 - 4 Plant annual, from fibrous roots, 0.5-7.5 dm tall; corollas 7.5-21 mm long.
 - *Agalinis maritima* var. *grandiflora*
- 3 Leaves filiform, membranous, or stiff; upper leaf surfaces distinctly or minutely scabrous; [a wide range of habitats, including wetlands].
 - 6 Lower corolla lobes glabrous on the outer surface; calyx lobes (1.5-) 2-8 mm long, narrowly triangular to lanceolate, 1.5-4× as long as wide.
 - *Agalinis heterophylla*
 - 6 Lower corolla lobes pilose on the outer surface; calyx lobes 0.3-3 (-5) mm long, deltate to broadly lanceolate, 0.8-2× as long as wide.
 - 8 Pedicels shorter than the subtending bract.

- 9 Upper corolla lobes projecting prominently over the upper anthers; inner surface of corolla throat glabrous across the bases of the upper lobes; pedicels 6-25 mm long..... *Agalinis tenuifolia*
- 9 Upper corolla lobes spreading to reflexed, not or slightly projected past the throat; inner surface of corolla throat villous across the bases of the upper lobes; pedicels 0.5-8 mm long.
- 10 Axillary leaf fascicles well-developed, shorter than or roughly equal to the subtending leaves..... *Agalinis fasciculata* var. *fasciculata*
- 10 Axillary leaf fascicles absent or shorter than the subtending leaves.
- 12 Leaves filiform, 0.2-0.8 mm wide; flowers 1 per node, the uppermost on each branch appearing terminal..... *Agalinis plukenetii*
- 12 Leaves filiform to linear-lanceolate, 0.6-4 (-5) mm wide; flowers 1-2 per node.
- 13 Leaves 0.5-1.4 mm wide; calyx lobes keeled; seeds black; corollas 15-23 mm long..... *Agalinis harperi*
- 13 Leaves 0.5-4 (-5) mm wide; calyx lobes rounded on the back; seeds dark brown; corollas 9-36 mm long..... *Agalinis purpurea*
- 8 Pedicels longer than or equal to the subtending bract.
- 17 Leaves (all) 0.5-3 mm long.
- 18 Inflorescence a raceme (or with several branches), the flowers borne all along the axes; branches stiff and straight, ascending, quadrangular in cross-section; [NC to n. FL, west to e. LA]..... *Agalinis aphylla*
- 18 Inflorescence a diffuse panicle, with flowers borne in 1's (or 2's or 3's) at the ends of long branches; branches lax, initially spreading, then curving upwards, nearly terete in cross-section; [e. GA south to c. FL peninsula, west to w. LA]..... *Agalinis filicaulis*
- 17 Leaves (1-) 4-70 mm long, at least some leaves > 4 mm long.
- 19 Outer surface of the lower corolla lobes pilose.
- 21 Upper corolla lobes projecting prominently over the upper anthers; inner surface of corolla throat glabrous across the bases of the upper lobes; leaves 0.3-6 mm wide; seeds tan to brown..... *Agalinis tenuifolia*
- 21 Upper corolla lobes spreading to reflexed, not or slightly projected past the throat; inner surface of corolla throat villous across the bases of the upper lobes; leaves 0.2-1.4 (-1.5) mm wide; seeds black or yellowish tan.
- 22 Flowers 2 per node; inflorescences racemes; capsules elliptic-ovoid..... *Agalinis setacea*
- 22 Flowers 1 per node; inflorescences racemes or panicles; capsules globular-ovoid..... *Agalinis gattereri*
- 19 Outer surface of the lower corolla lobes glabrous.
- 24 Pedicels scabrous; axillary leaf fascicles usually present and > 1/2 the length of the subtending leaves (sometimes absent).
- 25 Corolla lobes unequal in length, 2-6 mm long; upper corolla lobes arched over the anthers; calyx lobes triangular-subulate, recurved, 0.6-1.5 mm long; [Coastal Plain and Interior Highlands, w. MS, AR, LA, OK, and TX]..... *Agalinis homalantha*
- 25 Corolla lobes equal in length, 6-12 mm long; upper corolla lobes spreading; calyx lobes subulate, erect, 0.1-0.6 mm long; [strictly Coastal Plain, GA and Panhandle FL west to e. TX]..... *Agalinis pulchella*
- 24 Pedicels glabrous or ± scabridulous; leaf axillary fascicles absent or shorter than the subtending leaves.
- 31 Lower and mid stem branches stiffly arching-ascending, ascending, erect-ascending, or spreading-ascending; branches quadrangular in cross-section; capsules globular to oblong; leaves erect, erect-ascending, or ascending, or the lower slightly spreading.
- 32 Leaf blades subulate, elliptic, or filiform; anthers 1.8-2.6 mm long; corollas 15-25 mm long, pink to dark pink, with 2 yellow lines and red spots present in the floor of the throat; corolla lobes 4-7 (-9) mm long..... *Agalinis oligophylla*
- 32 Leaf blades linear-elliptic, narrowly spatulate, linear-spatulate, or linear; anthers 0.6-2.1 mm long; corollas 8-16 (-17) mm long, whitish to pink, with 2 yellow lines and red or pink spots pale or absent in the floor of the throat; corolla lobes 3-5 mm long.
- 33 Calyx lobes deltate, 0.2-0.5 mm long; leaf blades linear-elliptic to narrowly spatulate; anthers 1.5-2.1 mm long; stems 3-8 (-10) dm tall; [DE and MD south to s. FL, west to LA, mainly Coastal Plain and adjacent inland provinces]..... *Agalinis obtusifolia*
- 33 Calyx lobes triangular-subulate, 0.3-1.2 mm long; leaf blades linear; anthers 0.6-1.2 mm long; stems 1-5 (-6) dm tall; [mainly OH, KY, TN, and MS northwards and westwards]..... *Agalinis skinneriana*
- 31 Lower and mid stem branches spreading-ascending to laxly and widely spreading; branches subterete to quadrangular-ridged in cross-section; capsules ovoid, obovoid-oblong, ovoid-globular, or obovoid; leaves spreading to spreading-ascending..... *Agalinis viridis*

Agalinis aphylla (Nuttall) Rafinesque. SCALE-LEAF AGALINIS. **Hab:** Wet pine savannas. **Dist:** Se. NC south to ne. FL and Panhandle FL, west to e. LA. **Phen:** Sep-Oct; Oct-Nov. **Syn:** = F17, FNA12, GW2, K1, K3, K4, RAB, S, WH3; = *Gerardia aphylla* Nuttall – Pennell (1935). [NatureServe G3G4](#) (Vulnerable).

Agalinis fasciculata (Elliott) Rafinesque var. *fasciculata*. **Hab:** Longleaf pine sandhills, pine savannas, prairies, barrens, oak savannas, disturbed sandy areas, roadsides. **Dist:** S. MD south to c. peninsular FL, west to e. TX, northward in the interior to s. IN, s. IL, sw. MO, AR, e. NE, and nc. TX. **Phen:** Aug-Sep. **Syn:** = K4; = *Gerardia fasciculata* – Pennell (1935); < *Agalinis fasciculata* (Elliott) Rafinesque – Ar, C, F17, FNA17, GW2, IL, K1, K3, NcTx, RAB, S, Tn, Tx, Va, W, WH3; < *Gerardia fasciculata* Elliott – F, G, GrPl.

Agalinis filicaulis (Benth) Pennell. SPINDLY AGALINIS. **Hab:** Wet pine savannas, bogs, prairies. **Dist:** E. GA (Tattnall County) south to c. peninsular FL and Panhandle FL, west to w. LA. **Phen:** Sep-Oct. **Syn:** = F17, FNA17, K1, K3, K4, S, WH3; = *Gerardia filicaulis* (Benth) Chapman – Pennell (1935). [NatureServe G3](#) (Vulnerable).

Agalinis gattereri (Small) Small ex Britton. GATTINGER'S AGALINIS, MIDWESTERN AGALINIS. **Hab:** Barrens, glades, outcrops, woodlands. **Dist:** ON, MN, and NE south to AL, MS, LA, and TX. **Phen:** Aug-Oct. **Syn:** = Ar, FNA17, IL, K1, K3, K4, Mi, NcTx, S, Tn, Tx; = *Gerardia gattereri* Small – G, Pennell (1935). [NatureServe G4](#) (Apparently Secure).

Agalinis harperi Pennell. HARPER'S AGALINIS. **Hab:** Wet pinelands, interdune swales. **Dist:** E. NC south to s. FL, west to e. TX; n. Bahamas. **Phen:** Aug-Oct. **Tax:** See Hays (1998a) who has established the nomenclatural priority of *A. harperi*. **Comm:** Reported for SC (Kartesz 1999) and for NC and SC (Canne-Hilliker & Hays in FNA17) {investigate}. **Syn:** = Bah, F17, FNA17, K3, K4, WH3, Hays (1998a); = *Agalinis pinetorum* Pennell – K1; = *Gerardia harperi* (Pennell in Small) Pennell – Pennell (1935); > *Agalinis delicatula* Pennell; > *Agalinis harperi* Pennell – S; > *Agalinis pinetorum* Pennell – S.

Agalinis oligophylla Pennell. **Hab:** Moist to dry longleaf pine savannas, chalk outcrops, seepage bogs, moist to wet barrens and meadows. **Dist:** Sc. TN (Coffee and Warren counties) (as *A. pseudophylla*) (Chester, Wofford, & Kral 1997), c. and s. AL, west through s. MS to w. LA. **Phen:** Late Sep-mid Nov. **Syn:** = FNA17, K1, K3, K4, S, Tn, Tx; > *Agalinis pseudophylla* (Pennell) Shinnars; > *Agalinis pseudophylla* (Pennell) Shinnars; > *Gerardia pseudophylla* (Pennell) Pennell – Pennell (1935).

Agalinis plukenetii (Elliott) Rafinesque. PLUKENET'S AGALINIS. **Hab:** Longleaf pine sandhills, other dry forests. **Dist:** SC south to c. peninsular FL, west to w. LA, and northward in the interior to extreme se. TN (Polk County) (Chester, Wofford, & Kral 1997). **Phen:** Late Sep-early Nov. **Syn:** = F17, FNA17, K1, K3, K4, S, Tn, WH3; = *Gerardia plukenetii* Elliott – Pennell (1935). NatureServe G3G5 (Apparently Secure).

Agalinis pulchella Pennell. BEAUTIFUL AGALINIS. **Hab:** Pine savannas and longleaf pine sandhills. **Dist:** S. GA west to e. TX. **Phen:** Sep-early Oct. **Syn:** = F17, FNA17, K1, K3, K4, S, Tx, WH3; = *Gerardia pulchella* Pennell – Pennell (1935). NatureServe G4G5 (Apparently Secure).

Agalinis purpurea (Linnaeus) Pennell. COMMON AGALINIS. **Hab:** Woodlands, wet meadows, roadsides, in a wide variety of open habitats. **Dist:** NS west to MN, south to s. FL and e. TX. **Phen:** Aug-Nov; Sep-Dec. **Syn:** = Ar, F17, GrPl, Il, K1, K3, NE, NY, Pa, RAB, S, Tn, Tx, Va, W, WH3; = *Agalinis purpurea* ssp. *purpurea* – Mi; = *Agalinis purpurea* var. *purpurea* – FNA17, K4; = *Gerardia purpurea* Linnaeus – F, Pennell (1935); = *Gerardia purpurea* var. *purpurea* – G; < *Agalinis purpurea* (Linnaeus) Pennell – GW2; < *Agalinis purpurea* var. *purpurea* – C.

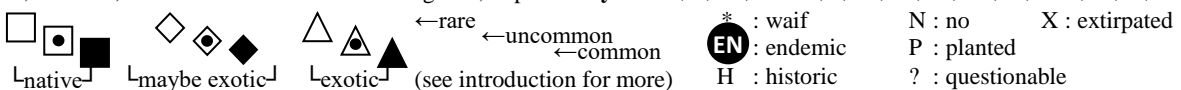

Agalinis setacea (J.F. Gmelin) Rafinesque. THREADLEAF AGALINIS. **Hab:** Longleaf pine sandhills, Florida scrub, other dry forests and openings. **Dist:** NY (Long Island) south to ne. FL, c. peninsular FL, and AL. **Phen:** Aug-Oct; Oct-Nov. **Syn:** = C, F17, FNA17, K1, K3, K4, NY, RAB, S, Tn, Va, W, WH3, Sorrie (2017b) in Weakley et al (2017); < *Agalinis obtusifolia* Rafinesque – F17; > *Agalinis stenophylla* Pennell; > *Gerardia setacea* J.F. Gmelin – F, G, Pennell (1935); > *Gerardia stenophylla* (Pennell) Pennell – Pennell (1935).

Agalinis skinneriana (Alph. Wood) Britton. **Hab:** Glades, dry prairies, bluffs, fens, especially over calcareous substrates, open oak woodlands, in MD in sandy fields and barrens. **Dist:** ON, OH, MI, and WI south to Coffee County, TN (Chester, Wofford, & Kral 1997), MS, and LA; disjunct in Coastal Plain of MD (Prince Georges County, MD; Maryland Wildlife and Heritage Service 2016). **Phen:** Jul-early Oct. **Syn:** = Ar, FNA17, GrPl, Il, K1, K3, K4, Mi, Tn; = *Gerardia skinneriana* Alph. Wood – G, Pennell (1935). NatureServe G3G4 (Vulnerable).

Agalinis tenuifolia (Vahl) Rafinesque. SLENDERLEAF AGALINIS. **Hab:** Wooded slopes, savannas, granitic outcrops, roadsides, other dry habitats. **Dist:** ME, ON, MI, and MO, south to FL and LA. **Phen:** Aug-Oct; Sep-Nov. **Syn:** = Ar, C, F17, FNA17, Il, K3, K4, Mi, NY, Pa, RAB, Tn, W, Sorrie (2017b)

Agalinis viridis (Small) Pennell. GREEN AGALINIS. **Hab:** Moist prairies, chalk prairies of the Black Belt, bottomlands. **Dist:** W. AL, MS, and e. LA west to MO, e. OK, AR, LA, and e. TX. **Phen:** Aug-Oct. **Syn:** = Ar, FNA17, GrPl, K3, K4, Tx. NatureServe G4? (Apparently Secure).

Aphyllon Mitchell 1769 (CANCER-ROOT)

A small genus of perhaps 3-7 species, holoparasitic herbs, of the New World. References: Collins, Colwell, & Yatskievych (2019c) in FNA17 (2019); Musselman (1982); Schneeweiss (2013); Schneider (2016).

Aphyllon uniflorum (Linnaeus) Torrey & A. Gray. GHOSTPIPE, CANCER-ROOT, ONE-FLOWERED BROOMRAPE.

Hab: In a wide diversity of forests. **Dist:** NL (Newfoundland) west to AK and BC, south to FL and TX. **Phen:** Apr-Jun. **Tax:** *Aphyllon uniflorum* var. *occidentale* Greene is western, distributed from SK and BC south to w. TX, CA, and Mexico. Schneider et al. (2016) showed that var. *occidentale* differs genetically and in host from eastern var. *uniflora*; it should be accorded specific rank. **Syn:** = F17; = *Orobanche uniflora* ssp. *uniflora* – FNA17; = *Orobanche uniflora* var. *uniflora* – C; = *Thalesia uniflora* (Linnaeus) Britton – S; < *Aphyllon uniflorum* (Linnaeus) Torrey & A. Gray – Schneider (2016); < *Orobanche uniflora* Linnaeus – Ar, F, G, GrPl, Il, K1, K3, Mi, NE, NY, Pa, RAB, Tn, Tx, Va, W, WH3, Musselman (1982).

Aureolaria Rafinesque 1836 (OAK-LEECH, FALSE-FOXGLOVE)

A genus of about 10 species, hemiparasitic herbs, of e. North America and Mexico. References: Morawetz (2019) in FNA17 (2019); Pennell (1935).

- 1 Calyx lobe margins crenate or pinnatifid; plant pubescent (especially on the calyx, corolla, capsule, and lower stem) with glandular hairs; annual; seeds 0.8-1.0 mm long, not winged. *Aureolaria pectinata*
- 1 Calyx lobe margins entire; plant glabrous or pubescent with nonglandular hairs; perennial; seeds 1.3-2.7 mm long, winged.
- 3 Capsules densely pubescent; inflorescence, pedicels, and/or calyx pubescent with dingy, nonglandular hairs; pedicels 1-3 mm at anthesis; flowering May-Jul *Aureolaria virginica*
- 3 Capsule glabrous; inflorescence, pedicels, and calyx glabrous (or pubescent with white nonglandular hairs); pedicels 1-25 mm long at anthesis; flowering Aug-Oct.
- 4 Lower and midstem white-puberulent; leaf blade surfaces puberulent; IN, IL, MO, AR, and MS westward]. *Aureolaria grandiflora* var. *serrata*
- 4 Lower and mid-stem glabrous; leaf blade surfaces glabrous; [IL, MO, AR, and MS eastward].
- 8 Lower leaves entire to serrate (or with only a few shallow lobes at the base of the leaf); pedicels 1-8 mm long at anthesis, straight; corolla 3.0-4.0 cm long; capsule 10-15 mm long; stem not glaucous *Aureolaria levigata*
- 8 Lower leaves pinnately lobed, the lobes themselves usually serrate, the sinuses extending over half of the distance to the midrib; pedicels 4-25 mm long at anthesis, upwardly curved; corolla 3.5-6 cm long; capsule 12-20 mm long; stem slightly to strongly glaucous. *Aureolaria flava*

Aureolaria flava (Linnaeus) Farwell. SMOOTH OAK-LEECH. **Hab:** Oak forests and woodlands, hemiparasitic on *Quercus* subgenus *Quercus*.

Dist: ME west to MN, south to GA, c. peninsular FL, AL, and e. LA. **Phen:** Aug-Sep; Sep-Oct. **Tax:** The various named varieties or subspecies need additional study; the variation seems too clinal to be practically recognized taxonomically. **Syn:** = Ar, F17, Mi, NY, RAB, Tn, Va, W, WH3; < *Aureolaria flava* (Linnaeus) Farwell – FNA17; > *Aureolaria flava* ssp. *flava* – S; < *Aureolaria flava* ssp. *flava* – S; > *Aureolaria flava* ssp. *macrantha* Pennell – Pennell (1935); > *Aureolaria flava* ssp. *reticulata* (Rafinesque) Pennell – S, Pennell (1935); > *Aureolaria flava* ssp. *typica* – Pennell (1935); < *Aureolaria flava* var. *flava* – C, G, K1, K3, K4, NE, Pa; > *Aureolaria flava* (Linnaeus) Farwell var. *macrantha* Pennell – C, G, Il, K1, K3, K4, Pa, Tx; > *Gerardia flava* Linnaeus var. *flava* – F; > *Gerardia flava* Linnaeus var. *macrantha* (Pennell) Fernald – F; > *Gerardia flava* Linnaeus var. *reticulata* (Rafinesque) Cory – F.

Aureolaria grandiflora (Benth) Pennell var. *serrata* (Benth) Pennell. LARGE-FLOWERED OAK-LEECH. **Hab:** Mesic to dry forests and woodlands. **Dist:** MO south to sw. MS, se. LA, s. LA, and e. TX. **Phen:** Aug-Oct. **Syn:** = GrPl, K1, K3, K4, NcTx; < *Aureolaria grandiflora* – Ar, FNA17; > *Aureolaria grandiflora* var. *cinerea* Pennell – Tx, Pennell (1935); > *Aureolaria grandiflora* (Benth) Pennell var. *serrata* (Benth) Pennell – Tx, Pennell (1935).

Aureolaria levigata (Rafinesque) Rafinesque. APPALACHIAN OAK-LEECH. **Hab:** Oak forests and woodlands. **Dist:** PA west to s. OH, south to SC and GA, primarily a Central and Southern Appalachian endemic, but extending into adjacent provinces, and, rarely, even the Coastal Plain. **Phen:** Aug-Sep; Sep-Oct. **Tax:** The spelling '*levigata*' was used by Rafinesque in the basionym, *Gerardia levigata*. There is no basis for its 'correction' to '*laevigata*' under provisions of the ICNafp (Shenzhen version). **Syn:** = FNA17; = *Aureolaria laevigata* – C, G, K1, K4, Pa, RAB, S, Tn, Va, W, Pennell (1935), orthographic variant; = *Gerardia laevigata* Rafinesque – F. NatureServe G5 (Secure).

Aureolaria pectinata (Nuttall) Pennell. SOUTHERN OAK-LEECH. **Hab:** Turkey oak sandhills, Florida scrub, other dry oak forests and woodlands, barrens. **Dist:** NC south to s. FL, west to LA, inland north to MO, e. OK, and e. TX. **Phen:** May-Sep; Sep-Oct. **Tax:** Related to *A. pedicularia*, but much more southerly in distribution. **Syn:** = Ar, FI7, FNA17, K1, K3, K4, RAB, Tn, Tx, WH3; = *Aureolaria pedicularia* (Linnaeus) Rafinesque var. *pectinata* (Nuttall) Gleason – C, G; = *Gerardia pectinata* (Nuttall) Benth – F; > *Aureolaria pectinata* ssp. *eurycarpa* (Pennell) Pennell – S, Pennell (1935); > *Aureolaria pectinata* (Nuttall) Pennell ssp. *floridana* Pennell; > *Aureolaria pectinata* ssp. *pectinata* – S; > *Aureolaria pectinata* ssp. *transcedens* (Pennell) Pennell – S, Pennell (1935); > *Aureolaria pectinata* ssp. *typica* – Pennell (1935); < *Aureolaria pedicularia* (Linnaeus) Rafinesque ex Pennell – W.

Aureolaria virginica (Linnaeus) Pennell. DOWNY OAK-LEECH, VIRGINIA OAK-LEECH. **Hab:** Oak forests and woodlands, hemiparasitic on *Quercus* subgenus *Quercus*. **Dist:** MA west to MI, south to ne. FL, Panhandle FL, and AL and west on the Coastal Plain through MS, and LA to e. TX. **Phen:** May-Jul; Aug-Sep. **Tax:** Taxa previously recognized (see synonymy) need modern review. **Syn:** = C, FI7, FNA17, G, K1, K3, K4, Mi, NE, NY, Pa, RAB, Tn, Va, W, WH3; = *Gerardia virginica* (Linnaeus) Britton, Sterns, & Poggenburg – F; > *Aureolaria dispersa* (Small) Pennell – Tx; > *Aureolaria microcarpa* Pennell – S, Pennell (1935); > *Aureolaria virginica* (Linnaeus) Pennell – S, Pennell (1935).

Bellardia Allioni 1785 (LINESEED)

A genus of 2 species, hemiparasitic annual herbs, of Mediterranean Europe. References: Uribe-Convers & Tank (2016); Zacharias (2019) in FNA17 (2019).

* **Bellardia viscosa** (Linnaeus) Fischer & C.A. Meyer. YELLOW GLANDWEED. **Hab:** Wet roadside ditches. **Dist:** Native of Europe. Reported for Baldwin County, AL (Barger et al. 2019). **Phen:** May. **Syn:** = FNA17, Uribe-Convers & Tank (2016); = *Parentucellia viscosa* (Linnaeus) Caruel – Ar, K3, K4, Tx. **NatureServe GNR** (Not Yet Ranked).

Buchnera Linnaeus 1753 (BLUEHEARTS)

Contributed by Bruce A. Sorrie

A genus of about 100 species, hemiparasitic biennial and perennial herbs, of tropical and warm temperate regions of the Old and New Worlds. The taxonomy of this genus is poorly understood. The plants are root hemi-parasites, apparently not particular about the host species. References: Pennell (1935); Philcox (1965); Sorrie (2019b) in FNA17 (2019).

Identification Notes: Lower leaves are broadest, mid and upper leaves narrowest, often markedly so; the key refers to lower leaves. Leaf teeth are usually few in number and vary in development, from crenate to 2-3 mm long and sharply pointed. The former condition is normal for *B. floridana*, the latter for *B. americana*. Calyx length is ca. 0.5 mm longer in fruit than in flower. The foliage turns black on drying.

- 1 Leaves lanceolate to narrowly ovate, tapering to a point; veins of lower stem leaves consisting of 3 major and 2 minor ones (narrow leaves may only have 3 total veins); leaf teeth usually well developed, rarely absent, usually 2-3 mm long; calyx (6.0-) 6.5-8.0 mm long; corolla lobes 5.0-7.0 mm long; [primarily of moderate to high pH soils in southern Great Plains, ranging to southern margin of the Great Lakes and eastward to the mid Atlantic seaboard, especially in mafic or calcareous glades and prairies, sometimes in more acid sites].....**Buchnera americana**
- 1 Leaves narrowly oblanceolate to lanceolate, rounded at tip; veins of lower stem leaves consisting of 1 major and 2 minor ones (narrow leaves may only have 1 vein); leaf teeth usually crenate but may be absent, < 2 mm long; calyx (4.0-) 4.5-5.5 mm long; corolla lobes 4.0-5.0 mm long; [primarily of low pH soils on the southern Atlantic and Gulf Coastal Plain, sometimes in calcareous sites (especially in FL)].....**Buchnera floridana**

Buchnera americana Linnaeus. PRAIRIE BLUEHEARTS, AMERICAN BLUEHEARTS, PLAINS BLUEHEARTS. **Hab:** Dry (seasonally moist) rocky, gravelly, or clayey soil of limestone glades, glades over mafic rock (such as diabase, gabbro, etc.), sand prairies, wet meadows, sandy roadsides. **Dist:** NY and s. ON west to MI, IL, MO, and s. KS, south to c. NC, GA, Panhandle FL, TX, and n. Mexico. **Phen:** Jun-Sep; Aug-Oct. **Comm:** *B. americana* has apparently declined very greatly in our area, probably owing to fire suppression in its habitats. **ID Notes:** In addition to the key characters given, *B. americana* is overall a larger and more robust plant than *B. floridana*, though both are quite variable in size, depending on the conditions in which they grow. **Syn:** = Ar, C, F, FNA17, G, GrPl, GW2, IL, K3, Mi, NY, Pa, RAB, S, Tn, Tx, Va, W, Pennell (1935), Philcox (1965); < *Buchnera americana* Linnaeus – FI7, K1, NcTx, WH3. **NatureServe G5?** (Secure).

Buchnera floridana Gandoger. SAVANNA BLUEHEARTS, FLORIDA BLUEHEARTS. **Hab:** Pine savannas, flatwoods, seepage bogs, sandy roadsides. **Dist:** Se. NC south to s. FL, west to TX; West Indies; scattered localities in s. Mexico and Central America. **Phen:** Apr-Oct; May-Nov. **Tax:** Previous attributions of *B. longifolia* Kunth (including *B. elongata* Small) to southeastern states (notably FL, AL, GA, and MS) are based on misidentifications of material which is actually *B. floridana*. Taxonomic complexities remain in the FL Peninsula, and need additional study. **Syn:** = Bah, FNA17, GW2, K3, RAB, Tx, Pennell (1935), Philcox (1965); < *Buchnera americana* Linnaeus – FI7, NcTx, WH3; > *Buchnera americana* Linnaeus – K1; > *Buchnera breviflora* Pennell – S; > *Buchnera elongata* Swartz – S; > *Buchnera floridana* Gandoger – S; > *Buchnera longifolia* Swartz – K1, by misattribution.

387. **OROBANCHACEAE***Castilleja* Mutis ex Linnaeus f. 1782 (PAINTBRUSH)

A genus of about 200 species, annual, perennial, or biennial hemiparasitic herbs, primarily of w. North America, with a few species also in e. North America, Eurasia, Central America, and Andean South America. References: Allison & Stevens (2001); Egger et al (2019) in FNA17 (2019); Nesom & Egger (2014); Pennell (1935); Singhurst et al (2020).

Castilleja coccinea (Linnaeus) Sprengel. EASTERN PAINTBRUSH. **Hab:** Woodlands, fens, barrens, rock outcrops, prairies, hay meadows, wet pastures, grassy openings, usually over mafic rocks. **Dist:** ME, NY, and MN south to SC, n. GA, n. AL, c. MS, w. LA, and OK. **Phen:** (Jan-) Apr-Jun; May-Aug. **Syn:** = Ar, C, F, FNA17, G, GrPl, GW2, Il, K3, K4, Mi, NE, NY, Pa, RAB, S, Tn, Va, W, Nesom & Egger (2014), Pennell (1935). NatureServe G5 (Secure).

Conopholis Wallroth 1825 (BEARCORN, "SQUAWROOT")

A genus of 3 species, herbs parasitic on *Quercus* section *Lobatae* (red oaks) of e. North America and sw. North America south to Central America. Rodrigues, Colwell, & Stefanović (2011) and Rodrigues et al. (2013) determined that a division of the genus into 3 species best reflects genetic differentiation, the other 2 being *C. alpina* Liebmman, ranging from AZ, NM, and TX south to s. Mexico, and *C. panamensis* Woodson of Costa Rica and Panama. References: Collins, Colwell, & Yatskievych (2019a) in FNA17 (2019); Haynes (1971); Rodrigues et al (2013); Rodrigues, Colwell, & Stefanović (2011); Thieret (1971).

Conopholis americana (Linnaeus) Wallroth. BEARCORN, OAKDROPS, SQUAWROOT. **Hab:** Rich, moist forests, under and hemiparasitic on *Quercus* species. **Dist:** NS west to WI and south to c. peninsular FL, AL, and TN; disjunct in se. Mexico (Chiapas, Oaxaca, and Puebla). **Phen:** Mar-Jun. **Comm:** Haynes (1971) discusses the nature of the parasitism. *Conopholis* apparently germinates near an oak root, forms a parasitic connection to the root, resulting in the formation of a gall consisting of both *Quercus* and *Conopholis* tissue. The gall can be up to 25 cm in diameter, and lasts for many years, repeatedly sending up flowering shoots. It is believed that the gall exists underground for some years prior to first flowering. **Syn:** = C, F, F17, FNA17, G, Il, K1, K3, K4, Mi, NE, NY, Pa, RAB, S, Tn, Va, W, WH3, WV, Haynes (1971), Rodrigues et al (2013), Rodrigues, Colwell, & Stefanović (2011), Thieret (1971). NatureServe G5 (Secure).

Dasistoma Rafinesque 1819 (MULLEIN FOXGLOVE)

A monotypic genus, an annual or perennial hemiparasitic herb, endemic to se. North America. The genus is sometimes spelled '*Dasystoma*,' a later orthographic variant. The genus is neuter (because ending in "-stoma"). References: Freeman (2019h) in FNA17 (2019); Pennell (1935).

Dasistoma macrophyllum (Nuttall) Rafinesque. MULLEIN FOXGLOVE. **Hab:** Xeric to dry-mesic woodlands and bluffs, riverbanks, streambanks, over limestone or diabase. **Dist:** WV, OH, s. WI, sw. WI, IA, and e. NE, south to sw. VA (Lee County; Wieboldt et al. 1998), nc. SC, nw. GA, sc. AL, sc. MS, nw. LA, and nc. TX. **Phen:** Jun-Sep. **Syn:** = FNA17, K4; = *Agalinis macrophylla* - ZZZZ; = *Dasistoma macrophylla* - Ar, C, G, GrPl, Il, K1, K3, Mi, NeTx, RAB, S, Tn, Tx, Va, Pennell (1935), orthographic variant; = *Seymeria macrophylla* Nuttall - F, GW2, WV. NatureServe G4 (Apparently Secure).

Epifagus Nuttall 1818 (BEECHDROPS)

A monotypic genus, a holoparasitic herb on the roots of *Fagus*, of e. North America. References: Collins, Colwell, & Yatskievych (2019b) in FNA17 (2019); Thieret (1971).

Epifagus virginiana (Linnaeus) W.P.C. Barton. BEECHDROPS. **Hab:** Moist to rather dry forests under and parasitic on *Fagus grandifolia*. **Dist:** NS west to WI, south to ne. FL, Panhandle FL, and LA; disjunct in the mountains of e. Mexico (TAM). **Phen:** Aug-Nov. **Syn:** = C, F, F17, FNA17, G, Il, K1, K3, K4, Mi, NE, NY, Pa, RAB, Tn, Tx, Va, W, WH3, WV, Thieret (1971); = *Leptamnium virginianum* (Linnaeus) Rafinesque - S. NatureServe G5 (Secure).

Macranthera Nuttall ex Benth 1836 (FLAMEFLOWER)

A monotypic genus, a biennial or perennial hemiparasitic herb, of se. North America. References: Pennell (1935); Sorrie (2019c) in FNA17 (2019).

Macranthera flammea (Bartram) Pennell. FLAMEFLOWER, HUMMINGBIRD-FLOWER. **Hab:** Pitcherplant bogs, bayheads., blackwater creekbanks. **Dist:** Nearly restricted to the East Gulf Coastal Plain (e. GA and FL Panhandle west to se. LA), but ranging east to the Atlantic Coastal Plain of e. GA (Bullock County), within a county of the SC border. **Phen:** Jul-Oct. **Syn:** = F17, FNA17, GW2, K1, K3, K4, S, WH3, Pennell (1935). NatureServe G3 (Vulnerable).

*Pedicularis* Linnaeus 1753 (WOOD-BETONY, LOUSEWORT)

A genus of 400-600 species, hemiparasitic perennial herbs, of temperate and boreal regions of c. and e. Asia, Europe, w. North America, e. North America, and Andean South America. References: Pennell (1935); Robart (2019) in FNA17 (2019).

Pedicularis canadensis Linnaeus. EASTERN LOUSEWORT, WOOD-BETONY. **Hab:** Moist to dry forests and woodlands, streambanks, prairies. **Dist:** ME, QC, and MB south to ne. FL, FL Panhandle, and e. TX. **Phen:** (Mar-) Apr-May; May-Jul. **Tax:** Robart in FNA (2019) includes Rocky Mountain plants treated by others as *P. fluviatilis* A.A. Heller or at infraspecific rank under *P. canadensis* as a taxonomically indistinguished part of *P. canadensis*; we provisionally retain this taxon as separate at species rank. Var. *dobbsii* Fernald, alleged to differ in having nearly solitary flowering stems and stoloniform basal offsets, may warrant additional study. **Comm:** *P. canadensis* is variable in corolla color, with yellow, red, or red and yellow bicolored flowers. **Syn:** = Ar, C, F17, G, GW2, K3, K4, Mi, NcTx, NY, Pa, RAB, S, Tn, Tx, Va, W, WH3, WV, Pennell (1935); < *Pedicularis canadensis* Linnaeus – FNA17, GrPl; > *Pedicularis canadensis* ssp. *canadensis* – K1, NE; > *Pedicularis canadensis* var. *canadensis* – F, Il; > *Pedicularis canadensis* var. *dobbsii* Fernald – F, Il.

*Schwalbea* Linnaeus 1753 (CHAFFSEED)

The genus is monotypic, a perennial hemiparasitic herb, of se. North America. References: Pennell (1935); Sorrie (2019a) in FNA17 (2019); Ward (2012a).

Schwalbea americana Linnaeus. CHAFFSEED. **Hab:** Pine savannas, sandhill-pocosin ecotones (in the uphill portions), mesic loamy-soil slopes or swales in sandhill longleaf pine woodlands, fire-maintained interior woodlands and barrens. **Dist:** Formerly rather widespread in e. North America, primarily in the Coastal Plain, from e. MA, south to c. peninsular FL and west to TX, and disjunct in the Cumberland Mountains of KY and TN. The species is now limited to a few scattered sites in MA, NJ, NC, SC, GA, FL, AL, and LA, a small portion of its former distribution. It appears to require high fire frequency, especially during the growing season, perhaps related to its establishment ecology. The tiny seeds are hyaline-winged. **Phen:** (Late Apr-) May-Jun; Aug. **Tax:** Ward (2012a) defended the recognition of two varieties, albeit without much detail or discussion. **Syn:** = C, F, F17, FNA17, G, GW2, K1, K3, NE, NY, RAB, Tn, Tx, Va, WH3; > *Schwalbea americana* Linnaeus – Pennell (1935); > *Schwalbea americana* var. *americana* – K4, Ward (2012a); > *Schwalbea americana* var. *australis* (Pennell) Reveal & C.R. Broome – K4, Ward (2012a); > *Schwalbea australis* Pennell – S, Pennell (1935). NatureServe G2 (Imperiled); USESA E.

*Seymeria* Pursh 1814 (SEYMERIA, BLACKSENNA)

A genus of about 25 species, annual hemiparasitic herbs, of s. North America (including Mexico). References: Pennell (1935); Randle (2019c) in FNA17 (2019).

- 1 Corolla glabrous on its outer surface; leaf segments linear, < 0.5 mm wide; stem glabrous or puberulent; seeds wingless (though with ridges) *Seymeria cassioides*
- 1 Corolla pubescent on its outer surface; leaf segments lanceolate, 1-2 mm wide; stem pubescent; seeds 3-4-winged. *Seymeria pectinata* ssp. *pectinata*

Seymeria cassioides (J.F. Gmelin) Blake. SENNA SEYMERIA, YAUPON BLACKSENNA. **Hab:** Dry to moist pinelands, wet pine savannas, longleaf pine sandhills, other dry woodlands, an obligate hemiparasite on *Pinus* spp. **Dist:** Se. VA south to c. peninsular FL, west to LA; disjunct in nc. AL and se. TN (Chester, Wofford, & Kral 1997; Tennessee Flora Committee 2015); n. Bahamas. **Phen:** Aug-Oct. **Syn:** = Ar, Bah, C, F, F17, FNA17, G, GW2, K1, K3, K4, RAB, Tx, Va, WH3, Pennell (1935); = *Azelia cassioides* J.F. Gmelin – S. NatureServe G5 (Secure).

Seymeria pectinata Pursh ssp. *pectinata*. COMB SEYMERIA, COMBLEAF BLACKSENNA. **Hab:** Dry pinelands, longleaf pine sandhills, dry to moist pine flatwoods. **Dist:** Ssp. *pectinata* ranges from se. NC south to n. peninsular FL, west to s. MS, a Southeastern Coastal Plain endemic. **Phen:** Jul-Oct. **Syn:** = FNA17, K1, K3, K4; = *Azelia pectinata* (Pursh) Kuntze ssp. *pectinata* – S; = *Seymeria pectinata* ssp. *typica* – Pennell (1935); < *Seymeria pectinata* – F17, RAB, WH3. ssp. pectinata

392. AQUIFOLIACEAE Berchtold & J. Presl 1825 (HOLLY FAMILY) [in AQUIFOLIALES]

A monogeneric family of about 600 (or more) species, nearly cosmopolitan. References: Loizeau et al (2016) in Kadereit & Bittrich (2016).

Ilex Linnaeus 1753 (HOLLY, WINTERBERRY, GALLBERRY)

A genus of 400-500 species, mostly trees and shrubs, cosmopolitan and widespread in tropical and temperate areas, especially Asia and America. The genus *Nemopanthis* is clearly best subsumed into *Ilex*. References: Godfrey (1988); Krakow (1989); Powell et al (2000); Whittemore [in prep]; Wunderlin & Poppleton (1977).

Identification Notes: Some of our species can be superficially similar to various shrubs and trees of the Rosaceae, in their alternate toothed leaves borne on spur shoots.

- 1 Leaves coriaceous, evergreen.
 - 2 Leaves with a well-developed apical spine (and usually also marginal spines) 2-6 mm long.
 - 3 Flowers in 1-few-flowered axillary cymes, on growth of the same year; upper leaf surfaces somewhat shiny to matte; marginal leaf spines (when present) in the plane of the leaf or mostly declined < 30 degrees from that plane; [native trees of a wide variety of habitats] *Ilex opaca*
 - 3 Flowers in axillary clusters, on growth of the previous year; upper leaf surfaces very shiny; marginal leaf spines (when present) often strongly oriented below or above the plane of the leaf; [exotic shrubs or small trees usually in suburban or urban areas] *Ilex cornuta*
 - 2 Leaves with margins either entire, crenate, serrate, or with marginal spinose prickles < 2 mm long (the apex sometimes mucronate, but not stiff and spinose).
 - 6 Leaves crenate from base to apex, 0.5-4.5 cm long; calyx and corolla 4-lobed. *Ilex vomitoria*
 - 6 Leaves entire, crenate (if so, only beyond the midpoint), serrate, or with marginal spinose prickles, 2-10 cm long; calyx and corolla 4-lobed or 5-9-lobed.
 - 8 Fruits black; calyx and corolla 5-9-lobed; leaves crenate near the tip or with a few marginal spinose prickles, or entire, with dark punctate dots beneath.
 - 9 Leaves 1.5-3× as long as wide, generally about 2-3 cm wide; leaf margins either entire or with a few, irregularly spaced, marginal spinose prickles that diverge from the margin *Ilex coriacea*
 - 9 Leaves 3-4× as long as wide, generally about 1 cm wide (almost never > 2 cm wide); leaf margins crenate in the apical 1/2 to 1/3 (almost never entire) *Ilex glabra*
 - 8 Fruits red, yellow, or black; calyx and corolla 4-lobed; leaves entire (or with a few spinose serrations), lacking dark punctate dots beneath.
 - 11 Leaves oblanceolate, oblong, or elliptic, 3-12 cm long, (8-) 15-40 mm wide, 2-4× as long as wide; petioles (3-) 5-15 mm long; leaf apex acute, obtuse, or rounded; branchlets strongly ascending, most of them forming an angle of < 45 degrees to the branch *Ilex cassine*
 - 11 Leaves lanceolate to narrowly oblong, 2-4 cm long, 3-8 mm wide, 3-7× as long as wide; petioles 1-3 (-5) mm long; leaf apex acute to acuminate; branchlets ascending to spreading, most of them forming angles greater than 45 degrees to the branch, and often at right angles *Ilex myrtifolia*
 - 1 Leaves membranous, deciduous.
 - 13 Leaves oblanceolate or obovate, broadest above the middle (to near the middle), 8-30 (-45) mm wide, narrowly cuneate basally, mostly 2-3× as long as wide.
 - 14 Pedicels of fruits and pistillate flowers 2-6 mm long; pedicels of staminate flowers (2-) 4-8 (-16) mm long; leaves mostly gray green, often revolute, especially toward the base; pubescence of the lower leaf surface tomentose, primarily on or near the midrib; leaf margins rarely ciliate. *Ilex decidua*
 - 14 Pedicels of fruits and pistillate flowers (5.5-) 10-30 mm long; pedicels of staminate flowers (10-) 15-25 mm long; leaves rarely revolute; pubescence of the lower leaf surface strigose, distributed on the surface; leaf margins often ciliate. *Ilex longipes*
 - 13 Leaves elliptic or ovate, broadest near the middle, (10-) 20-55 mm wide, rounded to broadly cuneate basally, mostly 1-2.5× as long as wide.
 - 17 Veins on undersurface of leaf blades reticulate, defining areoles; fruit surface dull; fruiting pedicels 6-14 mm long (averaging about 10 mm); [of blackwater floodplains and clay-based Carolina bays of the Coastal Plain] *Ilex amelanchar*
 - 17 Veins on undersurface of leaf blades obscure, not defining areoles; fruit surface shiny; fruiting pedicels either (8-) 10-30 mm long or 2-9 mm long (averaging either < 6 mm or > 15 mm long); [collectively of various habitats, widespread in our area].
 - 19 Nutlets (5-) 6-8 per fruit, smooth on the (curved) back; staminate flower clusters on peduncles 2-6 mm long; pistillate flowers with entire corolla lobes; flowers mostly in axils of leaves on normal shoots; petiole nearly terete in cross-section (or very shallowly channeled on the upper surface). *Ilex verticillata*
 - 19 Nutlets 4-5 per fruit, with striate ridges on the (curved) back; staminate flower clusters sessile or very short-peduncled (0-2 mm long); pistillate flowers with ciliate corolla lobes; flowers mostly in axils of leaves on lateral short-shoots; petiole with U-shaped channel on its upper side, with white appressed trichomes in the channel. *Ilex ambigua*

Ilex ambigua (Michaux) Torrey. CAROLINA HOLLY. **Hab:** Sandy upland forests, dry slope forests, rarely in pocosin ecotones in the fall-line sandhills region. **Dist:** Ne. NC, se. TN, n. AR, and se. OK south to c. peninsular FL, s. MS, and se. TX; disjunct in the Sierra Madre Oriental and

(see introduction for more)

Chiapas, Mexico. **Phen:** Apr-Jun; Aug-Sep. **Tax:** The various taxa that have been distinguished in this complex may have some merit, though a detailed study by Krakow (1989) did not show a clear basis for their recognition. *Ilex buswellii* Small, strictly of xeric habitats (longleaf pine sandhills, Florida scrub) of the Coastal Plain from se. NC southward, has the larger leaves on the plant 2-3.5 (-4) cm long and 0.7-1.7 (-2.5) cm wide. *Ilex ambigua* (*sensu stricto*) is distributed in the Coastal Plain, Piedmont and low Mountains, and has the larger leaves on a plant 3-9 (-10.5) cm long and 1.7-6 cm wide. *Ilex beadlei* of the low Mountains and Piedmont has the larger leaves on a plant 7-9 (-10.5) cm long and 2-6 cm wide. **Syn:** = Ar, FI7, K3, K4, Krakow (1989); = *Ilex ambigua* var. *ambigua* – RAB, Tn, W, Godfrey (1988); > *Ilex ambigua* (Michaux) Torrey – S, Tx; > *Ilex ambigua* var. *ambigua* – WH3; > *Ilex ambigua* var. *monticola* (A. Gray) Wunderlin & Poppleton – WH3, Godfrey (1988), misapplied; > *Ilex beadlei* W.W. Ashe – Pa, S; > *Ilex beadlei* Ashe var. *beadlei*; > *Ilex beadlei* Ashe var. *laevis* Ashe; > *Ilex buswellii* Small – S; > *Ilex caroliniana* Trelease ex Small; > *Ilex mollis* A. Gray; > *Ilex montana* Torrey & A. Gray ex A. Gray, misapplied; > *Ilex montana* var. *beadlei* (W.W. Ashe) Fernald – G; > *Ilex montana* var. *mollis* (A. Gray) Britton – C, F, Tx.

Ilex amelanther M.A. Curtis ex Chapman. SARVIS HOLLY. **Hab:** Banks of blackwater creeks and rivers, clay-based Carolina bays, other pine flatwoods ponds with seasonally flooded hydrology. **Dist:** A Southeastern Coastal Plain endemic: se. NC south to the FL Panhandle and west to se. LA (reports from se. VA appear to be based on confusion of material); disjunct in w. LA (Vernon Parish). **Phen:** Apr-May; Oct-Nov (-Apr). **ID Notes:** The fruits are sometimes persistent until the following spring; the species is perhaps most conspicuous in the winter, when the dull red fruits can be easily seen. **Syn:** = C, F, FI7, G, GW2, K3, K4, RAB, S, WH3, Godfrey (1988), Krakow (1989). **NatureServe G4** (Apparently Secure).

Ilex cassine Linnaeus. DAHOON, CASSENA. **Hab:** Blackwater stream swamps, pocosins, nearly always in very acid peaty or sandy sites. **Dist:** Primarily a Southeastern Coastal Plain endemic: se. NC south to s. FL and west to se. TX; Bahamas, Cuba (González-Gutiérrez 2007), and Mexico. **Phen:** May-Jun; Oct-Nov. **Tax:** *I. cassine* is variable in leaf shape, sometimes approaching *I. myrtifolia*. Some populations in our area show intergradation with or poor differentiation from *I. myrtifolia*, lending some credibility to their treatment as varieties. **Syn:** = Bah, GW2, S, Godfrey (1988); = *Ilex cassine* var. *cassine* – FI7, RAB, WH3; > *Ilex cassine* var. *cassine* – K3, K4; > *Ilex cassine* var. *latifolia* Aiton – K3, K4, Tx.

Ilex coriacea (Pursh) Chapman. BIG GALLBERRY, SWEET GALLBERRY. **Hab:** Pocosins, more restricted to wet, peaty sites than *I. glabra*. **Dist:** A Southeastern Coastal Plain endemic: se. VA south to c. peninsular FL and west to e. TX; slightly disjunct in s. DE. **Phen:** Apr-May; Late Jul-Oct. **Syn:** = C, F, FI7, G, GW2, K3, K4, RAB, S, Tx, Va, WH3, Godfrey (1988). **NatureServe G5** (Secure).

* ***Ilex cornuta*** Lindley & Paxton. CHINESE HOLLY, BURFORD HOLLY. **Hab:** Escaped into forests in (primarily) suburban and urban areas, but certain to become more ubiquitous and increasingly in natural areas. **Dist:** Native of China. Escaped from suburban plantings in AL, NC, KY (Clark et al. 2005) and elsewhere. To be expected throughout the Flora region. **Syn:** = Ar, K3, K4; = n/a – RAB. **NatureServe GNR** (Not Yet Ranked).

Ilex decidua Walter. POSSUM-HAW. **Hab:** Floodplain forests, less commonly on mesic (or even dry), upland slopes. **Dist:** MD south to Panhandle FL (western peninsula), west to TX on the Coastal Plain, extending also to adjacent provinces (the Piedmont and rarely Mountains in our area), and extending north in the interior to c. TN, w. KY, s. IL, c. MO, se. KS, and e. OK; also disjunct (as an unnamed variety) in the Sierra Madre Oriental of e. Mexico. **Phen:** Mar-May; Sep-Oct. **Tax:** The Mexican material was recognized by Krakow (1989) at the varietal level, but has not been formally named; it is known from a single collection from Nuevo León, Mexico. **Syn:** = S; = *Ilex decidua* Walter var. *decidua* – Tn, Va, Krakow (1989); < *Ilex decidua* Walter – Ar, C, F, G, GrPl, GW2, Il, K3, K4, Mo2, NcTx, Tx, WH3; < *Ilex decidua* Walter var. *decidua* – RAB; > *Ilex decidua* Walter var. *decidua* – Godfrey (1988), also including *I. cuthbertii*.

Ilex glabra (Linnaeus) A. Gray. LITTLE GALLBERRY, INKBERRY. **Hab:** Savannas, pine flatwoods, pocosin margins, swamps, primarily in wetlands, but extending upslope even into sandhills, with a clay lens or spodic horizon below to maintain additional moisture. **Dist:** NS and ME south to s. FL, west to e. LA and barely w. LA (Pointe Coupee Parish). **Phen:** May-Jun; Sep-Nov. **Syn:** = C, F, FI7, G, GW2, K3, K4, NE, NY, Pa, RAB, S, Tx, Va, WH3, Godfrey (1988). **NatureServe G5** (Secure).

Ilex longipes Chapman ex Trelease. GEORGIA HOLLY, CHAPMAN'S HOLLY. **Hab:** Upland forests. **Dist:** Sc. NC, sc. TN (Chester, Wofford, & Kral 1997), and wc. AR south to Panhandle FL, s. MS, and se. TX. **Phen:** Apr-May; Sep-Oct. **Syn:** = Ar, FI7, GW2, K3, K4, S, WH3; = *Ilex decidua* var. *longipes* (Chapman ex Trelease) H.E. Ahles – Tn, Godfrey (1988); = *Ilex longipes* Chapman var. *longipes* – Krakow (1989); < *Ilex decidua* var. *longipes* (Chapman ex Trelease) H.E. Ahles – RAB; < *Ilex longipes* Chapman ex Trelease – F, G; > *Ilex longipes* Chapman var. *hirsuta* Lundell – Tx; > *Ilex longipes* Chapman var. *longipes* – Tx.

Ilex myrtifolia Walter. MYRTLE HOLLY. **Hab:** Limesink (doline) ponds, pocosins, wet pine savannas. **Dist:** A Southeastern Coastal Plain endemic: se. NC south to n. peninsular FL and west to e. LA (and possibly se. TX?). **Phen:** May-Jun; Oct-Nov. **Comm:** See *I. cassine* for comments about these two taxa. **Syn:** = GW2, K3, K4, S, Tx, Godfrey (1988); = *Ilex cassine* var. *myrtifolia* (Walter) Sargent – FI7, RAB, WH3. **NatureServe G5?** (Secure).

Ilex opaca Aiton. AMERICAN HOLLY, CHRISTMAS HOLLY. **Hab:** In a wide variety of forests, ranging from xeric to wetland. **Dist:** MA (? NS and ME), IL, MO, and OK south to c. peninsular FL (apparently naturalized only in s. FL) and TX. **Phen:** Apr-Jun; Sep-Oct. **Comm:** This and *I. krugiana* of s. Florida are our only species of *Ilex* that become medium to large trees. **Syn:** = S, Tx; = *Ilex opaca* var. *opaca* – Ar, FI7, GW2, K3, K4, Mo2, NE, NY, Va, WH3, Godfrey (1988); < *Ilex opaca* Aiton – C, F, G, Il, Mi, NcTx, Pa, RAB, Tn, W, WV. **NatureServe G5T5** (Secure).

392. AQUIFOLIACEAE

Ilex verticillata (Linnaeus) A. Gray. WINTERBERRY, "BLACK ALDER". **Hab:** Bogs, pocosins, swampy forests. **Dist:** NL (Newfoundland) west to MN, south to Panhandle FL and se. TX. **Phen:** Apr-Jun; Sep-Nov. **Syn:** = Ar, FI7, GW2, IL, K3, K4, Mi, NE, NY, Pa, RAB, S, Tn, Tx, Va, W, WH3, WV, Godfrey (1988); > *Ilex verticillata* var. *padifolia* (Willdenow) Torrey & A. Gray ex S. Watson – C, F, G, Mo2; > *Ilex verticillata* var. *verticillata* – C, F, G.

Ilex vomitoria Aiton. YAUPON. **Hab:** Maritime forests, other dry sandy forests. **Dist:** Widespread in the Southeastern United States, primarily on the Coastal Plain, from e. VA (from Northampton County south) south to c. peninsular FL and west to se. TX; Cuba; Mexico (CHP). **Phen:** Mar-May; Oct-Nov. **Tax:** *I. vomitoria* from the Deep South often has much smaller leaves than plants in the Atlantic Coastal Plain. The Chiapas populations have been accorded variety status as var. *chiapensis* Sharp; they may warrant specific rank or alternatively be nothing more than a pubescent form. **Comm:** In NC and VA, yaupon is nearly restricted to maritime habitats, on the barrier islands and in a narrow band on the mainland, in forests with substantial maritime influence, but is more general southwards in GA, FL, and the Gulf coast. *I. vomitoria* is increasingly popular as an ornamental shrub, and is persistent or establishing inland in areas outside its native distribution, especially in suburban woodlands. The tea produced from its leaves is increasingly appreciated. **Syn:** = Ar, C, F, FI7, G, GW2, K3, K4, NcTx, RAB, S, Tx, Va, WH3, Godfrey (1988); > *Ilex vomitoria* var. *vomitorea* – Mo2. NatureServe G5 (Secure).

394. CAMPANULACEAE A.L. de Jussieu 1789 (BELLFLOWER FAMILY) [in ASTERALES]

A family of about 80-82 genera and 2000-2400 species, mostly herbs, cosmopolitan. There is controversy about the circumscription of the family, specifically whether subfamily Lobelioideae should be recognized at the family level. Recent phylogenetic studies of the Campanuloideae also suggest that substantial rearrangements of generic boundaries will be needed (Crowl et al. 2014). References: Crowl et al (2014); Eddie et al (2003); Lammers in Kadereit & Jeffrey (2007); Mansion et al (2012); Morin (2020); Rosatti (1986); Shulkina, Gaskin, & Eddie (2003); Yoo et al (2018).

- 1 Corollas bilaterally symmetrical (zygomorphic); carpels 2; [subfamily *Lobelioideae*].....***Lobelia***
- 1 Corollas radially symmetrical (actinomorphic); carpels (2-) 3-5; [subfamily *Campanuloideae*].
 - 2 Capsule dehiscent apically; flowers solitary or in very diffuse panicles (*Platycodon*, *Wahlenbergia*), or in compact involucre umbels (*Jasione*); [aliens, generally in weedy or disturbed situations].....***Wahlenbergia***
 - 2 Capsule dehiscent laterally (the pores nearly apical in some *Campanula*); flowers in spikes, racemes, or panicles; [mostly native species of various habitats (some of them weedy)].
 - 5 Inflorescence spicate, the flowers sessile, mostly in the axils of well-developed leaves; corollas rotate and style straight.....***Triodanis***
 - 5 Inflorescence racemose or paniculate, the flowers pedicelled, sometimes axillary to well-developed leaves; corollas campanulate, funnellform, or rotate, with a straight or curved style.....***Campanulastrum americanum***

Campanulastrum Small 1903 (AMERICAN-BELLFLOWER)

A monotypic genus, an annual or biennial herb, of e. and c. North America. Shetler & Morin (1986) stated that "Small's view [segregating *Campanula americana* into the monotypic genus *Campanulastrum*] appears to have increasing justification from palynological, cytological, and now seed evidence". *Campanulastrum* was also supported as a genus by Shulkina, Gaskin, & Eddie (2003), but combined into *Campanula* by Lammers in Kadereit & Jeffrey (2007) and Roquet et al. (2008). Molecular and morphological evidence shows *Campanulastrum* as more closely related to *Triodanis* and *Legousia* than to *Campanula* s.s., and so needs recognition at genus rank if the course followed in this flora is to be taken (recognizing monophyletic segregate genera, as opposed to expanding *Campanula* further) (see Morin 2020). References: Crowl et al (2014); Mansion et al (2012); Morin (2020); Rosatti (1986); Shulkina, Gaskin, & Eddie (2003).

