or spreading-ascending, not forming a distinct rosette of basal leaves shorter than the culm leaves; autumnal culms branching basally or from the lower nodes

- 1 Spikelets 2.4-4.5 mm long.
 - 2 Nodes, internodes, and sheaths glabrous; blades 4-13 cm, 5-8 mm, the surfaces smooth, glabrous; spikelets 2.4-2.9 mm long, glabrous; not known to produce axillary (autumnal) inflorescences..... *Dichanthelium nudicaule*
 - 2 Nodes bearded or otherwise pubescent; internodes and sheaths variously pubescent to glabrate; blades 6-35 cm, 2-5 mm, one or both surfaces scabrous and often pubescent; spikelets 1.7-4.5 mm long, glabrous or pubescent; plants produce axillary (autumnal) inflorescences.
 - 3 Spikelets 2.8-3.8 (-4.5) mm long, the second glume and sterile lemma pointed or beaked and extended beyond the summit of the fertile lemma; first glume 1.2-2 mm long..... *Dichanthelium depauperatum*
 - 3 Spikelets 1.7-2.8 mm long, the second glume and sterile lemma blunt or broadly pointed, not extending beyond the summit of the fertile lemma; first glume 0.7-1.2 mm long..... *Dichanthelium linearifolium*
- 1 Spikelets 0.9-2.3 mm long.
 - 4 Longer blades > 6 cm; if only 6 cm, then sheaths retrorsely long-pilose (*D. laxiflorum*).
 - 6 Longer blades 10-35 cm long, 2-4 mm wide; sheaths glabrous to variously pilose, but not conspicuously retrorsely long-pilose; nodes variously pubescent to glabrate; spikelets 1.7-2.3 (-2.8) mm long..... *Dichanthelium linearifolium*
 - 6 Longer blades 6-18 cm long, 7-12 mm wide; sheaths conspicuously retrorsely long-pilose; nodes bearded with retrorse or spreading hairs; spikelets (1.4-) 1.9-2.3 (-2.5) mm long..... *Dichanthelium laxiflorum*
 - 4 Longer blades 1.5-6 cm; sheaths glabrous or pubescent, but not retrorsely long-pilose.
 - 7 Blades 1-3 mm wide, glabrous, eciliate or basally ciliate; spikelets 0.9-1.2 (-1.4) mm long..... *Dichanthelium chamaelonche*
 - 7 Blades 3-8 mm wide; spikelets 1.1-2.1 mm long (or if < 1.5 mm long, then blades either pubescent on one or both surfaces or ciliate to the apex).
 - 9 Spikelets pubescent, 1.5-2.1 mm long; blade surfaces glabrous..... *Dichanthelium strigosum* var. *leucoblepharis*
 - 9 Spikelets glabrous, 1.1-1.8 mm long; blade surfaces pubescent or glabrous.
 - 10 Blades glabrous, or sparsely pilose only near the adaxial base; spikelets 1.4-1.8 mm long..... *Dichanthelium strigosum* var. *glabrescens*
 - 10 Blades pilose, at least abaxially; spikelets 1.1-1.6 mm long..... *Dichanthelium strigosum* var. *strigosum*

Key B - Spikelets 3.3-5.2 mm long

- 1 Nodes (at least the lower) densely bearded with retrorse hairs; spikelets 3.3-5.2 mm long; ligule ciliate, the membranous base minute or obsolete.
 - 2 Ligule 2.5-4 mm long; lower internodes pubescent with long ascending or spreading hairs; blades 8-15 cm long, 10-25 mm wide; first glume 1.8-2.5 mm long..... *Dichanthelium ravenelii*
 - 2 Ligule 0.3-1.3 mm long; lower internodes glabrous or pubescent with ascending hairs; blades 5-14 cm long, either 4-13 or 12-40 mm wide; first glume 1.2-2.2 mm long..... *Dichanthelium boscii*
- 1 Nodes glabrous, pubescent, or sparsely pilose; spikelets (2.4-) 3.3-4.2 mm long; ligules membranous, ciliate, or both.
 - 5 Ligule 1.6-3 mm long; blades 4-9 mm wide, > 10× as long as wide..... *Dichanthelium oligosanthos*
 - 5 Ligule 0.2-1.5 mm long; if larger blades < 9 mm wide and mostly 15× or more as long, then ligule 0.5-1 mm long.
 - 6 Larger blades 2-6 (-8) mm wide, 10-15× or more as long as wide (if shorter, then culms arising from hard corm-like bases and culms with 8-14 leaves); spikelets basally attenuate..... *Dichanthelium fusiforme*
 - 6 Larger blades 6-35 mm wide, mostly 10× or less as long as wide; spikelet bases rounded to narrowed.
 - 11 Ligules 1-1.5 mm long; blades 5-10 cm long by 6-15 mm wide, glabrous or pubescent, basally rounded; spikelets glabrous to pubescent..... *Dichanthelium scribnerianum*
 - 11 Ligules 0.3-1 mm long; blades 7-35 cm long by 8-35 mm wide, glabrous or scabrous, basally cordate or rounded; spikelets pubescent to glabrate..... *Dichanthelium clandestinum*

Key C - Spikelets 2.1-3.2 mm long, larger leaves 13-25 mm wide

- 1 Culm nodes, at least the lower, bearded (often retrorsely).
 - 2 Nodes with a viscid band below the beard; internodes and sheaths velvety-pubescent; vernal culm blades 9-20 cm long, 9-20 mm wide..... *Dichanthelium scoparium*
 - 2 Nodes without a viscid band below the beard; internodes and sheaths glabrous, the lower sometimes sparsely hairy; vernal culm blades 3.5-14 cm long, 7-15 mm wide..... **Key to the *Dichanthelium dichotomum* group**
- 1 Culm nodes glabrous or pubescent, but not bearded.
 - 3 Second glume and sterile lemma acute to short-acuminate, some in a given specimen 0.3 mm or more longer than fertile lemma..... *Dichanthelium scabriusculum*
 - 3 Second glume and sterile lemma blunt to subacute, shorter than, equaling, or barely exceeding fertile lemma, never by as much as 0.3 mm.
 - 8 Lower sheaths papillose-hispid with spreading hairs; ligule a membrane 0.4-0.9 mm long; leaf blades 10-28 cm long..... *Dichanthelium clandestinum*
 - 8 Lower sheaths glabrous, puberulent, or softly villous basally; ligule either a membrane 0-0.3 mm long or a ciliate membrane 0.4-0.7 mm long; leaf blades 5-18 cm long.
 - 11 Culms erect; blades more nearly symmetrical; spikelets 2.0-3.2 mm long; sterile lemma apex usually blunt to rounded..... *Dichanthelium commutatum* ssp. *commutatum*
 - 11 Culms basally decumbent; blades strongly asymmetrical-falcate; spikelets 3.0-3.2 mm long; sterile lemma apex usually pointed..... *Dichanthelium commutatum* ssp. *joorii*

**Key D - Spikelets 2.1-3.2 mm long, larger culm blades < 13 mm wide,
at least the lower culm nodes bearded with a usually spreading-ascending collar of dense and/or longish hairs**

- 1 Ligule with a dense ring of short hairs 0.5-1 mm long, and behind it a ring of longer hairs 1-5 mm long called the pseudoligule (see introduction for discussion of the so-called double ligule).
 4 Lower internodes with retrorse or spreading hairs to 3+ mm long; blade adaxial surface pilose with hairs to 4+ mm long, these appressed and angled away from the leaf axis; spikelets 2.1-2.5 mm long *Dichanthelium villosissimum* var. *villosissimum*
 4 Lower internodes pilose with (spreading-) ascending to appressed hairs, or nearly glabrous; blade adaxial surface sparsely appressed-pubescent to glabrate; spikelets 2.1-3.1 mm long. *Dichanthelium ovale* var. *addisonii*
- 1 Ligule a single structure, without a pseudoligule.
 6 Ligule 2-5 mm long, ciliate **Key to the *Dichanthelium acuminatum* group**
 6 Ligule < 2 mm long, ciliate or membranous.
 7 Ligule a stramineous to light brown membrane, with or without terminal cilia; peduncle antrorsely scabrous but not hairy.
 8 Panicle rachis smooth, pellucid-punctate; first glume 0.3-0.6 (-0.8) mm long, as broad as or broader than long, truncate to obtuse; larger leaves 10-25 cm long, 8-15 mm wide; ligule 0.5-1.3 mm long; lowest elongate culm internode > 2 mm in diameter; lowest nodes usually glabrous or pubescent *Dichanthelium scabriusculum*
 8 Panicle rachis scabrous or smooth, not pellucid-punctate; first glume 0.5-1.1 mm long, longer than wide, rounded to acute; larger leaves 3.5-12 cm long, 3-9 mm wide; ligule 0.1-0.6 mm long; lowest elongate culm internode < 2 mm in diameter; lowest nodes retrorsely bearded or glabrous.
 9 Lowest nodes usually retrorsely bearded; ligules (0.1-) 0.3-0.6 mm long; largest vernal blades 7-12 cm long, (4.5-) 6-9 mm wide; panicle peduncle scabrous; spikelets ovate-lanceolate, acute, 2.0-2.4 mm long; first glume lanceolate, blunt to acute; fertile lemma smooth *Dichanthelium cryptanthum*
 9 Lowest nodes usually glabrous; ligules 0.1-0.2 (-0.3) mm long; largest vernal blades 3.5-7 cm long, 3-6 mm wide; panicle peduncle smooth; spikelets elliptic, blunt to acute, 1.6-2.2 mm long; first glume ovate to rotund, rounded to acute; fertile lemma papillose *Dichanthelium lucidum*
 7 Ligule entirely of white hairs; peduncle variously hairy or glabrous, but not antrorsely scabrous.
 10 Culms with a viscid band below the retrorsely bearded nodes; internodes, sheaths, and blades velvety-pubescent *Dichanthelium scoparium*
 10 Culms without a viscid band below the retrorsely, spreading, or antrorsely bearded nodes; internodes and sheaths not velvety-pubescent, blades velvety-pubescent in some.
 12 Nodes retrorsely bearded; larger vernal leaves 7-15 mm wide.
 13 Sheaths retrorsely pilose with hairs 2-3 mm long; basal leaves usually numerous, ascending, similar in size and shape to the culm leaves; culms branching only at the base in autumnal phase *Dichanthelium laxiflorum*
 13 Sheaths glabrous or pilose (if pilose, then hairs not both retrorse and 2-3 mm long); basal leaves rosette-forming, usually much shorter than culm leaves; culms branching above base in autumnal phase. **Key to the *Dichanthelium dichotomum* group**
- 12 Nodes spreading to antrorsely bearded; larger vernal leaves 3-10 mm wide.
 15 Culm internodes glabrous to sparsely pilose; culm nodes bearded with long retrorse hairs; blade surfaces glabrous to velvety-pubescent **Key to the *Dichanthelium dichotomum* group**
 15 Culm internodes, at least the lower, strigose, pilose, or villous; culm nodes bearded with ascending or spreading hairs; blade surfaces glabrous or variously hairy.
 16 Lower nodes bearded with erect-ascending, soft, and long hairs; mid-culm blades usually 20× or more as long as wide.
 17 Spikelets (3.0-) 3.2-3.8 mm long, fusiform, pointed at summit, attenuate at base, with both glumes attached 0.3-0.5 mm below sterile lemma, the autumnal spikelets 3.5-3.8 mm long; larger vernal blades 3-6 mm wide, the lower and mid-culm blades of similar width; autumnal blades involute *Dichanthelium fusiforme*
 17 Spikelets 1.8-3.1 mm long, obovate, blunt, and the base not attenuate except in *D. arenicoloides* with autumnal spikelets 2.3-3.1 mm long; larger vernal blades 2-8 mm wide, the lower usually wider and often shorter than mid-culm blades; autumnal blades involute or flat.
 18 Longest vernal blades to 16 cm, widest vernal blades 4-8 mm, usually longitudinally wrinkled; vernal and autumnal spikelets 2.3-3.1 mm long; autumnal blades flat, the larger to 9 cm × 2-4 mm *Dichanthelium angustifolium*
 18 Longest vernal blades to 6 (*D. aciculare*) or 12 (*D. arenicoloides*) cm long, 2-5 mm wide, not noticeably wrinkled; vernal spikelets 1.5-2.8 mm long, autumnal spikelets either 1.5-2.3 (*D. aciculare*) or 2.3-3.1 (*D. arenicoloides*); autumnal blades involute, the larger to 6 cm × 1.5 mm.
 19 Longest vernal blades to 6 (-8) cm, widest vernal blades 2-5 mm; vernal and autumnal spikelets 1.7-2.3 mm long, blunt, not attenuate, the glumes attached <0.2 mm below sterile lemma; first glumes 0.6-0.9 mm long; larger autumnal blades to 3 cm by 1 mm *Dichanthelium aciculare*
 19 Longest vernal blades to 12 cm, widest vernal blades 3-4 (-5) mm; vernal spikelets 2.1-2.8 mm long; autumnal spikelets 2.3-3.1 mm long, pointed, attenuate, the glumes attached 0.3-0.5 mm below sterile lemma; first glumes 0.7-1.5 mm long; larger autumnal blades to 6 cm by 1.5 mm *Dichanthelium arenicoloides*
 16 Lower and often mid-culm nodes bearded with spreading, stiffish, and short-to-long hairs; mid-culm blades usually 15× or less as long as wide.
 20 Blades stiff, often longitudinally ribbed, at least the lower villous or strongly pilose on the abaxial surface, and pilose to hirsute on the adaxial surface, at least proximally.
 21 Spikelets 2.3-3.0 mm long; ligule < 1 mm long; mid-culm blades 4-8 mm wide *Dichanthelium consanguineum*
 21 Spikelets 1.7-2.0 (-2.3) mm long; ligule 1-2.5 mm long; mid-culm leaves 2-5 mm wide *Dichanthelium filiforme*
 20 Blades not noticeably stiff nor longitudinally ribbed, pubescent or strigose underneath, glabrous above or with a few long hairs near the base. *Dichanthelium ovale* var. *addisonii*

**Key E - Spikelets 2.1-3.2 mm long, larger culm blades < 13 mm wide, culm nodes not bearded,
the lowermost sometimes puberulent or sparsely pilose**

- 1 Ligule 1.6-4 mm long *Dichanthelium oligosanthos*
 1 Ligule < 1.5 mm long.
 2 Leaf blades, at least the lower, cordate or subcordate at the base, 4-25 mm wide.

- 5 Internodes crisp-puberulent; larger culm blades 4-8 (-11) cm long, 5-10 (-12) mm wide, broadest near the base; spikelets 2.1-2.7 mm long; first glumes 0.7-0.9 mm long.....*Dichanthelium commutatum* ssp. *ashei*
- 5 Internodes glabrous to sparsely pubescent, larger culm blades 5-18 cm long, 5-25 mm wide, broadest near the middle or broadly linear; spikelets 2.0-3.7 mm long; first glumes 0.5-2.6 mm long.
- 7 Culms erect; blades more nearly symmetrical; spikelets 2.0-3.2 mm long; sterile lemma apex usually blunt to rounded.....*Dichanthelium commutatum* ssp. *commutatum*
- 7 Culms basally decumbent; blades strongly asymmetrical-falcate; spikelets 3.0-3.2 mm long; sterile lemma apex usually pointed.....*Dichanthelium commutatum* ssp. *joorii*
- 2 Leaf blades tapering to the base, 2-12 mm wide.
- 8 Ligule a stramineous to light brown membrane, with or without terminal cilia.
- 10 Panicle rachis smooth, pellucid-punctate; first glume 0.3-0.6 (-0.8) mm long, as broad as or broader than long, truncate to obtuse; larger leaves 10-25 cm long, 8-15 mm wide; ligule 0.5-1.3 mm long; lowest elongate culm internode > 2 mm in diameter; lowest nodes usually glabrous or pubescent.....*Dichanthelium scabriusculum*
- 10 Panicle rachis scabrous or smooth, not pellucid-punctate; first glume 0.5-1.1 mm long, longer than wide, rounded to acute; larger leaves 3.5-12 cm long, 3-9 mm wide; ligule 0.1-0.6 mm long; lowest elongate culm internode < 2 mm in diameter; lowest nodes retrorsely bearded or glabrous.
- 11 Lowest nodes usually retrorsely bearded; ligules (0.1-) 0.3-0.6 mm long; largest vernal blades 7-12 cm long, (4.5-) 6-9 mm wide; panicle peduncle scabrous; spikelets ovate-lanceolate, acute, 2.0-2.4 mm long; first glume lanceolate, blunt to acute; fertile lemma smooth.....*Dichanthelium cryptanthum*
- 11 Lowest nodes usually glabrous; ligules 0.1-0.2 (-0.3) mm long; largest vernal blades 3.5-7 cm long, 3-6 mm wide; panicle peduncle smooth; spikelets elliptic, blunt to acute, 1.6-2.2 mm long; first glume ovate to rotund, rounded to acute; fertile lemma papillose.....*Dichanthelium lucidum*
- 8 Ligule of short white hairs or absent.
- 12 Leaves basally disposed, usually matted or cushion-forming, larger than the mid and upper culm leaves; blade margins uniformly papillose-ciliate; culms branching only at the base, 0.5-3.5 dm tall; internodes glabrous or sparsely pubescent.....*Dichanthelium strigosum* var. *leucoblepharis*
- 12 Basal leaves usually rosette-forming, not matted or cushion-forming, usually much smaller than culm leaves; blade margins glabrous, or ciliate only below the middle (or sometimes papillose-ciliate throughout in *D. portoricense* ssp. *patulum*, which has densely puberulent internodes); culms branching at the nodes in age, 1.5-7.5 dm tall.
- 14 Blades of mid-culm leaves typically long and stiff, acuminate, linear or narrowly lanceolate, usually > 10× as long as wide, only 2-6 mm wide when < 8 cm long.
- 15 Vegetative parts glabrous (spikelets pubescent, lowest internodes and sheaths sometimes sparsely pubescent, blades and sheaths sometimes ciliate); mature panicles less than ¼ as wide as long, the branches erect-ascending, the spikelets often subsecund; autumnal blades 4-10 cm long, involute, < 2 mm wide; spikelets 1.8-2.2 mm long.....*Dichanthelium neuranthum*
- 15 Vegetative parts pubescent, at least in the lower portion of plant; mature panicles usually more than half as wide as long, the branches spreading-ascending, the spikelets not noticeably subsecund; autumnal blades 1-6 cm long, involute and < 2 mm wide in *D. aciculare* and *D. arenicoloides*, or to 9 cm long, flat and 2-4 mm wide in *D. angustifolium* (autumnal blade dimensions not yet known for *D. wilcoxianum*); spikelets 1.5-3.2 mm long.
- 17 Culms 15-35 cm long; all culm leaf blades long-hirsute on both surfaces, their sheaths densely papillose-hirsute; leaf blades of the primary branches often exceeding the immature vernal panicles.....*Dichanthelium wilcoxianum*
- 17 Culms 15-75 cm long; culm leaf blades glabrous to sparsely pubescent, or the lower softly villous abaxially in *D. arenicoloides*; lower sheaths usually villous, mid-culm and upper sheaths glabrous (though often ciliate basally); leaf blades of primary branches not exceeding immature vernal panicles.
- 18 Spikelets (3.0-) 3.2-3.8 mm long, fusiform, pointed at summit, attenuate at base, with both glumes attached 0.3-0.5 mm below sterile lemma, the autumnal spikelets 3.5-3.8 mm long; larger vernal leaf blades 3-6 mm wide, the lower and mid-culm leaf blades of similar width; autumnal leaf blades involute.....*Dichanthelium fusiforme*
- 18 Spikelets 1.8-3.1 mm long, obovate, blunt, and the base not attenuate (except in *D. arenicoloides* with autumnal spikelets 2.3-3.1 mm long); larger vernal leaf blades 2-8 mm wide, the lower usually wider and often shorter than mid-culm leaf blades; autumnal leaf blades involute or flat.
- 19 Longest vernal blades to 16 cm, widest vernal leaf blades 4-8 mm, usually longitudinally wrinkled; vernal and autumnal spikelets 2.3-3.1 mm long; autumnal leaf blades flat, the larger to 9 cm by 2-4 mm.....*Dichanthelium angustifolium*
- 19 Longest vernal leaf blades to 6 cm (*D. aciculare*) or 12 cm (*D. arenicoloides*) long, 2-5 mm wide, not noticeably wrinkled; vernal spikelets 1.5-2.8 mm long, autumnal spikelets either 1.5-2.3 (*D. aciculare*) or 2.3-3.1 (*D. arenicoloides*); autumnal leaf blades involute, the larger to 6 cm by 1.5 mm.
- 20 Longest vernal leaf blades to 12 cm, widest vernal leaf blades 3-4 (-5) mm; vernal spikelets 2.1-2.8 mm long; autumnal spikelets 2.3-3.1 mm long, pointed, attenuate, the glumes attached 0.3-0.5 mm below sterile lemma; first glumes 0.7-1.5 mm long; larger autumnal leaf blades to 6 cm by 1.5 mm.....*Dichanthelium arenicoloides*
- 20 Longest vernal leaf blades to 6 (-8) cm, widest vernal leaf blades 2-5 mm; vernal and autumnal spikelets 1.7-2.3 mm long, blunt, not attenuate, the glumes attached < 0.2 mm below sterile lemma; first glumes 0.6-0.9 mm long; larger autumnal leaf blades to 3 cm by 1 mm.....*Dichanthelium aciculare*
- 14 Blades of mid-culm leaves lanceolate, thin or firm but not stiff, usually < 10× as long as wide, usually 7 mm or more wide when as much as 8 cm long.
- 22 Spikelets 2.9-3.8 mm long, broadly elliptic, rounded at the summit, with broad and thick nerves.....*Dichanthelium scribnerianum*
- 22 Spikelets 2.1-2.9 mm long, elliptic or obovate, rounded or pointed at the summit, the nerves often raised, but not broad and thick.
- 23 Culm internodes and sheaths glabrous or, sparsely pilose, or villous.
-*Key to the Dichanthelium dichotomum group*
- 23 Culm internodes crisp-puberulent (sparsely so in *D. webberianum*); sheaths puberulent or glabrous.
- 27 Spikelets elliptic, sub-acute to pointed, greenish or faintly purple-tinged basally.....*Dichanthelium commutatum* ssp. *ashei*
- 27 Spikelets strongly plano-convex when viewed laterally, obpyriform when viewed dorsally, broadly rounded, usually markedly reddish-purple basally.....*Dichanthelium portoricense* ssp. *patulum*

Key F - Spikelets 0.8-2.0 mm long, lower culm internodes variously hairy

- 1 Longer hairs of ligule 2-5 mm long.

- 5 Blades of mid-culm leaves lanceolate, thin or firm but not stiff, length and width various, less than 15× as long as wide..... **Key to the *Dichantheium acuminatum* group**
- 5 Blades of mid-culm leaves linear or narrowly lanceolate, stiff, acuminate, often involute, 4-10 cm long, 2-5 mm wide, about 15-20× as long as wide ***Dichantheium filirumum***
- 1 Longer hairs of ligule < 2 mm long.
- 6 Culm leaves basally crowded, ascending, usually matted or cushion-forming, larger than the mid and upper culm blades.
- 7 Sheaths conspicuously retrorsely long-pilose; longer blades 6-18 cm long and 7-12 mm wide; spikelets (1.4-) 1.9-2.3 (-2.5) mm long ***Dichantheium laxiflorum***
- 7 Sheaths variously pubescent or glabrous, but not conspicuously retrorsely long-pilose; longer blades 2-6 cm long and 1-8 mm wide; spikelets 0.9-2.1 mm long.
- 8 Leaf blades 1-4 mm wide, glabrous, the margins eciliate or basally ciliate; spikelets 0.9-1.5 mm long, glabrous; autumnal form branched from lower and mid nodes as well as from basal nodes. ***Dichantheium chamaelonche***
- 8 Leaf blades 2-10 mm wide, pubescent or glabrous, the margins coarsely papillose-ciliate throughout; spikelets 1.1-2.1 mm long, glabrous or pubescent; autumnal form branched from basal nodes only.
- 10 Spikelets pubescent, 1.5-2.1 mm long; blade surfaces glabrous ***Dichantheium strigosum* var. *leucoblepharis***
- 10 Spikelets glabrous, 1.1-1.8 mm long; blade surfaces pubescent or glabrous.
- 11 Leaf blades glabrous, or sparsely pilose only near the adaxial base; spikelets 1.4-2.1 mm long ***Dichantheium strigosum* var. *glabrescens***
- 11 Leaf blades pilose, at least abaxially; spikelets 1.1-1.6 mm long ***Dichantheium strigosum* var. *strigosum***
- 6 Culm leaves not basally crowded, the lowest leaves spreading and rosette-forming, usually smaller than the culm leaves.
- 13 Blades of mid-culm leaves linear or narrowly lanceolate, stiff, acuminate, often involute, 4-10 cm long, 2-5 mm wide, about 15-20× as long as wide.
- 14 Ligule less than 1 mm long; nodes glabrous to sparsely pubescent, not bearded; blades glabrous (lowest sometimes sparsely pilose); autumnal blades involute..... ***Dichantheium aciculare***
- 14 Ligule (1-) 1.5-2 (-2.5) mm long; nodes bearded with spreading-ascending hairs; blades moderately hirsute; autumnal blades flat ***Dichantheium filirumum***
- 13 Blades of mid-culm leaves lanceolate to lance-elliptic, thin or firm but not stiff, length and width various, < 15× as long as wide.
- 15 Internodes crisp-puberulent.
- 17 Spikelets (1.8-) 1.9-2.2 (-2.5) mm long; first glume 0.8-1.2 mm long; lower culm blades 2-8 mm wide ***Dichantheium portoricense* ssp. *patulum***
- 17 Spikelets 1.5-1.8 mm long; first glume 0.5-0.8 mm long; lower culm blades 2-5 mm wide..... ***Dichantheium portoricense* ssp. *portoricense***
- 15 Internodes variously hairy but not crisp-puberulent.
- 19 Internodes (sparsely-) moderately to densely pubescent to pilose; ligule 1-5 mm long; blade margins either weakly ciliate, papillose-ciliate basally only, or eciliate, lacking a white-beige cartilaginous edge 0.2 mm wide. ***Dichantheium leucothrix***
- 19 Internodes sparsely pilose; ligule < 1 mm long; blade margins various.
- 22 Blades with white-beige cartilaginous margins 0.2 mm wide; spikelets 1.4-1.7 mm long; autumnal form branching from middle and upper nodes..... ***Dichantheium tenue***
- 22 Blade margins coarsely papillose-ciliate throughout; spikelets 1.1-2.1 mm long; autumnal form branching from the base.
- 23 Spikelets pubescent, 1.5-2.1 mm long; blade surfaces glabrous..... ***Dichantheium strigosum* var. *leucoblepharis***
- 23 Spikelets glabrous, 1.1-1.8 mm long; blade surfaces pubescent or glabrous.
- 24 Blades glabrous, or sparsely pilose only near the adaxial base; spikelets 1.4-1.8 mm long ***Dichantheium strigosum* var. *glabrescens***
- 24 Blades pilose; spikelets 1.1-1.6 mm long..... ***Dichantheium strigosum* var. *strigosum***

Key G - Spikelets 0.8-2.0 mm long, lower culm internodes glabrous

- 1 Ligule 1-5 mm long.
- 2 Ligule (1.5-) 2-5 mm long; sheaths glabrous to variously pubescent; internodes glabrous or pubescent; nodes glabrous, or bearded with ascending, spreading, or tangled hairs; leaves 3-10 cm long, 3-10 mm wide; spikelets 0.8-1.9 mm long..... **Key to the *Dichantheium acuminatum* group**
- 2 Ligule 1-2 mm long; sheaths sparsely to moderately spreading short-pilose; internodes glabrous; nodes retrorsely bearded; leaves 1-4 cm long, 2-5 mm wide; spikelets 1.2-1.4 mm long ***Dichantheium curtifolium***
- 1 Ligule < 1 mm long.
- 3 Basal leaves rosette-forming, usually much smaller than the culm leaves, not matted or cushion-forming; culms branching at the mid and upper nodes in age.
- 4 Blades of mid-culm leaves typically long and acuminate, linear or narrowly lanceolate, usually 10-20× as long as wide, only 2-5 mm wide when < 8 cm long.
- 6 Spikelets (glandular-) papillose-pubescent; blades 1-3 (-5) mm wide; first glume 0.8-1.0 mm long; culms to 4 dm tall..... ***Dichantheium neuranthum***
- 6 Spikelets glabrous; blades 3-8 mm wide; first glume 0.3-1.1 mm long; culms to 10 dm tall. **Key to the *Dichantheium dichotomum* group**
- 4 Blades of mid-culm leaves lanceolate, mostly 10× or less as long as wide, usually 7 mm or more wide when as much as 8 cm long.
- 8 Spikelets elliptic, oblong, or obovate; lower culm blades 3-12 (-15) mm wide, thin, tapered to the base; plants often freely branching in age, becoming top-heavy with a mass of fascicled, reduced leafy branches and inflorescences..... **Key to the *Dichantheium dichotomum* group**
- 8 Spikelets broadly elliptic to suborbicular; lower culm blades 6-30 mm wide, broad and cordate to subcordate at the base; plants sparingly branched in age, not becoming top-heavy with fascicled, reduced leafy branches and inflorescences.
- 10 Spikelets 0.9-1.2 mm long; longer blades 6-8 cm long, erect to erect-ascending..... ***Dichantheium erectifolium***
- 10 Spikelets 1.2-1.9 mm long; longer blades 8-20 cm long, ascending or the uppermost erect.
- 11 Mid-culm blades to 25 cm long, 14-30 mm wide, the uppermost 10-15+ cm long; vernal panicles to 20 cm long, often less than half as wide as long; spikelets 1.3-1.6 (-1.7)..... ***Dichantheium polyanthes***
- 11 Mid-culm blades to 10 cm long, 5-11 (-14) mm wide, the uppermost 3-9 cm long; vernal panicles to 14 cm long, usually more than half as wide as long; spikelets (1.4-) 1.5-1.8 mm long ***Dichantheium sphaerocarpon***
- 3 Basal leaves similar to or larger than the mid and upper culm leaves, often matted or cushion-forming; culms branching at the base (also at mid and upper nodes in *D. chamaelonche* vars. and *D. dichotomum* var. *glabrifolium*).
- 12 Longer blades > 6 cm; if only 6 cm, then sheaths conspicuously retrorsely long-pilose (*D. laxiflorum*).
- 14 Longer blades 6-18 cm long by 7-12 mm wide; sheaths conspicuously retrorsely long-pilose; nodes bearded with retrorse or spreading hairs; spikelets (1.4-) 1.9-2.3 (-2.5) mm long ***Dichantheium laxiflorum***

- 14 Longer blades 10-35 cm long by 2-4 mm wide; sheaths glabrous to variously pilose, but not conspicuously retrorsely long-pilose; nodes variously pubescent to glabrate; spikelets 1.7-2.3 (-2.8) mm long..... *Dichanthelium linearifolium*
- 12 Longer blades 1.5-6 cm; sheaths glabrous or pubescent, but not retrorsely long-pilose.
- 15 Blades 1-3 mm wide, glabrous, eciliate or basally ciliate; spikelets 0.9-1.4 mm long..... *Dichanthelium chamaelonche*
- 15 Blades 3-8 mm wide; spikelets 1.1-2.1 mm long (if < 1.5 mm, then blades either pubescent on one or both surfaces or ciliate to the apex).
- 17 Spikelets pubescent, 1.5-2.1 mm long; blade surfaces glabrous..... *Dichanthelium strigosum* var. *leucoblepharis*
- 17 Spikelets glabrous, 1.1-1.8 mm long; blade surfaces pubescent or glabrous.
- 18 Blades glabrous, or sparsely pilose only near the adaxial base; spikelets 1.4-2.1 mm long..... *Dichanthelium strigosum* var. *glabrescens*
- 18 Blades pilose, at least abaxially; spikelets 1.1-1.6 mm long..... *Dichanthelium strigosum* var. *strigosum*

Key to the *Dichanthelium acuminatum* group -

- 1 Internodes glabrous (sometimes lowest internodes sparsely to moderately pubescent).
- 2 Ligule 1-2 mm long; sheaths sparsely to moderately spreading short-pilose; nodes retrorsely bearded; leaves 1-4 cm long, 2-5 mm wide; spikelets 1.2-1.4 mm long..... *Dichanthelium curtifolium*
- 2 Ligule (1.5-) 2-5 mm long; sheaths glabrous to variously pubescent, but not spreading short-pilose; nodes glabrous or pubescent, but not bearded; leaves 4-11 cm long, 4-8 mm wide.
- 3 Leaf blade basal cilia usually conspicuous; larger vernal blades 6-10 cm by 6-10 mm; internodes, especially lower, sometimes pilose; spikelets obovoid; plant often yellowish-green (orange-brown in age)..... *Dichanthelium acuminatum* var. *lindheimeri*
- 3 Leaf blade basal cilia usually inconspicuous or absent; larger vernal blades 2.5-10 cm long, 2-9 mm wide; all internodes glabrous (rarely the lowest sparsely pilose); spikelets ellipsoid; plant often green to purplish.
- 4 Spikelets (0.9-) 1.1-1.5 mm long, moderately densely to densely puberulent, most hairs < 0.1 mm long; panicles 3-8 cm long, usually more than ½ as wide as long; larger blades 2.5-8 cm long..... *Dichanthelium longiligulatum*
- 4 Spikelets (1.3-) 1.4-1.9 mm long, (glabrous-) sparsely to moderately pubescent, most hairs > 0.1 mm long; panicles 4-12 cm long, usually less than ½ as wide as long; larger blades 7-10 cm long..... *Dichanthelium spretum*
- 1 Internodes variously pubescent.
- 5 Peduncle, panicle axis, and/or sheaths of vernal culms puberulent with hairs 0.1 mm long, sometimes also pubescent with longer hairs, but never grayish-villous; larger leaf blades 2-7 cm long, 2-7 mm wide.
- 6 Spikelets 0.8-1.1 mm long; mid-culm leaf blades 2-4.5 cm long, 2-5 mm wide; sheaths sparsely puberulent to glabrous, lacking papillose-based longer hairs ... *Dichanthelium wrightianum*
- 6 Spikelets 1.1-1.7 mm long; mid-culm leaf blades generally 3-7 cm long and 3-7 mm wide; sheaths with some papillose-based hairs 2 mm or more long..... *Dichanthelium leucothrix*
- 5 Peduncle, panicle axis, and sheaths of vernal culms glabrous, or pilose, or grayish-villous with some shorter hairs 0.2-0.5 mm long, but not puberulent with hairs 0.1 mm long; larger blades 4-20 cm long, 4-12 mm wide.
- 9 Sheaths and internodes of vernal culms gray-villous with a dense, tangled, or matted mixture of slender hairs 2-4 mm long, variously ascending, spreading, and retrorse, papillose or non-papillose, often with shorter hairs beneath; leaf blades velvety-pubescent on abaxial surface, the margins ciliate for half or more their length..... *Dichanthelium acuminatum* var. *acuminatum*
- 9 Sheaths and internodes of vernal culms puberulent, pubescent or papillose-pilose to hispid with ascending straight hairs, but never grayish-villous; leaf blades glabrous to variously pilose abaxially, but not velvety-pubescent, the margins eciliate or ciliate only below the middle.
- 10 Spikelets 0.8-1.1 mm long; blades 2-4.5 cm long, 2-5 mm wide..... *Dichanthelium wrightianum*
- 10 Spikelets 1.1-2.0 mm long; blades 3-12 cm long, 3-12 mm wide.
- 11 Peduncle, panicle axis, and often middle and upper internodes glabrous; sheaths lacking hairs or papillae, at least near mid-length..... *Dichanthelium acuminatum* var. *lindheimeri*
- 11 Peduncle, panicle axis, and internodes puberulent, pubescent, or pilose; sheaths papillose-pilose to hispid.
- 12 Leaf blades 5-12 cm long, 6-12 mm wide; spikelets 1.5-2.0 mm long; peduncle, panicle axis, and sheaths variously pilose, but lacking puberulent hairs 0.1 mm long..... *Dichanthelium acuminatum* var. *fasciculatum*
- 12 Leaf blades 3-7 cm long, 3-7 mm wide; spikelets 1.1-1.7 mm long; puberulent hairs 0.1 mm long often present on peduncle, panicle axis, or sheaths..... *Dichanthelium leucothrix*

Key to the *Dichanthelium dichotomum* group -

- 1 Lower cauline nodes bearded, the hairs usually retrorse.
- 2 Spikelets glabrous.
- 3 Ligule an eciliate membrane; fertile lemma and palea densely papillose at 20×; leaves 3.5-7 cm long by 3-6 mm wide; culms weak, usually sprawling over other vegetation..... *Dichanthelium lucidum*
- 3 Ligule ciliate; fertile lemma and palea smooth, with few or no papillae; leaves either 1.5-4 (-5) cm long by 1-5 mm wide, or 5-12 cm long by 3-15 mm wide.
- 4 Spikelets 0.9-1.4 mm long; vernal cauline blades 1.5-4 (-5) cm long and 1-5 mm wide; internodes or sheaths glabrous or pubescent.
- 5 Spikelets 0.9-1.2 (-1.4) mm long; sheaths glabrous; vernal cauline blades 1-2 (-3) mm wide; ligule < 1 mm long; node beard hairs erect and often only partially encircling the node; internodes glabrous or puberulent..... *Dichanthelium chamaelonche*
- 5 Spikelets 1.2-1.4 mm long; sheaths spreading-pilose; vernal cauline blades 2-5 mm wide; ligule 1-2 mm long; node beard hairs usually spreading or reflexed; internodes glabrous..... *Dichanthelium curtifolium*
- 4 Spikelets 1.4-2.3 mm long; vernal cauline blades 5-12 cm long and 3-15 mm wide; internodes and sheaths glabrous.
- 6 Spikelets 1.8-2.3 mm long; first glume 0.6-1.1 mm long; fertile lemma 0.8-1.0 mm wide; widest vernal blades 3-8 (-10) mm wide; nodes, often only the lower, usually sparsely to moderately bearded with retrorse hairs..... *Dichanthelium dichotomum* var. *dichotomum*
- 6 Spikelets 1.4-1.9 mm long; first glume 0.3-0.6 (-0.7) mm long; fertile lemma 0.6-0.8 mm wide; widest vernal blades 7-15 mm wide; usually all nodes densely bearded with retrorse hairs..... *Dichanthelium microcarpon*
- 2 Spikelets pubescent.
- 7 Spikelets 1.2-1.4 mm long; sheaths spreading-pilose; vernal cauline blades 1-4 cm long and 2-5 mm wide; ligule 1-2 mm long..... *Dichanthelium curtifolium*

- 7 Spikelets 1.4-2.8 mm long; sheaths glabrous to pilose; vernal cauline blades 5-15 cm long and 5-15 mm wide; ligule \leq 1 mm long.
- 9 Usually all culm nodes bearded; internodes glabrous, or middle and upper internodes and peduncle sparsely to moderately spreading short-hairy, sometimes also glandular; upper as well as lower vernal sheaths and both surfaces of cauline blades pubescent, often densely so; spikelets (1.5-) 1.8-2.2 mm long; [of dry rocky or sandy basic soil and barrens] *Dichanthelium annulum*
- 9 Often only lower culm nodes bearded; internodes glabrous; at least middle and upper cauline blades glabrous; spikelets 1.4-2.8 mm long; [mostly of wet acid soils and mesic to dry woodlands].
- 11 Spikelets 1.7-2.2 mm long; first glume 0.6-0.9 mm long; fertile lemma 0.7-1.0 mm wide..... *Dichanthelium dichotomum* var. *nitidum*
- 11 Spikelets 1.4-1.9 mm long; first glume 0.3-0.6 (-0.8) mm long; fertile lemma 0.6-0.8 mm wide..... *Dichanthelium microcarpon*
- 1 Lower cauline nodes glabrous or puberulent, but not bearded.
- 12 Spikelets pubescent.
- 13 Spikelets (1.5-) 1.7-2.7 mm long, if shorter than 1.8 mm then fertile lemma and palea densely papillose; culms soon sprawling. *Dichanthelium lucidum*
- 13 Spikelets 1.2-1.7 mm long; fertile lemma and palea smooth; culms erect.
- 16 Leaf blades (3-) 4-6 (-9) per culm, pliable, 1-3.5 (-5) cm long, 1.5-4 mm wide, the margins flat and sharp-edged, gray-green to white-beige, 0.1 mm wide or less; spikelets 1.2-1.5 mm long, pubescent or glabrous; culms to 40 cm long *Dichanthelium ensifolium*
- 16 Leaf blades 3-4 per culm, firm, 2-6 (-8) cm long, 2-6 (-8) mm wide, at least one margin cartilaginously thickened, the edge usually rounded, white-beige to green-stramineous, 0.1-0.2 mm wide; spikelets (1.1-) 1.3-1.7 mm long, pubescent; culms to 60 cm long..... *Dichanthelium tenue*
- 12 Spikelets glabrous.
- 17 Cauline leaves mostly basally disposed, strongly ascending, much larger than the 2-3 remote middle and upper cauline leaves of fertile culms; spikelets 2.4-2.9 mm long; culms branch from basal and lower nodes, but are not known to produce autumnal inflorescences..... *Dichanthelium nudicaule*
- 17 Cauline leaves well-distributed along the culm, > 3, gradually reduced upward and often spreading; spikelets 0.9-2.6 mm long; culms produce autumnal inflorescences from lower, middle, and/or upper nodes, if from lower only, then spikelets only 0.9-1.2 mm long.
- 18 Fertile lemma and palea densely papillose; ligule usually ciliate, rarely an eciliate membrane 0.1-0.3 mm long; culms weak, soon sprawling over vegetation *Dichanthelium lucidum*
- 18 Fertile lemma and palea smooth, with few or no papillae; ligule always ciliate.
- 19 Spikelets 0.9-1.5 mm long; vernal blades 1-4 mm wide; culms stiffer, erect to ascending.
- 20 Spikelets 0.9-1.2 (-1.4) mm long; blades 1.5-4 (-5) cm long, 1-2.5 (-3) mm wide, mostly 15-20 times as long as wide; autumnal plants cushion-forming *Dichanthelium chamaelonche*
- 20 Spikelets 1.2-1.5 mm long; blades 1-12 (-20) cm long; autumnal plants not cushion-forming. *Dichanthelium ensifolium*
- 19 Spikelets 1.4-2.6 mm long; vernal blades 3-15 mm wide (if spikelets < 1.6 mm long and vernal blades < 5 mm wide, then larger blades > 5 cm long in *D. caerulescens*).
- 23 Spikelets 1.4-1.8 mm long; first glume 0.3-0.8 mm long; fertile lemma 1.3-1.5 mm long; mature vernal panicles usually short-exserted with ascending branches; fresh foliage bluish-glaucous..... *Dichanthelium caerulescens*
- 23 Spikelets 1.7-2.3 mm long; first glume 0.6-1.1 mm long; fertile lemma 1.6-1.9 mm long; mature vernal panicles exserted with spreading branches; fresh foliage not bluish-glaucous.
- 24 Vernal panicle smooth to weakly scabrous, the scabrousness usually confined to the pedicels; vernal cauline blades spreading to deflexed, flexuous; autumnal form densely bushy-fascicled, essentially forming one large mass of clustered leaves [of wet-mesic to dry woods and thickets] *Dichanthelium dichotomum* var. *dichotomum*
- 24 Vernal panicle moderately to densely scabrous, increasingly so from rachis to branches to pedicels; vernal cauline blades stiffly erect; autumnal fascicles forming isolated clusters of leaves [of wet pine savannas and open swamps] *Dichanthelium roanokense*

Dichanthelium aciculare (Desvaux ex Poiret) Gould & Clark. NEEDLE-LEAF WITCHGRASS. **Hab:** Sandy woods and fields. **Dist:** NJ south to n. FL, west to TX and OK, also in West Indies and n. South America. **Phen:** May-Oct. **Comm:** Blades typically are strongly involute, especially autumnal form. **Syn:** = Va, LeBlond (2017a) in Weakley et al (2017); = *Dichanthelium aciculare* ssp. *aciculare* – FNA25; = *Panicum aciculare* Desvaux ex Poiret – F, G, RAB; < *Dichanthelium aciculare* (Desvaux ex Poiret) Gould & Clark – FGr, K1, K3, K4, Gould & Clark (1978); < *Panicum aciculare* Desvaux ex Poiret – C; > *Panicum aciculare* Desvaux ex Poiret – HC, S; < *Panicum aciculare* var. *aciculare* – NeTx; > *Panicum arenicola* W.W. Ashe; > *Panicum areniculum* W.W. Ashe – HC, correctable orthographic error; > *Panicum bennettense* M.V. Brown – HC, S. **NatureServe** G5T4T5 (Apparently Secure).

Dichanthelium acuminatum (Swartz) Gould & C.A. Clark var. *acuminatum*. WOOLLY WITCHGRASS. **Hab:** Dryish sandy or clayey soils of open woods and disturbed areas. **Dist:** MA south to FL, west to TX, also in West Indies, Mexico, Central America, and n. South America. **Phen:** May-Oct. **ID Notes:** Internodes and sheaths gray-villous with usually non-papillate hairs. Plants tend to be low and "bushy" with several spreading-ascending culms and dense autumnal branching. See also discussion under *Dichanthelium filiramum*. **Syn:** = Va, Freckmann (1981); < *Dichanthelium acuminatum* ssp. *acuminatum* – FNA25; < *Dichanthelium acuminatum* (Swartz) Gould & C.A. Clark var. *acuminatum* – K3, NeTx; > *Dichanthelium acuminatum* (Swartz) Gould & C.A. Smith) Gould & C.A. Clark – K1, Freckmann (1981), Gould & Clark (1978); < *Panicum acuminatum* Swartz var. *acuminatum* – Lelong (1984); ~ *Panicum acuminatum* Swartz var. *implicatum* (Lamson-Scribner) Beetle; > *Panicum auburne* Ashe – F, G, HC, S, WV; > *Panicum lanuginosum* Elliott – RAB; > *Panicum lanuginosum* Elliott – HC, S, WV; > *Panicum lanuginosum* Elliott var. *lanuginosum* – C, F, G; < *Panicum leucothrix* Nash – C; < *Panicum thurowii* Lamson-Scribner & J.G. Smith – HC, S.

Dichanthelium acuminatum (Swartz) Gould & C.A. Clark var. *fasciculatum* (Torrey) Freckmann. SLENDER-STEMMED WITCHGRASS. **Hab:** Open or cut-over woods, thickets, fields, meadows, and shores, frequently on disturbed soils. **Dist:** NL (Newfoundland) south to FL, west to CA, north to s. BC. **Phen:** May-Aug. **ID Notes:** Typically much less pilose than var. *acuminatum*, the hairs usually papillate. Plants referable to *Panicum glutinoscabrum* Fernald may be a hybrid of var. *fasciculatum* with *D. scoparium*. Known only from se. VA, they are described as having culms 7-9 dm high; elongate internodes with cinereous puberulence and black, warty, viscid glands; villous nodes; glutinous-warty and scabrous sheaths and blades; ligule 4-5 mm long; minutely puberulent panicle axis; spikelets ellipsoid, subacute, 1.7-1.8 mm long, pubescent; first glume subacute, 0.6-0.7 mm long. **Syn:** = Va, Freckmann (1981); = *Dichanthelium acuminatum* ssp. *fasciculatum* (Torrey) Freckmann & Lelong – FNA25; = *Panicum fasciculatum* Torrey; < *Dichanthelium acuminatum* (Swartz) Gould & C.A. RAB; > *Panicum lanuginosum* var. *fasciculatum* (Torrey) Fernald – C, F, G; > *Panicum lanuginosum* var. *implicatum* (Lamson-Scribner) Fernald – C, F, G; > *Panicum lanuginosum* var. *tennesseense* (Ashe) Gleason – C, G; > *Panicum tennesseense* Ashe – HC, S.

Dichanthelium acuminatum (Swartz) Gould & C.A. Clark var. ***lindheimeri*** (Nash) Gould & C.A. Clark. LINDHEIMER'S WITCHGRASS. **Hab:** Open or cut-over woods, thickets, fields, meadows, and shores, often on wet soils. **Dist:** NS west to MB, south to FL and MO, west to s. CA. **Phen:** May-Sep. **ID Notes:** Internodes as well as sheaths often nearly glabrous. Panicle axis sometimes sparsely pilose at branch nodes, but otherwise glabrous. **Syn:** = Va, Freckmann (1981); = *Dichanthelium acuminatum* ssp. *lindheimeri* (Nash) Freckmann & Lelong – FNA25; = *Dichanthelium lindheimeri* (Nash) Gould – Mi, NY; < *Dichanthelium acuminatum* (Swartz) Gould & C.A. Clark var. *acuminatum* – K3, Gould & Clark (1978); > *Dichanthelium acuminatum* (Swartz) Gould & C.A. Clark var. *lindheimeri* (Nash) Gould & C.A. Clark – K1, Gould & Clark (1978); ? *Dichanthelium lanuginosum* (Elliott) Gould var. *lindheimeri* (Nash) Harvill; > *Panicum acuminatum* Swartz var. *lindheimeri* (Nash) Lelong – Lelong (1984); < *Panicum lanuginosum* Elliott – RAB; > *Panicum lanuginosum* var. *lindheimeri* (Nash) Fernald – F; >> *Panicum lanuginosum* var. *lindheimeri* (Nash) Fernald – C, G; > *Panicum lanuginosum* var. *septentrionale* Fernald – C, F, G; > *Panicum lindheimeri* Nash – HC, S, WV; < *Panicum spretum* J.A. Schultes – GW1.

Dichanthelium angustifolium (Elliott) Gould. NARROWLEAF WITCHGRASS. **Hab:** Sandy pinelands and fields. **Dist:** NJ south to FL, west to AR and e. TX. **Phen:** May-Oct. **Tax:** Autumnal form most readily distinguished from *D. aciculare* and *D. arenicoloides* by flat blades 2-4 mm wide (vs. involute blades 1-2 mm wide). Can be confused with *D. consanguineum*, which has spreading-pilose nodes and blades 10-15× as long as wide; *D. angustifolium* blades typically are 20× or more as long as wide. **Syn:** = Va, LeBlond (2017a) in Weakley et al (2017); = *Dichanthelium aciculare* ssp. *angustifolium* (Elliott) Freckmann & Lelong – FNA25; = *Dichanthelium aciculare* var. *angustifolium* (Elliott) Wipff & S.D. Jones – NcTx; = *Panicum angustifolium* Elliott – F, G, HC, RAB, S; < *Dichanthelium aciculare* (Desvaux ex Poiret) Gould & Clark – K1, K3, K4, Gould & Clark (1978); < *Panicum aciculare* Desvaux ex Poiret – C; < *Panicum angustifolium* Elliott – Tx.

Dichanthelium annuum (Ashe) LeBlond. RINGED WITCHGRASS. **Hab:** Dry sandy or rocky soil of open woods, dry grasslands, and barrens, and glades over serpentine, limestone, calcareous shales, and other high pH dry soils. **Dist:** NY, NJ, IN, and MO south to AL and MS, primarily in the Appalachian Province with very few occurrences in the Coastal Plain. **Phen:** May-Oct. **Comm:** One of the more distinctive taxa within the *D. dichotomum* group by morphology, habitat, and range. Plants from se. MA with all leaves pubescent, glabrous internodes, and spikelets 2.2-2.5 mm long were described as *Panicum annuum* var. *glabrescens*, but belong to *D. mattamuskeetense*. Reported for Pulaski County, KY (Brock 2020).

Syn: = NY, Pa, Va, LeBlond (2001a); = *Panicum annuum* Ashe – F, HC, S; = *Panicum annuum* var. *annuum* – G; < *Dichanthelium dichotomum* (Linnaeus) Gould – K1, Gould & Clark (1978); < *Dichanthelium dichotomum* ssp. *mattamuskeetense* (Ashe) Freckmann & Lelong – FNA25; < *Dichanthelium dichotomum* (Linnaeus) Gould var. *dichotomum* – K3, K4; < *Panicum dichotomum* Linnaeus – C, GW1, RAB; < *Panicum dichotomum* var. *mattamuskeetense* (Ashe) Lelong – Lelong (1984).

Dichanthelium arenicoloides (Ashe) LeBlond. SANDY WOODS WITCHGRASS. **Hab:** Open sandy soil of pinelands and dunes, primarily near the coast; probably occasional to frequent, but long overlooked. **Dist:** NC south to FL and west to TX and AR; also in West Indies, Central America, and n. South America. **Phen:** May-Nov. **Comm:** Vernal form intermediate between *D. aciculare* and *D. angustifolium*. Vernal cauline leaves are longer than those of *D. aciculare* but of similar width. Panicle branches often ascending. Autumnal form strongly resembling *D. aciculare* but with larger, attenuate spikelets, longer first glumes, and both glumes attached 0.3-0.5 mm below expansion of fertile lemma. **Syn:** = LeBlond (2017a) in Weakley et al (2017); = *Panicum arenicoloides* Ashe – HC, S; < *Dichanthelium aciculare* (Desvaux ex Poiret) Gould & Clark – K1, K3, K4, Gould & Clark (1978); < *Dichanthelium aciculare* ssp. *angustifolium* (Elliott) Freckmann & Lelong – FNA25; < *Panicum angustifolium* Elliott – Tx.

Dichanthelium boscii (Poiret) Gould & C.A. Clark. BOSCI'S WITCHGRASS. **Hab:** Shaded mesic to dry woodlands. **Dist:** MA and IL south to n. FL and e. TX. **Phen:** Apr-Sep. **Syn:** = FIgr, FNA25, K1, K3, K4, NY, Pa, Va, Gould & Clark (1978); = *Panicum boscii* Poiret – C, G, NcTx, RAB; > *Panicum boscii* var. *boscii* – F, HC, S, WV; > *Panicum boscii* var. *molle* (Vasey) A.S. Hitchcock & Chase – F, HC, S, WV; > *Panicum pubiflorum* Nash. NatureServe G5 (Secure).

Dichanthelium caerulescens (Hackel ex A.S. Hitchcock) Correll. BLUE WITCHGRASS. **Hab:** Marshes, swamps, wet pinelands, maritime grasslands, damp sandy soil. **Dist:** NJ to NC, and from FL to w. LA; Bahamas and West Indies. **Phen:** Jun-Oct. **Tax:** Not treated by FNA, where it presumably would have been placed in synonymy with *D. dichotomum* ssp. *roanokense*. **Syn:** = Bah, Va, LeBlond (2001a); = *Panicum caerulescens* Hackel ex A.S. Hitchcock – F, HC, S; < *Dichanthelium dichotomum* ssp. *roanokense* (Ashe) Freckmann & Lelong – FNA25; < *Dichanthelium dichotomum* (Linnaeus) Gould var. *dichotomum* – K1, K3, K4, Gould & Clark (1978); < *Panicum dichotomum* Linnaeus – GW1, RAB; < *Panicum dichotomum* var. *roanokense* (Ashe) Lelong – Lelong (1984); < *Panicum roanokense* Ashe – G.