Lobelia Linnaeus 1753 (LOBELIA)

Contributed by D.D. Spaulding, T.W. Barger, and B.A. Sorrie

A genus of over 400 species, herbs, shrubs, trees, cosmopolitan. References: Bowden (1982); Lammers in Kadereit & Jeffrey (2007); McVaugh (1936a); McVaugh (1940a) in Woodson & Schery (1940); Pittman & Sorrie (2020); Rosatti (1986); Spaulding & Barger (2016); Spaulding, Barger, & Horne (2016); Thompson & Lammers (1997).

Identification Notes: Vegetative *Lobelia* can be recognized by their milky sap, and the alternate leaves with obscure, whitish, callus-tipped, and often irregular or divergent teeth.

- 1 Corolla bright red (faded in dried specimens) or very rarely white, 30-45 mm long; filament-tube (17-) 19-33 (-37) mm long *Lobelia cardinalis* var. *cardinalis*
- 1 Corolla blue, purple, or white, 10-33 mm long; filament-tube 2-15 mm long.
 - 3 Larger leaves in a basal rosette, linear to linear-oblongate; [of wetlands, often growing in shallow to deeper water] *Lobelia floridana*
 - 3 Larger leaves cauline; [collectively widespread and in a range of habitats].
 - 8 Flowers smaller, 8-14 mm long (measured from base of calyx); filament tube smaller, 2.5-5 mm long; corolla usually not fenestrate (except sometimes in *L. flaccidifolia*).
 - 9 Stem leaves very narrow, most less than 5 mm wide (lowest leaves may be broader). *Lobelia boykinii*
 - 9 Stem leaves broader, the largest more than 10 mm wide.
 - 15 Stems long hirsute; fruiting capsules strongly inflated; lower flowers with ovate-leafy bracts; inflorescence usually much branched *Lobelia inflata*
 - 15 Stems glabrous or short-pubescent (base sometimes densely pubescent); fruiting capsules not inflated; flowers with smaller bracts; inflorescence branched or unbranched.
 - 16 Bracteoles conspicuous (somewhat foliaceous) and borne just below the middle of the pedicel (well above larger bract); calyx lobes toothed (some segments may be remotely toothed); flowers 14-20 mm long (measured from base of calyx) *Lobelia flaccidifolia*
 - 16 Bracteoles inconspicuous and borne at the base of the pedicel (adjacent to larger bract); calyx lobes mostly entire, rarely with a few teeth, though sometimes ciliate (ignore the leafy bract at the base of pedicel); flowers <15 mm long.
 - 17 Upper stem leaves oblong or obovate with narrowed bases; leaf margins often entire with tiny glandular teeth or occasionally undulate, crenulate to shallowly dentate; base of stem usually densely puberulent; plants rarely branched (if branched, then from lower two nodes, unless injured or late in season after main inflorescence has fruited); inflorescence spike-like with flowers 7-12 mm long that are borne on all sides; flowering mostly Jun-Aug *Lobelia spicata*
 - 17 Upper stem leaves short-ovate with broad, rounded bases (often partially clasping stem); leaf margins usually irregularly toothed with rounded teeth; plants often branched from lower and upper nodes (occasionally unbranched); inflorescence a raceme with flowers 10-15 mm long that are often borne partly on one side (partially secund); flowering mostly May-Jun. *Lobelia appendiculata*
 - 8 Flowers relatively large, the corolla (including the hypanthium) 18-33 mm long, fenestrate (with a slit or window on each side of the tube near the base) (or often not fenestrate in *L. flaccidifolia*).
 - 19 Leaves mostly < 3 cm long and very numerous, usually > 20 (leaves also < 7 mm wide); leaf margins prominently denticulate and apex rounded; sinuses of calyx with distinct auricles that overlap and often completely cover the calyx tube (hypanthium); calyx lobes pectinately toothed *Lobelia brevifolia*
 - 19 Leaves 4-15 cm and not as numerous, usually < 20; leaf margins variously toothed or entire and tips acute or rounded; sinuses of calyx with or without auricles; calyx lobes toothed or entire.
 - 20 Stem leaves linear, lanceolate or oblanceolate (< 1.5 cm wide); lower lip of corolla either densely pubescent (on the upper portion near the opening of throat) or glabrous (glabrescent in the tube) (in *L. speciosa* 1); calyx segments usually toothed (occasionally entire).
 - 21 Pedicel with inconspicuous bracteoles borne above the base of pedicel (they are linear, somewhat foliaceous, and have acute tips); calyx tube short-pubescent or glabrous (pedicel short-pubescent or glabrous); corolla tube usually not fenestrate (lacking lateral slits); lower leaves usually < 7 mm long, with blunt or acute tips; upper stem leaves usually not strongly denticulate (but gland-tipped teeth are usually present); internodes not geniculate or only slightly so; plants often drying a lighter green *Lobelia flaccidifolia*
 - 21 Pedicel with inconspicuous bracteoles borne at base and often hidden by bract (bracteoles are oval to oblong with blunt tips and look similar to glandular teeth of bract, except a little smaller); calyx tube either pustular (with wart-like bumps), long-hirsute, or glabrous (the pedicel short to long hirsute or glabrous); corolla tube fenestrate; lower leaves often > 7 mm long, often with sharp tips (but not always); upper stem leaves prominently denticulate (margins with numerous sharp, gland-tipped teeth); internodes often geniculate (zigzag); plants often drying darker. *Lobelia glandulosa*
 - 20 Stem leaves ovate, elliptic, obovate, oblong or lanceolate and corolla lip glabrous, or corolla lip pubescent basally, but leaves > 1.5 cm wide; calyx lobes toothed or entire.
 - 23 Underside of corolla longitudinally striped with white (looks pinstriped with narrow blue/violet lines with broader white stripes); bracteoles borne above the middle of pedicels just below calyx tube (bracteoles are much smaller than leafy bract that is found at base of the petiole); calyx lobes entire and usually with some long, chaffy hairs on the margins; sinuses of calyx with small to large auricles; filament tube 12-15 mm long *Lobelia siphilitica*
 - 23 Undersurface of corolla not noticeably striped with white; bracteoles located below middle of pedicels, often near base of leafy bract; calyx lobes toothed or entire and margins glabrous or ciliate with sharp-pointed hairs; sinuses of calyx lobes with or without auricles; filament tube 6-11 mm long.

24 Calyx lobes distinctly toothed (leafy bract at base of pedicel also toothed).....

24 Calyx lobes mostly entire or with a few lobes that are sparingly toothed (ignore leafy bract at the base of pedicel, which is often glandular-toothed)..... *Lobelia rogersii*

27 Auricles very large and conspicuous, covering almost half of calyx tube (resembling drooping ear lobes); lower corolla lip sometimes puberulent on the inside..... *Lobelia rogersii*

27 Auricles absent or smaller, less than 1/4 length of calyx tube; lower lip of corolla mostly glabrous on the inside..... *Lobelia puberula*

Lobelia appendiculata A.L.P.P. de Candolle. PALE LOBELIA. **Hab:** Pinelands, prairies, roadsides, usually in mesic or dry soils. **Dist:** AR and se. KS south to LA and TX; disjunct east of the Mississippi in c. AL, MS, and e. LA. **Phen:** May-Jun. **Syn:** = Ar, GW2, K3, K4, NcTx, S, Tx, McVaugh (1936a), Spaulding & Barger (2016); = *Lobelia appendiculata* Alphonse de Candolle var. *appendiculata* – K1. **NatureServe** G4G5TNR (Not Yet Ranked).

Lobelia boykinii Torrey & A. Gray ex A.L.P.P. de Candolle. BOYKIN'S LOBELIA. **Hab:** Cypress ponds and depression meadows. **Dist:** NJ and DE south to w. Panhandle FL, s. AL, and s. MS (Sorrie & Leonard 1999). **Phen:** May-Jul (-Aug). **Comm:** See McAvoy & Wilson (2014) for an account of its rediscovery in DE after a 100 year gap and details on its biology. **Syn:** = C, F, F17, G, GW2, K1, K3, K4, RAB, S, WH3, McVaugh (1936a), Spaulding & Barger (2016). **NatureServe** G2G3 (Imperiled).

Lobelia brevifolia Nuttall ex A.L.P.P. de Candolle. SHORTLEAF LOBELIA. **Hab:** Pine savannas, pine flatwoods, and bogs. **Dist:** Endemic to the East Gulf Coastal Plain of c. and w. Panhandle FL, west through s. AL and s. MS to e. LA (Florida Parishes). **Phen:** Jul-Nov. **Syn:** = F17, GW2, K1, K3, K4, S, WH3, McVaugh (1936a), Spaulding & Barger (2016). **NatureServe** G4G5 (Apparently Secure).

Lobelia cardinalis Linnaeus var. *cardinalis*. CARDINAL FLOWER. **Hab:** Streambanks, riverbanks, marshes, swamp forests. **Dist:** NB, QC, ON, MN, CO, UT, and s. CA south to c. peninsular FL, TX, and south through Mexico and Central America to Colombia. **Phen:** (May-) Jul-Oct. **Tax:** See Thompson & Lammers (1997). **Syn:** = C; = *Lobelia cardinalis* Linnaeus – S, McVaugh (1936a); = *Lobelia cardinalis* ssp. *cardinalis* – GW2, Tx, Tx; < *Lobelia cardinalis* Linnaeus – Ar, F, F17, G, IL, K1, K3, K4, Mi, Mo2, NcTx, NE, Pa, RAB, Tn, Va, W, WH3, WV, Spaulding & Barger (2016); > *Lobelia cardinalis* ssp. *cardinalis* var. *cardinalis* – Bowden (1982); > *Lobelia cardinalis* Linnaeus ssp. *cardinalis* var. *meridionalis* Bowden – Bowden (1982).

Lobelia flaccidifolia Small. **Hab:** Depression ponds, swampy woods along rivers and streams. **Dist:** C. SC and E. GA south into Panhandle FL, west to sw. AL (and presumably s. MS); disjunct in sw. LA and e. TX. **Phen:** (Apr-) Jun-Sep. **Syn:** = F17, GW2, K1, K3, K4, S, Tx, WH3, Spaulding & Barger (2016); > *Lobelia halei* Small – McVaugh (1936a). **NatureServe** G5 (Secure).

Lobelia floridana Chapman. FLORIDA LOBELIA. **Hab:** Wet pine savannas and flatwoods, depression ponds. **Dist:** S. GA (Jones & Coile 1988) and Panhandle FL west to LA; disjunct in se. NC (historically). McVaugh (1936) reports this species for Wilmington, New Hanover County, NC, based on a collection by MacFarlane in 1909 (PENN). The specimen is correctly identified and there is a written account of MacFarlane visiting the site on the label in 1909, so the record is plausible. **Syn:** = F17, GW2, K1, K3, K4, S, Tx, WH3, McVaugh (1936a), Spaulding & Barger (2016). **NatureServe** G5 (Secure).

Lobelia glandulosa Walter. **Hab:** Seepage slopes, pitcherplant bogs, streamhead margins, pine savannas, pine flatwoods, margins of beaver ponds. **Dist:** E. NC (or se. VA?) to s. FL, west to s. AL. **Phen:** Sep-Dec. **Comm:** Prior reports from the Piedmont are erroneous, most referring to *L. elongata* and *L. georgiana*. **Syn:** = C, F, G, GW2, K1, K3, K4, RAB, S, W, WH3, McVaugh (1936a), Spaulding & Barger (2016). **NatureServe** G4G5 (Apparently Secure).

Lobelia inflata Linnaeus. INDIAN-TOBACCO. **Hab:** Fields, meadows, gardens, open woodlands, disturbed areas. **Dist:** PE west to MN, south to GA, AL, se. MS, e. LA, s. AR, and se. OK. **Phen:** Jul-Nov. **Syn:** = Ar, C, F, G, GrPl, GW2, IL, K1, K3, K4, Mi, Mo2, NE, Pa, RAB, S, Tn, Va, W, McVaugh (1936a), Spaulding & Barger (2016); > *Lobelia inflata* var. *inflata* – WV; > *Lobelia inflata* var. *simplex* (Rafinesque) Millspaugh – WV. **NatureServe** G5 (Secure).

Lobelia puberula Michaux. DOWNY LOBELIA, PURPLE DEWDROP. **Hab:** Forests, openings. **Dist:** NJ, se. PA, s. OH, s. IN, s. IL, se. MO, AR, and OK, south to c. peninsular FL and s. TX. **Phen:** Jul-Oct. **Tax:** A number of varieties are sometimes recognized; see references. **Syn:** = Ar, C, F17, G, GW2, K4, Mo2, NcTx, Pa, RAB, S, Tn, Tx, Va, W, WH3, McVaugh (1936a), Spaulding & Barger (2016); = *Lobelia puberula* var. *puberula* – Spaulding & Barger (2016); > *Lobelia puberula* – McVaugh (1936a); > *Lobelia puberula* – McVaugh (1936a); > *Lobelia puberula* var. *mineolana* – K1; > *Lobelia puberula* var. *pauciflora* Bush – K3; > *Lobelia puberula* var. *puberula* – F, K1, K3; > *Lobelia puberula* var. *simulans* – F, IL, K1.

Lobelia rogersii Bowden. MCVAUGH'S LOBELIA. **Hab:** Bogs, wet pine savannas. **Dist:** Endemic to the Gulf Coastal Plain of GA west to e. LA, rarely inland in adjacent provinces of AL. **Syn:** = F17, K4, Spaulding & Barger (2016); = *Lobelia ×rogersii* Bowden – K3.

Lobelia siphilitica Linnaeus. GREAT BLUE LOBELIA. **Hab:** Bottomlands, moist forests, ditches, wet meadows, streambanks. **Dist:** ME, ON, MN, and WY, south to GA, AL, MS, AR, and TX. **Phen:** Late Jul-Oct. **Syn:** = Ar, K3, K4, Mi, Mo2, Pa, RAB, S, Tn, W, Spaulding & Barger (2016); ~ *Lobelia*

 Symbology:

400. MENYANTHACEAE

699

Identification Notes: As the scientific name implies, the leaves of *Nymphoides* bear a superficial resemblance to those of *Nymphaea*. The leaves of *Nymphoides* are more cordate, the two basal lobes more rounded, rather than having a rather sharp corner or angle. *Nymphoides cordata* has much smaller leaves than *Nymphaea*, while the thickly pebbled texturing of *Nymphoides aquatica* is very unlike the glossy smoothness of *Nymphaea*.

- 1 Floating stems usually with multiple leaves; capsules 12-25 mm long; flowers yellow..... *Nymphoides peltata*
- 1 Floating stems with single leaves; capsules 3-14 mm long; flowers white or yellow.
- 4 Upper surface of the petals bearing a ruffled crest down its length in the middle..... *Nymphoides cristata*
- 4 Upper surface of the petals planar and smooth.
 - 5 Leaves 5-15 cm wide, roughly pebbled below, thick in texture; stems 1.3-2.5 mm in diameter a few cm below the inflorescence, with conspicuous red spots; tuberous roots of floating clusters stout, blunt-tipped; seeds conspicuously papillate; capsule 10-14 mm long..... *Nymphoides aquatica*
 - 5 Leaves 3-7 cm wide, smooth below, thin in texture; stems 0.6-0.9 mm in diameter a few cm below the inflorescence, rarely spotted with red; tuberous roots of floating clusters slender, with pointed tips; seeds smooth (rarely papillate); capsule 4-5 mm long..... *Nymphoides cordata*

Nymphoides aquatica (Walter ex J.F. Gmelin) Kuntze. BIG FLOATING HEART, BANANA FLOATING HEART. **Hab:** Limesink ponds (dolines), other acidic and nutrient-poor water-filled depressions, sluggish streams, beaverponds, primarily in the Outer and Middle Coastal Plain. **Dist:** A Southeastern Coastal Plain endemic: NJ south to FL and west to TX. **Phen:** Late Apr-Sep. **Tax:** A tetraploid species (2n=36) (Tippary et al. 2018). **Syn:** = C, F, FI7, GW2, K1, K3, K4, RAB, Tx, Va, WH3, Middleton et al (2018), Wood (1983a); = *Nymphoides aquaticum* – G, S, orthographic variant. NatureServe G5 (Secure).

Nymphoides cordata (Elliott) Fernald. LITTLE FLOATING HEART. **Hab:** Upland depression ponds, sluggish streams, beaverponds, primarily in the fall-line Sandhills. **Dist:** NL (Newfoundland) and ON south MD; disjunct in the Coastal Plain of NC and SC; disjunct from sw. GA and Panhandle FL west to e. LA. **Phen:** Apr-Aug. **Tax:** A tetraploid species (2n=36) (Tippary et al. 2018). **Syn:** = C, F, FI7, GW2, K1, K3, K4, NE, Pa, RAB, WH3, Middleton et al (2018), Wood (1983a); = *Nymphoides cordatum* – G, orthographic variant; ? *Nymphoides lacunosum* (Ventenat) Kuntze – S, misapplied. NatureServe G5 (Secure).

* ***Nymphoides cristata*** (Roxburgh) Kuntze. CRESTED FLOATING HEART, WATER SNOWFLAKE. **Hab:** Ponds and lakes. **Dist:** Native of China and India. Apparently first naturalizing in North America in FL in 2000; introduced for water gardens and aquariums, and considered a noxious aquatic weed in our area. **Phen:** Jan-Mar. **Tax:** A diploid species (2n=18) (Tippary et al. 2018). **Syn:** = FI7, K3, K4, WH3, Middleton et al (2018). NatureServe GNR (Not Yet Ranked).

* ***Nymphoides peltata*** (S.G. Gmelin) Kuntze. YELLOW FLOATING HEART. **Hab:** Ponds. **Dist:** Native of Europe. This European native is sparingly naturalized in e. North America; it is sold for cultivation in water gardens, and will likely become more widely naturalized. **Phen:** May-Sep. **Tax:** A hexaploid species (2n=54) (Tippary et al. 2018). **Syn:** = Ar, C, F, FI7, GW2, IL, K1, K3, K4, NcTx, NE, Pa, Tx, Va; = *Nymphoides peltatum* – G, orthographic variant. NatureServe G5 (Secure).

403. ASTERACEAE Martinov 1820 (ASTER FAMILY) [in ASTERALES]

A family of about 1500-1700 genera and 25,000-35,000 species, herbs, shrubs, trees, and lianas, cosmopolitan in distribution. References: Barkley, Brouillette, & Strother (2006) in FNA19 (2006a); SE1.

Identification Notes: {define liguliflorous, discoid, disciform, radiant, and radiate heads; define various pappus characters. define calyculus. define palea and phyllary}

- 1 Plant a shrub or liana (woody vine), definitely with woody growth well above ground level..... **Key A**
- 1 Plant an annual, biennial, or perennial, lacking woody growth above ground level.
 - 2 Leaves opposite or whorled, at least on the lower stem nodes (the leaves higher on the stem sometimes alternate).
 - 3 Heads discoid or disciform..... **Key B**
 - 3 Heads radiate..... **Key C**
 - 2 Leaves either alternate (not opposite even at lower nodes of the stem) or basal only (the heads on scapiform stems).
 - 6 Heads liguliflorous (composed of ligulate florets); sap usually milky..... **Key D**
 - 6 Heads discoid, disciform, radiant, or radiate; sap usually clear.
 - 7 Heads discoid, disciform, or radiant.
 - 8 Leaves spiny-margined, phyllaries usually spine-tipped; disk flowers pink (rarely blue or yellow)..... **Key E**
 - 8 Leaves not spiny-margined; phyllaries spine-tipped or not; disk flowers variously colored (including pink)..... **Key F**
 - 7 Heads radiate..... **Key G**

Key A - woody composites (shrubs and lianas)

- 1 Leaves strictly alternate; [tribe *Astereae*].
- 2 Heads discoid; dioecious shrubs to 5 m tall; [widespread in our area]..... **Baccharis**
- 2 Heads radiate (most or all on a plant); bisexual shrub to 1 m tall or scrambling liana; [of se. NC southward, native in the Coastal Plain only].

 Symbology:
 * : waif
 EN : endemic
 H : historic
 N : no
 P : planted
 ? : questionable

- *Chrysoma*
- 1 Leaves opposite, at least on the lower stem nodes (the leaves higher on the stem sometimes alternate); [tribe *Heliantheae*].
- 4 Heads radiate, ray florets yellow; disc florets yellow; leaves strictly opposite or in part alternate. *Borrichia*
- 4 Heads discoid or disciform, ray florets lacking; disc florets pink, purple, or whitish; leaves opposite, but usually at least in part alternate higher on the stem; [collectively of various habitats, Coastal Plain and inland].
- 6 Heads solitary, axillary in the axils of leaves or leafy bracts; heads nodding, the involucre 2-7 mm high; [collectively widespread in our area, of maritime and inland wetlands or moist disturbed areas]; [tribe *Heliantheae*; subtribe *Ambrosiinae*]. *Iva*
- 6 Heads many, terminal on the branches of corymbiform arrays; heads erect, the involucre 4-12 mm high; [of Coastal Plain of FL, s. GA, s. AL, and c. MS, of dry, sandy scrub and pinelands, blackland prairies, or dry, disturbed areas]. *Palafoxia*

**Key B - herbaceous composites with opposite or whorled leaves
and discoid or disciform heads (lacking ray florets)**

- 1 Pappus present, of 5-60 barbellate bristles; receptacle naked (without paleae or well-developed bristles); [tribe *Heliantheae*; subtribe *Eupatoriinae*].
- 2 Plant a twining herb, phyllaries and disk florets 4 per head. *Mikania*
- 2 Plant stiffly erect to weakly spreading but never twining, phyllaries and disk florets usually > 4 per head.
- 3 Leaves in whorls of 3-7, > 2 cm wide. *Eutrochium*
- 3 Leaves opposite, rarely alternate or whorled, if whorled, < 2 cm wide.
- 4 Achenes (and ovaries) 8-10-ribbed; outer phyllaries longitudinally striate. *Brickellia*
- 4 Achenes (and ovaries) (3-) 4-5-ribbed; outer phyllaries not noticeably longitudinally striate.
- 5 Heads pink to blue.
- 6 Phyllaries in 4-6+ series, deciduous. *Chromolaena*
- 6 Phyllaries in 2-4 series, persistent (or deciduous in *Praxelis*).
- 7 Heads pink (rarely bluish); receptacles flat; florets 18-25 per head. *Fleischmannia*
- 7 Heads blue; receptacles conic; florets 25-70 per head. *Conoclinium*
- 5 Heads white to cream or, rarely, pale lilac.
- 9 Florets 3-7 per head. *Eupatorium*
- 9 Florets at least 9 per head.
- 10 Phyllaries not strongly imbricate, with the principal ones subequal and sub-biseriate; petioles 0.5-10 cm. *Ageratina*
- 10 Phyllaries clearly imbricate, in 3+ series; some species epetiolate. *Eupatorium*
- 1 Pappus absent, or of scales, setae, or awns; receptacle either naked, or with paleae or well-developed bristles.
- 11 Leaves whorled, linear, < 2 mm wide; head solitary; [aquatic herb growing in shallow stagnant water]. *Sclerolepis*
- 11 Leaves opposite (or alternate in part), broader in shape and > 5 mm wide; heads typically not solitary; [terrestrial or wetland plants].
- 12 Receptacle naked.
- 13 Pappus of 4-10 scales; heads white, pink, or blue.
- 14 Heads with 20-125 florets; leaves serrate; [rarely naturalized aliens in our area]. *Ageratum*
- 14 Heads with 10-30 florets; leaves entire; [natives, of FL, s. GA, and MS in our area]. *Palafoxia*
- 13 Pappus none, or of a few bristles or irregular coroniform lobes; heads green to yellow. *Iva*
- 12 Receptacle with paleae or well-developed bristles.
- 17 Heads small, less than 1 cm in diameter at anthesis (the female heads enlarging in *Xanthium*); disc florets dull white or suffused with green or purple; florets mainly unisexual (either in the same heads and then males central and females peripheral, or in separate female and male heads); female florets 0-8 per head; [tribe *Heliantheae*; subtribe *Ambrosiinae*]
- 18 Heads unisexual; cypselas shed within an indurated bur or "nut" with hooked or straight spines developed from the phyllaries and/or paleae.
- 19 Involucre of the female heads with tubercles or straight spines developing from the phyllaries; burs 1-8 mm long. *Ambrosia*
- 19 Involucre of the female heads with hooked spines developing from the phyllaries/paleae; burs 10-35 mm long. *Xanthium*
- 18 Heads bisexual, with functionally male and female flowers in the same head; cypselas shed individually, not enclosed. *Iva*
- 17 Heads larger, mostly > 1 cm in diameter at anthesis; disc florets conspicuously white, yellow, pale yellow, or purple; florets mainly bisexual; female florets > 12 per head (except 2-8 in *Polymnia*).
- 22 Disc flowers bright yellow.
- 23 Involucre of phyllaries not subtended by a calyculus. *Acmella*
- 23 Involucre of phyllaries subtended by a calyculus of bracts obviously different in color, texture, and shape than the phyllaries. *Bidens*
- 22 Disc flowers bright white or pale yellow. *Melanthera*

Key C - herbaceous composites with opposite leaves and radiate heads

- 1 Involucre of phyllaries subtended by a calyculus of bracts obviously different in color, texture, and shape than the phyllaries; [tribe *Heliantheae*; subtribe *Coreopsidinae*].
- 2 Phyllaries connate for at least ¼ their length; [MS westwards in our area]. *Thelesperma*
- 2 Phyllaries distinct; [collectively widespread in our area].
- 4 Cypselas 2.5-16 mm long, usually not winged; pappus awns (if present) usually retrorsely barbed. *Bidens*
- 4 Cypselas 1.2-8 mm long, usually winged; pappus awns (if present) barbellate or antrorsely barbed. *Coreopsis*
- 1 Involucre of phyllaries not subtended by a calyculus (or subtended by a calyculus of narrowly linear segments bearing oil glands in *Dysodia* and *Thymophylla*).
- 5 Ray florets white, pink, or purple (rarely pale yellow or lavender).
- 6 Ray flower persistent on the achene and becoming papery and bleached. *Zinnia*
- 6 Ray flower articulate from the achene and falling.

(see introduction for more)

N : no X : extirpated
P : planted
? : questionable

- 7 Pappus of a minute crown; disk florets white or whitish..... *Eclipta*
 7 Pappus either lacking, or of numerous scales, or of retrorsely barbed awns; disk florets yellow..... *Galinsoga*
- 5 Rays predominantly yellow, orange, or red (sometimes with some brown, maroon, or purple coloration as well).
 9 Receptacle naked, epaleate.
 11 Leaves unlobed, entire (though with marginal setae)..... *Pectis*
 11 Leaves pinnately lobed, the margins also often serrate..... *Thymophylla*
- 9 Receptacle paleate, with paleae, bristles, or scales.
 17 Disk florets functionally staminate ("sterile", not producing cypselas), the style undivided, their ovaries much smaller than those of the ray flowers (which are functionally pistillate).
 18 Inner phyllaries prickly with straight or uncinate prickles, and each enveloping a cypselas and swelling into a bur-like structure..... *Acanthospermum*
- 18 Inner phyllaries unarmed, not becoming bur-like (though those of *Melampodium* do invest the fruit).
 20 Slender, small plants, the stems to 5 dm long, often trailing; pappus persistent, forming a crown..... *Chrysogonum*
 20 Taller, robust plants, the stems usually 5-40 cm long at maturity, erect; pappus absent or of 2 awns.
 21 Cypselas strongly flattened, borne in 2-3 series from the 2-3 series of ray florets..... *Silphium*
 21 Cypselas thick, not flattened, borne in 1 series from the 1 series of ray florets..... *Smallanthus*
- 17 Disk florets functionally bisexual ("fertile", producing cypselas), the style divided, their ovaries as large as, or larger than, those of the ray florets (which may be either functionally pistillate or completely neuter).
 22 Ray corolla persistent on the achene and becoming papery and bleached.
 23 Plant a perennial; cypselas subterete, 4-5 mm long..... *Heliopsis*
 23 Plant an annual; cypselas 3-angled or flattened, 6-10 mm long..... *Zinnia*
- 22 Ray corolla articulate from the achene and falling after flowering.
 25 Paleae flattened, not notably clasping the cypselas; cypselas usually notably flattened in the same plane as the phyllaries and the paleae, i.e. at a right angle to the radii of the head; heads small, the receptacle 3-8 mm in diameter..... *Calypocarpus vialis*
- 25 Paleae conduplicate (V-shaped in cross section), the 2 sides of the V partially clasping the cypselas; cypselas either subterete, multi-angled in \times -section, or flattened parallel to the radii of the head; heads mostly larger.
 27 Phyllaries apparently 4 (the 4 outer foliaceous phyllaries forming a quadrangle which hides the much smaller and narrower inner phyllaries)..... *Tetragonotheca*
- 27 Phyllaries not as above (5 or more phyllaries readily visible).
 28 Cypselas (of at least the disk florets) strongly flattened and generally also winged.
 29 Cypselas 1-2.5 mm long; herb to 2 dm tall (erect or creeping)..... *Acmella*
 29 Cypselas 3-7 mm long; herb to 1-40 dm tall (erect)..... *Verbesina*
- 28 Cypselas subterete, quadrangular, variously angled, or diamond-shaped in \times -section, not winged.
 30 Ray florets pistillate ("fertile").
 *Sphagneticola trilobata*
 30 Ray florets completely neuter.
 *Helianthus*

**Key D - herbaceous composites with leaves alternate or basal,
 liguliflorous heads (composed of ligulate florets), and sap usually milky**

- 1 Cypselas (at least of the inner florets of the head) beaked.
 2 Heads solitary and terminal at the end of a stem unbranched to its base..... *Taraxacum*
- 2 Heads several per stem, in various corymbiform, umbelliform, spiciform, or paniculiform arrays (rarely solitary and terminal in the smallest and most depauperate individuals in a population).
 6 Achenes distinctly flattened..... *Lactuca*
 6 Achenes terete or prismatic.
 7 Pappus of plumose bristles, at least the inner series; plant an annual or biennial..... *Hypochaeris*
- 7 Pappus of simple capillary bristles; plant an annual, biennial, or perennial.
 9 Beak of the cypselas with a ring of soft white reflexed hairs at the summit (just below the pappus)..... *Pyrhopappus*
 9 Beak of the cypselas lacking a ring of hairs as described..... *Crepis*
- 1 Cypselas beakless.
 12 Leaves basally disposed (stem leaves few or none, if present generally smaller in size than the basal leaves, which are persistent into flowering and fruiting); corollas yellow, orange, or red.
 13 Pappus absent or of both scales and barbellulate bristles..... *Krigia*
 13 Pappus of bristles only (these barbellulate or plumose).
 15 Leaves with entire margins; plants perennials, either from long to short rhizomes or from a short caudex with fibrous roots..... *Hieracium*
 15 Leaves coarsely toothed or pinnately lobed; plants annuals, from a taproot.
 16 Involucre 5-12 mm high; achenes usually > 2.5 mm long; pappus bristles distinct, 3-7 mm long..... *Crepis*
 16 Involucre 3-5 mm high; achenes 1.5-2.5 mm long; pappus bristles basally connate, 2.5-3.5 mm long..... *Youngia*
- 12 Leaves basal and cauline (plant often beginning with a basal rosette, but by flowering bearing well-developed stem leaves about as large as the basal leaves, the basal rosette often withering prior to flowering and fruiting); corollas yellow, orange, red, blue, pink, white, or lavender.
 17 Pappus absent or of scales.
 18 Corollas pale blue (rarely pink or white)..... *Cichorium*
 18 Corollas yellow (rarely orange).

- 19 Phyllaries enfolding the outer cypselas.....*Hedypnois*
 19 Phyllaries not enfolding the outer cypselas.....*Krigia*
 17 Pappus of numerous smooth, barbellate, or plumose bristles.
 22 Cypselas more or less strongly flattened.....*Sonchus*
 22 Cypselas terete or prismatic, slightly or not at all flattened.
 24 Corollas pink, purple, lavender, white, or creamy-yellow.....*Nabalus*
 24 Corollas bright yellow, orange, or red.
 26 Plants taprooted annuals and biennials (rarely perennials); pappus bristles white and soft in texture.....*Crepis*
 26 Plants fibrous-rooted perennials; pappus bristles white, light to medium tan, or sordid, stiff.....*Hieracium*

Key E - herbaceous composites with leaves spiny, leaves alternate or basal, and heads discoid

- 2 Stem winged, the wings armed with spines.....*Carduus*
 2 Stem not winged.
 5 Leaves green with white mottles.....*Silybum*
 5 Leaves green.
 6 Disk flowers pink (rarely white).....*Cirsium*
 6 Disk flowers yellow.
 7 Pappus of numerous plumose bristles.....*Cirsium*
 7 Pappus absent or of scales or barbellulate bristles.....*Centaurea benedicta*

Key F - herbaceous composites with leaves not spiny, alternate or basal, heads disciform or discoid (or rarely radiant)

- 1 Flowers pink, lavender, or purplish; phyllary appendages scarious and spineless, decurrent along the phyllary margin nearly to the phyllary base.....*Centaurea*
 1 Flowers blue; phyllary appendages not or only slightly decurrent along the phyllary margins.....*Cyanus*

Key from FOV - for editing and augmentation:

- 1 Receptacles with paleae or bristles.
 2 Pappus lacking or of scales or awns.
 3 Pappus lacking.
 4 Involucre of dentate or fimbriate phyllaries.....*Centaurea*
 4 Involucre of the pistillate heads a bur with hooked prickles.....*Xanthium*
 3 Pappus present.
 5 Phyllaries dentate or fimbriate.....*Centaurea*
 5 Phyllaries entire.....*Marshallia*
 2 Pappus of bristles.
 6 Phyllaries fimbriate, dentate, or spiny; leaves often prickly or spiny.....*Centaurea*
 6 Phyllaries entire, leaves not prickly or spiny.
 8 Phyllaries hooked at tip; heads forming burs at maturity.....*Arctium*
 8 Phyllaries not hooked at tip; heads not forming burs at maturity.
 9 Heads larger, the involucre 6-15 mm high, with 15-40 phyllaries; leaves with conspicuous (at least at 10× magnification) resin dots.....*Carphephorus*
 9 Heads small, the involucre 3.5-6 mm high, with 5-12 phyllaries; leaves without shining punctate glands (except punctate-glandular in *Litrisa*, of the FL peninsula).....*Trilisa*
 1 Receptacles naked.
 11 Pappus lacking or of scales or awns.
 12 Disk florets blue or purple.
 13 Heads few-flowered, aggregated into secondary heads with leafy bracts.....*Elephantopus*
 13 Heads many-flowered, not aggregated into secondary heads.....*Vernonia*
 12 Disk florets yellow to yellowish green or reddish to reddish brown.
 14 Cypselas winged and spined; heads sessile in the branch forks.....*Soliva*
 14 Cypselas not winged and spined; heads not sessile in the branch forks.
 15 Inflorescence elongate, paniculiform, spiciform, or racemiform.....*Artemisia*
 15 Inflorescence a flat-topped corymb, or heads solitary.
 16 Receptacle strongly convex and pointed; plants pineapple-scented.....*Matricaria*
 16 Receptacle flat to convex; plants scented, but not of pineapple.....*Tanacetum*
 11 Pappus of capillary bristles.
 17 Heads yellow.
 18 Perennial; leaves remotely toothed to entire; [of shale barrens].....*Packera*
 18 Annual; leaves irregularly toothed to pinnatifid; [weed of disturbed soil].....*Senecio*
 17 Heads white, whitish, pink, purple, red,

- 19 Florets all perfect.
- 21 Phyllaries in essentially one series; leaves palmately veined, ovate to reniform..... *Arnoglossum*
- 21 Phyllaries in several series; leaves variously veined, linear to broadly ovate.
- 22 Heads white or whitish; [of uplands]..... *Brickellia*
- 22 Heads pink to red or violet to deep purple or, rarely, white; [of uplands or wetlands].
- 23 Pappus bristles of one length..... *Liatris*
- 23 Pappus double with inner bristles long and the outer very short *Vernonia*
- 19 Some or all florets pistillate.
- 24 Leaves not white-woolly.
- 25 Phyllaries in essentially one series; fresh plants not strongly scented..... *Erechtites*
- 25 Phyllaries in several series; fresh plants with a strong, aromatic fragrance *Pluchea*
- 24 Leaves white woolly, at least beneath.
- 26 Plants dioecious.
- *Antennaria*
- 26 Plants not dioecious.
- 28 Blooming Mar-Jul; pappus bristles united at base..... *Gamochaeta*
- 28 Blooming mostly Jul-Nov; pappus bristles distinct.
- *Pseudognaphalium*

Key G - Herbaceous composites with the leaves alternate or basal and the heads radiate

- 1 Ray florets yellow to orange.
- 2 Receptacles chaffy.
- 3 Disk florets sterile with style undivided..... *Silphium*
- 3 Disk florets fertile with style bifurcate.
- 4 Leaves decurrent down the stem; cypselas strongly flattened and often winged..... *Verbesina*
- 4 Leaves not decurrent; cypselas moderately compressed, not winged.
- 5 Receptacular bracts connate to form a honeycomb-like structure in which the flowers are set; pappus of 7-12 scales..... *Balduina*
- 5 Receptacular bracts not fused; pappus of awns or a fused crown.
- 6 Receptacles flat..... *Helianthus*
- 6 Receptacles conical or columnar..... *Rudbeckia*
- 2 Receptacles naked, rarely with bristles.
- 7 Pappus of scales or a crown.
- 8 Heads small, with disk < 5 mm wide and ray florets < 5 mm long *Amphiachyris*
- 8 Heads larger, with disk > 5 mm wide and ray florets > 5 mm long..... *Helenium*
- 7 Pappus of bristles, sometimes also with shorter outer scales.
- 9 Phyllaries in one series.
- *Packera*
- 9 Phyllary in 2+ series.
- 11 Pappus double.
- 12 Ray florets without pappus..... *Heterotheca*
- 12 Ray florets with pappus (similar to that of disk florets).
- 13 Leaves pinnately veined, usually broader and not grasslike..... *Chrysopsis*
- 13 Leaves parallel-veined, linear and grasslike..... *Pityopsis*
- 11 Pappus simple.
- 15 Plants taprooted [of dry Coastal Plain sands from se. VA southwards]..... *Croptilon*
- 15 Plants not taprooted [widespread].
- 16 Inflorescences flat-topped corymbs; leaves resinous-punctate, narrow, entire, sessile or subsessile..... *Euthamia*
- 16 Inflorescences rarely flat-topped; leaves not resinous-punctate, usually not linear, often toothed and petiolate *Solidago*
- 1 Ray florets white or whitish to pink or purple.
- 17 Receptacles chaffy.
- 18 Phyllaries dry, scarious-margined.
- 19 Ray florets 1-5 mm long; heads small in corymbiform arrays..... *Achillea*
- 19 Ray florets > 5 mm long; heads large, terminating the branches..... *Anthemis*
- 18 Phyllaries herbaceous, not scarious on margins.
- 20 Ray florets < 2.5 mm long; disk florets sterile, with an undivided style *Parthenium*
- 20 Ray florets > 5 mm long; disk florets fertile, with a divided style.
- 21 Ray florets pink or light purple, > 15 mm long; heads single *Echinacea*
- 21 Ray florets white, 5-10 mm long; heads 20-100 in a compound corymb *Verbesina*
- 17 Receptacles naked.
- 22 Pappus lacking.
- *Leucanthemum*
- 22 Pappus present.
- 24 Taprooted annuals; ray florets 1-7 mm long.
- 25 Leaves and stems not fleshy, rarely glabrous; cypselas < 1.4 mm long *Erigeron*
- 25 Leaves and stems fleshy, mostly glabrous; cypselas > 1.4 mm long..... *Symphyotrichum*
- 24 Not taprooted and mostly perennials; ray florets > 3 mm long.
- 26 Ray florets usually > 60; blooming Apr-Oct..... *Erigeron*
- 26 Ray florets rarely > 60; blooming late May-Nov.
- 27 Receptacles hemispheric to conic; pappus often with 2-4 awns *Boltonia*
- 27 Receptacles flat to slightly convex; pappus lacking awns.
- 28 At least the basal and lower leaves both petiolate and cordate/subcordate at base.

- 29 Often colonial; inflorescence corymbiform, flat-topped or rounded; outer phyllaries > 1 mm broad *Eurybia*
 29 Not colonial; inflorescence paniculiform, often elongate; outer phyllaries < 1 mm broad..... *Symphyotrichum*
 28 Basal and lower leaves not both petiolate and cordate/subcordate at base.
 30 Leaves sessile and auriculate or cordate-clasping..... *Symphyotrichum*
 30 Leaves petiolate or epetiolate but not auriculate or cordate-clasping.
 32 Leaves silvery-silky on both sides (at least when young), entire *Symphyotrichum*
 32 Leaves not silvery-silky, entire or toothed.
 33 Pappus double, with inner bristles distinctly longer than outer bristles.
 34 Leaves not rigid, veiny, lanceolate to elliptic or ovate, > 6 mm wide *Doellingeria*
 34 Leaves rigid, 1-nerved, linear to linear-spatulate, < 5 mm wide *Ionactis linariifolia*
 33 Pappus simple with all bristles often about the same length.
 35 Ray florets white, few (usually 3–8); cypselas densely silky..... *Sericocarpus*
 35 Ray florets white to pink or blue or purple, more numerous (usually 8–30); cypselas glabrous to pubescent but not densely silky.
 36 Ray florets white; involucre < 6 mm long; phyllaries < 1 mm wide *Symphyotrichum*
 36 Ray florets white or pink to blue or purple; involucre 7–12 mm long; phyllaries usually > 1 mm wide.
 37 Phyllaries glandular..... *Eurybia*
 37 Phyllaries not glandular.
 38 Phyllaries long-attenuate or loose and spreading *Symphyotrichum*
 38 Phyllaries appressed, not long-attenuate.
 *Eurybia*

***Acanthospermum* Schrank 1820 (PARAGUAY BUR)**

A genus of about 6 species, herbs, of tropical America. References: SE1; Strother (2006kk) in FNA20 (2006b).

* ***Acanthospermum australe*** (Loefling) Kuntze. PARAGUAY BUR, SHEEP BUR, PARAGUAY STARBUR. **Hab:** Disturbed areas. **Dist:** Native of South America. **Phen:** (Mar-) May-Nov. **Syn:** = Ar, C, F, FI7, FNA21, G, K1, K3, K4, NY, RAB, S, SE1, Tx, Va, WH3. NatureServe G5 (Secure).

***Achillea* Linnaeus 1753 (YARROW, MILFOIL, THOUSAND-LEAF)**

A genus of about 115 species, herbs, primarily Eurasian. References: Arriagada & Miller (1997); SE1; Guo et al (2005); Guo, Ehrendorfer, & Samuel (2004); Ramsey, Robertson, & Husband (2008); Trock (2006) in FNA19 (2006a).

Achillea gracilis Rafinesque. EASTERN YARROW, EASTERN THOUSANDLEAF. **Hab:** Grassy balds, meadows, pastures, roadsides, disturbed areas. **Dist:** Widespread in e. North America. **Phen:** Apr-Nov. **Tax:** The *Achillea millefolium* aggregate is a taxonomically very complex entity, with races of different ploidies, and both introduced and native genotypes in e. North America. Ramsey, Robertson & Husband (2008) recommended treating native North American races as *A. borealis*; most eastern North American populations represent native North American races, most closely allied to e. Asian taxa, with only a few collections of European races from near old port cities (Ramsey, pers. comm.; Ramsey 2011; Levin 2011). Later work suggests that *A. borealis* should be narrowly applied to a western North American entity, and that the oldest name available for native eastern North American *Achillea* is *A. gracilis*, a course followed here. **Syn:** = *Achillea lanulosa* Nuttall – F, Arriagada & Miller (1997); = *Achillea millefolium* ssp. *lanulosa* (Nuttall) Piper – C, G, GrPl, W; = *Achillea millefolium* var. *occidentalis* A.P. de Candolle – K1; < *Achillea borealis* Bongard – Ramsey, Robertson, & Husband (2008); < *Achillea millefolium* Linnaeus – Ar, FI7, FNA19, K4, Mi, NcTx, NY, Oh3, Pa, RAB, SE1, Tn, Va, WH3; < *Achillea millefolium* ssp. *lanulosa* (Nuttall) Piper – NE; > *Achillea millefolium* var. *lanulosa* (Nuttall) Piper – II; >< *Achillea millefolium* var. *millefolium* – II.

***Acmella* L.C. Richard ex C.H. Persoon 1807 (SPOTFLOWER)**

A genus of about 30 species, herbs, primarily of tropical distribution. References: SE1; Jansen (1985); Strother (2006uu) in FNA21 (2006c).

- 2 Leaves linear to lanceolate; petioles 2-4.5 mm long; outer series of phyllaries narrowly to broadly ovate, the apex acute; heads radiate or discoid *Acmella pusilla*
 2 Leaves narrowly to broadly ovate; petioles (3-) 5-43 mm long; outer series of phyllaries lanceolate, the apex acuminate; heads radiate *Acmella repens*

* ***Acmella pusilla*** (Hooker & Arnott) R.K. Jansen. ARGENTINE SPOTFLOWER. **Hab:** Lawns, disturbed areas (especially around old seaports). **Dist:** Native of South America. Known from scattered locations in the se. United States (NC, SC, GA, FL), associated with old seaports, such as Wilmington, NC, Savannah, GA, Pensacola and Apalachicola, FL, and perhaps not well-established at some of the reported locations. **Phen:** May-Sep. **Comm:** Reported as naturalized and "locally common" at a site in Chatham County, GA (Carter, Baker, & Morris 2009). **Syn:** = FNA21, K1, K3, K4, WH3, Jansen (1985). NatureServe G5 (Secure).

Acmella repens (Walter) L.C. Richard in Persoon. CREEPING SPOTFLOWER. **Hab:** Floating vegetation mats, roadsides, streambanks, other moist, open, habitats. **Dist:** Se. NC south to s. FL, west to e. TX, north in the Mississippi Embayment to w. TN and s. MO. **Phen:** Jul-Dec. **Tax:** Jansen (1985) treats this as var. *repens* of *A. oppositifolia*, the typic var. *oppositifolia* widely distributed from c. Mexico south through Central America into n. South America, stating that var. *repens* "can be easily separated from var. *oppositifolia* by its lanceolate, acuminate phyllaries and short double hairs on the achene margins". Jansen also states that "four factors have caused extreme difficulties in delimiting taxa at the specific and infraspecific

403. ASTERACEAE

level within this group: very close morphological similarity; polyploidy; hybridization, especially between different ploidy levels; and asexual reproduction". In his more statistical taxonomic analyses, his var. *repens* (tetraploid, and the only taxon out of 39 native to North America) separates rather well from *A. oppositifolia* (diploid, tetraploid, and hexaploid). Given the morphological distinctiveness and substantial allopatry of the two taxa, I prefer not to associate this taxon as a variety of the complex *A. oppositifolia*. **Syn:** = Ar, FNA21, Il, K3, K4, Tn; = *Acmella oppositifolia* (Lamarck) R.K. Jansen var. *repens* (Walter) R.K. Jansen – F17, K1, NcTx, WH3, Jansen (1985); = *Spilanthes americana* (Mutis ex Linnaeus f.) Hieronymus var. *repens* (Walter) A.H. Moore – F, RAB, Tx; < *Spilanthes americana* – C, G, GW2, S, SE1. NatureServe G5T5 (Secure).

*Ageratina* Spach 1847 (MILK-POISON, WHITE SNAKEROOT)

A genus of about 250-290 species, American. The separation of *Ageratina* from *Eupatorium* is clearly warranted, on morphological, karyological, and molecular grounds. References: Clewell & Wooten (1971); SE1; Lamont (2018); Nesom (2006mm) in FNA21 (2006c).

- 2 Leaves subcoriaceous in texture; leaves crenate or crenate-serrate; leaf blades 3-7 (-10) cm long, 2-5 cm wide; [primarily of xeric or submesic sites]. *Ageratina aromatica*
- 2 Leaves membranaceous in texture; leaves serrate or coarsely dentate; leaf blades 6-18 cm long, 3-12 cm wide (at least the larger on a given plant usually more 8 cm long); [primarily of mesic sites]. *Ageratina altissima*

Ageratina altissima (Linnaeus) R.M. King & H. Robinson. COMMON WHITE SNAKEROOT, COMMON MILK-POISON. **Hab:** Moist forests, such as cove forests. **Dist:** QC west to se. ND, south to Panhandle FL and c. TX. **Phen:** Late Jul-Nov. **Tax:** Var. *angustata* (A. Gray) Clewell & Wooten is sometimes recognized, and ranges from IL and e. KS south to LA and c. TX. **Comm:** This species has been shown to be the cause of the "milk sickness" of pioneer days; the plants contain a poison which is transmissible to humans through cow milk. **Syn:** = K4, Lamont (2018); = *Ageratina altissima* var. *altissima* – Ar, FNA21, K1, K3, NE, NY, Pa, Tn, Va; = *Eupatorium rugosum* Houttuyn var. *rugosum* – C, SE1; = *Eupatorium urticifolium* Reichard – S; < *Ageratina altissima* (Linnaeus) R.M. King & H. Robinson – F17, Mi, WH3; > *Ageratina altissima* var. *altissima* – Clewell & Wooten (1971); > *Ageratina altissima* var. *angustata* (A. Gray) Blake – Clewell & Wooten (1971); < *Eupatorium rugosum* Houttuyn – G, GrPl, NcTx, Oh3, RAB, Tx, W; > *Eupatorium rugosum* var. *chlorolepis* Fernald – F; > *Eupatorium rugosum* Houttuyn var. *rugosum* – F; > *Eupatorium rugosum* var. *tomentellum* (B.L. Robinson) Blake – F.

Ageratina aromatica (Linnaeus) Spach. SMALL-LEAVED WHITE SNAKEROOT, WILD-HOARHOUND. **Hab:** Woodlands and forests, usually xeric, and often fire-maintained, sandhills, also woodland edges. **Dist:** MA, NY, and OH, south to ne. FL, Panhandle FL, and e. LA (Florida parishes). **Phen:** Late Aug-Oct. **Tax:** Two varieties have been delineated, both of them occurring in our area. Var. *incisa* (A. Gray) C.F. Reed is described as differing from var. *aromatica* in having the leaves cuneate (vs. truncate to rounded), acuminate (vs. acute), sharply toothed (vs. bluntly toothed, thin in texture (vs. thick), and the petioles slender and 0.5-2 cm long (vs. less slender and 0.1-1.5 cm). It is supposed to be Southeastern in range, from se. VA south to FL, on the Coastal Plain. The validity of this variety needs further assessment. **Syn:** = F17, FNA21, K3, K4, NE, NY, Pa, Tn, Va, WH3, Clewell & Wooten (1971); = *Eupatorium aromaticum* Linnaeus – C, G, Oh3, RAB, SE1, W; > *Ageratina aromatica* var. *aromatica* – K1; > *Ageratina aromatica* var. *incisa* (Gray) C.F. Reed – K1; > *Eupatorium aromaticum* Linnaeus – S; > *Eupatorium aromaticum* var. *aromaticum* – F; > *Eupatorium aromaticum* var. *incisum* A. Gray – F; > *Eupatorium latidens* Small – S.

*Ageratum* Linnaeus 1753 (AGERATUM, FLOSSFLOWER, PUSSYFOOT)

A genus of about 44 species, herbs, of tropical America. References: SE1; Nesom (2006ff) in FNA21 (2006c).

* ***Ageratum conyzoides*** Linnaeus. AGERATUM, TROPICAL WHITEWEED, GOATBUSH. **Hab:** Disturbed areas. **Dist:** Apparently native of South America. Recently relocated in AL (Diamond 2015). **Phen:** Jul-Aug. **Syn:** = F17, FNA21, Il, K1, K3, NE, S, SE1, SFla, WH3; > *Ageratum conyzoides* ssp. *conyzoides* – Bah; > *Ageratum conyzoides* ssp. *latifolium* (Cavanilles) Johnson – Bah. Ambrosia Linnaeus 1753 (RAGWEED)

A genus of about 43 species, herbs, cosmopolitan. References: SE1; McMillan & Prevost (2022); Strother (2006dd) in FNA20 (2006b).

- 1 Leaves either undivided, with 2 lateral teeth, or palmately 3-5-lobed.
 - 2 Leaves sessile to clasping, 2-7 cm long, undivided or with teeth at base or rarely lobed.

..... *Ambrosia bidentata*
 - 2 Leaves petiolate, 7-30 cm long, (1-) 3 (-5) lobed.
 - 4 Petioles of upper leaves wingless; ribs of fruits ending in blunt or obsolete tubercles; leaf undersurfaces strongly scabrous *Ambrosia trifida* var. *texana*
 - 4 Petioles of upper leaves wing-margined; ribs of fruits ending in short spines; leaf undersurfaces glabrescent to scabrous *Ambrosia trifida* var. *trifida*
- 1 Leaves 1- to 3-pinnatifid.
 - 6 Annual, with fibrous roots; fruiting involucre (bur) with short, sharp spines 0.1-0.5 mm long

..... *Ambrosia artemisiifolia*
 - 6 Perennial, with deep-seated, creeping roots; fruiting involucre (bur) **either** with spines (0.1-) 0.4-1.0 mm long **or** with 'spines' reduced to mere bumps.

..... *Ambrosia psilostachya*

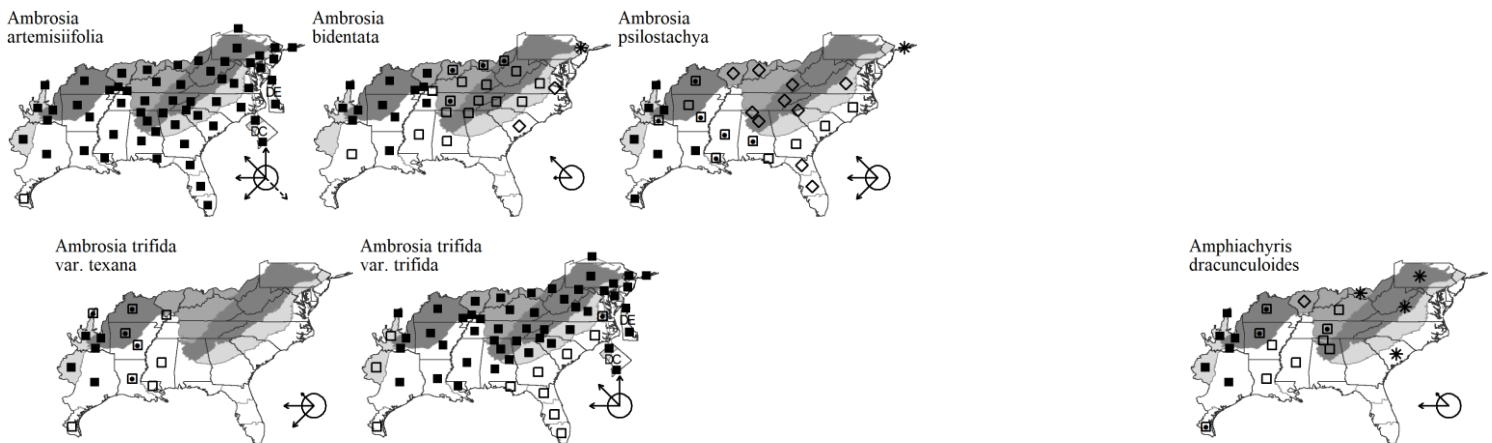

Ambrosia artemisiifolia Linnaeus. COMMON RAGWEED, HOGWEED. **Hab:** Roadsides, gardens, disturbed soils, thin soils on rock outcrops. **Dist:** NL (Newfoundland), NU, and BC south to FL, TX, CA and southward. **Phen:** Jul-Nov. **Syn:** = Ar, Bah, C, FI7, FNA21, G, GrPl, IL, K3, K4, Mi, NcTx, NE, NY, Oh3, Pa, RAB, SE1, Tn, Tx, Va, WH3, McMillan & Prevost (2022); > *Ambrosia artemisiifolia* Linnaeus var. *artemisiifolia* – F, K1, K2; > *Ambrosia artemisiifolia* Linnaeus var. *elator* (Linnaeus) Descourtils – F, K1, K2; > *Ambrosia artemisiifolia* Linnaeus var. *paniculata* (Michaux) Blank – F, K1, K2; > *Ambrosia elator* Linnaeus – S; > *Ambrosia glandulosa* Scheele – S; > *Ambrosia monophylla* (Walter) Rydberg – S.

Ambrosia bidentata Michaux. LANCELEAF RAGWEED. **Hab:** Barrens, prairies, mafic woodlands. **Dist:** S. OH, c. IN, c. IL, and s. IA south to SC (Bradley et al. [in prep.]), nw. GA, n. AL, c. LA and c. TX. Scattered occurrences in other areas probably represent introductions. **Phen:** Jul-Nov. **Syn:** = Ar, C, FNA21, G, GrPl, IL, K3, K4, NcTx, NE, Oh3, RAB, S, SE1, Tn, Tx, Va, McMillan & Prevost (2022). [NatureServe G5](#) (Secure).

Ambrosia psilostachya A.P. de Candolle. PERENNIAL RAGWEED. **Hab:** Prairies and disturbed areas; eastwards in the Carolinas in loamy sandy soil of flats and slight depressions in periodically burned longleaf pine uplands, also in disturbed areas. **Dist:** MI west to MT, south to LA and NM; also scattered along eastern seaboard states (ME, NH, NY, NC, SC, GA, FL, VA), where perhaps some of the distribution is adventive. Apparently first collected in VA in 2000. **Phen:** Jul-Nov. **Tax:** The native plants of loamy longleaf pine sandhills may be distinct; the name *A. rugelii* likely applies. **Syn:** = Ar, C, FI7, FNA21, G, GrPl, IL, K3, K4, Mi, NcTx, NE, NY, Oh3, Pa, SE1, Tx, McMillan & Prevost (2022); = *Ambrosia psilostachya* – WH3, misspelling; = *Ambrosia rugelii* Rydberg – S; > *Ambrosia psilostachya* A.P. de Candolle – RAB; > *Ambrosia psilostachya* var. *coronopifolia* (Torrey & Gray) Farwell – F; > *Ambrosia psilostachya* var. *psilostachya* – F; > *Ambrosia rugelii* Rydberg – RAB. [NatureServe G5](#) (Secure).

Ambrosia trifida Linnaeus var. *texana* Scheele. TEXAS GIANT RAGWEED. **Hab:** Floodplains, moist pastures; disturbed ground. **Dist:** S. IL and MO south to MS, s. TX, and Mexico. **Phen:** Jul-Nov. **Tax:** The distinction between var. *trifida* and var. *texana* (or at the specific rank *A. trifida* and *A. aptera*) warrants additional study. **Syn:** = C, F, G, GrPl, IL, NcTx, Tx; = *Ambrosia aptera* A.P. de Candolle – S; < *Ambrosia trifida* Linnaeus – Ar, FNA21, K3, K4, Mo2, SE1.

Ambrosia trifida Linnaeus var. *trifida*. GIANT RAGWEED. **Hab:** Floodplains, moist pastures, disturbed ground. **Dist:** NS and BC south to n. peninsular FL, Panhandle FL, TX, and CA. **Phen:** Jul-Nov. **Tax:** The distinction between var. *trifida* and var. *texana* (or at the specific rank *A. trifida* and *A. aptera*) warrants additional study. **Syn:** = C, F, G, GrPl, IL, NE; = *Ambrosia trifida* Linnaeus – S; < *Ambrosia trifida* Linnaeus – FI7, FNA21, K3, K4, Mi, Mo2, NY, Oh3, Pa, RAB, SE1, Tn, Va, WH3, McMillan & Prevost (2022).

*Amphichyris* (A.P. de Candolle) Nuttall 1840 (BROOMWEED)

A genus of 2 species, herbs, of sc. North America. References: SE1; Nesom (2000b); Nesom (2006z) in FNA20 (2006b).

Amphichyris dracunculoides (A.P. de Candolle) Nuttall. PRAIRIE BROOMWEED, BROOM SNAKEROOT. **Hab:** Limestone glades, disturbed areas over calcareous rocks; also rarely eastwards as a wool-combing mill waif (Nesom 2004d). **Dist:** This species is relatively common and weedy in

NatureServe G4G5 (Apparently Secure).

Antennaria Gaertner 1791 (PUSSYTOES)

A genus of about 70 species, herbs, of temperate and subtropical areas. Of our species, *A. neglecta*, *A. solitaria*, *A. virginica*, and *A. plantaginifolia* are sexual diploids. *A. parlinii* is of multiple hybrid origin, includes sexual and asexual populations, and is derived from *A. plantaginifolia*, *A. solitaria*, and *A. racemosa*. *A. howellii* is strictly asexual, and is derived from *A. plantaginifolia*, *A. racemosa*, *A. virginica*, and *A. neglecta* (Bayer 1985). For reasons discussed in Bayer & Stebbins (1982) and parallel to those applied in this work to allopolyploid taxa in *Eupatorium*, the treatment of Bayer (1985) and Bayer & Stebbins (1993, 1982) is preferable to Cronquist's treatments, used in most of the floras covering or approaching our area. Much remains to be learned about the relative habitats and distributions of the various taxa in our area. References: Arriagada (1998); Bayer & Stebbins (1982); Bayer & Stebbins (1987); Bayer & Stebbins (1993); Bayer (1984); Bayer (1985); Bayer (2006) in FNA19 (2006a); SE1.

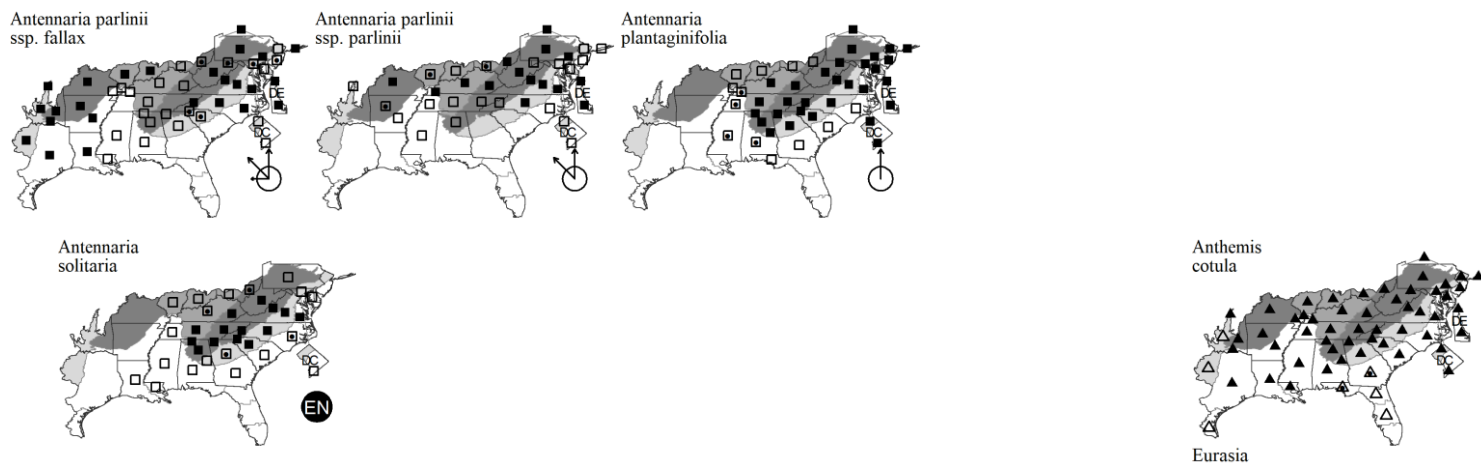

- 1 Flowering stalks with 1 head *Antennaria solitaria*
 1 Flowering stalks with 2 or more heads.
 3 Pistillate involucre 5-7 mm high; pistillate corollas 3-4 mm high; staminate corollas 2-3.5 mm high; basal leaves tomentose on the upper surface; young stolons mostly ascending; staminate and pistillate plants equally common *Antennaria plantaginifolia*
 3 Pistillate involucre 7-10 mm high; pistillate corollas 4-7 mm high; staminate corollas 3.5-5 mm high; basal leaves tomentose or glabrous on the upper surface; young stolons mostly decumbent; sexual and apomictic populations present.
 4 Basal leaves tomentose on the upper surface (becoming glabrate in age); summit of young cauline stem usually glandless *Antennaria parlinii* ssp. *fallax*
 4 Basal leaves glabrous or nearly so on the upper surface (even when young); summit of young cauline stem usually with purple glandular hairs *Antennaria parlinii* ssp. *parlinii*

Antennaria parlinii Fernald ssp. *fallax* (Greene) Bayer & Stebbins. BIG-HEAD PUSSYTOES. **Hab:** Dry woodlands. **Dist:** NS west to MN, south to GA, AL, MS, LA, and TX. **Phen:** Late Mar-Jun. **Syn:** = Ar, FNA19, GrPl, Il, K1, K3, Mi, NcTx, NE, NY, Oh3, Tn, Va, Arriagada (1998), Bayer & Stebbins (1993); = *Antennaria fallax* Greene var. *calophylla* (Greene) Fernald – F; = *Antennaria plantaginifolia* (Linnaeus) Richardson var. *ambigens* (Greene) Cronquist – C, G, RAB, SE1; > *Antennaria calophylla* Greene – S; > *Antennaria fallax* Greene – S, Tx; < *Antennaria parlinii* – K4, Pa, W. Arctium Linnaeus 1753 (BURDOCK)

A genus of about 11 species (though circumscription remains uncertain), herbs, of the temperate Old World. References: SE1; Duistermaat (1996); Keil (2006h) in FNA19 (2006a).

* ***Arctium minus*** (Hill) Bernhardt. COMMON BURDOCK. **Hab:** Pastures, barnyards, roadsides, other disturbed areas. **Dist:** Native of Eurasia. **Phen:** Late Jun-Nov. **Syn:** = Ar, C, F, FNA19, GrPl, Il, K1, K3, K4, Mi, NE, Oh3, Pa, RAB, S, SE1, Va, W, Duistermaat (1996); = *Arctium minus* ssp. *minus*; < *Arctium minus* (Hill) Bernhardt – G.

Arnoglossum Rafinesque 1817 (INDIAN-PLANTAIN)

A genus of about 8 species, herbs, of e. North America. References: Anderson (1998); Anderson (2006a) in FNA20 (2006b); Barkley (1999); SE1; Harper (1905a); Kral & Godfrey (1958); Pippen (1978); Robinson (1974); Ward (2004c).

- 1 Larger leaves palmately veined, cordate at the base, either strongly toothed or lobed.
 - 2 Leaves glaucous beneath; stem glaucous and terete (or slightly striate) ***Arnoglossum atriplicifolium***
 - 2 Leaves green beneath; stem green and conspicuously grooved ***Arnoglossum reniforme***
- 1 Larger leaves parallel-veined (the primary veins parallel and converging toward the leaf apex), lanceolate to elliptic-lanceolate, cuneate at the base, entire to remotely toothed (usually fewer than 10 teeth per leaf).
 - 3 Phyllaries not wing-keeled; stem terete.
 - 4 Basal and lower cauline leaves linear to lanceolate, green to slightly glaucous beneath; plants 0.5-2.5 m tall; [usually of pine savannas, se. NC south to s. FL, west to e. TX] ***Arnoglossum ovatum* var. *lanceolatum***
 - 4 Basal and lower cauline leaves ovate to ovate-lanceolate, glaucous beneath; plants 1.5-2.5 m tall; [usually of shaded, moist to bottomland habitats, e. GA west to e. LA] ***Arnoglossum ovatum* var. *ovatum***
 - 3 Phyllaries wing-keeled; stem strongly angled or sulcate.
 - 8 Involucres (9.5-) 10-12 (-14) mm high; corollas 8-10 (-11.5) mm long; leaves usually with 7-9 main parallel veins; mid-stem leaves petiolate, with rounded bases ***Arnoglossum plantagineum***
 - 8 Involucres (8-) 9.5-10 (-12) mm high; corollas 6-8 (-9.5) mm long; leaves usually with 3-5 main parallel veins; mid-stem leaves sessile, with broadly cuneate bases ***Arnoglossum sulcatum***

Arnoglossum atriplicifolium (Linnaeus) H. Robinson. PALE INDIAN-PLANTAIN. **Hab:** Mesic forests, open woodlands and woodland edges, clearings, prairies, meadows. **Dist:** NY, MN, and NE south to Panhandle FL and LA (attribution to MA is in error, A.Haines, pers.comm.). **Phen:** Jun-Oct. **Syn:** = Ar, FI7, FNA20, Il, K1, K3, K4, Mi, Mo2, NY, Pa, Tn, Va, WH3, Anderson (1998), Barkley (1999); = *Cacalia atriplicifolia* Linnaeus – C, F, G, GrPl, Oh3, RAB, SE1, W, Pippen (1978); = *Mesadenia atriplicifolia* (Linnaeus) Rafinesque – S. ***Artemisia*** Linnaeus 1753 (WORMWOOD, MUGWORT, SAGE)

If defined (as here) to include the segregate genus *Seriphidium*, a genus of about 500 species, shrubs and herbs, north temperate, boreal, and arctic. References: Arriagada & Miller (1997); Björk (2021); SE1; Ling Yeou-Ruenn (1995); Schultz (2006) in FNA19 (2006a).

- 1 Disk flowers functionally sterile (with abortive ovaries); corollas subglobose; fresh plants either not aromatic or with a tarragon odor; [subgenus *Dracunculus*].
 ***Artemisia caudata***
- 1 Disk flowers fertile (with normal ovaries); corollas funnel-shaped; fresh plants variously aromatic or not (but not with a tarragon odor).
 5 Leaves green, essentially glabrous on the lower surface; annuals or biennials from a taproot; plants lacking nonflowering shoots.
 ***Artemisia annua***
- 5 Leaves tomentose on the lower surface, densely so in many species; perennials from a branched rhizome or woody caudex; plants with nonflowering shoots.
 9 Involucres 6-10 mm high; disk corollas 3.2-4 mm long..... ***Artemisia stelleriana***
 9 Involucres 2.5-5 mm high; disk corollas 1-3 mm long.
 ***Artemisia ludoviciana***

* ***Artemisia annua*** Linnaeus. SWEET ANNIE, SWEET WORMWOOD, SWEET SAGEWORT, ANNUAL MUGWORT. **Hab:** Barnyards, roadsides, disturbed areas, waste areas around wool-combing mills (Nesom 2004d). **Dist:** Native of Asia and e. Europe. **Phen:** Aug-Nov. **Syn:** = Ar, C, F, FNA19, G, GrPl, GrPl, Il, K1, K3, K4, Mi, Mo2, NE, NY, Oh3, Pa, S, SE1, Tn, Va, Arriagada & Miller (1997), Ling Yeou-Ruenn (1995). NatureServe GNR (Not Yet Ranked).

Artemisia caudata Michaux. SAND WORMWOOD, BEACH WORMWOOD. **Hab:** Sandy woodlands, beaches and dunes, gravelly and rocky shores; also adventive in sandy fields, on roadsides, in railroad ballast, and other disturbed areas. **Dist:** Native south to NJ, PA, OH, IN, IL, MO, AR (?), OK, and TX. Rare at Presque Isle, nw. PA (S. Grund, pers.comm., 2021). **Phen:** Jul-Oct. **Syn:** = Il, Oh3, RAB, S, Björk (2021), Ling Yeou-Ruenn (1995); = *Artemisia campestris* Linnaeus ssp. *caudata* (Michaux) H.M. Hall & Clements – Ar, FI7, FNA19, GrPl, GrPl, K1, K3, K4, Mi, Mo2, NcTx, NE, NY, Pa, SE1, WH3, Arriagada & Miller (1997); = *Oligosporus campestris* (Linnaeus) Cassini ssp. *caudatus* (Michaux) W.A. Weber; = *Oligosporus caudatus* (Michaux) Poljakov; > *Artemisia caudata* var. *calvens* Lunell – F; > *Artemisia caudata* var. *caudata* – F. NatureServe G5T5 (Secure).

Artemisia ludoviciana Nuttall. WHITE SAGE, WHITE SAGEWORT, PRAIRIE SAGE, WESTERN MUGWORT. **Hab:** Prairies, roadsides, fencerows, eastwards in disturbed areas. **Dist:** MI west to AK, south as a native to IL, AR, TX, NM, AZ, CA, Mexico. **Phen:** Late Aug-Nov. **Syn:** = FI7, Pa, Va, WH3; = *Artemisia ludoviciana* ssp. *ludoviciana* – Ar, FNA19, K1, K3, K4, Mi, NE; = *Artemisia ludoviciana* var. *ludoviciana* – C, G, GrPl, SE1; > *Artemisia ludoviciana* Nuttall – RAB, Ling Yeou-Ruenn (1995); > *Artemisia ludoviciana* ssp. *ludoviciana* – NY; > *Artemisia ludoviciana* Nuttall var. *gnaphalodes* (Nuttall) Torrey & A. Gray – F, Il, Oh3; > *Artemisia ludoviciana* var. *ludoviciana* – F, Il, Mo2, Oh3; > *Artemisia serrata* – NY.

* ***Artemisia stelleriana*** Besser. BEACH WORMWOOD, DUSTY MILLER, HOARY MUGWORT. **Hab:** Sandy roadsides, dunes, other disturbed areas. **Dist:** Native of Japan and ne. Asia. This plant is reported (with documenting photograph) as naturalized and spreading in Nags Head (Dare County, NC) (Graetz 1973), and also more recently with a specimen from Currituck County by R.K. Peet. **Phen:** May-Sep. **Syn:** = C, F, FI7, FNA19, G, K1, K3, K4, Mi, Mo2, NE, NY, SE1, Va, WH3, Ling Yeou-Ruenn (1995); = *Artemisia stellerana* – Arriagada & Miller (1997), orthographic variant. NatureServe G4? (Apparently Secure).

Astranthium Nuttall 1840 (WESTERN-DAISY)

A genus of about 11 species, herbs, of sc. North America and Mexico. References: SE1; DeJong (1965); Nesom (2000b); Nesom (2006x) in FNA20 (2006b); Nesom (2015e).

Identification Notes: The lamina (plural: laminae) is the strap-shaped abaxial lip of the (typically 3-lobed) ray floret corollas. It is homologous with the abaxial lip of a bilabiate or pseudobilabiate corolla, in which it is typically oriented away from the center of the head.

Astranthium integrifolium (Michaux) Nuttall. EASTERN WESTERN-DAISY. **Hab:** Limestone glades, barrens, rocky woodlands, roadsides. **Dist:** Nc. KY south through c. TN to nw. GA and ne. AL (primarily in the Interior Low Plateau); disjunct in c. MS (where possibly native) and also disjunct in nc. WV, where presumably introduced. **Tax:** The related *A. ciliatum* (Rafinesque) Nesom of the Ozarkian region and Texas has sometimes been treated as a variety, subspecies, or unnamed component of *A. integrifolium*, but see Nesom (2005a) for rationale for recognition at the specific rank, which renders *A. integrifolium* endemic east of the Mississippi River. **Syn:** = FNA20, K3, K4, Tn, Nesom (2015e); = *Astranthium integrifolium* ssp. *integrifolium* – K1, DeJong (1965); = *Astranthium integrifolium* var. *integrifolium* – C; < *Astranthium integrifolium* (Michaux) Nuttall – F, G, SE1, W. NatureServe G5TNR (Not Yet Ranked).

Baccharis Linnaeus 1753 (SILVERLING, HIGH-TIDE BUSH, MULLET BUSH, GROUNDSEL TREE, BACCHARIS)

A genus of about 350–450 species, shrubs, perennial herbs, and trees, of tropical, subtropical, and warm temperate America. References: SE1; Franck et al (2021); Nesom (2000b); Sundberg & Bogler (2006) in FNA20 (2006b).

3 Leaves 1-2 (-5) mm wide; stems glabrous.

3 Leaves (3-) 5-40 mm wide; stems glabrous to minutely pubescent or scurfy.

5 Heads grouped in sessile clusters of 1-4 heads, each cluster subtended by a normally sized or slightly reduced leaf; heads sessile; bracts (leaves) subtending head clusters usually broadly obovate or spatulate (L:W 1.5-3×) and also usually toothed; leaf glands on leaf undersurface only, small and inconspicuous under magnification..... *Baccharis angustifolia*

5 Heads in paniculiform or umbelliform arrays of 10 to very many heads, the arrays including some reduced bracts subtending branches or head clusters, but with terminal groupings of heads mostly of 10+ heads above the last bract; heads pedunculate (sessile); bracts in the inflorescence mainly untoothed and narrower than leaves below the inflorescence, lanceolate to narrowly elliptical, 3-7× as long as wide (except spatulate and 1-2× in *Baccharis dioica*); leaf glands on both upper and lower faces, large and usually conspicuous under magnification (less so in older specimens) (except finer and less conspicuous in *Baccharis salicina*).
..... *Baccharis halimifolia*

Baccharis angustifolia Michaux. FALSE-WILLOW. **Hab:** Interdune swales, wet hammocks, marsh edges. **Dist:** Ne. NC south to s. FL, west to LA; Bahamas. **Phen:** Sep-Oct. **Tax:** Some plants with broader leaves and rare teeth seem to represent hybrids with *Baccharis halimifolia*. **Syn:** = Bah, FI7, FNA20, GW2, K1, K3, K4, RAB, S, SE1, WH3, Franck et al (2021). NatureServe G4 (Apparently Secure).

Baccharis glomeruliflora Persoon. **Hab:** Wet hammocks, marsh edges, interdune swales. **Dist:** Se. NC south to s. FL, west to MS; West Indies. **Phen:** Oct-Nov. **Syn:** = Bah, FI7, FNA20, GW2, K1, K3, K4, RAB, S, SE1, WH3, Franck et al (2021). NatureServe G4 (Apparently Secure).

Baccharis halimifolia Linnaeus. SILVERLING, HIGH-TIDE BUSH, MULLET BUSH, GROUNDSEL TREE, MANGLIER, SEA-MYRTLE, CONSUMPTION-WEED. **Hab:** Fresh and brackish marshes, marsh borders, hammocks, moist abused land, roadsides, ditches, old fields, and a wide variety of disturbed areas. **Dist:** Se. MA south to s. FL, west to TX, AR, and OK; West Indies. **Phen:** Aug-Oct. **Comm:** *B. halimifolia* is becoming increasingly common inland, and can be an especially aggressive invader in sunny sites after silvicultural disturbance. **Syn:** = Ar, Bah, C, F, FI7, FNA20, G, GW2, K1, K3, K4, NcTx, NE, NY, Pa, RAB, S, SE1, Tn, Tx, Va, WH3, Franck et al (2021). NatureServe G5 (Secure).

*Balduina* Nuttall 1818 (HONEYCOMB-HEAD, BALDUINA)

A genus of 3 species, herbs, of se. North America. References: SE1; Keener (2006) in FNA21 (2006c); Parker & Jones (1975).

Identification Notes: The common name alludes to the honeycomb-like texture of the receptacle, made up of connected receptacular bractlets which surround the achenes. This condition is diagnostic of the genus, and can be seen even when the plant is in flower by stripping the flowers from the receptacle. Superficially, the perennial species resemble some *Helenium* (particularly *H. pinnatifidum* and *H. vernale*), but these bloom months earlier. The punctate leaves are very distinctive.

1 Plant an annual or biennial; cauline leaves numerous, linear, 0.5-1.9 mm wide; outer involucre bracts 0.6-1.7 mm wide, lanceolate, acuminate; disk 6-15 mm wide; pappus scales obovate-orbicular, 0.3-0.6 mm long..... *Balduina angustifolia*

- 1 Plant a perennial; cauline leaves few, linear-spatulate, 2-7 mm wide; outer involucral bracts 1.7-3.1 mm wide, ovate, acute; disk (10-) 15-25 mm wide; pappus scales lanceolate, 1.1-2.1 mm long.

.....*Balduina uniflora*

Balduina angustifolia (Pursh) B.L. Robinson. SANDHILL HONEYCOMB-HEAD, SANDHILL BALDUINA. **Hab:** Longleaf pine sandhills, pine rocklands, and other dry, sandy soils. **Dist:** GA south to s. FL, west to s. MS; it should be sought in s. SC. **Phen:** Sep-Dec. **Syn:** = F17, FNA21, K1, K3, K4, SE1, WH3, Parker & Jones (1975); = *Actinospermum angustifolium* (Pursh) Torrey & A. Gray – S. **NatureServe G5** (Secure).

Balduina uniflora Nuttall. SAVANNA HONEYCOMB-HEAD, YELLOW BALDUINA. **Hab:** Wet pine savannas and pine flatwoods. **Dist:** A southeastern Coastal Plain endemic: se. NC and immediately adjacent ne. SC (apparently absent from much of SC), and from extreme s. SC south to ne. FL, FL Panhandle, and west to e. LA. **Phen:** Late Jul-Sep. **Syn:** = F17, FNA21, GW2, K1, K3, K4, RAB, SE1, WH3, Parker & Jones (1975); = *Endorima uniflora* (Nuttall) Barnhart ex Small – S; ~ *Actinospermum uniflorum* (Nutt.) Barnh.. **NatureServe G4** (Apparently Secure).

Bidens Linnaeus 1753 (BEGGAR-TICKS, BUR-MARIGOLD)

A genus of about 240 species, herbs, cosmopolitan. Recent molecular studies suggest that the relationship between *Bidens* and *Coreopsis* is complex, and that changes in taxonomy will be needed to more accurately reflect relationships (Kim et al. 1999; Crawford & Mort 2005). References: Ballard (1986); SE1; Lipscomb & Smith (1977); Sherff & Alexander (1955); Strother & Weedon (2006) in FNA21 (2006c).

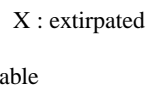

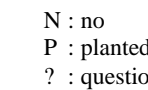

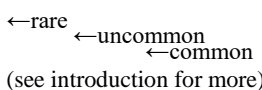

Identification Notes: The involucre of phyllaries is subtended by an additional series of bracteal structures, the calyculus.

- 2 Inner cypselas more-or-less equally 4-angled, thickest near the middle and equally tapered to both ends; ray florets white, pink, or pale yellowish (or absent).
 3 Leaves 2-3× dissected, primary lobes > 20, the ultimate segments rounded to acute, 2-10 mm wide; ray florets pale yellowish..... ***Bidens bipinnata***
 3 Leaves mostly once-pinnate, primary lobes 3-7, the ultimate segments serrate and acute, 8-50 mm wide; ray florets white or absent.
 ***Bidens alba* var. *radiata***
- 2 Inner cypselas flattened (if 4-angled, the alternating angles acute and obtuse), thickest toward the tip; ray florets yellow or orange (or absent).
 5 Most leaves simple, the margins dentate to serrate or incised (with 3-7 lobes).
 6 Leaves (except sometimes the lower) sessile; heads usually nodding, at least in age.
 ***Bidens laevis***
- 6 Leaves with a distinct petiole 1-4 cm long (this sometimes winged); heads erect.
 8 Rays 12-25+ mm long; cypselas 2.5-4.5 mm long, the margins not barbed or ciliate..... ***Bidens mitis***
 8 Rays absent or 2-5 (-12) mm long; cypselas (3-) 6-13 mm long, the margins sometimes barbed or ciliate.
 11 Cypselas ± flattened, sometimes weakly 3 (-4)-angled and 3 (-4)-awned, the faces usually smooth, seldom notably tuberculate; disc corollas 4-lobed, light yellow; anthers usually pale ***Bidens comosa***
 11 Cypselas (at least inner) usually ± 4-angled and 4-awned, the faces usually strigose or tuberculate; disc corollas 5-lobed, orange-yellow; anthers usually blackish..... ***Bidens connata***
- 5 Most leaves either 1-pinnately compound, the 3-5 (-7) leaflets petiolulate, or -1-2× pinnately lobed.
 12 Ray florets 0, or rays 1-3, the laminae 2-3.5 mm long.
 13 Calyculus bractlets (3-) 4 (-5), seldom ciliate; disc florets usually 10-20 ***Bidens discoidea***
 13 Calyculus bractlets 5-21, usually ciliate; disc florets 20-150.
 14 Calyculus bractlets (5-) 8 (-10); leaves usually 3 (-5)-foliolate ***Bidens frondosa***
 14 Calyculus bractlets 10-16 (-21); leaves usually lacinate or pinnatisect..... ***Bidens vulgata***
- 12 Ray florets (5-) 8-13, the laminae 10-30 mm long.
 15 Cypselas 2.5-4× as long as wide..... ***Bidens trichosperma***
 15 Cypselas 1.5-2 (-2.5)× as long as wide.
 16 Cypselas 2.5-5 mm long, the margins not winged, barbed, or ciliate..... ***Bidens mitis***
 16 Cypselas (4-) 5-8 mm long, the margins usually barbed or ciliate, and often also corky-winged.
 17 Calyculus bractlets 8-12 (-16), these (4-) 5-7 (-12) mm long; calyculus bractlets glabrous or fine-pubescent on the lower surface ***Bidens aristosa***
 17 Calyculus bractlets 12-21, these (6-) 8-12 (20) mm long; calyculus bractlets usually coarsely short-pubescent on the lower surface ***Bidens polylepis***

* ***Bidens alba*** (Linnaeus) A.P. de Candolle var. ***radiata*** (Schultz 'Bipontinus') Ballard ex T.E. Melchert. ROMERILLO. **Hab:** Disturbed areas. **Dist:** Adventive from the New World tropics. Reported for Clarksville, Montgomery County, TN (Kraft 2016). **Syn:** = Bah, K1, Ballard (1986); = *Bidens pilosa* Linnaeus var. *radiata* Schultz 'Bipontinus' – Sherff & Alexander (1955); < *Bidens alba* – Ar, F17, Il, NE, WH3; < *Bidens pilosa* Linnaeus – FNA21, K3, K4, RAB, S, SE1.

Bidens aristosa (Michaux) Britton. MIDWESTERN TICKSEED-SUNFLOWER, OZARK TICKSEED-SUNFLOWER. **Hab:** Marshes, wet meadows, ditches, bogs. **Dist:** DE, MD, IL, and MO south to GA, AL, FL (?), and TX (and adventive farther north); the pre-Columbian distribution is uncertain, and portions of the eastern range of the species may be only from, expansion from a more midwestern distribution. **Phen:** Aug-Oct (-Nov). **Syn:** = C, FNA21, G, GW2, Mi, NE, NY, Oh3, Pa, RAB, SE1, Tn, Va, W; < *Bidens aristosa* (Michaux) Britton – Ar, K1, K3, K4, NcTx; > *Bidens aristosa* var. *aristosa* – F, Il, S,

Bigelovia A.P. de Candolle 1836 (RAYLESS-GOLDENROD)

A genus of 3 species, herbs, of se. North America. References: Anderson (1970); SE1; Nesom (2000b); Nesom (2006v) in FNA21 (2006c); Nesom (2020f); Shinnars (1971b).

Bigelovia nudata (Michaux) A.P. de Candolle. RAYLESS-GOLDENROD. **Hab:** Pine savannas, pine flatwoods, pocosin edges. **Dist:** E. NC south to n. FL and west to e. LA. **Phen:** Aug-Oct. **Syn:** = Nesom (2020f); = *Bigelovia nudata* ssp. *nudata* – FI7, GW2, K1, K3, K4, WH3, Anderson (1970); = *Bigelovia nudata* (Michaux) A.P. de Candolle var. *nudata* – FNA20, SE1, Shinnars (1971b); < *Chondrophora nudata* (Michaux) Britton – RAB, S. NatureServe G5T4T5 (Apparently Secure).

Boltonia L'Héritier 1789 (DOLL'S-DAISY)

Contributed by John F. Townsend and Alan S. Weakley

A genus of about 6-7 species, herbs, of e. and c. North America. References: Anderson (1987); SE1; Karaman-Castro & Urbatsch (2006) in FNA20 (2006b); Morgan (1966); Nesom (2000b); Sorrie & LeBlond (2008); Townsend & Karaman-Castro (2006); Townsend (2013).

- 4 Phyllaries spatulate, oblanceolate, or linear-oblanceolate, apices cuspidate, pappus awns 2/3 or more as long as the achenes; inflorescence diffusely branched, with numerous heads. *Boltonia asteroides* var. *recognita*
- 4 Phyllaries linear-subulate to lanceolate; inflorescence various.
- 6 Inflorescence subulate-bracteate. *Boltonia diffusa* var. *diffusa*
- 6 Inflorescence more or less leafy-bracteate.
- 8 Inflorescence diffusely branched, heads relatively numerous, phyllaries (0.2-) 0.3-0.4 (-0.5) mm wide, (1.3-) 1.4-1.8 (-2.1) mm long, pappus awns 0.3-0.8 mm long. *Boltonia apalachicolensis*
- 8 Inflorescence with loosely ascending branches, heads relatively few, phyllaries (0.5-) 0.7-0.9 (-1.1) mm wide, (1.5-) 2.1-2.4 (-3.5) mm long, pappus awns (0.2-) 0.8-1.1 (-1.3) mm long. *Boltonia asteroides* var. *glastifolia*

Boltonia apalachicolensis L.C. Anderson. APALACHICOLA DOLL'S-DAISY. **Hab:** Floodplain forests. **Dist:** Panhandle FL, s. MS, west to LA. **Phen:** Aug-Oct. **Syn:** = FI7, FNA20, K1, K3, K4, WH3; < *Boltonia* sp. – GW2. NatureServe G2Q (Imperiled).

Boltonia asteroides (Linnaeus) L'Héritier var. *glastifolia* (Hill) Fernald. EASTERN DOLL'S-DAISY. **Hab:** Marshes, ditches. **Dist:** NJ south to Panhandle FL, west to MS, LA, and e. TX, mostly on the Coastal Plain, but with a few disjunct occurrences inland, such as Henderson County, NC. **Phen:** Aug-Oct. **Syn:** = F, K3, K4, Va, Townsend (2013); < *Boltonia asteroides* – FI7, RAB, W, WH3; < *Boltonia asteroides* (Linnaeus) L'Héritier var. *asteroides* – Ar, C, FNA20, G, K1, NY, SE1, Anderson (1987), Morgan (1966), Townsend & Karaman-Castro (2006); < *Boltonia* sp. – GW2.

Boltonia asteroides (Linnaeus) L'Héritier var. *recognita* (Fernald & Griscom) Cronquist. **Hab:** Marshes, prairies. **Dist:** MI, OH, KY, TN west to SK and OK. **Phen:** Jul-Oct. **Syn:** = Ar, C, FNA20, G, GrPl, Il, K1, K3, K4, NE, NY, Oh3, Tn, Anderson (1987), Townsend (2013); = *Boltonia latisquama* A. Gray var. *recognita* Fernald & Griscom – F; = *Boltonia recognita* (Fernald & Griscom) G.N. Jones; < *Boltonia* sp. – GW2. NatureServe G5T3T5 (Apparently Secure).

Boltonia diffusa Elliott var. *diffusa*. SOUTHERN DOLL'S-DAISY. **Hab:** Clay-based Carolina bays, roadsides, powerline rights-of-way, and other artificially open areas. **Dist:** Se. SC south to s. FL, west to e. TX, inland in the interior to c. TN, s. IL, s. MO, AR, and se. OK; disjunct in the Bahamas (Mangrove Cay of Andros Island). **Phen:** Aug-Oct. **Comm:** See Sorrie & LeBlond (2008) for comments on distribution and nativity. **Syn:** = Ar, F, FNA20, Il, K1, Va, Morgan (1966); < *Boltonia caroliniana* (Walter) Fernald – RAB; < *Boltonia diffusa* – C, FI7, G, K3, K4, NcTx, SE1, Tx, WH3, Anderson (1987); < *Boltonia* sp. – GW2.

Borrichia Adanson 1763 (SEASIDE OXEYE)

A genus of 2 species, shrubs, of se. United States, Gulf coast of Mexico, and West Indies. References: SE1; Semple (1978); Semple (2006g) in FNA21 (2006c); Ward (2012a).

Borrichia frutescens (Linnaeus) A.P. de Candolle. SILVER SEASIDE OXEYE. **Hab:** Salt and brackish marshes. **Dist:** E. MD and e. VA south to s. FL, west to TX and Mexico (Gulf Coast to the Yucatan peninsula); Bahamas (Grand Bahama); Bermuda. **Phen:** Jan-Dec. **ID Notes:** This species often forms nearly pure, clonal stands of many hectares, conspicuous from the fleshy, gray leaves. **Syn:** = Bah, C, F, FI7, FNA21, G, K1, K3, RAB, S, SE1, Tx, Va, WH3, Semple (1978). NatureServe G5 (Secure).

*Bradbria* Torrey & A. Gray 1842 (GOLDEN-ASTER)

A genus of 2 species, annual herbs, native to sc. North America. References: SE1; Harms (1974); Nesom (1991); Nesom (2000b); Semple & Chinnappa (1984); Semple (1981); Semple (1996); Semple (2006b) in FNA20 (2006b).

Bradbria pilosa (Nuttall) Semple. SOFT GOLDENASTER. **Hab:** Barrens, prairies, glades, savannas, roadsides, disturbed areas. **Dist:** S. MO and se. KS, south to w. LA and e. TX; populations east of the Mississippi River are questionably native. See Anderson (2007) for FL record. **Phen:** (May-) Jun-Oct. **Syn:** = Ar, FI7, FNA20, K3, K4, Mo2, Tn, WH3, Semple (1996); = *Chrysopsis pilosa* Nuttall – F, G, GrPl, NcTx, SE1, Nesom (1991), Semple (1981); = *Heterotheca pilosa* (Nuttall) Shinnery – Tx, Harms (1974); < *Heterotheca gossypina* (Michaux) Shinnery – RAB.

*Brickellia* Elliott 1823 (FALSE-BONESET, BRICKELL-BUSH)

A genus of about 100-110 species, herbs and shrubs, primarily of sw. North America and Mexico south into Central America. *Kuhnia* should be included within a broadly circumscribed *Brickellia* (Schilling et al. 2015; King & Robinson 1987; Shinnery 1971). In a molecular analysis (Schilling et al. 2015), *B. cordifolia* is basalmost in a clade that makes up *Brickellia* s.s., while *B. eupatorioides* is in a clade that corresponds to the formerly recognized *Kuhnia*. References: SE1; Schilling et al (2015); Scott (2006) in FNA21 (2006c); Shinnery (1946); Shinnery (1971a); Turner (1989).

Brickellia eupatorioides. EASTERN KUHNIA. **Hab:** Dry slopes, longleaf pine sandhills (especially in loamy sites), shale barrens, dry woodlands, thickets. **Dist:** NJ west to IN, south to c. peninsular FL and se. TX. **Phen:** Jun-Oct. **Tax:** In addition to var. *eupatorioides*, *B. eupatorioides* includes several other varieties, of more western distribution. Var. *texana* (Shinnery) Shinnery [= var. *ozarkana* (Shinnery) Shinnery] has the outer phyllaries prolonged into setae, nearly or fully as long as the inner phyllaries, and should be considered a possibility for our area, in dry open habitats with prairie or midwestern affinities; it is known from as far eastward as AR, MO, and s. IL. **Syn:** =; = *Brickellia eupatorioides* (Linnaeus) Shinnery var. *eupatorioides* – Ar, FNA21, K1, K3, K4, Mo2, NcTx, Va, Shinnery (1971a), Turner (1989); = *Kuhnia eupatorioides* var. *eupatorioides* – C, F, G, SE1, Tx, Tx; = *Kuhnia eupatorioides* var. *pyramidalis* Rafinesque – Shinnery (1946); < *Brickellia eupatorioides* – FI7, Pa, Tn, WH3; < *Kuhnia eupatorioides* Linnaeus – Oh3, RAB, S, W; > *Kuhnia eupatorioides* var. *eupatorioides* – SE1; > *Kuhnia eupatorioides* var. *gracilis* Torrey & A. Gray – SE1. NatureServe G5T5 (Secure).

*Calypocarpus* Lessing 1832 (STRAGGLER-DAISY, LAWNFLOWER)

A genus of 2-3 species, herbs, of sw. North America south to Central America. References: SE1; Lange, Bradley, & Sadle [in prep]; Sherff & Alexander (1955); Strother (2006v) in FNA21 (2006c).

Calypocarpus vialis Lessing. STRAGGLER-DAISY, LAWNFLOWER, HORSE-HERB, HIERBA DEL CABALLO. **Hab:** Disturbed areas, roadsides, lawns, flower-beds. **Dist:** Native of s. TX and Mexico. Nesom (2011d) discusses the native distribution of *C. vialis* and concludes that it was originally native to s. TX and Mexico. **Phen:** Jan-Dec. **Syn:** = Ar, Bah, FI7, FNA21, IL, K1, K3, K4, NcTx, S, SE1, Tx, WH3, Sherff & Alexander (1955). NatureServe G5 (Secure).

*Carduus* Linnaeus 1753 (PLUMELESS THISTLE)

A genus of about 90 species, herbs, of temperate Old World. References: SE1; Keil (2006e) in FNA19 (2006a).

* ***Carduus nutans*** Linnaeus. NODDING THISTLE, MUSK THISTLE. **Hab:** Fields, roadsides, disturbed areas. **Dist:** Native of Eurasia. **Phen:** Late May-Nov. **Tax:** *C. nutans* in its native range in Eurasia consists of a complex of taxa variously treated at specific, subspecific, and varietal rank; the application of these taxa to North American material is problematic and unresolved (see Keil 2006e in FNA for discussion). **Syn:** = Ar, C, F, FNA19, G, IL, K3, K4, Mi, NE, NY, Oh3, Pa, RAB, SE1, Tn, Va, W; > *Carduus nutans* Linnaeus ssp. *leiophyllus* (Petrovic) Stojanov & Stefanoff – GrPl; > *Carduus nutans* ssp. *macrocephalus* (Desfontaines) Nyman – GrPl, NcTx; > *Carduus nutans* Linnaeus ssp. *macrolepis* (Petersmann) Kazmi – K1.

Carphephorus Cassini 1816

A genus of 4 species, herbs, endemic to the Southeastern Coastal Plain of North America. The merger of *Trilisa* and *Litrisa* into *Carphephorus* has been questioned (Schmidt & Schilling 2000) and Schilling (2011) provides evidence that both *Trilisa* and *Litrisa* should be maintained as separate genera. Schilling (2011b) states that “*Carphephorus* s.s. remains enigmatic, and not only do the features that appear to be diagnostic for the genus appear to be plesiomorphies (elongate rootstocks; cymose capitulescences; larger heads; and notched tips of the anther appendages), there is no evidence from the molecular results that it represents a monophyletic entity. One potential resolution would be to recognize as distinct genera *C. corymbosus*, *C. pseudoliatris*, and *C. bellidifolius* + *C. tomentosus*. A second and perhaps better approach would be to combine *Carphephorus* s.s. (e.g. excluding *Trilisa* and *Litrisa*) and *Liatris* into a single genus.” The only species of this complex not occurring in our area is *Litrisa carnosa* Small (of c. peninsular FL). References: Correa & Wilbur (1969); SE1; DeLaney, Bissett, & Weidenhamer (1999); Nesom (2006hh) in FNA21 (2006c); Orzell & Bridges (2002); Schilling (2011b).

- 1 Heads small, the involucre 3.5-6 mm high, with 5-12 phyllaries; leaves without shining punctate glands (except punctate-glandular in *Litrisa carnosa*, of the FL peninsula).....*Trilisa odoratissima*
- 1 Heads larger, the involucre 6-15 mm high, with 15-40 phyllaries; leaves with conspicuous (at least at 10× magnification) resin dots.....*Carphephorus pseudoliatris*

Carphephorus pseudoliatris Cassini. LAVENDER LADY. **Hab:** Pineland seepage bogs and wet pine savannas. **Dist:** Sw. GA and FL Panhandle west to e. LA, and East Gulf Coastal Plain endemic. **Syn:** = F17, FNA21, GW2, K1, K3, K4, S, WH3, Correa & Wilbur (1969), DeLaney, Bissett, & Weidenhamer (1999), Schilling (2011b); = *Carphephorus pseudo-liatris* – SE1, orthographic variant. **NatureServe G4G5** (Apparently Secure).

Centaurea Linnaeus 1753 (STAR-THISTLE, KNAPWEED)

A genus of about 500 species, herbs, native of Eurasia and n. Africa. *Cyanus* is better separated at the generic level (Greuter 2003). References: Boršić et al (2011); SE1; Greuter (2003b); Greuter et al (2000); Keil & Ochsmann (2006) in FNA19 (2006a).

- 1 Phyllaries evidently spine-tipped.....*Centaurea benedicta*
- 1 Phyllaries not spine-tipped.
- 6 Plant an annual; flowers pale to medium blue, flowering Apr-Jun.....*Cyanus*
- 6 Plant a perennial; flowers pink to purple, flowering Jun-Oct.....*Centaurea stoebe* ssp. *micranthos*

* ***Centaurea benedicta*** (Linnaeus) Linnaeus. BLESSED-THISTLE. **Hab:** Fields, roadsides, disturbed areas. **Dist:** Native of Mediterranean Europe. **Phen:** Late Mar-Jun. **Syn:** = Ar, F17, FNA19, Il, K3, K4, NE, NY, RAB, Tn, Va, WH3; = *Cnicus benedictus* Linnaeus – C, F, G, K1, S, SE1, W. **NatureServe GNR** (Not Yet Ranked).

* ***Centaurea stoebe*** Linnaeus ssp. *micranthos* (S.G. Gmelin ex Gugler) Hayek. SPOTTED KNAPWEED, BUSHY KNAPWEED. **Hab:** Roadsides, disturbed areas. **Dist:** Native of Europe. **Phen:** Late Jun-Nov. **Tax:** Complications about typification make the appropriate name to apply to the tetraploid entity unclear. **Syn:** = Ar, F17, FNA19, K3, Mi, NE, NY, Pa, Tn, Va, WH3; = *Centaurea biebersteinii* A.P. de Candolle – K1; = *Centaurea maculosa* Lamarck – C, F, G, GrPl, Oh3, RAB, SE1, W, misapplied; = *Centaurea stoebe* Linnaeus ssp. *australis* (Pancic & A. Kern.) Greuter – K4; > *Centaurea biebersteinii* A.P. de Candolle – Il; > *Centaurea stoebe* Linnaeus ssp. *micranthos* (S.G. Gmelin ex Gugler) Hayek – Il. **NatureServe GNR** (Not Yet Ranked).

*Chaptalia* Ventenat 1802 (SUNBONNETS)

A genus of about 60 species, herbs, of warm temperate, subtropical, and tropical America. The remainder of the genus is distributed in the West Indies, Central America, and South America. References: SE1; Harms (2011); Nesom (1995a); Nesom (2006a) in FNA19 (2006a); Vuilleumier (1969).

Identification Notes: The basal leaves are distinctive, the undersurface permanently and tightly white floccose, the upper surface floccose when young but glabrate in age, and the margins with obscure denticulations.

Chaptalia tomentosa Ventenat. SUNBONNETS, PINELAND DAISY, NIGHT-NODDING BOG-DANDELION, WOOLLY SUNBONNETS. **Hab:** Pine savannas, sandhill seeps, pine flatwoods. **Dist:** E. NC south s. FL and west to e. TX; allegedly disjunct in Hispaniola (Acevedo-Rodríguez & Strong 2012).

Key to Map
 Symbology: (see introduction for more)

Phen: Dec (southwards)-May. **Syn:** = FI7, FNA19, GW2, K1, K3, K4, RAB, S, SE1, WH3, WI, Harms (2011), Nesom (1995a), Vuilleumier (1969). NatureServe G5 (Secure).

Chromolaena A.P. de Candolle 1836

A genus of about 165 species, perennial herbs and shrubs, of s. North America, Central America, and South America. References: SE1; Nesom (2006ll) in FNA21 (2006c).

Chromolaena ivifolia (Linnaeus) R.M. King & H. Robinson. IVY-LEAF THOROUGHWORT. **Hab:** Prairies and fields, disturbed areas. **Dist:** S. FL, Panhandle FL, s. AL, s. MS, TX; West Indies, Mexico, Central America, and South America (Woods, Diamond, & Searcy 2003; Kartesz 1999, Nesom in FNA 2006c). **Phen:** Aug-Nov. **Syn:** = FI7, FNA21, K1, K3, K4, WH3; = *Eupatorium ivaefolium* – SE1, Tx, orthographic variant; = *Osmia ivaefolia* (Linnaeus) Schultz 'Bipontinus' – S.

Chrysogonum Linnaeus 1753 (GREEN-AND-GOLD)

A genus of 3-4 species and 3-4 taxa, perennial herbs, of se. North America. Nesom (2020) elevated var. *brevistolon* to species rank. Schilling & Floden (2018) suggested "that patterns of differentiation within [*C. virginianum*] are complex and will require adjustment beyond simply elevating the varieties recognized by Nesom (2001) to species level" (Schilling & Floden 2018). References: SE1; Nesom (2001b); Nesom (2006ff) in FNA21 (2006c); Nesom (2020g); Schilling & Floden (2018).

Chrysogonum australe Alexander ex Small. GULF COAST GREEN-AND-GOLD. **Hab:** Moist to fairly dry woodlands and forests. **Dist:** FL Panhandle and sc. and sw. GA west to e. LA. **Phen:** Late Feb-early May. **Comm:** Genetic evidence suggests that this entity is better treated as a species than as a variety (Schilling & Floden 2018). **Syn:** = Nesom (2020g), Schilling & Floden (2018); = *Chrysogonum virginianum* Linnaeus var. *australe* (Alexander ex Small) H.E. Ahles – FI7, FNA21, K3, K4, WH3, Nesom (2001b); < *Chrysogonum australe* Alexander ex Small – S; < *Chrysogonum virginianum* Linnaeus var. *australe* (Alexander ex Small) H.E. Ahles – RAB, SE1, W.

Chrysoma Nuttall 1834 (WOODY GOLDENROD)

A monotypic genus, a shrub, of se. North America. References: SE1; Nesom (2000b); Nesom (2006w) in FNA20 (2006b).

Chrysoma pauciflosculosa (Michaux) Greene. WOODY GOLDENROD. **Hab:** Coastal dunes, xeric sands of very barren, open, white-sand sandhills, fluvial dunes, and less commonly in driest habitats in the fall-line Sandhills. **Dist:** S. NC south to n. FL and west to s. MS. **Phen:** Late Jul-Oct. **ID Notes:** *Chrysoma* has a growth habit unlike any other shrub east of Texas, southwestern United States, and Mexico. From a trunk-like base, numerous branches ascend, forming a flat-topped shrub 3-5 dm tall. Each branch has a cluster of evergreen leaves restricted to its terminal few cm, the internodes very short (a few mm at most). In summer, some of the woody branches produce terminal, deciduous, flowering branches, which elongate rapidly, the leaves widely spaced, reaching a height of a meter or more. Following flowering and fruiting, the deciduous branches die back to the summit of the woody branches. The leaves are gray-green, rather thick-textured, and finely reticulate, the reticulations giving an appearance rather like anole skin. The midrib is prominent below, almost invisible on the upper surface. Godfrey (1988) has an excellent drawing and description of this distinctive shrub. **Syn:** = FI7, FNA20, K1, K3, K4, S, SE1, WH3; = *Chrysoma solidaginoides* Nuttall; = *Solidago pauciflosculosa* Michaux – RAB. NatureServe G4G5 (Apparently Secure).

Chrysopsis (Nuttall) Elliott 1823 (GOLDEN-ASTER)

A genus of about 12-15 species, herbs, of se. North America, Mexico, and the Bahamas. This remains a difficult and rather poorly understood group. The appropriate taxonomic status of many of the entities remains unclear; for the moment, I am recognizing a number of entities at the specific level, the appropriate nomenclatural combinations not already available in all cases. References: SE1; DeLaney, Wunderlin, & Semple (2003); Harms (1974); Nesom (2000b); Semple (1981); Semple (1996); Semple (2006c) in FNA20 (2006b); Ward (2012a).

- 1 Stem, leaves, and phyllaries sparsely to densely pubescent with spreading non-glandular hairs as well as having minutely glandular pubescence; annuals with taproots.....*Bradburia pilosa*
- 1 Stems, leaves, and phyllaries various but lacking spreading non-glandular hairs; biennials or perennials, either fibrous-rooted or with a mostly short and quickly disintegrating taproot.
 - 2 Cypselas lacking translucent, yellow to reddish brown, longitudinal ridges; phyllaries moderately to densely glandular.*Chrysopsis mariana*
 - 2 Cypselas with 2-10 translucent, yellow to reddish brown, longitudinal ridges; phyllaries glabrous to densely pilose, and sometimes also stipitate-glandular.*Chrysopsis hyssopifolia*

Chrysopsis hyssopifolia Nuttall. HYSSOPELEAF GOLDENASTER. **Hab:** Longleaf pine sandhills, Florida scrub, dry pine flatwoods, other dry sands. **Dist:** N. FL peninsula west to FL Panhandle, s. AL, s. MS, and se. LA. **Phen:** Oct-Dec. **Comm:** 2n chromosome number=18. **Syn:** = SE1; = *Chrysopsis gossypina* (Michaux) Elliott ssp. *hyssopifolia* (Nuttall) Semple – FI7, FNA20, K3, K4, WH3, Semple (1981); = *Heterotheca hyssopifolia* (Nuttall) V.L. Harms – Harms (1974); > *Chrysopsis gigantea* Small – S; ~ *Chrysopsis gossypina* (Michx.) Ell. var. *hyssopifolia* (Nutt.) Semple; > *Chrysopsis hyssopifolia* Nuttall – S. NatureServe G5T3T5 (Apparently Secure).

Chrysopsis mariana (Linnaeus) Elliott. MARYLAND GOLDEN-ASTER. **Hab:** Longleaf pine sandhills, dry pine flatwoods, dry forests and woodlands, roadsides, other dry habitats. **Dist:** Se. NY and RI (Block Island) west to se. OH, c. KY, w. TN, south to c. peninsular FL and se. TX. **Phen:** Late Jun-Oct. **Tax:** As currently defined, *C. mariana* includes 2x (2n=8), 4x (2n=16), 6x (2n=24) and 8x (2n=32) races that have different distribution patterns that are allopatric or very nearly so (Semple & Chinnappa 1986). Diploids are found in the FL Panhandle and c. peninsula. Tetraploids are found only in ne. FL and the n. peninsula. Hexaploids range nearly throughout the non-FL portion of the species' distribution, in FL only in the nc. FL Panhandle. Octoploids are along the ne. coast of FL, on and near Merritts Island. **Syn:** = *C.* FI7, FNA20, G, K3, K4, NE, NY, Oh3, Pa, S, SE1, Tn, Tx, Va, W, WH3, Semple (1981); = *Heterotheca mariana* (Linnaeus) Shinnars – RAB, Harms (1974); > *Chrysopsis mariana* var. *macradenia* Fernald – F; > *Chrysopsis mariana* var. *mariana* – F. NatureServe G5 (Secure).

Cichorium Linnaeus 1753 (CHICORY)

A genus of 7 species, herbs, of Europe and n. Africa. References: SE1; Kiers et al (1999); Strother (2006n) in FNA19 (2006a).

* **Cichorium intybus** Linnaeus. CHICORY, SUCCORY, BLUE-SAILORS, WITLOOF. **Hab:** Roadsides, fencerows, vacant lots, disturbed areas. **Dist:** Native of Europe. See Anderson (2007) for FL record. **Phen:** Late May-Nov. **Comm:** The dried roasted root is used as a flavoring or substitute for coffee. **Syn:** = Ar, C, F, FI7, FNA19, G, GrPl, Il, K1, K3, K4, Mi, NcTx, NY, Oh3, Pa, RAB, S, SE1, Tn, Va, W, WH3, Kiers et al (1999). NatureServe GNR (Not Yet Ranked).

Cirsium P. Miller 1754 (THISTLE)

A genus of about 250 species, herbs, north temperate. References: SE1; Keil (2006f) in FNA19 (2006a); Nesom (2021i); Nesom (2022a).

Key adapted in part from Cronquist (1980); portions of key based on Keil (2006f).

- 2 Leaves decurrent onto the stem below, the decurrency extending as a wing at least several cm down the stem, and often to the leaf below; leaves scabrous-hispid above; phyllaries lacking a glutinous dorsal ridge; [alien weed]..... *Cirsium vulgare*
- 2 Leaves not decurrent as a conspicuous wing, or the decurrency extending < 1 cm (sometimes more decurrent in *C. lecontei*); leaves not scabrous-hispid above; [native, sometimes in disturbed habitats].
- 3 Phyllaries lacking spine tips (the outermost sometimes with a weak spine-tip to 0.5 mm long); leaves deeply lobed, to 55 cm long and 20 cm wide *Cirsium muticum*
- 3 Phyllaries (at least the outer and middle) with well-developed spine-tips > 1 mm long; leaves lobed or merely toothed, generally < 30 cm long and < 10 cm wide (except in *C. altissimum*).
- 4 Heads immediately subtended by several spiny-toothed leaves (appearing as a leafy involucre); flowers yellow, white, or purple.
 - 5 Involucres more-or-less densely tomentose; stems densely tomentose; [of the Coastal Plain and Piedmont] *Cirsium horridulum* var. *horridulum*
 - 5 Involucres glabrous; stems glabrous or sparsely tomentose; [of the Coastal Plain].
 - 6 Leaves shallowly to deeply pinnatifid; main spines of the leaves 10-30 mm long; [of s. AL and Panhandle FL westward] *Cirsium horridulum* var. *megacanthum*
 - 6 Leaves spinose-dentate to shallowly pinnatifid; main spines mostly 5-10 mm long; [widespread in the Coastal Plain] *Cirsium horridulum* var. *vittatum*
- 4 Heads pedunculate (rarely with 1 or 2 reduced leaves below); flowers pink, purple, lavender, or white.
 - 7 Lower surface of the leaves thinly and loosely white-tomentose beneath, this sloughing off in age, the green surface visible through the tomentum except on very small, young leaves.
 - 8 Heads 15-25 mm high; plants 5-35 dm tall, usually much branched and with numerous heads *Cirsium nuttallii*
 - 8 Heads 25-50 mm high; plants 2-10 dm tall, usually strict or few-branched and with 1 or a few heads.
 - 12 Heads 15-25 mm high; plants 4-20 dm tall; larger leaves 0.5-12 cm wide.
 - 12 Heads 25-45 mm high; plants 10-40 dm tall; larger leaves usually > 5 cm wide.
 - 15 Stems uniformly and persistently tomentose; upper leaf faces tomentose when young, sometimes glabrate in age; cypselas 4-6 mm long.
 - 15 Stems thinly tomentose when young, later glabrate or tomentum persisting above; upper leaf faces green, glabrate; cypselas 6-9 mm long.
 - 18 Leaves toothed or shallowly lobed *Cirsium altissimum*
 - 18 Leaves deeply pinnatifid *Cirsium discolor*

Cirsium altissimum (Linnaeus) Sprengel. TALL THISTLE. **Hab:** Pastures, woodlands, thickets. **Dist:** MA west to ND, south to Panhandle FL (Jackson County) and e. TX. **Phen:** Sep-Nov. **Syn:** = Ar, C, F, F17, FNA19, G, GrPl, Il, K1, K3, K4, Mi, NcTx, NE, NY, Oh3, Pa, S, SE1, Tn, Va, W, WH3; = *Carduus altissimus* Linnaeus – RAB. NatureServe G5 (Secure).