Dichanthelium chamaelonche (Trinius) Freckmann & Lelong. CARPET WITCHGRASS. **Hab:** Moist pine savannas and flatwoods, pineland pondshores. **Dist:** Se. VA south to FL, west to LA, also in Cuba and Belize. **Phen:** Apr-Sep. **Comm:** Internodes can be glabrous or puberulent, and nodes glabrous, pubescent, or bearded, but the glabrous spikelets 0.9-1.2 mm long are diagnostic. The concept of this taxon in FNA (as ssp. *chamaelonche*) appears to include *D. dichotomum* var. *glabrifolium* (see descriptions of Floridian *D. chamaelonche* ssp. *breve* and *D. dichotomum* var. *glabrifolium* in this treatment). **Syn:** = LeBlond (2018b) in Weakley et al (2018a); = *Panicum chamaelonche* Trinius – G, GW1, HC, RAB, S; = *Panicum chamaelonche* Trinius var. *chamaelonche* – Lelong (1984); < *Dichanthelium chamaelonche* (Trinius) Freckmann & Lelong ssp. *chamaelonche* – FNA25; < *Dichanthelium dichotomum* (Linnaeus) Gould var. *ensifolium* (Baldwin) Gould & Clark – K1, K3, K4, Gould & Clark (1978); < *Panicum ensifolium* Baldwin ex Elliott – C.

Dichanthelium commutatum (J.A. Schultes) Gould ssp. *commutatum*. VARIABLE WITCHGRASS. **Hab:** Low, shaded, moist woodlands and woodland edges, and dry, thin, often rocky woods and thickets. **Dist:** ME south to FL, west to MI, MO, OK, and TX; Mexico. **Phen:** May-Oct. **Tax:** Also see commentary under *D. commutatum* ssp. *equilaterale* and ssp. *joorii*. **Syn:** = FNA25, NY, Pa, Tn; = *Dichanthelium commutatum* (J.A. Schultes) Gould var. *commutatum* – Mo1, Va; < *Dichanthelium commutatum* (J.A. Schultes) Gould – K1, K3, K4; > *Dichanthelium mutabile* (Lamson-Scribner & J.G. Smith ex Nash) Wipff – Wipff (2020); < *Panicum commutatum* J.A. Schultes – C, RAB, Tx; > *Panicum commutatum* J.A. Schultes – HC, S, WV; > *Panicum commutatum* var. *commutatum* – F, G; < *Panicum divergens* Kunth – NcTx; > *Panicum mutabile* Lamson-Scribner & Smith ex Nash – F, G, HC, S.

Dichanthelium commutatum (J.A. Schultes) Gould ssp. *joorii* (Vasey) Freckmann & Lelong. SPRAWLING WITCHGRASS. **Hab:** Wet to swampy woodlands, sandy riparian areas. **Dist:** VA south to FL, west to TX; Mexico. **Phen:** May-Oct. **Tax:** Plants intermediate to ssp. *commutatum* are frequent, but recognition may be warranted in some areas. **Syn:** = FNA25; = *Panicum commutatum* J.A. Schultes var. *joorii* (Vasey) Fernald – F; = *Panicum joorii* Vasey – HC, S; < *Dichanthelium commutatum* (J.A. Schultes) Gould – FIGr, K1, K3, K4, WH3; < *Panicum commutatum* J.A. Schultes – C, RAB, Tx; < *Panicum commutatum* var. *commutatum* – G.

Dichanthelium consanguineum (Kunth) Gould & C.A. Clark. KUNTH'S WITCHGRASS. **Hab:** Moist or dry sandy soils of pinelands. **Dist:** Occasional from se. VA south to FL, west to TX and IN. **Phen:** Apr-Sep. **Comm:** Often not easily separated from *D. angustifolium* and *D. ovale*. It is distinguished from *D. angustifolium* by spreading-hirsute nodes and leaves 10-15× as long as wide (*D. angustifolium* has beardless nodes, or nodes bearded with erect-ascending soft hairs, and longer leaves 20× or more as long as wide). *D. consanguineum* is distinguished from *D. ovale* by having strongly pilose upper blade surfaces (*D. ovale* upper blade surfaces are glabrous or with a few long hairs basally). The hairs of *D. consanguineum* frequently are strongly papillate. **Syn:** = FNA25, K1, K3, K4, Va, Gould & Clark (1978), LeBlond (2017a) in Weakley et al (2017); = *Panicum consanguineum* Kunth – C, F, G, HC, RAB, S; < *Dichanthelium aciculare* (Desvaux ex Poirlet) Gould & Clark – FIGr; < *Panicum angustifolium* Elliott – Tx.

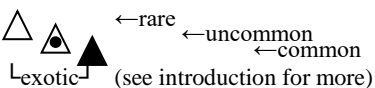

Dichanthelium cryptanthum (Ashe) LeBlond. HIDDEN-FLOWERED WITCHGRASS. **Hab:** Wet meadows and ditches, streamside openings. **Dist:** DE (or NJ?) to MS (or TX?) (previous concepts of this taxon and its range are unclear). **Phen:** May-Sep. **Comm:** In the field, this taxon can be mistaken for *D. yadkinense*; it is readily distinguished by its scabrous peduncle and membranous ligules. Reported for DE (Longbottom, Naczi, & Knapp 2016). **Syn:** = Va, LeBlond (2011) in Weakley et al (2011), LeBlond (2019a) in Weakley et al (2019a); = *Panicum cryptanthum* Ashe – F, HC, S; = *Panicum scabriusculum* var. *cryptanthum* (Ashe) Gleason – G; < *Dichanthelium scabriusculum* (Elliott) Gould & C.A. Clark – FNA25, K1, K3, K4, Gould & Clark (1978); < *Panicum scabriusculum* Elliott – C, GW1, RAB.

Dichanthelium curtifolium (Nash) LeBlond. SHORT-LEAVED WITCHGRASS. **Hab:** Bogs, sphagnum streamhead swamps, mountain streams, marl meadows. **Dist:** Disjunctly distributed in w. VA, w. NC and e. TN, e. SC, FL, and MS. **Phen:** Apr-Sep. **Comm:** The combination of characters is quite distinctive for the genus in our region. **Syn:** = LeBlond (2011) in Weakley et al (2011), LeBlond (2018b) in Weakley et al (2018a); = *Dichanthelium ensifolium* (Baldwin ex Elliott) Gould ssp. *curtifolium* (Nash) Freckmann & Lelong – FNA25; = *Panicum curtifolium* Nash – HC, RAB, S; = *Panicum ensifolium* Baldwin ex Elliott var. *curtifolium* (Nash) Lelong – Lelong (1984); < *Dichanthelium acuminatum* var. *implicatum* (Lamson-Scribner) Gould & Clark – K1, Gould & Clark (1978); < *Dichanthelium dichotomum* (Linnaeus) Gould var. *ensifolium* (Baldwin) Gould & Clark – K3, K4.

Dichanthelium depauperatum (Muhlenberg) Gould. STARVED WITCHGRASS. **Hab:** Dry soils of grasslands and open woods, often on disturbed soils of roadsides and ditches. **Dist:** NL (Newfoundland) and MN south to GA and TX. **Phen:** Apr-Sep. **Syn:** = FNA25, K1, K3, K4, Mi, NY, Pa, Va, Gould & Clark (1978); = *Panicum depauperatum* Muhlenberg – C, HC, NcTx, RAB, S, Tx, WV; > *Panicum depauperatum* var. *depauperatum* – F, G; > *Panicum depauperatum* var. *psilophyllum* Fernald – F, G. **NatureServe G5** (Secure).

Dichanthelium dichotomum (Linnaeus) Gould var. *dichotomum*. FORKED WITCHGRASS. **Hab:** Wet-mesic to dry woods, thickets, and woodland openings. **Dist:** S. Canada and MI south to FL and TX. **Phen:** May-Oct. **Tax:** Plants with bearded nodes and larger leaves are referable to *Panicum dichotomum* var. *barbulatum* (here included) but intermediates abound. **Syn:** = Va, LeBlond (2001a), LeBlond (2017c) in Weakley et al (2017); = *Dichanthelium dichotomum* ssp. *dichotomum* – FNA25, NY; = *Panicum dichotomum* Linnaeus – G; = *Panicum dichotomum* var. *dichotomum* – Lelong (1984); < *Dichanthelium dichotomum* (Linnaeus) Gould – Pa; < *Dichanthelium dichotomum* (Linnaeus) Gould var. *dichotomum* – K1, K3, Gould & Clark (1978); > *Panicum barbulatum* Michaux – HC, S; < *Panicum dichotomum* Linnaeus – C, GW1, NcTx, RAB; > *Panicum dichotomum* Linnaeus – HC, S; > *Panicum dichotomum* var. *barbulatum* (Michaux) Wood – F, WV; > *Panicum dichotomum* var. *dichotomum* – F, WV.

Dichanthelium dichotomum (Linnaeus) Gould var. ***nitidum*** (Lamarck) LeBlond. SHINING WITCHGRASS. **Hab:** Moist sandy or peaty soil of wet pine savannas and pocosin ecotones, wet meadows near the coast, swamps, and marshes. **Dist:** PA and NJ south to FL, west to MO and TX; also the Bahamas (Sorrie & LeBlond 1997) and West Indies, and Mexico to Venezuela. **Syn:** = Va, LeBlond (2001a); = *Dichanthelium dichotomum* ssp. *nitidum* (Lamarck) Freckmann & Lelong – FNA25; = *Panicum dichotomum* var. *nitidum* (Lamarck) Wood – Lelong (1984); = *Panicum nitidum* Lamarck – F, HC, Mi, S; = *Panicum nitidum* var. *nitidum* – G; < *Dichanthelium dichotomum* (Linnaeus) Gould – Bah, Pa; < *Dichanthelium dichotomum* (Linnaeus) Gould var. *dichotomum* – K1, K3, Gould & Clark (1978); < *Panicum dichotomum* Linnaeus – C, GW1, RAB.

Dichanthelium ensifolium (Baldwin ex Elliott) Gould. SMALL-LEAVED WITCHGRASS. **Hab:** Wet to mesic peaty, sandy, or mucky soils, often in open pinelands or with *Sphagnum*. **Dist:** NJ south to FL, west to e. TX and AR. **Phen:** May-Oct. **Comm:** Plants with pubescent spikelets are frequent. **Syn:** = Va, LeBlond (2018b) in Weakley et al (2018a); = *Dichanthelium ensifolium* ssp. *ensifolium* – FNA25; = *Panicum ensifolium* Baldwin ex Elliott – F; < *Dichanthelium dichotomum* (Linnaeus) Gould var. *ensifolium* (Baldwin) Gould & Clark – K1, K3, K4, Gould & Clark (1978); > *Dichanthelium flavovirens* (Nash) Wipff – Wipff (2020); > *Dichanthelium vernale* (A.S. Hitchcock & Chase) Wipff – Wipff (2020); < *Panicum ensifolium* Baldwin ex Elliott – C, G, GW1, RAB; > *Panicum ensifolium* Baldwin ex Elliott – HC, S; < *Panicum ensifolium* var. *ensifolium* – Lelong (1984); > *Panicum flavovirens* Nash – HC, S; > *Panicum vernale* A.S. Hitchcock & Chase – HC, S.

Dichanthelium erectifolium (Nash) Gould & C.A. Clark. ERECT-LEAVED WITCHGRASS. **Hab:** Limesink ponds, depression meadows, cypress savannas, pine savannas. **Dist:** Se. NC to FL, west to LA; Cuba. **Phen:** May-Aug. **Syn:** = FNA25, K1, K3, K4, Gould & Clark (1978); = *Panicum erectifolium* Nash – GW1, HC, RAB, S. [NatureServe G4](#) (Apparently Secure).

Dichanthelium filirum (Ashe) LeBlond. HAIRY NEEDLE-LEAVED WITCH GRASS. **Hab:** Dry to moist sandy pinelands. **Dist:** DE south to FL, west to TX and AR; West Indies. **Phen:** May-Oct. **Comm:** This species has the longitudinally wrinkled leaves 15-20+ times as long as wide plus the strongly nerved spikelets associated with the *D. aciculare* group. The villous nodes and longer ligules lead it towards the *D. acuminatum* group. The Ashe type for *Panicum filirum* was treated as a synonym of *P. aciculare* by Hitchcock & Chase (1910), but it is the same as Nash's *P. chrysopsidifolium* published three years later. Lower leaves of the Florida type of *P. chrysopsidifolium* are up to 10 mm wide, but no plants have been seen outside of Florida with leaves wider than 5 mm. The specific epithet *filirum* was changed to *filirameum* by Hitchcock & Chase, but Ashe's original spelling has been determined to be legitimate. **Syn:** = LeBlond (2016), LeBlond (2017a) in Weakley et al (2017); = *Dichanthelium chrysopsidifolium* (Nash) J.R. Thomas & Wipff – Wipff (2020); = *Panicum chrysopsidifolium* Nash – G, HC, S; = *Panicum filirum* Ashe; < *Dichanthelium acuminatum* (Swartz) Gould & C.A. Clark var. *acuminatum* – K1, K3, Gould & Clark (1978); < *Dichanthelium acuminatum* – K4; < *Panicum aciculare* Desvaux ex Poiret – F; < *Panicum consanguineum* Kunth – RAB; < *Panicum lanuginosum* Elliott var. *lanuginosum* – C.

Dichanthelium fusiforme (A.S. Hitchcock) Harvill. SPINDLE-FRUITED WITCHGRASS. **Hab:** Dry to moist sand of open pine and pine-oak woods and clearings. **Dist:** Se. VA south to FL, west to MS and w. LA, also in West Indies, Mexico, Central America, and Venezuela; perhaps most abundant in FL. **Phen:** May-Nov. **Comm:** Autumnal blades often flat. The autumnal form of *D. oligosanthos* var. *oligosanthos* can be very similar to *D. fusiforme* if the vernal blades of the former are missing. They are best separated by ligule length (0.5-1 mm in *fusiforme*, 1.5-3 mm in *oligosanthos*) and the more attenuated ends of the *fusiforme* spikelet. **Syn:** = Va, LeBlond (2017a) in Weakley et al (2017); = *Dichanthelium aciculare* ssp. *fusiforme* (A.S. Hitchcock) Freckmann & Lelong – FNA25; = *Panicum fusiforme* A.S. Hitchcock – F, G, HC, RAB, S; < *Dichanthelium aciculare* (Desvaux ex Poiret) Gould & Clark – FlGr, K1, K3, K4, Gould & Clark (1978); < *Panicum aciculare* Desvaux ex Poiret – C.

Dichanthelium laxiflorum (Lamarck) Gould. OPEN-FLOWER WITCHGRASS. **Hab:** Open or shaded woodlands, often in moist soil. **Dist:** MD south to FL, west to TX, north to IN; Mexico, Central America; West Indies. **Phen:** Apr-Sep. **Tax:** Included in this concept of *D. laxiflorum* are plants formerly known as *Panicum xalapense* var. *strictirameum*. They have strict panicles, smaller leaves, shorter culms, and spikelets as short as 1.4 mm. The known range of these plants is SC to TX. A few *D. laxiflorum* populations in SC and FL have spikelets to 2.5 mm long. **Syn:** = FNA25, K1, K3, K4, Pa, Va, Gould & Clark (1978); = *Panicum laxiflorum* Lamarck – C, F, G, NcTx, RAB; > *Dichanthelium xalapense* (Kunth) Wipff var. *strictirameum* (A.S. Hitchcock & Chase) Wipff – Wipff (2020); > *Dichanthelium xalapense* (Kunth) Wipff var. *xalapense* – Wipff (2020); > *Panicum laxiflorum* Lamarck – HC, S; > *Panicum xalapense* – WV; > *Panicum xalapense* var. *strictirameum* A.S. Hitchcock & Chase – HC, S; > *Panicum xalapense* Kunth var. *xalapense* – HC, S. [NatureServe G5](#) (Secure).

Dichanthelium leucothrix (Nash) Freckmann. ROUGHISH WITCHGRASS. **Hab:** Wet sandy, peaty, or mucky soil of pinelands and depression marshes. **Dist:** S. NJ south to FL, west to TX, also in TN; West Indies and n. South America. **Phen:** May-Oct. **Comm:** A micrometer is needed to measure the very short puberulence (0.1 mm) that distinguishes this taxon, *D. meridionale*, and *D. wrightianum* from other members of the *D. acuminatum* group. **Syn:** = K1, Freckmann (1981); = *Dichanthelium acuminatum* ssp. *leucothrix* (Nash) Freckmann & Lelong – FNA25; = *Dichanthelium acuminatum* (Swartz) Gould & C.A. Clark var. *leucothrix* (Nash) Lelong; = *Panicum acuminatum* Swartz var. *leucothrix* (Nash) Lelong – Lelong (1984); = *Panicum leucothrix* Nash – F, G, HC, RAB, S; = *Panicum spretum* var. *leucothrix* (Nash) D.B. Ward; < *Dichanthelium acuminatum* var. *implicatum* (Lamson-Scribner) Gould &

Clark – Gould & Clark (1978); < *Dichanthelium leucothrix* (Nash) Freckmann – K3, K4; < *Panicum implicatum* Swartz; < *Panicum leucothrix* Nash – C; < *Panicum spretum* J.A. Schultes – GW1.

Dichanthelium linearifolium (Lamson-Scribner) Gould. LOW WHITE-HAIRED WITCHGRASS. **Hab:** Dry open woods. **Dist:** Se. Canada and MN south to GA and TX. **Phen:** May-Oct. **Syn:** = FNA25, K1, K3, K4, NY, Pa, Va, Gould & Clark (1978); = *Panicum linearifolium* Lamson-Scribner – C, NcTx, RAB, S, Tx; > *Dichanthelium linearifolium* (Lamson-Scribner) Gould – Mi; > *Dichanthelium perlongum* (Nash) Freckmann – Mi; > *Panicum linearifolium* Lamson-Scribner – HC; > *Panicum linearifolium* var. *linearifolium* – F, G, WV; > *Panicum linearifolium* var. *wernerii* (Lamson-Scribner) Fernald – F, G, WV; > *Panicum wernerii* Lamson-Scribner – HC.

Dichanthelium longiligulatum (Nash) Freckmann. LONG-LIGULE WITCHGRASS. **Hab:** Limesink ponds, depression meadows, cypress savannas, pine savannas, bogs, swamps. **Dist:** NJ and PA south to FL, also in TN, e. TX, and Central America. **Phen:** May-Sep. **Comm:** Intermediate forms between this taxon and *D. spretum* occur. **Syn:** = K1, Va, Freckmann (1981); = *Dichanthelium acuminatum* ssp. *longiligulatum* (Nash) Freckmann & Lelong – FNA25; = *Dichanthelium acuminatum* (Swartz) Gould & Clark var. *longiligulatum* (Nash) Gould & Clark – Gould & Clark (1978); = *Panicum acuminatum* Swartz var. *longiligulatum* (Nash) Lelong – Lelong (1984); = *Panicum longiligulatum* Nash – HC, RAB, S; = *Panicum spretum* var. *longiligulatum* (Nash) D.B. Ward; < *Dichanthelium leucothrix* (Nash) Freckmann – K3, K4; < *Panicum lanuginosum* var. *lindheimeri* (Nash) Fernald – C, G; < *Panicum spretum* J.A. Schultes – GW1.

Dichanthelium lucidum (Ashe) LeBlond. BOG WITCHGRASS. **Hab:** Wet meadows, sphagnum swamps, bogs, wet woods, sphagnum streamhead pocosins, baygalls. **Dist:** MA and MI south to FL and TX. **Phen:** May-Oct. **Tax:** Vernal culms soon recline, producing a tangled mass. The papillose fertile lemma is diagnostic. Rarely, entire populations of *D. lucidum* can have eciliate ligules composed of a membrane 0.1-0.3 mm long. Even rarer are plants within these populations with retrorsely bearded nodes. Both conditions may reflect intergradation with another taxon, possibly within the *dichotomum* complex, or with *D. cryptanthum* in section *Clandestina*. Plants with spikelets 1.5-1.8 mm long, pubescent lower sheaths and internodes, and strigose-bullate blade surfaces of lower leaves were named *Panicum lucidum* var. *opacum* by Fernald. Plants with these characters were collected in Clarendon Co., SC, by John Nelson in 2019. These plants have incomplete ligules with few scattered short hairs, and fertile lemmas with scattered and irregular papillae at 40×. Gleason (1952) noted intermediates. More research is needed to determine the taxonomic validity of these plants. **Syn:** = NY, Pa, Va, LeBlond (2001a); = *Panicum lucidum* Ashe – G, S; < *Dichanthelium dichotomum* ssp. *lucidum* (Ashe) Freckmann & Lelong – FNA25; < *Dichanthelium dichotomum* (Linnaeus) Gould var. *dichotomum* – K1, K3, K4, Gould & Clark (1978); < *Panicum dichotomum* Linnaeus – C, GW1, NcTx, RAB; < *Panicum dichotomum* var. *lucidum* (Ashe) Lelong – Lelong (1984); ~ *Panicum dichotomum* L. var. *opacum*, (an illegitimate name used by Jones & Coile); > *Panicum lucidum* var. *lucidum* – F, HC; > *Panicum lucidum* var. *opacum* Fernald – F, HC.

Dichanthelium microcarpon (Muhlenberg ex Elliott) Mohlenbrock. SMALL-FRUITED WITCHGRASS. **Hab:** Floodplain forests, swamps, openings, and borders of streams and ponds, and occasionally in dry upland woods. **Dist:** MA and MI south to FL and TX. **Phen:** May-Oct. **Comm:** All nodes are typically densely retrorsely bearded. **Syn:** = Il, Mi, NY, Pa; = *Dichanthelium dichotomum* ssp. *microcarpon* (Muhlenberg ex Elliott) Freckmann & Lelong – FNA25; = *Dichanthelium dichotomum* (Linnaeus) Gould var. *ramulosum* (Torrey) LeBlond – Va, LeBlond (2001a); = *Panicum dichotomum* var. *ramulosum* (Torrey) Lelong – Lelong (1984); = *Panicum microcarpon* Muhlenberg ex Elliott – F, HC, S, WV; = *Panicum nitidum* Lamarck var. *ramulosum* Torrey – G; ~ *Dichanthelium dichotomum* (L.) Gould ssp. *ramulosum* (Muhl. ex Ell.) Freckmann & Lelong; < *Dichanthelium dichotomum* (Linnaeus) Gould var. *dichotomum* – K1, K3, K4, Gould & Clark (1978); < *Panicum dichotomum* Linnaeus – C, GW1, NcTx, RAB.

Dichanthelium neuranthum (Grisebach) LeBlond. NERVED WITCHGRASS. **Hab:** Maritime wet grasslands, Piedmont prairie-like barrens. **Dist:** Disjunct in se. and central NC, se. SC, GA, FL, MS, e. TX, AR; Bahamas, Cuba, and Belize. **Phen:** May-Nov. **Tax:** Can occur with the similar-appearing *D. caeruleus*, from which it differs by having spikelets that are longer (1.8-2.2 mm vs. 1.4-1.8), rounded summits vs. obtuse to sub-acute, and pubescent vs. glabrous; longer first glumes (0.8-1.0 mm vs. 0.3-0.8); leaves 15× or more as long as wide vs. 10-15×; and a nearly strict panicle. The plants from the Piedmont of NC match descriptions of *Panicum ovinum*, known from dry to moist open ground and prairies in e. TX, MS, and AR when last recognized (HC). It is treated here as a synonym of *D. neuranthum*. **Syn:** = FIGr, LeBlond (2017a) in Weakley et al (2017), LeBlond et al (2017); = *Dichanthelium aciculare* (Desvaux ex Poir.) Gould & C.A. Clark ssp. *neuranthum* (Grisebach) Freckmann & Lelong – FNA25; = *Panicum neuranthum* Grisebach – RAB; < *Dichanthelium aciculare* (Desvaux ex Poir.) Dichanthelium roanokense (Ashe) LeBlond. ROANOKE WITCHGRASS. **Hab:** Wet pine savannas, swamp openings, and wet peaty meadows. **Dist:** DE south to FL, west to e. TX; disjunct in Coffee County, TN (Ciafre, in prep.); Jamaica. **Phen:** May-Sep. **Tax:** See note under *D. caeruleus* regarding FNA treatment. **Syn:** = LeBlond (2017a) in Weakley et al (2017), LeBlond (2017c) in Weakley et al (2017), LeBlond et al (2017); = *Dichanthelium dichotomum* (Linnaeus) Gould var. *roanokense* (Ashe) LeBlond – Va, LeBlond (2001a); = *Panicum roanokense* Ashe – F, HC, S; < *Dichanthelium dichotomum* *ssp. roanokense* (Ashe) Freckmann & Lelong – FNA25; < *Dichanthelium dichotomum* (Linnaeus) Gould var. *dichotomum* – K1, K3, K4, Gould & Clark (1978); < *Panicum dichotomum* Linnaeus – C, GW1, NcTx, RAB; < *Panicum dichotomum* var. *roanokense* (Ashe) Lelong – Lelong (1984); < *Panicum roanokense* Ashe – G.

Dichanthelium scabriusculum (Elliott) Gould & C.A. Clark. TALL SWAMP WITCHGRASS. **Hab:** Moist, low, open or shaded woodlands, often along streams or ditches. **Dist:** Se. MA south to FL, west to e. TX and AR. **Phen:** May-Oct. **Syn:** = Va, LeBlond (2019a) in Weakley et al (2019a); < *Dichanthelium scabriusculum* (Elliott) Gould & C.A. Clark – FNA25, K1, K3, Gould & Clark (1978); > *Panicum aculeatum* A.S. Hitchcock & Chase – F, G, HC, S; < *Panicum scabriusculum* Elliott – C, GW1, RAB; > *Panicum scabriusculum* Elliott – F, HC, S; > *Panicum scabriusculum* var. *scabriusculum* – G.

Dichanthelium scoparium (Lamarck) Gould. VELVET WITCHGRASS. **Hab:** Moist sandy soil of woodland openings and ditches. **Dist:** MA and MI south to FL and TX; also in Mexico and West Indies. **Phen:** May-Oct. **Tax:** See note under *D. acuminatum* var. *fasciculatum* regarding *Panicum glutinoscabrum*. **ID Notes:** The dense, velvety pubescence of the internodes, sheaths, and blades of this taxon, combined with the viscid band below the nodes, are diagnostic. **Syn:** = FNA25, K1, K3, K4, NY, Pa, Va, Gould & Clark (1978); = *Panicum scoparium* Lamarck – C, F, G, GW1, HC, NcTx, RAB, S.

Dichanthelium scribnerianum (Nash) J.R. Thomas. SCRIBNER'S WITCHGRASS. **Hab:** Black belt prairies, calcareous clay prairies, prairie-like grassland remnants over fragipan soils in the loess plains, calcareous maritime forests, dry thin woods and openings, dry prairies, usually in basic soil. **Dist:** Sw. ME to s. BC, south to se. NC, n. GA, and CA, also in n. Mexico. **Phen:** Apr-Nov. **Syn:** =; = *Dichanthelium oligosanthes* *ssp. scribnerianum* (Nash) Freckmann & Lelong – FNA25, Mi, NY; = *Dichanthelium oligosanthes* (J.A. Schultes) Gould var. *scribnerianum* (Nash) Gould – K1, Va, Gould & Clark (1978); = *Panicum oligosanthes* var. *scribnerianum* (Nash) Fernald – NcTx; = *Panicum scribnerianum* Nash – S; > *Dichanthelium helleri* (Nash) Mohlenbrock – Thomas (2021); < *Dichanthelium oligosanthes* (J.A. Schultes) Gould – K3, K4, Pa; > *Dichanthelium scribnerianum* (Nash) J.R. Thomas – Thomas (2021); > *Panicum helleri* – G, HC; < *Panicum oligosanthes* J.A. Digitaria Haller 1768 (CRAB GRASS)

A genus of about 200 species, primarily in the tropics and subtropics. Most of our species occur primarily in disturbed situations; their original distributions and habitats are now obscure. References: Bridges & Orzell (2018b) in Weakley et al (2018a); Lo Medico et al (2017); Vega et al (2009); Webster (1980); Webster (1987); Wipff & Hatch (1994); Wipff & Shaw (2018b); Wipff (1996b); Wipff (2003e) in FNA25 (2003a).

Unkeyed taxa: *Digitaria horizontalis*

- 1 Inflorescences an open panicle (as long as wide); spikelets solitary (or paired or in 3's) on long or short pedicels; pedicels mostly > 2× as long as the spikelets, mostly spreading (sometimes distally appressed on branches); the entire panicle usually detaching at maturity **Leptoloma**
- 1 Inflorescences of digitate or sub-digitate primary branches, or primary branches alternately arranged along a central axis; with (1) 2-3 (or more) spikelets per node on primary branches, arranged in two rows along one side of the branch; spikelets appressed on branches; the entire inflorescence not detaching at maturity.
 - 2 Inflorescences of primary branches alternately arranged along a central axis; all the rachilla internodes more or less conspicuously elongated, hence upper florets stipitate; upper lemmas dark brown at maturity; spikelets 3.0-6.6 mm long, densely short to long pubescent, hairs generally exceeding the length of the spikelet and hairs spreading at maturity; hairs smooth-walled, with acute apices **Trichachne**
 - 2 Inflorescences of digitate or sub-digitate primary branches, or primary branches alternately arranged along a central axis; no conspicuous elongated rachilla internodes, upper floret not stipitate; upper lemmas pale yellow, tan, gray, purple-tinged, purple, brown or dark brown; spikelets 1.3-4.1 mm long, glabrous to variously pubescent; hairs various, smooth or verrucose walled, with acute or dilated apices.
 - 3 Rachis of each raceme narrow, trigonous, only slightly (if at all) winged.
 - 5 Spikelets 1.7-2.2 mm long; plants 3-10 dm tall; racemes to 10 cm long; upper sheaths glabrous, lower sheaths glabrous to sparsely pilose **Digitaria filiformis** var. *filiformis*
 - 5 Spikelets 2.0-2.8 mm long; plants 8-15 dm tall; racemes to 25 cm long; upper sheaths glabrous or pilose, lower sheaths densely pilose **Digitaria villosa**
 - 3 Rachis of each raceme broad (0.5-1 mm wide), winged, the wings as wide as or wider than the rachis proper.
 - 6 Lower sheaths glabrous; second glume 0.75-1× as long as the first glume (which may be ; fertile lemma dark brown or black at maturity (or pale brown or gray in *D. longiflora*).
 - 7 Hairs of the spikelet minutely capitate; second glume ca. 1× as long as the first glume; spikelets 1.7-2.3 mm long **Digitaria ischaemum**
 - 7 Hairs of the spikelet not minutely capitate; second glume ca. 0.75× as long as the first glume; spikelets 1.2-1.7 mm long **Digitaria violascens**
 - 6 Lower sheaths pilose; second glume 0.3-0.6× as long (to 0.8× as long in *D. ciliaris*) as the first glume; fertile lemma white, tan, or grayish-brown at maturity.
 - 8 Spikelets 1.5-1.8 mm long, villous with crinkled hairs; pedicels glabrous, terete in cross-section **Digitaria serotina**
 - 8 Spikelets (1.7-) 2.4-4.1 mm long, glabrous, scabrous, or pubescent with straight hairs; pedicels scabrous, 3-angled in cross-section; [section *Digitaria*].
 - 9 Spikelets (1.7-) 2.5-3.4 mm long, averaging 3.0 mm long or shorter; leaf blades pilose over the upper surface **Digitaria sanguinalis**
 - 9 Spikelets 2.6-4.1 mm long, averaging 3.1 mm long or longer; leaf blades glabrous except for a few hairs on the upper surface at the base.
 - 10 Lower lemma of the sessile spikelet with 5 equidistant nerves; lowermost inflorescence node glabrous or pubescent with hairs < 0.4 mm long; apex of the first glume rounded to truncate **Digitaria bicornis**
 - 10 Lower lemma of sessile spikelet with the lateral nerves crowded to the margins; lowermost inflorescence node pubescent with hairs > 0.4 mm long; apex of the first glume acute **Digitaria ciliaris**

* **Digitaria bicornis** (Lamarck) Roemer & J.A. Schultes. **Hab:** Sandy fields, lawns, roadsides, disturbed places. **Dist:** Webster (1980) believed that this species is likely to occur in VA and MD, as well. **Phen:** Jan-Dec. **Comm:** Whether or not it is introduced is unclear; it is now widely distributed in the tropics and subtropics worldwide. **Syn:** = Bah, ETx1, FIgr, FNA25, K1, K3, K4, WH3, Webster (1987); > *Digitaria diversiflora* Swallen – Tx. NatureServe G5 (Secure).

Digitaria ciliaris (Retzius) Koeler. SOUTHERN CRAB GRASS. **Hab:** Sandy fields, roadsides, and disturbed areas. **Phen:** Aug-Oct (-Jul). **Syn:** = Ar, Bah, C, ETx1, FIgr, FNA25, K1, K3, K4, Mo1, NcTx, NY, Pa, Tn, Va, WH3, Webster (1987); = *Digitaria sanguinalis* var. *ciliaris* (Retzius) Parlatore – F, HC; ? *Digitaria adscendens* (Kunth) Henrard – Tx. NatureServe G5 (Secure).

Digitaria filiformis (Linnaeus) Koeler var. *filiformis*. SLENDER CRABGRASS. **Hab:** Pine flatwoods, longleaf pine sandhills, fields, roadsides, disturbed areas. **Dist:** Widespread in e. North America. **Phen:** Mar-Dec. **Tax:** Var. *laevigulumis* (Fernald) J. Wipff, with glabrous spikelets, is a narrow endemic in NH. **Syn:** = Ar, C, ETx1, F, G, Mo1, NY, RAB, Va, WH3, Wipff (1996b); = *Digitaria filiformis* – HC, K1; = *Syntherisma filiformis* (Linnaeus) Nash – S; < *Digitaria filiformis* – Mi, NcTx, Pa, Tn, Tx, W, WV; < *Digitaria filiformis* (Linnaeus) Koeler var. *filiformis* – FNA25, K3, K4.

* **Digitaria horizontalis** Willdenow. JAMAICAN CRABGRASS. **Hab:** Roadsides, sandy areas, other disturbed areas. **Dist:** Uncertain if native in c. and s. peninsular FL; West Indies, Mexico south to South America. **Phen:** Jun-Nov. **Syn:** = Bah, FIgr, FNA25, K1, K3, K4, WH3. NatureServe G5 (Secure).

* **Digitaria ischaemum** (Schreber) Muhlenberg. SMOOTH CRAB GRASS. **Hab:** Fields, lawns, disturbed areas. **Dist:** Native of Eurasia. **Phen:** Jul-Nov. **Tax:** Two varieties have sometimes been recognized. Var. *ischaemum* has racemes (1-) 2-6, 1-9 (-10) cm long, mostly curved and plants mostly to 4 dm tall. Var. *mississippiensis* (Gattinger) Fernald has racemes 5-7, 6-15 cm long, mostly stiff and straight and plants to 10 dm tall. **Syn:** = Ar, C, ETx1, FIgr, FNA25, K1, K3, K4, Mi, Mo1, NE, NY, Pa, Tn, Va, W, WH3, WV; = *Digitaria ischaemum* var. *ischaemum* – RAB; = *Syntherisma ischaemum* (Schreber) Nash – S; > *Digitaria ischaemum* var. *ischaemum* – F, G, HC; > *Digitaria ischaemum* (Schreber) Muhlenberg var. *mississippiensis* (Gattinger) Fernald – F, G, HC.

***Dinebra* Jacquin 1809 (VIPER GRASS)**

A genus of ca. 25 species, annuals, of the tropics and subtropics. The circumscription of *Dinebra* here follows the greatly expanded course of Peterson et al. (2012). References: Barkworth (2003c) in FNA25 (2003a); Peterson et al (2012); Snow & Peterson (2012); Snow (2003a) in FNA25 (2003a); Snow et al (2018).

Unkeyed waifs: *Dinebra decipiens* var. *peacockii*

- 2 Sheaths sparsely to densely hairy with papillose-based hairs.
 - 3 Glumes lanceolate to narrowly elliptic, not or only slightly exceeding the florets; lemmas 1.3-1.7 mm long; caryopses usually with a narrow, shallow ventral groove, smooth, the apices broadly obtuse to acute..... *Dinebra panicea* ssp. *brachiata*
 - 3 Glumes linear to narrowly lanceolate, exceeding the florets; lemmas 0.9-1.2 mm long; caryopses without a ventral groove, often somewhat coarsely rugose, the apices broadly obtuse..... *Dinebra panicea* ssp. *mucronata*
- 2 Sheaths glabrous, or pubescent with non-papillose-based hairs.
 - 4 Panicles with 25-150 branches..... *Dinebra panicoides*
 - 4 Panicles with 2-25 branches..... *Dinebra panicoides*

* ***Dinebra decipiens*** (R. Brown) P.M. Peterson & N. Snow var. *peacockii* (Maiden & Betcher) P.M. Peterson & N. Snow. **Hab:** Waif at wool-combing mill (SC), probably not established. **Dist:** Native of Australia. **Syn:** = Snow & Peterson (2012); = *Dinebra decipiens* (R. Brown) P.M. Peterson & N. Snow ssp. *peacockii* (Maiden & Betcher) P.M. Peterson & N. Snow – K3, K4, Peterson et al (2012); = *Leptochloa decipiens* (R. Brown) Stapf ex Maiden ssp. *peacockii* (Maiden & Betcher) N. Snow – K1.

Dinebra panicea (Retz) P.M. Peterson & N. Snow ssp. *brachiata* (Steudel) P.M. Peterson & N. Snow. RED SPRANGLETOP. **Hab:** Sandy fields, disturbed bottomlands, agricultural fields, other disturbed areas. **Dist:** Widespread in the Western Hemisphere. **Phen:** Jun-Oct. **Tax:** The more familiar epithet, *Leptochloa filiformis*, must be replaced for reasons of nomenclatural priority. **Syn:** = K3, K4, Va, Peterson et al (2012), Snow & Peterson (2012); = *Leptochloa brachiata* Steudel; = *Leptochloa panicea* (Retz) Ohwi ssp. *brachiata* (Steudel) N. Snow – Ar, FNA25, IL, Mo1, Pa, Tn; < *Dinebra panicea* – ETx1; < *Leptochloa filiformis* (Lamarck) Palisot de Beauvois – C, F, G, GW1, HC, RAB, S, Tx, W. [NatureServe GNRT5](#) (Secure).

Dinebra panicea (Retz) P.M. Peterson & N. Snow ssp. *mucronata* (Michaux) P.M. Peterson & N. Snow. **Hab:** Sandy shores, disturbed areas. **Dist:** IL, MO, KS, and NM south through Mexico and Central America to South America; West Indies. **Phen:** May-Nov. **Syn:** = FIgr, K3, K4, Peterson et al (2012), Snow & Peterson (2012); = *Leptochloa attenuata* (Nuttall) Steudel – IL; = *Leptochloa mucronata* (Michaux) Kunth – Meso6, NcTx; = *Leptochloa panicea* (Retz) Ohwi ssp. *mucronata* (Michaux) Nowack – Ar, FNA25, K1, Mo1, NE, WH3; < *Dinebra panicea* – ETx1; < *Leptochloa filiformis* (Lamarck) Palisot de Beauvois – Tx.

* ***Dinebra panicoides*** (J. Presl) P.M. Peterson & N. Snow. AMAZON SPRANGLETOP. **Hab:** Swamps, wet areas, drawdown habitats on lake margins and in river channels. **Dist:** Native of South America. Belden et al. (2004) discuss the VA occurrences along the banks of the Roanoke (Staunton) River at Kerr Reservoir. Also reported for e. GA in the Coastal Plain (Sorrie, pers. comm.) and SC (Richland County) (Bradley et al. [in prep.]). **Phen:** May-Nov. **Syn:** = FIgr, K3, K4, Peterson et al (2012); = *Diplachne panicoides* (J. Presl) McNeill; = *Leptochloa panicoides* (J. Presl) A.S. *Diplachne* Palisot de Beauvois 1812

A genus of 2 or more species (depending on species concepts), widely distributed worldwide. Snow prefers to recognize 2 species, one with a number of subspecies. References: C; Peterson et al (2012); Peterson, Romaschenko, & Herrera Arrieta (2015); Snow & Peterson (2012); Snow (1998); Snow (2003a) in FNA25 (2003a); Snow et al (2018); Weakley et al (2011).

- 1 Lemmas 2-3 mm long, the apex obtuse to truncate, with the midrib often extended as a mucro..... *Diplachne uninervia*
 1 Lemmas 3-5 mm long, the apex acuminate or awned..... *Diplachne fascicularis*

Diplachne fascicularis (Lamarck) Palisot de Beauvois. BEARDED SPRANGLETOP. **Hab:** Freshwater marshes (in s. FL), beds of artificial impoundments, brackish habitats, disturbed areas. **Dist:** Widespread in e. North America, primarily west of the Appalachians (adventive farther east), and extending into South America. **Phen:** Jan-Dec. **Comm:** Reported (as *L. fascicularis*) for SC by Nelson & Kelly (1997). **Syn:** = F, FIGr; = *Leptochloa fascicularis* – Il, Tx; = *Leptochloa fascicularis* (Lamarck) A. Gray var. *fascicularis* – C, G; < *Diplachne fusca* (Linnaeus) Palisot de Beauvois ex Roemer & J.A. Schultes ssp. *fascicularis* (Lamarck) P.M. Peterson & N. Snow – K3, K4, Snow et al (2018); < *Diplachne fusca* (Linnaeus) Palisot de Beauvois ex Roemer & J.A. Schultes var. *fascicularis* (Lamarck) P.M. Peterson & N. Snow – Peterson et al (2012), Snow & Peterson (2012); < *Leptochloa fascicularis* – Bah, GW1, HC, Meso6, NcTx, RAB, S; < *Leptochloa fusca* (Linnaeus) Kunth ssp. *fascicularis* (Lamarck) N. Snow – Ar, FNA25, K1, Mi, Mo1, NE, NY, Pa, Tn, WH3.

Diplachne uninervia (J. Presl) Parodi. MEXICAN SPRANGLETOP. **Hab:** Wet, muddy areas, especially alkaline or saline; adventive eastwards and northwards. **Dist:** Widespread in the Western Hemisphere. Reported for SC by Nelson & Kelly (1997). **Phen:** Jan-Dec. **Syn:** = FIGr; = *Diplachne fusca* ssp. *uninervia* – K3, K4, Snow et al (2018); = *Diplachne fusca* (Linnaeus) Palisot de Beauvois ex Roemer & J.A. Schultes var. *uninervia* (J. Presl) P.M. Peterson & N. Snow – Peterson et al (2012), Snow & Peterson (2012); = *Leptochloa fusca* (Linnaeus) Kunth ssp. *uninervia* (J. Presl) N. *Disakisperma* Steudel 1854

A genus of 3 species of warm temperate, subtropical, and tropical America and Africa. References: Peterson et al (2012); Snow & Peterson (2012); Snow (1998); Snow (2003a) in FNA25 (2003a).

Disakisperma dubium (Kunth) P.M. Peterson & N. Snow. GREEN SPRANGLETOP. **Hab:** Coastal rock barrens (s. FL), rocky slopes, hammocks, disturbed areas (including as a waif at wool-combing mills and ballast sites).

Dist: FL, TX, and CA south through Central America and South America. **Phen:** Jan-Dec. **Comm:** Also reported for NC by Kartesz (1999), but the documentation indicates that it was cultivated at a Soil Conservation Service test nursery in Chapel Hill, Orange County. **Syn:** = FIGr, K3, K4, Snow & Peterson (2012); = *Disakisperma dubia* (Kunth) P.M. Peterson & N. Snow – NY, Peterson et al (2012), orthographic variant; = *Leptochloa dubia* (Kunth) Nees – ETx1, FNA25, HC, K2, Meso6, Mo1, NcTx, Tx, WH3. [NatureServe G5](#) (Secure).

*Distichlis* Rafinesque 1819 (SALTGRASS)

A genus of about 10 species, of North, Central, and South America, and Australia. Bell & Columbus (2008) recircumscribed *Distichlis* to include *Monanthochloe* Engelman and *Reederchloa* Soderstrom & H.F. Decker. References: Barkworth (2003b) in FNA25 (2003a); Bell & Columbus (2008); Thieret (2003a) in FNA25 (2003a).

Identification Notes: When sterile, *Distichlis spicata* is easily confused with *Sporobolus virginicus*, with which it sometimes occurs. *Distichlis spicata* is generally a coarser plant, and lacks long hairs around the collar of the sheath; *Sporobolus virginicus* is more delicate, and typically has long hairs on either side of the collar.

Distichlis spicata (Linnaeus) Greene. SALTGRASS, SPIKE GRASS. **Hab:** Coastal marshes and shores, especially common in hypersaline flats (where infrequent tidal inundation is followed by evaporation). **Dist:** Widespread in the Americas. **Phen:** Jun-Oct. **Tax:** Two varieties (or subspecies or species) have often been recognized: var. *spicata* ranging along the Atlantic coast from NS and PE south to tropical America, and on the Pacific coast of North America, and var. *stricta* (Torrey) Lamson-Scribner widespread in saline situations in western North America. These do not appear to warrant taxonomic recognition (Barkworth in FNA 2003a). **Syn:** = Ar, Bah, ETx1, FIGr, FNA25, GW1, IL, K1, K3, K4, Meso6, NcTx, NE, NY, Pa, RAB, S, Va, WH3; > *Distichlis spicata* (Linnaeus) Greene – F, G, HC; > *Distichlis spicata* ssp. *spicata*; > *Distichlis spicata* var. *spicata* – C, Mo1, Tx; > *Distichlis spicata* var. *stricta* (Torrey) Lamson-Scribner – C, Mo1, Tx; > *Distichlis stricta* – F, G, HC.

Echinochloa Palisot de Beauvois 1812 (BARNYARD-GRASS, JUNGLE-RICE)

A genus of 6-7 species of the tropics and warm temperate regions. References: Michael (2003) in FNA25 (2003a).

Unkeyed taxa: *Echinochloa cruspavonis* var. *macera*

Unkeyed waifs: *Echinochloa esculenta*

- 1 Panicle elongate, the branches few, distant, unbranched, and short, to 2 (-3) cm long; spikelets awnless; leaves 3-6 (-9) mm wide..... ***Echinochloa colonum***
- 1 Panicle broader, the branches numerous, approximate, often further branched, short to long, some (at least) exceeding 2 cm long; spikelets awnless or awned; leaves 5-30 mm wide.
 - 2 Lower sheaths usually papillate-pubescent; fertile lemma 2.5-4× as long as wide..... ***Echinochloa walteri***
 - 2 Lower sheaths glabrous; fertile lemma 1.5-2.5× as long as wide.
 - 3 Inflorescence nodding; awns 4-29 mm long..... ***Echinochloa cruspavonis* var. *cruspavonis***
 - 3 Inflorescence erect, stiff; awns 0-25 mm long.
 - 4 Second glume and sterile lemma hairy or scabrous to nearly glabrous, the hairs usually not papillose-based; fertile lemma obtuse or broadly acute, with a thin, membranous (later withering) tip set off from the body by a line of minute hairs..... ***Echinochloa crusgalli* var. *crusgalli***
 - 4 Second glume and sterile lemma usually with stout, papillose-based hairs on the veins; fertile lemma acuminate, abruptly narrowed to a firm, persistent tip.
 - 6 Spikelets < 3.5 mm long, not including the awn (if present); sterile lemma awnless or with an awn to 6 (-10) mm long..... ***Echinochloa muricata* var. *microstachya***
 - 6 Spikelets > 3.5 mm long, not including the awn (if present); sterile lemma usually awned (rarely awnless), the awn 6-25 mm long ***Echinochloa muricata* var. *muricata***

* ***Echinochloa colonum*** (Linnaeus) Link. JUNGLE-RICE. **Hab:** Fields, ditches, disturbed wet areas. **Dist:** Native of the Old World tropics. **Phen:** Jul-Oct (-Jun). **Tax:** The debate over the appropriate grammatical treatment and therefore spelling of the epithet is discussed in detail in Ward (2005b). **Syn:** = Bah, C, F, FIGr, G, GW1, HC, IL, Mo1, RAB, Tx, Va; = *Echinochloa colona* – Ar, ETx1, FNA25, K1, K3, K4, Meso6, NcTx, NE, Pa, S, Tn, WH3, orthographic variant. **NatureServe GNR** (Not Yet Ranked).

* ***Echinochloa crusgalli*** (Linnaeus) Palisot de Beauvois var. *crusgalli*. BARNYARD-GRASS. **Hab:** Disturbed areas. **Dist:** Native of Eurasia. **Phen:** Jul-Nov (-Jun). **Syn:** = C, G, Pa, Tx, Va; = *Echinochloa crus-galli* – FIGr, IL, K1, K3, K4, NY, WH3, orthographic variant; < *Echinochloa crusgalli* – Ar, Bah, ETx1, F, FNA25, GW1, Mi, Mo1, NcTx, NE, RAB, Tn, WV; < *Echinochloa crus-galli* ssp. *crus-galli* – S. **NatureServe GNR** (Not Yet Ranked).

Eleusine Gaertner 1788 (YARD GRASS)

A genus of about 9 species, native to Africa and South America. References: Hilu (2003) in FNA25 (2003a); Peterson, Romaschenko, & Herrera Arrieta (2015).

* **Eleusine indica** (Linnaeus) Gaertner. YARD GRASS, GOOSE GRASS. **Hab:** Lawns, roadsides, gardens, disturbed areas. **Dist:** Native of Old World. **Phen:** Jun-Oct. **Syn:** = Ar, Bah, C, ETx1, F, FIgr, FNA25, G, HC, K1, K3, K4, Meso6, Mi, NcTx, NE, NY, Pa, RAB, S, Tn, Tx, Va, W, WH3, WV; = *Eleusine indica* ssp. *indica* – Mo1. NatureServe GNR (Not Yet Ranked).

Elionurus Humboldt & Bonpland ex Willdenow 1805 (BALSAMSCALE)

A genus of about 15 species, native to tropical and subtropical parts of Africa and the Americas. References: Barkworth (2003y) in FNA25 (2003a).

Elionurus tripsacoides Humboldt & Bonpland ex Willdenow. PAN-AMERICAN BALSAMSCALE. **Hab:** Low sandy pine rocklands, pine savannas. **Dist:** S. GA south to s. FL, west to s. and w. TX, and south through Central America to s. South America. Reported for sw. GA by Jones & Coile (1988), for s. MS and FL (Sorrie & Leonard 1999). **Phen:** May-Nov. **Syn:** = ETx1, FIgr, FNA25, K1, K3, K4, WH3; = *Elyonurus tripsacoides* – GW1, HC, S, Tx, orthographic variant. NatureServe G5? (Secure).

Eleusine indica

Paleotropics

Elionurus tripsacoides

Elymus Linnaeus 1753 (WILD-RYE, RYE GRASS)

A genus of about 150 species, semicosmopolitan in temperate regions. The genus, as now circumscribed, includes all allopolyploid taxa with at least one chromosome complement contributed from *Pseudoroegneria*. North American *Elymus* species are all allopolyploids of *Pseudoroegneria* and *Hordeum* (Helfgott & Mason-Gamer 2004). Reference: Barkworth, Campbell, & Salomon in FNA (2007a); Campbell (2000); Church (1967); Tucker (1996)=Z; Barkworth (1997)=X. This treatment largely follows Barkworth, Campbell, & Salomon in FNA (2007a). References: Barkworth (1997); Barkworth, Campbell, & Salomon (2007) in FNA24 (2007a); Bush (1926); Campbell (2000); Church (1967); Haines (2020c); Poindexter & Weakley (2017); Tucker (1996).

Identification Notes: Measurements of the spike include the awns, but measurements of spikelets and its components do not. Rachis internodes should be measured near the middle of the spike. Glume widths are measured at the widest point, or if the widest point is not apparent, at about 5 mm above the glume base.

- 1 Spikelets solitary at each node (occasionally paired at the lowest nodes); glumes and lemmas awned or unawned; plants caespitose to strongly rhizomatous. *Elymus repens*
- 1 Spikelets 2-3 (-5) at each node; glumes and lemmas usually awned; plants usually caespitose, occasionally short-rhizomatous.
 - 15 Glumes persistent on the rachis, 0.2-1 mm wide, with 2-4 veins, the basal 0.5-2 mm essentially straight; lemmas rarely glabrous; spikelets with 1-3 (-4) florets; spikes nodding, exserted.
 - 16 Blades glabrous to scabrous, pale dull green; spikes 7-25 cm long; internodes usually 3-5 mm long; spikelets with 2-3 (-4) florets; lemmas usually scabrous, 7-14 mm long, 1-5 mm longer than the acute paleas; flowering usually late Jun to late Jul *Elymus riparius*
 - 16 Blades villous to pilose, dark glossy green; spikes 4-12 cm long; internodes usually 2-3 mm long; spikelets with 1-2 (-3) florets; lemmas usually villous (glabrous or scabrous in the poorly known *E. villosus* var. *arkansanus*), 5.5-9 mm long, 0-1.5 mm longer than the obtuse paleas; flowering usually early Jun to August. *Elymus villosus* var. *villosus*
 - 15 Glumes disarticulating with the lowest floret, 0.7-2.3 mm wide, with (2-) 3-5 (-8) veins, the basal 1-4 mm clearly bowed-out; lemmas often glabrous; spikelets with (2-) 3-5 (-6) florets; [*Elymus virginicus* complex].
 - 18 Spikes (including the awns) 2.5-6 cm wide, exserted; lemma awns 15-40 mm long; blades glabrous, scabrous, or villous.
 - 19 Spikes with 9-18 nodes; internodes 4-7 mm long; blades usually lax, dark glossy green under the glaucous bloom; auricles 2-3 mm long, blackish at maturity; flowering usually in mid-May to mid-Jun. *Elymus macgregorii* var. *macgregorii*
 - 19 Spikes with 15-30 nodes; internodes 3-5 mm long; blades lax, or often ascending and involute, pale dull green; auricles 0-2 mm long, brownish at maturity; flowering usually in mid-Jun to late Jul.
 - 21 Spikelets (and usually also the foliage) pubescent; spikes usually 6-12 cm long; lemmas 6-10 mm long *Elymus glabriflorus* var. *australis*
 - 21 Spikelets (and usually also the foliage) glabrous to scabrous; spikes usually 9-16 cm long; lemmas 7-13 mm long. *Elymus glabriflorus* var. *glabriflorus*

COMMON EASTERN WILD-RYE, TERRELL GRASS. **Hab:** Moist forests. **Syn:** = IL, Mi; = *Elymus virginicus* Linnaeus var. *virginicus* - Ar, FNA24, Mo1, NE, NY, Tn; ? *Elymus striatus* Willdenow - S; < *Elymus virginicus* Linnaeus - C, ETx1, GW1, RAB, Tx, Va, W, WV; < *Elymus virginicus* Linnaeus var. *virginicus* - F, FlGr, G, K1, K3, S.

Eragrostis Wolf 1776 (LOVEGRASS)

A genus of about 350 species of temperate and tropical areas. References: Franck (2018c) in Weakley et al (2018b); Kelley (2019); Koch (1978); Peterson (2003a) in FNA25 (2003a).