Cirsium carolinianum (Walter) Fernald & Schubert. CAROLINA THISTLE, SPRING THISTLE, PRAIRIE THISTLE. **Hab:** Prairies, open woodlands over mafic, ultramafic, or calcareous rocks. **Dist:** N. VA west to s. OH and MO, south to w. SC, n. GA, AL, and TX. **Phen:** Apr-Jun (-Jul). **Comm:** In the eastern part of the Southeast, *C. carolinianum* seems to be restricted to prairies and woodlands (or maintained powerline or road rights-of-way) over circumneutral rocks and soils, in situations which were oak savannas or even prairies prior to fire suppression. **Syn:** = Ar, C, F, FNA19, G, Il, K1, K3, K4, Oh3, SE1, Tn, Va, W; = *Carduus carolinianus* Walter – RAB; > *Cirsium flaccidum* Small – S; > *Cirsium virginianum* (Linnaeus) Michaux – S, misapplied.

Cirsium discolor (Muhlenberg ex Willdenow) Sprengel. FIELD THISTLE. **Hab:** Pastures, woodlands, thickets. **Dist:** QC west to MB, south to NC, MS, LA, and KS. **Phen:** Aug-Nov. **Syn:** = Ar, C, F, FNA19, G, Il, K1, K3, K4, Mi, NE, NY, Oh3, Pa, S, SE1, Tn, Va, W; = *Carduus discolor* (Muhlenberg ex Willdenow) Nuttall – RAB. NatureServe G5 (Secure).

Cirsium horridulum Michaux var. *horridulum*. COMMON YELLOW THISTLE, BULL THISTLE. **Hab:** Roadsides, woodlands, pine savannas. **Dist:** ME south to FL, west to TX, mostly on the Coastal Plain and adjacent provinces; also Mexico and Bahamas. **Phen:** Late Mar-early Jun. **Syn:** = C, FNA19, K1, K3, K4, NE, NY, Pa, SE1, Va; = *Carduus spinosissimus* Walter – RAB; = *Cirsium horridulum* – Bah, S; < *Cirsium horridulum* – F, F17, G, NcTx, Tn, WH3; < *Cirsium horridulum* – GW2; > *Cirsium horridulum* var. *elliottii* Torrey & A. Gray. NatureServe G5T5 (Secure).

Cirsium horridulum Michaux var. *megacanthum* (Nuttall) D.J. Keil. BIGSPINE THISTLE. **Hab:** Moist ground. **Dist:** AL and Panhandle FL west to TX and OK. **Phen:** Mar-Jun. **Syn:** = Ar, FNA19, K3, K4; < *Cirsium horridulum* – F17, WH3; < *Cirsium horridulum* – GW2; < *Cirsium horridulum* Michaux var. *vittatum* (Small) R.W. Long – K1, SE1; > *Cirsium vittatum* Small – S.

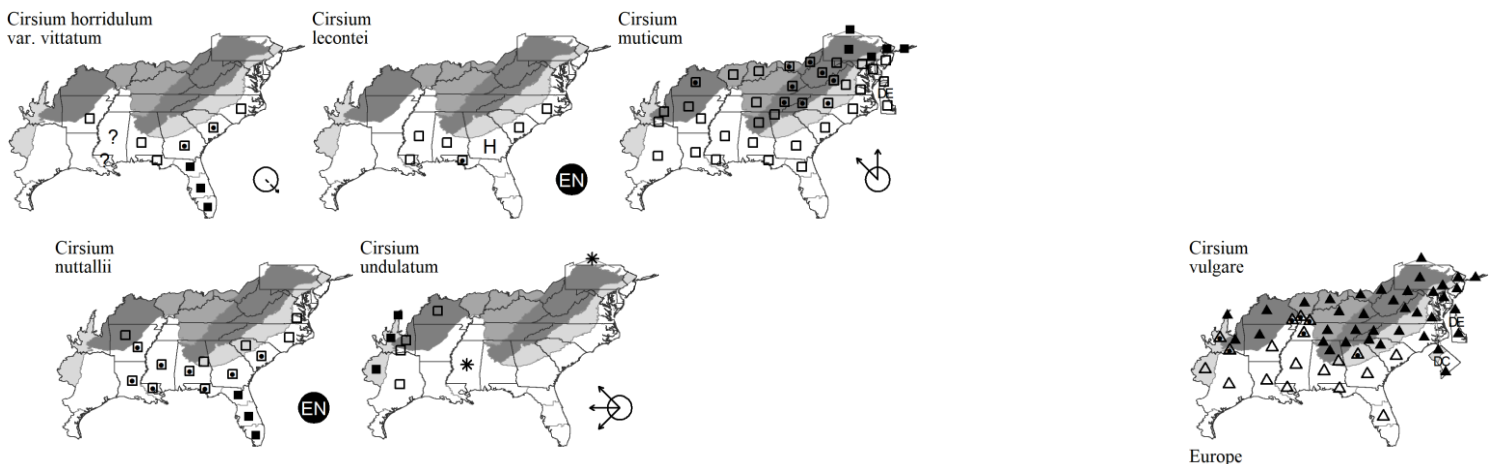

Cirsium horridulum Michaux var. *vittatum* (Small) R.W. Long. SOUTHERN YELLOW THISTLE, PINELAND THISTLE. **Hab:** Wet pine savannas. **Dist:** Se. NC south to s. peninsular FL and Panhandle FL; Bahamas; West Indies. **Phen:** May-Jul. **Syn:** = Ar, FNA19, K4; = *Carduus smallii* (Britton) H.E. Ahles – RAB; = *Cirsium vittatum* Small – Bah; < *Cirsium horridulum* – F17, WH3; < *Cirsium horridulum* – GW2; < *Cirsium horridulum* Michaux var. *vittatum* (Small) R.W. Long – K1, K3, SE1; > *Cirsium smallii* Britton – S; > *Cirsium vittatum* Small – S.

Cirsium lecontei Torrey & A. Gray. LECONTE'S THISTLE. **Hab:** Wet pine savannas, bogs. **Dist:** E. NC south to Panhandle FL, west to LA. **Phen:** Jun-Aug. **Syn:** = F17, FNA19, GW2, K1, K3, K4, S, SE1, WH3; = *Carduus lecontei* (Torrey & A. Gray) Pollard – RAB. NatureServe G3 (Vulnerable).

Cirsium muticum Michaux. SWAMP THISTLE. **Hab:** Swamps, wet thickets, woodlands, seepage slopes, wet prairies, meadows. **Dist:** NL (Newfoundland) west to SK, south to DE, NC, TN, and MO, and less commonly south to FL, AL (Diamond & Woods 2009), and TX. **Phen:** Aug-Nov. **Syn:** = Ar, C, F17, FNA19, G, GrPl, GW2, Il, K1, K3, K4, Mi, NE, NY, Oh3, Pa, S, SE1, Tn, Va, W, WH3; = *Carduus muticus* (Michaux) Persoon – RAB; > *Cirsium muticum* var. *muticum* – F. NatureServe G5 (Secure).

Cirsium nuttallii A.P. de Candolle. NUTTALL'S THISTLE, COASTAL TALL THISTLE. **Hab:** Longleaf pine savannas, roadsides, pastures, wet hammocks, dry hammocks, prairies. **Dist:** Se. VA south to s. FL, west to LA and AR. Reported for the first time from NC by Krings, Westbrooks, & Lloyd (2002). **Phen:** Jun-Aug. **Syn:** = C, F, F17, FNA19, G, GW2, K1, K3, K4, S, SE1, Va, WH3; = *Carduus nuttallii* (A.P. de Candolle) Pollard – RAB. NatureServe G5 (Secure).

Cirsium undulatum (Nuttall) Sprengel. WAVY-LEAF THISTLE. **Hab:** Dry prairies, pastures, disturbed areas. **Dist:** MB west to BC, south to sc. TX, NM, AZ, Ca, and Mexico. **Phen:** May-Jun (-Jul). **Syn:** = GrPl, K3, K4, Mi, NcTx, Tx. NatureServe G5 (Secure).

* **Cirsium vulgare** (Savi) Tenore. BULL THISTLE. **Hab:** Meadows, pastures, and disturbed areas. **Dist:** Native of Europe. **Phen:** Late Jun-Nov. **Syn:** = Ar, C, F, F17, FNA19, G, GrPl, Il, K1, K3, K4, Mi, NcTx, NE, NY, Oh3, Pa, SE1, Tn, Va, W, WH3; < *Carduus lanceolatus* Linnaeus – RAB; < *Cirsium lanceolatum* (Linnaeus) Scopoli – S, misapplied. NatureServe GNR (Not Yet Ranked).

Conoclinium A.P. de Candolle 1836 (MISTFLOWER)

A genus of 4 species, of e. and c. North America extending into Mexico. References: SE1; Medford, Poindexter, & Weakley (2020) in Weakley et al (2020); Patterson & Nesom (2006) in FNA21 (2006c); Schilling et al (2019b); Schmidt & Schilling (2000).

Conoclinium coelestinum (Linnaeus) A.P. de Candolle. MISTFLOWER, AGERATUM. **Hab:** Streambanks, moist to wet disturbed areas, especially ditches, probably more common than formerly. **Dist:** NJ west to IL, c. MO, se. KS, and OK, south to s. FL and c. TX; also in Cuba, and scattered farther north (as in NY, n. OH, and n. IN) probably as escapes from cultivation. **Phen:** Late Jul-Oct. **Tax:** See Wooten & Clewell (1971) for further discussion of this species. **Syn:** = Medford, Poindexter, & Weakley (2020) in Weakley et al (2020), Schilling et al (2019b); < *Conoclinium coelestinum* (Linnaeus) A.P. de Candolle – Ar, Fl7, FNA21, IL, K3, K4, Mi, NY, S, Tn, Va, WH3; < *Conoclinium coelestinum* – Pa, misspelling; < *Eupatorium coelestinum* Linnaeus – C, F, G, GrPl, NcTx, Oh3, RAB, SE1, Tx, W, WV.

Coreopsis Linnaeus 1753 (COREOPSIS, TICKSEED)

Contributed by Alan S. Weakley and Bruce A. Sorrie

A genus of about 30 species, herbs, of America (once unrelated groups are removed). Recent molecular studies suggest that the relationship between *Bidens* and *Coreopsis* (as traditionally circumscribed) is complex, and that changes in taxonomy will be needed to more accurately reflect relationships (Kim et al. 1999; Crawford & Mort 2005). Tadesse & Crawford (2014) have begun this process, removing from *Coreopsis* some unrelated groups into *Electra*, *Leptosyne*, and (perhaps) *Heterosperma*; two additional clades, traditionally treated in *Coreopsis* section *Pseudoagarista*, will likely be removed. It appears likely that the clade consisting of sections *Gyrophyllum* (*C. major*, *C. delphiniifolia*, *C. verticillata*, and *C. tripteris*) and *Silphidium* (*C. latifolia*) will also be removed. References: Allison & Stevens (2001); SE1; Schilling, Johnson, & Iacona (2015); Sherff & Alexander (1955); Smith (1976); Sorrie, LeBlond, & Weakley (2013); Strother (2006yy) in FNA21 (2006c); Tadesse & Crawford (2014).

- 1 Disk flowers with 4 corolla lobes and 4 anthers; ray flowers usually apically 3-lobed.
 - 2 Leaves pinnately or bipinnately lobed into linear segments or narrowly lanceolate segments; [section *Calliopsis*]..... *Coreopsis tinctoria* var. *tinctoria*
 - 2 Leaves simple or with 1-2 auriculate lobes at the base; [section *Eublepharis*].
 - 3 All of the major cauline leaves opposite (except in *C. linifolia* the lowermost few leaves may be alternate)..... *Coreopsis linifolia*
 - 3 All of the major cauline leaves alternate.
 - 6 Ray flowers pink; leaves juncoide (linear-terete)..... *Coreopsis nudata*
 - 6 Ray flowers yellow; leaves with an expanded blade..... *Coreopsis gladiata*
- 1 Disk flowers with 5 corolla lobes and 5 anthers; ray flowers apically entire, or with (2-) 4-5 teeth.
 - 11 All of the leaves simple or the plant with a mixture of simple leaves and leaves with 1-2 (-4) basal auricles or leaflets, these distinctly smaller than the terminal lobe or leaflet.
 - 13 Stems with (5-) 6-12 nodes between the first node > 1 cm above the basal leaves and the first head.
 - 14 Leaf blades (or terminal leaflets of compound leaves) narrowly oblanceolate, to 0.6 cm wide..... *Coreopsis pubescens* var. *debilis*
 - 14 Leaf blades (or terminal leaflets of compound leaves) elliptical to oblanceolate, 0.6-4 cm wide..... *Coreopsis pubescens* var. *pubescens*
 - 13 Stems with 1-5 (-8) nodes between the first node > 1 cm above the basal leaves and the first head.
 - 16 Annual; rays yellow, with a red-brown or purple blaze or spotting near the base..... *Coreopsis basalis*
 - 16 Perennial (cormose or rhizomatous at base, and sometimes also stoloniferous); rays completely yellow, lacking a red-brown or purple blaze or spotting near the base.
 - 18 Plants spreading by elongate stolons; leaf blades (or terminal leaflets) 1-2.2× as long as wide..... *Coreopsis auriculata*
 - 18 Plants lacking stolons; leaf blades (or terminal leaflets) > 3× as long as wide (basal leaves sometimes broader)..... *Coreopsis lanceolata*
 - 11 Most or all of the leaves deeply lobed or dissected into distinct leaflets or divisions, the leaflets or divisions 3-20 or more, if only 3, then the lateral leaflets nearly or fully as large and well-developed as the terminal.
 - 21 Leaves sessile or with a short subpetiolar base < 2 mm long, the initial division of the leaves palmate into 3 leaflets (these sometimes further divided), giving the 2 opposite leaves the superficial appearance of a whorl of 6 leaves; [section *Gyrophyllum*].
 - 22 Leaves palmately 3-foliolate (rarely the leaves, especially the upper, simple, or with lower leaves 3-foliolate with the middle leaflet 2- or 3-lobed), the total number of leaflets or divisions thus (1-) 3 (-5), the middle leaflet of median leaves (2-) 5-30 mm wide..... *Coreopsis major*
 - 22 Leaves palmately compound, the leaflets simple to lobed or pinnatifid, the total number of leaflets or divisions (3-) 5-25, the middle leaflet of median leaves 0.5-7 mm wide..... *Coreopsis verticillata*
 - 21 Leaves, at least the lower, distinctly petioled on petioles 5-50 mm or more long.
 - 25 Ray flowers not toothed terminally (or rarely with a few with inconspicuous and irregular teeth); mid-cauline leaves palmately 3-foliolate, the terminal leaflet sometimes again 3-5-foliolate (sometimes giving an appearance of a pinnately 5-7-foliolate leaf), the leaflets 6-35 mm wide, 3-15× as long as wide; [section *Gyrophyllum*]..... *Coreopsis tripteris*
 - 25 Ray flowers apically with (2-) 4-5 teeth; mid-cauline leaves pinnately 5-11-foliolate, the leaflets either 3-15 mm wide and about 1-3× as long as wide, or 0.5-2 mm wide and > 20× as long as wide; [section *Coreopsis*].
 - 26 Disk flowers reddish; ray flowers usually with a basal red mark; leaflets of mid-cauline leaves 1-15 mm wide and about 1-10× as long as wide..... *Coreopsis basalis*
 - 26 Disk flowers yellow; ray flowers yellow; leaflets of mid-cauline leaves 0.5-6 (-10) mm wide and > 10× as long as wide.
 - 28 Achene wings fimbriate; [of granitic outcrops of the Piedmont of GA and AL]..... *Coreopsis grandiflora* var. *saxicola*
 - 28 Achene wings entire; [collectively more widespread].

403. ASTERACEAE

middle leaflet of median leaves 10-30 mm wide, and leaflets herbaceous) and var. *rigida* (with leaf blades slightly short-pubescent to glabrous, outer phyllaries slightly short-pubescent to glabrous, middle leaflet of median leaves 5-10 (-12) mm wide, leaflets subcoriaceous and stiff). Variation and poor correlation of these features as stated and the presence of significant and apparently variation in other features requires additional study before a satisfying taxonomy can be presented. **Syn:** = F17, FNA21, K1, K3, K4, NE, NY, Oh3, S, Tn, Va, WH3, Smith (1976); = *Coreopsis rigida* Nuttall; > *Coreopsis major* Walter var. *linearis* Small; > *Coreopsis major* var. *major* – C, F, G, RAB, SE1, W, Sherff & Alexander (1955); > *Coreopsis major* var. *rigida* – C, F, SE1, Sherff & Alexander (1955); > *Coreopsis major* var. *stellata* (Nuttall) B.L. Robinson – F, G, RAB, WV, Sherff & Alexander (1955). NatureServe G5 (Secure).

Coreopsis nudata Nuttall. SWAMP COREOPSIS. **Hab:** Seasonally flooded pineland depressions, either herbaceous-dominated or under a canopy of *Taxodium ascendens*. **Dist:** E. GA (in close proximity to SC) south to ne. FL and Panhandle FL, west to e. LA. **Phen:** Mar-Apr. **ID Notes:** Immediately recognizable by its pink-rayed flowers and juncoid leaves. **Syn:** = F17, FNA21, GW2, K1, K3, K4, S, SE1, WH3, Sherff & Alexander (1955), Smith (1976), Sorrie, LeBlond, & Weakley (2013). NatureServe G3? (Vulnerable).

Coreopsis pubescens Elliott var. *debilis* (Sherff) E.B. Smith. **Hab:** Pine flatwoods, other habitats. **Dist:** C. TN south through AL and ne. MS to w. FL, s. AL, s. MS, and se. LA. **Syn:** = GW2, K1, K3, K4, Smith (1976); > *Coreopsis cornicularis* Sherff – Sherff & Alexander (1955); > *Coreopsis debilis* Sherff – Sherff & Alexander (1955); < *Coreopsis pubescens* – FNA21, S, SE1, Tn. NatureServe G5?TNR (Not Yet Ranked).

Coreopsis pubescens Elliott var. *pubescens*. COMMON HAIRY COREOPSIS. **Hab:** Forests, woodlands, and rock outcrops. **Dist:** The species as a whole is largely centered in the Southern Appalachians and Ozarks-Ouachitas, with scattered outlying occurrences; var. *pubescens* has essentially the range of the species, from s. VA, s. KY, s. IL, and s. MO south to nw. FL, MS, and LA. **Phen:** Jul-Sep. **Syn:** = F, GW2, K1, K3, K4, Sherff & Alexander (1955), Smith (1976); < *Coreopsis pubescens* – Ar, C, FNA21, G, GrPl, IL, RAB, S, SE1, Va, W, WH3, WV. NatureServe G5?T4T5 (Apparently Secure).

Coreopsis tinctoria Nuttall var. *tinctoria*. CALLIOPSIS, PLAINS COREOPSIS. **Hab:** Roadsides and other disturbed places. **Dist:** Var. *tinctoria* was apparently widespread in the Great Plains and sc. United States, now distributed nearly throughout North America. **Phen:** May-Sep. **Syn:** = C, K1, K3, K4, NE, Va, Smith (1976); > *Coreopsis cardaminaefolia* (A.P. de Candolle) Torrey & A. Gray – Tx; > *Coreopsis cardaminefolia* (A.P. de Candolle) Torrey & A. Gray – RAB, S, Sherff & Alexander (1955); > *Coreopsis stenophylla* Boynton – Sherff & Alexander (1955); < *Coreopsis tinctoria* – Ar, F17, FNA21, G, GrPl, GW2, Mi, NcTx, NY, Oh3, Pa, SE1, Tn, Tx, W, WH3, WV; > *Coreopsis tinctoria* – RAB, S; > *Coreopsis tinctoria* Nuttall var. *tinctoria* – Sherff & Alexander (1955). NatureServe G5?T5 (Secure).

Coreopsis tripteris Linnaeus. TALL COREOPSIS. **Hab:** Bottomland forests, riverside scours, other rich, moist woodlands and woodland borders, wet hammocks (FL), primarily over calcareous or mafic rocks or on nutrient-rich alluvium. **Dist:** MA, s. ON, and WI south to Panhandle FL and e. TX. **Phen:** Jul-early Sep. **Syn:** = Ar, C, F17, FNA21, G, GrPl, GW2, K1, K3, K4, Mi, NE, NY, Oh3, Pa, RAB, S, SE1, Tn, Tx, Va, W, WH3, WV, Smith (1976); > *Coreopsis tripteris* var. *deamii* Standley – F, IL; > *Coreopsis tripteris* var. *intercedens* Sherff – F, IL, Sherff & Alexander (1955); > *Coreopsis tripteris* var. *smithii* Sherff – F, Sherff & Alexander (1955); > *Coreopsis tripteris* var. *tripertis* – F, IL, Sherff & Alexander (1955). NatureServe G5 (Secure).

Coreopsis verticillata Linnaeus. THREADLEAF COREOPSIS. **Hab:** Dry sandy, rocky, or clayey woodlands and woodland borders; also a waif or persistent from horticultural use. **Dist:** Smith (1976) indicates that the species consists of two chromosome races, a diploid, ranging in the Piedmont and Mountains from c. SC and NC north to ne. WV, and s. MD, and an allotetraploid, limited to the Coastal Plain of ne. NC and se. VA. **Phen:** May-Jul. **Comm:** The finely-divided leaves are attractive and the plant is cultivated horticulturally; scattered occurrences outside the ranges indicated above are escapes from cultivation. **Syn:** = C, F, FNA21, G, K1, K3, K4, NE, RAB, S, SE1, Va, W, WV, Sherff & Alexander (1955), Smith (1976). NatureServe G5 (Secure).

Crepis Linnaeus 1753 (HAWKSBEARD)

A genus of about 200 species, herbs, of the Northern Hemisphere, South America, and southern Africa. References: Bogler (2006a) in FNA19 (2006a); SE1.

* *Crepis pulchra* Linnaeus. SMALLFLOWER HAWKSBEARD. **Hab:** Roadsides, fields, disturbed areas. **Dist:** Native of Eurasia. **Phen:** Late Apr-Jul. **Syn:** = Ar, C, F, FI7, FNA19, G, IL, K1, K3, K4, NcTx, Oh3, RAB, SE1, Tn, Va, W, WH3, WV. NatureServe GNR (Not Yet Ranked).

*Croptilon* Rafinesque 1837 (SCRATCH-DAISY)

A genus of 3 species, herbs, of s. North America. References: Tx; SE1; Nesom (2000b); Nesom (2006aa) in FNA20 (2006b); Smith (1981).

Croptilon divaricatum (Nuttall) Rafinesque. SCRATCH-DAISY. **Hab:** Sandy or otherwise dry soils of fields, roadsides, longleaf pine sandhill woodlands, and sand pine woodlands. **Dist:** Se. VA south to c. peninsular FL and west to c. TX, inland to n. GA, n. AL, se. OK and c. AR. **Phen:** Aug-Dec. **Syn:** = Ar, FNA20, K1, K3, K4, NcTx, Va, WH3; = *Haplopappus divaricatus* (Nuttall) A. Gray – C, F, G, RAB, SE1, W; = *Isopappus divaricatus* (Nuttall) Torrey & Gray – S; < *Croptilon divaricatum* (Nuttall) Rafinesque var. *divaricatum* – Tx. NatureServe G4G5 (Apparently Secure).

*Cyanus* P. Miller 1754 (CORNFLOWER, BACHELOR'S-BUTTONS)

A genus of about 30 species, herbs, native of Eurasia and n. Africa. *Cyanus* is better separated at the generic level (Greuter 2003). References: Boršić et al (2011); SE1; Greuter et al (2001); Keil & Ochsmann (2006) in FNA19 (2006a); Negaresh (2018).

* *Cyanus segetum* Hill. CORNFLOWER, BACHELOR'S-BUTTONS. **Hab:** Roadsides, disturbed areas. **Dist:** Native of Mediterranean Europe. **Phen:** Apr-Sep. **Syn:** = K4; = *Centaurea cyanus* Linnaeus – Ar, C, F, FI7, FNA19, G, GrPl, IL, K1, K3, Mi, NcTx, NE, NY, Oh3, Pa, RAB, S, SE1, Tn, Va, W, WH3. NatureServe GNR (Not Yet Ranked).

*Diaperia* Nuttall 1840 (DWARF CUDWEED)

A genus of 3 species, annual herbs, of c. United States and n. Mexico. References: Anderberg (1991); Arriagada (1998); SE1; Morefield (2006c) in FNA19 (2006a).

Key based in part on Morefield (2006c).

Diaperia prolifera (Nuttall ex A.P. de Candolle) Nuttall var. *prolifera*. COTTON-ROSE, BIGHEAD PYGMY-CUDWEED. **Hab:** Prairies, open clay or calcareous areas, disturbed areas; eastwards in waste areas around wool-combing mill. **Dist:** MO west to MT, south to LA and TX; disjunct eastward in the Black Belt prairies of AL and MS and also further eastward as an introduction (Nesom 2004d). **Phen:** May-Jun. **Syn:** = Ar, FNA19, GrPl, K3, K4; < *Evax prolifera* Nuttall ex A.P. de Candolle – K1, NcTx, SE1, Tx; < *Filago prolifera* (Nuttall ex A.P. de Candolle) Britton – Anderberg (1991), Arriagada (1998). NatureServe G5 (Secure).

Doellingeria Nees 1832 (FLAT-TOPPED ASTER)

A genus of about 3-4 species, perennial herbs, of e. North America. The separation of *Doellingeria* from *Aster* as a small, strictly North American group is clearly warranted, based on numerous studies, including Nesom (1993d), Brouillet et al. (2009), Noyes & Rieseberg (1999), and Nesom (2020a). The Asian species sometimes placed in *Doellingeria* are not closely related to American *Doellingeria* and have been separated into the genus *Cardiagyris* Nesom (Nesom 2020a). Allen et al. (2019) proposed combining western North American *Eucephalus* with *Doellingeria*. Given the conflicting phylogenetic data, the uncertain origin of *Eucephalus elegans*, and a 'whole evidence' synthetic approach based on molecular, morphological, and biogeographic data, we conservatively retain *Doellingeria* as a small genus endemic to eastern North America, following Nesom (2020a) and recent community consensus. References: Allen et al (2019); Brouillet et al (2009); SE1; Nesom (1993d); Nesom (2000b); Nesom (2020a); Semple & Chmielewski (2006) in FNA20 (2006b); Semple, Chmielewski, & Leeder (1991).

- 2 Disk flowers 4-13 (-20) per head; ray flowers 2-7 per head; leaves mostly (1.5-) 2-3 (-4)× as long as wide, stiff, revolute; midveins of the phyllaries enlarged and translucent towards the tip; cypselas sparsely to densely strigose; [of acid seepage in the Coastal Plain] *Doellingeria sericocarpoides*
2 Disk flowers (5-) 11-26 (-50) per head; ray flowers (2-) 5-14 (-16) per head; leaves (2-) 3.5-5 (-8)× as long as wide, flexible, planar; midveins of the phyllaries not swollen towards the tip; cypselas glabrous to sparsely strigose; [widespread in our area] *Doellingeria umbellata* var. *umbellata*

Doellingeria sericocarpoides Small. POCOSIN FLAT-TOPPED ASTER, SOUTHERN FLAT-TOPPED ASTER, SOUTHERN TALL FLAT-TOPPED ASTER. **Hab:** Peaty soils of sandhill ecotones and streamhead pocosins, other acidic seeps and swamps. **Dist:** S. NJ south to ne. FL and Panhandle FL, west to MS and se. LA; also in the West Gulf Coastal Plain of w. LA, AR, se. OK, and e. TX; disjunct in w. SC in the uppermost Piedmont in the Blue Ridge Escarpment region. **Phen:** Late Jul-Oct. **Tax:** This taxon is problematic in its current circumscription and is the subject of taxonomic studies. **Syn:** =

Symbology:

(see introduction for more)

403. ASTERACEAE

Ar, FI7, FNA20, K1, K3, K4, WH3, Nesom (1993d); = *Aster sericocarpoides* (Small) K. Schumann – SE1, Semple, Chmielewski, & Leeder (1991); = *Aster umbellatus* P. Miller var. *brevisquamus* Fernald – RAB; < *Aster umbellatus* P. Miller var. *latifolius* A. Gray – GW2, Tx; > *Doellingeria humilis* (Willdenow) Britton – S, misapplied; > *Doellingeria sericocarpoides* Small – S, by implication. NatureServe G3G5 (Apparently Secure).

Doellingeria umbellata (P. Miller) Nees var. ***umbellata***. NORTHERN FLAT-TOPPED WHITE ASTER, NORTHERN TALL FLAT-TOPPED ASTER. **Hab:** Wet meadows, pastures, bogs, fens, marshes, stream floodplains, roadbanks, to at least 1900 m. **Dist:** NL (Newfoundland) west to MN, south to e. VA, w. NC, nw. SC (P. McMillan, pers.comm., 2002), n. GA, ne. AL, TN, and KY. **Phen:** Jul-Oct. **Comm:** The recognition or not of two at either varietal or specific rank remains unsettled; Mohlenbrock (2015) argues for species rank of *D. pubens* (A. Gray) Rydberg (north and west of our area). **Syn:** = FNA20, K1, K3, K4, Mi, Mo2, NE, NY; = *Aster umbellatus* var. *umbellatus* – Semple, Chmielewski, & Leeder (1991); = *Doellingeria umbellata* – Il; < *Aster umbellatus* P. Miller – C, G, Oh3, SE1, W; < *Aster umbellatus* var. *umbellatus* – GW2, RAB; < *Doellingeria umbellata* – Pa, S, Tn, Va, Nesom (1993d). NatureServe G5T5 (Secure).

Dracopis Cassini 1825 (CONEFLOWER)

A monotypic genus, an annual herb, of sc. and se. North America, perhaps better included in *Rudbeckia*. References: Urbatsch & Cox (2006a) in FNA21 (2006c).

Dracopis amplexicaulis (Vahl) Cassini. CLASPING CONEFLOWER. **Hab:** Prairies, calcareous bottomlands, dry open areas, disturbed areas, waste areas near wool-combing mill; introduced in part in our area. **Dist:** Native to prairie-like areas and calcareous bottomlands from GA (?) and AL west to KS and TX; reported for nc. GA (Jones & Coile 1988) and introduced in SC (Nesom 2004d). **Phen:** (May-) Jul-Sep. **Syn:** = GrPl, Il, K1, K3, K4, NcTx, SE1, Tx, WH3; = *Rudbeckia amplexicaulis* Vahl – Ar, F, FNA21. NatureServe G5 (Secure).

Echinacea Moench 1794 (PURPLE CONEFLOWER)

A genus of 7-9 species, herbs, endemic to e. and c. North America. There has been considerable medicinal use of extracts from many of the species, and collection of plants from the wild to meet the demand of the herbal trade has extirpated many populations, particularly in c. United States. Foster (1991) presents a lengthy and detailed discussion of medicinal uses of *Echinacea*, along with considerable information on the biology, conservation needs, taxonomy, and nomenclatural history of the genus. Binns, Baum, & Arnason (2002) provide no rationale for their approach of recognizing the same number of taxa as McGregor, but treating them as 4 species and 10 varieties; the entities seem to be distinct at the specific level. References: Baskin, Snyder, & Baskin (1993); Binns, Baum, & Arnason (2002); SE1; Foster (1991); Gaddy (1991); McGregor (1968); McKeown (1999); Urbatsch, Neubig, & Cox (2006) in FNA21 (2006c).

1 Leaves lanceolate to ovate, the larger (basal) leaves 3-10 (-15) cm wide and rounded to cordate at the base.

.....*Echinacea purpurea*

1 Leaves lanceolate to linear, the larger (basal) leaves 1-3 (-4) cm wide and cuneate to attenuate at the base.

.....*Echinacea pallida*

Echinacea pallida (Nuttall) Nuttall. PALE PURPLE CONEFLOWER. **Hab:** Dry prairies, open dry woodlands, roadsides (introduced eastwards in our area). **Dist:** ON west to MI, WI, and ne. NE, south to IN, LA, and TX; disjunct eastward in TN, AL, GA, SC, NC, and VA (where probably but uncertainly native). **Phen:** May-Jul. **Tax:** Some at least of the eastern populations considered to be *E. pallida* are actually the closely related *E. simulata*; additional work is needed to disentangle the relative distributions of these two species in our area. **Syn:** = Ar, FNA21, GrPl, Il, K1, K4, Mi, Mo2, NcTx, NE, NY, RAB, Tn, Tx, Baskin, Snyder, & Baskin (1993), Foster (1991), McGregor (1968), McKeown (1999); = *Echinacea pallida* var. *pallida* – K3, Binns, Baum, & Arnason (2002); < *Echinacea pallida* (Nuttall) Nuttall – F, G, W; < *Echinacea pallida* var. *pallida* – C, SE1.

Echinacea purpurea (Linnaeus) Moench. EASTERN PURPLE CONEFLOWER. **Hab:** Open woodlands, roadsides, some of the occurrences persistent or spread from cultivation. **Dist:** OH, WI, and IA south to Panhandle FL and TX; introduced more broadly as in ne. United States and ON, the exact limits of the native distribution unclear. **Phen:** May-Oct. **Syn:** = Ar, C, F, FI7, FNA21, GrPl, Il, K1, K3, K4, Mi, Mo2, NcTx, NE, NY, Pa, RAB, SE1, Tn, W, WH3, Binns, Baum, & Arnason (2002), Foster (1991), McGregor (1968), McKeown (1999); = *Echinacea purpurea* var. *purpurea* – G, Oh3; > *Echinacea purpurea* var. *arkansana* Steyermark – Tx. NatureServe G4 (Apparently Secure).

403. ASTERACEAE

*Eclipta* Linnaeus 1753

A genus of 4 species, herbs, of temperate, subtropical, and tropical regions. References: SE1; Strother (2006ss) in FNA21 (2006c).

Eclipta prostrata (Linnaeus) Linnaeus. ECLIPTA, PIE-PLANT, BOTONCILLO, BOTÓN BLANCO, CLAVEL DE POZO, YERBA DE TAGO. **Hab:** Moist or wet disturbed areas, ditches, shores, disturbed bottomlands. **Dist:** MA west to WI, south to s. FL and TX, and southward into the tropics. **Phen:** Jun-Nov. **Syn:** = Ar, C, F17, FNA21, GrPl, Il, K1, K3, K4, Mi, NcTx, NE, NY, Pa, Tn, Va, WH3; = *Eclipta alba* (Linnaeus) Hasskarl – Bah, F, G, GW2, Oh3, RAB, SE1, Tx, W, WV; = *Verbesina alba* Linnaeus – S.

*Elephantopus* Linnaeus 1753 (ELEPHANT'S-FOOT)

A genus of about 12-30 species, of tropical, subtropical, and warm temperate regions. References: SE1; Jones (1982); Strother (2006b) in FNA19 (2006a).

Identification Notes: The acaulescent species are easily and often confused with *Vernonia acaulis*, especially when sterile. *Vernonia* has leaves scabrous above and sparsely pilose to glabrate beneath; *Elephantopus* has leaves sparsely pilose above, densely pilose or tomentose below. *Vernonia* leaves tend to have a more acute apex, and the veins above are more strikingly differentiated in their color (white or pink) from the adjacent leaf tissue. When in flower, the presence of subtending foliose bracts below the compound glomerule of heads in *Elephantopus* (versus the absence of foliose bracts below the simple head in *Vernonia*) is diagnostic.

- 1 Leaves cauline, the stem with well-developed leaves over 10 cm long;..... *Elephantopus carolinianus*
- 1 Leaves basal, the stem scapose or with a few leaves much smaller than the basal, usually < 8 cm long.
 - 2 Longest phyllaries 10-13 mm long; pappus 6-8 mm long; basal leaves 5.5-10.5 cm wide, usually at least some on a plant > 7 cm wide; leaves pubescent on the midrib below with spreading or reflexed hairs; [of the Coastal Plain, Piedmont, and rarely the Mountains]..... *Elephantopus tomentosus*
 - 2 Longest phyllaries 6-9 mm long; pappus 3-4.5 mm long; basal leaves 1.5-7.5 cm wide, rarely any on a plant > 7 cm wide; leaves pubescent on the midrib below with appressed or spreading hairs; [of the Coastal Plain, and rarely the lower Piedmont].
 - 3 Phyllaries densely villous with white hairs (0.3-) 0.5-1.0 mm long, the punctate glands obscured; cypselas 3-3.5 mm long; [of e. SC southward]..... *Elephantopus elatus*
 - 3 Phyllaries punctate-glandular, also sparsely pubescent with hairs 0.05-0.3 (-0.5) mm long; cypselas 2.5-3.0 mm long; [widespread in our area]..... *Elephantopus nudatus*

Elephantopus carolinianus Raeuschel. LEAFY ELEPHANT'S-FOOT. **Hab:** Mesic to dry forests and woodlands. **Dist:** NJ west to KS, south to s. FL and e. TX; West Indies. **Phen:** Aug-Nov. **Syn:** = Ar, C, F, F17, FNA19, G, GrPl, GW2, Il, K1, K3, K4, NcTx, Pa, RAB, S, SE1, Tn, Tx, Va, WH3, WV, Jones (1982). [NatureServe G5](#) (Secure).

Elephantopus elatus Bertoloni. SOUTHERN ELEPHANT'S-FOOT. **Hab:** Pine flatwoods and longleaf pine sandhills. **Dist:** E. SC south to s. FL, west to se. LA, on the Coastal Plain. **Phen:** Late Aug-Sep. **Syn:** = F17, FNA19, K1, K3, K4, RAB, S, SE1, WH3, Jones (1982). [NatureServe G5](#) (Secure).

Elephantopus nudatus A. Gray. COASTAL PLAIN ELEPHANT'S-FOOT. **Hab:** Woodlands and woodland borders, wet pine flatwoods, mesic pine flatwoods. **Dist:** DE south to n. peninsular FL, west to e. TX and AR, primarily on the Coastal Plain; south into n. South America. **Phen:** Late Jul-Sep. **Syn:** = Ar, C, F, F17, FNA19, G, GW2, K1, K3, K4, RAB, S, SE1, Tx, Va, WH3, Jones (1982). [NatureServe G5](#) (Secure).

Elephantopus tomentosus Linnaeus. COMMON ELEPHANT'S-FOOT. **Hab:** Woodlands and woodland borders, usually fairly dry. **Dist:** MD south to Panhandle FL, west to e. TX, north in the interior to w. NC and KY. **Phen:** Aug-Nov. **Syn:** = Ar, C, F, F17, FNA19, G, K1, K3, K4, RAB, S, SE1, Tn, Tx, Va, WH3, Jones (1982). [NatureServe G5](#) (Secure).

Emilia Cassini 1817 (TASSELFLOWER)

A genus of 50-100 species, of the Old World. References: Barkley (2006e) in FNA20 (2006b); SE1; Mapaya & Cron (2021).

* *Emilia fosbergii* Nicolson. SALMON TASSELFLOWER, CUPID'S-SHAVING-BRUSH. **Hab:** Disturbed areas, flower beds, landscaping. **Dist:** Native of Old World tropics. Scattered as an introduction in FL, including the Panhandle; reported for Lowndes County, GA (Carter, Baker, & Morris 2009). Nelson & Kelly (1997) reported *E. sonchifolia*, but actually based on specimens of *E. fosbergii*. **Syn:** = Bah, FI7, FNA20, K1, K3, K4, SE1, WH3. NatureServe GNR (Not Yet Ranked).

*Erechtites* Rafinesque 1817 (FIREWEED)

A genus of about 12-15 species, American and Australian. Barkley in FNA (2006a) points out that the genus name should be treated grammatically as masculine. References: Barkley (2006d) in FNA20 (2006b); SE1.

Erechtites hieracifolius (Linnaeus) Rafinesque ex A.P. de Candolle. FIREWEED, AMERICAN BURNWEED. **Hab:** In disturbed soil in nearly all habitats except the extremely xeric, present in most parts of the modern (beat-up) landscape at least as seedlings, liable to turn up at the smallest disturbance (such as small tree-fall tip-up mounds or campfires, even in large natural areas), most abundant in areas extensively disturbed or scarified by timber-harvest, bulldozing, or severe fire. **Dist:** NL (Newfoundland) west to SK, south to s. FL and e. TX; West Indies; tropical America. **Phen:** Late Jul-Nov. **Comm:** Perhaps the only other species in our area as adept at appearing (seemingly from nowhere) at small soil disturbances in forests are *Phytolacca americana* and the moss *Atrichum angustatum* (Bridel) Bruch & Schimper. **Syn:** = FI7, Mi, Tn, Va; = *Erechtites hieracifolia* var. *hieracifolia* – Bah, C, G, K1, SE1; = *Erechtites hieracifolia* var. *hieracifolia* – Pa; = *Erechtites hieracifolius* var. *hieracifolius* – Ar, FNA20, K4, NE, NY; < *Erechtites hieracifolia* – GrPl, GW2, Oh3, RAB, S, W, WV; > *Erechtites hieracifolia* var. *hieracifolia* – F, Il; > *Erechtites hieracifolia* var. *intermedia* Fernald – F, Il; > *Erechtites hieracifolia* var. *praealta* (Rafinesque) Fernald – F, Il; < *Erechtites hieracifolia* – NcTx; < *Erechtites hieracifolius* (Linnaeus) Rafinesque ex A.P. de Candolle – WH3; < *Senecio hieracifolius* Linnaeus var. *hieracifolius* – K3. NatureServe G5T5 (Secure).

*Erigeron* Linnaeus 1753 (DAISY FLEABANE)

A genus of about 200 species, nearly cosmopolitan. Sections follow Nesom (2008b). Here circumscribed to include *Conyza*. References: Allison & Stevens (2001); SE1; Nesom (2006bb) in FNA20 (2006b); Nesom (2008b); Nesom (2008b); Nesom (2018a); Noyes, Gerling, & Vandervoort (2006); Poindexter, Keener, & Noyes (2017) in Weakley et al (2017); Poindexter, Keener, & Noyes (2018) in Weakley et al (2018a); Strother (2006cc) in FNA20 (2006b).

Unkeyed taxa: *Erigeron floribundus*

- 1 Ray flowers 0.2-1 mm long; plants annual from a taproot.
 - 2 Plants diffusely branched from the base and throughout; plants 1-2.5 (-3) dm tall..... *Erigeron divaricatus*
 - 2 Plants with a well-developed central axis, sparingly branched (unless on coastal dunes, mowed, or otherwise injured); plants 1-15 dm tall.
 - 3 Involucre 4-6 mm high, densely pubescent; pistillate flowers 20-150 (or more) per head.
 - 4 Cauline leaves characteristically linear to linear-oblongate; capitulescence corymbiform to racemiform, less commonly thyrsoid; fruiting receptacles (2-) 2.5-4 (-5) mm wide, not alveolate or sometimes the inner florets barely so; phyllaries linear-lanceolate, relatively thick and opaque, 0.3-0.5 mm wide, green to greenish brown with a narrow, orange-resinous midvein, hispid-hirsute with thick-based hairs, sometimes purple-tipped, inserted on a ring of fused tissue; pistillate florets ca. 40-150, in (2-) 3-6 series..... *Erigeron bonariensis*
 - 4 Cauline leaves characteristically narrowly lanceolate-elliptic to lanceolate or oblanceolate; capitulescence usually paniculate-thyrsoid; fruiting receptacles 1.5-2.5 mm wide, weakly but distinctly alveolate (lens), outer to inner florets; phyllaries narrowly ovate, relatively thin and translucent, 0.5-0.8 mm wide, central part yellow-brown with an inconspicuous midvein, loosely strigose with thin-based hairs, never purple-tipped, inserted at apex of peduncle; pistillate florets ca. 20-50, in 2-3 series..... *Erigeron sumatrensis*
 - 3 Involucre 3-4 mm high, glabrous or very sparsely pubescent; pistillate flowers mostly 25-45 per head.
 - 5 Stem coarsely spreading-hirsute; leaves ciliate, the larger generally with a few to many coarse teeth; phyllaries green-tipped or white-tipped..... *Erigeron canadensis*
 - 5 Stem glabrous or with widely scattered, appressed hairs; leaves with a few cilia toward the base, generally entire; phyllaries purple-tipped..... *Erigeron pusillus*
- 1 Ray flowers 3-10 mm long; plants annual, biennial, or perennial.
 - 6 Stem leaves sessile; pappus of the pistillate (ray) flowers consisting only of a few short, slender scales, < 1 mm long (visible at 20× magnification); annual or perennial (rarely biennial); [section *Phalacrolooma*].
 - 7 Stem leaves many, mostly toothed, the larger > 1 cm wide; pubescence of the mid-stem long and spreading, of dense, flattened hairs; plants to 15 dm tall. *Erigeron annuus*
 - 7 Stem leaves few, mostly entire, the larger usually < 1 cm wide; pubescence of the mid-stem usually short and appressed, of flattened hairs, mainly restricted to the lower stem (or entirely absent); plants to 8 dm tall. *Erigeron strigosus* var. *strigosus*
 - 6 Stem leaves relatively large and clasping, or small and sessile (in *E. vernus*); pappus of the pistillate (ray) flowers of elongate capillary bristles (sometimes also with scales); plants biennial or perennial.
 - 12 Plants trailing or ascending, rooting at the nodes, and with stolons; [section *Cincinnati*]..... *Erigeron procumbens*
 - 12 Plants erect (sometimes the shoots curved at the base but ultimately vertical).
 - 13 Stem leaves not clasping; basal leaves fleshy; rays 25-40, white, 0.5-1.3 mm wide; [of moist to wet habitats of the Coastal Plain]; [section *Erigeridium*]..... *Erigeron vernus*

Erigeron annuus (Linnaeus) Persoon. ANNUAL FLEABANE. **Hab:** Roadsides, disturbed areas, gardens. **Dist:** NL (Newfoundland) west to MB, south to Panhandle FL and TX. **Phen:** May-Oct. **Syn:** = C, F, FI7, FNA20, GrPl, IL, K1, K3, K4, Mi, NcTx, NE, NY, Oh3, Pa, RAB, S, SE1, Tn, Tx, Va, W, WH3, WV; > *Erigeron annuus* var. *annuus* – G.

* ***Erigeron bonariensis*** Linnaeus. SOUTH AMERICAN HORSEWEED. **Hab:** Fields, disturbed areas. **Dist:** Apparently native of South America. Se. VA south into the tropics. **Phen:** Apr-Oct. **Syn:** = F, K3, K4, RAB; = *Conyza bonariensis* (Linnaeus) Cronquist – Ar, Bah, C, FI7, FNA20, K2, SE1, Tx, Va, WH3; = *Conyza floribunda* Kunth – G, misapplied; = *Leptilon bonariensis* (Linnaeus) Small; ~ *Conyza ambigua* DC.; > *Leptilon bonariense* (Linnaeus) Small – S; > *Leptilon linifolium* (Willdenow) Small – S.

Erigeron canadensis Linnaeus. COMMON HORSEWEED. **Hab:** Old fields, disturbed areas, roadsides, gardens. **Dist:** S. Canada south through nearly all of the United States to tropical America. **Phen:** Jun-Nov. **Syn:** = F; = *Conyza canadensis* (Linnaeus) Cronquist var. *canadensis* – C, G, GrPl, Mo2, NcTx, Oh3, Pa, SE1, Va, W; = *Erigeron canadensis* Linnaeus var. *canadensis* – NY, RAB; = *Leptilon canadense* (Linnaeus) Britton – S; = *Leptilon canadensis* (Linnaeus) Britton; < *Conyza canadensis* – Ar, FI7, FNA20, IL, K2, Mi, NE, Tn, WH3; > *Conyza canadensis* (Linnaeus) Cronquist var. *canadensis* – Tx; > *Conyza canadensis* var. *glabrata* (A. Gray) Cronquist – GrPl, Tx; < *Erigeron canadensis* Linnaeus – K3, K4, WV.

Erigeron divaricatus Michaux. **Hab:** Lawns, roadsides, other weedy situations. **Dist:** OH west to MN, south to KY, ec. TN (Chester, Wofford, & Kral 1997), ne. AL, LA, and c. TX. **Phen:** Jun-Oct. **Syn:** = F, K3, K4; = *Conyza ramosissima* Cronquist – Ar, C, FNA20, G, GrPl, IL, K2, NcTx, Oh3, SE1, Tn, Tx; = *Leptilon divaricatum* (Michaux) Rafinesque – S. [NatureServe G5](#) (Secure).

* ***Erigeron floribundus*** (Kunth) Schult. 'Bipontinus'. MANY-FLOWERED HORSEWEED. **Syn:** = *Conyza floribunda* Kunth – FNA20; = *Erigeron sumatrensis* Retzius – K3, K4.

Erigeron philadelphicus Linnaeus var. *philadelphicus*. PHILADELPHIA-DAISY. **Hab:** Roadsides, meadows, disturbed areas. **Dist:** NL (Newfoundland) west to BC, south to n. FL, TX, NM, CA, and Mexico. **Phen:** Apr-Aug. **Tax:** Var. *scaturicola* Fernald, of bluffs along the James River in VA, seems to be merely an extreme form. Other varieties [var. *glaber* Henry and var. *provancheri* (Marie-Victorin & Rousseau) B. Boivin] may have more merit. **Syn:** = Ar, FNA20, K1, K3, K4, NE, NY, Pa, Va; < *Erigeron philadelphicus* – C, FI7, G, GrPl, GW2, IL, Mi, NcTx, Oh3, RAB, S, SE1, Tn, W, WH3, WV; ~ *Erigeron philadelphicus* L. var. *glaber* Henry; > *Erigeron philadelphicus* Linnaeus var. *philadelphicus* – F; ~ *Erigeron philadelphicus* Linnaeus var. *provancheri* (Victorin & Rousseau) Boivin; > *Erigeron philadelphicus* var. *scaturicola* Fernald – F.

Erigeron procumbens (Houstoun ex Miller) Nesom. CORPUS CHRISTI FLEABANE. **Hab:** Moist to dry coastal areas, including marsh edges. **Dist:** S. MS (?), LA, TX, Tamaulipas, Veracruz. **Phen:** Apr-Sep. **Syn:** = FNA20, K3, K4; = *Erigeron myrionactis* Small – S, SE1, Tx. [NatureServe G5](#) (Secure).

Erigeron pulchellus Michaux var. *pulchellus*. ROBIN'S-PLANTAIN. **Hab:** Moist slopes, coves, limestone bluffs, trail margins, roadbanks. **Dist:** ME west to MN, south to Panhandle FL (Jackson County), GA, and e. TX. **Phen:** Apr-early Jun. **Tax:** In addition to the widespread var. *pulchellus*, and the Alleghenian var. *brauniae*, *E. pulchellus* has an additional local variety, var. *tolsteadii* Cronquist, of se. MN. **Syn:** = Ar, C, F, FNA20, G, K1, K3, K4, NE, NY, Oh3, Pa, SE1, Va, WV; < *Erigeron pulchellus* – FI7, GrPl, GW2, IL, Mi, RAB, S, Tn, Tx, W, WH3. [NatureServe G5T5](#) (Secure).

Erigeron pusillus Nuttall. SOUTHERN HORSEWEED. **Hab:** Dunes, brackish marsh edges, coastal sand flats, sand prairies, old fields, disturbed areas, barrens and glades. **Dist:** Se. MA and CT west to s. IN, south to FL and TX, and south into tropical America. **Phen:** (May-) Jul-Dec. **Tax:** Cronquist (1980) considers this and *Erigeron canadensis* as "well-marked varieties". **Syn:** = F; = *Conyza canadensis* (Linnaeus) Cronquist var. *pusilla* (Nuttall) Cronquist – C, G, GrPl, Mo2, Pa, SE1, Tx, Va, W; = *Conyza canadensis* var. *pusillus* – Oh3; = *Conyza parva* Cronquist; = *Erigeron canadensis* Linnaeus var. *pusillus* (Nuttall) B. Paletropics

Eupatorium Linnaeus 1753 (EUPATORIUM, THOROUGHWORT, DOG-FENNEL)

A genus of about 40 species, herbs, of e. North America and Eurasia (after the exclusion of *Ageratina*, *Chromolaena*, *Conoclinium*, *Eutrochium*, *Fleischmannia*, and other genera). I have differed considerably from Cronquist's treatments, as for instance in SE, regarding the rank at which to recognize taxonomic entities in *Eupatorium*. In the Southeastern United States, *Eupatorium* is a reticulately evolved complex, including diploids, triploids, and tetraploids; derivatives of hybridization produce sterile pollen but in some cases reproduce vigorously via agamosperous production of seeds. In some cases, these entities form separate populations from their presumed parental species, with distinctive ranges and habitats and more-or-less distinctive morphology. Cronquist treats morphologically highly distinctive entities, such as *E. pinnatifidum*, as full species, while stating that they are "not long-persistent". He treats morphologically more subtle entities as varieties of one of the two presumed parental species, such as *E. album* var. *vaseyi* ("very probably derived by hybridization of *E. album* var. *album* and *E. sessilifolium*"). Other entities, difficult to distinguish morphologically from another species, he does not recognize, as for instance *E. saltuense*, included as a synonym under *E. altissimum* ("*E. saltuense* may reflect hybridization between *E. altissimum* and some other species such as *E. album*, or possibly between *E. hyssopifolium* and *E. album*"). References: SE1; Cronquist (1985); Godfrey (1949); LeBlond et al (2007); Montgomery & Fairbrothers (1970); Schilling & Grubbs (2016); Schilling & Schilling (2015); Schilling (2011a); Schmidt & Schilling (2000); Siripun & Schilling (2006) in FNA21 (2006c); Siripun & Schilling (2006).

A species concept that stresses ecological, biological, and distributional independence seems preferable. When plants of a putative hybrid occur in substantial populations, reproducing independently of one or both alleged parents, and in geographically and/or ecologically distinctive situations they should be treated as a separate species. Only field observations and studies can provide the necessary information. I have seen no evidence that *E. pinnatifidum* (though morphologically strikingly distinctive) occurs independent of its parents; thus I treat it as a hybrid (see below). *E. vaseyi* regularly occurs without one or both of its presumed parents, forms fertile achenes, occurs in large populations, and (in NC) is distributionally more limited than its presumed parents (Sullivan 1978). Biologically, it is best treated as an allopolyploid species; its treatment as a variety leads to conceptual and nomenclatural problems (reflected in the synonymy above).