Unkeyed taxa: *Eragrostis atrovirens*

Unkeyed waifs: *Eragrostis tef*

- 1 Plants caespitose or rhizomatous perennials, with innovations near the base, and with or without buds in the basal sheaths.
- 3 Plants with short, knotty, thick rhizomes; florets articulating whole *Eragrostis spectabilis*
- 3 Plants without short or thick rhizomes; florets usually disarticulating.
- 4 Caryopsis with a deep to shallow groove along the adaxial surface.
- 5 Caryopsis dorsoventrally compressed, flattened parallel to the side of the embryo, translucent, light brownish *Eragrostis curvula*
- 5 Caryopsis laterally compressed, flattened on the side perpendicular to the embryo, or cylindric, opaque (rarely translucent), usually reddish brown.
- 6 Lateral veins of the lemmas conspicuous, often greenish, the lemmas strongly keeled *Eragrostis trichodes*
- 6 Lateral veins of the lemmas inconspicuous and hardly evident, the lemmas sometimes weakly keeled.
- 7 Lemmas 1.2-1.8 mm long; culms 30-70 cm tall *Eragrostis lugens*
- 7 Lemmas 1.6-3.0 mm long; culms (30-) 40-110 (-120) cm tall.
- 8 Spikelets 2-6-flowered, greenish with purple tinges; leaf blades 3-8 (-11) mm wide, 25-60 cm long; sheaths often densely papillose-hirsute *Eragrostis hirsuta*
- 8 Spikelets (3-) 5-12-flowered, olive green to lead gray; leaf blades 1-3.8 mm wide, (4-) 10-35 cm long; sheaths never papillose-hirsute *Eragrostis intermedia*

- 4 Caryopsis not grooved on the adaxial surface.
- 9 Stamens 3.
- 10 Spikelets 4-8.2 (-10) mm long.....*Eragrostis curvula*
- 10 Spikelets 2-4.5 (-5) mm long.
- 11 Leaf blades 25-60 cm long, 3-8 (-11) mm wide; lemmas 1.6-2.4 mm long; spikelets 1.0-1.7 mm wide*Eragrostis hirsuta*
- 11 Leaf blades (4-) 8-22 cm long, 1-3.5 mm wide; lemmas 1.2-1.8 mm long; spikelets 0.5-1.0 (-1.3) mm wide..... *Eragrostis lugens*
- 9 Stamens 2.
- 12 Panicle 15-45 cm wide, open, diffuse, broadly ovate to obovate in outline, the panicle branches capillary; pedicels 0.5-35 (-50) mm long, longer than or shorter than the spikelets.
- 13 Spikelets with widely spreading pedicels, the lower pedicels all generally longer than the spikelets; disarticulation of the lemmas only, the paleas persistent.....*Eragrostis elliptica*
- 13 Spikelets with appressed pedicels, lower pedicels of each branch shorter than the spikelets; disarticulation usually of the whole floret.....*Eragrostis refracta*
- 12 Panicle (1-) 2-17 (-20) cm wide, contracted to open, narrowly ovate to oblong in outline, the panicle branches stiffly spreading; pedicels (0-) 0.3-6 mm long, always shorter than the spikelets.
- 14 Spikelets 0.7-2.4 mm wide; glumes 0.3-2.2 mm long; lemma 1.5-2.5 mm long, the apex acute (sometimes acuminate).....*Eragrostis bahiensis*
- 14 Spikelets 2.4-5 mm wide; glumes 1.4-4 mm long; lemma 2-6 mm long, the apex acuminate to attenuate.....*Eragrostis oxylepis*
- 1 Plants caespitose, geniculate or mat-forming annuals, lacking innovations or buds in the lower sheaths.
- 15 Paleas prominently ciliate-pectinate on the keels, the hairs 0.1-0.8 mm long.
- 16 Panicles contracted, narrow, spike-like, usually <1.5 cm wide*Eragrostis ciliaris* var. *ciliaris*
- 16 Panicles open, cylindrical to narrowly ovate, usually 1-8 cm wide.
- *Eragrostis amabilis*
- 15 Paleas smooth to scabrous on the keels, the hairs (if present) <0.1 mm long.
- 18 Plants extensively stoloniferous, creeping and forming flat mats; inflorescences 1-3.5 cm long; culms (2-) 5-12 (-20) cm tall on the erect portions.
- 19 Hermaphroditic; spikelets bisexual; anthers 2, each 0.2-0.3 mm long*Eragrostis hypnoides*
- 19 Dioecious; spikelets unisexual; anthers 3, each 1.4-2.2 mm long *Eragrostis reptans*
- 18 Plants not stoloniferous (sometimes creeping and forming flat mats); inflorescences 3-55 cm long; culms (2-) 6-130 cm tall.
- 20 Ligules membranous, glabrous..... *Eragrostis japonica*
- 20 Ligules ciliate, with a row of tiny white hairs.
- 21 Caryopsis with a deep to shallow groove along the adaxial surface.
- 24 Panicle 10-45 (-55) cm long, 2/3 or more the height of the plant; pedicels (4-) 5-25 mm long; glandular pits absent below the nodes, branches, and rachis.....*Eragrostis capillaris*
- 24 Panicle 4-20 cm long, < 1/2 the height of the plant; pedicels 1.5-5 mm long; glandular pits often present below the nodes, branches, and rachis.....*Eragrostis frankii*
- 21 Caryopsis not grooved on the adaxial surface.
- 25 Plants with glandular pits or bands on the culm below the nodes, on the veins of the sheath, on the margins and veins of the blade, on the rachis, on the inflorescence branches and pedicels, and/or on the midveins of the lemma and palea.
- 26 Spikelets (1.7-) 2-4 mm long, 3-6-flowered.....*Eragrostis frankii*
- 26 Spikelets (2-) 3.5-20 mm long, (3-) 5-40-flowered.
- 27 Spikelets 0.6-1.3 mm wide; pedicels 1-10 mm long, flexuous and delicate, appressed or spreading.....*Eragrostis pilosa* var. *pilosa*
- 27 Spikelets 1.1-4 mm wide; pedicels 0.2-4 mm long, straight and rigid, mostly spreading.
- 28 Spikelets 6-20 mm long, 2-4 mm wide, 10-40-flowered; lemmas 2-2.8 mm long, with 1-3 crateriform glands along the keel; disarticulation of the entire florets from the persistent rachilla; anthers yellow.....*Eragrostis cilianensis*
- 28 Spikelets 4-7 (-11) mm long, 1.1-2.2 mm wide, 7-12 (-20)-flowered; lemmas 1.4-1.8 mm long, rarely with 1-2 crateriform glands along the keel; disarticulation of the lemmas only, the palea and rachilla usually persistent; anthers reddish-brown.
- *Eragrostis minor*
- 25 Plants lacking glandular pits or bands on the culm below the nodes, on the veins of the sheath, on the margins and veins of the blade, on the rachis, on the inflorescence branches and pedicels, and/or on the midveins of the lemma and palea.
- 31 Spikelets 3-6-flowered.....*Eragrostis frankii*
- 31 Spikelets (3-) 5-42-flowered.
- 32 Lemmas with conspicuous lateral veins, these usually greenish; grains 0.3-0.6 mm long, ovoid, subglobose, or obovoid.
- *Eragrostis gangetica*
- 32 Lemmas with inconspicuous or moderately conspicuous lateral veins, these usually not greenish; grains 0.5-1.1 mm long, pear-shaped, obovoid, or prism-shaped.
- 34 First glume 0.3-0.6 (-0.8) mm long, <0.5× as long as the lowest lemma; spikelets 0.6-1.3 mm wide; panicle branches usually whorled at the lowest 2 nodes.....*Eragrostis pilosa* var. *pilosa*
- 34 First glume 0.5-1.5 mm long, >0.5× as long as the lowest lemma; spikelets 1.2-2.5 mm wide; panicle branches solitary or paired at the 2 lowest nodes.
- 36 Pedicels widely spreading.....*Eragrostis pectinacea* var. *miserrima*
- 36 Pedicels appressed or rarely diverging up to 20 degrees from the branches.....*Eragrostis pectinacea* var. *pectinacea*

* *Eragrostis amabilis* (Linnaeus) Wright & Arnott ex Nees. JAPANESE LOVEGRASS, FEATHER LOVEGRASS. **Hab:** Disturbed areas. **Dist:** Native of Old World. **Phen:** Jun. **Syn:** = ETx1, FIGr, FNA25, HC, K3, K4, Meso6, RAB, S, Tx, WH3; ? *Eragrostis tenella* (Linnaeus) Palisot de Beauvois ex Roemer & J.A. Schultes – Bah, K1.

* *Eragrostis atrovirens* (Desvaux) Trinius ex Steudel. THALIA LOVEGRASS. **Hab:** Disturbed areas. **Dist:** Native of Africa. **Phen:** Jan-Dec. **Comm:** {add to key; add to synonymy}. **Syn:** = FIGr, FNA25, K1, K3, K4, Meso6, WH3. NatureServe GNR (Not Yet Ranked).

* *Eragrostis bahiensis* (Schrad ex J.A. Schultes) J.A. Schultes. BAHIA LOVEGRASS. **Hab:** Disturbed areas. **Dist:** Native of tropical America. Reported for SC (Kartesz 1999) and sw. GA (Jones & Coile 1988, GW, Kartesz 1999). **Phen:** Jan-Dec. **Syn:** = FIGr, FNA25, GW1, HC, K1, K3, K4, Meso6, S, WH3. NatureServe GNR (Not Yet Ranked).

103. POACEAE

Eragrostis capillaris (Linnaeus) Nees. LACE LOVEGRASS, LACEGRASS. **Hab:** Fields, roadsides, disturbed areas. **Dist:** ME and WI south to GA, FL Panhandle, and TX. **Phen:** Jul-Oct. **Syn:** = Ar, C, ETx1, F, FIGr, FNA25, G, HC, IL, K1, K3, K4, Mi, Mo1, NE, NY, Pa, RAB, S, Tn, Tx, Va, W, WV. NatureServe G5 (Secure).

* *Eragrostis ciliaris* (Allioni) Vignolo ex Janchen. STINKGRASS. **Hab:** Fields, disturbed areas. **Dist:** Native of Europe. **Phen:** Jul-Oct. **Syn:** = Ar, C, ETx1, FNA25, G, HC, IL, K1, K3, K4, Meso6, Mi, Mo1, NcTx, NE, NY, Pa, RAB, S, Tn, Tx, Va, W, WH3; ? *Eragrostis megastachya* (Koeler) Link – F, WV. NatureServe GNR (Not Yet Ranked).

* *Eragrostis ciliaris* (Linnaeus) R. Brown var. *ciliaris*. **Hab:** Sandy shores. **Dist:** S. SC south to TX, Central America, West Indies, South America, Africa, and Asia. **Syn:** = Bah, FNA25, HC, Meso6; < *Eragrostis ciliaris* – ETx1, FIGr, G, K1, K3, K4, RAB, S, Tx, WH3.

* *Eragrostis curvula* (Schrader) Nees. WEEPING LOVEGRASS. **Hab:** Roadsides. **Dist:** Native of s. Africa. Very commonly planted as a roadbank stabilizer, *E. curvula* is fire resistant and shows some capability to spread into adjacent natural habitats. **Phen:** Apr-Jul. **Syn:** = Ar, C, ETx1, FIGr, FNA25, HC, IL, K1, K3, K4, Meso6, Mi, Mo1, NcTx, NE, NY, Pa, RAB, Tn, Tx, Va, WH3, WV; > *Eragrostis curvula* var. *conferta* Stapf. NatureServe GNRTNR (Not Yet Ranked).

Eragrostis elliottii S. Watson. ELLIOTT'S LOVEGRASS. **Hab:** Ultisol wet pine savannas, maritime wet grasslands, inland edges of brackish marshes, inland edges of freshwater tidal marshes, calcareously-influenced wet pine savannas. **Dist:** NC south to s. FL, west to e. TX; West Indies; s. Mexico and Belize. **Phen:** Jun-Dec. **Syn:** = Bah, ETx1, FIGr, FNA25, GW1, HC, K1, K3, K4, Meso6, Mo1, RAB, S, Tx, WH3, Franck (2018c) in Weakley et al (2018b).

Eragrostis frankii C.A. Meyer ex Steudel. LACEGRASS, SANDBAR LOVEGRASS. **Hab:** Rocky river shores, sand bars, floodplains of rivers in clearings. **Dist:** MA and MN south to GA and AR. **Phen:** Sep. **Syn:** = Ar, C, FNA25, G, GW1, K1, K3, K4, Mi, Mo1, NE, NY, Pa, RAB, S, Tn, Va, W, WV; > *Eragrostis frankii* var. *frankii* – F, HC, IL. NatureServe G5 (Secure).

* *Eragrostis gangetica* (Roxburgh) Steudel. SLIMFLOWER LOVEGRASS. **Hab:** Ditches, roadsides, pond margins. **Dist:** Native of s. Asia. **Comm:** {add to synonymy}. **Syn:** = FIGr, FNA25, K3, K4, Meso6, WH3. NatureServe GNR (Not Yet Ranked).

Eragrostis hirsuta (Michaux) Nees. BIGTOP LOVEGRASS. **Hab:** Fields, roadsides, clearings, disturbed areas. **Dist:** MD south to FL, west to TX, north in the interior to TN, AR, and MO; Central America. **Phen:** Jul-Dec. **Syn:** = Ar, C, ETx1, FIGr, FNA25, IL, K1, K3, K4, Mo1, NcTx, RAB, S, Tn, Tx, Va, W, WH3, WV, Franck (2018c) in Weakley et al (2018b); > *Eragrostis hirsuta* var. *hirsuta* – F, G, HC; > *Eragrostis hirsuta* var. *laevivaginata* Fernald – F, G, HC. NatureServe G5 (Secure).

Eragrostis hypnoides (Lamarck) Britton, Sterns, & Poggenburg. CREEPING LOVEGRASS, TEAL LOVEGRASS. **Hab:** Marshes, shores, riverbanks, shores, impoundments. **Dist:** ME and QC west to SK, south to s. FL, TX, and CA; West Indies; south to South America. **Phen:** May-Sep. **Syn:** = Ar, C, ETx1, F, FIGr, FNA25, G, GW1, HC, IL, K1, K3, K4, Mi, Mo1, NcTx, NE, NY, Pa, RAB, S, Tn, Tx, Va, W, WH3, WV. NatureServe G5 (Secure).

Eragrostis intermedia A.S. Hitchcock. PLAINS LOVEGRASS. **Hab:** Sandy woodlands, prairies, disturbed areas. **Dist:** MO, KS, NM, and AZ south to AR, TX, Mexico, and Central America. Reported for scattered locations as far east as NC and SC (Kartesz 1999), e. GA (Jones & Coile 1988), e. TN (Chester et al. 1993). **Phen:** Apr-May. **Syn:** = C, ETx1, F, FIGr, FNA25, G, HC, K1, K3, K4, Meso6, NcTx, NE, Tn, Va, WH3; > *Eragrostis intermedia* var. *intermedia* – Mo1. NatureServe G5 (Secure).

* *Eragrostis japonica* (Thunberg) Trinius. POND LOVEGRASS. **Hab:** Riverbanks, other moist or wet sandy areas. **Dist:** SC and TN south to Central America, South America, and West Indies; Old World tropics. Probably introduced from the Old World. Reported for SC by HC, G, and Small (1933) and corroborated by recent collections (K. Bradley, pers.comm., 2020), sw. GA by Jones & Coile (1988), and for w. TN by Chester et al. (1993). **Phen:** Aug-Nov. **Syn:** = Ar, ETx1, FIGr, FNA25, IL, K1, K3, K4, Tn, WH3; ? *Eragrostis glomerata* (Walter) L.H. Dewey – G, GW1, HC, Mo1, S, Tx. NatureServe G3G5 (Apparently Secure).

* *Eragrostis lugens* Nees. MOURNING LOVEGRASS. **Hab:** Marshes, roadsides, low fields. **Dist:** Sw. and sc. United States south to Mexico; the native distribution is uncertain. **Phen:** Jun-Jan. **Syn:** = ETx1, FIGr, FNA25, HC, K1, K3, K4, Meso6, RAB, S, Tn, W, WH3. NatureServe G5 (Secure).

E. and se. Asia

* *Eragrostis minor* Host. LITTLE LOVEGRASS, BLUEGRASS LOVEGRASS. **Hab:** Disturbed areas, compacted soils of pastures and fields, other disturbed areas, as in cinders along railroads. **Dist:** Native of Europe. **Phen:** Late Jun-Sep. **Syn:** = Ar, C, FIgr, FNA25, Il, K1, K3, K4, Mi, Mo1, NE, NY, Pa, Tn, Va, WH3; ? *Eragrostis eragrostis* (Linnaeus) Palisot de Beauvois – S; ? *Eragrostis poaeoides* Palisot de Beauvois ex Roemer & J.A. Schultes – F, G, HC, RAB, Tx, W, WV.

Eragrostis oxylepis (Torrey) Torrey. RED LOVEGRASS. **Hab:** Sandy roadsides, coastal dunes, and disturbed areas. **Dist:** NE and CO south to FL, TX, NM, and Mexico. Scattered eastwards and of uncertain nativity. First reported for SC by Nelson & Kelly (1997). **Phen:** May-Dec. **Syn:** = GW1, HC, Tx; = *Eragrostis secundiflora* J. Presl ssp. *oxylepis* (Torrey) S.D. Koch – Ar, ETx1, FIgr, FNA25, K1, K3, K4, Mo1, NcTx, WH3; < *Eragrostis secundiflora* – S. NatureServe G5TNR (Not Yet Ranked).

Eragrostis pectinacea (Michaux) Nees ex Steudel var. *miserrima* (E. Fournier) J. Reeder. **Hab:** Disturbed habitats. **Dist:** From FL and westward and southward. **Phen:** Mar-Nov. **Syn:** = ETx1, FIgr, FNA25, K1, K3, K4, Meso6, Mi, Mo1, NcTx, WH3; = *Eragrostis tephrosanthos* J.A. Schultes – HC, S; > *Eragrostis arida* A.S. Hitchcock – Tx; < *Eragrostis pectinacea* – GW1, Il; >> *Eragrostis pectinacea* – Tx; > *Eragrostis tephrosanthos* J.A. Schultes – Tx.

Eragrostis pectinacea (Michaux) Nees ex Steudel var. *pectinacea*. CAROLINA LOVEGRASS. **Hab:** Fields, roadsides, disturbed areas. **Dist:** ME and WA south to Central America; West Indies. **Phen:** May-Nov. **Syn:** = Ar, ETx1, FIgr, FNA25, K1, K3, K4, Meso6, Mi, Mo1, NcTx, NE, NY, Va, WH3; = *Eragrostis pectinacea* – F, HC, S, WV; > *Eragrostis diffusa* Buckley – G, Il; < *Eragrostis pectinacea* – Bah, C, GW1, Pa, Tn, Tx, W; > *Eragrostis pectinacea* – G; >< *Eragrostis pectinacea* – Il; < *Eragrostis pilosa* (Linnaeus) Palisot de Beauvois – RAB; ~ *Eragrostis purshii* Schrad..

* *Eragrostis pilosa* (Linnaeus) Palisot de Beauvois var. *pilosa*. INDIA LOVEGRASS. **Hab:** Fields, roadsides, disturbed areas. **Dist:** Native of tropical regions of the Old and New World. **Phen:** Jul-Oct. **Syn:** = Ar, FNA25, K3, K4, Mo1, NE, NY, Va; = *Eragrostis pilosa* (Linnaeus) Palisot de Beauvois – S; > *Eragrostis multicaulis* Steudel – F, G, HC; < *Eragrostis pilosa* (Linnaeus) Palisot de Beauvois – Bah, ETx1, FIgr, Il, K1, Meso6, Mi, NcTx, Pa, RAB, Tn, Tx, W, WH3; > *Eragrostis pilosa* (Linnaeus) Palisot de Beauvois – F, G, HC.

Europe

Pantropics

Eragrostis refracta (Muhlenberg) Lamson-Scribner. COASTAL LOVEGRASS. **Hab:** Pinelands, pine savannas, woodlands, bogs and seeps, marshes, maritime grasslands. **Dist:** DE south to s. FL, west to TX. **Phen:** Jul-Oct. **Tax:** Some authors (see synonymy) have taken up the older name *E. virginica* for this, but its application is uncertain. **Syn:** = Ar, C, ETx1, F, FIgr, FNA25, G, GW1, HC, K1, K3, K4, RAB, S, Tx, Va, Franck (2018c) in Weakley et al (2018b); ? *Eragrostis virginica* (Zuccagni) Steudel – K2, WH3, misapplied. NatureServe G5 (Secure).

Eragrostis reptans (Michaux) Nees. CREEPING LOVEGRASS. **Hab:** Shores and wet flats along rivers, streams, and reservoirs. **Dist:** WV, IL, IA, and SD south to sw. GA, Panhandle FL, AL, MS, LA, TX and n. Mexico. **Phen:** Apr-Nov. **Syn:** = C, ETx1, F, FIgr, FNA25, G, GW1, HC, Il, K3, Mo1, NcTx, Tn, Tx; = *Neeragrostis reptans* (Michaux) Nicora – K1, K4. NatureServe G5 (Secure).

Eragrostis spectabilis (Pursh) Steudel. PURPLE LOVEGRASS, TUMBLEGRASS. **Hab:** Longleaf pine sandhills, pine flatwoods, other dry woodlands, sandy fields, roadsides. **Dist:** ME west to ND, south to s. FL and TX. **Phen:** Aug-Nov. **Syn:** = Ar, C, ETx1, FIgr, FNA25, G, GW1, HC, Il, K1, K3, K4, Mi, NcTx, NE, NY, Pa, RAB, S, Tn, Tx, Va, W, WH3, WV, Franck (2018c) in Weakley et al (2018b); < *Eragrostis pectinacea*, misapplied; > *Eragrostis spectabilis* var. *sparsihirsuta* Farwell – F; > *Eragrostis spectabilis* var. *spectabilis* – F.

* *Eragrostis tef* (Zuccagni) Trotter. TEFF. **Hab:** Waste areas near wool-combing mills, other disturbed areas. **Dist:** Native of Africa. **Comm:** This is the grain used in making Ethiopian bread. **Syn:** = FNA25, HC, K1, K4. NatureServe GNR (Not Yet Ranked).

Eragrostis trichodes (Nuttall) Alph. Wood. SAND LOVEGRASS. **Hab:** Sandy prairies, disturbed areas. **Dist:** IL, MN, SD, and se. WY south to MS, LA, TX, NM, AZ, and Mexico. **Phen:** Jul-Dec. **Syn:** = C, ETx1, FNA25, K1, K3, Mi, Mo1, NcTx, NY, Tn, Tx; > *Eragrostis trichodes* var. *pilifera* (Scheele) Fernald – Il; > *Eragrostis trichodes* var. *trichodes* – F, HC, Il.

Eremochloa Buse 1852 (CENTIPEDE GRASS)

A genus of about 11 species, native of Asia and Australia. References: Sorrie (2020a); Thieret (2003e) in FNA25 (2003a).

Identification Notes: In the autumn, the inflorescences make this grass readily recognizable at a distance: a short, tight lawn grass with a reddish aspect.

* *Eremochloa ophiuroides* (Munro) Hackel. CENTIPEDE GRASS. **Hab:** Lawns, roadsides, weedy in open, more natural sites. **Dist:** Native of se. Asia. Now very commonly planted as a lawn and roadside grass (especially in the Coastal Plain from se. NC southward). **Phen:** Jun-Oct. **Comm:** Stalter & Lamont (1996) report the VA occurrence of this species. Sorrie (2020) discusses the spread in distribution of this species. **Syn:** = Ar, ETx1, FIgr, FNA25, HC, K1, K3, K4, NE, RAB, Va, WH3, Sorrie (2020a). NatureServe GNR (Not Yet Ranked).

Erianthus Michaux 1803 (PLUMEGRASS)

A genus of XX species, perennials, of the New World. While Clayton & Renvoize (1986) stated that the “traditional division [of *Saccharum*] into awned (*Erianthus*) and awnless species seems wholly artificial”, Hodkinson et al. (2002) and others have developed molecular evidence which suggests that our species are not congeneric with *Saccharum*. It seems best to retain our species in *Erianthus*, following Soreng et al. (2015) and Lloyd Evans, Joshi, & Wang (2019). References: Gandhi & Dutton (1993); Hodkinson et al (2002); Soreng et al (2015); Ward (2001); Webster & Shaw (1995); Webster (2003) in FNA25 (2003a).

- 1 Lowermost inflorescence node densely hairy; callus hairs (ring of hairs beneath the spikelet) (7-) 9-25 mm long, equal to or longer than the spikelet; stem appressed-pubescent below the inflorescence, on the internodes as well as the nodes.
 - 2 Lemma awn flattened and spirally twisted at base; callus hairs 9-14 mm long, silvery or tinged with purple; leaves usually glabrous on the upper surface at maturity; [of moist to dry sites, rarely in wetlands]..... *Erianthus alopecuroides*
 - 2 Lemma awn nearly terete, straight or slightly flexuous; callus hairs (7-) 15-20 (-25) mm long, tawny or brown; leaves usually pilose on the upper surface at maturity; [of moist to wet sites, rarely in uplands] *Erianthus giganteus*
- 1 Lowermost inflorescence node glabrous; callus hairs (ring of hairs beneath the spikelet) 0-6.5 mm long, shorter than or equal to the spikelet (or absent in *E. brevibarbis*); stem glabrous below the inflorescence, except sometimes on the nodes.
 - 3 Callus hairs (ring of hairs beneath the spikelet) absent, or of few hairs 0-2 mm long (much shorter than the spikelet); panicle branches closely appressed, the panicle usually 1-3 cm broad; panicle branches glabrous..... *Erianthus strictus*
 - 3 Callus hairs (ring of hairs beneath the spikelet) present, dense, 3-6.5 mm long (from about half as long to nearly as long as the spikelet); panicle branches ascending, the panicle usually 4-10 cm broad; panicle branches pubescent.
 - 4 Awn of the lemma of the upper floret terete at the base, and not spiraled; spikelets dark brown; spikelet pair dissimilar in size, the lemma of the upper floret 0.7-0.8× as long as the lemma of the lower floret; lemma of the lower floret typically 3-nerved..... *Erianthus coarctatus*
 - 4 Awn of the lemma of the upper floret flattened at the base, either spiraled or not; spikelets straw-colored or purplish; spikelet pair homomorphic, the upper lemma 0.9-1.0× as long as the lower lemma; lemma of the lower floret not distinctly nerved.
 - 5 Awn of the lemma of the upper floret not basally spiraled, 10-18 mm long; lemma of the upper floret entire *Erianthus brevibarbis*
 - 5 Awn of the lemma of the upper floret basally spiraled, 15-22 mm long; lemma of the upper floret bifid, the tooth on either side of the lemma 2.0-2.5 mm long..... *Erianthus contortus*

Erianthus alopecuroides (Linnaeus) Elliott. SILVER PLUME GRASS. **Hab:** Dry to moist fields, roadsides, woodlands, and woodland borders. **Dist:** NJ west to IN, IL, MO, and OK, south to FL and TX. **Phen:** Sep-Nov. **Syn:** = C, F, G, GW1, HC, IL, Mo1, RAB, Tx, W, WV; = *Erianthus divaricatus* (Linnaeus) A.S. Hitchcock – S; = *Saccharum alopecuroides* (Linnaeus) Nuttall – Ar, ETx1, FIgr, FNA25, K3, K4, Tn, Va, WH3; = *Saccharum alopecuroides* (Linnaeus) Nuttall – Webster & Shaw (1995), orthographic variant; = *Saccharum alopecuroides* – K1, orthographic variant. NatureServe G5 (Secure).

Erianthus brevibarbis Michaux. SHORT-BEARDED PLUME GRASS. **Hab:** Marshes, ditches. **Dist:** Sc and AL west to n. FL, west to AR, e. OK, and e. TX; disjunct in s. IL. Reports from NC appear to be in error. **Phen:** Sep-Oct. **Syn:** = F, IL; = *Erianthus brevibarbis* var. *brevibarbis* – Ward (2001); = *Saccharum brevibarbe* (Michaux) Persoon var. *brevibarbe* – ETx1, FNA25, K3, K4, Webster & Shaw (1995); < *Erianthus brevibarbis* Michaux – C, G, GW1, RAB, S; >> *Erianthus coarctatus* Fernald var. *coarctatus* – HC; >> *Erianthus coarctatus* var. *elliottianus* Fernald – HC; < *Saccharum brevibarbe* (Michaux) Persoon. NatureServe G3G5 (Apparently Secure).

Erianthus coarctatus Fernald. BROWN PLUME GRASS. **Hab:** Marshes, ditches, clay-based Carolina bays, swamps, peaty powerline rights-of-way. **Dist:** DE and MD south to FL, west to TX (Brown & Marcus 1998). **Phen:** Sep-Nov. **Syn:** = F; = *Saccharum coarctatum* (Fernald) R.D. Webster – ETx1, FIgr, FNA25, K3, Va, WH3, Webster & Shaw (1995); < *Erianthus brevibarbis* Michaux – C, G, GW1, RAB, S; >> *Erianthus coarctatus* Fernald var. *coarctatus* – HC; >> *Erianthus coarctatus* var. *elliottianus* Fernald – HC. NatureServe G5? (Secure).

Erianthus contortus Elliott. BENT-AWN PLUME GRASS. **Hab:** Moist to wet clearings, open woodlands and forests, woodland borders. **Dist:** DE and MD south to Panhandle FL, west to TX and AR, with scattered occurrences north to TN. **Phen:** Late Jul-Oct. **Syn:** = C, F, G, GW1, HC, RAB, S, Tx, W; = *Erianthus brevibarbis* Michaux var. *contortus* (Elliott) D.B. Ward – Ward (2001); = *Saccharum brevibarbe* (Michaux) Persoon var. *contortum* (Elliott) R. Webster – Ar, ETx1, FIgr, FNA25, K3, NcTx, Tn, Va, WH3, Webster & Shaw (1995); = *Saccharum contortum* (Elliott) Nuttall. NatureServe G5 (Secure).

Erianthus giganteus (Walter) Palisot de Beauvois. SUGARCANE PLUME GRASS, GIANT PLUME GRASS. **Hab:** Marshes, roadbanks, lake and pond margins, cypress ponds, wet pine flatwoods, ditches. **Dist:** NY south to FL, west to se. TX and AR, mainly Coastal Plain, but with an extensive distribution inland as well. **Phen:** Sep-Dec. **Syn:** = C, G, GW1, HC, IL, Mo1, NcTx, RAB, Tx, W; = *Erianthus saccharoides* Michaux – S; = *Saccharum giganteum* (Walter) Persoon – Ar, ETx1, FIgr, FIgr, FNA25, K3, K4, Pa, Tn, Va, WH3, Webster & Shaw (1995); > *Erianthus giganteus* var. *compactus* (Nash) Fernald – F; > *Erianthus giganteus* var. *giganteus* – F. NatureServe G5 (Secure).

103. POACEAE

Erianthus strictus Elliott. NARROW PLUME GRASS. **Hab:** Marshes, clay-based Carolina bays, depression ponds, ditches. **Dist:** E. VA south to FL, west to TX, AR, scattered northward inland to TN and MO. **Phen:** Jul-Nov. **Syn:** = C, F, G, GW1, HC, II, Mo1, RAB, S, Tx; = *Saccharum baldwinii* Sprengel – Ar, ETx1, FIGr, FNA25, K3, K4, Tn, Va, WH3, Webster & Shaw (1995).

Eriochloa Kunth 1816 (CUP GRASS)

A genus of 320-30 species, of the tropical, subtropical, and warm temperate Old World and New World. References: Crins (1991); Shaw & Webster (1987); Shaw, Webster, & Bern (2003) in FNA25 (2003a).

Unkeyed taxa: *Eriochloa polystachya*

Unkeyed waifs: *Eriochloa aristata*, *Eriochloa fatmensis*

- 1 Lemma of fertile floret with an awn > 0.2 mm long; second glume awned; panicle compact, the raceme-like lateral branches close together and ascending-appressed, of irregular lengths; spikelets 8-16 on a typical, primary branch..... *Eriochloa contracta*
- 1 Lemma of fertile floret lacking an awn; second glume not awned; panicle open, the raceme-like lateral branches remote and divergent, the lowermost longest, the upper gradually reduced in length to the apex (*E. acuminata* var. *acuminata*, *E. michauxii* var. *michauxii*) or the panicle compact (*E. villosa*); spikelets 12-40 on a typical, primary branch.
 - 2 Spikelets 2.0-2.5 mm wide..... *Eriochloa villosa*
 - 2 Spikelets 1.1-1.8 mm wide..... *Eriochloa acuminata* var. *acuminata*

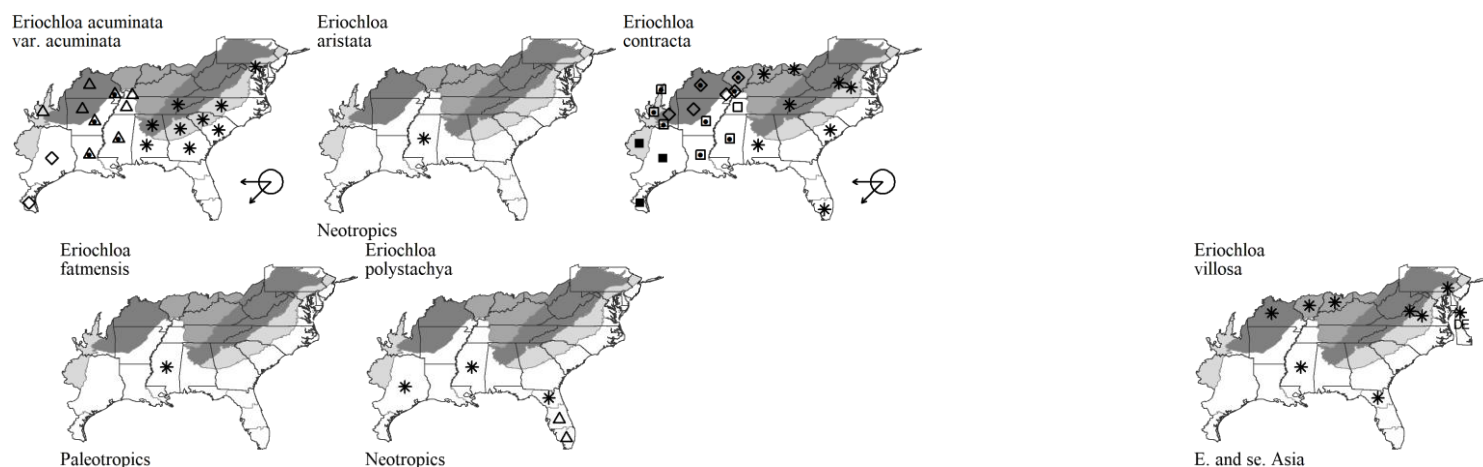

* **Eriochloa acuminata** (J. Presl) Kunth var. *acuminata*. **Hab:** Disturbed areas, urban waste areas, waste areas near wool-combing mills. **Dist:** Presumably native of farther south and west. Reported for scattered locations in GA (Jones & Coile 1988, as *E. gracilis*). **Phen:** Jun-Oct. **Comm:** Reported for NC (Kartesz 1999), but the specimen basis is of cultivated material. Reported as well-established in Laurens County, SC (Bradley et al. [in prep.]). **Syn:** = Ar, FIGr, FNA25, K3, K4, Mo1, NY, Crins (1991), Shaw & Webster (1987); = *Eriochloa gracilis* (Fournier) A.S. Hitchcock var. *gracilis* – HC; < *Eriochloa acuminata* – C, II, Tn, WH3; < *Eriochloa gracilis* (Fournier) A.S. Hitchcock – Tx; ~ *Eriochloa lemmonii* Vasey ex Scribn. var. *gracilis* (Fourn.) Gould.

* **Eriochloa aristata** Vasey. BEARDED CUPSCALE. **Hab:** Disturbed areas. **Dist:** Native of Mexico to South America. **Syn:** = FNA25, K3, K4. NatureServe G4? (Apparently Secure).

Eriochloa contracta A.S. Hitchcock. PRAIRIE CUPGRASS. **Hab:** Prairies, roadsides, wet or moist disturbed areas, waste areas around wool-combing mills. **Dist:** IL, NE, CO, and NM south to MS, LA, TX, NM, and Mexico. **Phen:** (Apr-) Jul-Sep. **Syn:** = Ar, ETx1, F, FIGr, FNA25, G, GW1, HC, II, K3, K4, Mo1, NcTx, Tx, WH3, Crins (1991), Shaw & Webster (1987). NatureServe G5 (Secure).

* **Eriochloa fatmensis** (Hochstetter & Steudel) Clayton. **Hab:** Disturbed areas, perhaps only a waif. **Dist:** Native of the paleotropics. **Syn:** = FNA25, K3, K4. NatureServe GNR (Not Yet Ranked).

* **Eriochloa polystachya** Kunth. CARIBBEAN CUPGRASS, CARIB GRASS. **Hab:** Disturbed areas. **Dist:** Native of the West Indies, Central America, and South America. **Phen:** Jul-Oct. **Syn:** = FIGr, FNA25, K3, K4, Meso6, WH3. NatureServe GNR (Not Yet Ranked).

* **Eriochloa villosa** (Thunberg) Kunth. CHINESE CUPGRASS. **Hab:** Fields, meadows, other disturbed areas (open edge of railroad bed). **Dist:** Native of e. Asia. **Phen:** Aug-Oct. **Comm:** See Belden et al. (2004) for additional information about the first occurrence in Virginia. **Syn:** = C, FNA25, HC, II, K3, K4, Mo1, Pa, Shaw & Webster (1987). NatureServe GNR (Not Yet Ranked).

A genus of ca. 12 species, of tropical and warm temperate regions. References: Aulbach (2003) in FNA25 (2003a).

- | | | |
|---|---|---------------------------|
| 1 | Lateral nerves of the fertile lemma glabrous; culms stout, 7-15 dm tall; spikes 8-16 (-20), 7-12 cm long..... | <i>Eustachys glauca</i> |
| | Lateral nerves of the fertile lemma pubescent; culms slender, 3-10 dm tall; spikes 1-20, 2.5-9 cm long. | |
| 5 | Lowest lemma in each spikelet tawny to reddish-brown; lateral veins of the lowest lemma in each spikelet with spreading hairs > 0.5 mm long; [rare introduction]..... | <i>Eustachys caribaea</i> |
| 5 | Lowest lemma in each spikelet dark brown; lateral veins of the lowest lemma in each spikelet with appressed hairs < 0.5 mm long; [common native from NC south to s. FL, west to LA and beyond our area] | <i>Eustachys petraea</i> |

* *Eustachys caribaea* (Sprengel) Herter. CHICKENFOOT GRASS, CARIBBEAN FINGER-GRASS. **Hab:** Roadsides, other disturbed areas. **Dist:** Native of South America. Reported for AL (Henry and Houston counties) by Diamond (2013b). **Syn:** = ETx1, FNA25, K1, K4; = *Chloris capensis* Sprengel – HC, misapplied; = *Eustachys paspaloides* ssp. *caribaea* – K3. NatureServe GNR (Not Yet Ranked).

Eustachys glauca Chapman. SALINARSH FINGER-GRASS. **Hab:** Marshes and marsh edges, wet hammocks, coastal wetlands, swamps. **Dist:** Se. NC south to FL and west to s. AL. The reported record for SC (Charleston County) is incorrect, based on a misidentification. **Phen:** Jun-Oct (-May). **Syn:** = FGr, FNA25, FNA25, K1, K3, K4, WH3; = *Chloris glauca* (Chapman) Wood – GW1, HC, RAB, S. NatureServe G4 (Apparently Secure).

Eustachys petraea (Swartz) Desvaux. DUNE FINGER-GRASS. **Hab:** Dune slacks and sand flats, also in disturbed areas (especially southward). **Dist:** NC (Dare County) south to FL and west to TX; Mexico to Panama; West Indies. **Phen:** (Sep-) Jun-Oct. **Syn:** = Bah, ETx1, FlGr, FNA25, K1, K3, K4, Meso6, WH3; = *Chloris petraea* Swartz – GW1, HC, RAB, S, Tx. [NatureServe G5](#) (Secure).

Festuca Linnaeus 1753 (FESCUE)

A genus of about 530 species, nearly cosmopolitan in temperate regions. Likely, given the complex phylogenetic relationships between several *Vulpia* clades and the “narrow-leaved *Festuca* clade” (= *Festuca* s.s.) it is best to include *Vulpia* in *Festuca*, even if *Festuca* is treated narrowly to consist only of the “narrow-leaved clade”. References: Aiken & Darbyshire (1990); Darbyshire & Pavlick (2007) in FNA24 (2007a); Darbyshire (1993); Lonard (2007) in FNA24 (2007a); Soreng & Terrell (1998); Tucker (1996).

Unkeyed waifs: *Festuca maritima*

- 1 Plant annual; stamen 1.
2 First glume $< \frac{1}{2}$ as long as the second glume *Festuca myuros*
2 First glume $> \frac{1}{2}$ as long as the second glume.
3 Lemma pubescent; lowest lemma 2.5-3.5 mm long; grains 1.5-2 mm long *Festuca sciurea*
3 Lemma glabrous or scabrous; lowest lemma 2.7-7 mm long; grains 1.7-3.3 mm long.
4 First glume 1.7-4.5 mm long; lemma awns 3-12 mm long; spikelets with 4-7 loosely imbricate florets; rachilla internodes mostly 0.9-1.1 mm long *Festuca bromoides*
4 First glume 3.5-5 mm long; lemma awns 0.3-6 (-9) mm long; spikelets with 5-11 (-more) closely imbricate florets; rachilla internodes mostly 0.5-0.7 mm long.
5 Spikelets 5.5-10 (-13) mm long; awn of the lowest lemma 3-9 mm long *Festuca octoflora* var. *octoflora*
5 Spikelets 4-5.5 (-6.5) mm long; awn of the lowest lemma 0.3-3 mm long *Festuca octoflora* var. *tenella*
- 1 Plant perennial; stamens 3.
9 Larger lemmas 5.5-10 mm long; leaf blades auriculate at the base; anthers 2-4 mm long
10 Auricles ciliate (sometimes only very sparsely so – check several at 10-20 \times magnification); spikelets with 3-6 (-9) florets; old sheaths pale straw-colored, often remaining intact; internodes of the rachilla antrorsely scabrous *Lolium arundinaceum*
10 Auricles glabrous; spikelets with (2-) 4-10 (-12) florets; old sheaths brown, decaying to fibers; internodes of the rachilla glabrous (smooth) or nearly so *Lolium pratense*
- 9 Larger lemmas 3.3-5.2 mm long; leaf blades not auriculate at the base; anthers 0.8-1.5 mm long; [subgenus *Subulatae*, section *Obtusae*].
12 Principal lowermost panicle branches with 8-20 spikelets clustered at the end; spikelets broadly ovate, 4-6 mm wide *Festuca paradoxa*
12 Principal lowermost panicle branches with 2-7 spikelets scattered along the outer half; spikelets narrowly ovate, 2-4 mm wide *Festuca subverticillata*

* ***Festuca bromoides*** Linnaeus. EUROPEAN SQUIRREL-TAIL FESCUE, BROME FESCUE. **Hab:** Sandy disturbed areas. **Dist:** Native of Eurasia. **Phen:** Mar-Apr. **Syn:** = FlGr, K4; = *Festuca dertonensis* (Allioni) Ascherson & Graebner – G, HC, Tx; = *Vulpia bromoides* (Linnaeus) S.F. Gray – Ar, Bah, C, ETx1, FNA24, Il, K1, K3, Meso6, Mo1, NcTx, NE, WH3, Tucker (1996).

* *Festuca maritima* Linnaeus. ONE-SIDED FESCUE. **Hab:** Disturbed areas. **Dist:** Native of Mediterranean Europe. **Syn:** = K4.

Festuca subverticillata (Persoon) E.B. Alexeev. NODDING FESCUE. **Hab:** Moist to wet forests, dry woodlands, and disturbed areas. **Dist:** ME, QC, and MB south to FL and e. TX. **Phen:** May-Jul. **Syn:** = Ar, C, ETx1, FGr, FNA24, II, K1, K3, K4, Mi, Mo1, NcTx, NE, NY, Tn, Va, WH3, Aiken & Darbyshire (1990), Tucker (1996); ? *Festuca obtusa* Biehler – F, G, GW1, HC, Pa, RAB, S, Tx, W, WV. [NatureServe G5](#) (Secure).

Glyceria R. Brown 1810 (MANNAGRASS)

A genus of about 40 species, nearly cosmopolitan. References: Barkworth & Anderton (2007) in FNA24 (2007a); Tucker (1996).

- 1 Spikelets 10-40 mm long, linear, 5-15× as long as wide, terete or nearly so in cross-section; [section *Glyceria*].
- 3 Lemma (3.5-) 4.0-6.0 mm long, the apex with 1-2 strongly developed lobes, and also often toothed between the lobes; leaf blades 2-12 cm long; primary panicle branches 1.5-9.5 cm long..... *Glyceria declinata*
- 3 Lemma 2.4-4.8 mm long, the apex rounded or with a few poorly developed rounded teeth; leaf blades 9-32 cm long; primary panicle branches 3-17 cm long.
 - 6 Lemmas hispidulous on the veins, the hairs ca. 0.1 mm long; leaf blades to 12 mm wide..... *Glyceria arkansana*
 - 6 Lemmas scabrous on the veins, the prickles ca. 0.05 mm long; leaf blades to 18 mm wide..... *Glyceria septentrionalis*
- 1 Spikelets 2.5-8 mm long, ovate to oblong, 1.5-3× as long as wide, laterally compressed in cross-section..... *Glyceria striata* var. *striata*

Glyceria arkansana Fernald. ARKANSAS MANNAGRASS. **Hab:** Swamps. **Dist:** IL south to LA, AR, and e. TX. **Phen:** May-Jun. **Tax:** Mohlenbrock (2014) gives additional characters (of unknown utility) for separating *G. arkansana* from *G. septentrionalis*: anthers < 1 mm long in *G. arkansana* (vs. 1-2 mm long in *G. septentrionalis*), and lemmas 2.5-3.0 mm long and sharply nerved (vs. 3.5-5.5 mm long and obscurely nerved). **Comm:** The VA report is in error. **Syn:** = ETx1, F, HC, II, K1, K3, K4, NcTx, Tx, Tucker (1996); = *Glyceria septentrionalis* A.S. Hitchcock var. *arkansana* (Fernald) Steyermark & Kučera – Ar, FNA24, Mo1, Tn; < *Glyceria septentrionalis* A.S. Hitchcock – C, G. [NatureServe G5](#) (Secure).

* **Glyceria declinata** Brébisson. **Hab:** Disturbed moist areas. **Dist:** Native of Europe. Documented for Alleghany County, NC (D. Poindexter, pers. comm. 2009). **Syn:** = Ar, FNA24, II, K3, K4, NY. [NatureServe GNR](#) (Not Yet Ranked).

Glyceria septentrionalis A.S. Hitchcock. FLOATING MANNAGRASS, EASTERN MANNAGRASS. **Hab:** Shallow water, wet mucky soils, floodplain sloughs, cypress ponds. **Dist:** MA west to MN, south to SC, ne. GA, and TX. **Phen:** May-Jun. **Syn:** = ETx1, F, FGr, GW1, HC, II, K1, K3, K4, Mi, Pa, RAB, Tx, Va, W, WH3, WV, Tucker (1996); = *Glyceria septentrionalis* var. *septentrionalis* – Ar, FNA24, Mo1, NE, NY, Tn; = *Panicularia septentrionalis* (A.S. Hitchcock) E.P. Bicknell – S; < *Glyceria septentrionalis* A.S. Hitchcock – C, G. [NatureServe G5](#) (Secure).

Glyceria striata (Lamarck) A.S. Hitchcock var. *striata*. FOWL MANNAGRASS. **Hab:** Wet meadows, seepages, bogs, marshes, swamp forests, freshwater tidal marshes, bottomland forests in mesic soils. **Dist:** NL (Newfoundland) west to BC, south to FL and CA. **Phen:** Apr-Jun. **Comm:** Var.

Gymnopogon Palisot de Beauvois 1812 (SKELETON GRASS, BEARD GRASS)

A genus of about 15 species, in temperate and tropical areas of the Americas. References: Cialdella & Zuloaga (2011); Peterson, Romaschenko, & Herrera Arrieta (2020); Smith (1971); Smith (2003) in FNA25 (2003a).

Identification Notes: When sterile, *Gymnopogon* is sometimes confused with *Dichanthelium*. *Gymnopogon* differs in having the sheaths conspicuously overlapping (vs. not overlapping in *Dichanthelium*) and leaves that are definitely cordate-clasping and of stiff texture (only a few *Dichanthelium* have this combination).

- 1 Awn of the lemma (4.5-) 7.4-12 mm long; inflorescence branches with spikelets distributed from the tip nearly to the base; leaves 5-15 mm wide; [widespread in our area, including the inland provinces] *Gymnopogon ambiguus*
- 1 Awn of the lemma (0.3-) 0.8-2.2 (-3.5) mm long; inflorescence branches with spikelets distributed either from the tip nearly to the base (*G. chapmanianus*) or to roughly the midpoint, the basal portion naked (or some branches rarely with a few spikelets) (*G. brevifolius*); leaves 2-8 mm wide; [Coastal Plain and only rarely the inland provinces].

..... *Gymnopogon brevifolius*

Gymnopogon ambiguus (Michaux) Britton, Sterns, & Poggenburg. EASTERN SKELETON GRASS, EASTERN BEARD GRASS. **Hab:** Prairies, glades, barrens, dry pinelands and woodlands, dry fields. **Dist:** S. NJ west to KY, OH, and MO, south to s. FL and c. TX. **Phen:** Aug-Nov. **Syn:** = Ar, C, ETx1, F, FlGr, FNA25, G, HC, IL, K1, K3, K4, Mo1, NcTx, Pa, RAB, S, Tn, Tx, Va, W, WH3, WV, Cialdella & Zuloaga (2011), Smith (1971). NatureServe G4 (Apparently Secure).

Gymnopogon brevifolius Trinius. PINELAND SKELETON GRASS, PINELAND BEARD GRASS. **Hab:** Pine savannas, sandhills, dry woodlands, prairies, calcareous glades, typically in dry sandy or clay hardpan soils. **Dist:** S. NJ south to s. FL, west to LA, AR, and e. TX; disjunct inland in the Highland Rim of KY and TN and w. SC in the uppermost Piedmont in the Blue Ridge Escarpment region. **Phen:** Jul-Dec. **Syn:** = Ar, C, ETx1, F, FlGr, FNA25, G, HC, K1, K3, K4, RAB, S, Tn, Tx, Va, WH3, Cialdella & Zuloaga (2011), Smith (1971). NatureServe G5 (Secure).

Heteropogon Persoon 1806 (TANGLEHEAD)

A genus of about 10 species, pantropical and extending into subtropical and warm temperate areas. References: Barkworth (2003w) in FNA25 (2003a).

* ***Heteropogon melanocarpus*** (Elliott) Benth. SWEET TANGLEHEAD, BUZZARD GRASS. **Hab:** Sandy roadsides, disturbed areas; possibly naturalized from the Old World. **Dist:** The species is widespread in the Old World and New World tropics, north in North America to se. NC. Named by Elliott in the early 1800s from material between the Altamaha and Satilla rivers in e. GA, but quite possibly already naturalized at that time from the Old World. **Phen:** Sep-Oct. **Syn:** = FlGr, FNA25, HC, K3, K4, RAB, S, Tx, WH3. NatureServe G4? (Apparently Secure).

Holcus Linnaeus 1753 (VELVET GRASS, SOFT GRASS)

A genus of 8 species, usually perennial, native of Europe, n. Africa, and w. Asia. References: Standley (2007a) in FNA24 (2007a); Tucker (1996).

* ***Holcus lanatus*** Linnaeus. VELVET GRASS, SOFT GRASS, YORKSHIRE-FOG. **Hab:** Moist to wet meadows, pastures, disturbed areas, roadsides, hedge-rows, sometimes invasive in bogs, fens, and other natural wetlands.

103. POACEAE

Dist: Native of Europe. **Phen:** May-Oct. **Syn:** = Ar, C, ETx1, F, FNA24, G, HC, Il, K1, K3, K4, Meso6, Mi, Mo1, NE, NY, Pa, RAB, Tn, Va, W, WV, Tucker (1996); = *Notholcus lanatus* (Linnaeus) Nash – S. NatureServe GNR (Not Yet Ranked).

Hordeum Linnaeus 1753 (BARLEY)

A genus of about 40 species, north temperate and in South America. Many recent authors place most of our species (other than *H. vulgare*) in *Critiesion* Rafinesque. References: Blattner (2004); Carmona et al (2016); Petersen & Seberg (2003); Tucker (1996); von Bothmer, Baden, & Jacobsen (2007) in FNA24 (2007a).

Unkeyed waifs: *Hordeum brachyantherum*

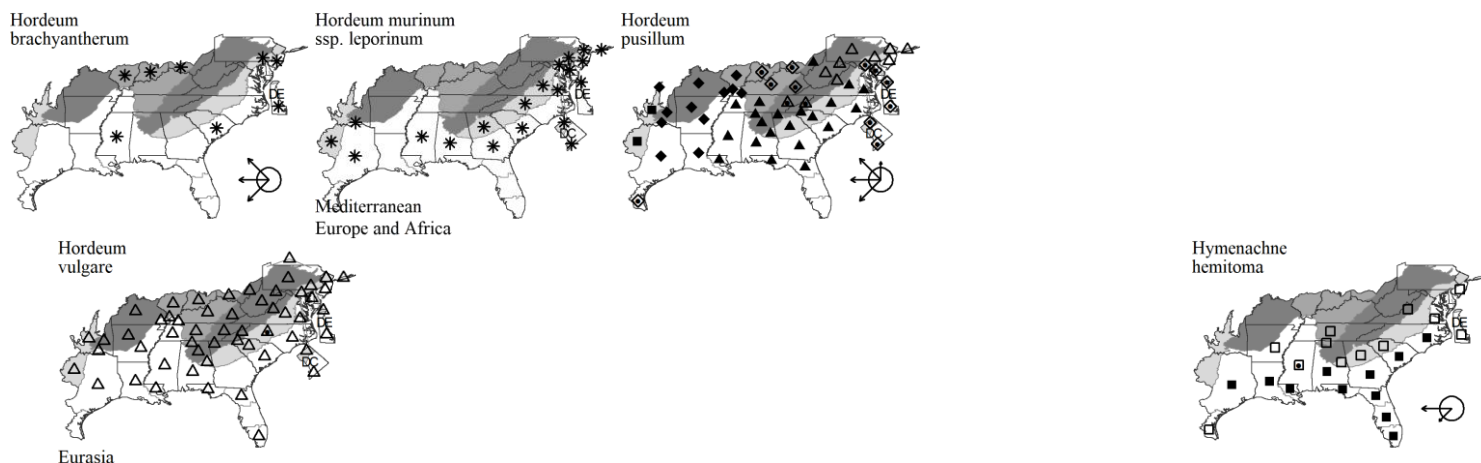

- 1 Rachis remaining intact at maturity; leaves 5-12 mm wide, with well-developed auricles; [section *Hordeum*]..... *Hordeum vulgare*
 1 Rachis disarticulating at maturity; leaves 1-5 mm wide, not auriculate (except in *H. murinum* ssp. *leporinum*).
 3 Leaves auriculate; glumes of the central spikelet (in the triad) with ciliate margins; [section *Hordeum*]..... *Hordeum murinum* ssp. *leporinum*
 3 Leaves not auriculate; glumes of the central spikelet (in the triad) with scabrous margins; [section *Critiesion*]..... *Hordeum pusillum*

* ***Hordeum brachyantherum*** Nevski. **Hab:** Disturbed areas, probably only a waif in our area. **Dist:** Native of w. North America and ne. Asia. Reported for se. PA (Rhoads & Klein 1993) and also apparently known from specimens from GA (Sorrie, pers. comm.), and scattered sites elsewhere in our area. **Tax:** A tetraploid taxon, with poorly understood origin and evolution, but best treated as specifically distinct from the diploid *H. californicum* Covas & Stebbins (Carmona et al. 2016) and the unnamed hexaploid cytotype often included within *H. brachyantherum* ssp. *brachyantherum*. **Syn:** = Il; = *Hordeum brachyantherum* Nevski ssp. *brachyantherum* – FNA24, K1, K3, K4, NE; ? *Critiesion brachyantherum* (Nevski) Barkworth & D.R. Dewey. NatureServe G5T5 (Secure).

* ***Hordeum murinum*** Linnaeus ssp. *leporinum* (Link) Arcangeli. MOUSE BARLEY. **Hab:** Disturbed areas. **Dist:** Native of Mediterranean Europe. **Phen:** Apr-May. **Comm:** A tetraploid taxon. **Syn:** = ETx1, FNA24, K1, K3, K4, NcTx, NE, NY, Tucker (1996); = *Critiesion murinum* (Linnaeus) Á. Löve ssp. *leporinum* (Link) Á. Löve; = *Hordeum leporinum* Link – C, HC, RAB; < *Hordeum murinum* Linnaeus – G, Pa, S. NatureServe GNRTNR (Not Yet Ranked).

Hordeum pusillum Nuttall. LITTLE BARLEY. **Hab:** Roadsides, fields, pastures, ditches, disturbed areas. **Dist:** Probably restricted to west of the Mississippi River a few centuries ago, but now present (and in many areas common) throughout a broad portion of the United States, from ME west to WA south to n. FL, s. TX, CA, and Mexico. **Phen:** Apr-Jun. **Comm:** A diploid taxon. **Syn:** = Ar, C, ETx1, F, FNA24, G, HC, Il, K1, K3, K4, Mi, Mo1, NcTx, NE, NY, Pa, RAB, S, Tn, Tx, Va, W, WH3, Tucker (1996); = *Critiesion pusillum* (Nuttall) Á. Löve; = *Hordeum pusillum* – FlGr, orthographic error. NatureServe G5 (Secure).

* ***Hordeum vulgare*** Linnaeus. BARLEY. **Hab:** Cultivated fields, commonly cultivated, rare as a waif. **Dist:** Native of Eurasia. **Phen:** Apr-Jul. **Tax:** A diploid taxon. The original wild form is often treated as *H. vulgare* ssp. *spontaneum* and the cultivated, non-shattering derivative as ssp. *vulgare* (Hancock 2004). The wild form was used as a food source since at least 19,000 years ago, and "ssp. *vulgare*" developed by 8,500 years ago. **Syn:** = Ar, C, F, FlGr, K1, K3, K4, Meso6, Mi, Mo1, NcTx, NE, NY, Pa, RAB, Tn, Tx, WH3, Tucker (1996); > *Hordeum aegiceras* Nees ex Royle – G; > *Hordeum vulgare* ssp. *spontaneum* (K. Koch) Thellung; > *Hordeum vulgare* ssp. *vulgare* – FNA24; > *Hordeum vulgare* var. *trifurcatum* (Schlechtendal) Alefeld – G, HC, Il; > *Hordeum vulgare* var. *vulgare* – G, HC, Il.

*Hymenachne* Palisot de Beauvois 1812 (MARSH-GRASS, MAIDENCANE)

A genus of 5-10 species, perennials, of the Neotropics and Paleotropics. Acosta et al. (2014) show 2 clades of *Hymenachne*, rendering it non-monophyletic, and suggest that it may need to be split in the future. If it is split, it appears that our two species would be in separate genera, with *Hymenachne hemitomion* (the former *Panicum hemitomion*) moving to yet another new genus. *Hymenachne* has a C3 photosynthetic pathway. References: Acosta et al (2014); Barkworth (2003m) in FNA25 (2003a); Freckmann & Lelong (2003c) in FNA25 (2003a); Grande Allende (2014); Hsu (1965); Lelong (1986).

Hymenachne hemitomia (J.A. Schultes) C.C. Hsu. MAIDENCANE. **Hab:** Lake, pond, and river shores, swamp borders, marshes, ditches, often in shallow water, often forming dense colonies in the low margin and shallow waters of Coastal Plain ponds. Occasionally in surprisingly xeric habitats, spreading vegetatively. **Dist:** Coastal Plain from s. NJ south to s. FL, west to TX; also TN; South America. **Phen:** Mar-Nov. **Syn:** = FlGr; =

Imperata Cirillo 1792 (COGONGRASS, SATINTAIL)

A genus of about 8-9 species, of tropical, subtropical, and warm temperate areas of both hemispheres. References: Burrell et al (2015); Cordobés et al (2021); Gabel (2003) in FNA25 (2003a); Hall (1998); Ward (2004c).

- 1 Anther 1; filaments dilated at base; lower lemma often absent.....*Imperata brasiliensis*
 1 Anthers 2; filaments not dilated at base; lower lemma rarely absent.....*Imperata cylindrica*

Imperata brasiliensis Trinius. BRAZILIAN SATINTAIL. **Hab:** Pine rocklands, mesic flatwoods. **Dist:** S. FL; West Indies and other parts of the Neotropics. **Phen:** Feb-May. **Tax:** In our area, Burrell et al. (2015) found evidence of this taxon only in s. FL. **Comm:** Native and relatively conservative in its s. FL habitat. **Syn:** = Bah, FNA25, HC, K1, K3, K4, S; = *Imperata cylindrica* var. *mexicana* (Ruprecht) D.B. Ward – Ward (2004c); < *Imperata cylindrica* (Linnaeus) Palisot de Beauvois – FIGr, Hall (1998).

* ***Imperata cylindrica*** (Linnaeus) Palisot de Beauvois. COGONGRASS. **Hab:** Pinelands, grassy roadsides, pastures. **Dist:** Native of se. Asia, s. Asia, and possibly e. Africa. See Nelson (1993) for first report from SC. **Phen:** Feb-May (-Nov). **Tax:** Hall (1998) argues that *I. cylindrica* and *I. brasiliensis* are not distinct. Ward (2004c) treats the 2 taxa at varietal level. **Comm:** An extremely aggressive and dangerous weed, now well-established and rapidly invading fire-maintained Coastal Plain areas (such as longleaf pine and slash pine flatwoods and longleaf pine clayhills) on the Gulf Coastal Plain of FL, AL, and MS. **Syn:** = FNA25, HC, K1, K3, K4; = *Imperata cylindrica* var. *cylindrica* – Ward (2004c); < *Imperata cylindrica* (Linnaeus) Palisot de Beauvois – FIGr, Hall (1998).

Kelochloa Lizarazu, M.V. Nicola, & Scataglini 2015 (WARTY PANIC GRASS)

A genus of 2 species, annual herbs, of eastern North America. References: Freckmann & Lelong (2003c) in FNA25 (2003a); Lelong (1986); Nicola, Lizarazu, & Scataglini (2015).

- 1 Lower lemmas tuberculate-hispid; spikelets 3.2-4.0 mm long; [of dry to mesic prairies and pinelands].....*Kelochloa brachyantha*
 1 Lower lemmas warty; spikelets 1.7-2.2 mm long; [of wetlands].....*Kelochloa verrucosa*

Kelochloa brachyantha (Steudel) Lizarazu, M.V. Nicola, & Scataglini. PRAIRIE PANIC GRASS. **Hab:** Prairies and sandy pinelands. **Dist:** W. LA, AR, OK, and e. TX; disjunct eastward in sc. MS, sw. GA, and Panhandle FL (Nicola, Lizarazu, & Scataglini 2015). **Phen:** Aug-Nov. **Syn:** = FIGr, K4, Nicola, Lizarazu, & Scataglini (2015); = *Panicum brachyanthum* Steudel – Ar, ETx1, FNA25, HC, K1, K3, NcTx, Tx. [NatureServe G5](#) (Secure).

Kelochloa verrucosa (Muhlenberg) Lizarazu, M.V. Nicola, & Scataglini. WARTY PANIC GRASS. **Hab:** Seasonally flooded depression meadows, wet pinelands, marshes, shores, ditches. **Dist:** MA and PA west to MI and IN, south to FL and se. TX. **Phen:** Apr-Nov. **ID Notes:** Spikelets deep green, the warty surface separating this species and *K. brachyantha* from *Panicum* (*sensu lato*) in our region. **Syn:** = FIGr, K4, NY, Nicola, Lizarazu, & Scataglini (2015); = *Panicum verrucosum* Muhlenberg – Ar, C, ETx1, F, FNA25, G, GW1, HC, IL, K1, K3, Mi, Pa, RAB, S, Tn, Tx, Va, W, WH3, Lelong (1986). Leersia Swartz 1788 (CUTGRASS)

A genus of about 17-18 species, perennial (less typically annual) herbs, tropical and warm temperate. References: Pyrah (1969); Pyrah (2007) in FNA24 (2007a); Tucker (1988).

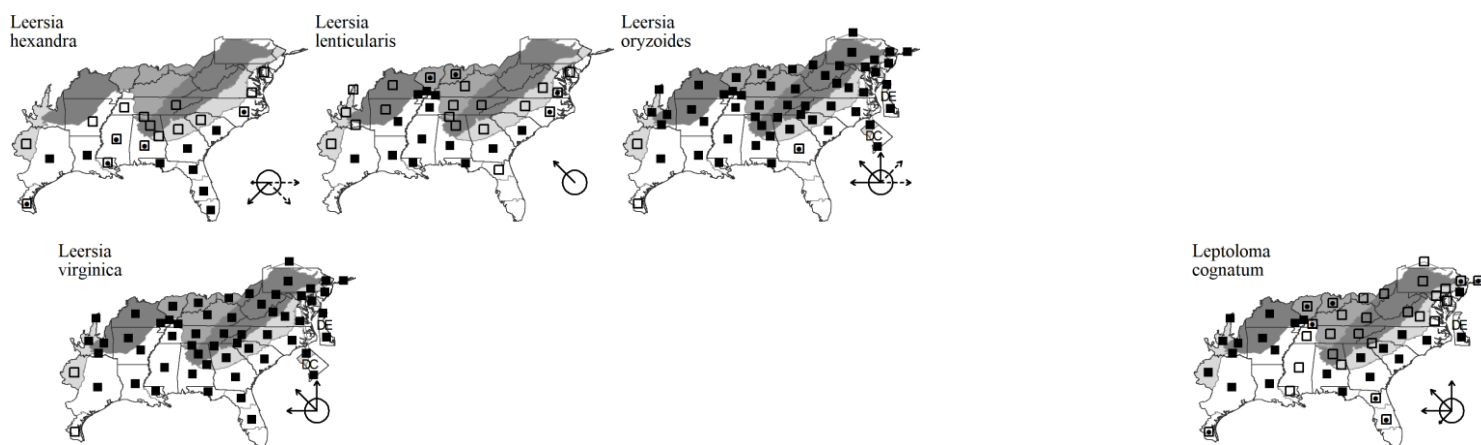

- 2 Lower panicle branches whorled or closely approximate; spikelets 4.0-5.5 mm long, 1.5-2.0 mm broad; stamens 3.....*Leersia oryzoides*
- 2 Lower panicle branches alternate (rarely opposite); spikelets 2.2-5.0 mm long, 0.8-4.0 mm broad; stamens 2 or 6.
- 3 Spikelets suborbicular-falcate, 3.0-4.0 mm broad, < 2× as long as broad; principal leaf-blades 10-15 mm wide; stamens 2.....*Leersia lenticularis*
- 3 Spikelets narrowly elliptic-falcate, 0.8-2.0 mm broad, > 2× as long as wide; principal leaf-blades usually < 7 mm wide; stamens 2 or 6.
- 4 Spikelets 3.8-4.7 mm long, 1.5-2.0 mm broad; panicle branches short, bearing spikelets nearly to their bases; stamens 6..... *Leersia hexandra*
- 4 Spikelets 2.2-3.5 mm long, 0.8-1.2 mm broad; panicle branches long, filiform, the longer ones bearing spikelets only in their upper half; stamens 2.....*Leersia virginica*

Leersia hexandra Swartz. SOUTHERN CUTGRASS. **Hab:** Clay-based Carolina bays, limesink ponds, Florida wet prairies, lakes, pools, canals, marshes, usually in places where periodically or seasonally inundated. **Dist:** Pantropical, ranging north in North America to MD, TN, and TX. **Phen:** Apr-Nov. **Comm:** This species is considered a serious weed in the Old World and New World tropics; in parts of our area, however, it is uncommon and not weedy. **Syn:** = Ar, C, ETx1, F, FIgr, FNA24, G, GW1, HC, K1, K3, K4, Meso6, RAB, Tn, Tx, Va, WH3, Pyrah (1969), Tucker (1988); = *Homalocenchrus hexandrus* (Swartz) Kuntze – S. [NatureServe G5](#) (Secure).

Leersia lenticularis Michaux. CATCHFLY CUTGRASS, OATMEAL GRASS. **Hab:** Floodplain forests and swamps, rarely in depression swamps and ponds. **Dist:** Se. VA south to ne. FL and Panhandle FL, west to e. TX, north in the interior to IN and MN. **Phen:** Jul-Nov. **Syn:** = Ar, C, ETx1, F, FIgr, FNA24, G, GW1, HC, Il, K1, K3, K4, Mo1, NcTx, RAB, Tn, Tx, Va, WH3, Pyrah (1969), Tucker (1988); = *Homalocenchrus lenticularis* (Michaux) Kuntze – S. [NatureServe G5](#) (Secure).

Leersia oryzoides (Linnaeus) Swartz. RICE CUTGRASS. **Hab:** Marshes, riverbanks, pond-shores, and a wide diversity of other wetlands. **Dist:** NS west to BC, south to Panhandle FL and CA; also in Europe and e. Asia (where probably introduced). **Phen:** Aug-Nov. **Syn:** = Ar, C, ETx1, F, FIgr, FNA24, G, GW1, HC, Il, K1, K3, K4, Mi, Mo1, NcTx, NE, NY, Pa, RAB, Tn, Tx, Va, WH3, WV, Tucker (1988); = *Homalocenchrus oryzoides* (Linnaeus) Pollich – S; > *Leersia oryzoides* var. *oryzoides* – Pyrah (1969). [NatureServe G5](#) (Secure).

Leersia virginica Willdenow. WHITE GRASS, WHITE CUTGRASS, VIRGINIA CUTGRASS. **Hab:** Floodplain forests, swamps, streambanks, less typically in mesic to even dry-mesic upland forests. **Dist:** QC west to MN and SD, south to c. peninsular FL and TX. **Phen:** May-Nov. **Syn:** = Ar, C, ETx1, FIgr, FNA24, G, GW1, HC, Il, K1, K3, K4, Mi, Mo1, NcTx, NE, NY, Pa, RAB, Tn, Tx, Va, WH3, WV, Pyrah (1969), Tucker (1988); = *Homalocenchrus virginicus* (Willdenow) Britton – S; > *Leersia virginica* var. *ovata* (Poiret) Fernald – F; > *Leersia virginica* var. *virginica* – F. Limnnodea L.H. Dewey 1894

A monotypic genus, and annual, of sc. United States and adjacent Mexico. References: Brandenburg & Thieret (2000); Snow (2007b) in FNA24 (2007a); Tucker (1996).

Limnnodea arkansana (Nuttall) L.H. Dewey. LIMNODEA. **Hab:** Calcareous prairies, hammocks, moist forests, loamy and sandy prairies, disturbed areas (Panhandle FL westward), waste at wool-combing mill, probably not established (SC). **Dist:** W. FL, c. and s. AL, west through MS, LA, and AR to OK, TX, and adjacent Mexico.

Phen: Mar-Jun. **Syn:** = Ar, ETx1, FIGr, FNA24, HC, K1, K3, K4, NcTx, S, Tx, WH3, Brandenburg & Thieret (2000); = *Cinna arkansana* (Nuttall) G. Tucker – Tucker (1996). NatureServe G4? (Apparently Secure).

Lolium Linnaeus 1753 (RYE-GRASS, DARNEL, FESCUE)

A genus of about 8-10 species, annuals and perennials, native to Europe, n. Africa, and temperate Asia. Here interpreted to include *Schedonorus*, following Soreng et al. (2015); perhaps the two together are best included in an even-more expanded *Festuca*. The best generic placement of *Schedonorus arundinaceus* (= *Festuca elatior*; = *Festuca arundinacea*; = *Lolium arundinaceum*) and *S. pratense* has been much disputed. Articles and floras continue to place them variously in three genera: *Festuca* (Aiken et al. 1997; Baldwin et al. 2012, Mohlenbrock 2014), *Lolium* (Darbyshire 1993; Soreng et al. 2015), and *Schedonorus* (Soreng & Terrell 1998). References: Aiken & Darbyshire (1990); Darbyshire (1993); Darbyshire (2007) in FNA24 (2007a); Inda et al (2008); Smith & Aikin (2012); Soreng & Terrell (1998); Terrell (2007d) in FNA24 (2007a); Tucker (1996).

Unkeyed waifs: *Lolium rigidum*

- 1 Inflorescence paniculate (spikelets borne on branches off the central axis, not 2-ranked).
 - 2 Auricles ciliate (sometimes only very sparsely so – check several at 10-20× magnification); spikelets with 3-6 (-9) florets; old sheaths pale straw-colored, often remaining intact; internodes of the rachilla antorsely scabrous *Lolium arundinaceum*
 - 2 Auricles glabrous; spikelets with (2-) 4-10 (-12) florets; old sheaths brown, decaying to fibers; internodes of the rachilla glabrous (smooth) or nearly so *Lolium pratense*
- 1 Inflorescence spikelike (spikelets sessile on the central axis, 2-ranked).
 - 3 Glumes (12-) 15-25 mm long, subcoriaceous, equaling or surpassing the uppermost lemma (therefore the length of the spikelet); florets 4-9 per spikelet; annual ... *Lolium temulentum* ssp. *temulentum*
 - 3 Glumes 4-12 mm long, herbaceous, shorter than the lemmas (therefore shorter than the spikelet); florets (2-) 5-22 per spikelet; annual or perennial.
 - 4 Lemmas (at least the upper) awned, the awns to 15 mm long; florets 11-22 per spikelet; annual or perennial.....*Lolium multiflorum*
 - 4 Lemmas awnless; florets (2-) 5-10 per spikelet; perennial *Lolium perenne*

* ***Lolium arundinaceum*** (Schreber) Darbyshire. TALL FESCUE, ALTA FESCUE. **Hab:** Fields, roadsides, pastures, disturbed areas. **Dist:** Native of Eurasia. **Phen:** May-Jul. **Syn:** = FIGr, K1, K4, WH3, Darbyshire (1993), Tucker (1996); = *Festuca arundinacea* Schreber – ETx1, HC, II, K2, Meso6, Mo1, NcTx, Aiken & Darbyshire (1990); = *Festuca elatior* Linnaeus – C, nom. utique rej.; = *Festuca elatior* var. *arundinacea* (Schreber) Wimmer – G; = *Schedonorus arundinaceus* (Schreber) Dumortier – Ar, FNA24, K3, Mi, NE, NY, Pa, Tn, Va, Soreng & Terrell (1998); < *Festuca elatior* Linnaeus – F, RAB, S, Tx, W, WV, nom. utique rej.; < *Festuca pratensis* Hudson – GW1; ? *Schedonorus phoenix* (Scopoli) Holub.

* ***Lolium multiflorum*** Lamarck. ITALIAN RYE-GRASS, ANNUAL RYE-GRASS. **Hab:** Fields, roadsides, pastures, disturbed areas. **Dist:** Native of Eurasia. **Phen:** Apr-Jul. **Syn:** = F, FIGr, FNA24, G, HC, II, K4, Meso6, NE, Pa, RAB, S, Tn, WV; = *Lolium perenne* ssp. *multiflorum* (Lamarck) Husnot – K1, K3, NcTx, NY; = *Lolium perenne* Linnaeus var. *aristatum* Willdenow – Ar, C, ETx1, Mi, Mo1, Va, Tucker (1996); < *Festuca perennis* (Linnaeus) Columbus & J.P. Luziola A.L. de Jussieu 1789 (SOUTHERN WATER GRASS)

A genus of about 12 species, from s. North America south to tropical South America. References: Judziewicz et al (2000); Martínez-y-Pérez, Mejía-Saulés, & Sosa (2008); Terrell (2007c) in FNA24 (2007a); Tucker (1988).

- 2 Culms prostrate; leaves conspicuously clustered toward the apex of the culms, floating, 1-5 (-8) cm long; pistillate inflorescence an inconspicuous axillary raceme, 1.1-3.5 cm long, with 2-5 florets ***Luziola fluitans* var. *fluitans***
- 2 Culms suberect to erect; leaves scattered along the culm, not floating, > 6 cm long; pistillate inflorescence an axillary panicle, 2-21.5 (-58) cm long, with 18-250 (-350) florets.

..... ***Luziola bahiensis***

Luziola bahiensis (Steudel) A.S. Hitchcock. BRAZILIAN WATER GRASS. **Hab:** Streams and riverbanks. **Dist:** Apparently native (Anderson & Hall 1993), but considered native of South America by some authors. **Phen:** Jun-Oct (-May). **Syn:** = FIgr, FNA24, HC, K1, K3, K4, S, WH3, Martínez-y-Pérez, Mejía-Saulés, & Sosa (2008). NatureServe G4G5 (Apparently Secure).

Luziola fluitans (Michaux) Terrell & H. Robinson var. **fluitans**. SOUTHERN WATER GRASS. **Hab:** Aquatic in water of natural lakes, slow-moving blackwater rivers, swamps, ponds, and other stagnant waters. **Dist:** Var. *fluitans* ranges from ne. NC to c. FL and west to e. TX. **Phen:** Aug-Oct. **Tax:** Var. *oconneri* (Guzman M.) G. Tucker occurs in the highlands of w. Mexico (Tucker 1988). **Comm:** A very unusual grass, truly aquatic, with flexuous stems and unwettable, floating leaves. In addition to floating leaves (helpful in the field but not in the herbarium!), other useful characters include two secondary blade nerves on either side of the midnerve and virtually as prominent as the midnerve, and which extend onto the sheath where they occur with another 5 or so strong nerves; often with cilia 0.5-1 mm long at the summit of the ventral face of the sheath (an unusual place); and a hyaline ligule about 1 mm long on the same plane as the sheath (i.e., free from the base of diverging blades). **Syn:** = FNA24, WH3, Judziewicz et al (2000), Tucker (1988); < *Hydrochloa carolinensis* Palisot de Beauvois – GW1, HC, RAB, S; < *Hydrochloa fluitans* (Michaux) Nash; < *Luziola fluitans* – Ar, ETx1, FIgr, K1, K3, K4, Meso6, Tx, Martínez-y-Pérez, Mejía-Saulés, & Sosa (2008). NatureServe G4G5TNR (Not Yet Ranked).

Megathyrsus (Pilger) B.K. Simon & S.W.L. Jacobs 2003 (GUINEA GRASS)

A genus of 3 species. References: Wipff & Thompson (2003b) in FNA25 (2003a).

* ***Megathyrsus maximus*** (Jacquin) B.K. Simon & S.W.L. Jacobs. GUINEA GRASS. **Hab:** A wide variety of dry to moist disturbed areas, pine plantations, fruit groves. **Dist:** Native of Africa. Introduced in the Gulf states (GA, AL, FL) (FNA; Carter, Baker, & Morris 2009) and se. SC (Bradley et al. [in prep.]). **Phen:** Jan-Dec. **Syn:** = FNA24, K3, K4; = *Panicum maximum* Jacquin – Bah, HC, S, Tx, WH3; = *Urochloa maxima* (Jacquin) R. Webster – FIgr, FNA25, K1; > *Panicum maximum* var. *maximum* – Meso6; > *Panicum maximum* var. *pubiglume* Schumann ex Peter – Meso6. NatureServe G5 (Secure).

X : extirpated

103. POACEAE

* ***Microstegium vimineum*** (Trinius) A. Camus. JAPANESE STILT-GRASS, FLEXIBLE SASA-GRASS, JAPANESE-GRASS. **Hab:** Disturbed areas, colonizing moist, rich soil, especially in floodplains, though sometimes patchily in even dry or dry-mesic uplands. **Dist:** Native of tropical se. Asia. **Phen:** Sep-Nov. **Comm:** The following chronological synopsis of flora accounts of *Microstegium* is instructive: not treated by Small (1933), "local" (Fernald 1950), "rarely introduced and possibly not established" (Gleason & Cronquist 1952), "sporadically naturalized" (Godfrey & Wooten 1979), "a rapidly spreading pernicious invader on moist ground, too common" (Wofford 1989). Radford, Ahles, & Bell (1968) reported it from fewer than 1/3 of the counties of the Carolinas (in 1968); it is now undoubtedly in every county, an abundant weed in most of them. This species has become a very serious pest, now ranking as one of the most destructive introduced plants in our area, forming extensive and dense patches, sprawling over and eliminating nearly all other herbaceous plants. Eradication is very difficult, and considering its obvious colonizing abilities, only temporary. Hunt & Zaremba (1992) documented the continuing northern expansion of *Microstegium* into NY and CT. Redman (1995) discussed its habitat preferences in MD and DC. Koyama (1987) reported it as "common as undergrowth of forests" in Japan, part of its native distribution. **Syn:** = Ar, C, ETx1, FIGr, FNA25, GW1, IL, K1, K3, K4, Mi, Mo1, NE, NY, Pa, RAB, Tn, Va, W, WH3, Chen, Veldkamp, & Kuoh (2012); = *Eulalia viminea* (Trinius) Kuntze – G; > *Eulalia viminea* var. *variabilis* Kuntze – F; > *Eulalia viminea* var. *viminea* – F; > *Microstegium vimineum* var. *imberbe* (Nees) Honda – HC; > *Microstegium vimineum* var. *vimineum* – HC. NatureServe GNR (Not Yet Ranked).

E. and se. Asia

Miscanthus Andersson 1855 (EULALIA)

A genus of ca. 14 species, perennials, of Eurasia and s. Africa. References: Barkworth (2003p) in FNA25 (2003a).

* ***Miscanthus sinensis*** Andersson. EULALIA, CHINESE SILVER GRASS. **Hab:** Roadsides, powerline rights-of-way, other disturbed habitats, increasingly moving into a wide variety of natural habitats, including those with prescribed fire. **Dist:** Native of e. Asia. **Phen:** Apr-Nov. **Comm:** This species is becoming aggressively invasive. Forms with leaves cross-variegated or linear-variegated with yellow are cultivated and sometimes escape or persist (in addition to the much more common green-leaved form). **Syn:** = C, ETx1, FIGr, FNA25, G, K1, K3, K4, Mi, Mo1, NcTx, NE, NY, Pa, RAB, S, Tn, Tx, Va, W, WH3, WV; > *Miscanthus sinensis* var. *gracillimus* A.S. Hitchcock – IL; > *Miscanthus sinensis* var. *sinensis* – IL; > *Miscanthus sinensis* var. *variegatus* Beal – F, HC; > *Miscanthus sinensis* var. *zebrinus* Beal – F, HC.

E. and se. Asia

Mnesithea Kunth 1829 (JOINTGRASS)

A genus of about 30 species, perennial and annual herbs, widespread in the tropics and subtropics of the Old and New World. Here circumscribed to include *Coelorachis* and *Hackelochloa*, based on Veldkamp, Koning, & Sosef (1986) and Soreng et al. (2015). References: Allen (2003c) in FNA25 (2003a); Soreng et al (2015); Thieret (2003f) in FNA25 (2003a); Veldkamp, de Koning, & Sosef (1986).

- 1 Annual; sessile spikelets hemispheric; lower glumes of the sessile spikelet alveolate; [alien weed] ***Mnesithea granularis***
- 1 Perennial (cespitose or rhizomatous); sessile spikelets ovate; lower glumes of the sessile spikelet rugose or pitted; [native].
 - 2 Culms round in cross-section ***Mnesithea cylindrica***
 - 2 Culms compressed-keeled in cross-section.
 - 3 Lower glume with rectangular pits..... ***Mnesithea tessellata***
 - 3 Lower glume smooth or with transverse ridges. ***Mnesithea rugosa***

Mnesithea cylindrica (Michaux) de Koning & Sosef. CAROLINA JOINTGRASS. **Hab:** Prairies, oak woodlands, roadsides and other disturbed ground in areas formerly prairie-like and fire-maintained, perhaps now extirpated in portions of our area (including NC). **Dist:** Fairly widespread in se. North America, north to NC and SC (at least formerly), MS, MO, and TX. **Phen:** Apr-Aug. **Syn:** = FIGr, Veldkamp, de Koning, & Sosef (1986); = *Coelorachis cylindrica* (Michaux) Nash – Ar, C, ETx1, FNA25, K1, K3, K4, Mi, Mo1, NcTx, WH3; = *Manisuris campestris* (Nuttall) A.S. Hitchcock – S; = *Manisuris cylindrica* (Michaux) Kuntze – F, G, GW1, HC, RAB, Tx. NatureServe G4G5 (Apparently Secure).

* ***Mnesithea granularis*** (Linnaeus) de Koning & Sosef. PITTSVILLE GRASS. **Hab:** Hammocks, pinelands, disturbed areas. **Dist:** Native of the Old World. Reported for sw. GA and other Gulf Coast states (Thieret in FNA 2003a, Jones & Coile 1988, Kartesz 1999). **Phen:** Sep-Oct. **Syn:** = *Hackelochloa granularis* (Linnaeus) Kuntze – FIGr, FNA25, HC, K1, K3, K4, WH3; = *Rytidix granularis* (Linnaeus) Skeels – S. NatureServe GNR (Not Yet Ranked).

Mnesithea rugosa (Nuttall) de Koning & Sosef. WRINKLED JOINTGRASS. **Hab:** Limesink ponds (dolines), depression meadows, clay-based Carolina bays, wet pine savannas, wet pine flatwoods, marl prairies, disturbed areas (such as seeps in powerline rights-of-way), always in places with a seasonally high water-table. **Dist:** A Southeastern Coastal Plain endemic: s. NJ south to FL and west to TX. **Phen:** May-Oct. **Syn:** = FIGr, Veldkamp, de Koning, & Sosef (1986); = *Coelorachis rugosa* (Nuttall) Nash – Ar, C, ETx1, FNA25, K1, K3, K4, Va, WH3; = *Manisuris rugosa* (Nuttall) Kuntze – F, G, GW1, HC, RAB, S, Tx. NatureServe G5 (Secure).

Mnesithea tessellata (Steudel) de Koning & Sosef. PITTED JOINTGRASS. **Hab:** Wet pine savannas and bogs. **Dist:** Sw. GA and FL Panhandle west to e. LA, an East Gulf Coastal Plain endemic. **Phen:** Sep-Oct. **Syn:** = FIGr, Veldkamp, de Koning, & Sosef (1986); = *Coelorachis tessellata* (Steudel) Nash – FNA25, K1, K3, K4, WH3; = *Manisuris tessellata* (Steudel) Lamson-Scribner – GW1, HC, S. NatureServe G5? (Secure).

103. POACEAE

*Moorochloa* Veldkamp 2004

A genus of about 3 species, annual grasses, of the Eastern Hemisphere. See Veldkamp (2004) and discussion in FNA24 (p. 793) about the generic nomenclature. References: Veldkamp (2004); Wipff, & Thompson in FNA (2003a), amended in FNA (2007a).

* *Moorochloa eruciformis* (J.E. Smith) Veldkamp. SWEET SIGNALGRASS. **Hab:** Creekbanks. **Dist:** Native of Eurasia. **Phen:** Sep-Oct. **Tax:** See discussion in FNA24, p. 793. **Syn:** = FNA24, K3, K4, Veldkamp (2004); = *Brachiaria eruciformis* (J.E. Smith) Grisebach – FNA25, Mo1. NatureServe GNR (Not Yet Ranked).

*Muhlenbergia* Schreber 1789 (MUHLY)

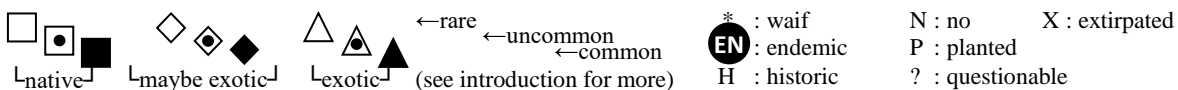

A genus of about 176 species, perennials and annuals, of North America south to Andean South America, and e. and se. Asia. *Muhlenbergia* is a large and diverse genus, recently reclassified by Peterson, Romaschenko, & Johnson (2010b); the subgenera used here follow that classification. References: Columbus & Smith (2010); Gustafson & Peterson (2007); Morden & Hatch (1989); Peterson (2003b) in FNA25 (2003a); Peterson, Romaschenko, & Johnson (2010b); Pohl (1969); Reeder (2003b) in FNA25 (2003a); Snow (2003b) in FNA25 (2003a).

- 1 Panicle open and diffuse, > 4 cm broad, the spikelets borne on slender or capillary pedicels longer than the lemmas.
 - 4 Lemma awn 0-1.5 (-4) mm long; glume bodies (1.1-) 2.0-3.3 (-3.6) mm long, < ½ as long as the lemma bodies, acuminate, not awned (rarely the second with a short awn < 0.6 mm long); spikelets usually brown or bronze (when fresh); basal sheaths usually very fibrous.....*Muhlenbergia expansa*
 - 4 Lemma awn (2-) 3-35 mm long; glume bodies (0.3-) 0.7-1.7 (-2.4) mm long, > ½ as long as the lemma body, one or both glumes sometimes awned; spikelets usually purple (when fresh); basal sheaths rarely strongly fibrous.
 - 5 Lemma awn (2-) 3-13 (-18) mm long, first glume awnless (or rarely with an awn to 3.2 mm long), second glume awnless (or rarely with an awn up to 5.0 mm long), palea awnless; lemma lacking setaceous teeth flanking the awn; flowering late Aug-Oct; [widespread in our area, particularly in rocky, clayey, or sandy glades, barrens, and woodlands with prairie affinities].....*Muhlenbergia capillaris*
 - 5 Lemma awn (8-) 12-26 (-35) mm long, first glume awn (0.5-) 1-7 (-10) mm long, second glume awn (1-) 5-19 (-25) mm long, palea awn-tipped; lemma with two setaceous teeth flanking the awn, the teeth 0.5-2.5 (-4.7) mm long; flowering Oct-Nov; [sandy maritime situations on barrier islands of the outer Coastal Plain].....*Muhlenbergia sericea*
- 1 Panicle slender, dense, < 2.5 cm broad, the spikelets sessile or on non-capillary pedicels shorter than the lemmas; [subgenus *Muhlenbergia*].
 - 6 Glumes minute, 0-0.5 mm long; plant lacking rhizomes; culms weak, decumbent and cespitosely branching in their lower portions, rooting at the nodes, the upper portions erect and sparsely branched.....*Muhlenbergia schreberi*
 - 6 Glumes well-developed, 1-7 mm long; plant with scaly rhizomes (except for *M. cuspidata*); culms firm (rarely sprawling), few or solitary (rarely forming dense colonies).
 - 9 Panicle linear, loosely flowered, much exceeding the leaves; culm erect, simple or sparingly branched; glumes relatively broad, the body ovate, 1.2-2.5 mm long, abruptly narrowed to the acuminate tip; ligule obsolete or shorter than the elongate cartilaginous summit of the leaf sheath.
 - 10 Lemmas awnless or awn < 0.5 mm long; spikelets 1.5-2.5 mm long; leaf blades usually (1-) 2-6 mm wide.....*Muhlenbergia sobolifera*
 - 10 Lemma awn 1-11 mm long (rarely awnless); spikelets 3-5 mm long; leaf blades (2) 6-10 (-13) mm wide (often > 8 mm wide).....*Muhlenbergia tenuiflora*
 - 9 Panicle lanceolate, densely (rarely loosely) flowered, leaves often extending conspicuously into the inflorescence; culm geniculate, freely branched; glumes relatively narrow, the body lanceolate, 2-3 mm long, tapering from base to apex; ligule usually obvious above the short cartilaginous summit of the leaf sheath.
 - 11 Culm glabrous throughout (including below the nodes).
 - 12 Glumes 1.4-2.0 mm long; ligule 0.2-0.5 mm long.....*Muhlenbergia bushii*
 - 12 Glumes 2-4 (-5) mm long; ligule 0.8-1.5 mm long.....*Muhlenbergia frondosa*
 - 11 Culm pubescent, at least below the nodes.
 - 13 Lemma awn 7-12 mm long; spikelets loosely clustered, on pedicels 2-4 mm long.....*Muhlenbergia sylvatica*
 - 13 Lemma awnless or with a short awn tip (rarely to 9 mm long); spikelets densely clustered, on pedicels < 1 mm long.....*Muhlenbergia glabrifloris*

Muhlenbergia bushii Pohl. BUSH'S MUHLY, NODDING MUHLY. **Hab:** Wet oak flatwoods, bottomlands, and other (at least seasonally) moist forests, especially over calcareous substrates. **Dist:** IN west IA, south to NE and TX; apparently disjunct eastward in scattered localities, including VA. **Phen:** Jul-Oct. **Syn:** = Ar, C, ETx1, FNA25, II, K1, K3, K4, Mo1, NcTx, Va; = *Muhlenbergia brachyphylla* Bush – F, G, HC, Tx. NatureServe G5 (Secure).

Muhlenbergia capillaris (Lamarck) Trin. HAIRGRASS, HAIR-AWN MUHLY. **Hab:** In the Piedmont and Interior Low Plateau primarily in clayey or thin rocky soils (especially in areas which formerly burned and were prairie-like) and in open woodlands, in the Coastal Plain in pine savannas, sandhills, dry woodlands, and coastal grasslands (where sometimes in close proximity with *M. sericea*), in the Mountains around calcareous rock outcrops, sandy prairies westwards. **Dist:** MA, NY, s. OH, s. IN, s. IL, MO, and e. KS south to s. FL, LA, and c. and s. TX. **Phen:** Aug-Dec. **Tax:** *M. capillaris* and its relatives, *M. expansa* and *M. sericea*, were the subject of an herbarium morphological study by Morden & Hatch (1989), who concluded that the three taxa are not sharply separable and should be recognized only at the varietal level. If one considers behavior in the field, ecology, and geography in conjunction with morphologic characters, however, there is little doubt that the three taxa are biological species.

Key to Map
Symbology:

103. POACEAE

Distribution and typical habitat are different for the three species, but *M. capillaris* can be found growing with or in proximity to each of the other two (I have not seen *M. sericea* and *M. expansa* together). In such situations, the two taxa present are readily distinguishable at a glance, and there is no evidence of intermediates or hybrids. Gustafson & Peterson (2007) also concluded that the three taxa are separable as species. **Syn:** = Ar, ETx1, F, FIGr, FNA25, G, II, K3, K4, NcTx, NE, NY, Pa, Tn, Va, W, Gustafson & Peterson (2007); = *Muhlenbergia capillaris* var. *capillaris* – C, HC, K1, Mo1, S, WH3, Morden & Hatch (1989); < *Muhlenbergia capillaris* (Lamarck) Trinius – GW1, RAB, Tx. NatureServe G5T5? (Secure).

Muhlenbergia expansa (Poir.) Trinius. SAVANNA HAIRGRASS. **Hab:** Pine savannas, pine flatwoods, mesic areas in sandhill-pocosin ecotones. **Dist:** Se. VA south to FL, west to e. TX (nearly exactly the range of *Pinus palustris*). **Phen:** Sep-Oct. **Tax:** See *M. capillaris* for a discussion of recent studies on the *M. capillaris* complex. **Comm:** An important part of the grassy component of many longleaf pine savannas, *M. expansa*'s flowering is stimulated by fire, and, lacking fire, it may be found in large populations in solely vegetative condition. **ID Notes:** *Muhlenbergia expansa* can be distinguished in sterile condition from other savanna bunchgrasses (*Sporobolus teretifolius*, *S. pinetorum*, *S. floridanus*, *S. curtissii*, *Aristida stricta*, and *A. beyrichiana*) by the following characteristics: old leaf bases fibrous and curly (rather than hardened and cartilaginous) and ligules 1-3 mm long (rather than 0.2 to 0.5 mm long). The open panicle somewhat resembles that of several species of similar habitat which often co-occur with *M. expansa* – *Sporobolus teretifolius*, *S. pinetorum*, *S. curtissii*, *S. floridanus*, and *S. brevipilis*, but the panicle of *M. expansa* is capillary, flexuous, and fragile, tending to break up over the winter (vs. fine-textured but not capillary, the branches rigid and ascending, more likely to persist over the winter in relatively intact condition). The vegetative characters listed above and under *Sporobolus brevipilis* are also useful. **Syn:** = ETx1, F, FNA25, GW1, HC, K3, K4, RAB, S, Va, Gustafson & Peterson (2007); = *Muhlenbergia capillaris* var. *trichopodes* (Elliott) Vasey – C, K1, WH3, Morden & Hatch (1989); = *Muhlenbergia trichopodes* (Elliott) Chapman; < *Muhlenbergia capillaris* (Lamarck) Trinius – Tx; < *Muhlenbergia sericea* (Michaux) P.M. Peterson – FIGr. NatureServe G5T5 (Secure).

Muhlenbergia frondosa (Poir.) Fernald. SMOOTH WIRESTEM MUHLY, SATIN GRASS. **Hab:** Barrens, prairies, floodplain forests, riverbanks, scour prairies, and moist disturbed areas. **Dist:** NC, ON, and ND south to e. NC, nw. SC, ne. GA, n. AL, n. MS, ne. LA, and ne. TX. **Phen:** Late Aug-Oct. **Syn:** = Ar, C, ETx1, F, FNA25, G, GW1, HC, II, K1, K3, K4, Mi, Mo1, NcTx, NE, NY, Pa, RAB, Tn, Tx, Va, W, WV; = *Muhlenbergia mexicana* (Linnaeus) Trinius – S, misapplied.

Muhlenbergia glabriflora Lamson-Scribner. CLAY-PAN MUHLY, SMOOTH MUHLY. **Hab:** Barrens, open oak flatwoods, other open habitats, in clayey soils. **Dist:** VA and NC west to IA, MO, AL, and TX, local and apparently rare in all of that range. **Phen:** Aug-Nov. **Comm:** In NC, only known from one collection, that from Durham County in 1936, with vague habitat data. F describes the habitat as "dry exsiccated or baked soils, prairies, gravels or rocky slopes," Pohl (1969) as "mostly on low ground, in shade on heavy clay soils." **Syn:** = Ar, FNA25, II, K3, K4, Mo1, NcTx, Tn; = *Muhlenbergia glabriflora* – C, ETx1, F, G, HC, K1, Tx, Va, orthographic variant. NatureServe G4? (Apparently Secure).

Muhlenbergia schreberi J.F. Gmelin. NIMBLE-WILL. **Hab:** Bottomland and other moist forests, dry forests, fields, dirt roads, disturbed areas. **Dist:** ME, NY, ON, MI, WI, MN, and SD, south to c. peninsular FL, LA, and c. TX. **Phen:** Aug-Jan. **Syn:** = Ar, C, ETx1, F, FIGr, FNA25, GW1, HC, II, K1, K3, K4, Mi, Mo1, NcTx, NE, NY, Pa, RAB, S, Tn, Tx, Va, W, WH3, WV; = *Muhlenbergia diffusa* Willdenow; > *Muhlenbergia palustris* Lamson-Scribner; > *Muhlenbergia schreberi* var. *palustris* (Lamson-Scribner) Lamson-Scribner – G, II; > *Muhlenbergia schreberi* var. *schreberi* – G, II. NatureServe G5 (Secure).

Muhlenbergia sericea (Michaux) P.M. Peterson. DUNE HAIRGRASS, SWEET GRASS. **Hab:** Maritime dry grasslands, maritime wet grasslands, interdune swales, low dunes, sometimes edges of freshwater or brackish marshes, northwards in its distribution (in NC and SC) apparently limited to the barrier islands (sometimes in close proximity with *M. capillaris*), sometimes locally abundant. **Dist:** NC (slightly north of Oregon Inlet, Dare County, south of Nags Head) south to s. FL and west to s. TX, primarily on barrier islands (some portions of the distribution on the Gulf Coast may be by introduction only). **Phen:** Aug-Dec. **Comm:** This species is a very conspicuous part of the Outer Banks flora in the autumn, especially showy and abundant between Rodanthe (Chicamacomico) and Avon (Kinnakeet), Dare County, NC, and also abundant on Ocracoke Island, Hyde County, NC. The capillary pedicels and awns of its purple inflorescences are so light as to be moved by the slightest breeze. By December or January they fade to tan, but remain showy. This grass is a major component of baskets made in the Low Country of SC by the Gullah, who call it "sweet grass." I agree with Curtis (1843), Blomquist (1948), Pinson & Batson (1971), Gould (1975), and others who consider *M. sericea* (as *M. filipes*) a species distinct from *M. capillaris*. In addition to a discussion of its relationship to *M. capillaris*, Pinson and Batson (1971) and Morden & Hatch (1989) provide descriptions, not elsewhere available. See *M. capillaris* for a discussion of recent studies on this complex. **Syn:** = FNA25, K3, K4, Gustafson & Peterson (2007); = *Muhlenbergia capillaris* var. *filipes* (M.A. Curtis) Chapman ex Beal – HC, K1, S, WH3, Morden & Hatch (1989); = *Muhlenbergia filipes* M.A. Curtis; < *Muhlenbergia capillaris* (Lamarck) Trinius – GW1, RAB, Tx; < *Muhlenbergia sericea* (Michaux) P.M. Peterson – FIGr. NatureServe G5T5? (Secure).

Muhlenbergia sobolifera (Muhlenberg ex Willdenow) Trinius. ROCK MUHLY. **Hab:** Dry wooded limestone slopes, rock outcrops, and rocky calcareous woodlands and forests. **Dist:** ME, WI, and KS south to n. GA, n. AL, n. MS, and c. TX. **Phen:** Jul-Oct. **Syn:** = Ar, C, ETx1, F, FNA25, G, HC, II, K1, K3, K4, Mo1, NcTx, NE, NY, Pa, RAB, S, Tn, Tx, Va, W, WV. NatureServe G5 (Secure).

Muhlenbergia sylvatica Torrey ex A. Gray. WOODLAND MUHLY. **Hab:** Bottomland and other moist forests, calcareous or mafic streambanks, prairies. **Dist:** ME and MN south to SC, ne. GA, AL, and TX. **Phen:** Jul-Oct. **Syn:** = Ar, C, FNA25, II, K1, K3, K4, Mi, Mo1, NcTx, NE, NY, Pa, RAB, Tn, Tx, Va, W, WV; = *Muhlenbergia umbrosa* Lamson-Scribner – S; > *Muhlenbergia sylvatica* var. *sylvatica* – F, G, GW1, HC. NatureServe G5T3T5 (Apparently Secure).

Muhlenbergia tenuiflora (Willdenow) Britton, Sterns, & Poggenburg. SLENDER MUHLY. **Hab:** Moist forests and disturbed areas, up to at least 1400 meters, especially in base-rich soils. **Dist:** NH, WI, and NE south to GA, AL, MS, and OK. **Phen:** Aug-Oct. **Tax:** Two varieties are sometimes recognized: var. *tenuiflora*, with lemma awn 4-11 mm long and the sheaths and stems retrorsely hirsute, especially around the nodes, and var. *variabilis* (endemic to the Southern Appalachians), with lemma awn 1-4 mm long or absent, and the sheaths and stems glabrous or nearly so. The validity of the varieties needs further assessment. **Syn:** = Ar, F, FNA25, G, HC, II, K1, K3, K4, Mi, NE, NY, Pa, RAB, S, Tn, Va, W, WV; > *Muhlenbergia tenuiflora* var. *tenuiflora* – C, Mo1; > *Muhlenbergia tenuiflora* var. *variabilis* (Lamson-Scribner) Pohl – C.

*Nassella* (Trinius) Desvaux 1846

A genus of ca. 116 species, mainly perennials, mainly of South America. References: Barkworth (2007i) in FNA24 (2007a); Cialdella et al (2014).

Unkeyed waifs: *Nassella viridula*

Nassella leucotricha (Trinius & Ruprecht) Pohl. TEXAS NEEDLEGRASS. **Hab:** Prairies, disturbed areas. **Dist:** Sw. AR, OK, and n. TX south to w. LA, TX, and s. Mexico (Chiapas) (and also eastwards as a waif, in waste areas near a wool-combing mill in e. SC). **Phen:** Apr-May. **Syn:** = Ar, ETx1, FNA24, K1, K3, K4, Meso6, NcTx; = *Stipa leucotricha* Trinius & Ruprecht – HC, Tx. NatureServe G5 (Secure).

* *Nassella viridula* (Trinius) Barkworth. GREEN TUSsock GRASS. **Hab:** Disturbed areas. **Dist:** MN west to BC, south to IA, NE, KS, NM, AZ, and CA. **Syn:** = FNA24, K4. NatureServe G5 (Secure).

*Opismenus* Palisot de Beauvois 1807 (WOODS-GRASS, BASKET-GRASS)

A genus of 5 or more species, widespread in the New World and Old World tropics, subtropics, and warm temperate areas. References: Crins (1991); Peterson et al (1999); Scholz (1981); Wipff (2003h) in FNA25 (2003a).

Identification Notes: Superficially, *Opismenus* somewhat resembles *Arthraxon*, but has the leaves only slightly cordate at the base (vs. strongly cordate-clasping).

Opismenus setarius (Lamarck) Roemer & J.A. Schultes. WOODS-GRASS. **Hab:** Hammocks, maritime forests, shell middens, moist forests. **Dist:** *O. hirtellus* is widespread in tropical and subtropical areas of the New and Old World; the "*setarius* entity" (variously treated at subspecies or species rank) ranges from e. NC south to FL, west to AR and TX, and south through the Caribbean and Central America to central South America. **Phen:** Aug-Oct. **Tax:** Scholz (1981) recognizes many other subspecies. The "*setarius* entity" is undoubtedly native in our area, often occurring in undisturbed habitats in natural communities entirely devoid of alien species (though it can also act somewhat aggressively in disturbed sites); the basis of Gould's (1975) assertion that *Opismenus* is "introduced or adventive in the United States" is unknown. Crins (1991) favors treating *O. setarius* as a taxonomically unrecognized component within a polymorphic *O. hirtellus*. **Syn:** = HC, RAB, S; = *Opismenus hirtellus* (Linnaeus) Palisot de Beauvois ssp. *setarius* (Lamarck) Mez ex Ekman – ETx1, FNA25, K3, Meso6, Scholz (1981); < *Opismenus compositus* (Linnaeus) Palisot de Beauvois – K4; < *Opismenus hirtellus* (Linnaeus) Palisot de Beauvois – Ar, NcTx, Tx, Crins (1991).

*Oryza* Linnaeus 1753 (RICE)

A genus of about 20 species, native of tropical and warm temperate portions of the Old World. References: Barkworth & Terrell (2007) in FNA24 (2007a); Judziewicz et al (2000); Nanda & Sharma (2003); Tucker (1988).

* *Oryza sativa* Linnaeus. RICE. **Hab:** Marshes, impoundments, of only sporadic occurrence outside of cultivation. **Dist:** Native of Asia. Perhaps the single most important food crop in the world, developed as a crop in Asia and cultivated at least since 10,000 years BP (Hancock 2004). **Phen:** Jun-Nov. **Comm:** Rice was an important crop before the Civil War in SC, GA, and extreme se. NC. It is planted as a crop in AR, LA, TX, and MS, and planted elsewhere in waterfowl impoundments. **Syn:** = Ar, C, FlGr, FNA24, G, GW1, HC, IL, K1, K3, K4, Meso6, Mo1, RAB, S, Tx, Judziewicz et al (2000), Nanda & Sharma (2003), Tucker (1988). NatureServe GNR (Not Yet Ranked).

Panicum Linnaeus 1753 (PANIC GRASS)

Contributed by Richard J. LeBlond

There has been considerable controversy over the generic limits of *Panicum*. In its broader past conceptions, it has been considered to include (in our area) taxa sometimes and variously segregated as *Brachiaria*, *Dichanthelium*, *Eriochloa*, *Paspalidium*, *Phanopyrum*, *Steinchisma*, and *Urochloa*. All were originally recognized based on morphological characteristics, to which have recently been added anatomical, chemical, and other evidence. Crins (1991) recognizes *Eriochloa*, *Urochloa* (including *Brachiaria*), *Paspalidium*, and *Panicum* as genera, with *Panicum* subdivided into subgenera *Panicum*, *Agrostoides*, *Dichanthelium*, *Phanopyrum*, and *Steinchisma*. We prefer to recognize most of the segregates as genera, pending further analyses, since there is little evidence that these groups are more closely related to one another than they are to other genera recognized in the Paniceae. *Phanopyrum* and *Dichanthelium* are the only segregate groups with C3 photosynthesis. *Eriochloa* and *Urochloa* (including *Brachiaria*) have C4 photosynthesis, with PEP-ck decarboxylation. *Panicum* and *Paspalidium* have C4 photosynthesis, with NAD-me or NADP-me decarboxylation. *Steinchisma*, in addition to its unusual expansion of the palea, apparently has a peculiar photosynthetic pathway, described by Crins (1991) as "intermediate between" C3 and C4 photosynthesis; "the leaves have Kranz anatomy, but there are fewer organelles than usual in the outer sheath."

We agree with Hansen & Wunderlin (1988) that "*Dichanthelium* is as 'good' a grass genus as many others (e.g. *Brachiaria*, *Sacciolepis*, and many more in other tribes)". Despite arguments to the contrary, there is little doubt that *Dichanthelium* is a natural group. Zuloaga, Ellis, and Morrone (1993) argue against the recognition of *Dichanthelium* as a genus, preferring to treat it as a subgenus under *Panicum*. They state, however, "within *Panicum*, *Dichanthelium* can be distinguished at the subgeneric level by the following set of characters: lax inflorescences; ellipsoid to obovoid spikelets; upper glume and lower lemma usually 7-11 nerved; upper anthecium apiculate or shortly crested, and simple papillae on the lemma and palea. Anatomically, all species are non-Kranz or C3, with the outer parenchymatous sheath lacking specialized chloroplasts", etc. The argument that *Phanopyrum* also has C3 photosynthesis does not materially affect the issue of the taxonomic rank at which to recognize the groups.

We also agree with Hansen & Wunderlin (1988) that "the acceptance of *Dichanthelium* provides a more consistent generic classification". It offers conveniences, as well, in our area, where *Dichanthelium* and *Panicum* are readily distinguishable from each other, and the combined genus would be very large, indeed. References: Darbyshire & Cayouette (1995); Freckmann & Lelong (2003c) in FNA25 (2003a); Haines (2010); LeBlond (2020); Lelong (1986); Sorrie (2018b) in Weakley et al (2018a); Zuloaga & Morrone (1996).