Unkeyed taxa: *Eupatorium* × *pinnatifidum*

- 1 Leaves generally in whorls of 3-7 (very rarely all of them opposite), most of them > 2 cm wide; involucre 6.5-9 mm high, the flowers pale pink to purple..... *Eutrochium*
- 1 Leaves generally opposite, sometimes in whorls of 3-4 (if so the leaves usually < 2 cm wide), or some of them alternate; involucre mostly 2-6 mm high, the flowers mostly white, rarely blue (rarely the involucre 6-11 mm high, then the flowers white).
 - 2 Leaves pinnate or pinnatifid, divided into linear or capillary segments, 0-5 mm wide..... **Key A**
 - 2 Leaves simple or palmately 3 (-5)-lobed, the leaves or lobes generally over 5 mm wide.
 - 4 Leaves long-petiolate, the petioles of larger leaves > 10 mm long. *Eupatorium serotinum*
 - 4 Leaves sessile or short-petiolate, the petioles < 9 mm long.
 - 6 Florets (3-) 5 (-7) per head..... **Key B**
 - 6 Florets 7-14 per head. *Eupatorium perfoliatum*

Key A - leaves pinnatifid or pinnate into linear or capillary segments (Dog-fennels)

- 1 Stem glabrous throughout, or short-pubescent in the lower portion only; inflorescence paniculate, the panicle branches recurved, the heads secundly arranged *Eupatorium leptophyllum*
- 1 Stem pubescent throughout, generally conspicuously so; inflorescence paniculate, the branches not recurved, the heads not secund.
- 2 Leaves bright green, glabrous, sparsely glandular-punctate, segments of the basal leaves 1-1.5 mm wide, segments of the upper leaves 0.2-0.5 mm wide *Eupatorium capillifolium*
- 2 Leaves grayish-green, pubescent, densely glandular-punctate, segments of the basal leaves 2-5 mm wide, segments of the upper leaves 1-2.5 mm wide *Eupatorium compositifolium*

Key B - leaves simple, flowers usually 5 per head

- 1 Phyllaries acuminate to attenuate.
- 2 Larger leaves 0.2-1.3 cm wide; stems puberulent; involucre 3.5-7 mm high. *Eupatorium leucolepis*
- 2 Larger leaves 1.5-3 (-4) cm wide; stems villous to puberulent; involucre 8-11 mm high.
- 4 Larger leaves < 6 cm long; leaves with few or no resin glands. *Eupatorium petaloideum*
- 4 Larger leaves > 6 cm long (and usually > 8 cm long); leaves with sparse to abundant resin glands.
- 8 Leaves lanceolate, > 3× as long as wide; inner phyllaries glandular only in the lower half; [widespread in our area] *Eupatorium album*
- 8 Leaves lance-ovate to ovate, < 3× as long as wide; inner phyllaries glandular to near the apex; [from s. MS westward in our area] *Eupatorium sullivaniae*
- 1 Phyllaries acute to obtuse.
- 9 Leaf bases broadly cuneate, truncate, or subcordate, the leaves generally distinctly broadest near the base.
- 13 Leaves averaging (1.5) 2-2.5× as long as wide, usually with a purple border (or not, in *E. species 1*); upper leaves and main inflorescence branches often alternate (opposite in *E. species 1*). *Eupatorium pilosum*
- 13 Leaves averaging 1-2× as long as wide, usually lacking a purple border; upper leaves and main inflorescence branches usually all opposite.
- 15 Leaf base broadly rounded, cordate-clasping; leaves very densely pubescent, the pubescence often harsh; larger leaves usually 4-10 cm long; principal pair of lateral veins diverging from the midrib 2-10 mm above the base of the leaf; toothing of leaf often irregular and coarse *Eupatorium cordigerum*
- 15 Leaf base cuneate, broadly cuneate, rounded, or cordate (but not clasping); leaves densely to sparsely pubescent; larger leaves usually 2-6 cm long; principal pair of lateral veins diverging at the base or 2-10 mm above the base of the leaf; toothing of leaf regular and relatively fine.
- 16 Leaf blades mostly 1-1.5 (-1.7)× as long as wide, tending to be obtuse (the apex usually 90° or more), the teeth generally rounded (the 2 sides of each tooth usually distinctly convex-curved, the end of the tooth therefore rounded), the principal pair of lateral veins diverging directly from the base of the midrib *Eupatorium rotundifolium*
- 16 Leaf blades mostly (1.2-) 1.5-2× as long as wide, tending to be acute (the apex usually 90° or less), the teeth generally rather sharp (the 2 sides of each tooth straight to gently curved, the end of the tooth therefore triangular), the principal pair of lateral veins diverging 2-10 mm above the base of the midrib.
- 17 Leaves broadly cuneate to broadly rounded, thin in texture, the pubescence rather soft and long (and also often sparse), the leaf blade not twisted at base, borne in a horizontal plane, up to 10 cm long and 6.5 cm wide; axillary fascicles lacking *Eupatorium pubescens*
- 17 Leaves cuneate to broadly cuneate, firm in texture, the pubescence rather harsh and short, the leaf blade twisted at the base, thus borne in a partially or fully vertical plane, up to 5.5 cm long and 3 cm wide; axillary fascicles regularly present *Eupatorium scabridum*
- 9 Leaf bases narrowly cuneate, the leaves generally broadest near the middle or toward the tip.
- 18 Plants from conspicuously tuberous-thickened (ca. 1 cm in diameter) horizontal rhizomes; leaves deflexed, spreading, or ascending.
- 19 Leaves 15-30 mm wide, spreading or ascending. *Eupatorium anomalum*
- 19 Leaves 2-12 mm wide, deflexed to erect-ascending. *Eupatorium mohrii*
- 18 Plants from crowns or caudices; leaves usually spreading or ascending (not deflexed).
- 22 Plants generally with numerous branches from at or near the base, the axillary shoots of the lower internodes elongating; leaves 2-5 cm long, oblanceolate.
- 23 Leaves broadly oblanceolate, 5-15 mm wide, crenate or serrate in the upper half *Eupatorium glaucescens*
- 23 Leaves narrowly oblanceolate, 3-8 mm wide, entire or remotely serrate apically *Eupatorium linearifolium*
- 22 Plants generally simple below the middle, the axillary shoots of the lower nodes not elongating (except in response to injury of the main stem); leaves 3-12 cm long, glaucous or linear.
- 24 Leaves mostly 6-40× as long as wide, the larger ones usually < 10 mm wide, ranging from 1-12 mm wide, whorled or opposite (rarely alternate above).
- 25 Leaves linear to narrowly lanceolate, the principal leaves 2-7 cm long, 1-5 mm wide, 10-40× as long as wide, entire to obscurely toothed, the leaves mostly in whorls of 3 or 4 *Eupatorium hyssopifolium*
- 25 Leaves lanceolate, the principal leaves 5-12 cm long, 5-10 (-12) mm wide, 6-15× as long as wide, conspicuously and divergently toothed, the leaves mostly opposite or in whorls of 3 *Eupatorium torreyanum*
- 24 Leaves mostly 2.5-7× as long as wide, the larger ones > 10 mm wide, ranging from 8-30 mm wide, opposite, alternate, or whorled.
- 26 Involucre 2.5-4 mm high; leaves obtuse to acute, elliptic to elliptic-oblongate, the 2 main lateral veins separating from the midrib about 1 cm above the base; leaves commonly 3 per node. *Eupatorium semiserratum*
- 26 Involucre 4.5-7 mm high; leaves acute to attenuate-acuminate, lanceolate, the 2 main lateral veins separating from the midvein at the base; leaves rarely 3 per node.
- 27 Leaves 3-5 cm long, 5-13 mm wide; leaf surfaces generally glabrous; [of AL westward] *Eupatorium lancifolium*
- 27 Leaves 5-12 cm long, 5-20 mm wide; leaf surfaces short or long puberulent; [widespread] *Eupatorium altissimum*

Eupatorium album Linnaeus. WHITE-BRACTED THOROUGHWORT. **Hab:** Dry woodlands. **Dist:** CT, NY, OH, and TN, south to FL and LA; disjunct in s. AR and n. LA (though many populations previously considered to be *E. album* west of the Mississippi River are *E. sullivaniae*). **Phen:** Late Jun-Oct. **Tax:** *E. album* is a diploid/auto polyploid species and the most widespread member of the *Eupatorium album* complex, a group of

species which have undergone extensive allopolyploid speciation. Many members of the complex have been treated as infrataxa under *E. album*, but are better separated as distinct species (Schilling 2011). Var. *glandulosum* is alleged to differ from var. *album* in having the involucre with copious dark glands (vs. glandless or nearly so). The distinction is dubious; variation seems essentially continuous in our area, with frequent intermediates, and there seems to be little correlation between morphology and habitat/range. **Syn:** = F17, K3, K4, Tn, Schilling (2011b); < *Eupatorium album* Linnaeus – Oh3, Pa, RAB, S, WH3; < *Eupatorium album* Linnaeus var. *album* – Ar, C, FNA21, K1, NE, SE1, Va, W, Cronquist (1985); > *Eupatorium album* Linnaeus var. *album* – F, G, WV; > *Eupatorium album* var. *glandulosum* (Michaux) A.P. de Candolle – F, G, WV.

Eupatorium altissimum Linnaeus. TALL THOROUGHWORT. **Hab:** Woodlands, old fields, woodland borders, and openings over mafic rocks (such as diabase) or calcareous rocks (such as limestone and calcareous sandstone). **Dist:** CT, NY, QC, MN, and NE, south to Panhandle FL and TX, primarily in the midwest, especially on limestone substrates, and uncommon east of the mountains. **Phen:** Late Aug–Nov. **Syn:** = F, G, GrPl, Il, K4, Mi, NcTx, NE, NY, Oh3, Pa, RAB, S, Tn, Tx, Va, W, WV; < *Eupatorium altissimum* Linnaeus – Ar, C, F17, FNA21, K1, K3, SE1, WH3. **NatureServe G5** (Secure).

Eupatorium anomalum Nash. ANOMALOUS EUPATORIUM. **Hab:** Moist savannas, coastal plain pondshores, moist interdune swales. **Dist:** NC (?) south to ne. FL, west to s. AL. **Phen:** Aug–Oct. **Tax:** *E. anomalum* is believed to be a triploid and tetraploid, apomictic derivative of the hybrid *E. mohrii* × *rotundifolium*. *E.* SC south to c. peninsular FL and west to s. AL. Inasmuch as it is now a separate lineage (as evidenced by a distinct distribution, more-or-less recognizable morphology, and phenologic separation), treatment as a separate taxon seems warranted. **Syn:** = FNA21, GW2, K1, K3, K4, SE1, Va, Schilling & Grubbs (2016); = *Eupatorium* × *anomalum* – F17, WH3; < *Eupatorium anomalum* Nash – S; < *Eupatorium recurvans* Small – RAB.

Eupatorium capillifolium (Lamarck) Small. COMMON DOG-FENNEL, YANKEEWEEED, CYPRESSWEED. **Hab:** Disturbed soils, old fields, clearcuts. **Dist:** CT, PA, KY, MO, and OK south to s. FL and TX; Bahamas; Cuba. **Phen:** Sep–Nov. **Comm:** This species, like *E. compositifolium*, is an excellent indicator of soil disturbance. **Syn:** = Ar, Bah, C, F, F17, FNA21, G, GW2, Il, K1, K3, K4, NcTx, NY, S, SE1, Tn, Tx, Va, W, WH3, WV; = *Eupatorium capillifolium* var. *capillifolium* – RAB. **NatureServe G5** (Secure).

Eupatorium compositifolium Walter. COASTAL DOG-FENNEL, YANKEEWEEED. **Hab:** Longleaf pine sandhills, sandy disturbed areas, exposed riverbanks and drawdown zones. **Dist:** Ne. NC south to s. FL, west to se. OK and TX. **Phen:** Sep–Dec. **Comm:** This species, like *E. capillifolium*, is an excellent indicator of soil disturbance. **Syn:** = Ar, F17, FNA21, GW2, K1, K3, K4, RAB, S, SE1, Tx, W, WH3. **NatureServe G5** (Secure).

Eupatorium cordigerum (Fernald) Fernald. CLASPING ROUNDEAF EUPATORIUM. **Hab:** Woodlands. **Dist:** VA, NC, and SC west to AR and MS. **Phen:** Jul–Aug. **Comm:** This taxon is an apomictic, polyploid derivative of the hybrid *E. perfoliatum* × *rotundifolium*. **Syn:** = F, Va; = *Eupatorium* × *cordigerum* (Fernald) Fernald – Ar, FNA21, K3, K4; = *Eupatorium rotundifolium* var. *cordigerum* Fernald – C, K1, SE1, Cronquist (1985); < *Eupatorium pubescens* Muhlenberg ex Willdenow – S; < *Eupatorium rotundifolium* Linnaeus – GW2; < *Eupatorium rotundifolium* Linnaeus ssp. *ovatum* (Bigelow) Montgomery & Fairbrothers – Montgomery & Fairbrothers (1970); < *Eupatorium rotundifolium* var. *ovatum* (Bigelow) Torrey – G, RAB; < *Eupatorium scabridum* Elliott – Tn.

Eupatorium glaucescens Elliott. WEDGELEAF EUPATORIUM, BROADLEAF BUSHY EUPATORIUM. **Hab:** Longleaf pine sandhills, dry sandy woodlands. **Dist:** Widespread in the Southeastern Coastal Plain, ranging from se. VA south to FL and west to MS. **Phen:** Late Jul–Oct. **Tax:** The name *E. cuneifolium* must be rejected on nomenclatural grounds (Gandhi & Thomas 1991). **Syn:** = K1; = *Eupatorium cuneifolium* Willdenow – S; < *Eupatorium cuneifolium* Willdenow – C, G, RAB, SE1; ? *Eupatorium cuneifolium* var. *cuneifolium* – F; < *Eupatorium glaucescens* Elliott – Tx; < *Eupatorium linearifolium* Walter – F17, FNA21, K3, K4, WH3.

Eupatorium hyssopifolium Linnaeus. HYSSOPELEAF EUPATORIUM. **Hab:** Roadbanks, pastures, fields, disturbed areas, dry woodlands. **Dist:** MA west to nc. KY, s.IL, se. MO, south to ne. FL and se. TX. **Phen:** Late Jul–Oct. **Syn:** = Il, K3, NE, NY, Tn, Va, Schilling (2011a); = *Eupatorium hyssopifolium* var. *hyssopifolium* – Ar, C, F17, FNA21, G, K3, Pa, SE1, W; < *Eupatorium hyssopifolium* Linnaeus – RAB, Tx, WV; > *Eupatorium hyssopifolium* var. *calcaratum* Fernald & Schubert – F, K1; > *Eupatorium hyssopifolium* var. *hyssopifolium* – F, K1; > *Eupatorium lecheifolium* Greene – S; > *Eupatorium sessilifolium* – S.

Eupatorium lancifolium (Torrey & A. Gray) Small. LANCELEAF EUPATORIUM. **Hab:** Prairies, open woodlands. **Dist:** AL west to s. AR and e. TX. **Syn:** = FNA21, GW2, K1, K3, K4, S, SE1, Schilling (2011b); = *Eupatorium semiserratum* A.P. de Candolle var. *lancifolium* Torrey & A. Gray. **NatureServe G3?** (Vulnerable).

Eupatorium leptophyllum A.P. de Candolle. LIMESINK DOG-FENNEL. **Hab:** Limesink depression ponds (dolines) in the outer Coastal Plain and clay-based Carolina bays in the inner Coastal Plain. **Dist:** Se. NC south to FL and west to s. GA and s. AL; Bahamas; Cuba. **Phen:** Sep–Nov. **Syn:** = Bah, F17, FNA21, GW2, K1, K3, K4, S, SE1, WH3; = *Eupatorium capillifolium* var. *leptophyllum* (A.P. de Candolle) H.E. Ahles – RAB. **NatureServe G4G5** (Apparently Secure).

Eupatorium leucolepis (A.P. de Candolle) Torrey & A. Gray. SAVANNA EUPATORIUM, JUSTICEWEED. **Hab:** Pine savannas, seepage bogs, depression ponds. **Dist:** Primarily of the Southeastern Coastal Plain, ranging from NY south to n. peninsular FL, Panhandle FL, and west to LA; disjunct in Coffee County, TN (Chester, Wofford, & Kral 1997). **Phen:** Aug–Oct. **Comm:** This species is often confused with members of the *E. recurvans-mohrii-anomalum* complex. The following differences are useful: *E. leucolepis* has phyllaries acuminate to attenuate (vs. acute to

403. ASTERACEAE

obtuse), leaves of the uppermost nodes below the inflorescence opposite, or rarely the uppermost 1-2 nodes subopposite (vs. leaves of the uppermost 2-15 nodes below the inflorescence alternate), and leaves generally longitudinally folded (vs. generally planar). The plants formerly called *E. leucolepis* var. *novae-angliae* Fernald and endemic to freshwater pondshores in MA and RI apparently represent a distinct allopolyploid species, *E. novae-angliae* (Fernald) V.I. Sullivan ex A. Haines & Sorrie, and should not be treated as a variety of *E. leucolepis*. **Syn:** = K3, K4, NY, Tn, Tx, Va, LeBlond et al (2007); = *Eupatorium leucolepis* var. *leucolepis* – C, F, G; < *Eupatorium leucolepis* (A.P. de Candolle) Torrey & A. Gray – F17, GW2, Pa, RAB, S, SE1, W, WH3; < *Eupatorium leucolepis* var. *leucolepis* – FNA21, K1. [NatureServe G5T5](#) (Secure).

Eupatorium linearifolium Walter. NARROWLEAF BUSHY EUPATORIUM, TWISTED EUPATORIUM. **Hab:** Longleaf pine sandhills. **Dist:** Se. VA south to FL and west to LA. **Phen:** Late Jul-Oct. **Comm:** The appropriate treatment of this taxon is unclear; it may be a derivative of the hybrid *E. cuneifolium* × *hyssopifolium*. **Syn:** = F, Va; = *Eupatorium hyssopifolium* var. *linearifolium* (Walter) Fernald – K1; = *Eupatorium tortifolium* Chapman – S; < *Eupatorium cuneifolium* Willdenow – C, G, RAB, SE1; < *Eupatorium linearifolium* Walter – F17, FNA21, K3, K4, Tx, WH3.

Eupatorium mohrii Greene. MOHR'S EUPATORIUM. **Hab:** Moist savannas, other wet habitats. **Dist:** Se. VA south to s. FL and west to TX. **Phen:** Aug-Oct. **Tax:** Like *E. anomalum*, *E. mohrii* is believed to be a triploid and tetraploid, apomictic derivative of the hybrid *E. recurvans* × *rotundifolium*; it is more widespread than *E. recurvans* sensu stricto. Inasmuch as it is now a separate lineage (as evidenced by a distinct distribution, more-or-less recognizable morphology, and phenologic separation), treatment as a separate taxon seems warranted. **Syn:** = GW2, Va; < *Eupatorium anomalum* Nash – S; < *Eupatorium mohrii* Greene – C, F17, FNA21, K1, K3, K4, SE1, W, WH3, Schilling & Grubbs (2016); < *Eupatorium recurvans* Small – F, G, RAB.

Eupatorium perfoliatum Linnaeus. BONESET. **Hab:** Marshes, swamps, bogs, wet pastures, and other wet habitats. **Dist:** NS west to MB, south to n. peninsular FL and TX. **Phen:** Aug-Oct. **Syn:** = Ar, F17, FNA21, GrPl, GW2, Il, K3, K4, Mi, NeTx, NE, NY, Oh3, Pa, RAB, Tn, Tx, Va, W, WH3, WV; = *Eupatorium perfoliatum* var. *perfoliatum* – C, F, G, K1, S, SE1; ? *Eupatorium cuneatum* Engelm. – S, (actually a hybrid). [NatureServe G5T5](#) (Secure).

Eupatorium petaloideum Britton. SNOWY WHITE EUPATORIUM. **Hab:** Longleaf pine sandhills, Florida scrub, other dryish pinelands. **Dist:** GA south to FL, west to MS. **Syn:** = F17, FNA21, K3, K4, S, Schilling (2011b); = *Eupatorium album* var. *petaloideum* (Britton) Godfrey ex D.B. Ward; < *Eupatorium album* Linnaeus – WH3; < *Eupatorium album* Linnaeus var. *album* – K1, SE1, Cronquist (1985).

Eupatorium pilosum Walter. RAGGED EUPATORIUM. **Hab:** Longleaf pine savannas, bogs, other wetlands, other moist areas, but also sometimes in surprisingly dry habitats, such as mesic and dry-mesic woodlands and woodland edges. **Dist:** MA south to c. peninsular FL, west to KY, c. TN, and MS; reports from w. LA need checking. **Phen:** Aug-Oct. **Tax:** *E. pilosum* is a species distinct from *E. rotundifolium*. There remains interesting morphologic and ecological variation included within this taxon needing careful study. **Syn:** = C, F, F17, FNA21, GW2, K1, K3, K4, NE, NY, Pa, RAB, Tn, Va, WH3, WV, Cronquist (1985), Montgomery & Fairbrothers (1970), Schilling & Schilling (2015); = *Eupatorium rotundifolium* var. *saundersii* (T.C. Porter) Cronquist – G, SE1, W; = *Eupatorium verbenaeifolium* Reiche – S. [NatureServe G5](#) (Secure).

Eupatorium xpinatifidum Elliott. **Hab:** Pine flatwoods, marshes. **Dist:** E. VA south to Panhandle FL. **Tax:** It is variously considered a species (as by S), a species of hybrid origin (as by SE), or a hybrid (as by GW and K). The parents are variously listed as *E. capillifolium* × *perfoliatum* (as by K) or *E. capillifolium* or *compositifolium* × *perfoliatum* (as by GW and SE). I have seen the plant in Pender County, NC, where it appears to be a first-generation hybrid, growing with *E. capillifolium* and *E. perfoliatum*. Until and unless additional evidence appears that it reproduces itself and exists in independent populations it should be treated as a hybrid rather than a species of hybrid origin. It is recognizable by its pinnatifid or bipinnatifid leaves (the segments broader than in the dog-fennels) and its corymbose-paniculate inflorescence. **Comm:** {not keyed}. **Syn:** = Ar, F17, FNA21, K1, K3, K4, Tn, WH3; = *Eupatorium pinnatifidum* Elliott – GW2, S, SE1; ~ *Eupatorium pectinatum* Small.

Eupatorium pubescens Muhlenberg ex Willdenow. INLAND ROUNDEAF EUPATORIUM. **Hab:** Forests and woodlands, woodland edges, roadbanks. **Dist:** Primarily in the Appalachians and adjacent provinces, ranging from ME west to OH, south to n. GA, n. AL, AR and LA; the distribution, abundance, and phenology of *E. pubescens* need additional study because of frequent lumping with *E. rotundifolium*. **Phen:** Jul-Sep. **Tax:** Where growing together, *E. pubescens* apparently flowers about a month earlier than *E. rotundifolium*. This taxon appears to be a stabilized polyploid complex originating from hybridization of *E. rotundifolium* and (perhaps) *E. sessilifolium*; in that it now functions as a more-or-less independent evolutionary lineage, with distinctive morphology, habitat, and distribution, it is here treated as a species. **Syn:** = F, NE, NY, Va, WV; = *Eupatorium rotundifolium* var. *ovatum* (Bigelow) Torrey – Ar, C, FNA21, G, K1, K3, K4, Oh3, Pa, SE1, W, Cronquist (1985); < *Eupatorium pubescens* Muhlenberg ex Willdenow – S, (also see *E. cordigerum*); < *Eupatorium rotundifolium* Linnaeus – GW2; < *Eupatorium rotundifolium* Linnaeus ssp. *ovatum* (Bigelow) Montgomery & Fairbrothers – Montgomery & Fairbrothers (1970); < *Eupatorium rotundifolium* var. *ovatum* (Bigelow) Torrey – RAB, (also see *E. cordigerum*). [NatureServe G5T5](#) (Secure).

Eupatorium rotundifolium Linnaeus. COMMON ROUNDEAF EUPATORIUM. **Hab:** Pine savannas, seepage bogs, moist to dry woodlands. **Dist:** MA, NY, IN, and OK south to s. FL and TX. **Phen:** Aug-Oct. **Syn:** = F, NE, NY, S, Tn, Va; = *Eupatorium rotundifolium* var. *rotundifolium* – Ar, C, FNA21, G, K1, K3, K4, Oh3, Pa, RAB, SE1, W, Cronquist (1985); < *Eupatorium rotundifolium* Linnaeus – F17, GW2, Tx, WH3; < *Eupatorium rotundifolium* Linnaeus ssp. *rotundifolium* – Montgomery & Fairbrothers (1970). [NatureServe G5T5](#) (Secure).

Eupatorium scabridum Elliott. ROUGHLEAF EUPATORIUM. **Hab:** Pine savannas, wet pinelands, dry, gravelly oak savannas and probably oak-shortleaf pine savannas and open woodlands, powerlines, roadbanks (in grassland remnants). **Dist:** SC south to n. FL, west to AR, LA, and OK. **Phen:** Late Jul-Oct. **Tax:** This plant is believed to be an allopolyploid and apomictic derivative of the hybrid *E. rotundifolium* × *semiserratum*. In some areas it apparently consists only of short-lived diploids, but in others (according to Godfrey & Wooten [1981] especially in SC, AR and LA) to occur as populations of polyploid apomicts. It resembles *E. rotundifolium*, but has cuneate leaves with a less prominent pair of lateral veins, narrower leaves, and is more likely to have 3-whorled leaves (as *E. semiserratum* often does). **Syn:** = GW2, S; = *Eupatorium rotundifolium* var. *scabridum* (Elliott) A. Gray – Ar, FNA21, K1, K3, K4, SE1; < *Eupatorium rotundifolium* Linnaeus – F17, Tx, WH3; < *Eupatorium rotundifolium* Linnaeus ssp. *rotundifolium* – Montgomery & Fairbrothers (1970); < *Eupatorium scabridum* Elliott – Tn. Eupatorium semiserratum A.P. de Candolle. **Hab:** Swamp forests, seepage bogs, savannas, clay-based Carolina bays, other wetlands. **Dist:** Se. VA south to ne. FL, Panhandle FL, west to TX and AR; disjunct in sc. TN. **Phen:** Late Jul-Oct. **ID Notes:** This species often has 3 leaves per node; most similar species rarely or never have whorled leaves. **Syn:** = Ar, C, F17, FNA21, G, GW2, K1, K3, K4, RAB, S, SE1, Tn, Va, WH3; = *Eupatorium cuneifolium* var. *semiserratum* (A.P. de Candolle) Fernald & Griscom – F; < *Eupatorium glaucescens* Elliott – Tx.

Eupatorium serotinum Michaux. LATE EUPATORIUM. **Hab:** Interdune swales, bottomland forests and openings, fields, open forests, powerline rights-of-way, tidal marshes, disturbed areas. **Dist:** MA, NY, MI, WI, MN, and NE south to s. FL, LA, and TX. This species was at one time apparently largely or strictly coastal in our area, but has spread inland rapidly along corridors of disturbance, somewhat similarly to *Baccharis halimifolia*. **Phen:** Late Aug-Oct. **Comm:** A weedy species that has expanded in abundance and range. **Syn:** = Ar, C, F, F17, FNA21, G, GrPl, GW2, Il, K1, K4, Mi, NE, NY, Oh3, Pa, RAB, S, SE1, Tn, Tx, Va, W, WH3, WV. **NatureServe G5** (Secure).

Eupatorium sullivaniae E.E. Schilling. SULLIVAN'S EUPATORIUM. **Hab:** Pinelands. **Dist:** S. MS west to w. LA and AR (to be expected in e. TX and perhaps se. OK). **Tax:** This species is an apomictic species derived from *E. album* × *lanceifolium* (Schilling 2011). **Syn:** = K3, K4, Schilling (2011b); < *Eupatorium album* Linnaeus – S; < *Eupatorium album* Linnaeus var. *album* – FNA21, K1, SE1.

Eupatorium torreyanum Short & R. Peter. TORREY'S EUPATORIUM. **Hab:** Dry woodlands, powerline rights-of-way, roadsides, marshes. **Dist:** NY south to n. peninsular FL, Panhandle FL, and west to OH, TN, and LA. **Phen:** Late Jul-Oct. **Tax:** Cronquist (1980) considers this taxon a "well-marked variety", "probably originated through hybridization between *E. hyssopifolium* and some other species, but now a stable entity". The other parent is postulated by Sullivan (1978) to be *E. semiserratum*. For reasons stated in the comments before the species accounts, the taxon is here treated as a species. **Syn:** = K4, NE, NY, S, Tn, Va; = *Eupatorium hyssopifolium* var. *laciniatum* Gray – Ar, C, F, F17, FNA21, G, K1, K3, Oh3, SE1, W, WH3; < *Eupatorium hyssopifolium* Linnaeus – RAB.

Eurybia (Cassini) Cassini 1820 (WOOD-ASTER)

A genus of about 23 species, perennial herbs, of North America. References: Brouillet (2006g) in FNA20 (2006b); SE1; Kral (1983a); Lamboy (1987); Lamboy (1988); Lamboy (1992); Nesom (1994b).

Eurybia hemispherica (Alexander) Nesom. PRAIRIE GRASS-LEAVED ASTER, SOUTHERN PINE ASTER. **Hab:** Glades, barrens, rocky woodlands. **Dist:** E. TN west to MO, south to nw. GA, se. GA, and FL Panhandle. **Phen:** Jul-Oct. **Tax:** Apparently diploid (2n=18) and tetraploid (2n=36). **Syn:** = Ar, FNA20, K1, K3, K4, Tn, WH3, Nesom (1994b); = *Aster hemisphaericus* – W, orthographic variant; = *Aster hemisphaericus* Alexander – C, F, SE1; = *Aster paludosus* Aiton ssp. *hemisphaericus* (Alexander) Cronquist – G, GrPl; = *Aster pedionomus* Alexander – S; = *Heleastrum hemisphaericum* (Alexander) Shinnery – Tx. **NatureServe G4** (Apparently Secure).

Euthamia (Nuttall) Cassini 1825 (GOLDENTOP, FLAT-TOPPED GOLDENROD)

Contributed by Alan S. Weakley & Bruce A. Sorrie

A genus of about 12-14 species, perennial herbs, of North America. References: SE1; Haines (2006) in FNA20 (2006b); Johnson (1995); Nesom (2021e); Nesom (2021g); Nesom (2021h); Sieren (1981); Sorrie () (in prep); Szubryt et al (2020); Taylor & Taylor (1983).

- 1 Leaves with dense pustules (slightly raised, elliptical, pale or translucent, blister-like pustules -- use 10× or more magnification); [w. GA, AL, w. TN (Coastal Plain), w. KY (Coastal Plain), s. MO, AR, se. OK, and e. TX southwards to s. MS and s. LA]..... *Euthamia leptoccephala*
- 1 Leaves without pustules, but with sparse to dense, resin pits (depressed, circular, pale or translucent pits -- use 10× or more magnification); [collectively widespread]..... *Euthamia caroliniana*
- 4 Leaf midveins glabrous; stems glabrous; leaves 0.5-5 (-7) mm wide. *Euthamia scabra*
- 4 Leaf midveins hirsutulous or hirtellous on the lower leaf surface; stems usually sparsely to moderately hirtellous, especially near the nodes and upwards near and in the inflorescence (except glabrous and resinous in *E. gymnospermoides*); leaves 1-6 (-7) mm wide. *Euthamia scabra*

Euthamia caroliniana (Linnaeus) Greene ex Porter & Britton. CAROLINA GOLDENTOP. **Hab:** Pine savannas, moist forests, ditches, pastures, disturbed areas. **Dist:** S. MA south to s. FL and west to se. LA, mainly on the Coastal Plain, extending somewhat into the Piedmont in places (reports from farther north or farther west are based on misidentifications or on broader circumscriptions of the taxon). **Phen:** (Aug) Sep-Dec. **Syn:** = F17, Pa, Va, WH3, Johnson (1995), Nesom (2021e), Nesom (2021g), Nesom (2021h); = *Euthamia minor* (Michaux) Greene – S, SE1; = *Euthamia tenuifolia* (Pursh) Nuttall – W; < *Euthamia caroliniana* (Linnaeus) Greene ex Porter & Britton – FNA20, Il, K1, K3, K4, Szubryt et al (2020); > *Euthamia caroliniana* (Linnaeus) Greene ex Porter & Britton – Sorrie () (in prep); > *Euthamia microcephala* (Nuttall) Greene; > *Euthamia minor* (Michaux) Greene – GW2; < *Euthamia tenuifolia* (Pursh) Nuttall – Sieren (1981); > *Euthamia tenuifolia* (Pursh) Nuttall – Sorrie () (in prep); > *Euthamia tenuifolia* (Pursh) Nuttall var. *microcephala* Nuttall – C; > *Euthamia tenuifolia* Greene var. *tenuifolia*; > *Solidago microcephala* (Nuttall) Bush – F, G, RAB; > *Solidago minor* Michaux; > *Solidago tenuifolia* Pursh – RAB.

Euthamia leptoccephala (Torrey & A. Gray) Greene. NARROWHEAD GOLDENTOP. **Hab:** Fields, pastures, roadsides, prairies, savannas. **Dist:** KY, IL, MO, and OK south to nw. GA (Floyd and Heard counties), AL, and TX. **Phen:** Aug-Oct. **Syn:** = Ar, C, FNA20, GW2, Il, K1, K3, K4, S, SE1, Tn, Tx, Nesom (2021e), Nesom (2021g), Sieren (1981), Sorrie () (in prep), Szubryt et al (2020); = *Solidago leptoccephala* Torrey & A. Gray – F, G. **NatureServe G5** (Secure).

Euthamia scabra Greene. GULF COAST GOLDENTOP. **Hab:** Estuarine and near-estuarine areas. **Dist:** FL Panhandle west to e. LA. **Tax:** See Szubryt et al. (2020) for additional, detailed information. **Syn:** = Nesom (2021e), Nesom (2021g), Szubryt et al (2020).

Eutrochium Rafinesque 1838 (JOE-PYE-WEED)

A genus of 5 species, perennial herbs, of North America. The separation of *Eutrochium* (*Eupatoriadelphus*) from *Eupatorium* was supported by Schmidt & Schilling (2000). Lamont (2004) made the necessary combinations under the oldest available generic name, *Eutrochium* Rafinesque. The widely used common name for the genus is discussed at detail by Pearce & Pringle (2017), who conclude that it relates to an 18th century native American in Massachusetts, named Joseph Shauquethqueat. References: SE1; Lamont (1995); Lamont (2004); Lamont (2006a) in FNA21 (2006c); Schmidt & Schilling (2000).

- 4 Stem hollow (with a large central cavity), purple throughout, strongly glaucous when fresh; flowers bright pink-purple; leaves in whorls of (3-) avg. 5 (-7); leaves mostly 3.5-5.5× as long as broad *Eutrochium fistulosum*
- 4 Stem solid (rarely with a slender central cavity), dark purple at the nodes or greenish purple throughout, not glaucous or only slightly so when fresh; flowers pale pink-purple; leaves in whorls of (2-) avg. 3-4 (-5); leaves mostly 2-4× as long as broad *Eutrochium purpureum* var. *purpureum*

Eutrochium fistulosum (Barratt) E.E. Lamont. HOLLOW-STEM JOE-PYE-WEED. **Hab:** Moist forests, marshes, fields, ditches. **Dist:** S. ME, NY, s. MI, IL, and MO, south to c. peninsular FL, Panhandle FL, and e. TX. **Phen:** Jul-Oct. **Syn:** = Ar, F17, FNA21, Il, K3, K4, Mi, NE, Pa, Tn, Va, Lamont (2004); = *Eupatoriadelphus fistulosus* (Barratt) King & H.E. Robinson – GW2, Schmidt & Schilling (2000); = *Eupatorium fistulosum* Barratt – C, F, G, K1, Mo2, Oh3, RAB, SE1, Tx, W, WH3, WV, Lamont (1995); = *Eupatorium maculatum* – S, misapplied.

Eutrochium purpureum (Linnaeus) E.E. Lamont var. *purpureum*. PURPLE-NODE JOE-PYE-WEED. **Hab:** Upland, usually mesic forests. **Dist:** NH west to se. MN, IA, and e. NE, south to SC, GA, Panhandle FL, n. LA, and e. OK; var. *holzingeri* (Rydborg) E.E. Lamont, differing in having the lower leaf surface densely and persistently pubescent (vs. glabrous or nearly so) is found in the Midwest (Lamont 1990). **Phen:** Jul-Oct. **Tax:** *Eupatorium purpureum* var. *amoenum* is smaller, more slender, with narrower leaves which are nearly glabrous below; it is probably only a form. **Syn:** = Ar, Il, K4, Va; = *Eupatorium purpureum* Linnaeus var. *purpureum* – Mo2; ~ *Eupatoriadelphus purpureus* (L.) King & H.E. Robins.; < *Eupatorium purpureum* – C, F, F17, GrPl, Mi, RAB, SE1, W, WH3; > *Eupatorium purpureum* var. *amoenum* (Pursh) Gray – G, WV; < *Eupatorium purpureum* Linnaeus var. *purpureum* – G, K1, WV, Lamont (1995); < *Eupatorium trifoliatum* Linnaeus – S; < *Eutrochium purpureum* – Pa, Tn; < *Eutrochium purpureum* (Linnaeus) E.E. Lamont var. *purpureum* – FNA21, NE, Lamont (2004).

Facelis Cassini 1819

A genus of 3 species, herbs, of South America. References: Anderberg (1991); Arriagada (1998); SE1; Nesom (2006a) in FNA19 (2006a).

Key to Map

* *Facelis retusa* (Lamarck) Schultz 'Bipontinus'. TRAMPWEED. **Hab:** Fields, roadsides, lawns, disturbed areas. **Dist:** Native of s. South America. **Phen:** Apr-Jun. **Syn:** = F17, FNA19, K1, K3, K4, NcTx, RAB, SE1, Tx, WH3, Anderberg (1991), Arriagada (1998); ? *Facelis apiculata* Cassini – S. NatureServe GNR (Not Yet Ranked).

Fleischmannia Schultz 'Bipontinus' 1850

A genus of about 80 species of s. North America, south through Central America to w. (Andean) South America. References: SE1; Nesom (2006jj) in FNA21 (2006c); Schultz & Schilling (2000); Wooten & Clewell (1971).

Fleischmannia incarnata (Walter) King & H. Robinson. PINK THOROUGHWORT, PINK EUPATORIUM. **Hab:** Nutrient-rich, moist to dry, forests and woodlands over diabase, limestone, coquina limestone, or other basic rocks, or on rich alluvium. **Dist:** Se. VA west to WV, s. OH, s. IN, s. IL, s. MO, and e. OK, south to w. peninsular FL, Panhandle FL, s. TX, and e. Mexico, the distribution oddly semi-fragmented. **Phen:** Late Aug-Oct. **Tax:** See Wooten & Clewell (1971) for further information about this species. **Syn:** = Ar, F17, FNA21, Il, K1, K3, K4, Tn, Va, WH3, Wooten & Clewell (1971); = *Eupatorium incarnatum* Walter – C, F, G, NcTx, Oh3, RAB, S, SE1, Tx, W, WV. NatureServe G5 (Secure).

Gaillardia Fougereux de Bondaroy 1786 (BLANKET-FLOWER, GAILLARDIA, FIRE-WHEELS)

A genus of about 15-30 species, herbs, of temperate North America and South America. References: SE1; Franck (2020) in Weakley et al (2020); Strother (2006c) in FNA21 (2006c); Turner & Whalen (1975); Turner (1979); Turner et al (2003).

- 1 Receptacle naked, lacking well-developed setae (if setae present, < 1 mm long).
 - 4 Disk flowers yellow; ray flowers usually present, yellow *Gaillardia aestivalis* var. *flavovirens*
 - 4 Disk flowers brown or reddish brown; ray flowers present or absent, when present usually largely red, orange, or purplish *Gaillardia aestivalis* var. *aestivalis*
- 1 Receptacle with well-developed setae 1.5-6 mm long.
 - 7 Leaves fleshy; perennial or annual, strongly branching, the secondary branches spreading and therefore forming compact, rounded "bushes"; [widespread, primarily of coastal dunes and flats, NC south to FL, west to TX] *Gaillardia pulchella* var. *drummondii*
 - 7 Leaves herbaceous; annual, with secondary branches ascending. *Gaillardia pulchella* var. *pulchella*

Gaillardia aestivalis (Walter) H. Rock var. *aestivalis*. SANDHILL GAILLARDIA, PRAIRIE GAILLARDIA. **Hab:** Longleaf pine sandhills, prairies, disturbed sandy soils. **Dist:** Sc. NC south to c. peninsular FL, west to KS and e. and se. TX. **Phen:** Jul-Oct. **Syn:** = NcTx, SE1, Turner (1979); < *Gaillardia aestivalis* – F17, FNA21, RAB, WH3, WH3; < *Gaillardia aestivalis* (Walter) H. Rock var. *aestivalis* – GrPl, K1, K3, K4; < *Gaillardia lanceolata* – S; < *Gaillardia lanceolata* Michaux var. *lanceolata* – G.

Gaillardia aestivalis var. *flavovirens*. YELLOW SANDHILL GAILLARDIA, YELLOW PRAIRIE GAILLARDIA. **Hab:** Longleaf pine sandhills, sandy prairies. **Dist:** Panhandle FL west to s. MO and se. TX. **Phen:** Jul-Oct. **Syn:** = Mo2, NcTx, SE1, Turner (1979); = *Gaillardia chrysantha* Small – S; = *Gaillardia lutea* Greene; < *Gaillardia aestivalis* – F17, FNA21, WH3; < *Gaillardia aestivalis* (Walter) H. Rock var. *aestivalis* – K1, K3, K4.

Gaillardia pulchella Fougereux de Bondaroy var. *drummondii* (Hooker) B.L. Turner. BEACH BLANKET-FLOWER. **Hab:** Dunes, sandy flats behind the dunes, roadsides and vacant lots on barrier islands. **Dist:** Ne. NC south to FL, west to TX; Bahamas. Probably native only in TX (Franck 2020). **Phen:** Apr-Dec. **Syn:** = K3, K4, Turner et al (2003); = *Gaillardia picta* Sweet – S; = *Gaillardia pulchella* Fougereux var. *picta* (Sweet) A. Gray – K1, Turner & Whalen (1975); < *Gaillardia pulchella* – Bah, C, F, F17, FNA21, G, GrPl, RAB, SE1, WH3. NatureServe G4G5T3T5 (Apparently Secure).

Gaillardia pulchella Fougereux de Bondaroy var. *pulchella*. COMMON BLANKET-FLOWER. **Hab:** Prairies, other open habitats, disturbed areas. **Dist:** MO, NE, CO, and AZ south to w. LA, TX, and Mexico; also naturalized eastwards, the pre-settlement distribution obscure. **Phen:** Apr-Sep. **Syn:** = K1, K3, K4, Mo2, NE, Turner & Whalen (1975), Turner et al (2003); = *Gaillardia drummondii* (Hooker) A.P. de Candolle – S, misapplied; < *Gaillardia pulchella* – Ar, C, F, F17, FNA21, G, GrPl, Il, Mi, NcTx, RAB, SE1, WH3. Galinsoga Ruiz & Pavón 1794 (PERUVIAN-DAISY, QUICKWEED, GALLANT SOLDIER)

A genus of about 13 species, herbs, of temperate and subtropical Central America and South America. References: Canne-Hilliker (2006) in FNA21 (2006c); SE1; Smith et al (2020).

* *Galinsoga quadriradiata* Ruiz & Pavón. COMMON PERUVIAN-DAISY, DEVIL'S-DELIGHT, RACEWEED, QUICKWEED, GALLANT SOLDIER. **Hab:** Disturbed areas, roadsides, barnyards. **Dist:** Native of Central and South America. A serious weed, especially in the cooler climates of the Mountains; Small (1933) described it as "a particularly pestiferous weed of such rapid growth and seeding as to make eradication extremely difficult." Fortunately, it does not seem especially prone to invade undisturbed natural areas. **Phen:** May-Nov. **Comm:** "*Galinsoga* is one of the most troublesome weeds of nurseries and landscapes in many parts of the world. It is fast growing and can produce up to 7,500 seeds within only 8 to 9 weeks after germination." (Smith et al. 2020). **Syn:** = Ar, Bah, C, FI7, FNA21, GrPl, Il, K1, K3, K4, Mi, NE, Oh3, Pa, SE1, Tn, Va, W, WH3; > *Galinsoga bicolorata* St. John & White – F, G; > *Galinsoga caracasana* (A.P. de Candolle) Schultz 'Bipontinus' – F, G; > *Galinsoga ciliata* (Rafinesque) Blake – F, G, RAB, S, WV. NatureServe GNR (Not Yet Ranked).

Gamochaeta Weddell 1856 (CUDWEED, EVERLASTING)

A genus of about 61 species, herbs, subcosmopolitan, but primarily native of South America. *Gamochaeta* is more closely related to other genera than it is to *Gnaphalium*. References: Arriagada (1998); SE1; Freire et al (2021); Nesom (1990); Nesom (2004b); Nesom (2004c); Nesom (2006n) in FNA19 (2006a); Nesom (2022b); Pruski & Nesom (2004); Urtubey et al (2016).

- 1 Leaves concolored or weakly bicolored (abaxial and adaxial faces more or less equally greenish to gray-greenish, indument usually loosely tomentose or arachnose, sometimes subpannose).
- 2 Blades of basal and lower cauline leaves 4-16 mm wide; bracts among the inflorescence heads spatulate to oblanceolate, the lowermost (at least) surpassing the heads *Gamochaeta pensylvanica*
- 2 Blades of basal and lower cauline leaves 2-6 (10) mm wide; bracts among the inflorescence heads linear, oblanceolate, or oblong, surpassing the heads or not.
- 3 Involucres 2.5-3 mm high, seated in tomentum; capitulescence initially cylindric and uninterrupted, at least distally, the main axis obscured by clustered heads; phyllaries in 3-4 (-5) series, the outer and middle ovate-lanceolate with narrowly to broadly acute apices, the outer 1/2-2/3 as long as the inner, at least the innermost commonly tinged with purple at the stereome-lamina junction; flowering (Feb-) Mar-May (sometimes later because of moisture or disturbance) *Gamochaeta antillana*
- 3 Involucres 3-3.5 mm high, lightly arachnose only at the base if at all; capitulescence interrupted at least distally, the main axis visible up to the terminal heads; phyllaries in 5-7 series, the outer and middle ovate-triangular with sharply acute-acuminate apices, the outer 1/3-1/2 as long as the inner, slightly brown, none with purplish color; flowering May-Jul *Gamochaeta calviceps*
- 1 Leaves strongly to weakly bicolored with greenish glabrescent upper surfaces; leaves spatulate-obovate to oblanceolate; basal leaves present at flowering.
- 5 Upper leaf surfaces glabrous or glabrate; involucres 2.5-3.0 mm high, more-or-less purplish, the bases glabrous; outer phyllaries elliptic-obovate to broadly ovate-elliptic, apices rounded to obtuse; bisexual florets 2-3 *Gamochaeta impatiens*
- 5 Upper leaf surfaces sparsely arachnose (hairs persistent, evident at 10× magnification); involucres 3.0-4.5 (-5) mm high, sometimes purplish, bases (imbedded in tomentum) often sparsely arachnose on the lower 1/5-1/2; outer phyllaries ovate, ovate-triangular, or ovate-lanceolate, apices acute to acuminate; bisexual florets 2-6.
- 6 Stems not pannose (indument whitish, like closely appressed, polished cloth, hairs usually not individually evident); involucres 3.0-3.5 (-4.0) mm high; apices of inner phyllaries acute to acute-acuminate; bisexual florets 2-4; cypselas purple *Gamochaeta chionesthes*
- 6 Stems usually ± pannose or pannose-tomentose (hairs individually evident, longitudinally arranged); involucres 3.0-4.5 mm high; apices of inner phyllaries acute, obtuse, or truncate-rounded, sometimes apiculate; bisexual florets 3-6; cypselas tan to brownish.
- 7 Blades of cauline leaves oblanceolate to oblanceolate-oblong or oblanceolate-obovate; involucres 3.0-3.5 mm high; laminae of inner phyllaries elliptic-oblong to oblong, apices truncate-rounded or obtuse and apiculate; bisexual florets (3-) 4-6; plants usually fibrous-rooted, rarely taprooted *Gamochaeta argyrinea*
- 7 Blades of cauline leaves oblanceolate to spatulate (basal cells of hairs on adaxial faces persistent, expanded, glassy); involucres 4.0-4.5 mm high; laminae of inner phyllaries triangular, apices acute (not apiculate); bisexual florets 3-4; plants fibrous-rooted or taprooted *Gamochaeta purpurea*

Gamochaeta antillana (Urban) Anderberg. CARIBBEAN EVERLASTING. **Hab:** Pine flatwoods, disturbed areas, fields, lawns. **Dist:** VA south to s. FL, west to AR and TX; Cuba; South America; Europe (introduced); New Zealand (introduced). **Phen:** Mar-Jul. **Syn:** = Ar, FI7, FNA19, K3, K4, WH3, Nesom (2004b), Nesom (2004c), Urtubey et al (2016); < *Gamochaeta falcata* (Lamarck) Cabrera – K1, Nesom (1990); < *Gnaphalium calviceps* Fernald – F; < *Gnaphalium falcatum* Lamarck – S; < *Gnaphalium purpureum* Linnaeus – W; < *Gnaphalium purpureum* Linnaeus var. *falcatum* (Lamarck) Torrey & A. Gray – C, G, RAB, SE1.

Gamochaeta argyrinea Nesom. SILVERY CUDWEED. **Hab:** Disturbed areas, roadsides, fields, lawns. **Dist:** DE, MD, WV, KY, s. MO, se. KS, south to Panhandle FL and e. TX. **Phen:** Mar-Jul. **Syn:** = Ar, FI7, FNA19, K3, K4, Tn, Va, WH3, Nesom (2004b), Nesom (2004c), Urtubey et al (2016); < *Gamochaeta purpurea* (Linnaeus) Cabrera – K1, Arriagada (1998), Nesom (1990); < *Gnaphalium purpureum* Linnaeus – F, S, W; < *Gnaphalium purpureum* Linnaeus var. *purpureum* – C, G, RAB, SE1.

Gamochaeta calviceps (Fernald) Cabrera. NARROW-LEAF PURPLE EVERLASTING. **Hab:** Disturbed areas, roadsides. **Dist:** VA south to FL, west to TX; South America, California (introduced); Europe (introduced), New Zealand (introduced). **Phen:** Mar-Jul. **Syn:** = Ar, FNA19, K3, K4, Va, Nesom (2004b), Nesom (2004c); < *Gamochaeta falcata* (Lamarck) Cabrera – K1, NcTx, Tx, Nesom (1990); < *Gnaphalium calviceps* Fernald – F; < *Gnaphalium falcatum* Lamarck – S; < *Gnaphalium purpureum* Linnaeus – W; < *Gnaphalium purpureum* Linnaeus var. *falcatum* (Lamarck) Torrey & A. Gray – C, G, RAB, SE1.

* *Gamochaeta chionesthes* Nesom. WHITE-CLOAKED CUDWEED. **Hab:** Roadsides, disturbed areas; apparently introduced from South America. **Phen:** Mar-Jul. **Syn:** = FI7, FNA19, K3, K4, WH3, Nesom (2004b), Nesom (2004c), Urtubey et al (2016); ~ *Gamochaeta purpurea* (Linnaeus) Cabrera, in part have both traditionally been misapplied; < *Gamochaeta purpurea* (Linnaeus) Cabrera – K1, Arriagada (1998), Nesom (1990); ~ *Gnaphalium purpureum* L., in part have both traditionally been misapplied; < *Gnaphalium purpureum* Linnaeus – F, S, W; < *Gnaphalium purpureum* Linnaeus var. *purpureum* – C, G, RAB, SE1.

* *Gamochaeta impatiens* Nesom. ELEGANT CUDWEED. **Hab:** Sandy roadsides, disturbed areas. **Dist:** Native of South America. **Phen:** Mar-Jul. **Tax:** Nesom (2022b) demonstrated that what has been previously identified in North America as *G. coarctata* is actually a different species, *G.*

Gamochaeta purpurea (Linnaeus) Cabrera. SPOONLEAF PURPLE EVERLASTING. **Hab:** Prairies, woodlands, fields, roadsides, pastures, disturbed areas. **Dist:** ME west to MI, south to s. FL and e. TX; apparently disjunct in CA and OR, adventive in w. US, Mexico, South America, and elsewhere. **Phen:** Late Mar-Sep. **Syn:** = F17, FNA19, GrPl, II, K3, K4, Mi, NcTx, NE, Tn, Va, WH3, Nesom (2004b), Nesom (2004c), Urtubey et al (2016); = *Gamochaeta purpurea* var. *purpurea* – Pa; < *Gamochaeta purpurea* (Linnaeus) Cabrera – K1, Arriagada (1998), Nesom (1990); < *Gnaphalium purpureum* Linnaeus – F, Oh3, S, Tx, W, WV; < *Gnaphalium purpureum* Linnaeus var. *purpureum* – C, G, RAB, SE1.

***Hedynois*** P. Miller 1754 (CRETAN-WEED)

A genus of 2 species, annual herbs, of Mediterranean Europe. References: Strother (2006v) in FNA19 (2006a).

* ***Hedynois rhagadioloides*** (Linnaeus) F.W. Schmidt. CRETAN-WEED. **Hab:** Disturbed areas. **Dist:** Native of Crete. Reported for Gulfport, Harrison Co. MS (H. Horne, pers. comm. 2015). **Phen:** Mar-May. **Syn:** = K4; = *Hedynois cretica* (Linnaeus) Dumont de Courset – FNA19, K3, NcTx. NatureServe GNR (Not Yet Ranked).

***Helenium*** Linnaeus 1753 (SNEEZEWEED, BITTERWEED)

A genus of about 32-40 species, herbs, of America. References: Bierner (1972); Bierner (1989); Bierner (2006b) in FNA21 (2006c); SE1; Fernald (1943); Knox (1987); Knox et al (2016); Rock (1957); Rydberg (1915).

- 1 Stem leaves very numerous, 0.5-2 (-4) mm wide, not decurrent on the stem or branches; taprooted annuals. *Helenium amarum*
- 1 Stem leaves few to numerous, at least the larger > 4 mm wide, decurrent on the stems and branches; fibrous-rooted perennials or taprooted annuals/biennials.
 - 3 Ray flowers absent; disc flowers with lobes (at least) brown, red, or purple. *Helenium flexuosum*
 - 3 Ray flowers present; disc flowers either yellow or with lobes (at least) brown, red, or purple.
 - 4 Ray flowers bearing a pistil and style, fertile.
 - 5 Plants fibrous-rooted perennials; [section *Helenium*]. *Helenium autumnale*
 - 5 Plants tap-rooted annuals or biennials; [section *Tetradus*]. *Helenium quadridentatum*
 - 4 Ray flowers lacking a pistil and style, sterile; [section *Leptopoda*].
 - 10 Disc flowers with lobes (at least) brown, red, or purple.
 - 11 Disc flowers predominately 4-lobed and with 4 stamens; heads 5-50 (-80) per plant; pappus scales aristate. *Helenium flexuosum*
 - 11 Disc flowers 5-lobed and with 5 stamens; heads 1-20 per plant; pappus scales acute. *Helenium brevifolium*
 - 10 Disc flowers with lobes yellow.
 - 13 Pappus scales deeply lacerate. *Helenium drummondii*
 - 13 Pappus scales entire or slightly lacerate.
 - 15 Peduncle pubescent to tomentose or lanose between the uppermost leaf and the head; achene pubescent on the ribs; heads 1-4 per plant; basal leaves (2.5-) 4.0-10.5 (-18.0) cm long, (0.8-) 1.2-2.0 (-2.5) cm wide, averaging ca. 4-6× as long as wide. *Helenium brevifolium*

15 Peduncle glabrous or glabrate between the uppermost leaf and the head; achene glabrous; heads 1 per plant; basal leaves (3.0-) 6.5-17.0 (-25.0) cm long, (0.4-) 0.6-1.0 (-1.5) cm wide, averaging ca. 10-15× as long as wide.....*Helenium vernale*

Helenium amarum (Rafinesque) H. Rock. BITTERWEED. **Hab:** Roadsides, overgrazed pastures, urban areas; in much of our area an introduction from farther west. **Dist:** Apparently native to e. and c. TX; now widespread in e. North America. **Phen:** May-Dec. **Tax:** Bierner (1989) discussed the taxonomy of section *Amarum*, consisting only of the two varieties of *H. amarum*. **Comm:** The plant has a very bitter taste and is generally avoided by grazing animals, a point noted by Rafinesque in his original description (in 1817): "the whole plant is odoriferous and intensely bitter, it gives an abominable taste to the milk of the cows that feed on it in summer". Overgrazed areas come to be dominated by *H. amarum*. In areas where it is frequently mowed, *H. amarum* appears to evolve a genotype capable of flowering and fruiting when only a few cm tall. **Syn:** = G, GrPl, Oh3, RAB, Tn, W, Bierner (1972); = *Helenium amarum* (Rafinesque) H. Rock var. *amarum* – Ar, C, FNA21, K1, K3, K4, NcTx, NE, Pa, Va, WH3, Bierner (1989); = *Helenium tenuifolium* Nuttall – F, S; < *Helenium amarum* (Rafinesque) H. Rock – F17, Il, Mi, SE1. **NatureServe G5T5** (Secure).

Helenium autumnale Linnaeus. COMMON SNEEZEWEED. **Hab:** Moist pastures, forests, woodlands, forest edges. **Dist:** QC west to BC, south to n. peninsular FL, TX, and CA. **Phen:** Aug-Oct. **Tax:** The taxa included here (see synonymy) need additional study. **Comm:** Like *H. amarum*, *H. autumnale* is bitter and unpalatable to grazing animals, becoming more abundant in pastures. **Syn:** = Ar, F17, FNA21, GrPl, K3, K4, Mi, NcTx, NE, Oh3, Pa, RAB, Tn, Va, WH3; < *Helenium autumnale* Linnaeus – GW2, W; > *Helenium autumnale* var. *autumnale* – C, F, G, Il, K1, SE1, WV, Fernald (1943); > *Helenium autumnale* Linnaeus var. *canaliculatum* (Lamarck) Torrey & A. Gray – Fernald (1943); > *Helenium autumnale* var. *parviflorum* (Nuttall) Fernald – F, Il, K1, WV, Fernald (1943); > *Helenium latifolium* P. Miller – S; > *Helenium parviflorum* Nuttall – S.