Identification Notes: {INTRODUCTION: Describe differences between *Panicum*, *Dichanthelium*, *Urochloa* (= *Brachiaria*), and *Paspalidium*, all of which are treated as *Panicum* in RAB. Describe collection methods and character analysis.}

- 1 Spikelets tuberculate..... *Kelloggloa*
- 1 Spikelets smooth, not tuberculate.
 - 2 Panicle < 2 cm wide at maturity.
 - 3 Spikelets > 4.5 mm long; first glume > 2.4 mm long; ligule 4-6 mm long; [of coastal dunes]; [*Panicum* section *Hiantes*]..... *Panicum amarum*
 - 3 Spikelets < 4 mm long; first glume < 2.1 mm long; ligule < 2 mm long; [not of coastal dunes].
 - 4 Blades involute, 1.5-4 mm wide; culms wiry..... *Coleataenia*
 - 4 Blades flat, the larger 6-20 mm wide; culms stout.
 - 5 Panicles constricted, 0.3-1.6 cm wide; spikelets sessile to short-pedicel; summit of fertile palea not enclosed by fertile lemma *Hymenachne hemitoma*
 - 5 Panicles > 1 cm wide; spikelets short to long-pedicel; summit of fertile palea enclosed by fertile lemma..... *Coleataenia*
 - 2 Panicle > 2 cm wide at maturity.
 - 7 Plants from a cluster of fibrous roots, without rhizomes or hard knotty crowns, annuals or perennials.
 - 8 First glume 1/5 to 1/3 length of spikelet, blunt to broadly rounded to truncate; sheaths usually glabrous (papillose-hispid in *P. dichotomiflorum* var. *bartowense*); nodes glabrous; [*Panicum* section *Dichotomiflora*].
 - 11 Sheaths conspicuously papillose-hispid; ligule 1.5-3 mm long; mature plant stout, erect, usually 10-20 dm long; spikelets 2.3-2.8 mm long *Panicum dichotomiflorum* var. *bartowense*
 - 11 Sheaths glabrous to sparsely pilose, the hairs not papillose-based; ligule 1-2 mm long; mature plant usually spreading to ascending, 5-10 (20) dm long; spikelets 2.3-3.8 mm long..... *Panicum dichotomiflorum* var. *dichotomiflorum*
 - 8 First glume 1/3 to 1/2 length of spikelet, acute to subacute; sheaths villous or hispid (except in the locally introduced *P. bisulcatum*); nodes often bearded.
 - 12 Spikelets 4.5-6 mm long; panicle branches often nodding or drooping at maturity; [*Panicum* section *Panicum*]..... *Panicum miliaceum* ssp. *miliaceum*
 - 12 Spikelets 1.8-3.6 mm long; panicle branches ascending-spreading at maturity.
 - 13 Spikelets long-acuminate, (2.6-) 3.0-3.6 mm long; mature panicle slender, usually 2-3× as long as wide; [*Panicum* section *Panicum*] *Panicum flexile*
 - 13 Spikelets short-pointed to acuminate, 1.8-2.5 (-2.8) mm long; mature panicle usually 0.7-2× as long as wide.
 - 15 Panicle usually equal to or longer than portion of culm below panicle, often basally included at maturity; panicle rachis, branches, and pedicels usually scabrous with barbs > 0.05 mm; pulvini usually pilose to villous, especially at lower primary branches (sometimes glabrous); culm usually not obviously zig-zag; larger blades usually more than 10 mm wide; spikelets 1.6-2.9 (-4) mm long, short- to long-acuminate, lanceolate, lance-ovoid, or lance-ellipsoid; first glume 0.6-1.5 (-2) mm long..... *Panicum capillare*
 - 15 Panicle usually not as long as portion of culm below panicle, usually exerted at maturity; panicle rachis and branches usually smooth, the pedicels often scabrous with barbs < 0.05 mm; pulvini glabrous to sparsely (-moderately) pilose; culm often zig-zag at least proximally; larger blades usually no more than 4-12 mm wide; spikelets 1.4-2.4 mm long, pointed to short-acuminate, lance-ellipsoid, ellipsoid, ovoid, or obovoid; first glume 0.4-0.9 (-1.2) mm long.
 - 17 Culms to 1 m long; internodes sparsely to densely hispid; blades to 12 mm wide; blade of flag (inflorescence bract) usually > 1/2 as long as panicle; panicle ellipsoid to obovoid, moderately to densely flowered; pulvini glabrous to sparsely pilose; spikelets 1.7-2.4 mm long *Panicum philadelphicum* ssp. *gattereri*

- 17 Culms to 0.5 m long; internodes glabrate to hispid; blades to 6 mm wide; blade of flag (inflorescence bract) usually $< \frac{1}{2}$ as long as panicle; panicle ovoid to deltoid, sparingly to moderately flowered; pulvini sparsely to moderately pilose; spikelets 1.4-2.2 (-2.4) mm long *Panicum philadelphicum* ssp. *philadelphicum*
- 7 Plants with rhizomes or hard knotty crowns, perennial.
- 18 Plants with hard crowns, lacking rhizomes; fertile lemma 1.2-2.4 mm long. *Coleataenia*
- 18 Plants with rhizomes; fertile lemma 1.6-4 mm long.
- 21 First glume truncate apically; [*Panicum* section *Repentia*]..... *Panicum repens*
- 21 First glume acute to obtuse.
- 22 Culms slightly compressed below; ligules 0.5 mm long or less; spikelets subsessile and subsecund, usually some obliquely bent above the first glume; fertile lemma 1.8-2.2 mm long..... *Coleataenia*
- 22 Culms terete; ligules 1-6 mm long; spikelets pediceled and not at all secund, essentially straight; fertile lemma 2-4 mm long; [*Panicum* section *Hiantes*].
- 23 Panicle narrow, the branches erect; sheaths longer than internodes; spikelets 4.3-7.7 mm long; fertile lemma 3-4 mm long.
- 24 First glumes 2.5-5.5 mm long, $\frac{2}{3}$ - $\frac{3}{4}$ as long as the spikelet, 7-9 nerved, the nerves thickened and raised; rhizomes usually elongate; culms solitary to loosely tufted, 0.2-1.5 m tall; leaves 0.7-3.6 dm long; panicles 2-6 cm wide, the primary branches usually 1-2 per node, loosely flowered; spikelets 4.7-7.7 mm long; fertile lemma 1.3-1.8 mm wide..... *Panicum amarum*
- 24 First glumes 2-3.5 mm long, $\frac{1}{2}$ - $\frac{2}{3}$ as long as the spikelet, 3-5 (-7) nerved, the nerves thin and wiry; rhizomes usually short; culms usually tufted, 1-2 (-3) m tall; leaves 2-5 dm long; panicles 3-10 cm wide, the primary branches usually 2 or more per node, densely flowered; spikelets 4.0-5.9 mm long; fertile lemma 1.0-1.5 mm wide..... *Panicum amarulum*
- 23 Panicle with divergent to spreading-ascending branches; upper sheaths shorter than internodes; spikelets 2.8-5 mm long; fertile lemma 2-2.6 mm long.
- 25 Spikelets 2.8-3.5 mm long; beak of sterile lemma exceeding fertile lemma by 0.2-0.5 mm; first glume (blunt-) acute, $\frac{1}{2}$ - $\frac{2}{3}$ as long as spikelet..... *Panicum virgatum* var. *cubense*
- 25 Spikelets 3.2-5 mm long; beak of sterile lemma exceeding fertile lemma by 0.6-1.3 mm; first glume acuminate, $\frac{3}{5}$ - $\frac{3}{4}$ as long as spikelet. *Panicum virgatum* var. *virgatum*

Panicum amarulum A.S. Hitchcock & Chase. SOUTHERN SEABEACH GRASS. **Hab:** Coastal dunes and shores, sand-flats, and longleaf pine sandhills. **Dist:** NJ s. to FL, west to TX and Mexico; restricted to the Coastal Plain except for WV (where apparently introduced). **Phen:** Jul-Nov. **Tax:** Palmer (1975) reduced *P. amarum* and *P. amarulum* to infraspecific rank, but their broadly overlapping distributions and suite of characters suggests that they are separate lineages. Ultimately, this species is not part of *Panicum* sensu stricto. **Comm:** Primarily a coastal plant, *P. amarulum* has been planted extensively in the Sandhills of NC. Blomquist 1948 says this taxon "does not seem to grow naturally in North Carolina." **Syn:** = Bah, C, F, G, HC, RAB, S, Tx, WV; = *Panicum amarum* ssp. *amarulum* (A.S. Hitchcock & Chase) Freckmann & Lelong – FIgr, FNA25, NE, NY; = *Panicum amarum* Elliott var. *amarulum* (A.S. Hitchcock & Chase) P.G. Palmer – K1, K3, K4, Meso6, Pa, Va, Lelong (1986); < *Panicum amarum* Elliott – WH3. NatureServe G5T3T5 (Apparently Secure).

Panicum amarum Elliott. BITTER SEABEACH GRASS. **Hab:** Coastal dunes and shores. **Dist:** CT s. to FL, w. to TX and TAB; restricted to the coast. **Phen:** Aug-Nov (-Jul). **Comm:** See note under *P. amarulum*. **Syn:** = C, F, G, HC, RAB, S; = *Panicum amarum* ssp. *amarum* – FIgr, FNA25, NE, NY; = *Panicum amarum* Elliott var. *amarum* – K1, K3, K4, Meso6, Pa, Va, Lelong (1986); < *Panicum amarum* Elliott – WH3. NatureServe G5T5? (Secure).

Panicum capillare Linnaeus. OLD-WITCH GRASS, TUMBLEWEED, TICKLE GRASS. **Hab:** Open sandy or stony soil, fields, roadsides, waste places, often weedy in cultivated soil. **Dist:** E. to c. Canada, s. to FL and TX; Bermuda. **Phen:** Aug-Nov. **Tax:** Plants formerly known as *P. capillare* var. *occidentale* Rydberg, ranging from Canada south to NJ, WV, KY, TX, and CA, are distinguished by long-acuminate spikelets 2.5-4 mm long that are mostly subsessile or short-pedicelled. In our region, *P. capillare* has short-acuminate spikelets 1.8-2.9 mm long, mostly on longer pedicels. **Syn:** = FIgr, K1, K4, Mi, NcTx, Pa, RAB, S, Tn, Tx, Va, WH3, WV, Darbyshire & Cayouette (1995), Lelong (1986); = *Panicum capillare* ssp. *capillare* – Ar, FNA25, NE, NY; = *Panicum capillare* var. *agreste* Gattinger – G; < *Panicum capillare* Linnaeus – C, Zuloaga & Morrone (1996); > *Panicum capillare* var. *capillare* – ETx1, F, HC, W; > *Panicum capillare* var. *occidentale* Rydberg.

Panicum dichotomiflorum Michaux var. *bartowense* (Lamson-Scribner & Merrill) Fernald. BARTOW PANIC GRASS. **Hab:** Open, usually wet soils, often emergent in shallow water or on exposed shores. **Dist:** FL (unconfirmed reports northward); Bahamas, Cuba, Jamaica. **Phen:** Jun-Dec. **Syn:** = FIgr, K1, K3, K4, WH3; = *Panicum bartowense* Lamson-Scribner & Merrill – Bah, GW1, HC, S; = *Panicum dichotomiflorum* ssp. *bartowense* (Lamson-Scribner & Merrill) Freckmann & Lelong – FNA25.

Panicum dichotomiflorum Michaux var. *dichotomiflorum*. SPREADING PANIC GRASS, FALL PANIC GRASS. **Hab:** Marshy shores, exposed wet soils, alluvial deposits in floodplain forests, spoil banks, ditches. **Dist:** E. Canada west to BC, south to FL and TX; also in the Bahamas (Sorrie & LeBlond 1997). **Phen:** Mar-Nov. **Tax:** Plants with geniculate bases, enlarged lower nodes and sheaths, and panicles with included peduncles and divergent branches have been recognized as var. *geniculatum* (Alph. Wood) Fernald. **Syn:** = FIgr, K4, NE; = *Panicum dichotomiflorum* ssp. *dichotomiflorum* – Ar, NY; < *Panicum dichotomiflorum* – C, ETx1, GW1, Mi, NcTx, Pa, RAB, S, Tn, Tx, WV, Lelong (1986); > *Panicum dichotomiflorum* ssp. *dichotomiflorum* – FNA25; *Panicum dichotomiflorum* Michaux var. *dichotomiflorum* – *Panicum* s.s.; < *Panicum dichotomiflorum* Michaux var. *dichotomiflorum* – Va; > *Panicum dichotomiflorum* Michaux var. *dichotomiflorum* – F, G, Il, K1, K3, W; >> *Panicum dichotomiflorum* Michaux var. *dichotomiflorum* – HC; > *Panicum dichotomiflorum* var. *geniculatum* (Wood) Fernald – F, G, Il, W; > *Panicum lacustre* A.S. Hitchcock & Ekman – FNA25, HC, K1, K3.

Panicum flexile (Gattinger) Lamson-Scribner. WIRY PANIC GRASS. **Hab:** Glades and openings over mafic or calcareous rocks, damp sandy meadows, open woodlands. **Dist:** NY, sw. QC, S. ON, and ND south to n. FL and TX. First reported for SC by Nelson & Kelly (1997). **Phen:** Jul-

* ***Panicum miliaceum*** Linnaeus ssp. **miliaceum**. BROOMCORN MILLET, PROSO MILLET, HOG MILLET. **Hab:** Planted in wildlife food plots, sometimes persistent or self-sowing nearby, also in fields and along railroads and roads. **Dist:** Native of Eurasia. **Phen:** Jul-Oct. **Tax:** *Panicum* sensu stricto. **Syn:** = C, FIGr, FNA25, K1, K3, K4, Mi, NE, NY; < *Panicum miliaceum* – ETx1, F, G, HC, Il, NcTx, Pa, S, Tn, Tx, WH3, Zuloaga & Morrone (1996). NatureServe GNRTNR (Not Yet Ranked).

Panicum philadelphicum Bernhardt ex Trinius ssp. **gattereri** (Nash) Freckmann & Lelong. GATTINGER'S PANIC GRASS. **Hab:** Damp or dry, usually calcareous sandy soils of fields, roadsides, shores, and cultivated ground. **Dist:** NY, sw. QC, and MN south to NC, TN, GA, AL, and AR. **Phen:** Aug-Oct. **Tax:** *Panicum* sensu stricto. **Syn:** = FNA25, NY, Tn; = *Panicum capillare* var. *campestre* Gatterer – G, W; = *Panicum gattereri* Nash – F, HC, Il, K1, Mi, Pa, RAB, S, Va, WV, Darbyshire & Cayouette (1995); = *Panicum philadelphicum* var. *campestre* (Gatterer) A. Haines – NE, Haines (2010); < *Panicum capillare* Linnaeus – C, Zuloaga & Morrone (1996); < *Panicum philadelphicum* Bernhardt ex Trinius – K3, K4.

Panicum philadelphicum Bernhardt ex Trinius ssp. **philadelphicum**. WOODLAND PANIC GRASS. **Hab:** Glades, barrens, desiccated pondshores, riversides, and other rocky or dry sandy soil of open woods and roadsides. **Dist:** NS west to WI, south to GA and e. TX. **Tax:** Plants formerly known as *P. tuckermanni* Fernald, ranging from se. Canada south to n. VA and OH, are distinguished by included or short-exserted peduncles less than one-third as long as the panicles (the peduncle measured from the summit of the flag sheath). **Comm:** *Panicum* sensu stricto. **Syn:** = Ar, FNA25; = *Panicum philadelphicum* Bernhardt ex Trinius – C, G, Il, K1, K3, NcTx, RAB, S, Tx, Va, WV; = *Panicum philadelphicum* var. *philadelphicum* – NE, Haines (2010); < *Panicum capillare* Linnaeus var. *sylvaticum* Torrey – ETx1, W; < *Panicum philadelphicum* Bernhardt ex Trinius – K3, Zuloaga & Morrone (1996); > *Panicum philadelphicum* Bernhardt ex Trinius – F, HC, Mi, Pa, Darbyshire & Cayouette (1995); > *Panicum philadelphicum* Bernhardt ex Trinius ssp. *philadelphicum* – NY; > *Panicum tuckermanni* Fernald – F, HC, Mi, NY, Pa, Darbyshire & Cayouette (1995); > *Panicum tuckermanni* – NE, orthographic variant.

* ***Panicum repens*** Linnaeus. TORPEDO GRASS. **Hab:** Ditches, roadbanks, disturbed coastal sands, in areas where ship's ballast was deposited. **Dist:** Probably native of Europe. First reported for NC by Leonard (1971b); reported for numerous counties in the GA Coastal Plain (Carter, Baker, & Morris 2009). **Phen:** May-Oct. **Tax:** *Panicum* sensu stricto. **Syn:** = Ar, Bah, ETx1, FIGr, FNA25, GW1, K1, K3, K4, Tx, WH3; > *Panicum gounii* Fournier – HC, S; > *Panicum repens* Linnaeus – HC, S. NatureServe GNR (Not Yet Ranked).

Panicum virgatum Linnaeus var. **cubense** Grisebach. BLUNT PANIC GRASS. **Hab:** Wet to dry sandy pinelands. **Dist:** Coastal Plain from MA to FL, west to MS; also in MI; West Indies. **Phen:** Jun-Oct. **Tax:** Not in *Panicum* sensu stricto. **Syn:** = F, HC, S, Va, Sorrie (2018b) in Weakley et al (2018a); < *Panicum virgatum* – C, FIGr, FNA25, G, GW1, NY, Pa, RAB, Tn, W, WH3, Lelong (1986); < *Panicum virgatum* Linnaeus var. *virgatum* – K1, K3, K4.

Panicum virgatum Linnaeus var. **virgatum**. SWITCHGRASS. **Hab:** Dry or wet sandy soils of pinelands, fresh and brackish marshes, tidal swamps, interdune swales and ponds, riverside scour prairies, mafic fens, calcareous fens and spring marshes, rocky river shores and bars, and also frequently planted. **Dist:** Sw. QC and ND south to FL and TX, west to NV; Bermuda; Central and South America. **Phen:** Jun-Oct. **Tax:** Not in *Panicum* sensu stricto. **Syn:** = F, HC, S, Va, Sorrie (2018b) in Weakley et al (2018a); < *Panicum virgatum* – Ar, C, ETx1, FIGr, FNA25, G, GW1, Il, Mi, NcTx, NY, Pa, RAB, Tn, Tx, Tx, W, WH3, WV, Lelong (1986); < *Panicum virgatum* Linnaeus var. *virgatum* – K1, K3, K4. NatureServe G5T5 (Secure).

***Parapholis*** C.E. Hubbard 1946 (SICKLE GRASS)

A genus of 6 species, annuals, of Eurasia. References: Tucker (1996); Worley (2007) in FNA24 (2007a).

* ***Parapholis incurva*** (Linnaeus) C.E. Hubbard. SICKLE GRASS, HARD GRASS, THIN-TAIL. **Hab:** Sandy and muddy flats, brackish or salt marshes. **Dist:** Native of Europe. **Phen:** Mar-Jun. **Syn:** = C, FIGr, FNA24, HC, K1, K3, K4, RAB, Tx, Tucker (1996); = *Pholiurus incurvus* (Linnaeus) Schinzius & Thellung – F, G; ? *Lepturus filiformis* (Roth) Trinius.

***Paspalum*** Linnaeus 1759 (PASPALUM, CROWN GRASS, BEADGRASS)

Contributed by Alan S. Weakley & Richard J. LeBlond

A genus of 300-400 species, of tropical and warm temperate regions. References: Allen & Hall (2003) in FNA25 (2003a); Banks (1966); Franck & Lange (2019) in Weakley et al (2019a); Silveus (1942); Wipff & Jones (1994).

103. POACEAE

- 1 Spikelets solitary, not associated with rudimentary spikelets or naked pedicels.
 - 2 Panicles usually composed of a terminal pair of branches, sometimes with 1 (-5) additional branches below the terminal pair.
 - 3 Upper glumes pubescent on the back or margins.
 - 4 Spikelets 1.3-1.9 mm long; upper glumes pilose along the margins *Paspalum conjugatum*
 - 4 Spikelets 2.4-3.2 mm long; upper glumes sparsely pubescent on the back *Paspalum distichum*
 - 3 Upper glumes glabrous.
 - 5 Spikelets elliptic, acute or acuminate at the tip *Paspalum vaginatum*
 - 5 Spikelets ovate to broadly elliptic, obtuse to broadly acute at the tip.
 - 6 Spikelets 1.9-2.3 mm long; leaf blades flat *Paspalum minus*
 - 6 Spikelets 2.5-4.0 mm long; leaf blades flat or longitudinally folded *Paspalum notatum*
 - 2 Panicles with 1-70 branches, if > 1, the branches arranged racemosely.
 - 7 Panicle branches 7-70, the axes extending beyond the outermost spikelets; panicle branches disarticulating at maturity *Paspalum fluitans*
 - 7 Panicle branches 1-6, terminating in a spikelet; panicle branches persistent.
 - 9 Axes of panicle branches not broadly winged, 0.6-1.3 mm wide.
 - 10 Spikelets orbicular, 2.8-3.2 mm wide *Paspalum laeve* var. *circulare*
 - 10 Spikelets slightly longer than broad, 2.0-2.5 mm wide *Paspalum laeve* var. *laeve*
 - 9 Axes of panicle branches broadly winged, 1.8-3.3 mm wide.
 - 11 Spikelets 3.2-4.0 mm long; upper lemmas with a few short hairs at their tips *Paspalum acuminatum*
 - 11 Spikelets 1.7-2.1 mm long; upper lemmas glabrous *Paspalum dissectum*
 - 1 Spikelets paired, or at least the second nonfunctional spikelet represented by a naked pedicel.
 - 12 Spikelets 1.0-1.3 mm long *Paspalum paniculatum*
 - 12 Spikelets 1.3-4.1 mm long
 - 13 Margins of upper glumes and lower lemmas pilose.
 - 14 Panicle branches 2-7; spikelets 2.3-4.0 mm long *Paspalum dilatatum* ssp. *dilatatum*
 - 14 Panicle branches (4-) 10-30; spikelets 1.8-2.8 mm long *Paspalum urvillei*
 - 13 Margins of upper glumes and lower lemmas glabrous or pubescent (if pubescent, the hairs not pilose), but neither ciliate-lacerate, winged, nor pilose.
 - 15 Upper florets olive to dark brown.
 - 16 Panicle branches 10-28 (or more) *Paspalum boscianum*
 - 16 Panicle branches 1-10 (or to 28 in *P. boscianum*, keyed under both leads).
 - 19 Plants annual.
 - 20 Spikelets 1.3-1.8 mm wide, broadly elliptic to orbicular, glabrous; panicles with 1-10 (-28) branches, the axes 0.7-2.3 mm wide *Paspalum boscianum*
 - 20 Spikelets 1.7-2.4 mm wide, broadly obovate, shortly pubescent; panicles with 1-5 branches, the axes 0.8-1.3 mm wide *Paspalum convexum*
 - 19 Plants perennial.
 - 21 Plants caespitose, rhizomes poorly developed; culms 10-20 dm tall; panicle branches ascending, divaricate, or reflexed.
 - *Paspalum plicatulum*
 - 21 Plants not caespitose, rhizomatous; culms 1-15 dm tall; panicle branches ascending.
 - *Paspalum plicatulum*
 - 15 Upper florets white, stramineous, or golden brown.
 - 25 Panicles with 15-100 branches.
 - 26 Plants annual; upper glumes and lower lemmas rugose *Paspalum racemosum*
 - 26 Plant perennial; upper glumes and lower lemmas smooth.
 - *Paspalum quadrifarium*
 - 25 Panicles with 1-15 branches.
 - 29 Spikelets 1.3-2.5 mm long.
 - 30 Upper glumes (and usually also the lower lemmas) shortly pubescent.
 - 31 Lower glumes present *Paspalum langei*
 - 31 Lower glumes absent.
 - Key A
 - 30 Upper glumes and lower lemmas glabrous.
 - 33 Panicles both terminal and axillary, the axillary panicles partially or completely enclosed by the subtending leaf sheath Key A
 - 33 Panicles all terminal.
 - 34 Upper panicle branches erect *Paspalum monostachyum*
 - 34 Upper panicle branches spreading to ascending.
 - 36 Lower sheaths villous or hirsute; spikelets 2.6-3.5 mm long *Paspalum praecox* var. *curtisianum*
 - 36 Lower sheaths glabrous or sparsely papillose pubescent; spikelets 2.2-2.8 mm long *Paspalum praecox* var. *praecox*
 - 29 Spikelets 2.5-4.1 mm long.
 - 37 Spikelet pairs barely if at all imbricate; lower glumes usually present *Paspalum bifidum*
 - 37 Spikelet pairs imbricate; lower glumes absent or present.
 - 38 Upper glumes pubescent; lower lemmas usually pubescent.
 - 39 Lower glumes present *Paspalum langei*
 - 39 Lower glumes absent *Paspalum pubiflorum* var. *glabrum*
 - 38 Upper glumes glabrous; lower lemmas usually glabrous.
 - 40 Upper florets golden brown *Paspalum floridanum*
 - 40 Upper florets pale to tan.
 - 41 Terminal panicle branches erect *Paspalum monostachyum*
 - 41 Terminal panicle branches spreading to ascending.
 - 42 Plants decumbent, rooting at the lower nodes; spikelets obovate to elliptic *Paspalum pubiflorum* var. *glabrum*
 - 42 Plants rhizomatous; spikelets orbicular to elliptic.

- 43 Spikelets 2.9-4.1 mm long; 1.9-3.1 mm wide, suborbicular to elliptic; upper glumes 5-veined; leaf blades flat *Paspalum floridanum*
 43 Spikelets 2.1-3.1 mm long, 2.0-2.8 mm wide, orbicular or nearly so; upper glumes 3-veined; leaf blades laterally folded.
 44 Lower sheaths villous or hirsute..... *Paspalum praecox* var. *curtisianum*
 44 Lower sheaths glabrous or sparsely papillose pubescent..... *Paspalum praecox* var. *praecox*

Key A - *Paspalum setaceum* complex
 (by Richard J. LeBlond)

- 1 Blades glabrous to pubescent or sparsely pilose (the margins often ciliate and/or scabrous).
 2 Blades glabrous, crowded toward the base, often recurved, 3-10 mm wide; rachis of panicle branches 0.2-0.6 mm wide; spikelets 1.4-1.8 mm long, 0.9-1.3 mm wide, glabrous (-few glandular hairs); sterile lemma without a midvein *Paspalum setaceum* var. *longepedunculatum*
 2 Blades glabrous, sometimes pubescent or sparsely pilose, more strongly cauline, not recurved (though sometimes spreading), 3-18 mm wide; rachis of panicle branches 0.6-1.2 mm wide; spikelets 1.7-2.6 mm long, 1.2-2.1 mm wide, pubescent to glabrous; sterile lemma with or without a midvein. *Paspalum setaceum* var. *ciliatifolium*
 1 Blades densely pubescent, hirsute, or long pilose.
 6 Plants prostrate to widely spreading; rachis of panicle branches 0.6-1.5 mm wide. *Paspalum setaceum* var. *supinum*
 6 Plants erect to spreading; rachis of panicle branches 0.3-1.0 mm wide.
 8 Spikelets 1.4-1.9 mm long, 1.1-1.6 mm wide; sterile lemma without a midvein; blades grayish green, 1.5-7 mm wide..... *Paspalum setaceum* var. *setaceum*
 8 Spikelets 1.7-2.5 mm long, 1.5-2.1 mm wide; sterile lemma with or without a midvein; blades light green or yellow-green to dark green, 2-16 mm wide. *Paspalum setaceum* var. *muhlenbergii*

Paspalum acuminatum Raddi. BROOK PASPALUM, CANOE GRASS. **Hab:** Fresh water ponds, wet areas, often disturbed; probably adventive in parts of our region (such as FL). **Dist:** C. GA and ne. TX south to s. FL and s. TX, south through the New World tropics to s. South America (Argentina). **Phen:** Jan-Dec. **Syn:** = ETx1, FIgr, FNA25, HC, K1, K3, K4, Meso6, Tx, WH3. NatureServe G5 (Secure).

Paspalum bifidum (Bertoloni) Nash. PITCHFORK PASPALUM, PITCHFORK CROWN GRASS. **Hab:** Mesic to wet longleaf pine savannas and mesic swales in longleaf pine sandhills, inland sand savannas, other sandy woodlands and fields. **Dist:** Se. VA south to s. FL, west to se. MO, se. OK, and e. TX. **Phen:** (Jun-) Aug-Nov. **Syn:** = Ar, C, ETx1, FIgr, GW1, HC, K1, K3, K4, Mo1, RAB, S, Tn, Tx, Va, WH3, Silveus (1942); > *Paspalum bifidum* var. *bifidum* - F, G; > *Paspalum bifidum* var. *projectum* Fernald - F, G. NatureServe G5 (Secure).

Paspalum boscianum Flügge. BULL PASPALUM. **Hab:** Marshes, cypress domes, low fields, ditches. **Dist:** MD, KY, AR, and e. TX south through tropical America. **Phen:** Jul-Oct (-Jun). **Syn:** = Ar, C, ETx1, F, FIgr, FNA25, G, GW1, HC, K1, K3, K4, RAB, S, Tn, Tx, Va, W, WH3, Silveus (1942). NatureServe G5 (Secure).

Paspalum conjugatum Bergius. SOUR PASPALUM. **Hab:** Disturbed areas, forest edges. **Dist:** Ne. FL, FL Panhandle, and s. AL west to e. and s. TX, south in the New World tropics; Old World tropics. **Phen:** Jul-Nov (-Jun). **Syn:** = Bah, ETx1, FIgr, FNA25, HC, K1, K3, K4, Meso6, S, WH3. NatureServe G5 (Secure).

* *Paspalum convexum* Flügge. MEXICAN PASPALUM. **Hab:** Disturbed areas. **Dist:** Native of tropical America. MS, LA, and e. TX. **Syn:** = ETx1, FNA25, K1, K3, K4, Tx. NatureServe GNR (Not Yet Ranked).

* *Paspalum dilatatum* Poir. ssp. *dilatatum*. DALLIS GRASS. **Hab:** Roadsides, fields, disturbed areas. **Dist:** Native of tropical America. **Phen:** May-Nov. **Tax:** Other subspecies occur in the native range in South America. **Syn:** < *Paspalum dilatatum* - Ar, Bah, C, ETx1, F, FIgr, FNA25, G, GW1, HC, IL, K1, K3, K4, Meso6, Mo1, NcTx, RAB, S, Tn, Tx, Va, W, WH3, Silveus (1942). NatureServe GNR (Not Yet Ranked).

Paspalum dissectum (Linnaeus) Linnaeus. MUDBANK CROWN-GRASS, WALTER'S PASPALUM. **Hab:** Mud flats, drawdown zones of ponds and reservoirs. **Dist:** NJ, IL, and KS south to c. FL and e. TX; Cuba. **Phen:** Jul-Nov (-Jun). **Syn:** = Ar, C, ETx1, F, FNA25, G, GW1, HC, IL, K1, K3, K4, Mo1, RAB, S, Tn, Tx, Va, WH3, Silveus (1942). NatureServe G4? (Apparently Secure).

Paspalum distichum Linnaeus. JOINT PASPALUM, KNOTGRASS. **Hab:** Brackish (especially oligohaline) and freshwater marshes, interdune swales and marshes, waterfowl impoundments. **Dist:** NJ, KS, and WA south to s. FL, s. TX, s. CA, and through the New World and Old World tropics. **Phen:** May-Nov. **Syn:** = Ar, C, ETx1, F, FIgr, FNA25, G, HC, K1, K3, K4, Meso6, NcTx, Pa, RAB, S, Tn, Tx, Va, W, WH3, Silveus (1942); = *Paspalum paspaloides* (Michaux) Lamson-Scribner; < *Paspalum distichum* Linnaeus - Bah, GW1; > *Paspalum distichum* var. *distichum* - Mo1.

Paspalum floridanum Michaux. FLORIDA PASPALUM, BIG PASPALUM. **Hab:** Longleaf pine sandhills, pine savannas, hammock edges, moist forests, ditches, barrens, prairies, fields, roadsides. **Dist:** NJ, IL, and KS south to s. FL and e. TX. **Phen:** Mar-Dec. **Syn:** = Ar, C, ETx1, FIgr, FNA25, GW1, IL, K1, K3, K4, NcTx, Pa, RAB, Tn, Tx, Va, W, WH3; > *Paspalum difforme* Le Conte - G, HC, S, Silveus (1942); > *Paspalum floridanum* Michaux - G; > *Paspalum floridanum* var. *floridanum* - F, HC, Mo1, Pa, S, Silveus (1942); > *Paspalum floridanum* var. *glabratum* Engelman ex Vasey - F, HC, Mo1, S, Silveus (1942); > *Paspalum giganteum* Baldwin ex Vasey - HC, S, Silveus (1942).

Paspalum fluitans (Elliott) Kunth. WATER PASPALUM, HORSETAIL CROWN GRASS. **Hab:** Mucky soils in swamp forests, moist riverbanks and bars, sloughs, sometimes forming floating mats. **Dist:** MD, IL, and KS south to s. FL and s. TX, and south through tropical America to c. South America. **Phen:** May-Nov. **Syn:** = C, F, G, HC, IL, K1, RAB, Tx, Va; = *Paspalum repens* P.J. Bergius var. *fluitans* (Elliott) J. Wipff & S.D. Jones - K3, K4, Wipff & Jones (1994); ~ *Paspalum mucronatum* Muhl.; < *Paspalum repens* P.J. Bergius - Ar, ETx1, FIgr, FNA25, GW1, Meso6, Mo1, S, Tn, WH3, Silveus (1942).

TX. **Phen:** Apr-Sep. **Syn:** = Ar, C, FIGr, FNA25, Il, Mo1, NE, NY, Pa, Tx, Banks (1966); = *Paspalum ciliatifolium* Michaux var. *muhlenbergii* (Nash) Fernald – G; = *Paspalum muhlenbergii* Nash; = *Paspalum pubescens* Muhlenberg ex Willdenow – HC, S, WV, Silveus (1942); = *Paspalum setaceum* var. *muhlenbergii* – Tn, orthographic variant; > *Paspalum ciliatifolium* Michaux var. *muhlenbergii* (Nash) Fernald – F; < *Paspalum setaceum* – ETx1, GW1, K1, K3, K4, NcTx, RAB, Va, W, WH3; > *Paspalum setaceum* var. *calvescens* Fernald – F.

Paspalum setaceum Michaux var. *setaceum*. THIN PASPALUM. **Hab:** Longleaf pine sandhills, pine savannas, pine flatwoods, dry to moist disturbed areas. **Dist:** MA and CT south to s. FL, west to e. TX, inland to w. VA, s. WV, s. MO and AR; Cuba. **Phen:** Jun-Nov. **Syn:** = Ar, Bah, C, FIGr, FNA25, Il, Mo1, NE, NY, Pa, Tn, Banks (1966); > *Paspalum debile* Michaux – F, HC, S, Silveus (1942); < *Paspalum setaceum* – ETx1, GW1, K1, K3, K4, RAB, Va, W, WH3; > *Paspalum setaceum* – G, HC, S, WV, Silveus (1942); > *Paspalum setaceum* Michaux var. *setaceum* – F.

Paspalum setaceum Michaux var. *supinum* (Bosc ex Poiret) Trinius. **Hab:** Longleaf pine sandhills, dunes, beaches, other sandy soils, old fields. **Dist:** E. NC (e. VA?) south to s. FL, west to s. MS. Also reported for the Coastal Plain of Virginia by Tatnall (1946); needing confirmation of the specimen identification. **Phen:** May-Dec. **Syn:** = F, FIGr, FNA25, Pa, Banks (1966); = *Paspalum supinum* Bosc ex Poiret – HC, S; < *Paspalum setaceum* – GW1, K1, K3, K4, RAB, Va, W, WH3.

* *Paspalum urvillei* Steudel. VASEY GRASS. **Hab:** Roadsides, fields, and other disturbed areas. **Dist:** Native of South America (Brazil and Argentina). **Phen:** Mar-Dec. **Syn:** = Ar, Bah, C, ETx1, F, FIGr, FNA25, G, GW1, HC, Il, K1, K3, K4, Meso6, Mo1, NcTx, RAB, S, Tn, Tx, Va, WH3, Silveus (1942). *NatureServe GNR* (Not Yet Ranked).

Paspalum vaginatum Swartz. SAND KNOTGRASS, SEASHORE CROWN GRASS. **Hab:** Brackish marshes, rarely inland in disturbed places. **Dist:** NC south to s. FL, west to s. TX, southward through the New World tropics; Old World tropics. **Phen:** Apr-Nov. **Syn:** = ETx1, FIGr, FNA25, HC, K1, K3, K4, Meso6, RAB, S, Tx, WH3, Silveus (1942); < *Paspalum distichum* Linnaeus – Bah, GW1, misapplied.

*Phalaris* Linnaeus 1753 (CANARY-GRASS)

A genus of about 16-22 species, north temperate and South American. References: Barkworth (2007q) in FNA24 (2007a); Tucker (1996); Voshell, Baldini, & Hilu (2016).

- 1 Perennial, with scaly rhizomes; inflorescence either obviously paniculate, 7-25 cm long, with ascending to appressed branches, the main branches of the inflorescence apparent, the inflorescence outline thus appearing lobed, or densely spikelike, 1.5-15 cm long. *Phalaris aquatica*
- 1 Annual, without rhizomes; inflorescence densely spikelike or almost capitate, 1-9 cm long, the branches not apparent, the inflorescence outline a single ovoid, ellipsoid, or lanceolate form.
 - 4 Keels of the glumes broadly winged (the wing ca. 1 mm wide); sterile florets 2.0-4.5 mm long; [section *Phalaris*] *Phalaris canariensis*
 - 4 Keels of the glume narrowly winged (the wing < 0.5 mm wide); sterile florets 0.5-2.5 mm long.
 - 5 Sterile floret 1; [section *Bulbophalaris*] *Phalaris minor*
 - 5 Sterile florets 2; [section *Caroliniana*].
 - 6 Nerves of the glumes scabrous; panicle cylindric in outline, 6-18 cm long; glumes 3.5-4.0 mm long; sterile florets 0.5-1.5 mm long *Phalaris angusta*

- * ***Phalaris canariensis*** Linnaeus. BIRDSEED GRASS, CANARY-GRASS. **Hab:** Roadsides, gardens, yards (under bird feeders), other disturbed areas. **Dist:** Native of Mediterranean Europe. **Phen:** Apr-Oct. **Syn:** = Ar, C, ETx1, F, FIGr, FNA24, G, GW1, HC, Il, K1, K3, K4, Meso6, Mo1, NcTx, NE, NY, Pa, RAB, S, Tn, Tx, Va, WH3, WV, Tucker (1996), Voshell, Baldini, & Hilu (2016). NatureServe GNR (Not Yet Ranked).
- Phalaris caroliniana*** Walter. MAYGRASS, CAROLINA CANARY-GRASS. **Hab:** Borders of oligohaline tidal marshes, bottomland forests, ditches, roadsides, pastures, fallow fields, disturbed areas. **Dist:** NC west to OR, south into Mexico, the original distribution now obscured. **Phen:** Apr-Jun. **Syn:** = Ar, C, ETx1, F, FIGr, FNA24, G, GW1, HC, K1, K3, K4, Mo1, NcTx, RAB, S, Tn, WH3, Tucker (1996), Voshell, Baldini, & Hilu (2016). NatureServe G5? (Secure).
- * ***Phalaris minor*** Retzius. LESSER CANARY GRASS. **Hab:** Waste areas near wool-combing mills, other disturbed sites. **Dist:** Native of Mediterranean Europe. Also reported for other scattered states in e. North America, including peninsular FL (Kartesz 1999). **Phen:** Mar. **Syn:** = FIGr, FNA24, HC, K1, K3, K4, Meso6, WH3, Voshell, Baldini, & Hilu (2016). NatureServe GNR (Not Yet Ranked).

Phanopyrum (Rafinesque) Nash 1903 (PHANOPYRUM)

Circumscription of this genus is currently in flux. *Phanopyrum* is variously treated as a distinct genus or as a subgenus of *Panicum*. References: Crins (1991); Freckmann & Lelong (2003c) in FNA25 (2003a); Webster (1988).

Phanopyrum gymnocarpon (Elliott) Nash. SWAMP PHANOPYRUM. **Hab:** Swamps, seasonally flooded soils of cypress-gum sloughs, tidal (freshwater) cypress-gum swamps, disturbed wet soils, low woods, ditches, muddy banks of streams and lakes, sinks, floodplains, and marshes. **Dist:** Se. VA south to FL, west to TX and AR. **Phen:** Aug-Oct. **Syn:** = Ar, FIGr, K1, K3, Tn, Va, WH3, Webster (1988); = *Panicum gymnocarpon* Elliott – ETx1, FNA25, GW1, HC, RAB, S, Tx, Crins (1991). NatureServe G5 (Secure).

Phleum Linnaeus 1753 (TIMOTHY)

A genus of about 15 species, annuals and perennials, mainly native to Eurasia. References: Barkworth (2007p) in FNA24 (2007a); Stace (2010); Tucker (1996).

* ***Phleum pratense*** Linnaeus ssp. *pratense*. TIMOTHY, CAT'S-TAIL. **Hab:** Meadows, pastures, roadsides, disturbed areas. **Dist:** Native of Europe. **Phen:** Jun-Oct. **Comm:** The American common name comes from the name of the man (Timothy Hanson) who is believed to have introduced it into the United States in 1720; in England, *Phleum* is called "cat's-tail". **Syn:** = FNA24; = *Phleum pratense* – Stace (2010); = *Phleum pratense* var. *pratense* – F; < *Phleum pratense* – C, FIGr, G, HC, Il, K1, K3, K4, Mi, Mo1, NcTx, NE, Pa, RAB, S, Tn, Tx, Va, W, WH3, WV, Tucker (1996).

Phragmites Adanson 1763 (COMMON REED)

A genus with 3-5 species, nearly worldwide in distribution. References: Allred (2003a) in FNA25 (2003a); Haines (2010); Saltonstall & Hauber (2007); Saltonstall (2002); Saltonstall, Peterson, & Soreng (2004); Ward & Jacono (2009); Ward (2010).

- 1 Panicle diffuse and partially drooping, with lower lateral branches naked for 1-4 cm; leaf blades of lower stem leaves abscising from the sheaths by mid-season; leaves lightly scabrous on lower surface; culms stout, to 20 mm in diameter, smooth and glossy; [native on the Gulf Coast, from FL and GA westward, and southward into the tropics] *Phragmites karka*
- 1 Panicle erect and relatively compact, with lower lateral branches spikelet-bearing to base; {} *Phragmites australis*

* ***Phragmites australis*** (Cavanilles) Trinius ex Steudel. COMMON REED, OLD WORLD REED. **Hab:** Brackish and freshwater marshes, dredge-spoil deposit islands, ditches. **Dist:** Native of Eurasia. **Phen:** Aug-Oct. **Comm:** Fox, Godfrey, & Blomquist (1950) report its first collection in NC (in 1948). In most of our area, reed is of relatively recent introduction, reported from only nine counties in Radford, Ahles, & Bell (1968), but now becoming a serious weed in coastal areas, where it aggressively colonizes freshwater and brackish marshes, excluding the native species. **Syn:** = K4,

Phyllostachys Siebold & Zuccarini 1843 (BAMBOO)

A genus of about 50 (or more) species, native of mainly temperate e. Asia. References: Duncan & Duncan [(in prep); Judziewicz et al (2000); Stapleton & Barkworth (2007) in FNA24 (2007a).

Identification Notes: In addition to the species keyed below, a number of other species are sometimes cultivated in our area, and may be encountered. Bamboos are seriously under-represented in herbaria, since they rarely flower and are impractical to press. All of the species should be anticipated in other physiographic provinces and states than those listed.

Unkeyed waifs: *Phyllostachys meyeri*

- 1 Internodes at the base of principal culms dissimilar in length, the lowermost internode 1-12 cm long, the next 3 internodes distinctly longer, with nodal junctions mostly straight across *Phyllostachys aurea*
- 1 Internodes at the base of principal culms all similar in length, mostly 4-8 cm, with nodal junctions oblique.
 - 2 Groove on internode (above the branch) yellowish-green, the rest of the culm dull greenish..... *Phyllostachys aureosulcata*
 - 2 Groove on internode (above the branch) the same color as the rest of the culm. *Phyllostachys nigra*

* ***Phyllostachys aurea*** Carrière ex Rivière & C. Rivière. GOLDEN BAMBOO, FISHPOLE BAMBOO. **Hab:** Suburban woodlands, upland forests and woodlands, riparian forests, stream banks, roadsides, pastures, old fields, persisting and spreading from plantings. **Dist:** Native of China and Japan. **Phen:** Mar. **Comm:** This is the usual large bamboo cultivated and naturalizing in most of our region, forming dense stands, up to at least 15 m tall. Very rarely flowering in our region. **Syn:** = Ar, ETx1, FlGr, FNA24, HC, Il, K1, K3, K4, Meso6, NcTx, RAB, Va, WH3, Duncan & Duncan [(in prep), Judziewicz et al (2000). NatureServe GNR (Not Yet Ranked).

* ***Phyllostachys aureosulcata*** McClure. YELLOWGROOVE BAMBOO. **Hab:** Cultivated as an ornamental, persistent or spreading from plantings. **Dist:** Native of China. Reported as persisting and spreading in n. VA (Arlington County and City of Alexandria) by Simmons et al. (2020). **Syn:** = K1, K3, K4, WV, Duncan & Duncan [(in prep), Judziewicz et al (2000). NatureServe GNR (Not Yet Ranked).

* ***Phyllostachys meyeri*** McClure. **Hab:** Cultivated as an ornamental, persistent or spreading from plantings. **Dist:** Native of e. Asia. Reported as introduced in FL, NC, and SC (Kartesz 2015). **Phen:** Apr-Jun. **Syn:** = FlGr, K1, K3, K4. NatureServe GNR (Not Yet Ranked).

* ***Phyllostachys nigra*** (Loddiges ex Lindley) Munro. BLACK BAMBOO. **Hab:** Cultivated as an ornamental, persistent or spreading from plantings. **Dist:** Native of China and Japan. **Syn:** = K1, K3, K4, WV, Duncan & Duncan [(in prep), Judziewicz et al (2000); > *Phyllostachys nigra* var. *henonis* (Mitford) Makino – WV. NatureServe GNR (Not Yet Ranked).

Piptochaetium J. Presl 1830 (NEEDLEGRASS)

A genus of about 27 species, of temperate North and South America, and montane tropical South America (Cialdella & Giussani 2002). References: Barkworth (2007g) in FNA24 (2007a); Cialdella & Giussani (2002).

Piptochaetium avenaceum (Linnaeus) Parodi. EASTERN NEEDLEGRASS, BLACK OATGRASS, BLACKSEED SPEARGRASS. **Hab:** Upland woodlands and forests, sometimes abundant or even dominant in xeric woodlands over granitic or mafic rocks in the Piedmont. **Dist:** MA, KY, s. IL, and c. OK, south to c. peninsular FL and s. TX; disjunct near the Great Lakes in n. IN and w. MI. **Phen:** Mar-Jun. **Syn:** = Ar, C, ETx1, FIgr, FNA24, K1, K3, K4, Mi, NE, NY, Pa, Tn, Va, WH3; = *Stipa avenacea* Linnaeus – F, G, HC, RAB, S, Tx, W, WV. NatureServe G5 (Secure).

Poa Linnaeus 1753 (BLUEGRASS)

A genus of about 500 species, annuals and perennials, cosmopolitan. References: Haines (2004); Soreng & Simmons (2018); Soreng (1998); Soreng (2007) in FNA24 (2007a); Tucker (1996).

- 1 Plants with well-developed rhizomes; perennial.
 - 2 Upper stems strongly flattened; [section *Tichopoa*] *Poa compressa*
 - 2 Upper stems terete or nearly so. *Poa pratensis* ssp. *pratensis*
- 1 Plants lacking rhizomes; perennial or annual.
 - 5 Plants dioecious, the florets unisexual; lemmas and glumes scarious and silvery; [rare introduction in our area]; [section *Dioicopoa*]..... *Poa arachnifera*
 - 5 Plants not dioecious, the florets bisexual; lemmas and glumes not notably scarious and silvery; [collectively common and widespread in our area].
 - 6 Lemmas not webbed at the base.
 - 7 Annual; culms decumbent to ascending and 1-3 dm long; inflorescence 2-8 cm long, the ascending branches bearing crowded spikelets above the middle; lemmas 2.4-3.4 mm long; [section *Micrantherae*]..... *Poa annua*
 - 7 Perennial; culms erect, 3-6 dm long; inflorescence 6-15 cm long, the widely spreading branches bearing a few spikelets near the end; lemmas 3.2-4.4 mm long; [section *Sylvestres*]..... *Poa autumnalis*
 - 6 Lemmas webbed at the base.
 - 8 Culm bulbous-thickened at ground level; [section *Arenariae*]. *Poa bulbosa* var. *vivipara*
 - 8 Culm not bulbous-thickened.
 - 11 Annual; [section *Homalopoa*]..... *Poa chapmaniana*
 - 11 Perennial. *Poa sylvestris*

* ***Poa annua*** Linnaeus. SPEARGRASS, SIX-WEEKS GRASS, ANNUAL BLUEGRASS. **Hab:** Fields, roadsides, gardens, lawns, disturbed areas. **Dist:** Native of Eurasia. **Phen:** Dec-May (-Nov). **Syn:** = Ar, C, ETx1, F, FIgr, FNA24, G, GW1, HC, IL, K1, K3, K4, Meso6, Mi, Mo1, NcTx, NE, NY, Pa, RAB, S, Tn, Tx, Va, W, WH3, WV, Tucker (1996); = *Ochlopoa annua* (Linnaeus) H. Scholz. NatureServe GNR (Not Yet Ranked).

Poa arachnifera Torrey. TEXAS BLUEGRASS. **Hab:** Prairies and woodlands, eastwards in disturbed areas. Prairies, woodlands, eastwards in disturbed areas. **Dist:** Sc. KS south through OK to se., sc. and sw. TX. **Phen:** Mar-May. **Syn:** = Ar, ETx1, FIgr, FNA24, HC, IL, K1, K3, K4, NcTx, RAB, S, Tx, WH3. NatureServe G5 (Secure).

Poa autumnalis Muhlenberg ex Elliott. BLUEGRASS. **Hab:** Moist or dry nutrient-rich forests. **Dist:** N. NJ west to se. MI, south to Panhandle FL and e. TX. **Phen:** Mar-May. **Syn:** = Ar, C, ETx1, F, FIgr, FNA24, G, GW1, HC, IL, K1, K3, K4, Mi, Pa, RAB, S, Tn, Tx, Va, W, WH3, Tucker (1996). NatureServe G5 (Secure).

* ***Poa bulbosa*** Linnaeus var. *vivipara* Koeler. BULBOUS BLUEGRASS. **Hab:** Lawns, disturbed areas. **Dist:** Native of Europe. **Phen:** Apr-May. **Syn:** = Soreng & Simmons (2018); = *Poa bulbosa* Linnaeus ssp. *vivipara* (Koeler) Arcangeli – FNA24, K4, Mi, NE, NY, Tn, Va; < *Poa bulbosa* – Ar, C, ETx1, F, G, HC, IL, K1, K2, Mo1, NcTx, Pa, RAB, WV, Tucker (1996). NatureServe GNR (Not Yet Ranked).

Poa chapmaniana Lamson-Scribner. CHAPMAN'S BLUEGRASS. **Hab:** Low fields, roadsides, disturbed areas. **Dist:** DE west to IA, south to FL Panhandle and LA. **Phen:** Mar-May. **Syn:** = Ar, C, ETx1, F, FIgr, FNA24, G, HC, IL, K1, K3, K4, Mo1, NcTx, NE, RAB, S, Tn, Tx, Va, W, WH3, WV, Tucker (1996). NatureServe G5 (Secure).

* ***Poa compressa*** Linnaeus. FLAT-STEMMED BLUEGRASS, CANADA BLUEGRASS. **Hab:** Fields, roadsides, disturbed areas. **Dist:** Considered to be a native of Europe, but often found in remote natural areas. **Phen:** Apr-Aug. **Syn:** = Ar, C, ETx1, F, FNA24, G, HC, IL, K1, K3, K4, Mi, Mo1, NcTx, NE, NY, Pa, RAB, S, Tn, Tx, Va, W, WV, Tucker (1996). NatureServe GNR (Not Yet Ranked).

* ***Poa pratensis*** Linnaeus ssp. *pratensis*. KENTUCKY BLUEGRASS, JUNEGRASS, SPEARGRASS. **Hab:** Lawns, roadsides, disturbed areas, and widely naturalized in more natural forests, woodlands, and wetlands. **Dist:** Native of Europe. **Phen:** Apr-Aug. **Syn:** = Ar, FNA24, K1, Mi, NE, NY, Va; = *Poa*

Polypogon Desfontaines 1798

A genus of about 18 species, annuals and perennials, of tropical and warm temperate regions. References: Barkworth (2007o) in FNA24 (2007a); MacRoberts, MacRoberts, & Allen (2020); Tucker (1996).

Unkeyed taxa: *Polypogon interruptus*

* ***Polypogon interruptus*** Kunth. DITCH RABBITFOOT GRASS. **Hab:** Ditches, disturbed wet areas. **Dist:** Native of w. North America, Mexico, south through Central America to South America. **Comm:** See Diamond (2013b) for additional information. **Syn:** = FNA24, K3, K4, NY, Tx. NatureServe G5? (Secure).

* ***Polypogon monspeliensis*** (Linnaeus) Desfontaines. ANNUAL RABBITFOOT GRASS, BEARDGRASS, ANNUAL BEARDGRASS. **Hab:** Brackish marshes, fields, nurseries, hammocks, other disturbed areas. **Dist:** Native of s. Europe to w. Asia. **Phen:** Apr-Jul. **Syn:** = C, ETx1, F, FIGr, FNA24, G, GW1, HC, K1, K3, K4, Meso6, Mi, NcTx, NE, NY, Pa, RAB, S, Tx, Va, WH3, Tucker (1996). NatureServe GNR (Not Yet Ranked).

Rottboellia Linnaeus f. 1782 (ITCH-GRASS)

A genus of about 5 species, native to tropical Asia and Africa. References: Wipff & Rector (1993); Wipff (2003m) in FNA25 (2003a).

* ***Rottboellia cochinchinensis*** (Loureiro) W.D. Clayton. ITCH GRASS. **Hab:** Disturbed ground, pine rocklands, pine savannas, fruit groves. **Dist:** Native of tropical se. Asia. This grass, considered a noxious weed, was found in at least 13 GA counties by 1985 (Duncan 1985; Carter, Baker, & Morris 2009), on a farm in Robeson County, NC in 1984, in cornfields in Westmoreland County, VA in 2007, and in Berkeley County, SC in 2013. **Phen:** Jul-Nov. **Syn:** = Ar, FIGr, FNA25, II, K1, K3, K4, WH3, Wipff & Rector (1993); = *Manisuris exaltata* (Linnaeus f.) Kuntze – S; = *Rottboellia exaltata* Linnaeus f. – Bah, HC. NatureServe GNR (Not Yet Ranked).

Sacciolepis Nash 1901 (CUPSCALE)

A genus of about 30 species, primarily in the tropics and subtropics. References: Wipff (2003i) in FNA25 (2003a).

- 1 Annual, cespitose; spikelets 2.5-3.5 mm long; [rare alien] *Sacciolepis indica*
1 Perennial, from creeping stolons; spikelets (3-) 4-5 mm long; [common native] *Sacciolepis striata*

* ***Sacciolepis indica*** (Linnaeus) Chase. INDIAN CUPSCALE. **Hab:** Low fields, ditches, disturbed wetlands, moist pine savannas. **Dist:** Native of India. **Phen:** Mar-Nov. **Syn:** = ETx1, FIGr, FNA25, GW1, HC, K1, K3, K4, Meso6, RAB, WH3. NatureServe GNR (Not Yet Ranked).

Sacciolepis striata (Linnaeus) Nash. AMERICAN CUPSCALE. **Hab:** Marshes (especially tidal oligohaline), interdune swales, ditches, swamps. **Dist:** S. NJ south to FL, west to e. TX and OK, nearly limited to the Coastal Plain, but occasionally inland as in w. NC and TN; also native in the West Indies and n. South America. **Phen:** May-Dec. **Syn:** = Ar, C, ETx1, F, FIGr, FNA25, G, GW1, HC, K1, K3, K4, Meso6, Mo1, NcTx, NE, RAB, S, Tn, Tx, Va, W, WH3. NatureServe G5 (Secure).

103. POACEAE

E. and se. Asia

Schizachyrium Nees 1829 (LITTLE BLUESTEM)

A genus of about 60 species, widespread in tropical, subtropical, and warm temperate regions of the World. The issue of the separation of *Schizachyrium* from *Andropogon*, the membership of each genus, the morphological characters that are key and diagnostic (when characters are in conflict), and the reciprocal monophyly of each genus remain very uncertain (see, for instance, Arthan et al. 2017). For now, I retain the predominant usage of recent decades of separating the two genera, and allocate the species to genera on the pragmatic character of single racemes (*Schizachyrium*) vs. 2 or more racemes (*Andropogon*), but that may well prove erroneous. References: Arthan et al (2017); Gandhi (1989); Hatch (1978); Hatch (1984); Wipff (1996a); Wipff (2003) in FNA25 (2003a).

- 1 Leaf blades 0.5-1.5 mm wide, with a lighter-colored zone (of bullate cells) in the center of the upper surface; sessile spikelet 3.5-4.5 mm long *Schizachyrium tenerum*
- 1 Leaf blades >1.5 mm wide, lacking a distinct lighter zone on the upper surface; sessile spikelet 4-11 mm long.
 - 3 Plants rhizomatous, with internodes 6 mm long or longer; sessile spikelet 5-7 mm long *Schizachyrium stoloniferum*
 - 3 Plants caespitose, rhizome internodes absent or < 3 mm long, the stem sometimes decumbent at the base and rooting at the lower nodes (appearing nearly rhizomatous); sessile spikelet 6-10 mm long.
 - 5 Leaf sheaths broad and strongly keeled, hairs of the raceme internodes 2.5-6 mm long; stems decumbent at base, rooting at the lower nodes; plants blue-green.
 - 6 Ligules 1.5-2 mm long; pedicellate spikelets 1.5-5 mm long; [of the Atlantic Coast]..... *Schizachyrium littorale*
 - 6 Ligules 0.5-1 mm long; pedicellate spikelets 4.5-8.5 mm long; [of the Gulf Coast] *Schizachyrium maritimum*
 - 5 Leaf sheaths rounded or weakly keeled; hairs of the raceme internodes either 1-3 (-4) mm long, or to 9 mm long (in *S. gracile* var. *gracile* and *S. sericatum* of s. FL); stems erect, not rooting at the lower nodes; plants green or blue-green.
 - 10 Pedicellate spikelets of the proximal spikelet units on each raceme staminate, 5-10 mm long, with a lemma, the pedicellate spikelets of the distal units usually smaller (1-4 mm long) and sterile; sheaths and blades densely tomentose to glabrate..... *Schizachyrium scoparium* var. *divergens*
 - 10 Most pedicellate spikelets sterile, 1-6 mm long, without a lemma; sheaths and blades usually glabrous, occasionally pubescent..... *Schizachyrium scoparium* var. *scoparium*

Schizachyrium littorale (Nash) E.P. Bicknell. SEASIDE LITTLE BLUESTEM. **Hab:** Coastal dunes and maritime dry grasslands, often with *Uniola paniculata*, *Panicum amarum*, and other dune plants. **Dist:** E. MA south to NC (or SC?), and inland on the shores of the Great Lakes. Also reported for FL for ne. FL (Duval County) and Panhandle FL (Franklin County), and in s. TX. **Phen:** Aug-Dec. **Syn:** = FIGr, FNA25, GW1, II, K1, K3, K4, NE, NY, Va; = *Andropogon littoralis* Nash – HC, S; = *Andropogon scoparius* Michaux var. *littoralis* (Nash) A.S. Hitchcock – F, G; = *Schizachyrium scoparium* ssp. *littorale* (Nash) Gandhi & Smeins – Mi; = *Schizachyrium scoparium* ssp. *littoralis* – Tx, orthographic variant; = *Schizachyrium scoparium* var. *littorale* (Nash) Gould – C, Pa, WH3, Wipff (1996a); < *Andropogon scoparius* Michaux – RAB; < *Schizachyrium scoparium* ssp. *littorale* (Nash) Gandhi & Smeins – Gandhi (1989).

Schizachyrium maritimum (Chapman) Nash. GULF COAST BLUESTEM. **Hab:** Coastal dunes and grasslands. **Dist:** AL and FL west to e. LA. **Phen:** Oct-Nov. **Syn:** = FIGr, FNA25, GW1, K1, K3, K4; = *Andropogon maritimus* Chapman – HC, S; < *Schizachyrium scoparium* (Michaux) Nash var. *scoparium* – WH3. **NatureServe G3G4Q** (Vulnerable).

Schizachyrium scoparium (Michaux) Nash var. *divergens* (Hackel) Gould. PINEHILL BLUESTEM. **Hab:** Longleaf pine sandhills, upland longleaf pine savannas, barrens, prairies, various other open habitats. **Dist:** KY, AR, and TX, south to Panhandle FL, AL, MS, and LA. **Phen:** Aug-Dec. **Syn:** = Ar, ETx1, FNA25, K1, K3, K4, Tn; = *Andropogon divergens* (Hackel) Andersson ex A.S. Hitchcock – HC; = *Andropogon scoparius* Michaux var. *divergens* Hackel; < *Andropogon scoparius* Michaux – S; > *Schizachyrium scoparium* (Michaux) Nash var. *divergens* (Hackel) Gould – Tx; < *Schizachyrium scoparium* (Michaux) Nash var. *scoparium* – FIGr, WH3; >> *Schizachyrium scoparium* var. *virile* (Shinners) Gould – Tx.

Schizachyrium scoparium (Michaux) Nash var. *scoparium*. COMMON LITTLE BLUESTEM. **Hab:** In a wide range of moist to dry habitats. **Dist:** NB west to AB, south to Panhandle FL and Mexico. **Phen:** (Jun-) Aug-Dec. **Comm:** One of the most ubiquitous plants in the modern landscape of our area, occurring throughout in the majority of habitats. This species is extremely variable, some of the variability correlated with habitat and geography; the recognition of infraspecific taxa is warranted. **Syn:** = Ar, C, ETx1, FNA25, K3, K4, Mo1, NE, NY, Pa, Tn, Va, Wipff (1996a); = *Schizachyrium scoparium* – GW1; = *Schizachyrium scoparium* ssp. *scoparium* – K1, Mi, Gandhi (1989); > *Andropogon praematurus* Fernald – F, G; < *Andropogon scoparius* Michaux – RAB, S, W, WV; > *Andropogon scoparius* var. *frequens* F.T. Hubbard – F; > *Andropogon scoparius* var. *polycladus* Lamson-Scribner & Ball – F; > *Andropogon scoparius* var. *scoparius* – F, G, HC; < *Schizachyrium scoparium* – Il, NeTx; < *Schizachyrium scoparium* ssp. *scoparium* – FIGr; < *Schizachyrium scoparium* (Michaux) Nash var. *scoparium* – WH3.

Schizachyrium stoloniferum Nash. CREEPING BLUESTEM. **Hab:** Fall-line sandhills in the inner Coastal Plain, perhaps in other dry habitats, also apparently in seepages in pineland landscapes, mesic to wetland pine savannas and seepage slopes in peninsular Florida, the habitat and range in our area requiring further study. **Dist:** SC and GA south to s. FL and west to s. MS. **Phen:** Aug-Oct. **Comm:** See Wipff (1996a) for additional discussion. **Syn:** = GW1; = *Andropogon stolonifer* (Nash) A.S. Hitchcock – HC, S; = *Andropogon stoloniferum* (Nash) A.S. Hitchcock, orthographic variant; = *Schizachyrium scoparium* (Michaux) Nash var. *stoloniferum* (Nash) J. Wipff – FIGr, FNA25, K1, K3, K4, WH3, Wipff (1996a); < *Andropogon scoparius* Michaux – RAB; < *Schizachyrium scoparium* ssp. *littorale* (Nash) Gandhi & Smeins – Gandhi (1989).

103. POACEAE

Schizachyrium tenerum Nees. **SLENDER BLUESTEM, LIEDOWN GRASS.** **Hab:** Longleaf pine savannas, sandhills, and flatwoods. **Dist:** S. GA, ne. FL, and FL Panhandle west to e. TX; Mexico, Central America, to South America. **Phen:** Jul-Nov. **Syn:** = ETx1, FIGr, FNA25, K1, K3, K4, Tx, WH3; = *Andropogon tener* (Nees) Kunth – HC, S. NatureServe G5 (Secure).

Sclerochloa Palisot de Beauvois 1812 (HARD GRASS)

A genus of 2 species, annuals, native of s. Europe and w. Asia. References: Brandenburg (2007b) in FNA24 (2007a); Brandenburg, Estes, & Thieret (1991); Tucker (1996).

* ***Sclerochloa dura*** (Linnaeus) Palisot de Beauvois. **HARD GRASS, FAIRGROUND GRASS.** **Hab:** Athletic fields, lawns, in gravel or compacted earth in agricultural fairgrounds. **Dist:** Native of Mediterranean Europe. **Phen:** Feb-Apr. **Syn:** = C, ETx1, FNA24, HC, IL, K1, K3, K4, Mi, Mo1, NcTx, NY, Pa, Tx, Tucker (1996). NatureServe GNR (Not Yet Ranked).

Secale Linnaeus 1753 (RYE)

A genus of 3 species, native to western w. Asia and the Mediterranean. References: Barkworth (2007j) in FNA24 (2007a); Tucker (1996).

* ***Secale cereale*** Linnaeus. **RYE.** **Hab:** Fields; commonly cultivated, uncommonly persistent or volunteering after cultivation. **Dist:** Native of Eurasia. **Phen:** May-Jul. **Comm:** The lemmas have awns 2-6 cm long. An important crop, cultivated for at least 8000 years. **Syn:** = Ar, C, ETx1, F, FIGr, FNA24, G, HC, IL, K1, K3, K4, Mi, Mo1, NcTx, NE, NY, Pa, RAB, Tn, Tx, Va, WH3, Tucker (1996). NatureServe GNR (Not Yet Ranked).

Setaria Palisot de Beauvois 1807 (FOXTAIL GRASS)

A genus of about 110-140 species, of tropical and warm temperate regions. Webster (1995) merged *Paspalidium* into *Setaria*, but it now appears that *Paspalidium* should be held as separate. References: Allen (2003a) in FNA25 (2003a); Crins (1991); Rominger (2003) in FNA25 (2003a); Webster (1988); Webster (1993b); Webster (1995).

Unkeyed waifs: *Setaria megaphylla*

2 Most spikelets other than the terminal lacking a subtending bristle; leaves flat or plicate.

2 All spikelets subtended by 1 or more bristles; leaves flat.

5 Bristles 4-12 below each spikelet.

6 Annual, with fibrous roots.

7 Spikelets 2.0-2.5 mm long; bristles reddish *Setaria pallide-fusca*

7 Spikelets 3.0-3.4 mm long; bristles yellow *Setaria pumila*

6 Perennial, noticeably rhizomatous.

8 Panicle 3-8 (10) cm long; plant from knotty rhizomes; [native, common (sometimes weedy)] *Setaria parviflora*

8 Panicle 5-25 cm long; plant from thick rhizomes; [alien, rare] *Setaria sphacelata*

5 Bristles 1-3 (rarely 6) below each spikelet.

12 Upper lemmas smooth and shiny (occasionally with obscure rugosity)

..... *Setaria magna*

12 Upper lemmas distinctly transversely rugose, dull.

14 Upper lemmas coarsely rugose; leaves 4-7 mm wide; [native] *Setaria corrugata*

14 Upper lemmas finely rugose; leaves 4-25 mm wide; [aliens, generally of ruderal sites].

16 Leaves softly pilose on the upper surface; panicles arching and drooping from the base; spikelets 2.5-3.0 mm long *Setaria faberi*

16 Leaves scabrous on the upper surface; panicles nodding only at the tip; spikelets 1.8-2.2 mm long.

17 Panicles 10-20 cm long; culms 10-25 dm tall; leaves 10-25 mm wide *Setaria viridis* var. *major*

17 Panicles 3-8 cm long; culms 2-10 dm tall; leaves 4-12 mm wide *Setaria viridis* var. *viridis*

* ***Setaria barbata*** (Lamarck) Kunth. **MARY-GRASS.** **Hab:** Rockland hammock edge, on ballast at Apalachicola (Franklin County, FL), other disturbed areas. **Dist:** Native of Africa. Reported for Miami-Dade County (Bradley [in prep.]). **Phen:** Sep-Oct. **Syn:** = FIGr, FNA25, HC, K1, K3, K4, Meso6, WH3. NatureServe GNR (Not Yet Ranked).

Sorghastrum Nash 1901 (INDIANGRASS)

A genus of about 18-20 species, of tropical and subtropical America and Africa, rarely extending into temperate areas. References: Dávila Aranda & Hatch (2002) in FNA25 (2003a); Hall (1982).

- 1 Awns 10-22 (-30) mm long, once-geniculate; plants rhizomatous; surfaces of the glumes tan to slightly brown basally; ligule 2-10 mm long, prominently auricled *Sorghastrum nutans*
- 1 Awns 16-46 mm long, twice-geniculate; plants caespitose; surfaces of the glumes brown; ligule 1-5 mm long, truncate.
- 2 Axis of the panicle straight, erect, the branchlets appressed to ascending, the spikelets drooping-second; spikelets 0.8-1.2 mm wide *Sorghastrum secundum*
- 2 Axis of the panicle arching, usually strongly so, the branchlets ascending to spreading, the spikelets not drooping-second; spikelets 1.1-1.8 mm wide.
- 3 Axis of the panicle straight, with the branches distributed no more than 180 degrees around the axis (as viewed from above); spikelets 1.3-1.8 mm wide; rachis 0.7-1.3 mm thick; flowering Jul-Aug. *Sorghastrum apalachicolense*
- 3 Axis of the panicle arching, with the branchlets distributed through 360 degrees around the axis (as viewed from above); spikelets 1.1-1.4 mm wide; rachis 0.3-0.8 mm thick; flowering Sep-Nov. *Sorghastrum elliotii*

Sorghastrum apalachicolense D.W. Hall. APALACHICOLA INDIANGRASS, OPEN INDIANGRASS. **Hab:** Pine flatwoods and longleaf pine sandhills. **Dist:** Panhandle FL west to s. MS (Sorrie & Leonard 1999). It may well occur as well in GA. **Phen:** Jul-Aug. **Syn:** = K1, K3, K4, WH3, Hall (1982); = *Sorghastrum apalachicolense* D.W. Hall – FIGr; < *Sorghastrum elliotii* (C. Mohr) Nash – FNA25.

Sorghastrum elliotii (C. Mohr) Nash. SLENDER INDIANGRASS. **Hab:** Woodlands and forests, river-scur areas, including oak-hickory forests and woodlands over mafic rocks. **Dist:** MD south to FL and west to TX, inland to TN, AR, and OK, mainly on the Coastal Plain, but extending inland to other physiographic provinces. **Phen:** Sep-Nov. **Syn:** = C, ETx1, F, FIGr, G, HC, K1, K3, K4, NcTx, RAB, S, Tn, Tx, Va, W, WH3, Hall (1982); < *Sorghastrum elliotii* (C. Mohr) Nash – FNA25.

Sorghastrum nutans (Linnaeus) Nash. YELLOW INDIANGRASS. **Hab:** Xeric and mesic woodlands and forests of a wide variety, prairies, barrens, powerline rights-of-way, roadbanks. **Dist:** ME and QC west to s. MB, south to c. peninsular FL, TX, UT, AZ, and Mexico. **Phen:** Late Aug-Nov. **Comm:** Along with *Andropogon gerardi*, *Schizachyrium scoparium*, and *Panicum virgatum*, *Sorghastrum nutans* is one of the dominant grasses of the tall-grass prairie. It is also common in a variety of open habitats (natural and altered) in the forested landscape of eastern North America. **Syn:** = Ar, C, ETx1, F, FIGr, FNA25, G, HC, IL, K1, K3, K4, Mi, Mo1, NcTx, NE, NY, Pa, RAB, S, Tn, Va, W, WH3, WV, Hall (1982); = *Sorghastrum avenaceum* (Michaux) Nash – Tx. **NatureServe G5** (Secure).

Sorghastrum secundum (Elliott) Nash. LOPSIDED INDIANGRASS. **Hab:** Longleaf pine sandhills, Florida dry prairies, pine rocklands. **Dist:** S. SC south to s. FL and west to s. AL (Sorrie & Leonard 1999); n. Bahamas. **Phen:** (Jul-) Sep-Nov. **Syn:** = Bah, FIGr, FNA25, HC, K1, K3, K4, RAB, S, WH3, WI, Hall (1982). **NatureServe G5** (Secure).

*Sorghum* Moench 1794 (SORGHUM, MILO, JOHNSON GRASS)

A genus of about 25 species, of tropical and subtropical Old World (1 species in Mexico). References: Barkworth (2003r) in FNA25 (2003a); de Wet (1978).

- 1 Rhizomatous perennial; leaves 1-2 cm wide *Sorghum halepense*
- 1 Fibrous-rooted annual; leaves (2-) 3-5 cm wide. *Sorghum bicolor* ssp. *bicolor*

* ***Sorghum bicolor*** (Linnaeus) Moench ssp. *bicolor*. SORGHUM, MILO, BROOMCORN, SORGO. **Hab:** Cultivated, rarely persistent; common in cultivation, rare as an escape. **Dist:** Native of Africa. **Phen:** Oct. **Syn:** = ETx1, FIGr, FNA25, K1, K3, K4, Mo1, NcTx, NE, NY, Pa, WH3; = *Sorghum bicolor* (Linnaeus) Moench var. *bicolor* – C; = *Sorghum vulgare* var. *vulgare* – HC; < *Holcus sorghum* Linnaeus – S; < *Sorghum bicolor* – Mi, Tn, Tx; > *Sorghum bicolor* (Linnaeus) Moench var. *bicolor* – Il; > *Sorghum bicolor* var. *caffrorum* (Retzius) Mohlenbrock – Il; > *Sorghum bicolor* var. *saccharatum* (Linnaeus) Mohlenbrock – Il; < *Sorghum vulgare* Persoon – RAB; < *Sorghum vulgare* – F, orthographic variant. **NatureServe GNRTNR** (Not Yet Ranked).

* ***Sorghum halepense*** (Linnaeus) Persoon. JOHNSON GRASS. **Hab:** Fields, pastures, roadsides, waste places, cultivated fields. **Dist:** Native of Eurasia. **Phen:** Apr-Dec. **Comm:** A serious weed, difficult to eradicate. **Syn:** = Ar, Bah, C, ETx1, FIGr, FNA25, GW1, HC, K1, K3, K4, Mi, Mo1, NcTx, NE, NY, Pa, RAB, Tn, Tx, Va, W, WH3, WV; = *Holcus halepensis* Linnaeus – S; = *Sorghum halepense* – F, G, orthographic variant. **NatureServe GNR** (Not Yet Ranked).

103. POACEAE

Sorghum bicolor
ssp. bicolorSorghum
halepense*Spartina* Schreber 1789 (CORDGRASS)

A genus of about 15 species, perennial herbs, of the northern Hemisphere. The recognition of this genus is controversial following the work of Peterson et al. (2014a, 2014b), which shows *Spartina* as derived from within *Sporobolus*. Alternate possibilities to including *Spartina* in *Sporobolus* (the course taken by Peterson et al. 2014a, 2014b) include splitting *Sporobolus* into smaller monophyletic groups. For now and awaiting further study and potential taxonomic changes, we retain an apparently paraphyletic *Sporobolus* and recognize *Spartina*. References: Barkworth (2003j) in FNA25 (2003a); Peterson et al (2014a); Peterson et al (2014b).

- 1 Leaves with smooth or slightly scabrous margins; spikelets glabrous or nearly so; [of salt to brackish coastal marshes]; [section *Spartina*; subsection *Alterniflora*] *Spartina alterniflora*
- 1 Leaves with strongly scabrous margins; spikelets scabrous, at least on the keel; [of brackish to fresh marshes, or inland or upland].
 - 2 Plants strongly caespitose, forming large clumps with numerous basal leaves and culms; leaves involute; culms 0.5-2 m tall; [of s. SC southward]..... *Spartina spartinae*
 - 2 Plants with elongate rhizomes, forming large clonal patches, the culms arising singly; leaves involute or flat; culms either 0.5-3.5 m tall; [collectively widespread in our area]; [section *Spartina*; subsection *Spartina*].
 - 5 Spikes 1-9 per inflorescence; culms 0.5-1 m tall; leaves 0.5-4 (-7) mm wide, usually involute when fresh..... *Spartina patens*
 - 5 Spikes 5-70 per inflorescence; culms 1-3.5 m tall; leaves 5-20 mm wide, usually flat when fresh..... *Spartina cynosuroides*

Spartina alterniflora Loiseleur-Deslongchamps. SALT MARSH CORDGRASS, SMOOTH CORDGRASS. **Hab:** Salt marshes. **Dist:** NL (Newfoundland) south to FL, west to TX; e. South America; introduced in n. Europe. **Phen:** Aug-Dec. **Comm:** *S. alterniflora* is the dominant plant (often essentially a monoculture) of intratidal salt marshes in our area. **Syn:** = C, FNA25, GW1, K1, K3, NE, RAB, Tx, Va, WH3; = *Spartina glabra* Muhlenberg; = *Spartina stricta* (Aiton) Roth; = *Sporobolus alterniflorus* (Loiseleur) P.M. Peterson & Saarela – FIgr, K4, K4, NY, Peterson et al (2014a); > *Spartina alterniflora* var. *alterniflora* – F, G, HC, S; > *Spartina alterniflora* var. *glabra* (Muhlenberg ex Bigelow) Fernald – F, G, HC, S; > *Spartina alterniflora* var. *pilosa* (Merrill) Fernald – F, G, HC.

NatureServe G5 (Secure).

Spartina cynosuroides (Linnaeus) Roth. GIANT CORDGRASS. **Hab:** Brackish (mesohaline and oligohaline) and freshwater tidal marshes, especially along margins of tidal creeks. **Dist:** MA south to FL, west to e. TX. **Phen:** Jun-Sep. **Syn:** = C, FNA25, G, GW1, HC, K1, K3, NE, RAB, S, Tx, Va, WH3; = *Sporobolus cynosuroides* (Linnaeus) P.M. Peterson & Saarela – FIgr, K4, NY, Peterson et al (2014a); > *Spartina cynosuroides* var. *cynosuroides* – F.

NatureServe G5 (Secure).

Spartina patens (Aiton) Muhlenberg. SMALL SALTMEADOW CORDGRASS, SALT HAY, MARSH-HAY CORDGRASS. **Hab:** Dunes, sand flats, upper edges of tidal marshes, maritime wet grasslands, overwash flats. **Dist:** NL (Newfoundland) south to FL, west to TX; West Indies; Mexico and Central America. **Phen:** Mar-Dec. **Comm:** *Spartina patens* var. *monogyna* has spikelets 7-10 mm long (vs. 9-13 mm); second glume acute to obtuse (rarely acuminate) (vs. acuminate); spikes (2-) 4-9 per inflorescence (vs. 1-4); second highest leaf blade on the stem (1-) avg. 2 (-5) dm long (vs. 0.5-2 dm); plants to 15 dm tall (vs. to 8 dm); culms to 6 mm in diameter at base (vs. to 3 mm). Whether var. *monogyna* (name available only in *Spartina*) is worthy of recognition is a matter of debate; there appear to be morphological differences correlated with geography and, according to some authors, habitat, but positive identification to variety is often difficult. **Syn:** = Bah, C, FNA25, GW1, K1, K3, Mi, NE, RAB, S, Tx, Va, WH3; = *Sporobolus pumilus* (Roth) P.M. Peterson & Saarela – FIgr, K4, NY, Peterson et al (2014a); > *Spartina patens* var. *monogyna* – F, G, HC; > *Spartina patens* var. *patens* – F, G, HC.

Spartina spartinae (Trinius) Merrill ex A.S. Hitchcock. GULF CORDGRASS. **Hab:** Brackish marshes, coastal prairies, and inland saline situations. **Dist:** AL and FL west to TX; Bahamas. **Phen:** Mar-Dec. **Syn:** = Bah, ETx1, FNA25, GW1, HC, K1, K3, S, Tx, WH3; = *Sporobolus spartinus* (Trinius) P.M. Peterson & Saarela – FIgr, K4, Peterson et al (2014a). **NatureServe G4G5** (Apparently Secure).

*Sphenopholis* Lamson-Scribner 1906 (WEDGEGRASS)

A genus of 6 species, North American. References: Daniel (2007a) in FNA24 (2007a); Tucker (1996).

- 1 Spikelets 5-9.5 mm long; second lemma with an awn 3.5-7 mm long..... *Sphenopholis pensylvanica*
- 1 Spikelets 1.5-5 mm long; second lemma awnless, or with an awn up to 3.5 mm long.

103. POACEAE

clonal patches (*S. pinetorum*, *S. floridanus*, and *S. curtissii* form wiregrass-like bunches or clumps). In flower or fruit, *S. brevipilis* and *S. vaseyi* can be distinguished by characters of the spikelet, by vegetative characters, or by its coarser, generally taller culms, with the panicle branches usually spreading (rather than always ascending in *S. pinetorum*, *S. floridanus*, and *S. curtissii*). These five species have very similar bases, unlike any other grasses in our area – the lower leaf sheaths are indurated and shiny, forming a hard, polished, knotty, and fire-proof covering over the short-creeping rhizome. *Aristida stricta* has a somewhat similar base, but less indurated, less creeping, and with an unpolished appearance. Positive identification in sterile condition is not difficult.

- 3 Inflorescence an array of spikes, the spikelets closely imbricate in 2 rows along the rachis of the spikes, the spikes alternate along the primary inflorescence axis; [genus *Spartina*, or, if treated as part of *Sporobolus*, section *Spartina*]..... *Spartina*
- 3 Inflorescence a slender or broad panicle.
- 5 Inflorescence a contracted, (superficially) spike-like panicle, < 6 cm broad, the branches appressed to strongly ascending.
- 6 Inflorescence 2-5 cm long; most inflorescences enclosed by sheaths (or most or all exserted); plant a geniculate annual; [section *Clandestini*].
- 8 Lemma and palea shorter than the glumes; palea usually shorter than the lemma; lemma glabrous or strigose with hairs < 0.2 mm long; spikelets 2.3 -3.3 (-3.8) mm long; floret (lemma, palea and enclosed grain) 1.6-3.3 (-3.8)× as long as wide..... *Sporobolus ozarkanus*
- 8 Lemma and palea longer than the glumes; palea usually longer than the lemma; lemma strigose with hairs > 0.2 mm long; spikelets 2.8-5 mm long; floret (lemma, palea and enclosed grain) 2.2-5.7 (-7.5)× as long as wide..... *Sporobolus vaginiflorus*
- 6 Inflorescence 4-15 cm long; most inflorescences exserted to partly enclosed; plant a rhizomatous or tufted perennial or caespitose annual.
- 9 Plant creeping extensively by slender rhizomes; leaf blades cauline, distichous, to 12 cm long; [section *Virginicae*]..... *Sporobolus virginicus*
- 9 Plant loosely tufted, from short rhizomes; leaf blades basal or cauline, not distichous, 10-100 cm long.
- 10 Spikelets 1.2-2.2 mm long; first glume 0.5-0.8 mm long; leaves primarily basal; [section *Sporobolus*].
- 11 Panicle branches appressed, 0.5-2 cm long in the middle of the inflorescence; second glume acute, > ½ as long as the spikelet *Sporobolus indicus*
- 11 Panicle branches strongly ascending, 2-8 cm long in the middle of the inflorescence; second glume truncate or broadly obtuse, < ½ as long as the spikelet.
- 12 Plants to 7.5 dm tall; leaf blades to 4 dm long and 2.5-3.5 mm wide..... *Sporobolus jacquemontii*
- 12 Plants to 17 dm tall; leaf blades to 7 dm long and 6-8 mm wide..... *Sporobolus pyramidalis*
- 10 Spikelets 4-8 mm long; first glume 2-5 mm long; leaves cauline and basal; [section *Clandestini*].
- 13 Lemma pubescent, usually conspicuously shorter than the palea; pericarp loose when moist..... *Sporobolus clandestinus*
- 13 Lemma glabrous, about as long as the palea; pericarp gelatinous when moist.
- 14 Culms (1.4-) 2.0-5.0 mm thick; uppermost leaf sheath (1.3-) 1.5-6.0 mm wide near its base; panicles with 12-35 primary branches, crowded, densely flowered..... *Sporobolus compositus* var. *compositus*
- 14 Culms 1.0-2.0 (-2.5) mm thick; terminal sheath 0.8-2.0 (-2.5) mm wide near its base; panicles with 8-18 primary branches, lax, loosely flowered.
- 15 Plants caespitose, lacking scaly rhizomes..... *Sporobolus compositus* var. *drummondii*
- 15 Plants forming clonal patches, with scaly rhizomes..... *Sporobolus compositus* var. *macer*
- 5 Inflorescence an open panicle, > 2 cm broad, the branches ascending to spreading.
- 16 Branches of the panicle verticillate, whorled; spikelets 2.5-4 mm long; [section *Triachyrum*]..... *Sporobolus junceus*
- 16 Branches of the panicle alternate (some occasionally rather randomly subopposite or opposite, but never regularly whorled); spikelets either 4-6.5 mm long, or 1.2-3.0 mm long.
- *Sporobolus cryptandrus*

Sporobolus clandestinus (Biehler) A.S. Hitchcock. ROUGH DROPSEED. **Hab:** Glades, barrens, and thin soil of woodlands, also in dry sands and pine rocklands. **Dist:** MA, NY, MI, WI, IA, and KS south to s. FL and TX. **Phen:** Aug-Oct. **Tax:** Wipff & Jones (1995) recommended reducing this taxon to a variety under *S. compositus*, because of its morphologic similarity. While *S. clandestinus* and *S. compositus* are undoubtedly closely related, I prefer to retain the two as species. **Syn:** = Ar, C, ETx1, F, FNA25, G, HC, IL, K1, K3, K4, Mi, Mo1, NE, NY, Pa, S, Tn, Va, W, WH3, Riggins (1977); = *Sporobolus compositus* (Poirot) Merrill var. *clandestinus* (Biehler) J. Wipff & S.D. Jones – FGr, NcTx, WH3. **NatureServe G5** (Secure).

Sporobolus compositus (Poirot) Merrill var. *compositus*. TALL DROPSEED. **Hab:** Diabase glades and barrens, limestone glades and barrens, disturbed areas over diabase or calcareous rocks. **Dist:** The general range is centered in the Plains, but extending east into ne. United States. The name *S. compositus* has nomenclatural priority over the more traditionally familiar *S. asper* (Kartesz & Gandhi 1995). **Phen:** Sep-Nov. **Comm:** This species and variety are reported for NC in a recent revision of the *S. asper* group (Riggins 1977); little is known about the occurrence of this species in NC. **Syn:** = Ar, ETx1, FNA25, K1, K3, K4, Mo1, NcTx, NE, NY, Tn, Va; = *Sporobolus asper* – F, S, WV; = *Sporobolus asper* (Michaux) Kunth var. *asper* – C, G, HC, Riggins (1977); < *Sporobolus asper* – Tx; < *Sporobolus compositus* – IL, Mi, Pa.

Sporobolus compositus (Poirot) Merrill var. *drummondii* (Trinius) Kartesz & Gandhi. DRUMMOND'S DROPSEED. **Hab:** Glades, barrens, roadsides, disturbed areas, over calcareous substrates. **Dist:** East to the Ridge and Valley province of e. TN (Chester et al. 1993), occurring over limestone, and in sw. SC (on mafic rocks at Wadkoe Mountain), and allegedly also in GA (Kartesz 2015). It could very likely occur in sw. VA, as it is in Hawkins County, TN, immediately adjacent to VA (Chester et al. 1993). **Phen:** Aug-Nov. **Syn:** = Ar, ETx1, FNA25, K1, K3, K4, Mo1, NcTx, NE, Tn; = *Sporobolus asper* (Michaux) Kunth var. *drummondii* (Trinius) Vasey – C, Riggins (1977); = *Sporobolus asper* var. *hookeri* (Trinius) Vasey – G, HC, misapplied; = *Sporobolus drummondii* (Trinius) Vasey – F, S.

Sporobolus compositus (Poirot) Merrill var. *macer* (Trinius) Kartesz & Gandhi. **Hab:** Wet and dry pinelands, prairies, dry woodland margins. **Dist:** MO and KS south to MS, LA and e. TX. **Phen:** Aug-Nov. **Syn:** = Ar, ETx1, FNA25, K1, K3, K4, Mo1, NcTx; = *Sporobolus macer* (Trinius) A.S. Hitchcock – HC; = *Sporobolus macrus* (Trinius) A.S. Hitchcock – S; < *Sporobolus asper* – Tx.

Sporobolus cryptandrus (Torrey) A. Gray. SAND DROPSEED. **Hab:** Floodplains, shores, disturbed areas. **Dist:** Native of c. and w. North America, west of the Appalachians. This species is reported for NC by HC, F, and S. **Phen:** May-Nov. **Syn:** = Ar, C, ETx1, FNA25, G, HC, IL, K1, K3, K4, Mi, Mo1, NcTx, NE, NY, Pa, S, Tn, Tx, WV, Riggins (1977); > *Sporobolus cryptandrus* var. *cryptandrus* – F. **NatureServe G5** (Secure).

103. POACEAE

Sporobolus indicus (Linnaeus) R. Brown. SMUT GRASS, BLACKSEED. **Hab:** Low prairies and swales, roadsides, lawns, disturbed situations.

Dist: Pantropical and subtropical, its original distribution apparently in the New World tropics, but obscured by its weedy capabilities and sometimes considered introduced in whole or in part in our area. **Phen:** (Jan-) Jul-Oct (-Dec). **Syn:** = Ar, Bah, C, ETx1, FlGr, FNA25, GW1, Il, Meso6, Mi, Mo1, NcTx, Tn, Tx, Va, W, Simon & Jacobs (1999); = *Sporobolus indicus* var. *indicus* – K1, K3, K4, WH3; > *Sporobolus berterianus* (Trinius) A.S. Hitchcock & Chase – S; > *Sporobolus indicus* (Linnaeus) R. Brown – HC, S; > *Sporobolus poiretii* (Roemer & J.A. Schultes) A.S. Hitchcock – F, G, HC, RAB. [NatureServe G5T5](#) (Secure).

* ***Sporobolus jacquemontii*** Kunth. WEST INDIAN DROPSEED. **Hab:** Pine flatwoods, beaches, roadsides on barrier islands. **Dist:** FL Panhandle (Wakulla County), FL peninsula; West Indies. **Phen:** Jun-Nov. **Comm:** The original distribution is the New World tropics and subtropics, but its exact extent is unclear, and the species may be entirely or partly alien in our area. **Syn:** = Bah, FlGr, FNA25, Meso6, Simon & Jacobs (1999); ? *Sporobolus berterianus* (Trinius) A.S. Hitchcock & Chase – S; < *Sporobolus indicus* var. *pyramidalis* (Palisot de Beauvois) Veldkamp – K1, K3; < *Sporobolus pyramidalis* Palisot de Beauvois – K4.

Sporobolus junceus (Palisot de Beauvois) Kunth. SANDHILL DROPSEED, PINEYWOODS DROPSEED. **Hab:** Longleaf pine sandhills, glades and barrens over mafic rocks, river-scour bars, sandy prairies, pine rocklands, and other dry, open areas. **Dist:** Se. VA south to s. FL and west to se. OK (Mink, Singhurst, & Holmes 2012) and se. TX; scattered inland in disjunct sites. **Phen:** (Jun-) Sep-Nov (-May). **Syn:** = Ar, C, ETx1, F, FlGr, FNA25, G, HC, K1, K3, K4, RAB, Tn, Tx, Va, WH3, Weakley & Peterson (1998); = *Heleochloa juncea* Palisot de Beauvois; = *Sporobolus ejuncidus* Nash; = *Sporobolus gracilis* (Trinius) Merrill – S. [NatureServe G5](#) (Secure).

Sporobolus ozarkanus Fernald. OZARK DROPSEED. **Hab:** Limestone glades, diabase glades. **Dist:** KY west to KS, south to e. TN, AR, and TX; disjunct in c. NC. **Phen:** Aug-Oct. **Comm:** In Granville County, NC, it is associated (on glades of diabase, a mafic rock) with other taxa with affinities to midwestern glades and prairies: *Solidago jacksonii*, *Solidago ptarmicoides*, *Baptisia aberrans*, *Symphotrichum depauperatum*, *Silphium terebinthinaceum*, *Parthenium auriculatum*, *Ruellia humilis*, and others. *S. ozarkanus*, *S. neglectus*, and *S. vaginiflorus* form a still very poorly understood complex. **Syn:** = C, ETx1, F, G, HC, Il, K1, K4, Mo1, NcTx, Va; = *Sporobolus vaginiflorus* (Torrey ex A. Gray) Wood var. *ozarkanus* (Fernald) Shinnars – Ar, FNA25, K3, Tn; < *Sporobolus vaginaeflorus* – Tx. [NatureServe G5T5?](#) (Secure).

* ***Sporobolus pyramidalis*** Palisot de Beauvois. GIANT RATSTAIL GRASS. **Hab:** Roadsides. **Dist:** Native of the Old World Tropics. **Comm:** Taxonomically confused with *S. jacquemontii*. **Syn:** = K4, Simon & Jacobs (1999); < *Sporobolus indicus* var. *pyramidalis* (Palisot de Beauvois) Veldkamp – K1, K3, WH3.

Sporobolus vaginiflorus (Torrey ex A. Gray) Alph. Wood. POVERTY DROPSEED. **Hab:** Glades, barrens, open disturbed sites. **Dist:** The species occurs nearly throughout e. United States. **Phen:** Aug-Nov. **Tax:** *S. ozarkanus*, *S. neglectus*, and *S. vaginiflorus* form a still very poorly understood complex. **Syn:** = C, ETx1, FlGr, G, HC, Il, K4, Mi, Mo1, NcTx, NY, Pa, RAB, Tn, Va, W, WH3, WV; = *Sporobolus vaginaeflorus* – S, orthographic variant; = *Sporobolus vaginiflorus* var. *vaginiflorus* – Ar, F, FNA25, K1, K3, NE; < *Sporobolus vaginaeflorus* – Tx. [NatureServe G5T5](#) (Secure).

Sporobolus virginicus (Linnaeus) Kunth. SEASHORE DROPSEED, COASTAL DROPSEED. **Hab:** Salt marshes, tidal mud flats, and low dunes in the outer Coastal Plain. **Dist:** Se. NC along the coast to TX, in the West Indies and into n. South America (its alleged occurrence in se. VA is apparently incorrect); also native in e. Asia, Africa, Australia and the Pacific region (Simon & Jacobs 1999). **Phen:** Sep-Oct (-Aug). **Comm:** *Sporobolus virginicus* is currently treated as a polymorphous and very widespread species, with a wide range of morphology and several ploidy levels (Simon & Jacobs 1999). **ID Notes:** *Sporobolus virginicus* is similar in aspect and growth form to *Distichlis spicata*, with which it occurs in tidal flats. *Sporobolus virginicus* is more delicate, and typically has long hairs on either side of the collar of the sheath; *Distichlis spicata* is generally a coarser plant, and lacks long hairs around the collar of the sheath. **Syn:** = Bah, C, F, FlGr, FNA25, G, GW1, HC, K1, K3, K4, Meso6, RAB, S, Tx, WH3. [NatureServe G5](#) (Secure).

Stapfochloa H. Scholz 2004

A genus of 6-7 species, perennial herbs, of the New World tropics and 1 species in Africa. The species placed here in *Stapfochloa*, following Peterson, Romaschenko, & Herrera Arrieta (2015) and Wipff & Shaw (2018a), have traditionally been included in *Chloris*, but form a clade sister to *Cynodon*. References: Molina & Rúgolo de Agrasar (2004); Peterson, Romaschenko, & Herrera Arrieta (2015); Wipff & Shaw (2018a).

* *Stapfochloa canterae* (Arechavaleta) P.M. Peterson. PARAGUAYAN WINDMILL-GRASS. **Hab:** Gravel parking lots, other disturbed areas. **Dist:** Native of Paraguay. Reported for AL (Diamond 2016). **Tax:** The epithet was originally spelled "*canterai*," but should be corrected to the genitive "*canterae*" by the provisions of the ICNafp. **Syn:** = K4, Wipff & Shaw (2018a); = *Chloris canterae* Arechavaleta var. *canterae* – FNA25, K3; = *Chloris canterei* Arechavaleta var. *canterei* – K1; < *Chloris canterae* – ETx1; < *Chloris canterai* – Tx, orthographic variant; < *Chloris canterai* – HC, orthographic variant; < *Stapfochloa canterae* (Arechavaleta) P.M. Peterson – Peterson, Romaschenko, & Herrera Arrieta (2015). **NatureServe GNR** (Not Yet Ranked).

*Steinchisma* Rafinesque 1830 (GAPING PANIC GRASS)

A genus of about 6 species, perennial herbs, of s. North America, Central America, and South America. See discussion following *Panicum* regarding generic concepts. The large, thickened, pale sterile palea of this species is unique among panicoids of our region; it is one of several morphological characters that led to the segregation of *Steinchisma* as a genus, a finding now confirmed by DNA phylogeny. The enlargement of the sterile palea causes the spikelet to spread open, or "gape." *Steinchisma* has an "intermediate C3-C4" pathway. References: Acosta et al (2014); Freckmann & Lelong (2003b) in FNA25 (2003a); Zuloaga et al (1998).

Steinchisma hians (Elliott) Nash. GAPING PANIC GRASS. **Hab:** Stream, pond, and lake shores, low woods, cypress-gum ponds, floodplains, marshes, ditches, seepage slopes. **Dist:** Se. VA south to FL, west to TX and OK, and south through Mexico and Central America to Colombia; also in s. South America. **Phen:** Mar–Nov. **ID Notes:** This species can superficially closely resemble *Sphenopholis obtusata*. **Syn:** = Ar, ETx1, FlGr, FNA25, K1, K3, K4, Tn, Va, Zuloaga et al (1998); = *Panicum hians* Elliott – C, F, G, GW1, HC, NcTx, RAB, S, Tx, W, WH3. **NatureServe G5** (Secure).

Stenotaphrum Trinius 1820 (ST. AUGUSTINE GRASS)

A genus of about 7 species, tropical and subtropical. References: Allred (2003e) in FNA25 (2003a); Sauer (1972).

Stenotaphrum secundatum (Walter) Kuntze. ST. AUGUSTINE GRASS, CARPET GRASS. **Hab:** Brackish and freshwater tidal marshes, roadsides, dunes, lawns. **Dist:** A pioneer species of beaches and shores, *S. secundatum* was known from the Carolinas prior to 1800. It has been interpreted as native or introduced in our area; its original range is probably now impossible to determine. Sauer (1972) maps it as widespread along the coasts of s. North America, Central America, South America, the West Indies, Africa, Australia, and sw. Pacific Islands. In our area it is certainly now more frequently encountered as a lawn or roadside grass than in anything that could be construed as a natural habitat. The other 6 species in the genus are Asian, or on islands of the sw. Pacific or Indian Oceans. **Phen:** Jul–Oct. **Tax:** The nativity of this species is complicated by selection for turfgrass and hybridization with genotypes from the Old World (e.g. s. Africa). Extant populations may represent more aggressive forms than historical. **Syn:** = Ar, Bah, ETx1, FlGr, FNA25, HC, K1, K3, K4, Meso6, Mo1, NcTx, RAB, S, Tx, WH3, Sauer (1972). **NatureServe G5** (Secure).

*Trichachne* Nees 1829

A genus of XX species, perennial herbs, native of the New World. References: Lo Medico et al (2017); Vega et al (2009); Webster (1980); Webster (1987); Wipff & Hatch (1994); Wipff & Shaw (2018b); Wipff (1996b); Wipff (2003e) in FNA25 (2003a).

- 2 Spikelets (3.7-) 4-6.6 mm long, with ochraceous indumentum, narrowly ellipsoid, apex acuminate; lower lemma glabrous on both sides of midnerve and either pilose or alternately pilose and glabrous in the remaining zones. *Trichachne insularis*
- 2 Spikelets 3-4.5 mm long, with hairs whitish-silvery or whitish with purplish tints, narrowly ovate or ovate, apex acuminate or abruptly acuminate; lower lemma glabrous on both sides of the midnerve and pilose in the remaining zones. *Trichachne californica* var. *californica*

Trichachne californica (Benth) Chase var. *californica*. COTTONTOP, CALIFORNIA CRAB GRASS. **Hab:** Disturbed areas; apparently introduced from sw. United States and adjacent Mexico, south through Central America to South America. **Syn:** = Wipff & Shaw (2018b); = *Digitaria californica* (Benth) Henrard var. *californica* – FNA25; < *Digitaria californica* – ETx1, K3, NcTx; < *Trichachne californica* (Benth) Chase – HC, K4, Tx. **NatureServe G5T5?** (Secure).

Trichachne insularis (Linnaeus) Nees. SOURGRASS. **Hab:** Hammocks, rocklands, scrubs, roadsides, disturbed areas. **Dist:** FL, AL, and MS west to TX; West Indies; Mexico, Central America, South America. **Phen:** Jul–Sep (–Jun). **Syn:** = Bah, HC, IL, K4; = *Digitaria insularis* (Linnaeus) Mez ex Ekman – ETx1, FlGr, FNA25, K1, K3, WH3; = *Valota insularis* (Linnaeus) Chase – S; ? *Trichachne nutans* – Tx. **NatureServe G5** (Secure).

103. POACEAE

Trichachne californica
var. californicaTrichachne
insularis*Tridens* Roemer & J.A. Schultes 1817 (TRIODIA, REDTOP, TRIDENS, FLUFFGRASS)

A genus of about 14 species, native to the Western Hemisphere. References: Valdés-Reyna (2003b) in FNA25 (2003a); Witsell & Baker (2013).

- 1 Panicle dense and spike-like, > 4× as long as wide, the branches ascending to appressed. *Tridens carolinianus*
- 2 Plants from elongate rhizomes; lemma 4-5 mm long; spikelet 7-9 mm long. *Tridens strictus*
- 2 Plants caespitose; lemma 2.5-3 mm long; spikelet 4-6 mm long. *Tridens strictus*
- 1 Panicle open and spreading, < 4× as long as wide, the branches well-developed and spreading-ascending to reflexed. *Tridens ambiguus*
- 3 Spikelets 4-5 mm long, 2.5-3.5 mm wide. *Tridens ambiguus*
- 3 Spikelets 6-8 mm long, 1.5-2.2 mm wide. *Tridens chapmanii*
- 4 Primary pulvini densely pubescent, the hairs encircling the base of the panicle branch; secondary pulvini pubescent; spikelets mostly on pedicels 3-20 mm long, these divergent from the inflorescence branchlets; main branches of the inflorescence stiffly spreading. *Tridens chapmanii*
- 4 Primary pulvini glabrous to sparsely pubescent, tufted only in the axil (the upper surface of the panicle branch); secondary pulvini glabrous; spikelets on pedicels mostly < 3 mm long, these mainly appressed to the inflorescence branchlets; main branches of the inflorescence spreading, ascending or drooping *Tridens flavus*

Tridens ambiguus (Elliott) J.A. Schultes. PINELAND TRIODIA, FLATWOODS FLUFFGRASS. **Hab:** Wet pine savannas, clay-based Carolina bays, marshes. **Dist:** S. NC south to FL, west to e. TX. **Phen:** Jul-Oct. **Syn:** = ETx1, FIGr, FNA25, GW1, HC, K1, K3, K4, RAB, Tx, WH3; = *Triodia elliotii* Bush – S. NatureServe G4 (Apparently Secure).

Tridens carolinianus (Steudel) Henrard. CAROLINA TRIODIA, CAROLINA FLUFFGRASS. **Hab:** Mesic swales in sandhills. **Dist:** S. NC south to FL, west to LA. **Phen:** Aug-Nov. **Syn:** = FIGr, FNA25, HC, K1, K3, K4, RAB, WH3; = *Triodia drummondii* Lamson-Scribner & Kearney – S. NatureServe G3G4 (Vulnerable).

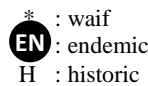

Tridens chapmanii (Small) Chase. CHAPMAN'S TRIODIA. **Hab:** Longleaf pine sandhills, loamy sands of disturbed longleaf pine woodlands; inland in glades, river-scour prairies and barrens, sandy barrens, and roadsides. **Dist:** NJ south to FL, west to TX and OK. **Phen:** Aug-Oct. **Syn:** = HC, Tn, Va; = *Tridens flavus* (Linnaeus) A.S. Hitchcock var. *chapmanii* (Small) Shinnery – Ar, C, ETx1, FIGr, FNA25, K1, K3, K4, Mo1, RAB, Tx, WH3, Witsell & Baker (2013); = *Triodia chapmanii* (Small) Bush – F, G; < *Triodia flava* (Linnaeus) Smyth – S.

Tridens flavus (Linnaeus) A.S. Hitchcock. REDTOP, TALL REDTOP, PURPLETOP TRIDENS, GREASY GRASS. **Hab:** Roadsides, disturbed areas, glades, barrens. **Dist:** NH west to NE, south to s. FL and TX. **Phen:** Mar-Nov. **Syn:** = HC, Il, NcTx, Pa, Tn, Va; = *Tridens flavus* var. *flavus* – Ar, C, ETx1, FIGr, FNA25, K1, K3, K4, Mo1, NE, RAB, Tx, WH3, Witsell & Baker (2013); = *Triodia flava* (Linnaeus) Smyth – F, G, WV; < *Tridens flavus* (Linnaeus) A.S. Hitchcock – W; < *Triodia flava* (Linnaeus) Smyth – S. NatureServe G5T5 (Secure).

Tridens strictus (Nuttall) Nash. SPIKE TRIODIA, LONGSPIKE FLUFFGRASS, LONGSPIKE TRIDENS. **Hab:** Longleaf pine sandhills, moist pine savannas, woodlands, mesic to wet soils around swamps and marshes, roadsides. **Dist:** S. VA south to AL, west to TX, north in the interior to IL and KS. **Phen:** Aug-Nov. **Comm:** It is possible that this grass is not native north and east of GA. Rhoads & Klein (1993) report an old specimen from w. PA, presumably a waif. **Syn:** = Ar, ETx1, FIGr, FNA25, GW1, HC, Il, K1, K3, K4, Mo1, NcTx, RAB, Tn, Tx, Va, WH3, Witsell & Baker (2013); = *Triodia stricta* (Nuttall) Bentham ex Vasey – F, G, S. NatureServe G5 (Secure).

Tripidium H. Scholz 2006 (RAVENNA-GRASS)

A genus of 7 species, perennials, of Eurasia. Often recently treated as the genus *Ripidium* Trinius 1820, but this is a later and therefore illegitimate homonym of the fern genus *Ripidium* Bernardi 1801. Lloyd Evans, Joshi, & Wang (2019) clearly show that *Tripidium* should be treated separately from *Saccharum*, *Erianthus*, and related genera. References: Hodkinson et al (2002); Lloyd Evans, Joshi, & Wang (2019); Vincent & Gardner (2016).

* ***Tripidium ravennae*** (Linnaeus) H. Scholz. RAVENNA-GRASS, PLUME-GRASS. **Hab:** Cultivated as an ornamental, escaping, and naturalizing. **Dist:** Native of s. Europe and other parts of Eurasia and n. Africa. In sw. GA, TN, and MD (Kartesz 1999), DC (Steury 2004a), FL (Wunderlin & Hansen 2006). Vincent & Gardner (2016) discuss the species and its rapid spread in OH. Expected to become increasingly invasive in most of our region. **Phen:** Oct-Dec. **Syn:** = FIGr, K4, NY, Lloyd Evans, Joshi, & Wang (2019), Vincent & Gardner (2016); = *Erianthus ravennae* (Linnaeus) Palisot de Beauvois – F, Il, Mo1; = *Ripidium ravennae* (Linnaeus) Trinius, illegitimate name; = *Saccharum ravennae* (Linnaeus) Linnaeus – FNA25, K1, K3, Mi, WH3; > *Erianthus ravennae* var. *purpurascens* (Anderss.) Hackel – HC; > *Erianthus ravennae* var. *ravennae* – HC. NatureServe GNR (Not Yet Ranked).

Triplasis Palisot de Beauvois 1812 (SANDGRASS)

A genus of 2 species, of eastern and central North America south through Mexico to Costa Rica. References: Hatch (2003a) in FNA25 (2003a).

Identification Notes: The foliage of both of our species has a sour taste.

- 1 Lemma awn 4.5-8 mm long; culm internodes appressed pilose or puberulent; perennial *Triplasis americana*
 1 Lemma awn 0.5-1.5 mm long; culm internodes glabrous to minutely scaberulous; annual (or rarely perennial) *Triplasis purpurea* var. *purpurea*

Triplasis americana Palisot de Beauvois. SOUTHERN SANDGRASS. **Hab:** Longleaf pine sandhills, beach dunes, open sandy areas. **Dist:** A Southeastern Coastal Plain endemic: NC south to s. FL, west to e. LA. **Phen:** Aug-Oct. **Syn:** = FIGr, FNA25, HC, K1, K3, K4, RAB, S, WH3. NatureServe G5 (Secure).

Triplasis purpurea (Walter) Chapman var. *purpurea*. PURPLE SANDGRASS. **Hab:** Dunes, maritime dry grasslands, open sandy areas. **Dist:** NH south to s. FL, and west to TX, along the coast; also around the Great Lakes, and in central United States. **Phen:** (May-) Sep-Oct (-Nov). **Comm:** Var. *caribensis* R.W. Pohl is in the New World tropics. **Syn:** = Ar, FNA25, Mo1, NE, NY, Va; > *Triplasis intermedia* Nash – S; < *Triplasis purpurea* – C, ETx1, F, FIGr, G, HC, Il, K1, K3, K4, Mi, NcTx, Pa, RAB, Tn, Tx, WH3; > *Triplasis purpurea* – S. NatureServe G4G5TNR (Not Yet Ranked).

*Tripsacum* Linnaeus 1759 (GAMA GRASS)

A genus of about 12 species, tropical and subtropical American. References: Barkworth (2003z) in FNA25 (2003a); DeWet, Harlan, & Brink (1982).

Tripsacum dactyloides (Linnaeus) Linnaeus var. *dactyloides*. GAMA GRASS. **Hab:** Roadsides, moist areas, disturbed areas, moist riverbanks. **Dist:** *Tripsacum dactyloides* is widespread in e. North America north to MA, MI (where adventive), IA, and NE, ranging south into tropical Central and South America; var. *dactyloides* is North American. **Phen:** Mar-Dec. **Comm:** This important species of moist and wetland areas in the Great Plains is generally seen in disturbed habitats in the eastern part of our region; its original habitats in various parts of our area are poorly understood, and it may not be truly native in the easternmost Southeast. **Syn:** = FNA25, NY, Va, DeWet, Harlan, & Brink (1982); < *Tripsacum dactyloides* – Bah, C, ETx1, FIGr, FlGr, G, Il, K1, K3, K4, Mi, Mo1, NcTx, NE, Pa, RAB, S, Tn, Tx, W, WH3, WV; > *Tripsacum dactyloides* (Linnaeus) Linnaeus var. *dactyloides* – F, HC; > *Tripsacum dactyloides* var. *occidentale* Cutler & Anderson – F, HC. NatureServe G5TNR (Not Yet Ranked).

*Trisetum* Persoon 1805 (OAT-GRASS)

A genus of about 75-85 species, north and south temperate. References: Barberá et al (2019); Finot et al (2005); Randall & Hilu (1986); Rumely (2007) in FNA24 (2007a); Tucker (1996).

* ***Trisetum flavescens*** (Linnaeus) Palisot de Beauvois. YELLOW OATGRASS. **Hab:** Grown for forage, locally established. **Dist:** Native of Mediterranean Europe, n. Africa, and w. Asia. **Syn:** = FNA24, K3, K4, Mo1, NE, NY, Finot et al (2005). NatureServe GNR (Not Yet Ranked).

Key to Map
 Symbology:

* : waif
 EN : endemic
 H : historic

N : no
 P : planted
 ? : questionable

A genus of about 25 species (the taxonomy complicated by extensive and ancient cultivation), native of w. and c. Asia. References: Morrison (2007) in FNA24 (2007a); Tucker (1996); Zohary & Hopf (1994).