Helenium brevifolium (Nuttall) Alph. Wood. SHORTLEAF SNEEZEWEED. **Hab:** Seepage bogs, river-scoured cobble bars. **Dist:** *H. brevifolium* has a peculiar distribution, reaching its greatest abundance on the Gulf Coastal Plain, from Panhandle FL west to e. LA, and occurring at widely scattered disjunct sites in c. and n. AL, wc. GA, c. and w. NC, ec. TN (Chester, Wofford, & Kral 1997), and sw. and se. VA. **Phen:** May-Jun. **Syn:** = C, F17, FNA21, G, GW2, K1, K3, K4, RAB, SE1, Tn, Va, W, WH3, Bierner (1972); > *Helenium brevifolium* (Nuttall) Alph. Wood – F, S; > *Helenium curtisii* A. Gray – F, S. **NatureServe G4** (Apparently Secure).

Helenium drummondii H. Rock. FRINGED SNEEZEWEED. **Hab:** Ditches. **Dist:** W. LA west to e. TX. Reported for e. LA and MS (Kartesz 2010); not so reported in Kartesz (2015, 2020). Reported for FL (without locality (Wunderlin, Hansen, & Franck 2020)). **Syn:** = F17, FNA21, K3, K4, SE1, WH3. **NatureServe G4** (Apparently Secure).

Helenium flexuosum Rafinesque. SOUTHERN SNEEZEWEED. **Hab:** Moist pastures, moist forests, riverbanks, wet pine rocklands (in s. FL). **Dist:** S. ME west to MN, south to c. peninsular FL and TX; disjunct in s. FL. **Phen:** May-Aug. **Tax:** Rayless plants of s. FL likely warrant taxonomic recognition. **Syn:** = C, F17, FNA21, G, GrPl, GW2, K1, K3, K4, Mi, NE, Oh3, Pa, RAB, SE1, Tn, Va, W, WH3, WV, Bierner (1972); > *Helenium floridanum* Fernald – Fernald (1943); > *Helenium godfreyi* Fernald – Fernald (1943); > *Helenium nudiflorum* Nuttall – F, S, Fernald (1943); > *Helenium polyphyllum* Small – S. **NatureServe G5** (Secure).

Helenium quadridentatum Labillardière. **Hab:** Moist soils of pond edges, streambanks, and ditches. **Dist:** AL west to TX, south to MX and Central America; Cuba. The occurrence in SC reported by Rydberg (1915), Small (1933), and Kartesz (1999) is likely an introduction. **Syn:** = FNA21, K1, K3, K4, S, SE1, Bierner (1972). **NatureServe G4?** (Apparently Secure).

Helenium vernale Walter. **Hab:** Wet pine savannas and adjacent ditches. **Dist:** A Southeastern Coastal Plain endemic: se. NC south to ne. FL, Panhandle FL, and west to e. LA. **Phen:** Apr-May. **Syn:** = FNA21, GW2, K1, K3, K4, RAB, SE1, WH3, Bierner (1972); = *Helenium helenium* (Nuttall) Small – S; ~ *Helenium nuttallii* A. Gray; ~ *Leptopoda helenium* Nutt..

Helianthus Linnaeus 1753 (SUNFLOWER)

A genus of about 50 species, herbs, of North America. References: SE1; Heiser et al (1969); Schilling (2006c) in FNA21 (2006c); Schilling et al (1998).

Key based in part on Schilling (2006c).

- 1 Leaves basally disposed, the plants scapose to subscapose, the stem leaves relatively few (with 2-8 nodes below the inflorescence), those on the upper stem opposite or alternate, strongly reduced upward in size as compared to the persistent basal leaves; [section *Atrorubentes*]..... **Key A**
- 1 Leaves cauline, plants leafy the length of the stem, the stem leaves many (with 10 or more nodes below the inflorescence), basal leaves lacking (at least at anthesis).
2 Plant a tap-rooted annual (rarely surviving a second year)..... **Key B**

Key to Map
Symbology:

- 2 Plant a perennial from crown buds or rhizomes, the roots sometimes tuberous-thickened; [section *Atrorubentes*]. **Key C**
 3 Disk flowers red or purple (at least in part)..... **Key D**
 3 Disk flowers yellow..... **Key D**

Key A - sunflowers with basally disposed leaves

- 1 Disk flowers yellow. *Helianthus occidentalis* ssp. *occidentalis*
 1 Disk flowers red or purple (at least in part).
 5 Basal leaves 6-20 cm long; lower several pairs of stem leaves up to 1/2 as long and wide as the basal leaves; [collectively widespread in our region from VA, KY, IL, MO, and OK southwards, in the inland provinces and the Coastal Plain].
 6 Trichomes on the leaf abaxial midrib > 1 mm long; lower stem with a few pairs of leaves (< 8 nodes below the capitulescence), these strongly reduced upward; leaf blades (1.3-) 1.7-2.5 (-3)× as long as wide; petiole often > 1/3 as long as the blade, broadly winged toward the blade; plants to 2 m tall; nonflowering stems usually absent; [widespread in our area] *Helianthus atrorubens*
 6 Trichomes on the leaf abaxial midrib < 1 mm long; lower stem leafy, often to above the middle (> 8 nodes below the capitulescence); leaf blades 1-1.7 (-2)× as long as wide; petiole usually < 1/3 as long as the blade, narrowly winged toward the blade; plants to 3 m tall; nonflowering stems usually present; [west of our area] *Helianthus silphoides*
 5 Basal leaves 4-15 cm long; lower several pairs of stem leaves often < 1/2 as long and wide as the basal leaves; [Coastal Plain, NC to FL to e. LA].
 *Helianthus heterophyllus*

Key B - annual sunflowers

- 1 Disk flowers yellow. *Helianthus annuus*
 1 Disk flowers red or purple (at least in part).
 5 Phyllaries ovate to ovate-oblong, > 4 mm wide; leaves 5-25 cm wide; disk (2-) 3-30 cm wide; plants (0.5-) 1-3 m tall *Helianthus annuus*
 5 Phyllaries lanceolate, 1-4 (-5) mm wide; leaves 1.5-9 cm wide; disk 1-2.5 cm wide; plants 0.4-1.5 m tall.
 *Helianthus debilis* ssp. *tardiflorus*

Key C - perennial sunflowers with leafy stems and red disk flowers

- 3 Leaf blades long and narrow, linear or lanceolate and usually > 10× as long as wide.
 4 Plants < 1.5 m tall; leaves < 1 cm wide; rhizomes lacking or poorly developed *Helianthus angustifolius*
 4 Plants > 1.5 m tall; leaves > 1 cm wide; rhizomes well developed *Helianthus simulans*
 3 Leaf blades shorter and broader, lanceolate, lance-ovate, deltoid, deltoid-ovate and usually < 5× as long as wide.
 5 Phyllaries 1.5-3 mm broad, lanceolate *Helianthus floridanus*
 5 Phyllaries 3-5 mm broad, oblong, ovate, or obovate.
 6 Abaxial surfaces of leaves and ligules lacking subsessile glandular trichomes; leaves usually broadly ovate to orbicular and with a petiole > 1 cm long *Helianthus silphoides*
 6 Abaxial surfaces of leaves and ligules with subsessile glandular trichomes; leaves usually lanceolate to lance-ovate or rhombic-ovate and with a petiole usually < 1 cm long.
 7 Phyllaries oblong-lanceolate, apex acuminate, abaxially usually pubescent *Helianthus laetiflorus*
 7 Phyllaries elliptical to oblong-ovate, apex acute, abaxially glabrate.
 *Helianthus pauciflorus* ssp. *pauciflorus*

Key D - perennial sunflowers with leafy stems and yellow disk flowers

- 1 Stems below the capitulescence glabrous or nearly so, sometimes glaucous.
 2 Leaves whorled at principal nodes, either alternate or opposite at other nodes *Helianthus verticillatus*
 2 Leaves either alternate or opposite (or both), never whorled.
 6 Rays few, usually 5 or 8; heads small, the involucre 9 mm broad or less.
 *Helianthus microcephalus*
 6 Rays usually 10 or more in larger heads; heads larger, the involucre usually > 9 mm broad.
 8 Leaves sessile, rounded to cordate at base, and trinerved, with the 2 lateral veins diverging from the midrib at the very base of the leaf *Helianthus divaricatus*
 8 Leaves sessile to petiolate, but narrowing gradually to base and triplinerved, the 2 lateral veins diverging from the midrib above the base of the blade.
 9 Anther appendages yellow.
 10 Leaf blade lanceolate to lance-ovate, sessile to petiolate but the petiole usually < 1/4 as long as the blade; phyllaries not conspicuously graduated and imbricate, usually loose and spreading *Helianthus grosseserratus*
 10 Leaf blade ovate to elliptic, with a distinct petiole usually > 2 cm long and 1/2 as long as blade or longer; phyllaries conspicuously graduated and imbricate, usually appressed, not exceeding disk *Helianthus occidentalis* ssp. *occidentalis*
 9 Anther appendages dark or reddish-brown.
 12 Longer phyllaries usually exceeding disk by 1/2 their length or more, apex acuminate; larger leaves moderately to conspicuously serrate, with a petiole 2-5 cm long, and abaxially with usually relatively few subsessile glandular trichomes *Helianthus decapetalus*
 12 Phyllaries equal to or slightly exceeding disk, apex acute; leaves moderately serrate to entire, with a petiole 1-3 cm long, and abaxially with usually abundant subsessile glandular trichomes ('resin dots') *Helianthus strumosus*
 1 Stems pubescent throughout, not glaucous.
 13 Leaves sessile and cordate, mostly or all opposite *Helianthus mollis*
 13 Leaves petiolate or sessile, but not cordate, and alternate or opposite.

Key to Map
 Symbology:

←rare ←uncommon ←common
 (see introduction for more)

N : no X : extirpated
 P : planted
 ? : questionable

- 14 Phyllaries attenuate, conspicuously exceeding the disk in length and reflexed, apically with numerous subsessile glandular trichomes ('resin dots'); leaf bases often convex, the basically ovate or lance-ovate blade joined to a broadly winged and gradually narrowed petiole.....*Helianthus resinosus*
- 14 Phyllaries acute to attenuate, but not reflexed, subsessile glandular trichomes present or absent; leaf bases usually attenuate to truncate or rounded, the blade lance-linear or lanceolate, or if ovate or lance-ovate either sessile or with a petiole that is at most narrowly winged.
- 15 Leaves conduplicate (strongly folded along the midvein, thus V-shaped) and entire, usually with only a single prominent main vein; inflorescence when well developed spiciform or racemose.....*Helianthus maximiliani*
- 15 Leaves not conduplicate, entire or serrate, triplinerved (with a prominent lateral pair of veins near the base); inflorescence not spiciform or racemose.
- 16 Phyllaries conspicuously graduated and imbricate, usually appressed.
- 17 Leaf blades lanceolate to ovate, petiole 1-5 cm long and usually < ½ as long as blade; anther appendages with dark pigment; cypselas 4-5 mm, usually sterile.....*Helianthus laetiflorus*
- 17 Leaf blades ovate to elliptic, petiole distinct, > 2 cm and usually > ½ as long as the blade; anther appendages yellow; cypselas 3-4 mm long, fertile.....*Helianthus occidentalis* ssp. *occidentalis*
- 16 Phyllaries not conspicuously graduated and imbricate, usually loose or spreading.
- 19 Leaves with a prominent petiole > 2 cm long, blades lance-ovate to ovate and > 5 cm broad; cypselas 5-7 mm long; tubers produced late in growing season.....*Helianthus tuberosus*
- 19 Leaves sessile or with a short petiole usually < 2 cm long; blades linear to lanceolate, < 4.5 cm broad; cypselas 3-5 cm long; tubers present or absent.
- 20 Leaves truncate to broadly rounded at base, shortly but distinctly petiolate.....*Helianthus hirsutus*
- 20 Leaves cuneate, gradually narrowing to base, sessile to petiolate.
- 21 Ligules lacking subsessile glandular trichomes; leaves not strongly revolute.....*Helianthus giganteus*
- 21 Ligules abaxially with subsessile glandular trichomes ('resin dots'); leaves usually revolute.
- 23 Leaves conspicuously undulate; ovate to elliptical to lanceolate, occasionally linear (if so, usually < 10 cm long), usually < 5× as long as wide; heads 1-6 per plant; outer phyllaries acute to obtuse.....*Helianthus floridanus*
- 23 Leaves not conspicuously undulate; linear to lanceolate, > 5× as long as broad (and also 8-16 cm long); heads 3-16 per plant; outer phyllaries acuminate to acute.
- 24 Plants short, < 1.5 m tall; leaves < 1 cm wide; rhizomes lacking or poorly developed.....*Helianthus angustifolius*
- 24 Plants robust, > 1.5 m tall; leaves > 1 cm wide; rhizomes well developed.....*Helianthus similans*

***Helianthus angustifolius* Linnaeus. NARROWLEAF SUNFLOWER. Hab:** Pine savannas, ditches, marshes, other wet habitats. **Dist:** Primarily Coastal Plain, from Long Island, NY south to c. peninsular FL and west to TX, irregularly inland to OH, IN, and MO. **Phen:** (Jul-) Sep-Oct (-frost). **Comm:** This plant is very showy when in flower on roadsides, especially in Oct. **Syn:** = Ar, C, FI7, FNA21, G, GW2, IL, K1, K3, K4, Oh3, Pa, RAB, S, SE1, Tn, Tx, Va, W, WH3, WV; > *Helianthus angustifolius* var. *angustifolius* – F; > *Helianthus angustifolius* var. *planifolius* Fernald – F. NatureServe G5 (Secure).

***Helianthus annuus* Linnaeus. COMMON SUNFLOWER, MIRASOL. Hab:** Disturbed areas, often cultivated in gardens, sometimes cultivated in fields. **Dist:** Native of the Plains states. This is the common cultivated sunflower grown for its flowers, seeds, and oil. **Phen:** Jun-Oct. **Syn:** = C, F, FI7, FNA21, G, GrPI, IL, K1, K3, K4, Mi, NcTx, NE, Pa, RAB, S, SE1, Tn, Va, W, WH3, WV; > *Helianthus annuus* ssp. *annuus* – Tx; > *Helianthus annuus* ssp. *texasus* Heiser – Tx; > *Helianthus annuus* var. *macrocarpus* (A.P. de Candolle) Cockerell – Oh3.

***Helianthus atrorubens* Linnaeus. APPALACHIAN SUNFLOWER. Hab:** Dry soils of rocky, sandy, or clayey woodlands and roadbanks. **Dist:** N. VA west to w. TN, and south to c. GA, Panhandle FL, AL, and se. LA. **Phen:** Late Jul-Oct. **Comm:** Related to the Ozarkian *H. silphoides* Nuttall. **Syn:** = C, FI7, FNA21, K1, K3, K4, RAB, SE1, Tn, Va, W, WH3; = *Helianthus atrorubens* var. *atrорubens* – G; < *Helianthus atrorubens* Linnaeus – S; > *Helianthus atrorubens* var. *alsodes* Fernald – F; > *Helianthus atrorubens* var. *atrорubens* – F.

***Helianthus debilis* Nuttall ssp. *tardiflorus* Heiser. GULF COAST BEACH SUNFLOWER. Hab:** Sandy beaches, dry pinelands. **Dist:** GA, FL, AL, and MS. **Phen:** Mar-Sep. **Syn:** = FNA21, K1, K3, K4; = *Helianthus debilis* ssp. *cucumerifolius* (Torrey & Gray) Heiser var. *tardiflorus* (Heiser) Cronquist – SE1; < *Helianthus cucumerifolius* Torrey & A. Gray – S; < *Helianthus debilis* Nuttall ssp. *cucumerifolius* (Torrey & A. Gray) Heiser – FI7, WH3.

***Helianthus decapetalus* Linnaeus. FOREST SUNFLOWER. Hab:** Mesic woodlands and forests, oak savannas. **Dist:** ME and QC west to WI and IA, south to GA and MO. **Phen:** Jul-Oct. **Syn:** = C, FNA21, G, IL, K1, K3, K4, Mi, NE, Oh3, Pa, RAB, S, SE1, Tn, Va, W; > *Helianthus arenicola* E. E. Wats.; > *Helianthus decapetalus* Linnaeus – F, WV; > *Helianthus leoninus* E. E. Wats.; > *Helianthus saxicola* Small – S; > *Helianthus trachelifolius* P. Miller – F, WV. NatureServe G5 (Secure).

***Helianthus divaricatus* Linnaeus. WOODLAND SUNFLOWER. Hab:** Mesic to dry woodlands and forests, forest edges. **Dist:** ME, QC, ON, and IA south to Panhandle FL, LA, and OK. **Phen:** Jun-Aug. **Syn:** = Ar, C, FI7, FNA21, G, IL, K1, K3, K4, Mi, NE, Oh3, Pa, RAB, S, SE1, Tn, Va, W, WH3, WV; > *Helianthus divaricatus* var. *angustifolius* Kuntze – F; > *Helianthus divaricatus* var. *divaricatus* – F. NatureServe G5 (Secure).

***Helianthus floridanus* A. Gray ex Chapman. FLORIDA SUNFLOWER. Hab:** Wet pine savannas and pocosin edges. **Dist:** A Southeastern Coastal Plain species: se. NC south to c. peninsular FL, and west to se. LA. **Phen:** Sep-Oct. **Syn:** = FI7, FNA21, GW2, K1, K3, K4, RAB, S, SE1, WH3. NatureServe G3G4 (Vulnerable).

***Helianthus giganteus* Linnaeus. TUBEROUS SUNFLOWER, SWAMP SUNFLOWER. Hab:** Bog edges, moist thickets, ditches. **Dist:** NB and ME west to MN, south to n. SC, n. GA, e. and c. TN, c. KY, n. IN, n. IL, and WI. **Phen:** Late Jul-Oct. **Syn:** = C, F, FNA21, G, GW2, IL, K1, K3, K4, Mi, NE, Oh3, Pa, RAB, S, SE1, Tn, Va, W, WV; > *Helianthus alienus* E.E. Watson – S; > *Helianthus giganteus* Linnaeus – S; > *Helianthus validus* E.E. Watson – S. NatureServe G5 (Secure).

***Helianthus grosseserratus* M. Martens. SAWTOOTH SUNFLOWER. Hab:** Prairies, fens, pastures, roadsides, disturbed areas. **Dist:** The original range of this species was apparently centered in OH, IN, IL, IA, and MO, but its exact extent is obscured by its subsequent spread. Reported for NC

403. ASTERACEAE

by Matthews & Mellichamp (1989). **Phen:** Jul-Oct. **Syn:** = Ar, C, F, FNA21, G, GrPl, K1, K3, K4, Mi, NcTx, NE, Oh3, Pa, Tn, Va, W, WV; = *Helianthus grosse-serratus* – S, SE1, Tx, orthographic variant. **NatureServe G5** (Secure).

***Helianthus heterophyllus* Nuttall.** SAVANNA SUNFLOWER. **Hab:** Wet pine savannas, seepage bogs. **Dist:** A Southeastern Coastal Plain endemic: se. NC south to Panhandle FL and west to se. LA. **Phen:** Aug-Oct. **Syn:** = F17, FNA21, GW2, K1, K3, K4, RAB, S, SE1, WH3. **NatureServe G4** (Apparently Secure).

***Helianthus hirsutus* Rafinesque.** HAIRY SUNFLOWER. **Hab:** Woodlands and other sunny or semi-sunny habitats. **Dist:** PA and MN, south to n. FL and TX. **Phen:** Jun-Oct. **Syn:** = Ar, C, F17, FNA21, G, GrPl, K1, K3, K4, Mi, NcTx, NE, Pa, RAB, S, SE1, Tn, Tx, Va, W, WH3, WV; > *Helianthus hirsutus* var. *hirsutus* – F, Il, Oh3; > *Helianthus hirsutus* var. *stenophyllus* Torrey & Gray – F, Il; > *Helianthus hirsutus* var. *trachyphyllus* Torrey & Gray – F, Il. **NatureServe G5** (Secure).

***Helianthus laetiflorus* Persoon.** **Hab:** Disturbed areas; introduced from farther west. **Dist:** Widely scattered in e. and c. North America, believed to be a derivative of the hybrid of *H. pauciflorus* Nuttall ssp. *subrhomboides* (Rydberg) O. Spring & E. Schilling and *H. tuberosus*. **Phen:** Late Jul-Sep. **Syn:** = G, Pa, RAB, S, SE1, Va, WV; = *Helianthus* × *laetiflorus* Persoon (pro sp.) – C, FNA21, GrPl, Il, K1, K3, K4, Mi, NE, Oh3, Tn; = *Helianthus laetiflorus* var. *laetiflorus* – F; ~ *Helianthus scaberrimus* Ell..

***Helianthus maximiliani* Schrader.** MAXIMILIAN SUNFLOWER. **Hab:** Moist roadsides and disturbed areas. **Dist:** MI and MB west to BC and south to TX; introduced in the East. **Phen:** Aug-Oct. **Syn:** = GrPl, Il, Oh3, SE1, Tn, W; = *Helianthus maximiliani* – Ar, F, FNA21, G, K1, K3, K4, Mi, NcTx, NE, Pa, RAB, S, Tx, Va, orthographic variant. **NatureServe G5** (Secure).

***Helianthus microcephalus* Torrey & A. Gray.** SMALL-HEADED SUNFLOWER, SMALL WOOD SUNFLOWER. **Hab:** Dry woodlands and roadbanks. **Dist:** PA west to MI, south to Panhandle FL and se. LA. **Phen:** Jul-Oct. **Syn:** = Ar, F, F17, FNA21, G, Il, K1, K3, K4, Mi, NE, Oh3, Pa, RAB, S, Tn, Va, W, WH3, WV; < *Helianthus microcephalus* Torrey & A. Gray – C, SE1.

***Helianthus mollis* Lamarck.** ASHY SUNFLOWER, GRAY SUNFLOWER. **Hab:** Calcareous prairies and barrens, disturbed places. **Dist:** Apparently native of the Midwest, centered in IN, IL, MO, AR, c. TN, and w. KY, its original distribution obscured by its subsequent spread. Native in nw. GA. **Phen:** Jul-Sep. **Syn:** = C, FNA21, G, GrPl, Il, K1, K3, K4, Mi, NcTx, NE, Oh3, Pa, RAB, S, SE1, Tn, Tx, Va, W; > *Helianthus mollis* var. *cordatus* S. Watson – F; > *Helianthus mollis* var. *mollis* – F. **NatureServe G4G5** (Apparently Secure).

***Helianthus occidentalis* Riddell ssp. *occidentalis*.** NAKED-STEM SUNFLOWER. **Hab:** Rocky or sandy flood-scoured riversides, dry hammocks (in FL). **Dist:** MD and DC west to MN, and south to w. NC, n. GA, Panhandle FL, and TX. **Phen:** Jul-Oct. **Tax:** Ssp. *occidentalis* occupies most of the range of the species. Ssp. *plantagineus* (Torrey & Gray) Shinnery occurs in sw. LA, se. TX, and AR. Var. *dowellianus* Torrey & Gray, of uncertain status (if valid, then usually treated as a variety under ssp. *occidentalis*), occurs in the Appalachian portion of the range. **Comm:** The species has been collected only twice in NC, the type collection of *H. dowellianus* M.A. Curtis, from "near Franklin, Macon Co.", and in 1897, near Asheville, Buncombe County ("sandy bottoms along the French Broad River near Biltmore"). GAHP reports *H. occidentalis* as a rare species in the state, from "limestone glades and barrens, rocky or cherty soils" (GAHP 2003); it is uncertain what variety is represented. **Syn:** = Ar, FNA21, K1, K3, K4, NE, Oh3, Va; = *Helianthus occidentalis* – G, Il, Mi, RAB, S, Tn, W, WH3; = *Helianthus occidentalis* var. *occidentalis* – Pa; > *Helianthus dowellianus* M.A. Curtis – WV; < *Helianthus occidentalis* – Tx; > *Helianthus occidentalis* – WV; > *Helianthus occidentalis* Riddell var. *dowellianus* (M.A. Curtis) Torrey & A. Gray – C, F, SE1.

***Helianthus pauciflorus* Nuttall ssp. *pauciflorus*.** STIFF SUNFLOWER. **Hab:** Prairies, disturbed areas. **Dist:** ON and MI west to SD and SK, south to w. KY, n. MS, and TX. Reported for VA by Fernald (1950) under the name *H. laetiflorus* var. *rigidus* and for nc. GA by Jones & Coile (1988) under the name *H. rigidus*. **Phen:** Jul-Oct. **Syn:** = Ar, FNA21, K1, K3, K4, NE; = *Helianthus pauciflorus* var. *pauciflorus* – C; > *Helianthus laetiflorus* var. *rigidus* (Cassini) Fernald – F, Tx; < *Helianthus pauciflorus* Nuttall – Il, Mi, NcTx; > *Helianthus rigidus* (Cassini) Desfontaines – S; ? *Helianthus rigidus* var. *rigidus* – SE1. **NatureServe G5T5?** (Secure).

***Helianthus resinosus* Small.** RESINOUS SUNFLOWER. **Hab:** Woodlands, thickets, roadsides. **Dist:** Nc. and w. NC south to Panhandle FL and west to MS. **Phen:** Jun-Oct. **Comm:** Listed for VA by F; documentation unknown. **Syn:** = F17, FNA21, K1, K3, K4, S, SE1, W, WH3; = *Helianthus tomentosus* Michaux – F, RAB, S, misapplied. **NatureServe G4G5** (Apparently Secure).

***Helianthus silphioides* Nuttall.** **Hab:** Woodland edges. **Dist:** S. KY, s. IL, and s. MO south to AL, MS, LA, and e. OK. **Phen:** Aug-Oct. **Syn:** = Ar, C, F, FNA21, Il, K1, K3, K4, SE1, Tn; = *Helianthus atrorubens* Linnaeus var. *pubescens* Kuntze – G; < *Helianthus atrorubens* Linnaeus – S.

***Helianthus simulans* E. Watson.** MUCK SUNFLOWER. **Hab:** Wet soils, ditches, roadsides. **Dist:** Native from SC south to c. peninsular FL, FL Panhandle, and west to LA and e. TX; now spread more widely by horticultural use. **Phen:** Oct-Nov. **Syn:** = Ar, F17, FNA21, GW2, K1, K3, K4, S, SE1, Tx, WH3. **NatureServe G4?** (Apparently Secure).

TN, LA, and TX. **Phen:** Jul-Oct. **Syn:** = Ar, C, FI7, FNA21, K1, K3, K4, Mi, NcTx, NE, Oh3, Pa, RAB, S, SE1, Tn, Tx, Va, W, WH3; > *Helianthus tuberosus* Linnaeus var. *subcanescens* A. Gray – GrPl; > *Helianthus tuberosus* var. *tuberosus* – F, G, Il.

Helianthus verticillatus Small. WHORLED SUNFLOWER. **Hab:** Seasonally wet to moist calcareous prairies. **Dist:** Nw. GA, ne. AL, w. TN, and n. MS; disjunct in sw. VA). The species has become a bit popular (niche market) as an ornamental and may be expected to be encountered outside its (admittedly poorly understood) native range. **Phen:** Aug-Oct. **Tax:** This taxon is a species, not a hybrid; its morphological characteristics alone (with its unique whorled leaves) make the hybrid status suggested by Cronquist (1980) ("a hybrid of *H. angustifolius* with either *H. eggertii* or *H. grosseserratus*") implausible. See Matthews et al. (2002) for additional information. Moore, Siniscalchi, & Mandel (2021) analyzed the genetic diversity of the species. **Syn:** = FNA21, K3, K4, S, Tn; = *Helianthus* × *verticillatus* E.E. Watson (pro sp.) – C, K1, SE1. NatureServe G1 (Critically Imperiled); USESA E.

Helianthus
*strumosus**Helianthus*
*tuberosus**Helianthus*
verticillatus***Heliopsis*** Persoon 1807 (SUNFLOWER-EVERLASTING, OXEYE)

A genus of about 18 species, herbs, of America. References: SE1; Fisher (1957); Smith (2006a) in FNA21 (2006c).

- 1 Plants 3-8 dm tall; larger leaves on a plant generally 3-8 cm long; heads 1 (-3) per plant; rays 6-10 (-13) per head; rays 1-2 (-2.4) cm long; [of the Coastal Plain] *Heliopsis gracilis*
- 1 Plants (4-) 8-15 dm tall; larger leaves on a plant generally 7-15 cm long; heads (1-) 3-8 per plant; rays (8-) 10-16 per head; rays (1.5-) 2-4 cm long; [widespread in our area, rare in the Coastal Plain].
 - 2 Leaves smooth on both sides (or sometimes sparsely pubescent below and slightly scabrous above); leaves (4.0-) 4.5-6.0 (-12) cm wide; stem glabrous and glaucous below, slightly pubescent above, the hairs generally all slender and ascending..... *Heliopsis helianthoides* var. *helianthoides*
 - 2 Leaves moderately to densely scabrous on both sides; leaves 2.0-3.5 (-5.0) cm wide; stem also scabrous with short, broad-based hairs *Heliopsis helianthoides* var. *scabra*

Heliopsis gracilis Nuttall. SMOOTH OXEYE, PINEWOODS OXEYE, COASTAL PLAIN SUNFLOWER-EVERLASTING, COASTAL PLAIN OXEYE. **Hab:** Moist calcareous forests. **Dist:** A Southeastern Coastal Plain endemic: se. SC (Berkeley, Dorchester, and Charleston counties) south to GA (Jones & Coile 1988) and Panhandle FL, and west to LA (Thomas & Allen 1996) and se. AR. **Phen:** Apr-Jul; May-Jul. **Syn:** = Ar, FNA21, K3, K4, SE1, Tx, Fisher (1957); = *Heliopsis helianthoides* (Linnaeus) Sweet var. *gracilis* (Nuttall) Gandhi & R.D. Thomas – FI7, K1, WH3; = *Heliopsis minor* (Hooker) C. Mohr – S. NatureServe G5T5? (Secure).

Heliopsis helianthoides (Linnaeus) Sweet var. *helianthoides*. EASTERN SUNFLOWER-EVERLASTING, EASTERN OXEYE. **Hab:** Bottomland and moist forests, woodlands, woodland borders. **Dist:** VT, ON, and WI south to GA and LA. **Phen:** May-Oct. **Syn:** = C, FNA21, G, Il, K1, K3, K4, Mi, Mo2, NE, Pa, SE1, Va; = *Heliopsis helianthoides* – S, WV; = *Heliopsis helianthoides* ssp. *helianthoides* – Oh3, Fisher (1957); < *Heliopsis helianthoides* – RAB, Tn, W; > *Heliopsis helianthoides* (Linnaeus) Sweet var. *helianthoides* – F; > *Heliopsis helianthoides* var. *solidaginoides* (Linnaeus) Fernald – F.

Heliopsis helianthoides (Linnaeus) Sweet var. *scabra* (Dunal) Fernald. WESTERN SUNFLOWER-EVERLASTING, ROUGH OXEYE, WESTERN OXEYE. **Hab:** Prairies, open forests and woodlands, woodland borders. **Dist:** NL (Newfoundland) and SK south to VA, WV, KY, GA, LA, TX, and NM. **Phen:** May-Oct. **Tax:** Smith (2006a) in FNA (2006c) mentions frequent intergradation, and some plants in our area best considered var. *scabra* do not seem to be "pure". **Syn:** = Ar, C, F, FNA21, G, GrPl, Il, K1, K3, K4, Mi, Mo2, NE, SE1, Tx; = *Heliopsis helianthoides* (Linnaeus) Sweet ssp. *occidentalis* T.R. 403. ASTERACEAE

Heliopsis
gracilisHeliopsis helianthoides
var. helianthoidesHeliopsis helianthoides
var. scabra**Heterotheca** Cassini 1817 (CAMPHORWEED, GOLDEN-ASTER)

A genus of about 50 species, herbs, of North America. References: SE1; Gandhi & Thomas (1989); Levy (2020); Nesom (2019e); Nesom (2020e); Semple (1983); Semple (1996); Semple (2004); Semple (2006e) in FNA20 (2006b); Wagenknecht (1960).

- 3 Ray flowers without pappus; annual or biennial, taprooted; upper leaves rounded to clasping at the sessile base, lower leaves (deciduous by late in the season) petiolate; fruits developing from the ray florets 3- or 4-angled, glabrous or slightly strigose **Heterotheca subaxillaris**
- 3 Ray flowers with pappus; perennial, from creeping rhizomes; upper and lower leaves cuneate to a sessile base; fruits developing from the ray florets 2-angled (flattened), moderately to densely hairy. **Heterotheca camporum** var. **glandulissima**

Heterotheca camporum (Greene) Shinnars var. **glandulissima** Semple. NASHVILLE CAMPHORWEED, LEMON-YELLOW GOLDENASTER. **Hab:** Roadsides, disturbed areas, shale roadsides, outcrops, and quarries. **Dist:** Native range is postulated to be KY through c. TN to n. AL; now more widespread. **Phen:** Jul-Oct. **Comm:** See discussion in Levy (2020) about distribution and habitats. **Syn:** = Ar, FNA20, Mi, Tn, Va; = *Chrysopsis camporum* Greene var. *glandulissima* (Semple) Cronquist – C; = *Heterotheca camporum* var. *glandulissimum* – K1, K3, K4, Semple (1996), orthographic error; < *Chrysopsis camporum* – F, Il, SE1, W; < *Chrysopsis villosa* (Pursh) Nuttall var. *camporum* (Greene) Cronquist – G; < *Heterotheca camporum* – Oh3. NatureServe G5TNR (Not Yet Ranked).

Heterotheca subaxillaris (Lamarck) Britton & Rusby. CAMPHORWEED. **Hab:** Coastal dunes and sand-flats, roadsides, disturbed areas. **Dist:** NJ, PA, IN, IL, SD, UT and CA south to FL, TX, and Mexico. **Phen:** Jul-Oct (-Jan). **Syn:** = C, F, FI7, G, K1, K4, NcTx, Pa, RAB, S, SE1, WH3, Nesom (2019e); > *Heterotheca latifolia* var. *arkansana* Wagenknecht – Tx; > *Heterotheca latifolia* Buckley var. *latifolia* – Tx, Semple (1996), Wagenknecht (1960); > *Heterotheca latifolia* Buckley var. *macgregoris* Wagenknecht – GrPI; > *Heterotheca subaxillaris* (Lamarck) Britton & Rusby – Va, Semple (1996); > *Heterotheca subaxillaris* (Lamarck) Britton & Rusby ssp. *latifolia* (Buckley) Semple – Ar, FNA20, K3, Tn, Semple (2004); > *Heterotheca subaxillaris* ssp. *subaxillaris* – FNA20, K3, Semple (2004); > *Heterotheca subaxillaris* (Lamarck) Britton & Rusby var. *latifolia* (Buckley) Gandhi & R.D. Thomas – NE, Gandhi & Thomas (1989); > *Heterotheca subaxillaris* var. *procumbens* Wagenknecht – Tx; > *Heterotheca subaxillaris* (Lamarck) Britton & Rusby var. *subaxillaris* – Tx, Gandhi & Thomas (1989), Wagenknecht (1960).

Heterotheca camporum
var. glandulissimaHeterotheca
subaxillaris**Hieracium** Linnaeus 1753 (HAWKWEED, KING-DEVIL)

A genus of 250-1000 species, herbs, primarily temperate. *Hieracium* is a complicated genus, with many apomictic races sometimes recognized as taxa. Often separated into *Hieracium* and *Pilosella*, an approach increasingly supported by molecular and morphological evidence, and has become the dominant approach in Europe and worldwide (Funk et al. 2009; Kilian, Gemeinholzer, & Lack 2009; Bräutigam & Greuter 2007). References: Bräutigam & Greuter (2007); SE1; Kilian, Gemeinholzer, & Lack (2009); Strother (2006t) in FNA19 (2006a).

Identification Notes: Many of our species hybridize, and some of the species listed above are apparently hybrid derivatives. I prefer to treat taxa such as *H. marianum* as species (even if hybridization-derived) because they regularly occur independently of the parental taxa. Other hybrids of native species known in our area include: *H. gronovii* × *paniculatum* [*H. ×alleghaniense* Britton (pro sp.)], *H. gronovii* × *venosum*, *H. paniculatum* × *scabrum*, *H. paniculatum* × *venosum* [*H. ×scribneri* Small (pro sp.)]; *H. scribneri* – K1], *H. scabrum* × *venosum*.

- 6 Leaves purple-veined (when fresh).
7 Lower stem strongly pilose; leaves weakly purple-veined **Hieracium marianum**
7 Lower stem glabrous or nearly so; leaves strongly purple-veined **Hieracium venosum**
- 6 Leaves not purple-veined.
8 Inflorescence a narrow to broad panicle. **Hieracium gronovii**
8 Inflorescence corymbiform.
14 Stem with several well-developed leaves slightly smaller than the basal leaves; inflorescence corymbiform or tending toward paniculate. **Hieracium gronovii**
14 Stem leafless, or with only a few leaves distinctly smaller than the basal leaves; inflorescence strongly corymbiform.

Hieracium marianum

Hieracium gronovii Linnaeus. BEAKED HAWKWEED, QUEENDEVIL. **Hab:** Longleaf pine sandhills, dry forests and woodlands, woodland margins, roadsides. **Dist:** MA west to s. ON and KS, south to c. peninsular FL and TX. **Phen:** Jul-Nov. **Syn:** = Ar, C, F, FI7, FNA19, G, GrPl, Il, K1, K3, K4, Mi, NcTx, NE, Oh3, Pa, RAB, S, SE1, Tn, Va, W, WH3, WV. [NatureServe G5](#) (Secure).

Hieracium marianum Willdenow. MARYLAND HAWKWEED. **Hab:** Dry forests, woodland margins, roadsides. **Dist:** NH west to OH, south to FL and MS. **Phen:** May-Nov. **Comm:** Considered to derive from hybridization between *H. gronovii* Linnaeus and *H. venosum* Linnaeus. There is apparently no definite report from VA. **Syn:** = F, K1, K3, K4, S, WV; = *Hieracium* × *marianum* Willdenow (pro sp.) – C, NE, RAB, SE1. [NatureServe G5?](#) (Secure).

Hieracium venosum Linnaeus. VEINY HAWKWEED, RATTLESNAKE WEED. **Hab:** Dry forests, woodland margins, roadsides. **Dist:** NY west to MI, south to GA, AL, and MS. **Phen:** Apr-Sep. **Syn:** = C, FNA19, G, K3, K4, Mi, NE, Oh3, Pa, RAB, S, SE1, Tn, Va, W, WV; > *Hieracium venosum* var. *nudicaule* (Michaux) Farwell – F, K1; > *Hieracium venosum* var. *venosum* – F, K1.

*Hymenopappus* L'Héritier 1788 (WOOLLY-WHITE)

A genus of about 11-14 species, herbs, of s. North America. References: SE1; Strother (2006eee) in FNA21 (2006c); Turner (1956); Turner (2015).

Hymenopappus scabiosaeus L'Héritier var. *scabiosaeus*. OLD PLAINSMAN, SOUTHEASTERN WOOLLYWHITE.

Hab: Longleaf pine sandhills and adjacent sandy fields, other open dry areas. **Dist:** Sc. SC south to n. peninsular FL, west to AR, MO, and OK, and north in the interior to n. IN, c. and s. IL, and se. MO. **Phen:** Apr-Jun. **Syn:** = Ar, C, FNA21, K1, K3, K4, SE1, Turner (1956); < *Hymenopappus scabiosaeus* – F, FI7, G, Il, RAB, S, WH3. [NatureServe G4G5T4T5](#) (Apparently Secure).

*Hypochaeris* Linnaeus 1753 (CAT'S-EAR)

A genus of about 60 species, herbs, of South America, Europe, Asia, and n. Africa. The controversial spelling of the genus name is now resolved in favor of *Hypochaeris*. References: Bogler (2006e) in FNA19 (2006a); SE1.

- 1 Stem with at least a few well-developed leaves, clasping and similar to the basal; pappus of one length, all long and plumose.
 - 2 Flowers yellow; middle and outer phyllaries hispid; heads usually 5-8 mm across at anthesis, the involucre campanulate..... *Hypochaeris chillensis*
 - 2 Flowers white; middle and outer phyllaries glabrous or puberulent; heads usually 2-4 mm wide at anthesis, the involucre cylindric *Hypochaeris microcephala* var. *albiflora*
- 1 Stem naked, or only with few and very small bracts; pappus of two lengths, the outer short and barbellate, the inner long and plumose.
 - 3 Plants glabrous or apparently so; plants mostly annual *Hypochaeris glabra*
 - 3 Plants conspicuously pubescent, as on the hispid leaves; plants mostly perennial..... *Hypochaeris radicata*

* ***Hypochaeris chillensis*** (Kunth) Britton. BRAZILIAN CAT'S-EAR. **Hab:** Roadsides, fields, other disturbed places. **Dist:** Native of South America. More common in the NC Coastal Plain than shown in RAB (common in Duplin, Sampson, and Wayne cos.) (A.J. Bullard, pers. comm., 2003). **Phen:** Late Apr-Jul. **Syn:** = FI7, FNA19, K3, K4, WH3; ? *Hypochaeris brasiliensis* (Less.) Grisebach var. *tweediei* (Hooker & Arnott) Baker – K1, SE1; ? *Hypochaeris elata* (Weddell) Grisebach – RAB, misapplied.

* ***Hypochaeris glabra*** Linnaeus. SMOOTH CAT'S-EAR. **Hab:** Roadsides, fields, disturbed areas. **Dist:** Native of Europe. **Phen:** Late Mar-Jul. **Syn:** = Ar, FI7, FNA19, Il, K1, K3, K4, NcTx, NE, S, WH3; = *Hypochaeris glabra* – C, RAB, SE1, WV, orthographic variant. [NatureServe GNR](#) (Not Yet Ranked).

* ***Hypochaeris microcephala*** (Schultz 'Bipontinus') Cabrera var. *albiflora* (Kuntze) Cabrera. WHITE-FLOWERED CAT'S-EAR. **Hab:** Disturbed areas. **Dist:** Native of South America. This species has been found as a naturalized introduction at Fort Pulaski (Chatham County, GA) (T. Govus, pers. comm., 2006), in Camden County, GA (Carter, Baker, & Morris 2009), and in Beaufort, Charleston, and Jasper counties, SC (Bradley et al. [in prep.]). **Syn:** = FI7, FNA19, K1, K3, K4, SE1. [NatureServe GNRTNR](#) (Not Yet Ranked).

* ***Hypochaeris radicata*** Linnaeus. SPOTTED CAT'S-EAR. **Hab:** Roadsides, fields, disturbed areas. **Dist:** Native of Eurasia. **Phen:** Apr-Oct. **Syn:** = Ar, FI7, FNA19, G, Il, K1, K3, K4, Mi, NE, Oh3, Pa, S, Tn, Va, WH3; = *Hypochaeris radicata* – C, F, RAB, SE1, WV, orthographic variant. Ionactis Greene 1897 (STIFF-LEAVED ASTER)

A genus of 5 species, herbs, of North America. *Ionactis* has usually been included in *Aster*, but differs in many characters and is more closely related to *Heterotheca* (Nesom & Leary 1992). References: SE1; Nesom & Leary (1992); Nesom (2006s) in FNA20 (2006b); Nesom (2020h).

- 1 Rhizomes absent, stems caespitose, arising from a compact, woody, fibrous-rooted crown; heads relatively crowded, on short, distal branches); [widespread in our region] *Ionactis linariifolia*
- 1 Rhizomes branching, creeping and scale-leaved, evidently colonial; heads solitary on long, bracteate peduncle-like branches arising from midstem or slightly above; [ne. FL west to e. LA, largely limited to the East Gulf Coastal Plain] *Ionactis repens*

Ionactis linariifolia (Linnaeus) Greene. STIFF-LEAVED ASTER. **Hab:** Dry pine savannas, longleaf pine sandhills, pine flatwoods, prairie-like openings, glades, and barrens, high elevation rock outcrops and glades, to at least 1450 m, dry roadbanks, woodland edges, rocky woodlands. **Dist:** ME and QC west to WI, south to ne. FL, Panhandle FL, and TX. **Phen:** Jul-Nov. **Tax:** There appears to be substantial variation in *I. linariifolia*, with montane (and northern) populations having considerably longer and broader leaves than Coastal Plain (and southern) populations; additional study is needed. Nesom (2020h) described a new species, *I. repens*, from the Gulf Coastal Plain, but substantial variation remains taxonomically unaccounted for, including plants in xeric longleaf pine sandhills of the Carolinas that have narrow leaves, one or a few heads on long 'peduncles', but lack the creeping rhizomes of *I. repens*. **Syn:** = Nesom (2020h); < *Aster linariifolius* Linnaeus – C, G, GrPl, Oh3, RAB, SE1, W, WV; < *Ionactis linariifolia* (Linnaeus) Greene – Ar, Fl7, FNA20, K3, K4, NE, Tn, Tx, Va, WH3, Nesom & Leary (1992); < *Ionactis linariifolius* (Linnaeus) Greene – Il, Pa, S, orthographic variant.

Ionactis repens Nesom. CREEPING STIFF-LEAVED ASTER. **Hab:** Longleaf pine sandhills and dry pine flatwoods. **Dist:** Gulf Coastal Plain, FL Panhandle to e. LA; outliers in ne. FL. **Phen:** Oct-Nov. **Tax:** See Nesom (2020h) for detailed information. **Syn:** = Nesom (2020h); < *Ionactis linariifolia* (Linnaeus) Greene – Fl7, FNA20, SE1, WH3, Nesom & Leary (1992); < *Ionactis linariifolius* (Linnaeus) Greene – S.

Iva Linnaeus 1753 (MARSH-ELDER)

A genus of about 9 species, shrubs and herbs, of North America and the West Indies, as circumscribed more narrowly by recent authors. References: SE1; Jackson (1960); Strother (2006gg) in FNA20 (2006b); Turner (2009a).

- | | | |
|---|---|--|
| 1 | Plants perennial, fleshy, glabrous (or strigillose on the leaf faces); [mostly of maritime situations, such as brackish marshes, marsh edges, or ocean dunes]; [section <i>Iva</i>]. | |
| 3 | Leaves 1.5-4.5 (-6.0) cm long, 0.4-1.0 (-1.5) cm wide, 1-3 mm thick when fresh, mostly untoothed; involucre 4-7 mm high; leaves alternate from midstem upward; [mostly of dunes and the upper beach] | <i>Iva imbricata</i> |
| 3 | Leaves 4-10 cm long, 0.7-4.0 cm wide, 0.5-1 mm thick when fresh, usually toothed; involucre 2-4 mm high; leaves opposite (alternate above or in the inflorescence); [mostly of marshes, marsh edges, and wet hammocks]. | |
| | | <i>Iva frutescens</i> var. <i>frutescens</i> |
| 1 | Plants annual (perennial in <i>I. asperifolia</i>), not fleshy, more-or-less pubescent (at least in the inflorescence); [of mainly inland wetlands or disturbed areas]. | |
| | | <i>Iva annua</i> |

Iva annua Linnaeus. SUMPWEED, ROUGH MARSH-ELDER. **Hab:** Fields, especially bottomlands, disturbed places; in the eastern and inland part of area probably introduced (by native Americans) from farther west. **Dist:** PA, ND, and CO south to FL, NM, and Mexico (the original distribution uncertain). Reported for MD (Longbottom, Naczi, & Knapp 2016). **Phen:** Aug-Nov. **Tax:** The so-called var. *macrocarpa* (Blake) R.C. Jackson, known only from archeological remains and presumed extinct, is almost certainly a cultivated form, selected for its large seeds. **Comm:** This species was apparently an important crop of native Americans. **Syn:** = C, Fl7, FNA21, GrP1, GW2, Il, K3, K4, Mi, NcTx, NE, Oh3, Pa, RAB, SE1, Tn, Tx, Va, W, WH3; = *Iva ciliata* Willdenow – F; > *Iva annua* var. *annua* – K1, Jackson (1960); > *Iva annua* var. *caudata* (Small) R.C. Jackson – K1, Jackson (1960); > *Iva annua* var. *macrocarpa* (Blake) R.C. Jackson – K1, Jackson (1960); > *Iva caudata* Small – S; > *Iva ciliata* Willdenow – S; > *Iva ciliata* Willdenow var. *ciliata* – G; > *Iva ciliata* var. *macrocarpa* Blake – G.

Iva frutescens Linnaeus var. *frutescens*. SOUTHERN MARITIME MARSH-ELDER. **Hab:** Brackish marshes and marsh edges, normally on the back side of barrier islands. **Dist:** NJ south to s. FL, west to e. and se. TX. **Phen:** Late Aug-Nov. **Tax:** See *I. frutescens* var. *oraria* for discussion of the

two taxa. **Syn:** = C, F, G, SE1, Tx; = *Iva frutescens* ssp. *frutescens* – GW2, Jackson (1960); < *Iva frutescens* – FI7, FNA21, K3, K4, Pa, RAB, S, Va, WH3.

NatureServe G5T4T5 (Apparently Secure).

Iva imbricata Walter. DUNE MARSH-ELDER. **Hab:** Dunes, upper beach, island-end flats. **Dist:** Se. VA south to s. FL, west to LA and coastal TX; Bahamas; Cuba. **Phen:** Late Aug–Nov. **Comm:** This plant is often the most oceanward perennial plant, often the first perennial to colonize the upper beach or incipient dunes on island-end flats, where it occurs with such upper beach annuals as *Euphorbia polygonifolia*, *Euphorbia bombensis*, *Cakile edentula*, and *Amaranthus pumilus*. **Syn:** = Bah, C, F, FI7, FNA21, G, K3, K4, RAB, S, SE1, Tx, Va, WH3, Jackson (1960). NatureServe G5? (Secure).

**Krigia** Schreber 1791 (CYNTHIA, DWARF-DANDELION)

A genus of 7 species, herbs, of (mainly e.) North America. References: Chambers & O'Kennon (2006) in FNA19 (2006a); Chambers (2004); SE1; Kim & Turner (1992).

- 1 Phyllaries erect in fruit, 2–4× as long as wide; pappus absent (or represented by minute scales or bristles < 2 mm long); plant a leafy-stemmed winter annual. **Krigia cespitosa**
- 1 Phyllaries reflexed in fruit, 3–8× as long as broad; pappus present, consisting of 5 or more scales and 5 or more bristles (the bristles > 4 mm long); plant a scapose, subscapose, or leafy-stemmed perennial or a scapose or subscapose winter annual.
 - 5 Pappus of 5 scales and 5 bristles; plant a winter annual; stem leafless or leafy at the base only. **Krigia virginica**
 - 5 Pappus of 15–40 scales and 15–40 bristles; plant a perennial; stem leafless, leafy at the base only, or with many leaves extending up the stem.
 - 6 Stems leafless, the peduncles terminal; perennial from ovoid tubers, with long slender stolons which form new plants or tubers; pappus bristles (5.0–) 5.3–7.7 (–10.0) mm long. **Krigia dandelion**
 - 6 Stems leafy, at least at the base, the peduncles axillary; perennials from stout creeping rhizomes or short caudices, not bearing tubers; pappus bristles 4.0–7.0 mm long. **Krigia biflora** ssp. *biflora*

Krigia biflora Schreber ssp. *biflora*. ORANGE DWARF-DANDELION, TWIN-FLOWERED CYNTHIA. **Hab:** Rich, moist forests. **Dist:** Var. *biflora* ranges from MA s. ON and MN south to GA, AL, MS, AR, and e. OK; the smaller var. *viridis* (Standley) Kim occurs in CO, AZ, and NM. **Phen:** May–Oct. **Comm:** The natural hexaploid hybrid *Krigia × shimmersiana* K.L. Chambers [*K. biflora* × *montana*] is documented from the Craggy Mountains, Buncombe County, NC (Chambers 2004; Kim & Turner 1992). **Syn:** = Mi; = *Cynthia virginica* (Linnaeus) D. Don – S; < *Krigia biflora* – C, F, FNA19, G, GrPl, II, K3, K4, Pa, RAB, SE1, Tn, W, WV; < *Krigia biflora* (Walter) S.F. Blake var. *biflora* – NE, Va, Kim & Turner (1992). NatureServe G5T5 (Secure).

Krigia cespitosa (Rafinesque) K.L. Chambers. OPPOSITE-LEAF DWARF-DANDELION. **Hab:** Fields, roadsides, disturbed places. **Dist:** Se. VA and NE south to c. peninsular FL and TX. **Phen:** Late Mar–early Jun. **Tax:** *K. gracilis* (A.P. de Candolle) Shinnars occurs in TX, OK, and LA; it is sometimes treated as *K. cespitosa* var. *gracilis* (A.P. de Candolle) K.L. Chambers, but is better considered as a species, as it is sympatric and generally distinct. **Syn:** = Tn, Va; = *Krigia caespitosa* var. *caespitosa* – K3, orthographic variant; = *Krigia cespitosa* (Rafinesque) K.L. Chambers var. *caespitosa* – Ar, FNA19, K4, Chambers (2004); = *Krigia oppositifolia* Rafinesque – C, G, RAB, SE1, Tx, W; = *Serinia cespitosa* Rafinesque – Il; = *Serinia oppositifolia* (Rafinesque) Kuntze – F, S; < *Krigia caespitosa* – GrPl, orthographic variant; < *Krigia cespitosa* (Rafinesque) K.L. Chambers – FI7, GW2, NcTx, WH3, Kim & Turner (1992).

Krigia dandelion (Linnaeus) Nuttall. COLONIAL DWARF-DANDELION, POTATO-DANDELION. **Hab:** Woodlands, roadsides, wet prairies, low damp meadows, disturbed areas. **Dist:** NJ, IL, and KA, south to Panhandle FL and ne. TX. **Phen:** Apr–May (–Jun). **Syn:** = Ar, C, F, FI7, FNA19, G, GrPl, GW2, II, K3, K4, NcTx, Oh3, RAB, SE1, Tn, Va, W, WH3, Kim & Turner (1992); = *Cynthia dandelion* (Linnaeus) A.P. de Candolle – S; ~ *Adopogon dandelion* (L.) Kuntze. NatureServe G5 (Secure).

Krigia virginica (Linnaeus) Willdenow. VIRGINIA DWARF-DANDELION. **Hab:** Rocky woodlands, roadsides, disturbed areas. **Dist:** ME west to MN, south to c. peninsular FL and c. TX. **Phen:** Late Mar–Jul. **Syn:** = C, F, FI7, FNA19, G, GW2, II, K3, K4, NcTx, NE, Oh3, Pa, RAB, S, SE1, Tn, Va, W, WH3, Kim & Turner (1992); = *Adopogon carolinianus* (Walter) Britton; = *Adopogon virginicus* (Linnaeus) Kuntze; = *Hyocis virginica* Linnaeus. Lactuca Linnaeus 1753 (LETTUCE)

A genus of about 75 species, herbs, nearly cosmopolitan (especially north temperate). References: SE1; McVaugh (1972); Strother (2006r) in FNA19 (2006a).

Identification Notes: Most species are highly variable in leaf lobing. Note that *L. serriola* can be mistaken for *Sonchus*, but *L. serriola* has prickles on the midrib, while the prickles of *Sonchus* are restricted to the leaf margins.