* ***Triticum aestivum*** Linnaeus. BREAD WHEAT. **Hab:** Fields; frequently cultivated, rarely persistent or volunteering following cultivation. **Dist:** Native of Eurasia. **Phen:** Apr-Jun. **Comm:** One of the most important crops in the world. The lemmas can either be awnless or with long awns (to 8 cm long). **Syn:** = Ar, C, ETx1, F, FIGr, FNA24, G, HC, IL, K1, K3, K4, Meso6, NcTx, NE, NY, Pa, RAB, Tn, Tx, WH3, Tucker (1996); = *Triticum xaestivum* Linnaeus, pro species; > *Triticum aestivum* ssp. *aestivum* – Mo1. NatureServe GNR (Not Yet Ranked).

Uniola Linnaeus 1753 (SEA OATS)

A genus of 2 species, perennial herbs, of warm temperate, subtropical, and tropical shores of s. North America, Central America, n. South America, and the West Indies. The only other species of the genus ranges from Baja California south along the Pacific Ocean to Ecuador; other species previously treated in *Uniola* have been shown to be only distantly related and are now treated as *Chasmanthium*. References: Hodel & Gonzalez (2013); Yates (1966a); Yates (1966b); Yates (2003) in FNA25 (2003a).

Uniola paniculata Linnaeus. SEA OATS. **Hab:** Abundant on unforested primary and secondary dunes on barrier islands, and on dry to mesic sand flats and interdune swales. **Dist:** Se. VA south to FL and west to TX and Mexico (TAB); West Indies (Bahamas, Cuba). **Phen:** Jun-Nov (-Apr). **Tax:** Hodel & Gonzalez (2013) describe genetic differentiation within the species. **Comm:** This is the most important sand-binding grass on ocean dunes from NC south, playing a critical role in primary succession on dunes. **Syn:** = Bah, C, F, FlGr, FNA25, G, HC, K1, K3, K4, Meso6, RAB, S, Tx, Va, WH3, Yates (1966a), Yates (1966b). **NatureServe** G5 (Secure).

Urochloa Palisot de Beauvois 1812 (PARA-GRASS, SIGNAL-GRASS)

A genus of about 100 species, pantropical and subtropical. References: Crins (1991); Webster (1988); Wipff & Thompson (2003a) in FNA25 (2003a); Wipff & Thompson (2003b) in FNA25 (2003a).

Unkeyed taxa: *Urochloa arizonica*, *Urochloa fusca* var. *reticulata*, *Urochloa plantaginea*

- | | | |
|---|--|-----------------------------|
| 2 | Upper half of second glume and first lemma with evident transverse veins connecting the longitudinal veins; spikelets 3.5-4.7 mm long..... | <i>Urochloa platyphylla</i> |
| 2 | Upper half of second glume and first lemma without evident transverse veins, or with very obscure cross-veins; spikelets either 2-4 mm or 5-6 mm long. | |
| 3 | Spikelets 2-4 mm long..... | <i>Urochloa ramosa</i> |
| 3 | Spikelets 5-6 mm long..... | <i>Urochloa texana</i> |

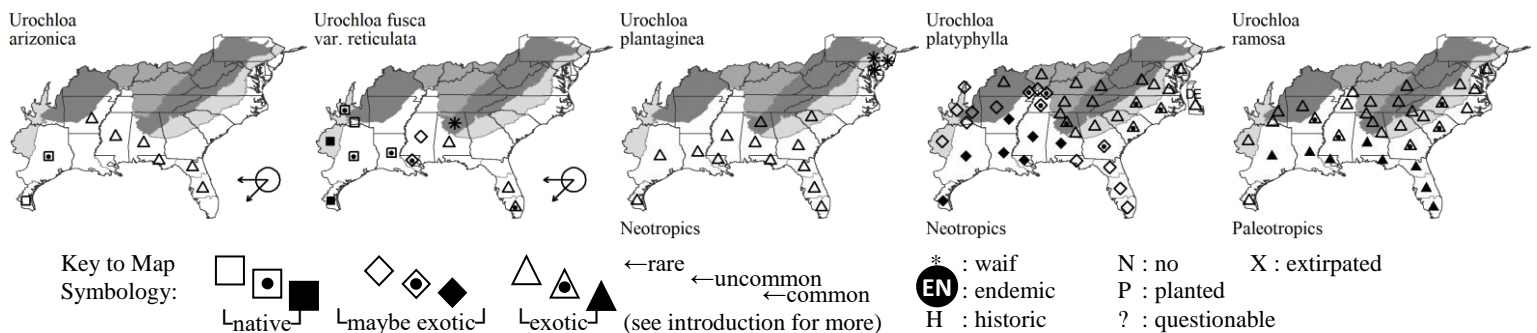

Urochloa arizonica (Lamson-Scribner & Merrill) Morrone & Zuloaga. ARIZONA SIGNALGRASS. **Hab:** Disturbed areas. **Dist:** Native of sw. United States. **Phen:** Jul-Oct. **Syn:** = Ar, FlGr, K3, K4, WH3.

***Urochloa fusca* (Swartz) B.F. Hansen & Wunderlin var. *reticulata* (Torrey) B.F. Hansen & Wunderlin.** BROWNTOP SIGNALGRASS. **Hab:** Disturbed areas. **Dist:** OK and AZ south through TX, south through Mexico to tropical America; eastwards as an adventive. **Phen:** May-Oct. **Syn:** = FlGr, WH3; ? *Panicum fasciculatum* Torrey – Bah, HC, Tx; ? *Urochloa fasciculata* (Swartz) R. Webster – K1, Meso6, NcTx; < *Urochloa fusca* – ETx1, FNA25, K3, K4.

* *Urochloa plantaginea* (Link) R. Webster. ALEXANDER GRASS. **Hab:** Disturbed areas. **Dist:** Native of the Neotropics. Reported for s. GA (Jones & Coile 1988), as *Brachiaria plantaginea*, and for Escambia County in the FL Panhandle (Kunzer et al. 2009). **Phen:** Jun-Oct. **Syn:** = FIGr, FNA25, K1, K3, K4, Meso6, WH3, Crins (1991), Webster (1988); = *Brachiaria plantaginea* (Link) A.S. Hitchcock. NatureServe GNR (Not Yet Ranked).

* ***Urochloa platyphylla*** (Munro ex Wright) R. Webster. BROADLEAF SIGNAL-GRASS. **Hab:** Edges of agricultural fields, other disturbed wet or seasonally moist areas. **Dist:** Apparently native of South America. E. NC south to FL, west to TX, north in the interior to AR, OK, and se. MO; also in MD and DE (Longbottom, Naczi, & Knapp 2016; Terrell & Reveal 1996). **Phen:** Apr-Nov. **Syn:** = Ar, ETx1, FIGr, FNA25, II, K1, K3, K4, Mo1, Mo1, NcTx, Tn, Va, WH3, Crins (1991), Webster (1988); = *Brachiaria platyphylla* (Munro ex Wright) Nash – GW1, HC, RAB, Tx; ? *Brachiaria extensa* Chase – S. NatureServe G5 (Secure).

* *Urochloa ramosa* (Linnaeus) T.Q. Nguyen. BROWNTOP MILLET, DIXIE SIGNALGRASS. **Hab:** Disturbed areas. **Dist:** Native of tropical Africa and Asia. This species has apparently been widely planted for wildlife food and erosion control in southeastern states. **Phen:** Apr-Nov. **Syn:** = Ar, ETx1, FIGr, FNA25, Il, K1, K3, K4, Tn, Va, WH3, Crins (1991); = *Brachiaria ramosa* (Linnaeus) Stapf; = *Panicum ramosum* Linnaeus – HC. NatureServe GNR (Not Yet Ranked).

103. POACEAE

Urochloa texana (Buckley) R. Webster. TEXAS MILLET, TEXAS SIGNALGRASS. **Hab:** Edges of agricultural fields, other disturbed areas, gardens. **Dist:** Native of TX, OK, NM, and AZ south to TX and Mexico. First reported for SC by Hill & Horn (1997). Apparently spreading in eastern North America. Reported as "new to DE and spreading in MD" by Longbottom, Naczi, & Knapp (2016). **Phen:** May-Dec. **Syn:** = Ar, ETx1, FlGr, K1, K3, K4, Mo1, NcTx, NE, WH3, Crins (1991), Webster (1988); = *Brachiaria texana* (Buckley) S.T. Blake; = *Panicum texanum* Buckley – C, HC, RAB, S, Tx. [NatureServe G5?](#) (Secure).

***Zea* Linnaeus 1753 (CORN, MAIZE)**

A genus of about 5 species, native of Mexico and Central America. References: Iltis (2003) in FNA25 (2003a).

* ***Zea mays* Linnaeus ssp. *mays***. CORN, MAIZE. **Hab:** Very commonly cultivated, rarely volunteering in old fields or around trashpiles, common in cultivation, rare as a short-lived escape. **Dist:** Native of Mexico. *Zea* is one of the most important cultivated plants in the world, originating in Mexico, probably from *Zea mays* ssp. *parviglumis* Iltis & Doebley. **Phen:** (Mar-) Jun-Nov. **Comm:** It was initially cultivated in sw. Mexico (before 8000 BP), spreading to the sw. United States before 5000 BP, and to the e. United States by 2000 years BP. At the time of European contact, *Zea mays* ssp. *mays* was an important staple crop from s. Canada south to s. South America (Hancock 2004). **Syn:** = Ar, ETx1, FlGr, FNA25, K1, K3, K4, Mo1, NE, NY, Va, WH3; < *Zea mays* – Bah, F, HC, Il, Mi, NcTx, RAB, S, Tx. [NatureServe GNRTUTXC](#) (Unrankable).

***Zizania* Linnaeus 1753 (WILD-RICE)**

A genus of 4 species (and 6 taxa) of northern and eastern North America. References: Judziewicz et al (2000); Terrell (2007a) in FNA24 (2007a); Terrell et al (1997); Tucker (1988).

Zizania aquatica* Linnaeus var. *aquatica. SOUTHERN WILD-RICE. **Hab:** Freshwater marshes, usually tidal. **Dist:** Var. *aquatica* ranges from ME west to WI, south to c. peninsular FL and LA. **Phen:** May-Oct (-Apr, southwards). **Tax:** Var. *brevis* Fassett is restricted to the St. Lawrence River in QC. **Comm:** *Zizania* was formerly an important food for Amerindians; it is now gathered as a specialty grain, commanding high prices. **Syn:** = C, F, FNA24, G, HC, K1, K3, K4, NE, NY, Va, Judziewicz et al (2000), Terrell et al (1997), Tucker (1988); < *Zizania aquatica* – FlGr, GW1, Il, Mi, Pa, RAB, S, WH3. [NatureServe G5T5](#) (Secure).

***Zizaniopsis* Döll & Ascherson 1871 (GIANT CUTGRASS)**

A genus of about 5 species, of tropical and subtropical America. References: Judziewicz et al (2000); Terrell (2007b) in FNA24 (2007a); Tucker (1988).

Identification Notes: Superficially similar to *Zizania* in its habitat and large size, *Zizaniopsis* may be distinguished by its very different inflorescence and by its stout horizontal rhizomes (our taxa of *Zizania* are annual and not rhizomatous).

***Zizaniopsis miliacea* (Michaux) Döll & Ascherson**. SOUTHERN WILD-RICE, GIANT CUTGRASS, WATER-MILLET. **Hab:** Brackish and freshwater marshes, tropical strand swamps, river shores. **Dist:** MD south to FL, west to TX, north in the interior to MO, and disjunct in w. Mexico. **Phen:** May-Jul. **Comm:** The other species of the genus are South American. **Syn:** = C, ETx1, F, FlGr, FNA24, G, GW1, HC, Il, K1, K3, K4, Mo1, NcTx, RAB, S, Tn, Tx, Va, WH3, Judziewicz et al (2000), Tucker (1988); = *Zizania miliacea* Michaux. [NatureServe G5](#) (Secure).

***Zoysia* Willdenow 1801 (ZOYSIA, TEMPLE-GRASS)**

A genus of about 11 species, perennials, of tropical, subtropical, and temperate Asia. References: Anderson (2003) in FNA25 (2003a).

- 2 Pedicels 1.6-3.5 mm long; spikelets ovate, 1.1-4 mm wide; culm internodes 2-10 mm long; blades ascending *Zoysia japonica*
 2 Pedicels 0.6-1.6 mm long; spikelets lanceolate, 0.6-1.0 mm wide; culm internodes 5-40 mm long, all plants with at least some internodes > 14 mm long; blades spreading at nearly 90 degree angles *Zoysia matrella*

- * ***Zoysia japonica* Steudel**. JAPANESE LAWNGRASS, KOREAN LAWNGRASS, ZOYSIA. **Hab:** Used as a lawngrass, persisting or spreading. **Dist:** Native of Japan. Reported for VA (Kartesz 1999). **Phen:** Jan-Jun. **Syn:** = Ar, C, ETx1, FlGr, FNA25, HC, Il, K1, K3, K4, WH3. [NatureServe GNR](#) (Not Yet Ranked).
 * ***Zoysia matrella* (Linnaeus) Merrill**. ZOYSIA, MANILA TEMPLE-GRASS. **Hab:** Used as a lawngrass, persisting or spreading. **Dist:** Native of the Philippines. **Phen:** Apr-Dec. **Syn:** = FlGr, FNA25, HC, K3, K4, WH3; = *Zoysia matrella* var. *matrella* – Meso6; > *Zoysia tenuifolia* Willdenow ex Trinius – Bah. [NatureServe GNRTNR](#) (Not Yet Ranked).

SECTION 6: EUDICOTYLEDONAE (EUDICOTS)

104. CERATOPHYLLACEAE S.F. Gray 1822 (HORNWORT FAMILY) [in CERATOPHYLLALES]

A peculiar and apparently very primitive family, of a single genus and about 6 species, aquatic herbs, of cosmopolitan distribution. References: Les in Kubitzki, Rohwer, & Bittrich (1993); Les (1985); Les (1986); Les (1988a); Les (1988b); Les (1988c); Les (1989); Les (1997) in FNA3 (1997); Szalontai et al (2018).

Ceratophyllum Linnaeus 1753 (HORNWORT, COONTAIL)

A genus of about 6 species, aquatic herbs, of cosmopolitan distribution. References: Les in Kubitzki, Rohwer, & Bittrich (1993); Les (1985); Les (1986); Les (1988a); Les (1988b); Les (1988c); Les (1989); Les (1997) in FNA3 (1997); Szalontai et al (2018); Wilmot-Dear (1985).

Identification Notes: *Ceratophyllum* is sometimes mistaken for superficially somewhat similar, aquatics, such as *Cabomba* (Cabombaceae), *Utricularia* (Lentibulariaceae), and *Myriophyllum* (Haloragaceae). *Cabomba* has the leaves opposite (rather than whorled), dichotomously divided (like *Ceratophyllum*), but the divisions lacking the marginal denticles of *Ceratophyllum*, and on a 1-3 cm long petiole (vs. sessile or on a petiole 0-2 mm long). *Utricularia* has the leaves sometimes dichotomously divided, but the divisions are usually irregular, the leaves are alternate (in most species), and bladder traps are present. *Myriophyllum* has the leaves pectinately rather than dichotomously divided.

- 1 Largest leaves forking 1-2× (count branching-nodes from the base of the leaf to the tip of the most-forked division); leaves coarse-textured, stiff, the marginal denticles usually strongly raised on a broad base of green tissue; achene margin wingless, with 2 basal spines or tubercles (these rarely absent), otherwise entire (lacking marginal spines).....*Ceratophyllum demersum*
- 1 Largest leaves forking 3-4× (count branching nodes from the base of the leaf to the tip of the most-forked division); leaves fine-textured, flaccid, the marginal denticles not raised on a broad base of green tissue, sometimes obscure or obsolete; achene margin winged, with 2-20 lateral spines 0.1-6.5 mm long (occasionally spineless), with 2 basal spines (these rarely absent).....*Ceratophyllum echinatum*

Ceratophyllum demersum Linnaeus. COONTAIL. **Hab:** Ponds, pools, slow-moving streams. **Dist:** NL (Newfoundland) west to AK, south to s. FL, TX, CA, and south through the West Indies and Central America to South America. **Phen:** May-Sep. **Syn:** = Ar, C, F, FNA3, G, GrPl, GW2, Il, K1, K3, K4, Mi, NcTx, NE, NY, Pa, RAB, S, Tn, Tx, Va, W, WH3, Les (1985), Les (1986), Les (1988a), Les (1988b), Les (1988c), Les (1989), Szalontai et al (2018), Wilmot-Dear (1985). **NatureServe G5** (Secure).

Ceratophyllum echinatum A. Gray. **Hab:** Ponds, pools, slow-moving streams. **Dist:** NL (Newfoundland) west to ON and n. MN, south to c. peninsular FL and e. TX; also in BC, WA, and OR. **Phen:** May-Sep. **Syn:** = C, F, FNA3, G, GrPl, Il, K1, K3, K4, Mi, NcTx, NY, Pa, RAB, S, Tn, Tx, Va, WH3, Les (1985), Les (1986), Les (1988a), Les (1988b), Les (1988c), Les (1989), Szalontai et al (2018); = *Ceratophyllum submersum* Linnaeus ssp. *muricatum* (Chamisso) Wilmot-Dear var. *echinatum* (A. Gray) Wilmot-Dear – Wilmot-Dear (1985); < *Ceratophyllum muricatum* Chamisso – GW2.

106b. FUMARIACEAE Marquis 1820 (FUMITORY FAMILY) [in RANUNCULALES]

This family includes 15-20 genera and 500-600 species, herbs, mostly north temperate. The Fumariaceae are often now subsumed into the Papaveraceae and separated as subfamilies (Lidén 1981, 1986; Lidén et al. 1997; Judd, Sanders, & Donoghue 1994), but the option remains (and is here followed) to recognize the two monophyletic clades as families: Papaveraceae s.s. and Fumariaceae. The placement of *Pteridophyllum* (especially) and *Hypecoum* in their own families or basal in either Papaveraceae or Fumariaceae remains unsettled. References: Hill (1992); Lidén in Kubitzki, Rohwer, & Bittrich (1993); Lidén (1981); Lidén (1986); Lidén et al (1997); Pérez-Gutiérrez et al (2012); Pérez-Gutiérrez et al (2015); Stern (1997) in FNA3 (1997); Wang et al (2009).

- 1 Corolla with the 2 outer petals spurred or saccate at their bases; [tribe *Corydaleae*].
.....*Dicentra*
- 1 Corolla with only 1 outer petal spurred or saccate at its base.
4 Ovary and fruit subglobose, with 1 seed; [tribe *Fumarieae*].....*Fumaria*
4 Ovary and fruit elongate, with several to many seeds; [tribe *Corydaleae*].
.....*Corydalis*

Corydalis A.P. de Candolle 1805 (CORYDALIS)

A genus of about 400 species, herbs, of temperate regions of the Northern Hemisphere (especially China and the Himalayas). References: Lidén in Kubitzki, Rohwer, & Bittrich (1993); Ownbey (1947); Stern (1997) in FNA3 (1997).

- 2 Fruits pendent or divergent; spurred petal 7-10 mm long; pedicels 6-15 mm long; seeds 1.8-2.5 mm wide, with a narrow, acute ring-margin *Corydalis flavula*
- 2 Fruits erect or ascending (pendent or divergent in *C. aurea*); spurred petal 10-15 mm long; pedicels 1-6 mm long (5-10 mm long in *C. aurea*); seeds 1.0-2.2 mm wide, with or without a narrow, acute ring-margin. *Corydalis halei*

Corydalis flavula (Rafinesque) A.P. de Candolle. YELLOW FUMEWORT, YELLOW HARLEQUIN, SHORT-SPURRED CORYDALIS. **Hab:** Rich moist forests, especially alluvial forests, also in glades and on outcrops over mafic rocks (such as greenstone). **Dist:** S. CT, NY, and s. ON west to SD, south to NC, AL, LA, and OK. **Phen:** Mar-May; May-Jun. **Syn:** = Ar, C, F, FNA3, G, GrPl, Il, K1, K3, K4, Mi, NE, NY, Pa, RAB, Tn, Va, W, WH3, WV, Ownbey (1947); = *Capnoides flavulum* (Rafinesque) Kuntze – S. NatureServe G5 (Secure).

Corydalis halei (Small) Fernald & Schubert. SOUTHERN CORYDALIS. **Hab:** Sandy roadsides and disturbed areas. **Dist:** E. NC south to FL, west to TX, and inland north to IL, MO, and OK. **Phen:** Feb-May; Apr-Jun. **Tax:** F and S recognized it as a species distinct from *C. micrantha*; Ownbey reduced it to a subspecies, citing inadequate morphological differences and some alleged intermediates in OK and MO. The two taxa appear readily separable on morphological, ecological, and geographical grounds; species status seems warranted. **Syn:** = F; = *Capnoides halei* Small – S; = *Corydalis micrantha* (Engelmann ex A. Gray) A. Gray ssp. *australis* (Chapman) G.B. Ownbey – FNA3, GrPl, K1, K3, K4, NcTx, RAB, WH3, Ownbey (1947); = *Corydalis micrantha* (Engelmann ex A. Gray) A. Gray var. *australis* (Chapman) Shinnars – Ar, C, Tx; < *Capnoides micrantha* (Engelmann ex A. Gray) Britton, misapplied; > *Corydalis halei* (Small) Fernald & Schubert – Il; < *Corydalis micrantha* (Engelmann ex A. Gray) A. Gray – G; > *Corydalis micrantha* (Engelmann ex A. Gray) A. Gray ssp. *australis* (Chapman) G.B. Ownbey – Il.

*Dicentra* Bernhardt 1833

A genus of about 12 species, perennial herbs, with a relictual north temperate distribution: e. North America, w. North America, and e. Asia. References: Hatcher (2019); Lidén in Kubitzki, Rohwer, & Bittrich (1993); Stern (1961); Stern (1997) in FNA3 (1997).

Dicentra cucullaria (Linnaeus) Bernhardt. DUTCHMAN'S BRITCHES. **Hab:** Rich, moist forests, especially rich cove forests in the mountains. **Dist:** NS west to n. MN, south to GA, ne. MS (Tishomingo County), AR, and KS; disjunct in WA, OR, and ID. **Phen:** Mar-May; May-Jun. **Tax:** A tetraploid species (2n=32) (Hatcher 2019). **Syn:** = Ar, C, F, FNA3, G, GrPl, Il, K1, K3, K4, Mi, NE, NY, Pa, RAB, Tn, Va, W, WV; = *Bicuculla cucullaria* (Linnaeus) Millsbaugh – S. NatureServe G5 (Secure).

*Fumaria* Linnaeus 1753 (FUMITORY)

A genus of about 50 species, annual herbs, primarily Eurasian. References: Boufford (1997c) in FNA3 (1997); Lidén in Kubitzki, Rohwer, & Bittrich (1993); Stace (2010).

* ***Fumaria officinalis*** Linnaeus. FUMITORY, EARTHSMOKE. **Hab:** Sandy fields, disturbed places, escaped from gardens. **Dist:** Native of Europe. **Phen:** Feb-Sep. **Syn:** = C, F, FNA3, G, GrPl, Il, Mi, Mo1, NcTx, NY, Pa, RAB, S, Tx, Va, WH3, WV; > *Fumaria officinalis* ssp. *officinalis* – K1, K3, K4, NE, Stace (2010); > *Fumaria officinalis* ssp. *wirtgenii* (W.D.J. Koch) Arcangeli – K1, K3, K4, Stace (2010).

106c. PAPAVERACEAE A.L. de Jussieu 1789 (POPPY FAMILY) [in RANUNCULALES]

A family of 23 genera and about 230 species, mainly herbs (some shrubs and small trees), largely north temperate in distribution. References: Hoot, Wefferling, & Wulff (2015); Kadereit in Kubitzki, Rohwer, & Bittrich (1993); Kiger (1997) in FNA3 (1997); Wang et al (2009).

- 1 Flowering stem scapose, leaves basal only; petals 8-16, white; [subfamily *Chelidonioideae*] *Sanguinaria*
- 1 Flowering stem with leaves at least low on the stem; petals 0-6, purple, red, orange-red, orange, yellow, cream.
- 3 Leaves and fruits prickly; [subfamily *Papaveroideae*] *Argemone*
- 3 Leaves and fruits not prickly. *Eschscholzia*

Argemone Linnaeus 1753 (PRICKLY-POPPY)

A genus of about 32 species, annual and perennial herbs, of North America, West Indies, Central America, South America, and Hawaii. References: Kadereit in Kubitzki, Rohwer, & Bittrich (1993); Ownbey (1997) in FNA3 (1997).

- 1 Flowers yellow to cream or bronze; stamens 20-75..... *Argemone mexicana*
 1 Flowers white to pink or pale lavender; stamens > 150..... *Argemone albiflora* var. *albiflora*

***Argemone albiflora* Hornemann var. *albiflora*.** CAROLINA-POPPY, WHITE PRICKLY-POPPY. **Hab:** Sandy roadsides and disturbed areas. **Dist:** This species is apparently native to the southeastern United States, presumably including portions of our area, south to s. FL, but the native range is unclear. **Phen:** Apr-May (-Sep). **Tax:** Var. *texana* (G.B. Ownbey) Shinnery occurs in TX, AR, and LA. **Comm:** The species' weediness suggests that it may be merely adventive in portions of our area. **Syn:** = *Argemone albiflora* ssp. *albiflora* – FNA3, K1, K3, K4, NE, NY; < *Argemone alba* F. Lestiboudois – G, S, WI, misapplied; < *Argemone albiflora* – C, IL, MI, RAB, WH3. NatureServe G4G5T4T5 (Apparently Secure).

***Argemone mexicana* Linnaeus.** MEXICAN-POPPY, MEXICAN PRICKLY-POPPY. **Hab:** Sandy roadsides and disturbed areas. **Dist:** Native of peninsular FL, West Indies, and maybe Mexico and Central America. **Phen:** Apr-May (-Aug). **Syn:** = Bah, C, FNA3, G, GrPl, IL, K1, K3, K4, MI, NcTx, NE, NY, Pa, RAB, Tx, WH3, WI. NatureServe G5 (Secure).

*Eschscholzia* Chamisso 1820 (CALIFORNIA-POPPY)

A genus of about 12 species, annual and perennial herbs, of sw. North America and n. Mexico. References: Clark (1997) in FNA3 (1997); Kadereit in Kubitzki, Rohwer, & Bittrich (1993).

- * ***Eschscholzia californica* Chamisso ssp. *californica*.** CALIFORNIA-POPPY. **Hab:** Roadsides, disturbed areas. **Dist:** Native of w. North America. **Phen:** Apr-Aug. **Syn:** = FNA3, K1, NcTx, NE, NY; < *Eschscholtzia californica* – F, IL, K3, K4, RAB, orthographic variant; < *Eschscholzia californica* – MI, Pa. NatureServe G4T4 (Apparently Secure).

*Sanguinaria* Linnaeus 1753 (BLOODROOT)

A monotypic genus, a perennial herb, of e. North America. References: Kadereit in Kubitzki, Rohwer, & Bittrich (1993); Kiger (1997) in FNA3 (1997).

***Sanguinaria canadensis* Linnaeus.** BLOODROOT, RED PUCCOON. **Hab:** Moist nutrient-rich forests. **Dist:** NS west to MN and MB, south to Panhandle FL and OK. **Phen:** (Late Jan-) Mar-Apr; Apr-May. **Tax:** Fernald recognized two varieties – var. *rotundifolia*, more southern and the primary form in our area, considered to have leaves less lobed than the more northern var. *canadensis*; leaf shape variability within populations makes it impractical to recognize infraspecific taxa. **Syn:** = Ar, C, FNA3, G, GrPl, IL, K1, K3, K4, MI, NE, NY, Pa, RAB, S, Tn, Va, W, WH3; > *Sanguinaria canadensis* var. *canadensis* – F; > *Sanguinaria canadensis* var. *rotundifolia* (Greene) Fedde – F, Tx. NatureServe G5 (Secure).

109. MENISPERMACEAE A.L. de Jussieu 1789 (MOONSEED FAMILY) [in RANUNCULALES]

A family of about 72 genera and 450 species, vines, shrubs, trees, and herbs, of tropical, subtropical, and warm temperate areas. References: Hoot et al (2009); Kessler in Kubitzki, Rohwer, & Bittrich (1993); Lian et al (2020); Rhodes (1997) in FNA3 (1997); Wang et al (2009).

Identification Notes: The flowers are unisexual and plants dioecious.

- 1 Leaves asymmetrically peltate (the stem attached 1-5 mm in from the leaf margin); stamens 4 or 12-36; petals 1, 4, or 6-9; fruit bluish-black or red; [tribe *Menispermaceae*]..... *Menispermum canadense*
 1 Leaves not peltate, usually cordate (the stem attached at the leaf margin); stamens 6 or 12; petals 6 or 0; fruit red or bluish-black.
 3 Leaves 3-7-lobed, the sinuses usually deep, the lobes acute; stamens 12; petals 0; fruit bluish-black, 13-25 mm long; stone concave on one side; [tribe *Tinosporaceae*]..... *Calycocarpum lyonii*
 3 Leaves entire to 3-lobed, the sinuses always shallow, the lobes (if present) broadly rounded; stamens 6; petals 6; fruit red or bluish-black, 4-8 mm long; stone flattened on both sides; [tribe *Tiliaceae*]..... *Nephroia*

Calycocarpum Nuttall ex Torrey & A. Gray 1838 (CUPSEED)

A monotypic genus, a woody vine, of e. North America. References: Kessler in Kubitzki, Rohwer, & Bittrich (1993); Rhodes (1997) in FNA3 (1997).

Calycocarpum lyonii (Pursh) A. Gray. CUPSEED, LYONIA-VINE. **Hab:** Mesic upland, riparian, and bottomland forests, stream banks, wet hammocks. **Dist:** E. TN, sc. KY, s. IN, s. IL, MO, and e. KS, south to se. GA, Panhandle FL, s. AL, s. MS, s. LA, and e. TX. Reported from SC, but rejected based on mistaken evidence (K. Bradley, pers.comm., 2020). **Phen:** May-Jul (-Oct); Jul-Sep (-Nov). **Syn:** = Ar, C, F, FNA3, G, GrPl, Il, K1, K3, K4, NcTx, S, Tn, Tx, WH3. NatureServe G5 (Secure).

*Menispermum* Linnaeus 1753 (MOONSEED)

A genus of 2-4 species, woody vines, of temperate e. North America and temperate e. Asia. References: Kessler in Kubitzki, Rohwer, & Bittrich (1993); Rhodes (1997) in FNA3 (1997).

Menispermum canadense Linnaeus. MOONSEED, YELLOW PARILLA. **Hab:** Moist nutrient-rich forests, especially on floodplains or lower slopes, less commonly in dry calcium-rich forests and woodlands. **Dist:** QC west to MB, south to GA and OK. **Phen:** May-Aug; Jul-Oct. **Syn:** = Ar, C, F, FNA3, G, GrPl, Il, K1, K3, K4, Mi, NcTx, NE, NY, Pa, RAB, S, Tn, Va, W, WH3, WV. NatureServe G5 (Secure).

*Nephreria* Loureiro 1790 (CORALBEADS, SNAILSEED)

A genus of 3 species, lianas, of temperate and subtropical e. North America (including Mexico) and e. Asia. Lian et al. (2020) show that *Cocculus* as previously circumscribed is polyphyletic, and the two North American species are grouped with an Asian species, in a resurrected genus *Nephreria*. The newly circumscribed genera are morphologically distinctive as well. References: Kessler in Kubitzki, Rohwer, & Bittrich (1993); Lian et al (2020); Rhodes (1997) in FNA3 (1997).

Nephreria carolina (Linnaeus) Lian Lian & Wei Wang. CORALBEADS, CAROLINA MOONSEED, SNAILSEED, RED MOONSEED. **Hab:** Moist to dry forests and thickets, especially where calcareous, also weedy in landscaped areas. **Dist:** VA south to FL, west to TX, north in the interior to s. IN and MO. The occurrences in VA may be primarily adventive. **Phen:** Jun-Aug; Jul-Oct. **Syn:** = K4, Lian et al (2020); = *Cebatha carolina* (Linnaeus) Britton; = *Cocculus carolinus* (Linnaeus) A.P. de Candolle – C, F, FNA3, G, GrPl, Il, K1, K3, NcTx, RAB, Tx, Va, W, WH3; = *Epibaterium carolinum* (Linnaeus) Britton – S. NatureServe G5 (Secure).

110. BERBERIDACEAE A.L. de Jussieu 1789 (BARBERRY FAMILY) [in RANUNCULALES]

As broadly defined here, a family of about 17 genera and 650 species, herbs and shrubs, of the temperate Northern Hemisphere and Andean South America. There has been much debate and study of whether the Berberidaceae should be recognized as a broadly defined unit, or split into a variety of segregate families (such as Podophyllaceae, Epimediaceae, Nandineae, Leonticeae). Based on molecular studies, Kim & Jansen (1996, 1998) and Kim et al. (2004) conclude that division of the Berberidaceae into segregate families is not warranted. References: Ahrendt (1961); Kim & Jansen (1996); Kim & Jansen (1998); Kim et al (2004); Loconte in Kubitzki, Rohwer, & Bittrich (1993); Loconte & Estes (1989b); Meacham (1980); Stearn (2002); Wang et al (2009); Whetstone, Atkinson, & Spaulding (1997) in FNA3 (1997); Yu & Chung (2017).

1 Leaves 2-3-ternately compound; [subfamily *Nandinoideae*].

.....*Nandina domestica*

1 Leaves simple (sometimes shallowly to deeply lobed), 2-foliolate, 3-foliolate, or 1-pinnately compound.

3 Plant a shrub; leaves simple, palmately 3-foliolate, or 1-pinnately compound; flowers yellow; [subfamily *Berberidoideae*]

4 Leaves simple, fascicled on short spur shoots; stems spiny; leaves deciduous or evergreen *Berberis*

4 Leaves 1-pinnately compound or palmately 3-foliolate, either fascicled on short spur shoots (*Alloberberis*) or not fascicled (*Mahonia*); stems not spiny; leaves evergreen. *Mahonia*

3 Plant an herb; leaves peltate, 2-parted or radially lobed; flowers white; [subfamily *Podophylloideae*].

.....*Podophyllum peltatum*

Berberis Linnaeus 1753 (BARBERRY)

A genus of about 500 species, shrubs, of North America, South America, Asia, Europe, and n. Africa. Many authors have favored the inclusion of *Mahonia* in *Berberis*, but we here follow Yu & Chung (2017). References: Chen et al (2020); Kim, Kim, & Landrum (2004); Loconte in Kubitzki, Rohwer, & Bittrich (1993); Whittemore (1997d) in FNA3 (1997); Yu & Chung (2017).

Identification Notes: Other species of *Berberis* are used horticulturally in our area. Though none appear to be established at this

Key to Map
Symbology:

* : waif
EN : endemic

? : questionable

time, the possibility of encountering species other than those treated above should be kept in mind.

- 1 Leaves 1-pinnately compound, > 10 cm long, not fascicled on short spur shoots; stems not spiny; leaves evergreen. *Mahonia*
 1 Leaves simple, < 6 cm long, fascicled on short spur shoots; stems spiny; leaves deciduous or evergreen. *Berberis julianae*

* *Berberis julianae* C.K. Schneider. EVERGREEN BARBERRY. **Hab:** Floodplains, also seeding down and escaping locally near horticultural plantings. **Dist:** Native of China. First reported for NC by Pittillo & Brown (1988). **Phen:** Dec-Mar; Feb-May. **Syn:** = K3, K4, NY; = *Berberis julianiae*, orthographic variant; = n/a – RAB. [NatureServe GNR](#) (Not Yet Ranked).

Mahonia Nuttall 1818 (MAHONIA, OREGON-GRAPE)

A genus of about 100 species, shrubs, of e. Asia and w. North America south to Central America. References: Chen et al (2020); Kim, Kim, & Landrum (2004); Loconte in Kubitzki, Rohwer, & Bittrich (1993); Whittemore (1997d) in FNA3 (1997); Yu & Chung (2017).

* *Mahonia bealei* (Fortune) Carrière. LEATHERLEAF MAHONIA, CHINESE MAHONIA, HOLLY-GRAPE. **Hab:** In deciduous forests in suburban areas, spread from plantings. **Dist:** Native of China. Naturalizing widely (and increasingly aggressively) in the southeastern United States. **Phen:** Dec-Mar; May-Jul. **Syn:** = K1, K3, K4, RAB, Yu & Chung (2017); = *Berberis bealei* Fortune – Ar, FNA3, Tn, Va, WH3. [NatureServe GNR](#) (Not Yet Ranked).

Nandina Thunberg 1781 (NANDINA, SACRED-BAMBOO)

A monotypic genus, a shrub, native of Japan, China, and India. Here treated as a monotypic genus in the Berberidaceae, *Nandina* seems to have only a general kinship to the Berberidaceae (see Ehdaie & Russell 1984, Loconte & Estes 1989b, Meacham 1980) and should perhaps be placed in its own monotypic family. References: Ehdaie & Russell (1984); Loconte in Kubitzki, Rohwer, & Bittrich (1993); Whetstone, Atkinson, & Spaulding (1997) in FNA3 (1997).

* *Nandina domestica* Thunberg. NANDINA, SACRED-BAMBOO. **Hab:** Forests and woodlands in suburban areas, commonly planted, increasingly escaping and naturalizing. **Dist:** Native of China. *Nandina* has numerous cultivated forms, and is widely planted, especially southward. **Phen:** May-Jun; Oct-Nov. **Comm:** Leaflet shape varies in cultivated forms from broadly ovate to linear. **Syn:** = FNA3, K1, K3, K4, NcTx, RAB, Tn, Va, WH3. [NatureServe GNR](#) (Not Yet Ranked).

Podophyllum Linnaeus 1753 (MAY-APPLE)

A monotypic genus, a perennial, rhizomatous herb, of e. North America. Ye et al. (2022) determined that *Podophyllum* is sister to the e. Asian endemic genus *Dysosma* (with which it is sometimes combined, as *Podophyllum sensu lato*), the clade of *Podophyllum* and *Dysosma* sister to *Diphylleia*. References: George (1997b) in FNA3 (1997); Loconte in Kubitzki, Rohwer, & Bittrich (1993); Shaw (2000); Shaw (2002); Ye et al (2022).

The aspect of a pair of orbicular leaves is shared with *Diphylleia* (Berberidaceae) and *Hydrastis* (Hydrastidaceae, sometimes included in Ranunculaceae).

Podophyllum peltatum Linnaeus. MAY-APPLE, AMERICAN MANDRAKE. **Hab:** Rich forests, bottomlands, slopes, pastures. **Dist:** NS west to MN, south to Panhandle FL and TX. **Phen:** (Late Feb-) Mar-Apr; May-Jun. **Comm:** The ripe fruits are edible; the rest of the plant contains a variety of alkaloids, and is poisonous-medicinal. Compounds from *Podophyllum* are used in wart removal, and show anti-viral and anti-cancer promise. **Syn:** = Ar, C, F, FNA3, G, GrPl, K1, K3, K4, Mi, NcTx, NE, NY, Pa, RAB, S, Tn, Tx, Va, W, WH3, WV; > *Podophyllum peltatum* var. *annulare* J.M.H. Shaw – Shaw (2000), Shaw (2002); > *Podophyllum peltatum* var. *peltatum* – Shaw (2000), Shaw (2002). [NatureServe G5](#) (Secure).

111a. HYDRASTIDACEAE Martinov 1820 (GOLDENSEAL FAMILY) [in RANUNCULALES]

A monotypic family, of temperate e. North America. In chemistry, morphology, and anatomy, *Hydrastis* shows some relationship to *Podophyllum* and *Diphylleia* of the Podophyllaceae (often included in the Berberidaceae). Though usually placed in the Ranunculaceae, Tobe & Keating (1985) present evidence from morphology, anatomy, embryology, palynology, chemistry, and cytology that suggests that *Hydrastis* is best recognized as a monotypic family. They contend that "*Hydrastis* represents a relictual primitive group which very early diverged from a common ancestral stock of the Ranunculaceae, Berberidaceae and probably of Circaeasteraceae, and that *Hydrastis* has evolved in its own evolutionary line parallel with other lines leading to the modern representatives of these families." Thorne (1992) and Reveal (1993a) have also accepted Hydrastidaceae as a distinct family. Tobe in Kubitzki & Bayer places *Hydrastis* with *Glaucidium* Siebold & Zuccarini in a bigeneric Hydrastidaceae. Zhai et al. (2019), like most recent authors, include *Hydrastis* in Ranunculaceae, but show *Glaucidium* and *Hydrastis* as successively basal in their broad Ranunculaceae,

111a. HYDRASTIDACEAE

which is compatible with family rank recognition of these distinctive groups. References: Tamura in Kubitzki, Rohwer, & Bittrich (1993); Tobe in Kubitzki & Bayer (2002); Wang et al (2009); Whittemore & Parfitt (1997) in FNA3 (1997); Zhai et al (2019).

Hydrastis Linnaeus 1759 (GOLDENSEAL)

A monotypic genus, an herb, endemic to e. North America. References: Ford (1997a) in FNA3 (1997); Tamura in Kubitzki, Rohwer, & Bittrich (1993).

Hydrastis canadensis Linnaeus. GOLDENSEAL. **Hab:** Mesic (rarely drier), very nutrient-rich forests, with circumneutral soils, over calcareous or mafic rocks such as limestone, amphibolite, and dolostone, sometimes forming large colonies after canopy disturbance such as logging. **Dist:** VT and MN south to w. and c. NC, nw. SC (Bradley et al. [in prep.]), n. GA, TN, and AR. **Phen:** Apr-May; May-Jun. **Comm:** Exploited for the herbal trade (and still often used as a home remedy in more remote parts of the mountains), though too rare in the eastern part of our area to support economically significant wild collection. The rhizome and roots are bitter in taste and contain several alkaloids. Reported for SC (P. McMillan, pers.comm., 2002). **Syn:** = Ar, C, F, FNA3, G, II, K1, K3, K4, Mi, NE, NY, Pa, RAB, S, Tn, Va, W, WV. **NatureServe G3G4** (Vulnerable).

111b. RANUNCULACEAE A.L. de Jussieu 1789 (BUTTERCUP FAMILY) [in RANUNCULALES]

A family of about 62 genera and 2450 species, herbs, shrubs, and vines, primarily of temperate and boreal regions. Classification of subfamilies and tribes follows Wang et al. (2009). References: Carrière (2019); Cossard et al (2016); Keener (1977); Tamura in Kubitzki, Rohwer, & Bittrich (1993); Wang et al (2009); Wang et al (2014); Whittemore & Parfitt (1997) in FNA3 (1997); Zhai et al (2019).

- 1 Shrub or vine; leaves compound (or sometimes some to most of them simple in *Clematis*).
 - 2 Leaves opposite, distributed along the stem; sepals 4, white to blue or purplish, 10-50 mm long; wood not yellow; [subfamily *Ranunculoideae*, tribe *Anemoneae*] **Clematis**
 - 2 Leaves alternate, clustered together at the top of the usually unbranched, erect stem; sepals 5, maroon, 2-5 mm long; wood yellow; [subfamily *Coptidoideae*] **Xanthorhiza**
- 1 Herb; leaves compound or simple.
 - 3 Leaves simple, sometimes deeply cleft or lobed into rounded or elongate segments; [subfamily *Ranunculoideae*].
 - 4 Plants in flower **Key A**
 - 4 Plants in fruit **Key B**
 - 3 Leaves compound, the leaflets either linear or more-or-less petiolulate.
 - 5 Plants in flower **Key C**
 - 5 Plants in fruit **Key D**

Key A

- 1 Flowers bilaterally symmetrical, the upper sepal hooded or spurred; [tribe *Delphinieae*] **Delphinium**
- 1 Flowers radially symmetrical, no perianth parts spurred or hooded (except the 5 sepals spurred in *Myosurus*).
 - 3 Petals present, white or yellow, larger and more conspicuous than the sepals; sepals present, green; [in other words, with a second, green, less conspicuous perianth whorl below the largest and colored perianth whorl; note that some *Anemone* have a calyx-like involucre of 3 bracts subtending each flower]; [tribe *Ranunculeae*].
 - 4 Basal leaves linear to linear-spatulate, mostly 4-8 cm long, 1-3 mm wide; receptacle elongate, 1-6 cm long (superficially resembling a *Plantago* inflorescence) **Myosurus**
 - 4 Basal leaves various, but not as above; receptacle globose to sub-cylindric, mostly < 1 cm long **Ranunculus**
 - 3 Petals absent (or modified into relatively inconspicuous nectaries or staminodia); sepals present and petaloid (white, yellow, yellow-green, cream, or blue).
 - 7 Petaloid sepals 3-5 mm long, caducous; stamens white and showy; [tribe *Ranunculeae*] **Trautvetteria**
 - 7 Petaloid sepals 6-40 mm long, not caducous; stamens not notably white and showy.
 - 8 Leaves opposite, distributed along the stem; style plumose; [tribe *Anemoneae*] **Clematis**
 - 8 Leaves all basal, or with a few alternate or whorled involucre leaves on the stem; style not plumose. **Hepatica**

Key B

- 1 Fruit a follicle, each carpel with 2 or more ovules. **Delphinium**
- 1 Fruit an achene (or dehiscent utricle in *Trautvetteria*), each carpel with 1 ovule.
 - 6 Leaves opposite, distributed along the stem; style plumose; [tribe *Anemoneae*] **Clematis**
 - 6 Leaves all basal, or with a few alternate or whorled involucre leaves on the stem; style not plumose.
 - 7 Basal leaves linear to linear-spatulate, mostly 4-8 cm long, 1-3 mm wide; receptacle elongate, 1-6 cm long (superficially resembling a *Plantago* inflorescence); [tribe *Ranunculeae*] **Myosurus minimus**
 - 7 Basal leaves various, but not as above, generally long-petiolate, with an expanded, crenate-toothed, 3-lobed, or palmately-lobed blade; receptacle globose to sub-cylindric, mostly < 1 cm long.
 - 8 Fruit a dehiscent utricle; cauline leaves alternate; [tribe *Ranunculeae*] **Trautvetteria**
 - 8 Fruit an achene; cauline leaves opposite or whorled (or alternate in *Ranunculus*, or reduced to alternate scale-like bracts in *Halerpestes*).

111b. RANUNCULACEAE

- 9 Cauline leaves opposite or whorled, or reduced to 3 sepal-like involucral bracts immediately subtending the flower; sepals absent (but in “*Hepatica*” mimicked by the bracts); [tribe *Anemoneae*] *Hepatica*
- 9 Cauline leaves alternate; sepals present; [tribe *Ranunculeae*] *Ranunculus*

Key C

- 1 Leaflets linear, < 1.5 mm wide.
- 2 Flowers bilaterally symmetrical; [subfamily *Ranunculoideae*, tribe *Delphineae*] *Delphinium*
- 2 Flowers radially symmetrical.
- 3 Aquatic; [native]; [subfamily *Ranunculoideae*, tribe *Ranunculeae*] *Ranunculus*
- 3 Terrestrial; [alien] *Adonis*
- 1 Leaflets broader, rounded, lobed, or toothed.
- 6 Leaves all cauline, opposite; stems somewhat woody at base; [subfamily *Ranunculoideae*, tribe *Anemoneae*] *Clematis*
- 6 Leaves basal and cauline, the cauline alternate (or with opposite or whorled involucral bracts).
- 7 Petals present, conspicuous
- 8 Flowers dangling; petals red, orange with yellow, or blue, spurred; [subfamily *Thalicthroideae*] *Aquilegia*
- 8 Flowers not dangling; petals yellow, not spurred; [subfamily *Ranunculoideae*, tribe *Ranunculeae*] *Ranunculus*
- 7 Petals absent or inconspicuous (soon deciduous or altered into a nectary-bearing clavate structure); sepals sometimes petaloid and conspicuous.
- 9 Sepals petaloid, conspicuous, white (or cream, rose, pink, or tinged with green).
- 10 Involucre absent, all leaves on the stem alternate; petaloid sepals 5, white; [subfamily *Thalicthroideae*] *Enemion*
- 10 Involucre of opposite or whorled, leaflike bracts present; petaloid sepals (4-) 5-20 (-30), white, cream, rose, or green.
- 11 Basal leaves with 3-5 leaflets, these toothed or incised; petaloid sepals white, cream, rose, or green; [subfamily *Ranunculoideae*, tribe *Anemoneae*] .. *Anemone*
- 11 Basal leaves with > 5 leaflets; these with 0-3 rounded lobes at the tip; petaloid sepals white to pale pink; [subfamily *Thalicthroideae*] *Thalictrum thalictroides*
- 9 Sepals absent, or inconspicuous in comparison to the stamens or pistils.
- 13 Inflorescence a raceme; [subfamily *Ranunculoideae*, tribe *Cimicifugeae*] *Actaea*
- 13 Inflorescence a panicle; [subfamily *Thalicthroideae*] *Thalictrum*

Key D

- 1 Fruit a follicle or capsular (or fleshy and berrylike in some *Actaea*).
- 2 Mature leaves > 4 dm wide; [subfamily *Ranunculoideae*, tribe *Cimicifugeae*] *Actaea*
- 2 Mature leaves < 3 dm wide.
- 3 Leaflets linear; [aliens] *Delphinium*
- 3 Leaflets broad, rounded; [mostly natives] *Aquilegia*
- 6 Follicles 15-31 mm long, with beaks 7-18 mm long *Enemion*
- 6 Follicles 3.5-6.5 mm long, with beaks 1.5-3 mm long *Enemion*
- 1 Fruit an achene.
- 7 Leaves divided into numerous linear segments, all of which are < 1 mm wide.
- 8 Plant aquatic (if leaves divided into numerous linear segments); [subfamily *Ranunculoideae*, tribe *Ranunculeae*] *Ranunculus*
- 8 Plant terrestrial *Adonis*
- 7 Leaf segments rounded or cleft, > 1 mm wide.
- 10 Leaves cauline, opposite; [subfamily *Ranunculoideae*, tribe *Anemoneae*] *Clematis*
- 10 Leaves basal and/or cauline, cauline leaves (if present) alternate (leaflike involucral bracts sometimes present and opposite or whorled).
- 11 Leaflike involucral bracts present, opposite or whorled.
- 12 Achenes not ribbed or veined on lateral surfaces; leaf texture moderate to distinctly thick and leathery; [subfamily *Ranunculoideae*, tribe *Anemoneae*] .. *Anemone*
- 12 Achenes conspicuously ribbed or veined on lateral surfaces; leaf texture thin, delicate; [subfamily *Thalicthroideae*] *Thalictrum thalictroides*
- 11 Leaflike involucral bracts not present.
- 13 Leaflets 3-many, if many the leaflets typically with teeth, or sharp lobes; [subfamily *Ranunculoideae*, tribe *Ranunculeae*] *Ranunculus*
- 13 Leaflets many, unlobed or typically with 3-9 rounded lobes; [subfamily *Thalicthroideae*] *Thalictrum*

***Actaea* Linnaeus 1753 (BANE BERRY)**

A genus of about 28 species, perennial herbs, of temperate regions of the Northern Hemisphere. Compton, Culham, & Jury (1998) support the inclusion of *Cimicifuga* in *Actaea*, based on morphologic and molecular analyses. References: Compton, Culham, & Jury (1998); Ford (1997c) in FNA3 (1997); Park & Lee (1996); Ramsey (1987); Ramsey (1988); Ramsey (1997) in FNA3 (1997); Tamura in Kubitzki, Rohwer, & Bittrich (1993).

Identification Notes: In rich coves and other mesic Appalachian forests, *Actaea* often grows with a number of other herbs with similarly compound leaves, including *Astilbe* (Saxifragaceae), *Aruncus* (Rosaceae), *Caulophyllum* (Berberidaceae), *Angelica*, *Thaspium*, *Osmorrhiza*, and *Ligusticum* (Apiaceae), *Aralia* (Araliaceae), *Thalictrum* (Ranunculaceae), and others. The curious evolutionary convergence of leaf morphology (to a 2-3-ternately compound form) of a large number of unrelated genera of Appalachian cove forests is interesting.

***Adonis*** Linnaeus 1753 (ADONIS)

A genus of about 26 species, annual and perennial herbs, of Eurasia. References: Parfitt (1997c) in FNA3 (1997); Tamura in Kubitzki, Rohwer, & Bittrich (1993).

- * ***Adonis annua*** Linnaeus. AUTUMN ADONIS, BIRD'S-EYE, PHEASANT'S-EYE. **Hab:** Disturbed areas, formerly especially as a weed in grain fields. **Dist:** Native of Eurasia. Naturalized in n. AL and sc. TN (Parfitt in FNA 1997). **Phen:** (Late Mar-) Apr-Jun. **Syn:** = Ar, C, FNA3, G, K1, K3, K4, NcTx, Tx. NatureServe GNR (Not Yet Ranked).

***Anemone*** Linnaeus 1753 (ANEMONE)

A genus of about 140-200 species (depending on circumscription), perennial herbs (rarely shrubs), of Eurasia, North America, Central America, South America, and Africa. The infrageneric classification shown in the key is that of Hoot, Meyer, & Manning (2012). References: Dutton, Keener, & Ford (1997) in FNA3 (1997); Ehrendorfer et al (2009); Hoot, Meyer, & Manning (2012); Hoot, Reznicek, & Palmer (1994); Jiang et al (2017); Keener, Dix, & Dutton (1996); Mlinarec et al (2011); Tamura in Kubitzki, Rohwer, & Bittrich (1993); Ziman et al (2004).

- 1 Basal leaves lobed but not fully divided into 3 or more leaflets; stem leaves either unlobed and borne immediately below the flower (easily mistakable as a calyx) or lobed and borne well below the flower..... *Hepatica*
- 1 Basal leaves compound, fully divided into 3 or more leaflets; stem leaves lobed and borne well below the flower.
 - 3 Stem branched, 4-11 dm tall, bearing 2 or more flowers; stem leaves petiolate; [subsection *Virginianae*]..... *Anemone virginiana* var. *virginiana*
 - 3 Stem unbranched, 0.5-4 dm tall, bearing 1 flower; stem leaves sessile or petiolate.
 - 6 Sepals (5-) 8-20, cream-white, violet, blue, pink, or green; stem leaves sessile; [subsection *Anemone*; series *Carolinianae*].
 - 7 Stem densely pubescent above and below the stem leaves; stem leaves borne above the midpoint of the stem at anthesis; plant from a globose, vertically oriented bulb, lacking rhizomes; basal leaves 1-ternate, the 3 lobes sublobed or toothed, but not additionally divided; involucre leaves (1.5-) 3-6 cm long; achene bodies 2.7-3.5 mm long; achene beak sinuous, hidden in the achene indument..... *Anemone berlandieri*
 - 7 Stem densely pubescent above the stem leaves, glabrous to very sparsely pubescent beneath the stem leaves; stem leaves borne at or below the midpoint of the stem at anthesis; plant with slender, horizontal rhizomes; basal leaves 1-3-ternate, the 3 primary lobes usually further divided into linear segments; involucre leaves 1-2.5 (-3) cm long; achene bodies 1.5-2.5 (-3.0) mm long; achene beak straight, extending out of the achene indument..... *Anemone caroliniana*
 - 6 Sepals 5 (-8), white or bright yellow; stem leaves petiolate, the leaflets ovate, obovate, elliptic, lanceolate, or oblanceolate 2-8 cm long, 8-30 mm wide; [subsection *Anemonanthea*]..... *Anemone quinquefolia*

Anemone berlandieri Pritzl. EASTERN PRAIRIE ANEMONE, TEN-PETAL ANEMONE. **Hab:** Thin, circumneutral soils around rock outcrops, calcareous glades, calcareous hammocks (in FL), calcareous bluffs, chalk outcrops & thin-soiled black-belt prairies, lawns and mowed roadsides (over calcareous soils). **Dist:** *A. berlandieri* is primarily a species of midwestern prairies, occurring from n. AR and s. KS south through OK to c. LA and s. TX; disjunct eastward in AL, c. GA, n. FL, c. NC, c. SC, and sc. VA. It reaches its northeastern limit (and only VA occurrence) at calcareous mudstone cliffs on the Banister River (Pittsylvania County); it is scattered in the Piedmont of NC on a variety of rock types, including mafic meta-argillite and plagioclase-rich granite. **Phen:** (Late Feb-) Mar-Apr. **Tax:** *A. berlandieri* and *A. caroliniana* have been much confused in floras; see

111b. RANUNCULACEAE

Joseph & Heimbürger (1966) for clarification. **Syn:** = Ar, FNA3, GrPl, K1, K3, K4, NcTx, Va, WH3, Hoot, Meyer, & Manning (2012); < *Anemone caroliniana* Walter – C, F, G, RAB, S, W; < *Anemone decapetala* Arduino, misapplied (a South American species); > *Anemone heterophylla* Nuttall ex Torrey & Gray – Tx.