- 1 Achene beaks stout and short, 0.1-0.5 (-1.0) mm long ($< \frac{1}{2}$ as long as the body of the achene); rays blue to violet (rarely yellow or white). *Lactuca floridana*
- 1 Achene beaks filiform and long, 1-4 mm long ($> \frac{1}{2}$ as long as the body of the achene); rays yellow or blue (sometimes white or drying bluish).
 - 3 Each face of the achene with (3-) 5-9 nerves; stems typically white or pale green; rays yellow (sometimes drying blue); [aliens].
 - 4 Unlobed cauline leaves lanceolate to linear. *Lactuca saligna*
 - 4 Unlobed cauline leaves oblong, obovate, or spatulate.
 - 5 Phyllaries usually erect in fruit; midribs of leaves usually smooth *Lactuca sativa*
 - 5 Phyllaries usually reflexed in fruit; midribs of leaves prickly setose *Lactuca serriola*
 - 3 Each face of the achene with 1 (-3) nerves; stems typically medium to dark green or reddish; rays yellow or blue; [natives, though often weedy].
 - 6 Unlobed leaves and lobes of lobed leaves narrow, usually < 1 cm wide; leaves basally disposed, the basal and lower-stem leaves the largest and most persistent; plants 3-12 dm tall; [primarily of the Coastal Plain, rare elsewhere] *Lactuca graminifolia* var. *graminifolia*
 - 6 Unlobed leaves and lobes of lobed leaves wider, usually > 1 cm wide; leaves well-distributed on the stem; plants 3-33 dm tall; [collectively widespread].
 - 7 Leaves thick textured and with stout prickles along the mid-vein and margins of leaves; [of KY and MS westward] *Lactuca ludoviciana*
 - 7 Leaves without stout prickles along the mid-vein and margins of the leaves (though margins may be toothed); [widespread in our area].
 - 8 Lobes of leaves mostly widest at the base and tapering to a pointed tip; leaves and stems rarely noticeably pubescent; fruiting involucre 10-15 mm tall; achenes 2.5-3.5 mm long (excluding the beak). *Lactuca canadensis*
 - 8 Lobes of leaves blocky, widest above the base and blunt, square or rounded at the tip (like those of a Post Oak); leaves and stem almost always noticeably pubescent; fruiting involucre 15-22 mm tall; achenes 4.5-6 mm long (excluding the beak) *Lactuca hirsuta*

Lactuca canadensis Linnaeus. AMERICAN WILD LETTUCE. **Hab:** Fields, roadsides, disturbed ground. **Dist:** NS and BC south to n. peninsular FL, TX, and CA. **Phen:** Jun-Nov. **Syn:** = Ar, C, F17, FNA19, GrPl, K1, K3, K4, Mi, NcTx, NE, Pa, RAB, SE1, Tn, Va, W, WH3; $> Lactuca canadensis$ Linnaeus – S; $> Lactuca canadensis$ var. *canadensis* – F, G, Il, Oh3, WV; $> Lactuca canadensis$ var. *latifolia* Kuntze – F, G, Il, Oh3, WV; $> Lactuca canadensis$ var. *longifolia* (Michaux) Farwell – F, G, Il, Oh3, WV; $> Lactuca canadensis$ var. *obovata* Wiegand – F, G, Il, Oh3; $> Lactuca sagittifolia Elliott – S.$

Lactuca floridana (Linnaeus) Gaertner. WOODLAND LETTUCE. **Hab:** Mesic and dry-mesic forests. **Dist:** NY, MB and MN south to s. FL and TX. **Phen:** Aug-Nov. **Syn:** = Ar, C, F17, FNA19, K3, K4, Mi, NcTx, RAB, SE1, Tn, Va, W, WH3, WV; $> Lactuca floridana$ var. *floridana* – F, G, GrPl, Il, K1, Oh3, Pa; $> Lactuca floridana$ var. *villosa* (Jacquin) Cronquist – F, G, GrPl, Il, K1, Oh3, Pa; $> Lactuca villosa Jacquin; $> Mulgedium floridanum (Linnaeus) A.P. de Candolle – S; $> Mulgedium villosum (Jacquin) Small – S.$$$

Lactuca graminifolia Michaux var. *graminifolia*. COASTAL PLAIN LETTUCE. **Hab:** Mesic to dry-mesic pine-oak woodlands and forests, longleaf pine sandhills, sandy fields, and sandy roadsides. **Dist:** E. NC south to s. FL, west to c. LA; disjunct in s. NJ. **Phen:** Apr-Jul. **Comm:** Var. *arizonica* McVaugh is distributed in mesic canyons in montane w. TX, s. CO, NM, and AZ, south into w. Mexico. Var. *mexicana* McVaugh is distributed in Tamaulipas, Veracruz, Oaxaca, Chiapas, and Guatemala. **Syn:** = K1, K3, K4, Va; = *Lactuca graminifolia* – S; $< Lactuca graminifolia$ – Bah, F, F17, FNA19, RAB, SE1, Tn, W, WH3. **NatureServe** G5?T3T5 (Apparently Secure).

Lactuca hirsuta Muhlenberg ex Nuttall. RED WOOD LETTUCE. **Hab:** Forests and forest edges. **Dist:** NS and ON south to s. GA and e. TX. **Phen:** Late May-Nov. **ID Notes:** *Lactuca hirsuta* has a more open inflorescence, with long secondary branches that are widely spreading (almost perpendicular) from the stem, with fewer, spatially widely scattered flowers pointed in many directions (in contrast to *Lactuca canadensis* and other *Lactuca* that tend to have all branches ascending, with flowers closer together and often facing upward/skyward. **Syn:** = Ar, C, FNA19, K3, K4, Mi, NE, Oh3, Pa, RAB, S, SE1, Tn, Va, W, WV; $> Lactuca hirsuta$ var. *hirsuta* – F, G, K1; $> Lactuca hirsuta$ var. *sanguinea* (Bigelow) Fernald – F, G, Il, K1.

Lactuca ludoviciana (Nuttall) Riddell. LOUISIANA LETTUCE. **Hab:** Fields, roadsides, mesic forests. **Dist:** MB and BC, south to IN, KY, MS, LA, TX, and CA. **Phen:** Jun-Sep. **Syn:** = C, F, FNA19, G, GrPl, Il, K1, K3, K4, NcTx, S, SE1. **NatureServe** G4G5 (Apparently Secure).

* ***Lactuca saligna*** Linnaeus. WILLOWLEAF LETTUCE. **Hab:** Fields, roadsides, disturbed ground, perhaps associated with circumneutral soils. **Dist:** Native of Europe. **Phen:** Aug-Nov. **Syn:** = C, F, FNA19, G, GrPl, Il, K1, K3, K4, Mi, Oh3, Pa, RAB, SE1, Tn, Va, W, WV. **NatureServe** GNR (Not Yet Ranked).

* ***Lactuca sativa*** Linnaeus. GARDEN LETTUCE. **Hab:** Cultivated throughout our area in home gardens and commercially, rarely weakly persistent, common as a cultivated plant, rare as a short-lived waif. **Dist:** Native of Eurasia. **Phen:** Jun-Oct. **Syn:** = Ar, F, FNA19, G, Il, K1, K3, K4, Mi, NE, Oh3. **NatureServe** GNR (Not Yet Ranked).

* ***Lactuca serriola*** Linnaeus. PRICKLY LETTUCE. **Hab:** Roadsides, disturbed ground, pastures. **Dist:** Native of Europe. **Phen:** Jun-Nov. **Syn:** = Ar, C, F17, FNA19, GrPl, Il, K1, K3, K4, Mi, NcTx, NE, Pa, SE1, Tn, Va, WH3; = *Lactuca scariola* Linnaeus – F, RAB; $> Lactuca scariola$ Linnaeus – S; $> Lactuca serriola$ var. *integrata* Gren. & Godr. – G, Oh3, W; $> Lactuca serriola$ var. *serriola* – Oh3; $> Lactuca virosa Linnaeus – S, misapplied.$

403. ASTERACEAE

*Laphangium* (Hilliard & B.L. Burt) Tzvelev 1993 [1994] (RED-TIPPED RABBIT-TOBACCO)

A genus of 3 species, of Mediterranean Europe, Africa, and w. Asia. References: Anderberg (1991); Arriagada (1998); Galbany-Casals et al (2004); Greuter (2003b); Nesom (2001a); Nesom (2006k) in FNA19 (2006a).

* *Laphangium luteoalbum* (Linnaeus) Tzvelev. RED-TIPPED RABBIT TOBACCO. **Hab:** Mowed rights-of-way, other disturbed areas. **Dist:** Native of Eurasia. **Phen:** Apr-Jun. **Tax:** Best treated in *Laphangium* (see synonymy) (G. Nesom, pers. comm., 2016). **Comm:** {not yet keyed in Asteraceae key; add synonymy}. **Syn:** = Greuter (2003b); = *Helichrysum luteoalbum* (Linnaeus) Reichenbach – K3, K4, Galbany-Casals et al (2004); = *Pseudognaphalium luteoalbum* (Linnaeus) Hilliard & B.L. Burt – Ar, Fl7, FNA19, WH3. NatureServe GNR (Not Yet Ranked).

*Leucanthemum* P. Miller 1754 (OXEYE DAISY)

A genus of about 35 species, herbs, of Eurasia. References: Arriagada & Miller (1997); SE1; Strother (2006aa) in FNA19 (2006a).

* *Leucanthemum vulgare* Lamarck. OXEYE DAISY, WHITE DAISY, COMMON DAISY, MARGUERITE. **Hab:** Fields, roadsides, pastures, disturbed areas. **Dist:** Native of Eurasia. **Phen:** Apr-Oct. **Syn:** = Ar, Fl7, FNA19, Il, K1, K3, K4, Mi, NcTx, NE, Pa, Va, WH3, Arriagada & Miller (1997); = *Chrysanthemum leucanthemum* Linnaeus – C, G, Oh3, RAB, SE1, W; = *Leucanthemum leucanthemum* (Linnaeus) Rydberg – S; > *Chrysanthemum laucanthemum* Linnaeus var. *leucanthemum*; > *Chrysanthemum leucanthemum* var. *pinnatifidum* Lecoq & Lamotte – F, GrPl, WV. NatureServe GNR (Not Yet Ranked).

*Liatis* Schreber 1791 (BLAZING-STAR, GAYFEATHER)

A genus of 40-50 species, herbs, of e. and c. North America. References: Bridges & Orzell (2017a) in Weakley et al (2017); Clark (2019); SE1; Gaiser (1946); Godfrey (1948); Mayfield (2002); Nesom & Stucky (2004); Nesom (2005c); Nesom (2006gg) in FNA21 (2006c); Nesom (2021b); Stucky & Pyne (1990); Stucky (1991); Stucky (1992).

Key based largely on Nesom in FNA (2006c).

- 1 Pappus plumose, the barbels along each pappus bristle mostly 0.5-1.0 mm long or longer.
 - 2 Inner phyllaries with apices prolonged, slightly dilated, and petaloid (white to yellow, pink, or purplish); heads 3-5 mm in diameter, with 4-6 flowers per head.
 - 4 Phyllary apices lavender to pink or magenta.....*Liatis elegans* var. *elegans*
 - 4 Phyllary apices white to cream or light yellow.....*Liatis elegans* var. *kralii*
 - 2 Inner phyllaries not prominently petaloid; heads 10-20 mm in diameter, with 10-60 flowers per head.
 - 10 Outer phyllaries as long as or (more usually longer than) the inner phyllaries, spreading or reflexed, the spreading portion typically > 2 mm long.
 -*Liatis squarrosa* var. *squarrosa*
 - 10 Outer phyllaries shorter than the inner phyllaries, erect-appressed to spreading or reflexed, the spreading portion 0-2 mm long.
 - 13 Stems and leaves usually glabrous; inner phyllaries usually apically rounded to truncate, apiculate, all essentially erect and appressed, usually with a narrow hyaline border.....*Liatis cylindracea*
 - 13 Stems and leaves hirsute to hirsute-pilose; inner phyllaries apically acute-acuminate, all usually spreading to reflexed on the distal 1/3 (outer) to 1/5 (inner), usually without a hyaline border.....*Liatis hirsuta*
- 1 Pappus barbellate, the barbels along each pappus bristle 0.1-0.3 (-0.4) mm long.
 - 21 Leaves 3-5-veined.
 - 23 Phyllary apices obtuse to rounded.
 -*Liatis resinosa*
 - 23 Phyllary apices acuminate or acute.
 - 26 Stems moderately to densely puberulent; leaves moderately to densely puberulent (rarely glabrescent); corms globose to elongate.....*Liatis pycnostachya* var. *lasiophylla*
 - 26 Stems glabrous or sparsely puberulent only near the inflorescence; leaves glabrous; corms globose.....*Liatis pycnostachya* var. *pycnostachya*
 - 21 Leaves 1 (-3) veined.
 - 27 Mid and inner phyllaries with a point of some kind: either apically acuminate or acute or (if rounded-retuse) minutely involute-cuspidate to apiculate.
 - 29 Stems hirtellous with spreading to slightly deflexed hairs or variously puberulent to hirsute.
 -*Liatis gracilis*
 - 29 Stems glabrous or sometimes sparsely pilose.
 -*Liatis tenuifolia*
 - 27 Mid and inner phyllaries lacking a point: apically rounded, obtuse, or truncate.

40 Stems glabrous (rarely sparsely to moderately pilose in *L. pilosa*).

..... *Liatris elegantula*

40 Stems puberulent to strigose.

45 Involucres 2.5-7 mm wide; florets 3-12.

..... *Liatris gracilis*

45 Involucres 13-22 (-25) mm wide or (6-) 8-15 mm wide (*L. squarrosa*); florets 11-80.

52 Phyllaries glabrous, bullate, with broad, conspicuous, often erose to lacerate or irregular, hyaline border *Liatris aspera*

52 Phyllaries glabrous to puberulent or puberulent-hirtellous, essentially flat (not bullate), without hyaline border or border narrow and inconspicuous..
..... *Liatris squarrosa*

Liatris aspera Michaux. ROUGH BLAZING-STAR. **Hab:** Prairies, barrens, glades. **Dist:** ON and ND south to Panhandle FL and TX. **Phen:** Aug-Sep (-Oct). **Syn:** = Ar, C, FI7, FNA21, G, GrPl, K3, K4, Mi, NcTx, RAB, SE1, Tn, Va, W, WH3; = *Laciniaria aspera* (Michaux) Greene; > *Laciniaria aspera* (Michaux) Greene var. *aspera* - S; > *Laciniaria aspera* (Michaux) Greene var. *spherioidea* (Michaux) Alexander - S; > *Liatris aspera* var. *aspera* - F, Il, Oh3, Tx; > *Liatris aspera* Michaux var. *intermedia* (Lunell) Gaiser - F, Il, K1, Oh3, WV, Godfrey (1948); > *Liatris aspera* var. *salutans* (Lunell) Shinnars - Tx; > *Liatris spherioidea* Michaux - K1.

Liatris cylindracea Michaux. BARRELHEAD BLAZING-STAR. **Hab:** Limestone glades, dry prairies. **Dist:** NY, ON, and MN south to se. TN (Ridge and Valley) (Chester, Wofford, & Kral 1997), nw. GA, and c. AL (Bibb County), and OK. **Phen:** Jul-Sep. **Syn:** = Ar, C, F, FNA21, G, Il, K3, K4, Mi, Oh3, SE1, Tn; = *Laciniaria cylindracea* (Michaux) Kuntze. **NatureServe G5** (Secure).

Liatris elegans (Walter) Michaux var. *elegans*. COMMON ELEGANT BLAZING-STAR. **Hab:** Longleaf pine sandhills, {additional habitats}. **Dist:** SC south to c. peninsular FL, west to TX and OK. **Phen:** Aug-Oct. **Tax:** See Mayfield (2002) and Nesom (2021b) for discussion of the *Liatris elegans* complex. **Syn:** = Nesom (2021b); > *Laciniaria elegans* (Walter) Kuntze - S; > *Laciniaria flabellata* Small - S; < *Liatris elegans* (Walter) Michaux - FI7, NcTx, RAB, SE1, WH3; < *Liatris elegans* (Walter) Michaux var. *elegans* - FNA21, K3, K4, Tx, Mayfield (2002); > *Liatris elegans* (Walter) Michaux var. *elegans* - K1, Gaiser (1946); > *Liatris elegans* var. *flabellata* (Small) Gaiser - K1, Gaiser (1946).

Liatris elegans (Walter) Michaux var. *kralii* Mayfield. KRAL'S ELEGANT BLAZING-STAR. **Hab:** Longleaf pine sandhills. **Dist:** Se. SC (Allendale Co.) south to n. FL and west to s. MS. **Phen:** Aug-Oct (-Nov). **Tax:** See Mayfield (2002) and Nesom (2021b) for discussion of the *Liatris elegans* complex. **Syn:** = FNA21, K3, K4, Mayfield (2002), Nesom (2021b); < *Laciniaria elegans* (Walter) Kuntze - S; < *Liatris elegans* (Walter) Michaux - FI7, SE1, WH3; < *Liatris elegans* (Walter) Michaux var. *elegans* - Gaiser (1946).

Liatris elegantula (Greene) K. Schumann. **Hab:** Longleaf pine sandhills, other dry woodlands. **Dist:** GA south to n. peninsular FL, west to MS. **Phen:** Aug-Oct (-Nov). **Syn:** = FI7, FNA21, K3, K4, WH3, Nesom & Stucky (2004); = *Laciniaria elegantula* Greene; = *Liatris graminifolia* Willdenow var. *elegantula* (Greene) Gaiser - Gaiser (1946); < *Laciniaria graminifolia* (Willdenow) Kuntze - S; < *Liatris graminifolia* Willdenow - SE1.

Liatris gracilis Pursh. SLENDER BLAZING-STAR. **Hab:** Longleaf pine sandhills, dry pine flatwoods, pine rocklands. **Dist:** SC south to s. FL, west to MS. **Phen:** (Jul-) Aug-Oct (-Nov). **Syn:** = FI7, FNA21, K4, WH3; = *Liatris gracilis* Pursh var. *gracilis* - K3; < *Laciniaria gracilis* Pursh - K1, RAB, SE1; > *Laciniaria gracilis* Pursh - S; > *Laciniaria laxa* Small - S.

Liatris hirsuta Rydberg. RYDBERG'S BLAZING-STAR. **Hab:** Glades and prairies. **Dist:** W. IA and e. NE south to MS, LA, and e. TX; disjunct eastward in nw. GA, se. TN (D. Estes, T. Govus, T. Patrick, M. Medley, R. Ware, pers. comm., 2018), and ne. AL. **Phen:** Jun-Sep. **Tax:** The disjunct eastern material needs additional study and may warrant taxonomic recognition. **Syn:** = Ar, FNA21, Il, K3, K4; = *Liatris squarrosa* (Linnaeus) Michaux var. *hirsuta* (Rydberg) Gaiser - C, F, G, GrPl, K1, SE1, Gaiser (1946), Godfrey (1948); < *Laciniaria squarrosa* (Linnaeus) Hill - S; < *Liatris squarrosa* - W.

Liatris pycnostachya Michaux var. *lasiophylla* Shinnars. HAIRY PRAIRIE BLAZINGSTAR. **Hab:** Longleaf pine sandhills and other dry sandy pinelands and oak woodlands. **Dist:** S. MS and se. LA west through w. LA to ne., e., and se. TX. **Phen:** Jul-Nov. **Syn:** = FNA21, K3, K4, Tx; < *Laciniaria pycnostachya* (Michaux) Kuntze - S; < *Liatris pycnostachya* - NcTx, SE1. **NatureServe G5TNR** (Not Yet Ranked).

Liatris pycnostachya Michaux var. *pycnostachya*. PRAIRIE BLAZINGSTAR. **Hab:** Sandy prairies, other damp to dry, open habitats. **Dist:** N. IN, WI, MN, and ND south to MS, LA, and se. TX. **Phen:** Jun-Oct. **Syn:** = Ar, FNA21, K3, K4, NE, Tx; < *Laciniaria pycnostachya* (Michaux) Kuntze - S; < *Liatris pycnostachya* - C, F, G, GrPl, Il, Mi, NcTx, Oh3, SE1. **NatureServe G5T5** (Secure).

Liatris resinosa Nuttall. **Hab:** Bogs, wet longleaf pine savannas, seepages. **Dist:** NJ south to s. FL, west to LA. **Phen:** (Jul-) Aug-Oct (-Nov).

Syn: =; = *Liatris spicata* (Linnaeus) Willdenow var. *resinosa* (Nuttall) Gaiser - F, FNA21, G, K1, RAB, Va, WV, Gaiser (1946), Godfrey (1948); < *Laciniaria spicata* (Linnaeus) Kuntze - S; < *Liatris spicata* Linnaeus - C, FI7, SE1, Tn, W, WH3; < *Liatris spicata* (Linnaeus) Willdenow var. *spicata* - K3, K4.

Liatris squarrosa (Linnaeus) Michaux var. *squarrosa*. **Hab:** Dry woodlands, glades, barrens, dry prairies, wet prairies. **Dist:** MD, OH, s. MI, s. IN, s. IL, MO south to Panhandle FL and e. TX. **Phen:** Aug-Nov. **Syn:** = C, FNA21, G, K1, K3, K4, Oh3, SE1, Va; < *Laciniaria squarrosa* (Linnaeus) Hill -

403. ASTERACEAE

S; < *Liatris squarrosa* – F17, IL, MI, RAB, TN, W, WH3, WV; > *Liatris squarrosa* var. *alabamensis* (Alexander) Gaiser – NC, TX; > *Liatris squarrosa* var. *gracilentia* Gaiser – F, Gaiser (1946), Godfrey (1948); > *Liatris squarrosa* (Linnaeus) Michaux var. *squarrosa* – F, TX; > *Liatris squarrosa* var. *typica* Gaiser – Gaiser (1946), Godfrey (1948).

***Liatris squarrosa* Michaux.** **Hab:** Diabase barrens, other glades and barrens, prairies, longleaf pine sandhills, open woodlands. **Dist:** NC, NC, s. WV, OH, IN, IL, MO, and OK south to sw. GA, Panhandle FL, AL, MS, LA, and e. TX. **Phen:** Aug-Oct (-Nov). **Tax:** Highly variable in morphology and habitats and badly in need of additional study to determine if multiple taxa should be recognized, as seems likely. In the Atlantic Coastal States, there is a striking difference between plants of the fall-line Sandhills and rest of the Coastal Plain (small plants, strict inflorescences, narrow leaves < 2 cm long below the inflorescence, small heads with few flowers) vs. plants of diabase barrens (robust plants, inflorescences often branched, larger leaves, large heads with many flowers). **Syn:** = C, F17, FNA21, IL, K1, K3, K4, SE1, TN, TX, Va, W, WH3; > *Lacinaria ruthii* Alexander – S; > *Lacinaria shortii* Alexander – S; > *Lacinaria tracyi* Alexander – S; > *Liatris earlei* (Greene) Schumann – F, RAB, Gaiser (1946), Godfrey (1948); > *Liatris ruthii* Alexander; > *Liatris scabra* (Greene) K. Schumann – F, G, IL; > *Liatris scariosa* var. *squarrosa* – Gaiser (1946), Godfrey (1948); > *Liatris squarrosa* Michaux – G.

***Liatris tenuifolia* Nuttall.** **Hab:** Longleaf pine sandhills. **Dist:** SC south to s. FL, west to AL. **Phen:** Aug-Nov. **Syn:** = FNA21, K3, K4, RAB, Bridges & Orzell (2017a) in Weakley et al (2017); = *Liatris tenuifolia* Nuttall var. *tenuifolia* – F17, K1, SE1, WH3; < *Lacinaria tenuifolia* (Nuttall) Kuntze – S. **NatureServe** G4G5T4T5 (Apparently Secure).

***Marshallia* Schreber 1791 (BARBARA'S-BUTTONS)**

A genus of about 11-13 species, perennial herbs, of the se. United States. *Marshallia* ranges from sc. VA, sw. PA, WV, s. KY, s. MO, and c. OK, south to c. peninsular FL, and wc. TX. References: Beadle & Boynton (1901); Channell (1957); SE1; Knapp, Poindexter, & Weakley (2020); Watson & Estes (1990); Watson (2006) in FNA21 (2006c); Watson, Elisens, & Estes (1991); Watson, Jansen, & Estes (1991); Weakley & Poindexter (2012).

- 1 Leaves not basally disposed, the leaves all about the same size; plants glabrous throughout; plants colonial by persistent rhizomes; internodes 10-25 (and leaves 2-5× as long as wide)..... ***Marshallia trinervia***
- 1 Leaves basally disposed, either all of the leaves below the midpoint of the stem, or the upper leaves markedly smaller than the lower stem and basal leaves (the basal leaves sometimes withered); plants pubescent at least below the heads; plants producing lateral offsets which are separated from the parent in less than a year; internodes 1-12 (and leaves 3-15× as long as wide) or 10-35 (and leaves 8-20× as long as wide)..... ***Marshallia angustifolia***

***Marshallia angustifolia* (Michaux) Pursh.** GULF COAST BARBARA'S-BUTTONS. **Hab:** Pine savannas, seepage bogs. **Dist:** E. GA south to c. peninsular FL, west to e. TX; historically disjunct on (likely) the eastern Highland Rim (where mapped here) or Cumberland Plateau of e. TN (Michaux's type came from TN). **Phen:** Late Jun-Sep. **Tax:** We disagree with Channell's dismissal of the TN record by Michaux as a mislabeling and his identification of the Michaux specimen as representing *M. graminifolia* of the Atlantic Coastal Plain. **Syn:** = *Marshallia graminifolia* (Walter) Small – S, misapplied; = *Marshallia graminifolia* (Walter) Small ssp. *tenuifolia* (Rafinesque) L. Watson – Watson & Estes (1990); = *Marshallia graminifolia* (Walter) Small var. *cynanthera* (Elliott) Beadle & F.E. Boynton – K1, K3, K4, Beadle & Boynton (1901); = *Marshallia tenuifolia* Rafinesque – GW2, SE1, Channell (1957); < *Marshallia graminifolia* (Walter) Small – F17, FNA21, WH3. **NatureServe** G4T4Q (Apparently Secure).

***Marshallia trinervia* (Walter) Trelease.** COLONIAL BARBARA'S-BUTTONS, BROADLEAF BARBARA'S-BUTTONS. **Hab:** Moist rocky streambanks and in calcareous clays, more often in shady habitats than its congeners. **Dist:** C. TN, south to s. AL and s. MS (Sorrie & Leonard 1999) and e. and w. LA(!). Reported for VA by C; the documentation is unknown. Michaux gave his *Persoonia latifolia* as "Habitat in montosis Carolinae". The only moderately recent NC record (Macon County) appears to be from the yard of the director of the Highlands Biological Station at the time; other herbarium specimens from his property are of clearly cultivated material. The SC record from Walter seems dubious on biogeographic grounds; the only other purported SC specimen (from 1973) is misidentified. **Phen:** Jul. **Syn:** = C, F, FNA21, G, K1, K3, K4, RAB, S, SE1, TN, W, Beadle & Boynton (1901), Channell (1957), Watson & Estes (1990); = *Marshallia latifolia* (Michaux) Pursh. **NatureServe** G3 (Vulnerable).

Matricaria Linnaeus 1740 (MAYWEED)

A genus of about 7 species, herbs, of Eurasia and n. Africa. References: Arriagada & Miller (1997); Brouillet (2006b) in FNA19 (2006a); SE1.

* ***Matricaria discoidea*** A.P. de Candolle. PINEAPPLE-WEED, RAYLESS CHAMOMILE. **Hab:** Barnyards, pastures, roadsides. **Dist:** Native of w. North America. **Phen:** May-Nov. **Syn:** = Ar, FNA19, Il, K1, K3, K4, Mi, NE, Pa, Tn, Va, Arriagada & Miller (1997); = *Matricaria matricarioides* (Lessing) T.C. Porter – C, F, G, GrPl, Oh3, RAB, SE1, illegitimate name; ? *Chamomilla suaveolens* (Pursh) Rydberg; ? *Lepidotheca suaveolens* (Pursh) Nuttall. NatureServe G5 (Secure).

Melanthera Rohr 1792 (BLACK-ANTHERS)

As more narrowly circumscribed, a genus of about 4-8, herbs, of the southeastern United States and the Caribbean regions of Mexico, Central America, n. South America, and the West Indies (Orchard 2013, Edwards et al. 2018). References: WI; SE1; Edwards et al (2018); Franck et al (2021); SFla; Orchard (2013); Parks (1973); Parks (2006) in FNA21 (2006c); Wagner & Robinson (2001).

Melanthera nivea (Linnaeus) Small. SNOWY BLACK-ANTHERS, SNOW SQUARESTEM. **Hab:** Calcareous outcrops, sandy woodlands. **Dist:** E. SC south to s. FL, west to LA; also widespread in the West Indies, Mexico, Central America, and northern South America (Colombia, Ecuador, Peru, and Venezuela). **Phen:** Jun-Oct. **Tax:** Additional taxa have sometimes been recognized within what is treated here as a very broad *M. nivea*; they warrant additional study. **Syn:** = FNA21, Il, K1, K3, K4, SE1, Tn, Franck et al (2021), Wagner & Robinson (2001); > *Melanthera aspera* (Jacquin) Sprengel var. *aspera* – SFla, Parks (1973); > *Melanthera aspera* var. *glabriuscula* (Kuntze) J.C. Parks – Bah, V, Parks (1973); > *Melanthera deltoidea* Michaux – S; > *Melanthera hastata* Michaux – RAB, S; > *Melanthera ligulata* Small – S, Parks (1973); < *Melanthera nivea* (Linnaeus) Small – Fl7, WH3, WI; > *Melanthera nivea* (Linnaeus) Small – SFla, Parks (1973).

Mikania Willdenow 1803 (CLIMBING HEMPWEED)

A genus of about 430-450 species, vines, perennial herbs, and shrubs, primarily pantropical in distribution, but with extensions into temperate areas (Holmes 1995). References: Anderson et al (2012); SE1; Holmes (1981); Holmes (2006) in FNA21 (2006c); Nauman (1981).

- 1 Involucre 6.5-8 mm; achenes 3.5-4.5 mm long; stems, leaves, and involucre spreading pubescent; pseudostipule a low ridge with a tomentose fringe; stem 6-angled; [of se. SC southward] *Mikania cordifolia*
- 1 Involucre 4-5.5 (-6) mm high; achenes 1.5-2.5 (-2.7) mm long; stems, leaves, and involucre puberulent or nearly smooth; pseudostipule membranous; stem round in x-section to obscurely 6-angled; [widespread in our area]. *Mikania scandens*

Mikania cordifolia (Linnaeus f.) Willdenow. HEARTLEAF CLIMBING HEMPWEED. **Hab:** Bottomland hardwood forests, mesic hammocks near the coast, margins of tidal marshes. **Dist:** Se. SC (Beaufort and Colleton counties) (P. McMillan, pers. comm. 2005), e. GA (Bryan & Camden counties) (Carter, Baker, & Morris 2009), south to s. FL, west to s. LA; West Indies, Mexico, Central America, South America. **Syn:** = Fl7, FNA21, K1, K3, K4, S, SE1, WH3, WI, Holmes (1981), Nauman (1981); = *Willoughbya halei* Small. NatureServe G5 (Secure).

Mikania scandens (Linnaeus) Willdenow. CLIMBING HEMPWEED. **Hab:** Marshes, swamp forests, wet thickets, streambanks, seepages. **Dist:** ME to s. ON, south to s. FL and e. TX, south into the tropics. **Phen:** Jun-Oct. **Syn:** = Ar, C, Fl7, FNA21, G, GW2, Il, K1, K3, K4, Mi, NcTx, NE, Oh3, Pa, RAB, S, Tn, Tx, Va, W, WI, Holmes (1981); = *Willughbaeya scandens* (Linnaeus) Kuntze; < *Mikania scandens* (Linnaeus) Willdenow – Bah, SE1, WH3, Nauman (1981); > *Mikania scandens* var. *pubescens* (Nuttall) Torrey & A. Gray – F; > *Mikania scandens* var. *scandens* – F.

*Nabalus* Cassini 1825 (RATTLESNAKE-ROOT)

A genus of about 20 species, perennial herbs, of temperate North America and e. Asia. Molecular and morphological studies suggest that *Prenanthes* includes disparate components, and North American taxa are best treated in the segregate genus *Nabalus* (Schilling, Floden, & Schilling 2015; Kilian, Gemeinholzer, & Lack 2009; Lack in Kadereit & Jeffrey 2007). The sectional treatment of Sennikov (2000) does not appear to offer a coherent and helpful division of the genus and is not followed here. References: Bogler (2006c) in FNA19 (2006a); SE1; Fusiak & Schilling (1984); Johnson (1980); Kilian, Gemeinholzer, & Lack (2009); Lack in Kadereit & Jeffrey (2007); Sennikov (2000); Shih (1987).

403. ASTERACEAE

750

Identification Notes: The species cannot be reliably identified in sterile condition. "Principal phyllaries" are the inner, well-developed, excluding the few smaller and poorly-developed outer phyllaries.

- 2 Phyllaries glabrous or with few cilia or inconspicuous fine short pubescence at the tip. *Nabalus altissimus*
- 2 Phyllaries evidently (though sometimes sparsely) pubescent with long coarse hairs (1.5-3 mm long).
 - 6 Inflorescence corymbiform to paniculiform, many of the branches well-developed.
 - 7 Phyllaries densely setose; leaves usually merely toothed, sinuate, or shallowly lobed. *Nabalus barbatus*
 - 7 Phyllaries sparsely setose; principal leaves usually evidently lobed. *Nabalus serpentaria*
 - 6 Inflorescence cylindric, thyrsoid, the branches very short. *Nabalus asper*

Nabalus altissimus (Linnaeus) Hooker. TALL RATTLESNAKE-ROOT. **Hab:** Forests. **Dist:** NL (Newfoundland) west to MI, south to GA, LA, and AR. **Phen:** Aug-Nov. **Tax:** The variation of pappus color responsible for the sometime recognition of two varieties (see synonymy) needs additional study. **Syn:** = K3, NE, S, Tn, Va; = *Prenanthes altissima* Linnaeus – Ar, FNA19, G, K1, Mi, Oh3, Pa, RAB, W, WV, Fusiak & Schilling (1984), Johnson (1980); > *Nabalus altissimus* var. *altissimus* – Il; > *Nabalus altissimus* var. *cinnamomea* (Fernald) Mohlenbrock – Il; > *Prenanthes altissima* var. *altissima* – C, F, SE1; > *Prenanthes altissima* var. *cinnamomea* Fernald – C, F, SE1; > *Prenanthes altissima* var. *hispidula* Fernald. NatureServe G5 (Secure).

Nabalus asper (Michaux) Torrey & A. Gray. ROUGH RATTLESNAKE-ROOT. **Hab:** Prairies, glades, and barrens, limestone woodlands. **Dist:** PA, OH, WI, MN, and SD south to c. TN, MS, LA, and OK. Discovered in AL (D. Estes, pers.comm. 2021). **Phen:** Aug-Sep. **Syn:** = Il, K4, S, Tn; = *Nabalus asperus* (Michaux) Torrey & A. Gray – K3; = *Prenanthes aspera* Michaux – Ar, C, F, FNA19, G, GrPl, K1, Oh3, SE1. NatureServe G4? (Apparently Secure).

Nabalus barbatus (Torrey & A. Gray) A. Heller. BARBED RATTLESNAKE-ROOT, FLATWOODS RATTLESNAKE-ROOT, PRAIRIE LION'S-FOOT. **Hab:** Limestone glades, calcareous barrens, and calcareous oak flatwoods. **Dist:** C. TN (Western Highland Rim) (Chester, Wofford, & Kral 1997), nw. GA, and n. AL west to se. AR, e. TX and w. LA. **Phen:** Aug-Oct. **Syn:** = K3, K4, Tn; = *Prenanthes barbata* (Torrey & A. Gray) Milstead – Ar, FNA19, K1, SE1; = *Prenanthes serpentaria* Pursh var. *barbata* Torrey & A. Gray; < *Nabalus integrifolius* Cassini – S, misapplied. NatureServe G3 (Vulnerable).

Nabalus serpentaria (Pursh) Hooker. LION'S-FOOT, GALL-OF-THE-EARTH. **Hab:** Forests. **Dist:** MA south to GA, ne. FL, Panhandle FL, and MS. **Phen:** Aug-Oct. **Tax:** Pursh (1814) capitalized the epithet (in *Prenanthes*), indicating that he regarded the epithet as a noun in apposition, not an adjective; the correct spelling of the epithet in *Nabalus* is therefore "*serpentaria*". **Syn:** = F17; = *Nabalus serpentarius* (Pursh) Hooker – K3, K4, Tn, Va; = *Prenanthes serpentaria* Pursh – C, F, FNA19, G, K1, Oh3, Pa, RAB, SE1, W, WH3, WV, Fusiak & Schilling (1984), Johnson (1980); > *Nabalus integrifolius* Cassini – S, (also see *Prenanthes barbata*); > *Nabalus serpentarius* (Pursh) Hooker – S. NatureServe G5 (Secure).

Packera Å. Löve & D. Löve 1976 (RAGWORT)

A genus of about 65 species, annual and perennial herbs, of subtropical, temperate, and arctic North American, with a few species in Siberia. These species have usually been considered part of *Senecio*, and have often been given informal status as "the Aureoid group". According to recent interpretations, this group warrants generic status, as *Packera* (Bremer 1994). References: Barkley (1962); Barkley (1978); Barkley (1999); Boufford et al (2014); Bremer (1994); SE1; Gramling (2006); Kowal & Mahoney (2016); Kowal et al (2015); Mabberley (2020); Mahoney & Kowal (2008); Trock (2006) in FNA20 (2006b); Weakley et al (2011).

Unkeyed taxa: *Packera plattensis*

- 1 Plant an annual (rarely a biennial) from a fibrous root system or a taproot; leaves with lateral lobes either broadly rounded (and toothed) apically and broadly triangular-cuneate or rounded at the base, or parallel-sided in their lower half and 3-5-lobed apically, the lateral lobes resembling the terminal lobe in shape and usually size; [of wet soil of swamps and wet fields]
 - 2 Leaves with lateral lobes broadly rounded (and toothed) apically and broadly triangular-cuneate or rounded at the base; plants fibrous-rooted; plants 1.5-10 dm tall, with 1 stem from the rosette; [widespread in our area]. *Packera glabella*
 - 2 Leaves with lateral lobes parallel-sided in their lower half and 3-5-lobed apically; plants from a taproot; plants 2-6 dm tall, with 1-6 stems from the rosette; [LA and AR westward]. *Packera tampicana*
- 1 Plant a perennial (rarely a biennial) from a short caudex or longer rhizome; leaves with lateral lobes absent, or distinctly narrower than the terminal lobe; [of dry to mesic soils, but not generally as above].
 - 5 Basal leaves with leaf bases cordate, truncate, obliquely truncate, or rounded, abruptly tapering to the petiole; leaf blades either 0.8-2× as long as broad or 4-7× as long as broad. *Packera aurea*
 - 5 Basal leaves cuneate at the base, with leaf tissue often somewhat decurrent along upper petiole or petiole winged throughout; leaf blades oblong, elliptic, lanceolate, oblanceolate, or spatulate, 1.5-8× longer than broad.
 - 9 Basal leaves ovate, orbicular, or reniform, the blade 0.8-2× as long as wide; plants often forming clonal patches by stolons or widely creeping rhizomes. *Packera obovata*
 - 9 Basal leaves oblanceolate, narrowly elliptic, the blade 2-8× as long as wide; plants usually not forming clonal patches by stolons or widely creeping rhizomes.
 - 10 Heads many, generally 20-100; basal leaves (including petioles) up to 30 cm long and 3.5 cm wide. *Packera anonyma*
 - 10 Heads few, generally 5-20; basal leaves (including petioles) up to 12 cm long and 2 cm wide. *Packera paupercula* var. *paupercula*

Packera anonyma (Wood) W.A. Weber & Á. Löve. APPALACHIAN RAGWORT, SMALL'S RAGWORT. **Hab:** Rock outcrops, roadsides, woodlands; hammocks, disturbed areas. **Dist:** S. PA, DE, and KY, south to Panhandle FL and c. MS. First reported for LA in Caddo Parish by Kelley (2020). **Phen:** May-early Jun. **Syn:** = FI7, FNA20, K1, K3, K4, Pa, Tn, Va, WH3, Barkley (1999), Kowal & Mahoney (2016); = *Senecio anonymus* Wood – C, Oh3, SE1, Barkley (1978); = *Senecio smallii* Britton – F, G, RAB, S, WV. [NatureServe G5](#) (Secure).

Packera aurea (Linnaeus) Á. Löve & D. Löve. GOLDEN GROUNDSEL, GOLDEN RAGWORT, HEARTLEAF RAGWORT. **Hab:** Moist forests, bottomlands, bogs, stream banks. **Dist:** NL (Labrador) west to MN, south to NC, ne. SC, n. GA, n. AL, and c. AR; disjunct in Panhandle FL. **Phen:** Late Mar-Jun. **Tax:** This species is variable, and some of the more striking variants have been named; some may well warrant formal taxonomic recognition, but additional study is needed. **Syn:** = Ar, FI7, FNA20, IL, K1, K3, K4, Mi, NE, Pa, Tn, Va, WH3, Barkley (1999); = *Senecio aureus* Linnaeus – C, G, GW2, Oh3, RAB, SE1, WV, Barkley (1978); > *Senecio aureus* Linnaeus – S; > *Senecio aureus* Linnaeus var. *ashei* Greenman; > *Senecio aureus* var. *aureus* – F; > *Senecio aureus* var. *gracilis* (Pursh) Hooker – F; > *Senecio aureus* var. *intercurus* Fernald – F; > *Senecio gracilis* Pursh – S. [NatureServe G5](#) (Secure).

Packera glabella (Poiret) C. Jeffrey. BUTTERWEED, SMOOTH RAGWORT, SMOOTH GROUNDSEL, YELLOWTOP. **Hab:** Swamp forests, bottomland forests, cleared areas in bottomlands, wet agricultural fields, ditches, often in mucky soils. **Dist:** E. NC south to s. FL, west to e. TX, north in the interior to sw. WV, OH, MO, and SD. **Phen:** Mar-early Jun. **Syn:** = Ar, FI7, FNA20, IL, K1, K3, K4, Mi, Pa, Tn, WH3, Barkley (1999); = *Senecio glabellus* Poiret – C, F, G, GrPl, GW2, Oh3, RAB, S, SE1, WV, Barkley (1978); ~ *Senecio lobatus* Pursh. [NatureServe G5](#) (Secure).

Packera obovata (Muhlenberg ex Willdenow) W.A. Weber & Á. Löve. ROUNDLEAF GROUNDSEL, ROUNDLEAF RAGWORT, RUNNING RAGWORT. **Hab:** Nutrient rich forests and woodlands (dry or moist), usually over calcareous or mafic rocks. **Dist:** VT west to KS, south to Panhandle FL and TX. **Phen:** Mar-Jun. **Syn:** = Ar, FI7, FNA20, IL, K1, K3, K4, Mi, NcTx, NE, Pa, Tn, Va, WH3, Barkley (1999), Kowal & Mahoney (2016); = *Senecio obovatus* Muhlenberg ex Willdenow – C, GrPl, Oh3, RAB, SE1, Barkley (1978); > *Senecio obovatus* Muhlenberg ex Willdenow – S; > *Senecio obovatus* var. *elliottii* (Torrey & A. Gray) Fernald – F, G, WV; > *Senecio obovatus* var. *obovatus* – F, G, WV; > *Senecio obovatus* var. *rotundus* Britton – F; > *Senecio rotundus* (Britton) Small – S. [NatureServe G5](#) (Secure).

Packera paupercula (Michaux) Á. Löve & D. Löve var. *paupercula*. NORTHERN MEADOW GROUNDSEL, BALSAM RAGWORT. **Hab:** Thickets, meadows, glades, generally over circumneutral soils derived from calcareous or mafic rocks. **Dist:** NL (Labrador) west to AK, south to GA, Panhandle FL (Bay County), AL, and OR. **Phen:** Apr-May. **Tax:** This taxon is heterogeneous and needs additional study. **Syn:** = IL, K3, K4, Tn, Va, Kowal & Mahoney (2016), Mahoney & Kowal (2008); < *Packera paupercula* (Michaux) Á. & D. Löve – FI7, FNA20, K1, NE, Pa, WH3, Barkley (1978), Barkley (1999); < *Senecio pauperculus* Michaux – C, G, GrPl, GW2, Oh3, RAB, S, SE1; > *Senecio pauperculus* var. *balsamitae* (Muhlenberg ex Willdenow) Fernald – F; > *Senecio pauperculus* var. *pauperculus* – F; > *Senecio pauperculus* var. *praelongus* (Greenman) House – F.

Packera plattensis (Nuttall) W.A. Weber & Á. Löve. PRAIRIE GROUNDSEL, PRAIRIE RAGWORT. **Hab:** Thin calcareous soils. **Dist:** N. OH, n. IN, IL, WI, MN, ON, MB, SK, and BC south to MS, LA, TX, and NM. **Phen:** May-Jul. **Syn:** = K3, K4, NcTx, Kowal & Mahoney (2016); < *Packera plattensis* (Nuttall) W.A. Weber & Á. Löve – Ar, FNA20; < *Senecio plattensis* Nuttall – GrPl, Oh3. [NatureServe G5](#) (Secure).

Packera tampicana (A.P. de Candolle) C. Jeffrey. GREAT PLAINS GROUNDSEL, GREAT PLAINS RAGWORT. **Hab:** Low prairies, roadsides. **Dist:** Sw. AR and se. KS south and east to e. LA (Florida parishes) or s. MS (Cronquist 1980), and south to TX and Mexico (CHH, COA, HID, NLE, PUE, ROO, SLP, TAM, VER). **Phen:** Feb-Jun. **Syn:** = Ar, FNA20, K3, K4, NcTx; = *Senecio imparipinnatus* Klatt – GrPl, SE1.

Palafoxia Lagasca y Segura 1816 (PALAFOXIA)

A genus of about 12 species, shrubs. Perennial herbs, and annual herbs, of s. North America (mainly TX and n. Mexico). References: Baltzer (1944); SE1; Strother (2006hhh) in FNA21 (2006c); Turner & Morris (1976).

1 Ray flowers 3-13; upper stem and peduncles moderately to densely stipitate glandular.

1 Ray flowers 0; upper stem and peduncles strigillose, scabrous, or glabrate, hairs not gland-tipped.

..... *Palafoxia hookeriana* var. *hookeriana*

..... *Palafoxia callosa*

Palafoxia callosa (Nuttall) Torrey & A. Gray. SMALL PALAFOXIA. **Hab:** Calcareous glades, barrens, and woodlands, blackland prairies. **Dist:** MO, AR, and OK south to c. TX and COA; disjunct in c. MS. **Phen:** Aug-Oct. **Syn:** = Ar, FNA21, GrPl, K3, K4, Mo2, NcTx, SE1, Turner & Morris (1976); = *Othake callosum* (Nuttall) Bush – Baltzer (1944). [NatureServe G4G5](#) (Apparently Secure).

403. ASTERACEAE

Palafoxia hookeriana Torrey & A. Gray var. ***hookeriana***. SHOWY PALAFOXIA. **Hab:** Xeric sandy pine and oak-pine woodlands. **Dist:** Endemic to the TX Coastal Plain, from ec. TX to s. TX. Turner & Morris (1976) mention its occurrence "as a weed locally in Lucedale, Mississippi, where it was introduced by seed obtained from natural populations in Texas by the local Methodist preacher". **Phen:** Sep-Oct. **Syn:** = K3, K4, NcTx, Turner & Morris (1976); < *Othake hookerianum* (Torrey & A. Gray) Bush – Baltzer (1944); < *Palafoxia hookeriana* – FNA21, Tx. NatureServe G4T3T4 (Vulnerable).

***Parthenium*** Linnaeus 1753 (WILD QUININE)

A genus of about 16 species, herbs and shrubs, of North America and the West Indies. The genus should be divided, based on multiple lines of evidence. References: SE1; Mears (1975); Rollins (1950); Strother (2006ff) in FNA21 (2006c).

- 1 Leaves pinnatifid to bipinnatifid, the primary sinuses extending 9/10 or more of the way to the midrib; leaves thin in texture; pappus of 2 petaloid scales; [section *Parthenium*].
- ***Parthenium hystrophorus***
- 1 Leaves toothed (pinnatifid or sinuous-margined in forms of *P. integrifolium* var. *mabryanum*, the sinuses extending up to 3/4 of the way to the midrib); leaves somewhat thick in texture; pappus of 2-3 weak awns; [native perennials]; [section *Partheniastrum*].
- ***Parthenium integrifolium* var. *integrifolium***

* ***Parthenium hystrophorus*** Linnaeus. SANTA MARIA, FEVERFEW, GAJARGHASS, CONGRESS GRASS. **Hab:** Disturbed areas. **Dist:** Native of tropical America, including the West Indies. **Phen:** Jul-Nov. **Syn:** = Ar, Bah, C, F, FI7, FNA21, G, GrPl, Il, K1, K3, K4, Mi, Mo2, NcTx, NE, Oh3, Pa, S, SE1, Tx, WH3, Rollins (1950). NatureServe GNR (Not Yet Ranked).

Parthenium integrifolium Linnaeus var. ***integrifolium***. COMMON WILD QUININE. **Hab:** Woodlands, roadsides, various dryish habitats, mainly open or sparsely wooded. **Dist:** VA west to MN, south to SC, GA, ne. MS, and nw. AR. **Phen:** Late May-Aug. **Tax:** Var. *henryanum* Mears appears to be merely a form of var. *integrifolium*. **Syn:** = K1, Mo2, NE, Va; < *Parthenium integrifolium* – Ar, C, F, FNA21, G, GrPl, Il, K3, K3, K4, Mi, Oh3, Pa, S, SE1, W, WV, Rollins (1950); > *Parthenium integrifolium* var. *henryanum* Mears – Mears (1975); < *Parthenium integrifolium* Linnaeus var. *integrifolium* – RAB, Tn; > *Parthenium integrifolium* Linnaeus var. *integrifolium* – Mears (1975).

***Pectis*** Linnaeus 1759

A genus of about 90 species, herbs, of s. North America, Mexico, Central America, West Indies, South America, and Pacific Islands. References: SE1; Keil (2006m) in FNA21 (2006c).

Key based on Keil (2006m).

Pectis prostrata Cavanilles. **Hab:** Roadsides, mowed areas, other dry disturbed areas. **Dist:** Native of tropical America (probably including s. FL). Reported for NC (Basinger, pers. comm., 2006), GA (Carter, Baker, & Morris 2009), and SC (Bradley et al. [in prep.]). **Phen:** Jul-Nov. **Comm:** Spreading northward along roadsides, the original distribution unclear. **Syn:** = Bah, FI7, FNA21, K3, K4, S, SE1, WH3. NatureServe G4 (Apparently Secure).

Pityopsis Nuttall 1840 (GRASS-LEAVED GOLDEN-ASTER)

Contributed by Alan S. Weakley, Edwin L. Bridges, & Bruce A. Sorrie

A genus of about 13 taxa (variously recognized at species or varietal rank), perennial herbs, of se. North America south to Central America. *Pityopsis* is taxonomically and nomenclaturally difficult. The problems include species and varietal concepts in a morphologically and cytologically diverse group, nomenclatural issues involving typification and application (and frequently misapplication) of a plethora of names at specific and

Key to Map
Symbology:

* : waif
EN : endemic
H : historic

N : no
P : planted
? : questionable

varietal ranks, in three genera: a narrow *Pityopsis*, a broader *Chrysopsis*, or a very broad *Heterotheca*. References: Bowers (1972); Bridges & Orzell (2018b) in Weakley et al (2018a); SE1; Nesom (2019a); Nesom (2019b); Semple & Bowers (1985); Semple & Jabbour (2019); Semple (2006d) in FNA20 (2006b); Ward (2004c).

- 8 Peduncles and upper stem densely glandular-hairy (stipitate-glandular); phyllaries densely glandular-hairy; involucre 4.5-8 mm high; lower leaves < 10 mm wide. *Pityopsis aspera* var. *adenolepis*
- 8 Peduncles and upper stem eglandular to sparsely glandular; phyllaries eglandular, or the inner phyllaries sparsely to densely glandular, at least distally; involucre 5-14 mm high; lower leaves up to 20 mm wide.
- 12 Phyllaries in unequal series, linear triangular (outer) to narrowly oblong-lanceolate (innermost), innermost series unevenly longer than the next outer series, inner to middle often glandular distally or only at the very apex, inner usually distinctly thinner; [widespread in our region, including in the inland provinces east of the Mississippi] *Pityopsis nervosa*
- 12 Phyllaries all similar, linear-triangular, evenly imbricate, glandular or eglandular, of even texture; [either Coastal Plain NC to n. FL west to se. LA, or west of the Mississippi River].
- 13 Involucres 8-11 mm high; peduncles and involucre eglandular; [AR, OK, TX, and LA, rarely east to sw. MS] *Pityopsis tenuifolia*
- 13 Involucres 4-7 mm high; involucre at least in part stipitate-glandular; [NC s to n. FL and w to se. LA].
- 14 Inner phyllaries densely stipitate-glandular apically, sparsely to moderately sericeous proximally *Pityopsis graminifolia*
- 14 Inner phyllaries sometimes sparsely stipitate-glandular, usually sparsely to moderately sericeous throughout *Pityopsis microcephala*

Pityopsis aspera (Shuttleworth ex Small) Small var. *adenolepis* (Fernald) Semple & F.D. Bowers. **Hab:** Longleaf pine sandhills, dry woodlands, forests, and disturbed places, apparently in the NC Mountains only in the Escarpment. **Dist:** E. MD (R. Simmons, pers. comm., 2016) and e. and c. VA south to n. FL and west to s. MS. **Phen:** Late Jun-Oct. **Tax:** *P. aspera* var. *adenolepis* includes 2 chromosome numbers (2n = 18 and 36), which "account, in part, for the range of variation in involucre, floret, and fruit size" (Semple & Bowers 1985). Nesom (2019a) subsumes this variety under a more broadly defined *P. aspera*, since he did not find a clear morphological or geographic separation between these varieties. We are tentatively maintaining the varieties, pending further field study of this variation. **Syn:** = FNA20, K1, K3, Va, Semple & Bowers (1985); = *Chrysopsis graminifolia* (Michaux) Elliott – F, misapplied; = *Heterotheca adenolepis* (Fernald) H.E. Ahles – Bowers (1972); = *Pityopsis adenolepis* (Fernald) Semple; < *Chrysopsis graminifolia* (Michaux) Elliott var. *aspera* (Shuttleworth ex Small) A. Gray – C. G. SE1, W; > *Heterotheca adenolepis* (Fernald) H.E. Ahles – RAB; < *Heterotheca aspera* (Shuttleworth ex Small) Shinnery; > *Heterotheca graminifolia* (Michx.) Shinnery – RAB, misapplied; < *Pityopsis aspera* (Shuttleworth ex Small) Small – F17, K4, S, WH3, Nesom (2019a). NatureServe G5T5 (Secure).

Pityopsis graminifolia (Michaux) Nuttall. **Hab:** Longleaf pine sandhills, other dry woodlands. **Dist:** Se. NC south to n. FL, and west to s. MS. **Phen:** Jul-Oct. **Tax:** Semple & Bowers (1985) treat *P. graminifolia* as encompassing five varieties "that intergrade and hybridize, when the ploidy level is the same" (Semple & Bowers 1985). More recent work by Bridges and Orzell (2018b) and Nesom (2019a) has elevated most of these to species level, as reflected in this treatment. Nesom (2019a) interprets *P. graminifolia* as mostly corresponding to the plants referred to *P. graminifolia* var. *latifolia* by Semple and Bowers (1985) and Semple (2006) in FNA. However, Semple (2019) clearly shows that the type of *Inula graminifolia* is a small-headed specimen with densely stipitate-glandular phyllaries, consistent with the characters of *P. graminifolia* var. *graminifolia* in Semple & Bowers (1985). Pending further study, this name must be used in that sense. This taxon is diploid (2n=18). **Syn:** = *Pityopsis graminifolia* (Michaux) Nuttall var. *graminifolia* – FNA20, K1, K3, Bridges & Orzell (2018b) in Weakley et al (2018a), Semple & Bowers (1985); < *Chrysopsis graminifolia* (Michaux) Elliott var. *graminifolia* – C; < *Chrysopsis graminifolia* (Michaux) Elliott var. *microcephala* (Small) Cronquist – SE1; ~ *Heterotheca graminifolia* (Michx.) Shinnery; < *Heterotheca microcephala* (Small) Shinnery var. *microcephala* – Bowers (1972); < *Heterotheca nervosa* (Willdenow) Shinnery var. *microcephala* (Small) Shinnery ex H.E. Ahles – RAB; < *Pityopsis graminifolia* (Michaux) Nuttall – F17, K4, WH3; < *Pityopsis microcephala* (Small) Small – S, Nesom (2019a). NatureServe G5T4 (Apparently Secure).

Pityopsis microcephala (Small) Small. **Hab:** Longleaf pine sandhills, sandy woodlands, pine savannas, pine flatwoods, other dry woodlands. **Dist:** Se. NC south to n. FL and west to se. LA (specimens from west of the Mississippi River formerly referred to this species were determined by Nesom (2019a) to represent *P. tenuifolia*). **Phen:** Jul-Oct. **Comm:** This taxon is diploid (2n=18). **Syn:** = K4; = *Pityopsis graminifolia* (Michaux) Nuttall var. *tenuifolia* (Torrey) Semple & F.D. Bowers – Ar, FNA20, K1, K3, Semple & Bowers (1985); < *Chrysopsis graminifolia* (Michaux) Elliott var. *microcephala* (Small) Cronquist – SE1; < *Heterotheca microcephala* (Small) Shinnery var. *microcephala* – Bowers (1972); < *Heterotheca nervosa* (Willdenow) Shinnery var. *microcephala* (Small) Shinnery ex H.E. Ahles – RAB; < *Pityopsis graminifolia* (Michaux) Nuttall – F17, WH3; < *Pityopsis microcephala* (Small) Small – S, Nesom (2019a). NatureServe G5T5? (Secure).

Pityopsis nervosa (Willdenow) Dress. **Hab:** Longleaf pine sandhills, dry woodlands and forests (such as ridgetop pine/heath communities in the Mountains), roadbanks. **Dist:** S. NJ, DE (formerly), s. OH, and c. AR south to s. FL and nc. TX; Bahamas; also in Mexico (TAM, VER, OAX, CHP) and Central America (Belize, Guatemala, Honduras). **Phen:** Jun-Oct. **Tax:** This is the oldest species name for the most common large-headed member of the *P. graminifolia* complex, including a wide range of variation and possible introgression with other taxa of *Pityopsis*. Most populations are tetraploid (2n=36), but occasional diploids have also been referred here. **Syn:** = *Pityopsis graminifolia* (Michaux) Nuttall – Nesom (2019a); = *Pityopsis nervosa* (Willdenow) Dress var. *nervosa* – Ward (2004c); < *Chrysopsis graminifolia* (Michaux) Elliott – G; < *Chrysopsis graminifolia* (Michaux) Elliott var. *graminifolia* – SE1, misapplied; < *Chrysopsis graminifolia* (Michaux) Elliott var. *latifolia* Fernald – C, W; > *Chrysopsis nervosa* (Willdenow) Fernald var. *nervosa* – F; > *Chrysopsis nervosa* var. *stenolepis* Fernald – F; > *Chrysopsis nervosa* var. *virgata* Fernald – F; > *Heterotheca correllii* (Fernald) H.E. Ahles – RAB; < *Heterotheca graminifolia* (Michx.) Shinnery – Bah, Tx, Bowers (1972); ~ *Heterotheca nervosa* (Willd.) Shinnery; > *Heterotheca nervosa* (Willdenow) Shinnery var. *nervosa* – RAB; > *Heterotheca oligantha* (Chapman) Harms – Tx, misidentifications; < *Pityopsis graminifolia* (Michaux) Nuttall – F17, K4, Oh3, S, WH3, misapplied; < *Pityopsis graminifolia* (Michaux) Nuttall var. *latifolia* Fernald – Ar, FNA20, K1, K3, NcTx, Tn, Va, Semple & Bowers (1985).