Anemone caroliniana Walter. PRAIRIE ANEMONE, CAROLINA ANEMONE. **Hab:** Clayey soils of post oak and blackjack oak woodlands (Iredell soils), calcareous glades and barrens, wet meadows. **Dist:** Wc. IN, n. IL, WI, MN, and SD south to s. LA and e. and c. TX; disjunct east of the Mississippi River in c. NC south to s. GA, and c. TN south to s. AL. **Phen:** (Late Feb-) Mar-May. **Syn:** = Ar, FNA3, GrPl, IL, K1, K3, K4, NcTx, Tn, Tx, Hoot, Meyer, & Manning (2012); < *Anemone caroliniana* Walter – C, F, G, RAB, S, W.

Anemone quinquefolia Linnaeus. WOOD ANEMONE. **Hab:** Rich, moist forests, grassy balds, often abundant at high elevations. **Dist:** NL, QC, ON, MB, SK, and AB south to SC, GA, AL, MS, AR, and ne. SD. **Phen:** Mar-May. **Syn:** = GrPl, Mi, Pa, RAB, S, W; = *Anemone quinquefolia* var. *quinquefolia* – Ar, FNA3, NE, NY, Tn, Va; < *Anemone quinquefolia* Linnaeus – Hoot, Meyer, & Manning (2012); > *Anemone quinquefolia* var. *bifolia* Farwell – C, G, K1, K2, K3, K4; > *Anemone quinquefolia* var. *interior* Fernald – F, G, IL; > *Anemone quinquefolia* var. *quinquefolia* – C, F, IL, K1, K2, K3, K4.

Anemone virginiana Linnaeus var. *virginiana*. TALL ANEMONE, THIMBLEWEED. **Hab:** Rich forests and woodlands, prairies, especially prevalent on circumneutral soils. **Dist:** NL (Newfoundland), ME, s. ON, and SK, south to GA, AL, MS, LA, OK, and WY. **Phen:** May-Aug. **Tax:** Two other varieties are more northern; see discussion of var. *alba*. **Syn:** = Ar, C, FNA3, K1, K3, K4, Mi, NE, Va; = *Anemone virginiana* – F, G, GrPl, Hoot, Meyer, & Manning (2012); > *Anemone riparia* Fernald – S, misapplied; < *Anemone virginiana* – IL, NY, Pa, RAB, Tn, W; > *Anemone virginiana* – S. NatureServe G5T5 (Secure).

Aquilegia canadensis Linnaeus. CANADA COLUMBINE, EASTERN COLUMBINE. **Hab:** Forests, woodlands, rock outcrops, especially (though by no means entirely) on calcareous or mafic substrates. **Dist:** NS, QC, ON, MB, and SK south to Panhandle FL, s. AL, ne. MS (Tishomingo County), w. TN, c. AR, and se. OK; disjunct in Edwards Plateau of TX. **Phen:** Mar-Jun. **Tax:** Disjunct populations in the deep South, on limestone in sw. GA and FL Panhandle, have been described as *A. australis* or *A. canadensis* var. *australis*; they need additional study. **Comm:** One of our most familiar wildflowers. **Syn:** = Ar, C, FNA3, G, GrPl, K1, K3, K4, Mi, NcTx, NE, NY, Pa, RAB, S, Tn, Va, W, WH3; > *Aquilegia australis* Small – S; > *Aquilegia canadensis* Linnaeus – S; > *Aquilegia canadensis* var. *australis* (Small) Munz – Munz (1946); > *Aquilegia canadensis* var. *canadensis* – F, Munz (1946); > *Aquilegia canadensis* var. *coccinea* (Small) Munz – F, Munz (1946); > *Aquilegia canadensis* var. *latiuscula* (Greene) Munz – Tx, Munz (1946); > *Aquilegia coccinea* Small – S.

Clematis Linnaeus 1753 (CLEMATIS, VIRGIN'S-BOWER)

Contributed by Thomas Murphy, Zach Irick, Dwayne Estes, and Alan Weakley

A genus of about 295 species, shrubs, vines, and suffrutescent herbs, of Eurasia, North America, South America, Africa, Madagascar, and Oceania. W.A. Weber (1995) proposed generic status (as *Coriflora* W.A. Weber) for the leatherflowers, here treated as *Clematis*, subgenus *Viorna*. References: Essig (1990); Estes (2006); Floden (2013); Keener (1967); Keener (1975); Keener (2017) in Weakley et al (2017); Krakowiak, Shelton, & Shaw (2019); Moreno & Essig (1997) in FNA3 (1997); Murphy (2020); Pringle (1971); Pringle (1997) in FNA3 (1997); Tamura in Kubitzki, Rohwer, & Bittrich (1993); Weber (1995).

Identification Notes: Additional species of *Clematis*, of Asian or European origin, are cultivated as ornamentals and might be encountered.

- 1 Flowers numerous, in compound cymose-paniculate inflorescences; sepals white; filaments glabrous; [subgenus *Clematis*].
- 2 Flowers perfect, with 5-10 carpels; anthers 1.5-3 mm long; leaf margins entire (rarely cleft or with 1-2 rounded teeth or small lobes); leaflets (3-) 5 (-7), often variegated with a silver blaze along the midvein; [alien, in disturbed areas]..... *Clematis terniflora*
- 2 Flowers mostly polygamo-dioecious, the pistillate with 18-60 carpels; anthers 0.5-1 mm long; leaf margins coarsely toothed with acute teeth; leaflets 3 (*C. virginiana*) or 5-7 (*C. catesbyana*), uniformly green; [native, though sometimes weedy].
- 4 Leaves (3-) 5-7-foliolate; pistillate flowers with 18-35 carpels..... *Clematis catesbyana*
- 4 Leaves 3-foliolate; pistillate flowers with 40-60 carpels..... *Clematis virginiana*
- 1 Flowers solitary or in groups of 3's; sepals usually at least partly bluish, purplish or red; filaments pubescent.
- 13 Lower surface of leaves glaucous and glabrous (rarely with a few scattered hairs).
- 15 Leaf blade thin in texture; secondary and tertiary veins impressed rather than raised on the upper leaflet surface *Clematis glaucophylla*
- 15 Leaf blade leathery in texture; secondary and tertiary veins forming a prominently raised reticulum on the upper leaflet surface. *Clematis versicolor*
- 13 Lower surface of leaves not glaucous, pubescent (rarely nearly glabrous).
- 19 Leaves coriaceous, the secondary and tertiary veins forming prominent reticulations on the upper surface.

- 20 Leaf blade coarsely reticulate-veined, the ultimate closed areoles often > 2 mm long in the longer dimension, the tertiary and quaternary veins not prominently raised; achene beak sparsely pubescent to silky, with ascending or appressed hairs..... *Clematis pitcheri* var. *pitcheri*
- 20 Leaf blade finely reticulate-veined, the ultimate closed areoles mostly < 2 mm long in the longest dimension, the tertiary and quaternary veins often prominently raised; achene beak plumose, with spreading hairs..... **Key A**
- 19 Leaves membranous to subcoriaceous, the secondary and tertiary veins forming faint, indistinct reticulations on the upper surface.
- 21 Sepals 2.5-5 cm long, the tips widely spreading, the upper margins thin, crisped, expanded (to 6 mm wide); sepal surfaces glabrous; [widespread, but mainly Coastal Plain]..... *Clematis crispa*
- 21 Sepals XX-YY cm long, the tips reflexed, the upper margins thick, not expanded; sepal surcaes glabrous to variously hairy; [widespread, but especially inland provinces]..... *Clematis species 11*

Key A - *Clematis reticulata* complex

- 3 Leaflets distinctly coriaceous with dense network of raised reticulate venation, average areole area small, (0.19-) 0.37-0.44 (-0.84) mm²; widest adaxial leaflet veins (not including mid-vein) (0.09-) 0.13-0.15 (-0.28) mm wide; leaflet apices usually rounded to broadly acute; sepal trichomes short with longest trichomes (0.27-) 0.32-0.39 (-0.47) mm long; achene rim (sum of both ends) to achene width ratio (0.22-) 0.26-0.32 (-0.38); [lower Coastal Plain of AL, FL, GA, MS, SC] *Clematis reticulata*
- 3 Leaflets distinctly membranaceous to subcoriaceous, average areole area large (0.36-) 0.61-0.94 (-2.69) mm², raised reticulate venation forming a sparsely concentrated network; widest adaxial leaflet veins (not including mid-vein) (0.04-) 0.07-0.09 (-0.14) mm wide; leaflet apices acute to acuminate, rarely rounded; sepal trichomes puberulent with longest trichomes (0.45-) 0.52-0.66 (-0.84) mm long; achene rim (sum of both ends) to achene width ratio (0.30-) 0.32-0.46 (-0.50); [n. and c. AL (mostly north of the Alabama River), wc. GA, ne. MS, and extreme sc. TN]..... *Clematis species 5*

Clematis catesbyana Pursh. COASTAL VIRGIN'S-BOWER, SATIN-CURLS. **Hab:** Dunes and interdune swales with abundant shell hash, calcareous woodlands, thickets, and glades, calcareous hammocks. **Dist:** Se. VA south to c. peninsular FL and west to LA, and inland especially in calcareous parts of c. KY, c. TN and n. AR and s. MO, as well as in the Ridge and Valley of VA and disjunct at Linville Caverns, McDowell County, NC, where on dolomite in a geologic window in the Blue Ridge. **Phen:** Jun-Sep. **Syn:** = Ar, C, F12, FNA3, GW2, K1, K3, K4, Tn, Va, WH3; > *Clematis catesbyana* Pursh - S; < *Clematis ligusticifolia* Nuttall ex Torrey & A. Gray - RAB, misapplied; > *Clematis micrantha* Small - S.

Clematis crispa Linnaeus. MARSH CLEMATIS, SOUTHERN LEATHERFLOWER, SWAMP LEATHERFLOWER, BLUE JASMINE. **Hab:** Marshes, tidal and non-tidal swamps, floodplain forests, disturbed wet or moist areas. **Dist:** FL to TX, north to se. VA and s. IL. **Phen:** Apr-Aug (-Sep). **Syn:** = Ar, C, F, F12, FNA3, G, GW2, IL, K1, K3, K4, NcTx, RAB, Tn, Va, W, WH3; = *Coriflora crispa* (Linnaeus) W.A. Weber - Weber (1995); = *Viorna crispa* (Linnaeus) Small - S; > *Clematis crispa* var. *crispa* - Tx; > *Clematis crispa* Linnaeus var. *walteri* A. Gray - Tx. **NatureServe G5** (Secure).

Clematis glaucophylla Small. WHITE-LEAVED LEATHERFLOWER. **Hab:** Dry rocky river bluffs, scrub-shrub over xeric alluvial deposits and fluvial sand ridges, wet hammocks (FL). **Dist:** Widespread in Southeastern United States, from se. TN and OK, south to FL Panhandle, LA, and TX, but apparently rare and poorly known. Previous attributions of this species for NC, SC, KY, and (perhaps) VA appear to be based on misidentifications. **Phen:** May-Sep. **Syn:** = Ar, C, F, F12, FNA3, G, GW2, K1, K3, K4, RAB, Tn, Tx, WH3, Estes (2006); = *Coriflora glaucophylla* (Small) W.A. Weber - Weber (1995); = *Viorna glaucophylla* (Small) Small - S. **NatureServe G4?** (Apparently Secure).

Clematis pitcheri Torrey & A. Gray var. *pitcheri*. BELLFLOWER LEATHERFLOWER. **Hab:** Limestone glades and barrens. **Dist:** IN, IL, IA, and e. NE south to w. KY, c. TN, ne. MS, AR, TX, and NM. **Phen:** Apr-Oct. **Tax:** Var. *dictyota* (Greene) W.M. Dennis occurs in w. TX and s. NM south to n. Mexico. **Syn:** = Ar, FNA3, K1, K3, K4; < *Clematis pitcheri* - GrPl, IL, NcTx, Tn, Tx, Tx; < *Coriflora pitcheri* (Torrey & A. Gray) W.A. Weber - Weber (1995); < *Viorna pitcheri* (Torrey & A. Gray) Britton - S. **NatureServe G4G5TNR** (Not Yet Ranked).

Clematis reticulata Walter. NETLEAF LEATHERFLOWER. **Hab:** Dry, sandy woodlands, such as longleaf pine sandhills and dry hammocks. **Dist:** Se. SC south to c. peninsular FL, west to s. MS. **Phen:** (Late Apr-) May-mid Jul (-Sep). **Syn:** = < *Clematis reticulata* Walter - F12, FNA3, K1, K3, K4, RAB, Tx, WH3; < *Coriflora reticulata* (Walter) W.M. Weber - Weber (1995); < *Viorna reticulata* (Walter) Small - S.

Clematis species 11. **Syn:** = *Viorna flaccida* (Small) Small - S; < *Clematis viorna* Linnaeus - C, F, FNA3, G, K1, K3, K4, Tn.

Clematis species 5. ALABAMA LEATHERFLOWER. **Hab:** Rocky pine-oak woodlands, montane longleaf pine savannas, sandstone river-scour shrublands, xeric sandstone outcrop and glades, sandy bluffs and river banks. **Dist:** Sc. TN, ne. MS, c. and n. AL, and wc. GA. **Phen:** Late Apr-mid Jun. **Tax:** See Murphy (2020). **Syn:** = *Viorna subreticulata* Harbison ex Small - S; < *Clematis reticulata* Walter - FNA3, K1, K3, K4; < *Coriflora reticulata* (Walter) W.M. Weber - Tn, Weber (1995).

* ***Clematis terniflora*** A.P. de Candolle. SWEET AUTUMN CLEMATIS, YAM-LEAVED CLEMATIS, "CLEMATHY-VINE". **Hab:** Disturbed areas. **Dist:** Native of e. Asia (Japan, China, Korea). **Phen:** Jul-Oct (-Dec). **ID Notes:** The leaflets are often variegated, with whitish-green blazes along the main veins. **Syn:** = Ar, C, F12, FNA3, GrPl, GW2, IL, K1, K3, K4, Mi, NcTx, NE, NY, Pa, Tn, Va, W, WH3; > *Clematis dioscoreifolia* Léveillé & Vaniot - RAB, Tx, misapplied; > *Clematis dioscoreifolia* Léveillé & Vaniot var. *robusta* Carrière & Rehder - F; ? *Clematis maximowicziana* Franchet & Savatier; ? *Clematis paniculata* Thunberg - S. **NatureServe GNR** (Not Yet Ranked).

Clematis versicolor Small ex Rydberg. PALE LEATHERFLOWER. **Hab:** Rocky, calcareous woodlands, bluffs, and cliffs. **Dist:** Sc. KY, c. TN, nc. AL (Barger et al. 2019); Ozarks and Ouachitas of s. MO, n. and c. AR, and e. OK. Records from e. TX and e. TN are misidentifications. **Phen:** May-Aug. **Syn:** = Ar, FNA3, K1, K3, K4, Tn, Tx, Estes (2006); = *Coriflora versicolor* (Small ex Rydberg) W.A. Weber - Weber (1995); = *Viorna versicolor* (Small ex Rydberg) Small - S. **NatureServe G4?** (Apparently Secure).

111b. RANUNCULACEAE

Clematis virginiana Linnaeus. VIRGIN'S-BOWER. **Hab:** In a wide variety of moist forests, thickets, and openings. **Dist:** Nova Scotia, ON, and MB, south to wc. peninsular FL and TX. **Phen:** Jul-Sep. **ID Notes:** Vegetatively, this species can be distinguished from *C. viorna* and *C. crispa* (the other common and widespread species in our area) by its leaves with three relatively symmetrical leaflets (vs. leaves with 3-many irregular leaflets). **Syn:** = Ar, C, F, FI2, FNA3, GrPI, GW2, Il, K1, K3, K4, Mi, NE, NY, Pa, RAB, S, Tn, Tx, Va, W, WH3; ? *Clematis virginiana* var. *virginiana* – G. NatureServe G5 (Secure).

**Delphinium** Linnaeus 1753 (LARKSPUR)

A genus of about 360 species, annual and perennial herbs, of Eurasia, Africa, and North America. Jabbour & Renner (2011a, 2011b, 2012) show convincingly that *Consolida* should be included in *Delphinium*. References: Jabbour & Renner (2011); Jabbour & Renner (2012); Jabbour (2011); Kral (1976); Tamura in Kubitzki, Rohwer, & Bittrich (1993); Warnock (1995); Warnock (1997a) in FNA3 (1997); Warnock (1997b) in FNA3 (1997).

1 Annual; pistil 1; petals 2, connate; leaf lobes < 1.5 mm wide; [section *Consolida*]; [aliens].

..... *Delphinium ajacis*

1 Perennial; pistils 3 (-5); petals 4, separate; leaf lobes > 0.5 mm wide; [natives].

6 Follicles divergent; inflorescence a raceme or divergently branched panicle, 0.5-2 (-3) dm long; flowering plants 2-9 (-13) dm tall; flowering Mar-early Jul; [section *Diedropetala*; subsection *Grumosa*].

..... *Delphinium tricorne*

6 Follicles erect; raceme > 3 dm long; flowering plants 5-20 dm tall; flowering May-Sep.

11 Basal leaves absent at anthesis; flowers (sepals) blue to purplish (rarely white); stems (3-) 6-10 (-15) dm tall; blade of midstem leaves not distinctly 3-parted, the ultimate segments 12-25 in number, 0.5-1.5 mm wide..... *Delphinium carolinianum* ssp. *carolinianum*

11 Basal leaves usually present at anthesis; flowers (sepals) blue or white; stems 2-8 (-10) dm tall; blade of midstem leaves distinctly 3-7-parted (and then usually additionally divided), the ultimate segments 3-15 in number, 2-10 mm wide.

..... *Delphinium carolinianum* ssp. *vimineum*

* **Delphinium ajacis** Linnaeus. ROCKET LARKSPUR, GARDEN LARKSPUR. **Hab:** Roadsides, fields, waste places, disturbed ground. **Dist:** Native of Europe. **Phen:** May-Sep. **Syn:** = F, G, GrPI, NY, RAB, S, Tx, WV; = *Consolida ajacis* (Linnaeus) Schur – Ar, FNA3, Il, K3, K4, Mi, NcTx, NE, Pa, Tn, Va, WH3; = *Consolida ambigua* (Linnaeus) P.W. Ball & Heywood in Heywood & P.W. Ball – W; = *Delphinium ambiguum* Linnaeus – C. NatureServe GNR (Not Yet Ranked).

Delphinium carolinianum Walter ssp. *carolinianum*. OZARK LARKSPUR, PRAIRIE LARKSPUR, CAROLINA LARKSPUR, BLUE LARKSPUR. **Hab:** Rocky woodlands, granite outcrops, Altamaha Grit outcrops, blackland prairies, calcareous glades, moist sandy woodlands associated with longleaf pine. **Dist:** IL west to e. KS, south to LA and TX, with disjunct occurrences eastward in SC, GA, AL, Panhandle FL (Gadsden County), and MS; questionably reported for c. TN. The flowers are a pale to medium blue. This species has been reported for NC (by C) and 'north to Va.' (by F and S). I know of no documentation for its past or present occurrence in NC or VA, but its presence in those states is plausible. **Phen:** (Apr-) May-Jul. **Syn:** = Ar, FNA3, Il, K1, K3, K4, NcTx, Tn; = *Delphinium azureum* Michaux; = *Delphinium carolinianum* Walter – C, G, GrPI, WH3, Kral (1976); < *Delphinium carolinianum* Walter – S, Tx; < *Delphinium carolinianum* var. *carolinianum* – F. NatureServe G5T5 (Secure).

Delphinium carolinianum Walter ssp. *vimineum* (D. Don) M.J. Warnock. PINEWOODS LARKSPUR, TEXAS LARKSPUR. **Hab:** Grasslands, coastal prairies, longleaf pine sandhills. **Dist:** Sw. AR south to MS, e. and w. LA, s. TX, and Mexico (CHH, COA, and TAM). **Phen:** Mar-Jun (-Jul). **Comm:** Reported for MS (John Kees, pers.comm. 2020). **Syn:** = Ar, FNA3, K3, K4, NcTx; = *Delphinium vimineum* D. Don – Tx. NatureServe G5T5 (Secure).

Delphinium tricorne Michaux. DWARF LARKSPUR. **Hab:** Rich, moist forests, especially over mafic or calcareous rocks, less commonly (as along the Roanoke River in ne. NC) on very fertile alluvial deposits, moist prairies. **Dist:** Sw. PA and MN south to NC, nw. GA, AL, and OK. **Phen:** Mar-May. **Comm:** The flowers are variable in color, usually a deep bluish violet, but ranging through pink to pure white. **Syn:** = Ar, C, F, FNA3, G, GrPI, Il, K1, K3, K4, Pa, RAB, S, Tn, Va, W, WV, Kral (1976). NatureServe G5 (Secure).

Enemion Rafinesque 1820 (ISOPYRUM)

A genus of about 6 species, perennial herbs, of temperate North America and e. Asia. The issue of the separation of the genus *Enemion* from *Isopyrum* remains somewhat controversial; I here follow Keener (1977), Tamura (1993), and Ford (1997). References: Ford (1997g) in FNA3 (1997); Keener (1977); Tamura in Kubitzki, Rohwer, & Bittrich (1993).

Identification Notes: *Enemion* is somewhat superficially similar to the more common and widespread (in the Flora area)

Thalictrum thalictroides, with which it also sometimes grows, but can be distinguished by the following characters: stem leaves 1-4 and alternate (vs. stem leaves 2 and opposite), fruit an aggregate of follicles (vs. fruit an aggregate of achenes), petaloid sepals 5 (vs. 5-10, usually some at least of the flowers on a plant with 6 or more), leaflets deeply lobed, at least some of the leaflets on a plant with sinuses at least 1/3 as long as the leaflet (vs. leaflets shallowly lobed, the notches < 2 mm long).

Enemion biternatum Rafinesque. ISOPYRUM, FALSE RUE-ANEMONE. **Hab:** Rich forests, either on natural levees with very nutrient rich sediments or on slopes with underlying mafic rocks. **Dist:** Mainly west of the Appalachians, W. NY, s. ON and MN south to TN, ne. MS (Tishomingo County), and AR; disjunct east and south of the Blue Ridge in VA, NC, SC, the FL Panhandle, and s. AL. Buckingham, Singhurst, & Paez (2020) discussed its distribution in Texas. **Phen:** (Jan-) Mar-Apr; May. **Syn:** = Ar, FNA3, Il, K1, K3, K4, Mi, NY, Tn, Va, WH3; = *Isopyrum biternatum* (Rafinesque) Torrey & Gray – C, F, G, GrPl, RAB, S, Tx. [NatureServe G5](#) (Secure).

Hepatica P. Miller 1754 (HEPATICA, LIVERLEAF)

A genus of 7-12 species, perennial herbs, of Eurasia and e. North America. Although Hoot, Meyer, & Manning (2012), Hoot, Reznicek, & Palmer (1994), and others argued that *Hepatica* should be included in *Anemone*, a series of later papers cast doubt on that course; it now seems best to leave (or return) *Hepatica* to generic rank, pending additional research. References: Dutton, Keener, & Ford (1997) in FNA3 (1997); Hoot, Meyer, & Manning (2012); Jiang et al (2017); Steyermark & Steyermark (1960).

- 1 Leaves 3 (-7) lobed, the lobes acute, the primary sinuses deep, over halfway to the petiole (the middle lobe 70-90% as long as the total length of the leaf blade); involucre bracts acute..... *Hepatica acutiloba*
 1 Leaves 3-lobed, the lobes broadly rounded, the primary sinuses less deep, about halfway to the petiole (the middle lobe 50-70% as long as the total length of the leaf blade); involucre bracts obtuse..... *Hepatica americana*

Hepatica acutiloba A.P. de Candolle. SHARP-LOBED HEPATICA, SHARP-LOBED LIVERLEAF. **Hab:** Moist forests, especially over calcareous or mafic rocks. **Dist:** ME, s. QC, s. ON, and MN south to SC, AL, MS (Tishomingo County), and AR. **Phen:** (Late Jan-) Mar-Apr. **Tax:** See comments under *H. americana* about the taxonomy of our two taxa of *Hepatica*. **Syn:** = C, F, G, Il, Mi, NY, RAB, Tn, W, WV, Jiang et al (2017); = *Anemone acutiloba* (A.P. de Candolle) G. Lawson – Ar, FNA3, NE, Pa, Va, Hoot, Meyer, & Manning (2012); = *Hepatica acuta* (Pursh) Britton – S; = *Hepatica nobilis* P. Miller var. *acuta* (Pursh) Steyermark – K1, K3, K4, Steyermark & Steyermark (1960). [NatureServe G5T5](#) (Secure).

Hepatica americana (A.P. de Candolle) Ker Gawler. ROUND-LOBED HEPATICA, ROUND-LOBED LIVERLEAF. **Hab:** Moist forests. **Dist:** NS, s. QC, s. ON, and MB south to Panhandle FL, AL, MS, and AR. **Phen:** (Jan-) Feb-May. **Tax:** The two North American taxa of *Hepatica* seem entirely distinct in our region; they have sometimes been described as hybridizing freely or merging indistinguishably, but this seems inaccurate. They are also both related to the European *H. nobilis* P. Miller. Steyermark & Steyermark (1960) chose to treat the three entities as varieties of *H. nobilis*; I prefer to retain them at the specific level, a position also carefully supported by Yatskievych (2013). **Syn:** = C, F, G, Il, Mi, NY, RAB, Tn, W, WV, Jiang et al (2017); = *Anemone americana* (A.P. de Candolle) H. Hara – Ar, FNA3, NE, Pa, Va, WH3, Hoot, Meyer, & Manning (2012); = *Hepatica nobilis* P. Miller var. *obtusata* (Pursh) Steyermark – K1, K3, K4, Steyermark & Steyermark (1960); < *Hepatica hepatica* (Linnaeus) Karsten – S. [NatureServe G5T5](#) (Secure).

*Myosurus* Linnaeus 1753 (MOUSETAIL)

A genus of about 15 species, annual scapose herbs, nearly cosmopolitan (lacking in e. Asia and tropical regions), with a center of diversity in w. North America. References: Campbell (1952); Emadzade et al (2010); Tamura in Kubitzki, Rohwer, & Bittrich (1993); Whittemore (1997b) in FNA3 (1997).

Identification Notes: The tremendously elongated receptacle of the flower is easily mistaken for a spikelike inflorescence (such as of *Plantago*).

 Symbology:

* : waif
 EN : endemic
 H : historic

N : no
 P : planted
 ? : questionable
 X : extirpated

111b. RANUNCULACEAE

Myosurus minimus Linnaeus. MOUSETAIL. **Hab:** Usually in disturbed areas, such as fields in floodplains.

Dist: The species is circumboreal and also found in various places in the Southern Hemisphere. **Phen:** Mar-May.

Tax: A number of subspecies have been described; if these are recognized, our material in eastern North America is the typical ssp. *minimus*. **Comm:** Widely distributed in North America, Eurasia, and the Southern Hemisphere.

The pre-Columbian occurrence of *Myosurus* in parts of our area (such as the Coastal Plain and Piedmont of the Atlantic states) is uncertain; it may well be an alien, early introduced from more western parts of se. North America. The plant is a winter annual, sprouting from seed in the fall, overwintering as a rosette, and flowering in early spring. **Syn:** = Ar, C, F, FNA3, G, GrPl, GW2, Il, K1, K3, Mi, NcTx, NE, NY, RAB, S, Tn, Tx, Va; = *Ranunculus minimus* (Linnaeus) E.H.L. Krause – K4; > *Myosurus minimus* ssp. *minimus* – Campbell (1952).

Ranunculus Linnaeus 1753 (BUTTERCUP, CROWFOOT, SPEARWORT)

A genus of about 550 species, perennial and annual herbs, nearly cosmopolitan (most diverse in temperate and boreal regions of the Northern Hemisphere), here following the circumscription of Emadzade et al. (2010), with removal of numerous small genera more closely related to *Myosurus* and *Trautvetteria*. Subgeneric and sectional taxonomy follows Hörandl & Emadzade (2012). In the *R. hispidus* complex, I follow Duncan's (1980) taxonomic entities, though recognizing some of his varieties as species; distributions given in many works for the *R. hispidus* complex are apparently garbled by differences in taxonomic concepts. References: Duncan (1980); Emadzade et al (2010); Haines (2007b); Hörandl & Emadzade (2012); Keener & Hoot (1987); Keener (1976); Paun et al (2005); Tamura in Kubitzki, Rohwer, & Bittrich (1993); Whittemore (1997a) in FNA3 (1997); Wiegand, Bobrov, & Zaleska-Galosz (2017).

Identification Notes: Mature or relatively mature achenes are necessary for the identification of some species. Shape and pubescence of the receptacle is also a frequently used taxonomic character, best judged by stripping off the achenes.

- 2 Cauline leaves all simple, mostly lanceolate, either entire, denticulate, or serrate, but not lobed or deeply divided; [native, occurring in marshes or other wetlands]; [subgenus *Auricomus*; section *Flammula*] **Key B**
- 2 Cauline leaves (at least most them) lobed, divided, or compound; [native or introduced, occurring in various habitats].
- 3 Basal leaves not divided, mostly cordate, reniform, or ovate (and merely toothed), distinctly unlike the deeply divided cauline leaves; achenes turgid, ovoid, 1-2.5 mm long, without pronounced marginal rims; petals 1.5-6.5 mm long; [native, occurring in mesic to dry forests and woodlands, and also (especially *R. abortivus*) weedy]; [subgenus *Auricomus*; section *Auricomus*] **Key C**
- 3 Basal leaves mostly deeply parted or compound, the cauline leaves generally similar but smaller and often less divided; achenes various, 1-5 mm long, with or without pronounced marginal rims; petals 2-15 mm long; [native or introduced, occurring in various habitats].
- 4 Achenes markedly spiny, papillose, or tuberculate (the protuberances few and small in *R. sardous*, keyed both here and below); [introduced, usually weedy and in disturbed habitats] **Key D**
- 4 Achenes smooth (rarely pubescent or papillose); [native or introduced, occurring in various habitats].
- 5 Achenes turgid, 1-1.5 (-2) mm long, the marginal rims scarcely or not at all evident, the achenes corky-thickened at their bases for dispersal by floating; [of mucky marshes or ditches, or aquatic in pools]; [subgenus *Auricomus*; section *Hecaton*] **Key E**
- 5 Achenes moderately turgid or flattened, 1.5-3.8 mm long, with a pronounced (at 10× or more) marginal rim appearing as a differentiated border or flange, more-or-less flattened, and separated from the central bulge of the achene by a concavity or even a groove, the achenes not corky-thickened at their bases; [of mostly terrestrial habitats or in bottomland forests] **Key F**

Key B - subgenus *Auricomus*; section *Flammula* (simple-leaved buttercups) (Spearworts)

- 1 Petals 1-3 (-5); petals 1-2 mm long, about as long as the sepals; annual *Ranunculus pusillus*
- 1 Petals (4-) 5-9; petals 2-8 mm long, distinctly longer than the sepals; annual or perennial *Ranunculus laxicaulis*

Key C - subgenus *Auricomus*; section *Auricomus*

- 2 Petals 4-8 mm long, longer than the sepals *Ranunculus harveyi*
- 2 Petals 1.5-3.5 mm long, slightly shorter than the sepals.
- 3 Leaves and stems glabrous or nearly so (or the upper stem puberulent); basal leaves 1-6 (-10) cm wide, reniform to cordate at the base; roots usually all filiform; receptacle surface (with achenes removed or fallen off) pubescent (at least sparsely so); achenes shiny *Ranunculus abortivus*
- 3 Leaves and stems villous, at least sparsely so and at least toward the base of the plant; basal leaves 1-2.5 cm wide, truncate to cuneate (rarely cordate) at the base; roots sometimes in part fusiform-thickened; receptacle surface glabrous; achenes dull *Ranunculus micranthus*

Key D - subgenus *Ranunculus*; sections *Polyanthemos*, *Ranunculus*, and *Echinella*

- 1 Flowers sessile, opposite the petioles; sepals 3; petals 3; [section *Polyanthemos*] *Ranunculus platensis*
- 1 Flowers pedunculate, axillary; sepals usually 5; petals usually 5.
- 2 Petals 1-2 (-3) mm long; receptacles glabrous; [section *Ranunculus*] *Ranunculus parviflorus*
- 2 Petals (3-) 4-12 mm long; receptacles pubescent.
- 3 Achenes bodies 1.5-3 mm long, 30-60 per head; achene beak ca. 0.5 mm long; achene with conical protuberances or short spines, to 0.16 mm long; achene beak 0.1-0.5 mm long; basal leaves compound; [section *Polyanthemos*].
- 4 Achene with a few conical protuberances; petals 5-12 mm long; plant sparsely to densely hirsute; achenes 30-40 per head *Ranunculus sardous*
- 4 Achene with numerous short spines; petals (3-) 4-5 mm long; plant with a few, widely scattered, long hairs; achenes 40-60 per head *Ranunculus trilobus*

111b. RANUNCULACEAE

- 3 Achenes 2.5-5 mm long, 4-20 per head; achene beak 1.5-3.0 mm long (or 0.8-1 mm long in *R. marginatus*); achene conspicuously spiny, the longer spines mostly 0.30-0.85 mm long (or only ca. 0.2 mm long in *R. marginatus*); basal leaves simple (but deeply lobed) or compound.
 5 Achenes 4-9 per head, in a single whorl; achene margins spiny, as also the faces; beak of the achene 2.5-3 mm long; [section *Echinella*].....*Ranunculus arvensis*
- 5 Achenes 10-20 per head, in several whorls; achene margins smooth, the spines restricted to the faces; beak of the achene 1.5-2.5 mm long; [section *Polyanthemos*].
*Ranunculus muricatus*

Key E - subgenus *Auricomus*; section *Hecaton*

- 1 Petals 6-14 mm long; achene body 1.3-2.5 mm long, the beak 0.7-1.5 mm long; plants with submersed leaves dissected into numerous linear segments; [aquatic].....*Ranunculus flabellaris*
- 1 Petals 2-4 (-5) mm long; achene body 0.8-1.2 mm long, the beak 0-0.1 mm long; plants without distinctive, dissected submersed leaves; [terrestrial or semi-aquatic].
*Ranunculus sceleratus* var. *sceleratus*

Key F - subgenus *Ranunculus*; section *Polyanthemos* (and *Ranunculus*)

- 1 Petals 2-6 mm long, about as long as the sepals; [section *Polyanthemos*].
*Ranunculus recurvatus* var. *recurvatus*
- 1 Petals 5-15 mm long, (1.3-) 1.5× or more as long as the sepals; achene beak straight, flexuous, slightly curved, or hooked, 0.2-3.0 mm long.
 4 Achene beaks recurved or hooked, the stigmatic surface elongate, along the upper (curved) side of the style (beak) (visible at 10×); [introduced, usually weedy in disturbed habitats].
 5 Stems repent, rooting at the nodes; [section *Polyanthemos*].....*Ranunculus repens*
- 5 Stems erect, not rooting at the nodes.
 6 Petals 5-8 mm long; plant a soft-based annual; achene face usually with at least a few conical protuberances (if examined carefully at 10× or more); [section *Polyanthemos*].....*Ranunculus sardous*
- 6 Petals 8-16 mm long; plant a cormose or hard-based perennial; achene face truly smooth.
 7 Sepals spreading; stems not cormose-thickened at the base; larger leaves appearing (3-) 5-parted, all of the segments sessile; plant to 12 dm tall; [section *Ranunculus*].....*Ranunculus acris*
- 7 Sepals tightly reflexed; stems cormose-thickened at the base; larger leaves pinnately 3-5-parted, the terminal segment long-stalked; plant to 6 dm tall; [section *Polyanthemos*].....*Ranunculus bulbosus*
- 4 Achene beaks straight or slightly curved, flexuous, the stigmatic surface limited to the tip of the style (beak); [native, normally in more-or-less natural habitats]; [section *Polyanthemos*].
 8 Larger leaves mostly pinnately 3-7-foliolate, the terminal leaflet larger than the lateral leaflets, the leaflets (especially the terminal) often further cleft or lobed, the blade usually longer than wide in outline, the segments often rather narrow; naked receptacle conical, tapering gradually to the apex (the region of staminal attachment as thick as the region of gynoecial attachment, which tapers through all or nearly all of its length, best seen by stripping off the achenes); rhizome regenerating totally each growing season, producing both fibrous and (at the end of the growing season) tuberous roots (1.3-4.9 mm in diameter); [rare in our area, in calcareous, mafic, or ultramafic sites with prairie affinities].....*Ranunculus fascicularis*
- 8 Larger leaves mostly palmately 3-foliolate, the terminal leaflet about the same size as the lateral leaflets, the leaflets sometimes further cleft or lobed, the blade usually as wide as long or wider; naked receptacle clavate or ellipsoid (the region of staminal attachment distinctly narrower than the region of gynoecial attachment, thus forming a waist, from which the gynoecial region expands and then tapers to the apex); rhizome regenerated partially each growing season, producing uniform, fibrous roots (up to 3.0 mm in diameter); leaves usually simple and ovate, or trifoliate with ovate leaflets; [collectively widespread in our area].
 9 Achenes wide-margined (wider portions of the margin 1/4 to 2/3 as wide as the achene body); plants colonial, sending out stolons (by the time of fruiting) which root at the nodes, forming new plants; sepals reflexed at full anthesis.....*Ranunculus septentrionalis*
- 9 Achenes narrow-margined (wider portions of the margin 1/8 or less as wide as the achene body); plants usually erect or repent by the time of fruiting (if repent sometimes forming adventitious roots at the nodes, but not generally developing new plants); sepals spreading at full anthesis (sometimes reflexed later).
*Ranunculus hispidus*

Ranunculus abortivus Linnaeus. KIDNEYLEAF BUTTERCUP, EARLY WOOD BUTTERCUP. **Hab:** Bottomland and other moist forests, low fields, disturbed areas, lawns, roadsides. **Dist:** NL (Labrador) to AK, south to FL, TX, and CO. **Phen:** (Feb-) Mar-Jun. **ID Notes:** A common plant, sometimes pretty weedy, in shady and sunny places, recognizable from its cordate, basal leaves that are broader than long, and with distinctive broad teeth that are flatish. **Syn:** = Ar, FNA3, GrPl, GW2, K1, K3, K4, Mi, NcTx, NE, NY, Pa, RAB, S, Tx, Va, W, WH3, WV, Keener (1976); > *Ranunculus abortivus* var. *abortivus* – C, F, G, Il; > *Ranunculus abortivus* Linnaeus var. *acrolasius* Fernald – F, Il; > *Ranunculus abortivus* Linnaeus var. *eucyclus* Fernald – F; > *Ranunculus abortivus* Linnaeus var. *indivisus* Fernald – F.

* ***Ranunculus acris*** Linnaeus. TALL BUTTERCUP, BITTER BUTTERCUP. **Hab:** Pastures, fields, roadsides, lawns, disturbed areas. **Dist:** Native of Europe. **Phen:** May-Aug. **Syn:** = C, F, FNA3, G, GrPl, GW2, Il, Mi, NE, NY, Pa, RAB, S, Tn, W, WV, Keener (1976); > *Ranunculus acris* var. *acris* – K1, K3, K4. **NatureServe G5T5** (Secure).

* ***Ranunculus arvensis*** Linnaeus. CORN CROWFOOT, HUNGERWEED. **Hab:** Fields, disturbed areas. **Dist:** Native of Europe. **Phen:** Apr-Jun. **Syn:** = Ar, C, FNA3, G, GrPl, GW2, Il, K1, K3, K4, NY, WV, Keener & Hoot (1987), Keener (1976); > *Ranunculus arvensis* var. *arvensis* – RAB; > *Ranunculus arvensis* var. *tuberculatus* (A.P. de Candolle) Koch – RAB. **NatureServe GNR** (Not Yet Ranked).

* ***Ranunculus bulbosus*** Linnaeus. BULBOUS BUTTERCUP, ST. ANTHONY'S TURNIP. **Hab:** Fields, roadsides, disturbed areas. **Dist:** Native of Europe. **Phen:** Apr-Jul. **Syn:** = Ar, C, FNA3, GrPl, GW2, Il, K1, K3, K4, Mi, NE, NY, Pa, RAB, S, Tn, Va, W, WV, Keener (1976); > *Ranunculus bulbosus* var. *bulbosus* – F; > *Ranunculus bulbosus* var. *dissectus* Barbey – F; > *Ranunculus bulbosus* var. *valdepubens* (Jordan) Briquet – F. **NatureServe GNR** (Not Yet Ranked).

Ranunculus fascicularis Muhlenberg ex Bigelow. THICK-ROOT BUTTERCUP, EARLY BUTTERCUP. **Hab:** Wet flats with prairie affinities (with *Camassia scilloides*), rocky barrens and glades over mafic rocks (such as gabbro or diabase), ultramafic outcrop barrens (over olivine), limestone barrens, prairies, oak savannas. **Dist:** MA and NY west to s. ON, MN, and se. MB, south to c. NC, nc. SC, sw. GA, and e. TX; occurrences which are both south of New England and east of the Appalachians are scattered and disjunct. **Phen:** Feb-May; Mar-Jun. **Comm:** This species is tetraploid (n =

16). **Syn:** = Ar, C, FNA3, GrPl, GW2, Il, K1, K3, K4, Mi, NcTx, NE, NY, Pa, S, Tn, Va, W, Duncan (1980), Keener (1976); > *Ranunculus fascicularis* var. *apricus* (Greene) Fernald – Tx; > *Ranunculus fascicularis* var. *fascicularis* – F, G, Tx. NatureServe G5 (Secure).

Ranunculus flabellaris Rafinesque. YELLOW WATER CROWFOOT. **Hab:** Pools in floodplains of small stream swamps, ponds, borrow pits, other stagnant or slowly moving waters. **Dist:** ME west to BC, south to ne. NC, KY, IN, IL, LA, OK, UT, and CA. **Phen:** Mar-Jul. **Syn:** = Ar, C, F, FNA3, G, GrPl, GW2, Il, K1, K3, K4, Mi, NE, NY, Pa, RAB, Tn, Va, Keener (1976); = *Ranunculus delphiniifolius* Torrey ex Eaton – S. NatureServe G5 (Secure).

Ranunculus harveyi (A. Gray) Britton. **Hab:** Forests, savannas, shaley bluffs, and prairies, mostly on acidic substrates. **Dist:** IN, IL, MO, and OK south to TN, AL, and LA. **Phen:** Mar-May. **Syn:** = *Ranunculus harveyi* var. *harveyi* – Ar, FNA3, K1; < *Ranunculus harveyi* (A. Gray) Britton – C, F, G, Il, K3, K4, Tn. NatureServe G4 (Apparently Secure).

Ranunculus hispidus Michaux. HISPID BUTTERCUP, HAIRY BUTTERCUP. **Hab:** Rich moist forests, creekbanks, mesic to dry woodlands and forests, bottomlands. **Dist:** MA and VT west to s. ON, n. IL, and se. KS, south to e. and c. NC, s. GA, s. AL, AR, and ne. OK. **Phen:** Mar-Jun. **Tax:** This species is tetraploid ($n = 16$). **Syn:** = GW2, NE, NY, RAB, S, Va, W, Haines (2007b), Keener (1976); = *Ranunculus hispidus* var. *hispidus* – Ar, C, FNA3, GrPl, K1, K3, K4, Mi, Pa, Tn, Duncan (1980); > *Ranunculus hispidus* var. *eurylobus* L. Benson – F, G, WV; > *Ranunculus hispidus* var. *falsus* Fernald – F; > *Ranunculus hispidus* var. *hispidus* – F, G, Il, WV; > *Ranunculus hispidus* var. *marilandicus* (Poiret) L. Benson – G, Il.

Ranunculus laxicaulis (Torrey & A. Gray) Darby. COASTAL PLAIN SPEARWORT. **Hab:** Marshes, swamps, tidal cypress swamps. **Dist:** DE south to sw. GA, Panhandle FL (L. Anderson, pers.comm., 2021), west to e. TX, inland in the interior to w. TN, s. IN, s. IL, MO, and KS, almost entirely on the southeastern Coastal Plain. **Phen:** Apr-Sep. **Tax:** *R. subcordatus* E.O. Beal, allegedly endemic to NC, is conspecific with *R. laxicaulis*. **Syn:** = Ar, F, FNA3, G, GrPl, Il, K1, K3, K4, RAB, Tn, Tx, Va, W, WH3; > *Ranunculus laxicaulis* (Torrey & A. Gray) Darby – GW2, Keener (1976); ? *Ranunculus oblongifolius* Elliott – S, misapplied; > *Ranunculus subcordatus* E.O. Beal – GW2, Keener (1976); ? *Ranunculus texensis* Engelman – C.

Ranunculus micranthus Nuttall. SMALL-FLOWERED BUTTERCUP, ROCK BUTTERCUP. **Hab:** Rich bottomland forests, also upslope on mesic to dry forests and rock outcrops over mafic or calcareous substrates. **Dist:** MA west to SD, south to e. VA, c. NC, sc. TN, WV, OH, and OK. **Phen:** Mar-Jun. **Syn:** = Ar, C, FNA3, G, GrPl, GW2, Il, K1, K3, K4, NE, NY, Pa, RAB, S, Tn, Va, W, WV, Keener (1976); > *Ranunculus micranthus* var. *cymbalistes* (Greene) Fernald – F; > *Ranunculus micranthus* var. *delitescens* (Greene) Fernald – F; > *Ranunculus micranthus* var. *micranthus* – F. NatureServe G5 (Secure).

* **Ranunculus muricatus** Linnaeus. ROUGHSEED BUTTERCUP. **Hab:** Ditches and marshes. **Dist:** Native of Europe. **Phen:** Feb-Jun. **Syn:** = FNA3, GW2, K1, K3, K4, NcTx, NY, RAB, S, Tx, WH3, Keener & Hoot (1987), Keener (1976). NatureServe GNR (Not Yet Ranked).

* **Ranunculus parviflorus** Linnaeus. SMALL-FLOWERED BUTTERCUP, STICKSEED CROWFOOT. **Hab:** Disturbed areas. **Dist:** Native of Europe. **Phen:** Feb-Jul. **Syn:** = Ar, C, F, FNA3, G, GW2, Il, K1, K3, K4, NcTx, RAB, S, Tn, Tx, Va, W, WH3, Keener & Hoot (1987), Keener (1976). NatureServe GNR (Not Yet Ranked).

* **Ranunculus platensis** Sprengel. **Hab:** Lawns, ditches. **Dist:** Native of South America. Reported for Beaufort, Berkeley, Lee, and Orangeburg counties, SC (Bradley et al. [in prep.]). **Syn:** = FNA3, GW2, K1, K4, Tx, WH3, Keener & Hoot (1987), Keener (1976). NatureServe GNR (Not Yet Ranked).

Ranunculus pusillus Poiret. LOW SPEARWORT, SMALL SPEARWORT. **Hab:** Marshes, ditches, other wet habitats. **Dist:** S. NY south to c. peninsular FL, west to c. TX, north in the interior to OH, IN, and MO. **Phen:** Apr-Jun. **Syn:** = Ar, C, F, FNA3, G, GW2, Il, K3, K4, NcTx, NY, Pa, RAB, S, Tn, Tx, Va, W, WH3, WV, Keener (1976); > *Ranunculus oblongifolius* Elliott; > *Ranunculus pusillus* Poiret var. *angustifolius* (Engelmann) L. Benson; > *Ranunculus pusillus* var. *pusillus* – K1.

Ranunculus recurvatus Poiret var. *recurvatus*. HOOKED BUTTERCUP, HOOKED CROWFOOT. **Hab:** Bottomland forests, cove forests, swamps, mesic slope forests. **Dist:** ME and QC west to MN, south to sw. GA, MS, and OK. **Phen:** Apr-Jul. **Tax:** Var. *tropicus* (Grisebach) Fawcett & Rendle occurs in Puerto Rico and other islands of the West Indies. **Syn:** = Ar, FNA3, K1, K3, K4, NE, NY, Va; < *Ranunculus recurvatus* – C, G, GrPl, GW2, Il, Mi, Pa, RAB, S, Tn, Tx, W, WH3, Keener (1976); > *Ranunculus recurvatus* var. *adpressipilis* Weatherby – F, WV; > *Ranunculus recurvatus* Poiret var. *recurvatus* – F, WV. NatureServe G5T5 (Secure).

111b. RANUNCULACEAE

* **Ranunculus repens** Linnaeus. CREEPING BUTTERCUP, MEG-MANY-FEET. **Hab:** Low meadows, disturbed areas. **Dist:** Native of Europe. **Phen:** May-Sep. **Syn:** = Ar, FNA3, G, GW2, K1, K3, K4, Mi, NE, NY, Pa, RAB, S, Tx, Va, W, Keener (1976); > *Ranunculus repens* var. *degeneratus* Schur – C, Il; > *Ranunculus repens* var. *glabratus* A.P. de Candolle – C, F; > *Ranunculus repens* var. *pleniflorus* Fernald – F, WV; > *Ranunculus repens* var. *repens* – C, F, Il, WV.

* **Ranunculus sardous** Crantz. SARDINIAN BUTTERCUP, HAIRY BUTTERCUP. **Hab:** Low fields, disturbed areas. **Dist:** Native of Europe. **Phen:** Apr-Jul (-Oct). **Syn:** = Ar, C, F, FNA3, G, GrPl, GW2, Il, K1, K3, K4, Mi, NE, NY, Pa, RAB, Tn, Tx, Va, WH3, Keener & Hoot (1987), Keener (1976). NatureServe GNR (Not Yet Ranked).

Ranunculus sceleratus Linnaeus var. *sceleratus*. CURSED BUTTERCUP, CELERY-LEAF CROWFOOT. **Hab:** Marshes, ditches, and stream margins. **Dist:** The species is circumboreal, ranging south in North America (partly introduced, at least southward) to n. FL, LA, TX, and CA. **Phen:** Apr-Sep. **Tax:** Var. *sceleratus* is widespread and the only variety in e. North America; var. *multifidus* occurs in w. North America. The epithet has sometimes been misspelled 'scleratus'. **Syn:** = Ar, C, F, FNA3, G, GrPl, K1, K3, K4, NE, NY, Va; < *Ranunculus sceleratus* – GW2, Il, Mi, NcTx, Pa, RAB, S, Tn, Tx, W, WH3, Keener (1976). NatureServe G5T5 (Secure).

Ranunculus septentrionalis Poirlet in Lamarck. CAROLINA BUTTERCUP. **Hab:** Swamp forests, wet woodlands, open marshy wetlands. **Dist:** NY west to s. ON, WI, and MN, south to n. peninsular FL, LA, and e. TX. **Phen:** Mar-Aug. **Tax:** This species is tetraploid (n = 16). **Syn:** = NY, Haines (2007b); = *Ranunculus carolinianus* A.P. de Candolle – F, G, GW2, Il, RAB, Va, W, WV, Keener (1976); = *Ranunculus hispidus* Michaux var. *nitidus* (Chapman) T. Duncan – Ar, C, FNA3, GrPl, K1, K3, K4, Mi, NcTx, Pa, Tn, WH3, Duncan (1980); > *Ranunculus carolinianus* var. *carolinianus* – Tx; > *Ranunculus carolinianus* var. *villicaulis* Shinnars – Tx; > *Ranunculus palmatus* Elliott – S; > *Ranunculus septentrionalis* Poirlet in Lamarck – S.

* **Ranunculus trilobus** Desfontaines. **Hab:** Fields, roadsides, ditches. **Dist:** Native of sw. Europe. **Syn:** = FNA3, K1, WH3, Keener & Hoot (1987), Keener (1976). NatureServe GNR (Not Yet Ranked).

**Thalictrum** Linnaeus 1753 (MEADOW-RUE)

A genus of about 330 species, perennial herbs, of Eurasia, North America, South America, and Africa. Ro & McPherson (1997) corroborated via molecular phylogeny that *Anemonella* should be included in *Thalictrum*; in fact, *T. thalictroides* appears to form a "basal" subclade in *Thalictrum* with *T. clavatum* (and presumably *T. mirabile*). References: Park & Festerling (1997) in FNA3 (1997); Park (1992); Ro & McPherson (1997); Tamura in Kubitzki, Rohwer, & Bittrich (1993).

Identification Notes: *Thalictrum thalictroides* is superficially similar to *Enemion biternatum*, but can be distinguished by the following characters: fruit an achene (vs. fruit a follicle), petaloid sepals 5-10 (vs. 5).

- 1 Sepals petaloid, conspicuous, white (or tinged with pink or green); leaflike involucral bracts present, opposite or whorled; inflorescence an umbel; [section *Anemonella*].....*Thalictrum thalictroides*
- 1 Sepals absent, or inconspicuous in comparison to the stamens or pistils; leaflike involucral bracts not present; inflorescence a panicle, corymb or raceme.
 - 5 Most of the leaflets with (3-) 4-6 (-9) lobes or teeth; [section *Heterogamia*].
 - 7 Largest leaflets > 15 mm long; stems 30-80 cm tall, erect*Thalictrum dioicum*
 - 7 Largest leaflets < 15 mm wide; stems 10-40 cm tall, reclining*Thalictrum debile*
 - 5 Most of the leaflets with 1-3 (-5) lobes or teeth; [section *Leucocoma*].
 - 9 Leaflet undersurfaces, peduncles, and achenes with stipitate glands or papillae.
 - 10 Anthers 1-3.6 (-4) mm long; stigmas 1.5-4.7 (-6) mm long*Thalictrum dasycarpum*
 - 10 Anthers 0.5-2.8 mm long; stigmas 0.6-3.5 mm long.*Thalictrum amphibolum*
 - 9 Leaflet undersurfaces, peduncles, and achenes glabrous or pubescent, lacking both stipitate glands and papillae.
 - 12 Leaflet undersurfaces, peduncles, and achenes finely pubescent*Thalictrum pubescens*
 - 12 Leaflet undersurfaces, peduncles, and achenes glabrous.
 - 13 Leaflets entire to 3-lobed, averaging about 10 mm wide, the broadest usually < 20 mm wide; filaments (2-) 3-4.5 (-6.5) mm long (averaging 3.6 mm)....*Thalictrum macrostylum*
 - 13 Leaflets 3-lobed (rarely entire), averaging 15-23 mm wide, the broadest usually 15-60 mm wide; filaments (2-) 4-5 (-8) mm long (averaging 4.5 mm).