Pityopsis tenuifolia (Torrey) Nesom. WEST GULF GRASSLEAF-GOLDENASTER. **Hab:** Dry woodlands. **Dist:** E. AR south to sw. MS and w to se. OK and e. TX. **Phen:** Jul-Oct. **Tax:** Nesom (2019a) indicates that this species is similar to *P. tracyi* but from its past placement is generally somewhat smaller in most characters. This species is diploid (n=18). **Syn:** = K4, Nesom (2019a); < *Chrysopsis graminifolia* (Michaux) Elliott var. *microcephala* (Small) Cronquist – SE1; < *Heterotheca microcephala* (Small) Shinnery var. *microcephala* – Bowers (1972); < *Pityopsis graminifolia* (Michaux) Nuttall var. *tenuifolia* (Torrey) Semple & F.D. Bowers – Ar, FNA20, K1, K3.

Pityopsis graminifolia

Pityopsis microcephala

Pityopsis nervosa

Pityopsis tenuifolia

Plectocephalus D. Don in R. Sweet 1830 (BASKETFLOWER)

A genus of 4 species, annual herbs, of midwestern North America, Mexico, South America, and Africa. References: Keil (2006j) in FNA19 (2006a).

Plectocephalus americanus (Nuttall) D. Don in R. Sweet. AMERICAN BASKETFLOWER. **Hab:** Glades and woodlands; eastwards as a waif in waste ground around wool-combing mills in e. SC (Nesom 2004d). **Dist:** S. IL, MO, KS, NM, and AZ south to s. AR, w. LA, TX, and Mexico (CHH, COA, DUR, HID, NLE, OAX, ROO, SLP, SON, TAM). **Phen:** Jul-Sep. **Syn:** = Ar, FNA19, IL, K3, K4; = *Centaurea americana* Nuttall – C, F, G, GrPl, K1, Mo2, NcTx, SE1. **NatureServe G5** (Secure).

Pluchea Cassini 1817 (MARSH-FLEABANE)

A genus of about 40 species, herbs and shrubs, of tropical, subtropical, and warm temperate regions. References: Arriagada (1998); SE1; Godfrey (1952); Nesom (1989); Nesom (2004a); Nesom (2006r) in FNA19 (2006a); Pruski (2005).

- 2 Leaves petiolate or narrowly cuneate at the base; [section *Pluchea*].
 - 4 Phyllaries glandular on the outer surface (the outer bracts also somewhat pubescent); inflorescence paniculiform, the lateral branches not reaching or exceeding the central branches; plants to 20 dm tall; [in freshwater habitats and uplands, widespread inland]..... ***Pluchea camphorata***
 - 4 Phyllaries short-pubescent with several-celled glandular-tipped hairs; inflorescence more-or-less corymbiform and flat-topped, some of the lower lateral branches elongate and reaching or exceeding the central branches; plants to 10 (-15) dm tall; [mainly in salty or brackish habitats, restricted to the outer Coastal Plain] ***Pluchea odorata***
- 2 Leaves sessile, and either rounded, truncate, or clasping at the base; [section *Amplectifolium*].
 - 6 Stems and leaves glandular, otherwise nearly glabrous; involucre 4-5 mm wide ***Pluchea yucatanensis***
 - 6 Stems and leaves puberulent or arachnose as well as glandular; involucre 5-12 mm wide.
 - 7 Corollas pink or purple; heads 4-6 mm high, 5-9 mm wide; phyllaries usually arachnoid and commonly also with dense, thick, viscid hairs; outer phyllaries acuminate; nutlets black, 0.5-1 mm long, densely pubescent; [flowering Jun-Jul]..... ***Pluchea baccharis***
 - 7 Corollas creamy white; heads 6-10 mm high, 6-12 mm wide; phyllaries thinly arachnoid, with sessile glands; outer phyllaries obtuse or obtuse-apiculate; nutlets pinkish, ca. 1 mm long, pubescent on the angles; [flowering late Jul-Oct]..... ***Pluchea foetida* var. *foetida***

Pluchea baccharis (P. Miller) Pruski. ROSE FLEABANE, SAVANNA FLEABANE. **Hab:** Wet pine savannas, other saturated wetlands. **Dist:** E. NC south to s. FL, west to se. TX; Bahamas, Cuba, Mexico, and Central America. **Phen:** Jun-Jul. **Tax:** Pruski (2005) established that *P. baccharis* is the correct name for the taxon known in recent decades as *P. rosea*. Godfrey (1952) recognized two varieties of *P. rosea*, var. *rosea* of se. United States and var. *mexicana* R.K. Godfrey of gypsum plains in San Luis Potosí, Mexico; Nesom (1989) recognized the latter taxon at the species level, *P. mexicana* (R.K. Godfrey) Nesom. **Syn:** = FI7, FNA19, K3, K4, WH3, Pruski (2005); = *Pluchea rosea* R.K. Godfrey – Bah, K1, RAB, Tx, Arriagada (1998), Nesom (1989), Nesom (2004a); = *Pluchea rosea* var. *rosea* – GW2, SE1. **NatureServe G4G5** (Apparently Secure).

Pluchea camphorata (Linnaeus) A.P. de Candolle. CAMPHORWEED, CAMPHOR PLUCHEA. **Hab:** Bottomland sloughs, clay flatwoods, other freshwater wetlands, also weedy in upland areas, particularly in sunny areas and following disturbance. **Dist:** DE and NJ (formerly) and MD south to n. peninsular FL, west to TX and OK, north in the interior to s. OH and e. KS. **Phen:** Aug-Oct. **Syn:** = C, F, FI7, FNA19, G, GW2, IL, K1, K3, K4, NcTx, Oh3, RAB, SE1, Tn, Tx, Va, WH3, Arriagada (1998), Nesom (1989), Nesom (2004a); = *Pluchea petiolata* Cassini – S.

Pluchea foetida (Linnaeus) A.P. de Candolle var. *foetida*. STINKING FLEABANE. **Hab:** Seasonally wet areas, ditches, various other freshwater wetlands. **Dist:** S. NJ south to s. FL, west to e. TX and se. OK; West Indies (Hispaniola). **Phen:** Late Jul-Oct. **Syn:** = K1, K4, Va; < *Pluchea foetida* – Ar, C, F, FI7, FNA19, G, GW2, K3, NcTx, RAB, SE1, Tx, WH3, Arriagada (1998), Nesom (1989), Nesom (2004a); > *Pluchea foetida* – S; > *Pluchea tenuifolia* Small – S. **NatureServe G5T5** (Secure).

Pluchea odorata (Linnaeus) Cassini. SALT MARSH FLEABANE. **Hab:** Salt and brackish marshes. **Dist:** MA and MI south to s. FL and TX (mostly on the Coastal Plain), also in w. United States, Central America, and South America. **Phen:** Aug-Oct. **Tax:** Two varieties are sometimes recognized, the widespread and more robust, but small headed var. *odorata* (involucre 4-6 (-7) mm across the disk, with 6-13 (19) functionally staminate flowers; plants 2-8 (-20) dm tall; of VA southward), and the northeastern North American and less robust but large-headed var. *succulenta* (involucre 7-8 (-10) mm across the disk, with (14-) 21-34 functionally staminate flowers; plants 2-6 dm tall; of NC northward). Additional study is needed to warrant recognition of the varieties. **Syn:** = Bah, FI7, GW2, NcTx, Va, WH3, Arriagada (1998), Nesom (1989), Nesom (2004a); = *Pluchea purpurascens* (Swartz) A.P. de Candolle – RAB, Tx; > *Pluchea camphorata* (Linnaeus) A.P. de Candolle – S, misapplied; > *Pluchea odorata* var. *odorata* – Ar, C, FNA19, GrPl, K1, K3, K4, SE1; > *Pluchea odorata* (Linnaeus) Cassini var. *succulenta* (Fernald) Cronquist – C, FNA19, IL, K1, K3, K4, Mi, NE, Pa, SE1; > *Pluchea purpurascens* (Swartz) A.P. de Candolle var. *purpurascens* – F, G; > *Pluchea purpurascens* (Swartz) A.P. de Candolle var. *succulenta* Fernald – F, G.

* ***Pluchea yucatanensis*** Nesom. YUCATAN CAMPHORWEED. **Hab:** Brackish marshes. **Dist:** Native of Mexico and Belize. Introduced in s. AL and s. MS. **Syn:** = FNA19, K4. **NatureServe GNR** (Not Yet Ranked).

403. ASTERACEAE

*Pseudognaphalium* Kirpicznikov 1950 (RABBIT-TOBACCO)

A genus of about 100 species, herbs, nearly cosmopolitan, especially of American temperate regions. References: Anderberg (1991); Arriagada (1998); SE1; Galbany-Casals et al (2004); Mahler (1975); Nesom (2001a); Nesom (2006k) in FNA19 (2006a).

- 2 Leaves distinctly (but shortly) decurrent 1-10 mm and adnate-auriculate on the stem. *Laphangium luteoalbum*
- 2 Leaves sessile, not decurrent or adnate-auriculate.
- 5 Stem glandular-pubescent or glandular-puberulent, the hairs at right angles to the stem, the stem surface plainly visible. *Pseudognaphalium helleri*
- 5 Stem white-woolly or arachnoid with matted white hairs, the stem surface generally obscured (sometimes glandular-pubescent at the base of the stem only) *Pseudognaphalium obtusifolium*

Pseudognaphalium helleri (Britton) A. Anderberg. HELLER'S RABBIT-TOBACCO. **Hab:** Dry woodlands and openings (especially over mafic rocks), longleaf pine sandhills. **Dist:** Sc. VA south to Panhandle FL, s. AL, west to AR, LA, and ne. TX. **Phen:** Sep-Oct. **Syn:** = Ar, FNA19, Tn, Va, Nesom (2001a); = *Gnaphalium helleri* Britton var. *helleri* – Mahler (1975); = *Gnaphalium obtusifolium* var. *helleri* (Britton) Blake – F, Arriagada (1998); = *Pseudognaphalium helleri* (Britton) A. Anderberg ssp. *helleri* – K3, K4; < *Gnaphalium helleri* – C, G, RAB, S, SE1, W; < *Pseudognaphalium helleri* (Britton) A. Anderberg – FI7, WH3. NatureServe G4G5T3T4 (Vulnerable).

Pseudognaphalium obtusifolium (Linnaeus) Hilliard & Burt. EASTERN RABBIT-TOBACCO, FRAGRANT RABBIT-TOBACCO, CAT'S-FOOT. **Hab:** Prairies, openings, woodlands, coastal dunes, sandy pinelands, disturbed areas. **Dist:** NL (Newfoundland) west to ON, south to s. FL and c. and s. TX. **Phen:** Aug-Nov. **Syn:** = FI7, FNA19, IL, Mi, NcTx, NE, Pa, Tn, Va, WH3, Nesom (2001a); = *Gnaphalium obtusifolium* Linnaeus – GrPl, Oh3, RAB, S, SE1, W, WV; = *Gnaphalium obtusifolium* var. *obtusifolium* – C, G, Arriagada (1998); > *Gnaphalium obtusifolium* var. *obtusifolium* – F; > *Gnaphalium obtusifolium* Linnaeus var. *praecox* Fernald – F; ? *Gnaphalium polyccephalum* Michaux; > *Pseudognaphalium obtusifolium* ssp. *obtusifolium* – K3, K4; > *Pseudognaphalium obtusifolium* ssp. *praecox* (Fernald) Kartesz – K3, K4.

*Pyrrhopappus* A.P. de Candolle 1838 (FALSE-DANDELION)

A genus of 4-5 species, herbs, of sw., sc., and se. North America. References: SE1; Strother (2006x) in FNA19 (2006a).

- 2 Outer phyllaries mainly 1/3-2/3 as long as the inner phyllaries; lower and middle stem usually glabrous; leaf margins usually glabrous; upper cauline leaves usually unlobed or with 1-2 (-5) small lobes. *Pyrrhopappus carolinianus*
- 2 Outer phyllaries mainly < 1/3 as long as the inner phyllaries; lower and middle stem usually sparsely to densely pilose; leaf margins usually ciliate; upper cauline leaves usually pinnately (3-) 5-7 (-9)-lobed. *Pyrrhopappus pauciflorus*

Pyrrhopappus carolinianus (Walter) A.P. de Candolle. FALSE-DANDELION, CAROLINA DESERT-CHICORY. **Hab:** Dry and moist forests, roadsides, meadows, fields. **Dist:** DE, se. PA, and MD south to c. peninsular FL, west to IL, MO, and TX; the pre-Columbian range is uncertain. **Phen:** Mar-Jun (and sometimes later). **Syn:** = Ar, C, F, FI7, FNA19, G, GrPl, IL, K1, K3, K4, NcTx, Tn, Va, W, WH3, WV; = *Sitilias caroliniana* (Walter) Rafinesque – S; > *Pyrrhopappus carolinianus* var. *carolinianus* – RAB, SE1; > *Pyrrhopappus carolinianus* var. *georgianus* (Shinners) H.E. Ahles – RAB, SE1; > *Pyrrhopappus georgianus* Shinners. NatureServe G5 (Secure).

Pyrrhopappus pauciflorus (D. Don) A.P. de Candolle. SMALL-FLOWERED DESERT-CHICORY. **Hab:** Disturbed areas. **Dist:** AR, OK, NM, and AZ, south to w. LA, TX, and Mexico (AGU, CHH, COA, DUR, GUA, JAL, MEX, NLE, PUE, ROO, SLP, SIN, SON, TAM, ZAC); also adventive eastwards. **Phen:** (Feb.) Apr-May. **Tax:** Here interpreted to exclude *Pyrrhopappus rothrockii* A. Gray. **Syn:** = FNA19; = *Pyrrhopappus multicaulis* A.P. de Candolle – SE1, Tx; = *Sitilias multicaulis* (A.P. de Candolle) Greene – S; > *Pyrrhopappus multicaulis* A.P. de Candolle var. *geiseri* (Shinners) Northington – GrPl; < *Pyrrhopappus pauciflorus* (D. Don) A.P. de Candolle – K1, K3, K4, NcTx.

403. ASTERACEAE

*Ratibida* Rafinesque 1817 (PRAIRIE CONEFLOWER)

A genus of about 7 species, herbs, of North America. References: SE1; Richards (1968); Urbatsch & Cox (2006b) in FNA21 (2006c).

Key, in part, from Urbatsch & Cox (2006b).

- 1 Disks ellipsoid-globular, 10-25 mm tall, 1-1.6× as long as thick; plant a fibrous-rooted perennial from a woody rhizome or caudex; rays 2.5-3.5 (-6.0) cm long; achenes smooth, lacking a pappus *Ratibida pinnata*
- 1 Disks columnar, 10-70 mm tall, 2-4.5× as long as thick; plant a tap-rooted perennial; rays < 2 (-2.5) cm long; achenes ciliate and winged, crowned by a pappus consisting of 1 or more awn-teeth. *Ratibida columnifera*

Ratibida columnifera (Nuttall) Wooton & Standley. COLUMNAR PRAIRIE CONEFLOWER. **Hab:** Prairies, eastwards in dry disturbed areas, established around nurseries or plantings, waste areas near wool-combing mills. **Dist:** ON west to AB, south to TX, NM, AZ, and Mexico (CHH, COA, HID, NLE, PUE, SLP, SON, TAM, VER, ZAC); introduced at scattered sites eastward, including e. NC, e. SC, and c. TN (Chester, Wofford, & Kral 1997). **Phen:** May-Aug (-Oct). **Syn:** = Ar, C, F, FI7, FNA21, G, GrPl, Il, K1, K3, K4, Mi, NcTx, NE, Oh3, Pa, SE1, WH3, WV, Richards (1968); = *Ratibida columnaris* (Sims) D. Don - S, Tx. NatureServe G5 (Secure).

Ratibida pinnata (Ventenat) Barnhart. GLOBULAR PRAIRIE CONEFLOWER, GREY-HEADED CONEFLOWER, DROOPING CONEFLOWER. **Hab:** Prairie-like glades and oak savannas over gabbro (usually in Iredell soils) or calcareous rocks, cedar glades, calcareous (black belt or chalk) prairies, disturbed areas (often planted in 'wildflower mixes' and naturalized from cultivation). **Dist:** S. ON west to MN and SD, south to w. PA, e. TN, nw. GA, Panhandle FL, MS, OK, and ne. TX (Singhurst, Mink, & Holmes 2010); disjunct in nc. SC (Nelson 1993). **Phen:** Jun-Aug (-Oct). **Comm:** A characteristic plant of midwestern prairies and limestone glades. **Syn:** = Ar, C, F, FI7, FNA21, G, GrPl, Il, K1, K3, K4, Mi, NE, Oh3, Pa, S, SE1, Tn, W, WH3, WV, Richards (1968). NatureServe G5 (Secure).

*Rayjacksonia* R.L. Hartman & M.A. Lane 1996 (CAMPHOR-DAISY)

A genus of 3 species and 4 taxa, annual and perennial herbs, of the s. United States and n. Mexico. References: SE1; Lane & Hartman (1996); Nesom (2006z) in FNA20 (2006b); Nesom, Rosen, & Lawrence (2013); Ward (2012a).

Rayjacksonia phyllocephala (A.P. de Candolle) R.L. Hartman & M.A. Lane var. *phyllocephala*. GULF COAST CAMPHOR-DAISY. **Hab:** Dunes, other open, sandy near-coastal areas. **Dist:** Gulf coast from Florida Keys west to s. TX and southwards into Mexico. **Syn:** = K4, Nesom, Rosen, & Lawrence (2013), Ward (2012a); < *Haplopappus phyllocephala* A.P. de Candolle - SE1; < *Machaeranthera phyllocephala* (A.P. de Candolle) Shinnars - Tx; < *Rayjacksonia phyllocephala* - FI7, FNA20, K3, WH3, Lane & Hartman (1996).

*Rudbeckia* Linnaeus 1753 (YELLOW CONEFLOWER, BLACK-EYED SUSAN)

A genus of about 25 or more species, herbs, of North America. References: Campbell & Seymour (2013); SE1; Perdue (1957); Urbatsch & Cox (2006a) in FNA21 (2006c).

Identification Notes: This treatment needs considerable additional work in the herbarium, and will likely be substantially modified. Pales are receptacular bracts which subtend all or some of the disc florets of capitulum. They differ from phyllaries in that they subtend individual florets atop the receptacle vs. phyllaries which subtend the entire head of flowers. They are present within some, but not all, Asteraceae genera, and are most common in the Heliantheae tribe.

- 3 Leaves (at least some of the largest and generally more basal) 3-lobed or more divided (except *R. laciniata* var. *heterophylla* with sometimes few if any leaves lobed, and these usually the stem leaves).

- 4 Disc flowers yellow or yellowish-green; achenes 3.5-6.0 mm long.

Key to Map
Symbology:

* : waif
EN : endemic
H : historic

N : no
P : planted
? : questionable

- 5 Basal and lower stem leaves 1-2-pinnatifid, with 5-many lobes; plants 1-3 m tall. *Rudbeckia laciniata* var. *laciniata*
- 5 Basal and lower stem leaves 1-5-lobed; plants 0.5-2 m tall. *Rudbeckia laciniata* var. *digitata*
- 4 Disc flowers purple-brown; achenes 1.9-3.5 mm long.
- 9 Pales acute, hairy near the tip; rays 20-40 mm long. *Rudbeckia subtomentosa*
- 9 Pales cuspidate, with awn-like tips ca. 1.5 mm long, glabrous; rays 8-30 mm long. *Rudbeckia triloba* var. *triloba*
- 3 Leaves simple, unlobed, toothed (or entire).
- 13 Pales (bracts of the receptacle) densely pubescent near the tip.
- 14 Plants glabrous or with scattered inconspicuous hairs.
- 15 Stem very sparsely spreading-villous (to more conspicuously hairy, and then keyable under 21b); disc to 15 mm high. *Rudbeckia heliopsidis*
- 15 Stem glabrous; disc elongating in fruit, ultimately 12-60 mm high. *Dracopis amplexicaulis*
- 14 Plants conspicuously hirsute or pilose.
- 19 Plants perennials from a woody rhizome; pappus a low crown; style appendages short, blunt.
- 20 Disc 10-15 mm across; rays 6-12, mostly spreading, 15-25 mm long; leaves not folded longitudinally. *Rudbeckia heliopsidis*
- 20 Disc 15-25 mm across; rays 12-25, mostly reflexed, 30-50 mm long; leaves folded longitudinally. *Rudbeckia grandiflora* var. *alismifolia*
- 19 Plants annuals, biennials, or perennials from fibrous roots; pappus lacking or a low crown to 0.1 mm high; style appendages elongate, subulate (*R. hirta*) or short, acute to obtuse (*R. mollis*).
- 22 Stems and leaves softly pilose to woolly; style branches short, acute to obtuse; [plants of dry sands of the Coastal Plain of SC southward] *Rudbeckia mollis*
- 22 Stems and leaves with coarse and stiffish hairs; style branches elongate, subulate; [plants collectively widespread in our area].
- 23 Stems leafy mainly toward the base, branched mainly near the middle; peduncles usually ½ the height of the plants; [of the Coastal Plain] *Rudbeckia hirta* var. *angustifolia*
- 23 Stems leafy throughout, branched mainly well above the middle; peduncles < 1/3 the height of the plants; [collectively widespread].
- 24 Basal leaves broadly elliptic to ovate, 2.5-7 cm wide, mostly ca. 2× as long as wide, with coarsely serrate margins; rays typically yellow or tinged orange throughout; [mostly undisturbed woodlands and fields, Appalachian highlands westward to IL] *Rudbeckia hirta* var. *hirta*
- 24 Basal leaves lanceolate to oblanceolate 1-2.5 (-5) cm wide, mostly 3-5× as long as wide (or basal leaves absent), with entire to serrate margins; rays typically yellow with maroon, brown, or reddish bases; [disturbed areas OR glades and similar dry habitats, e. US westward].
- 25 Plants annual; lacking basal tufts of leaves; cauline leaves with consistent size; lower leaves sessile or subsessile; [sandstone glades, other dry areas, IL and IN south to MS and TX] *Rudbeckia bicolor*
- 25 Plants biennial or short-lived perennials; with basal tufts of leaves; cauline leaf size gradually decreasing along stem; lower leaves petiolate; [disturbed areas, widespread] *Rudbeckia hirta* var. *pulcherrima*
- 13 Pales (bracts of the receptacle) glabrous or nearly so (except sometimes for a minutely ciliate margin).
- 26 Pales cuspidate, with awn-like tips ca. 1.5 mm long. *Rudbeckia triloba* var. *triloba*
- 26 Pales obtuse to acute.
- 33 Basal leaves with bases cordate (some may be merely rounded); upper stem leaves notably reduced in size relative to the lower stem leaves. *Rudbeckia umbrosa*
- 33 Basal leaves with bases cuneate to broadly cuneate or rounded; upper stem leaves similar in size to the lower stem leaves.
- 36 Paleae ciliate. *Rudbeckia fulgida*
- 36 Paleae eciliate (erose to minutely toothed, rarely with 1-2 cilia). *Rudbeckia terranigrae*

***Rudbeckia bicolor* Nuttall. Hab:** Sandstone glades, other dry soils. **Tax:** There is a major discrepancy in two conflicting names, *Rudbeckia bicolor* Nutt. and *Rudbeckia hirta* L. var. *pulcherrima* Farr., and to which material these names appropriately refer. Nuttall's type for *Rudbeckia bicolor* from "R. River", in Arkansas, was published in 1834 (Journ. Acad. Philad. 7:81), which predated Farwell's published name of *Rudbeckia hirta* var. *pulcherrima* (Michigan Acad. Sci. 6:209. 1904). Farwell simply describes *R. hirta* var. *pulcherrima* as a "form that differs from the species only in having a part of the upper surface of the ray, or even the whole upper face, brown-purple." Nuttall describes *R. bicolor* as (translated): annual, pilose, scabrous, stem unicolored; leaves oblong, sessile, rarely subserrate or obtuse, with the lower subovate and petiolate; and with short rays of color (the lower half of rays brown colored). He also states it is somewhat related to *R. serotina* (another apparent synonym of var. *pulcherrima*), but he elaborates, "...the flower is entirely different, the leaves all nearly oblong and softly hairy...In Arkansas and near to Red River." Some authors choose to synonymize *R. bicolor* into *R. hirta* var. *pulcherrima* (GBIF 2022, IT IS 2022, Keener et al. 2022, Urbatsch and Cox in FNA vol. 21 (2006c)). If the two are not recognized as distinct, then one name needs to be prioritized, which would depend on its recognition at varietal or species rank. Both taxa are also buried deeply into other synonyms (e.g. *R. serotina*, *R. sericea*, *R. lanceolata*, *R. longipes*, *R. hirta* var. *corymbifera*, *R. hirta* var. *serotina*). *R. hirta* var. *pulcherrima* is apparently a widespread weedier species of disturbed areas and *R. bicolor* may be more restricted to sandstone glades and similar habitats in a handful of states in the southeast and lower midwest. Farwell's short description lists *R. hirta* var. *pulcherrima* from Detroit, Michigan, which may have not included analysis of southern material (i.e. "bicolor"). The *R. hirta* and *R. fulgida* complexes are both widespread and highly variable, and unsurprisingly accompany a complicated history of synonymy and taxon recognition. Haines (2011) recognizes *R. bicolor* as distinct from *R. hirta* as annual plants lacking basal tufts of leaves with cauline leaves of consistent size proximally and distally and all leaves being sessile or subsessile (vs. *R. hirta* as biennial or short-lived perennials with basal tufts of leaves and cauline leaves decreasing in size distally, with lower leaves borne on petioles). However, Haines (2011) lists both *R. bicolor* and *R. hirta* var. *pulcherrima* as adventive species in New England, with the former only being reported from MA. Numerous specimens from the apparent native range of both taxa (AL, AR, etc...) show tremendous overlap in cauline leaf shape and size (Kral 53236, Kral 58158, Parker 853, Spaulding 11911, Diamond 13617), which appear to have upper cauline leaves broadly oblanceolate to distinctly linear-lanceolate, although few specimens contain persistent basal tufts of leaves which complicates distinctions listed in Haines (2011). We choose to currently recognize both *R. bicolor* and *R. hirta*

Moore) Fernald & Schubert – F; > *Rudbeckia serotina* Nuttall var. *serotina* – F, II.

Rudbeckia laciniata Linnaeus var. *digitata* (Miller) Fiori. COASTAL PLAIN CUTLEAF CONEFLOWER. **Hab:** Seepage bogs, streamsides. **Dist:** VA south to FL, west to LA. **Phen:** Jul-Oct. **Syn:** = C, F, K1, K3, Tn; < *Rudbeckia laciniata* – FI7, GW2, RAB, S, W, WH3; < *Rudbeckia laciniata* Linnaeus var. *digitata* (Miller) Fiori – SE1, Va; < *Rudbeckia laciniata* Linnaeus var. *humilis* A. Gray – FNA21, K4; < *Rudbeckia laciniata* Linnaeus var. *laciniata* – G.

Rudbeckia laciniata Linnaeus var. *laciniata*. COMMON CUTLEAF CONEFLOWER, GOLDENGLOW. **Hab:** Moist forests, bottomlands, streambanks. **Dist:** NB, ON, and MB south to FL and TX. **Phen:** Jul-Oct. **Tax:** 'Goldenglow' (var. *hortensia*) is a cultivar or form with 2-3× as many ray flowers; it may be encountered as a casual from horticultural use. **Syn:** = Ar, FNA21, GrPl, K1, K3, NE, SE1, Tn, Va; < *Rudbeckia laciniata* – FI7, GW2, II, Mi, RAB, S, Tx, W, WH3; > *Rudbeckia laciniata* var. *hortensia* – Oh3, misspelling; > *Rudbeckia laciniata* var. *hortensia* L.H. Bailey – F; > *Rudbeckia laciniata* var. *hortensis* L.H. Bailey – Pa, WV, misspelling; < *Rudbeckia laciniata* Linnaeus var. *laciniata* – C, G, K4; > *Rudbeckia laciniata* Linnaeus var. *laciniata* – F, Oh3, WV; < < *Rudbeckia laciniata* Linnaeus var. *laciniata* – Pa.

Rudbeckia mollis Elliott. WOOLLY CONEFLOWER. **Hab:** Longleaf pine / turkey oak sandhills. **Dist:** SC south to n. peninsular FL, FL Panhandle, west to s. AL. **Phen:** Late Aug-Oct. **Syn:** = FI7, FNA21, K1, K3, K4, RAB, S, SE1, WH3, Perdue (1957). NatureServe G3G5 (Apparently Secure).

Rudbeckia subtomentosa Pursh. SWEET CONEFLOWER. **Hab:** Moist to dry woodlands, prairies, disturbed areas. **Dist:** MI, IA, and OK south to nc. TN (Tennessee Flora Committee 2015), MS and TX; eastward as introductions or possibly disjuncts. Known for NC only from a single 1897 specimen from Hollow Rock, Orange Co. NC; probably an introduction. **Phen:** Jul-Sep. **Syn:** = Ar, F, FNA21, GrPl, II, K1, K3, K4, Mi, NE, S, SE1, Tn, Perdue (1957). NatureServe G5 (Secure).

Rudbeckia terranigrae J.J.N. Campbell & W.R. Seymour. BLACKLAND CONEFLOWER. **Hab:** Blackland prairies and perhaps other habitats. **Dist:** Black Belt of AL and MS, and perhaps more widespread, the distribution currently poorly understood. **Tax:** For additional information, see Campbell & Seymour (2014). **Comm:** {not yet keyed}. **Syn:** = K4, Campbell & Seymour (2013).

Rudbeckia triloba Linnaeus var. *triloba*. COMMON THREE-LOBED CONEFLOWER. **Hab:** Moist forests and rock outcrops. **Dist:** VT, ON, MN, and NE south to GA and TX; westward in CO and UT (presumably as introductions). **Phen:** Jul-Oct. **Syn:** = Ar, C, F, FNA21, G, GrPl, II, K1, K3, K4, NE, Pa, SE1, Tn, Va; = *Rudbeckia triloba* – S; < *Rudbeckia triloba* – Mi, NcTx, Oh3, RAB, W, WV. 403. ASTERACEAE

Rudbeckia umbrosa C.L. Boynton & Beadle. APPALACHIAN CONEFLOWER. **Hab:** Rich calcareous slopes, bottomlands. **Dist:** VA, OH, IN, and MO south to GA, MS, and AR. **Phen:** Aug-Oct. **Syn:** = F, Il, Tn, Campbell & Seymour (2013); = *Rudbeckia fulgida* Aiton var. *umbrosa* (C.L. Boynton & Beadle) Cronquist – Ar, FNA21, G, K1, K4, Oh3, SE1, Perdue (1957); > *Rudbeckia chapmanii* C.L. Boynton & Beadle – S; < *Rudbeckia fulgida* Aiton – GW2, RAB, Va, W; > *Rudbeckia umbrosa* C.L. Boynton & Beadle – S. NatureServe G5T4T5 (Apparently Secure).

*Santolina* Linnaeus 1753

A genus of about 8-18 species, shrubs, of the Mediterranean region. References: Giacò, Astuti, & Peruzzi (2021); Watson (2006d) in FNA19 (2006a).

* ***Santolina chamaecyparissus*** Linnaeus. HOLY-FLAX, LAVENDER-COTTON, CYPRESS LAVENDER-COTTON. **Hab:** Disturbed areas. **Dist:** Native of Mediterranean Europe, perhaps of ancient garden origin (as no natural populations are known). This species is introduced in e. and w. NC (Fox, Godfrey, & Blomquist 1952). **Phen:** Mar-Oct. **Tax:** Giacò, Astuti, & Peruzzi (2021) confirm that application of the name *S. chamaecyparissus* to the widely cultivated species, which is a pentaploid and not known from any natural, wild populations. **Comm:** Graetz (1973) recommended it for planting in barrier island areas of the Carolinas. **Syn:** = C, K1, K3, K4, NE, Giacò, Astuti, & Peruzzi (2021). NatureServe GNR (Not Yet Ranked).

*Sclerolepis* Cassini 1816 (SCLEROLEPIS)

A monotypic genus, a perennial herb, of se. North America. References: SE1; Lamont (2006b) in FNA21 (2006c).

Sclerolepis uniflora (Walter) Britton, Sterns, & Poggenburg. SCLEROLEPIS. **Hab:** In shallow water (later sometimes stranded on shore by dropping water levels) of clay-based Carolina bays, natural lake shores, blackwater stream shores and swamps, in seepage wetlands including sea-level fens. **Dist:** NH south to c. peninsular FL, west to sw. AL (very rare north of NC); slightly disjunct in s. MS and se. LA (Sorrie & LeBlond 2008). **Phen:** May-Aug; Jul-Oct. **Syn:** = C, F, F17, FNA21, G, GW2, K1, K3, K4, NE, RAB, SE1, Va, WH3. NatureServe G4 (Apparently Secure).

*Senecio* Linnaeus 1753 (RAGWORT, GROUNDSEL)

A genus of very uncertain circumscription, if treated broadly with as many as 1500-2000 species, trees, shrubs, herbs, and vines. The trend is to divide *Senecio* into smaller, more natural genera. Most species in our flora traditionally treated as "*Senecio*" are not even part of a broadly defined core group, and have been transferred to *Packera*, *Hasteola*, and *Rugelia*. References: Anderson (1994); Barkley (1978); Barkley (1999); Barkley (2000); Barkley (2006a) in FNA20 (2006b); Bremer (1994); SE1; Pelsner et al (2007); Phippen (1978).

* ***Senecio vulgaris*** Linnaeus. GROUNDSEL. **Hab:** Roadsides, fields, disturbed areas. **Dist:** Native of Eurasia. **Phen:** (Jan-) Mar-Jun (-Dec). **Syn:** = Ar, C, F, F17, FNA20, G, GrPl, Il, K1, K3, K4, Mi, NcTx, NE, Oh3, Pa, RAB, S, SE1, Tn, Va, W, WH3, WV, Barkley (1978), Barkley (1999). NatureServe GNR (Not Yet Ranked).

Sericocarpus Nees 1832 (WHITE-TOPPED ASTER)

A genus of 5 species, herbs, of North America. This group of species, traditionally treated as *Sericocarpus*, was transferred to *Aster* by Cronquist, a treatment followed by most (but not all) recent floristic works. It now appears, based on morphological and molecular studies, that the traditional treatment as a separate genus is far superior. Nesom (1993a) argued that a variety of characters indicate that *Sericocarpus* is more closely allied to *Solidago*, *Euthamia*, *Bigelovia*, *Chrysoma*, and *Gutierrezia* than it is to *Aster*. Noyes & Rieseberg (1999) provided strong support for this contention, based on molecular evidence. See Nesom (1993a), Jones (1980), Semple & Brouillet (1980), and Noyes & Rieseberg (1999) for further discussion about the affinities of this group. References: SE1; Leonard, Cook, & Semple (2005); Nesom (1993a); Nesom (2021c); Semple & Leonard (2006) in FNA20 (2006b).

1 Leaves basally disposed, the basal leaves (these sometimes withered by flowering season) and/or lower stem leaves larger than the upper stem leaves; leaves (at least the lower stem or basal) toothed. *Sericocarpus caespitosus*

1 Leaves cauline, basal rosette lacking, the mid-stem leaves the largest; leaves entire (or with 1-2 teeth in *S. tortifolius*). *Sericocarpus linifolius*

3 Leaves (2-) 4-8 cm long, 0.2-1.2 cm wide, linear to oblanceolate, 6-12× as long as wide, not twisted at the base (the leaf blade in a more-or-less horizontal plane); leaves glabrous (but with a ciliate margin), glandular-punctate; involucre glabrous. *Sericocarpus linifolius*

- 3 Leaves 1.5-4 cm long, 0.6-1.5 (-2.0) cm wide, obovate, 1.5-4× as long as wide, twisted at the base (bringing most of the leaf blade into a more-or-less vertical plane); leaves puberulent, glandular-punctate, and with prominent resin globules (at 10× magnification); involucre puberulent.....*Sericocarpus tortifolius*

Sericocarpus caespitosus Nesom. **Hab:** Dry woodlands, thin soils around rock outcrops, longleaf pine sandhills, other dry pinelands, woodland margins. **Dist:** C. and w. NY south to se. PA, c. MD, c. NC, SC, c. and sw. GA, w. FL Panhandle, s. AL, and MS, primarily in the Piedmont and provinces west of that. **Phen:** (Apr-) May-Jul (-Aug). **Tax:** See Nesom (2021c) for additional information. **Syn:** = Nesom (2021c); < *Aster paternus* Cronquist – C, G, Oh3, RAB, SE1, W; < *Sericocarpus asteroides* (Linnaeus) Britton, Sterns, & Poggenburg – F, F17, FNA20, K1, K3, K4, Mi, Pa, S, Tn, Va, WH3, WV, Nesom (1993a).

Sericocarpus linifolius (Linnaeus) Britton, Sterns, & Poggenburg. NARROW-LEAF WHITE-TOPPED ASTER. **Hab:** Dry woodlands, woodland margins, longleaf pine sandhills. **Dist:** MA west to s. OH and s. IN, south to se. SC, c. GA, s. AL, Panhandle FL (Santa Rosa County, Grayson Sasser, 2019, pers. comm.), s. MS, and e. LA (Florida parishes). **Phen:** Jun-Aug. **Syn:** = F, FNA20, K1, K3, K4, Mi, NE, Pa, S, Tn, Va, WV, Leonard, Cook, & Semple (2005), Nesom (1993a); = *Aster solidagineus* Michaux – C, G, Oh3, RAB, SE1, W. **NatureServe G5** (Secure).

Sericocarpus tortifolius (Michaux) Nees. TWISTED-LEAF WHITE-TOPPED ASTER. **Hab:** Dry to mesic longleaf pine sandhills, other dry woodlands. **Dist:** E. NC south to s. FL, west to e. LA (Florida parishes), more or less restricted to the Coastal Plain, but inland onto hard-rock provinces in nc. GA and nc. AL. **Phen:** Aug-Nov. **Syn:** = F17, FNA20, K1, K3, K4, WH3, Leonard, Cook, & Semple (2005), Nesom (1993a); = *Aster tortifolius* Michaux – RAB, SE1, W; = *Sericocarpus bifolius* (Walter) Porter – S. **NatureServe G4** (Apparently Secure).

Silphium Linnaeus 1753 (ROSINWEED)

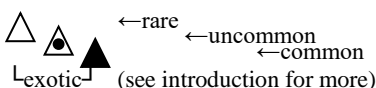

Contributed by Mason Brock and Alan Weakley

A genus of 20-30 species, herbs, of e. North America. References: Clevinger (2004); Clevinger (2006) in FNA21 (2006c); SE1; Cruden (1962); Medley (1989); Perry (1937); Steyermark (1951); Sweeney (1970).

Identification Notes: The number of ray flowers per head is a useful taxonomic character in *Silphium*; since only ray flowers are fertile, the number of ray flowers can also be estimated by the number of achenes in freshly fruiting material. The leaves of *Silphium* in the "Asteriscus group" are typically opposite at the lowermost nodes and alternate at the uppermost nodes subtending the inflorescence. However, mid-stem leaf arrangement remains a useful diagnostic character. Specimens of predominately opposite-leaved taxa that have regrown from damage earlier in the year will often develop alternate leaves at mid-stem. The key and taxonomic treatment is provisional.

- 1 Leaves basally disposed, the basal leaves large and persistent, the stem with very few to many leaves, but these definitely reduced upward in size; leaves entire to toothed, to deeply cut; plants with definite taproots (except *S. brachiatum*, *S. confertifolium*, *S. gracile*, *S. mohrii*, *S. simpsonii*, and *S. wasiotense*).
 - 2 Stem relatively leafy, with 4-5 nodes or more, the stem leaves smaller than the basal, but not merely bracteal.
 - 3 Leaves deeply pinnatifid to bipinnatifid *Silphium laciniatum*
 - 3 Leaves nearly entire to coarsely toothed (but not pinnatifid).
 - 7 Stem, inflorescence, and phyllaries glabrous or very nearly so; [AL and perhaps MS] *Silphium confertifolium*
 - 7 Stem, inflorescence, and phyllaries obviously scabrous, hirsute, or hispid; [collectively more widespread] *Silphium simpsonii*
 - 2 Stem nearly naked, bearing only a few bracteal (very reduced) leaves.
 - 11 Principal leaves shallowly to deeply pinnatifid; leaf blade base cuneate, rounded or shallowly cordate; leaf blade often > 2× as long as wide *Silphium pinnatifidum*
 - 11 Principal leaves only toothed (or subentire); leaf blade base cordate or truncate at the base (rarely abruptly narrowed); leaf blade < 1.5× as long as wide *Silphium terebinthinaceum*
- 1 Leaves primarily on the stem, basal leaves usually absent or soon withering, the stem with many leaves, these similar in size; leaves entire or toothed; plants fibrous-rooted from a crown, rhizome, or caudex.
 - 15 Stem square in x-section; upper leaves connate, fused basally, the stem thus perfoliate *Silphium perfoliatum*
 - 15 Stem terete; leaves not connate.
 - 18 Ray flowers 20-30 per head (or more); pales eglandular; [west of the Mississippi River] *Silphium integrifolium* var. *integrifolium*
 - 18 Ray flowers 12-22 per head; pales eglandular or stipitate-glandular (glands often mixed with other pubescence, use 20× magnification); [east of the Mississippi River, except for *S. asperim*]
 - 21 Mid-stem leaves predominately alternate (lower leaves often opposite); inflorescence eglandular except for inconspicuous dull yellow-brown stipitate-glands on pales; stem glabrous, hispid, or hirsute with hairs > 1 mm.
 - 23 Phyllary abaxial surface hispid; inflorescence congested, with peduncles usually less than 4 cm long; basal leaves withered by flowering *Silphium asperim*
 - 23 Phyllary abaxial surface scabrous or glabrous; inflorescence open, with peduncles up to 13 cm long; basal leaves sometimes persisting at flowering; [Coastal Plain, SC, GA, FL, AL, and MS] *Silphium simpsonii*

Key to Map
Symbology:

N : no X : extirpated
P : planted
? : questionable

21 Mid-stem leaves predominately opposite or whorled (occasionally alternate in damaged re-growth); inflorescence eglandular, or if glandular then glands conspicuous and not restricted to pales; stem various, but never hirsute with hairs >1 mm.

24 Mid-stem leaves petiolate or subsessile (not clasping), with a cuneate or rounded base; leaves typically lanceolate, gradually tapering towards the tip; stem and inflorescence branches eglandular.

24 Mid-stem leaves clasping to short-petiolate, with a subcordate to rounded base; leaves typically ovate, widest at base and abruptly tapering to an acute tip; stem and inflorescence branches eglandular or stipitate-glandular.

28 Stem and inflorescence branches glabrous *Silphium integrifolium* var. *gatingeri*
28 Stem and inflorescence branches finely puberulent or hispid *Silphium integrifolium* var. *integrifolium*

Silphium aspernum Hooker. {NAME}. **Hab:** Prairies and woodlands. **Dist:** N. GA, TN, and MO south to AL and LA. **Phen:** May-Oct. **Tax:** There has been confusion as to which entity the name *Silphium aspernum* is best applied. Perry (1937) interpreted the name *S. aspernum* as a synonym of the western *S. radula*, and therefore assigned the eastern entity to the next available name *Silphium gatesii*. However, the type specimen of *S. aspernum* is collected from east of the Mississippi River (vicinity of Covington, Louisiana), a region to which *S. radula* is unknown, and it appears to have the small heads and reduced ray flowers typical of the eastern entity. The name *S. aspernum* is therefore best applied to the eastern entity. Nomenclatural issues aside, *Silphium aspernum* appears morphologically close to *Silphium radula* and likely intergrades near their region of contact. **Syn:** ~ *Silphium aspernum* Hooker, misapplied by Cronquist (1949); > *Silphium aspernum* Hooker – Tx, Perry (1937); < *Silphium asteriscus* – F, G, W; < *Silphium asteriscus* Linnaeus var. *asteriscus* – C, FNA21, K1, K3, K4; ~ *Silphium dentatum* var. *gatesii* (Mohr) H.E. Ahles; > *Silphium gatesii* C. Mohr – Tn, Perry (1937); ~ *Silphium radula* Nuttall, misapplied by Cronquist (1980), Jones & Coile (1988), and Weakley (2015).

Silphium asteriscus Linnaeus var. *latifolium* (A. Gray) J.A. Clevinger. **Hab:** Woodlands, roadsides. **Dist:** VA, WV, and KY south to GA and LA. **Phen:** Jul-Sep. **Tax:** This taxon appears to occasionally intergrade with *S. integrifolium* in the western edge of its range, and more commonly intergrade with *S. asteriscus* var. *trifoliatum* in the Interior Plateau and Cumberland Plateau. However, in the broad core of its range (spanning a region of AL, TN, and KY) populations of *S. asteriscus* var. *latifolium* are morphologically consistent and readily recognizable, with large leaves uncharacteristic of both *S. integrifolium* and *S. asteriscus* var. *asteriscus*. Some recent authors have chosen species status, under the name *Silphium glabrum*. The taxonomy and map are very speculative. **Syn:** = *Silphium glabrum* Eggert ex Small – S, Tn; = *Silphium laevigatum* Pursh – RAB; = *Silphium trifoliatum* Linnaeus var. *latifolium* A. Gray – C, F, G, K1, SE1, Perry (1937); < *Silphium asteriscus* – Va; < *Silphium asteriscus* Linnaeus var. *latifolium* (A. Gray) J.A. Clevinger – FNA21, K3, K4; ~ *Silphium confertifolium* Small; < *Silphium trifoliatum* – W.

Silphium confertifolium Small. BLACK BELT ROSINWEED. **Hab:** Chalk prairies. **Dist:** Black Belt of AL and possibly e. MS, also on limestone. **Syn:** = S, SE1, Perry (1937); < *Silphium asteriscus* Linnaeus var. *latifolium* (A. Gray) J.A. Clevinger – FNA21, K4.

Silphium integrifolium Michaux var. *gatingeri* L.M. Perry. GATTINGER'S ROSINWEED. **Hab:** Prairies and woodland openings. **Dist:** KY, MS, and TN. **Tax:** This variety appears to be morphologically intermediate between *S. integrifolium* var. *integrifolium* and *S. asteriscus* var. *latifolium*, and may have risen from the result of hybridization. It is found in a region at the western border of the range of *S. asteriscus* var. *latifolium*, mostly in the Western Highland Rim of Tennessee and in western Kentucky. In this region it forms distinctive populations, with the absence of either putative parent species. It is unclear what level of taxonomic rank, if any, is warranted. **Syn:** = K1, Perry (1937); < *Silphium asteriscus* Linnaeus var. *asteriscus* – K4.

Silphium integrifolium Michaux var. *integrifolium*. PRAIRIE ROSINWEED. **Hab:** Prairies, calcareous glades and barrens. **Dist:** MI, WI, and se. SD south to c. TN, se. AL, s. MS, s. LA, and OK. **Phen:** Jul-Sep. **Syn:** < *Silphium integrifolium* Michaux – Mi, Tn; > *Silphium integrifolium* var. *deamii* L.M. Perry – F, IL, K1, Perry (1937); < *Silphium integrifolium* Michaux var. *integrifolium* – Ar, C, FNA21, G, GrPl, K3, K4, SE1; > *Silphium integrifolium* Michaux var. *integrifolium* – F, IL, K1, Perry (1937).

Silphium laciniatum Linnaeus. COMPASS-PLANT. **Hab:** Prairies, limestone barrens, calcareous glades, also sometimes cultivated (including outside of its native distribution). **Dist:** S. ON, MI, WI, s. MN, and e. SD south to se. TN, s. AL, c. MS, s. LA, c. TX, and n. NM. Populations discovered at outlying sites to the east (Chester Co. VA, Chain Bridge in Washington DC in the 1880s, etc.) are ambiguous as to nativity (R. Wright, pers. comm. 2012). **Phen:** Jun-Sep. **Syn:** = Ar, C, FNA21, G, GrPl, K3, K4, Mi, NcTx, Oh3, SE1, Tn, Tx; > *Silphium laciniatum* var. *laciniatum* – F, IL, K1, Perry (1937); > *Silphium laciniatum* var. *robinsonii* L.M. Perry – F, IL, K1, Perry (1937).

Silphium perfoliatum Linnaeus. COMMON CUP-PLANT. **Hab:** Floodplain forests and openings, sometimes escaped from cultivation. **Dist:** VT, ON, and ND south to sc. NC, AL, and TX. **Phen:** Jun-Sep. **Syn:** = GrPl, IL, Mi, Oh3, RAB, S, Tn, WV, Perry (1937); = *Silphium perfoliatum* Linnaeus ssp. *perfoliatum* – Cruden (1962); = *Silphium perfoliatum* Linnaeus var. *perfoliatum* – Ar, C, FNA21, K1, K3, K4, NE, Pa, SE1, Va; < *Silphium perfoliatum* Linnaeus – G, W. NatureServe G5T5? (Secure).

Silphium pinnatifidum Elliott. TANSY ROSINWEED. **Hab:** Limestone glades and woodlands, blackland prairies. **Dist:** OH and IN south to nw. GA, AL, and ne. MS. **Phen:** Jul-Sep. **Syn:** = IL, K1, S, SE1, Tn; = *Silphium terebinthinaceum* Jacquin var. *pinnatifidum* (Elliott) A. Gray – F, FNA21, K3, K4, Perry (1937); > *Silphium chickamaugense* Canby; ~ *Silphium lanceolatum* Canby non Nutt.; < *Silphium terebinthinaceum* Jacquin – G.

Silphium simpsonii Greene. **Hab:** Longleaf pinelands. **Dist:** SC south to FL, west to MS. **Syn:** = K1; = *Silphium asteriscus* Linnaeus var. *simpsonii* (Greene) J.A. Clevinger – FNA21, K3, K4, Clevinger (2004); = *Silphium simpsonii* var. *simpsonii* – Perry (1937); < *Silphium asteriscus* – WH3; < *Silphium gracile* A. Gray – S, SE1, misapplied.

Silphium terebinthinaceum Jacquin. PRAIRIE-DOCK. **Hab:** Mafic or calcareous glades, barrens, woodlands, prairies, and roadsides and powerline-rights-of-ways with remnant historical vegetation of those types. **Dist:** NY, ON, WI, and e. IA south to nw. GA, AL, MS, and AR (its distribution in s. OH, KY, TN, nw. GA, AL, and MS fragmented and disjunct); further disjunct eastward in the Piedmont of NC and n. SC. **Phen:** Jul-Sep. **Tax:** *S. rumicifolium* Small refers to plants of limestone in the Ridge and Valley province of e. TN and extreme sw. VA, alleged to differ

P : planted
? : questionable

403. ASTERACEAE

from *S. terebinthinaceum* in the leaf bases cuneate at the base (vs. cordate or truncate), smaller leaf blades (only to 15 cm long), smaller plants (to 8 dm tall vs. to 30 dm tall), and outer phyllaries broader than long (vs. longer than broad). Var. *lucybrauniae* Steyermark, with leaf blades glabrous above vs. scabrous, and also alleged to have generally smaller leaves and stature may also warrant recognition (Steyermark 1951); if var. *lucybrauniae* is accepted, it should be spelled '*lucybrauniae*' under provisions of the Shenzhen Code (Turland et al. 2018). *S. terebinthinaceum* (as still broadly treated after the removal of *S. pinnatifidum*) has a fragmented distribution, different habitats in disjunct portions of its distribution, and morphological variation suggestive that there is more than one taxon passing under that name. A rangewide study is needed. **Syn:** = Mi, RAB, SE1, Tn, Va; = *Silphium terebinthinaceum* var. *terebinthaceum* – Ar, F, FNA21, K3, K4; > *Silphium rumicifolium* Small – S, Perry (1937); < *Silphium terebinthinaceum* Jacquin – G; > *Silphium terebinthinaceum* Jacquin – S; > *Silphium terebinthinaceum* var. *luciae-brauniae* Steyermark – K1, orthographic variant; > *Silphium terebinthinaceum* var. *lucybrauniae* Steyermark, correct spelling; > *Silphium terebinthinaceum* var. *lucybrauniae* Steyermark – Il, Oh3, Steyermark (1951), orthographic variant; > *Silphium terebinthinaceum* var. *terebinthaceum* – Il, K1, Oh3, Perry (1937), Steyermark (1951).

*Silybum* Adanson 1763 (MILK-THISTLE)

A genus of 2 species, herbs, of the Mediterranean region. References: SE1; Keil (2006g) in FNA19 (2006a).

* *Silybum marianum* (Linnaeus) Gaertner. MILK-THISTLE, BLESSED-THISTLE. **Hab:** Disturbed areas. **Dist:** Native of Mediterranean Europe. **Phen:** May-Jul. **Syn:** = Ar, C, F, FNA19, G, K1, K3, K4, Mi, NcTx, NE, Oh3, Pa, SE1; = *Mariana mariana* (Linnaeus) Hill – S. NatureServe GNR (Not Yet Ranked).

*Smallanthus* Mackenzie 1933 (BEARSFOOT)

A genus of about 20 species, of tropical, subtropical, and warm temperate America. Robinson (1978) describes the morphological and karyological differences warranting recognition of *Smallanthus* as a genus separate from *Polymnia*. References: SE1; Robinson (1978); Strother (2006ii) in FNA20 (2006b); Wells (1965); Wells (1969).

Smallanthus uvedalia (Linnaeus) Mackenzie. BEARSFOOT, LEAFCUP. **Hab:** Moist forests, bottomland forests, and disturbed places. **Dist:** NY, s. MI, IL, MO, and se. KS south to c. peninsular FL and c. TX. **Phen:** Jul-Oct. **Tax:** Here *S. uvedalia* is provisionally treated as an e. North American endemic; it is sometimes circumscribed more broadly, with a range then extending through e. Mexico and Central America to Panama. Within e. United States, *S. uvedalia* has sometimes been separated into varieties (see synonymy); further study is warranted, but Wells (1969) did not consider them to warrant recognition. The epithet retains the spelling '*uvedalia*' regardless of the grammatical gender of the genus, as it is a pre-Linnaean genus name honoring Robert Uvedale (1642-1722) and being used as a noun in apposition. **Syn:** = Fl7, FNA21, GrPl, K3, K4, Mi, NcTx, S, Tn, WH3; = *Polymnia uvedalia* (Linnaeus) Linnaeus – C, Oh3, RAB, SE1, W, WV, Wells (1969); = *Smallanthus uvedalius* – Ar, Il, K1, Pa, Va, Robinson (1978), orthographic variant; > *Polymnia uvedalia* var. *densipilis* Blake – F, G, Tx, Wells (1965); > *Polymnia uvedalia* var. *floridana* Blake – F, Wells (1965); > *Polymnia uvedalia* var. *uvedalia* – F, G, Wells (1965). NatureServe G4G5 (Apparently Secure).

*Solidago* Linnaeus 1753 (GOLDENROD)

A genus of 90-110 species, herbs, primarily North American, but with a few species in South America, Macaronesia, and Eurasia. The placement of the "flat-topped goldenrods" has been controversial; they are sometimes excluded from *Solidago* and treated as an apparently sister lineage and genus, *Oligoneuron*. References: Beck et al (2021); Braun (1942); Brouillet & Semple (1981); Cook & Semple (2004); SE1; Heard & Semple (1988); Johnson (1995); LeBlond (2000); Levy & Donaldson (2018); Martino, Semple, & Beck (2020); Morton (1973); Morton (1974); Nesom (1993b); Nesom (2009f); Semple & Beck (2021); Semple & Chmielewski (2021); Semple & Cook (2006) in FNA20 (2006b); Semple & Nelson (2018); Semple & Peirson (2013); Semple (2003); Semple (2013); Semple (2017a); Semple (2022); Semple et al (2012); Semple et al (2015); Semple et al (2016a); Semple et al (2016b); Semple et al (2017a); Semple et al (2017b); Semple et al (2019a); Semple et al (2019b); Semple et al (2020a); Semple et al (2020b); Semple et al (2021); Semple, Bzovsky, & Tong (2016); Semple, Kornobis, & Bzovsky (2018); Semple, Tong, & Chong (2017a); Semple, Tong, & Chong (2017b); Semple, Tong, & Pastoloro (2012); Sorrie (2018a) in Weakley et al (2018a); Zhang (1996).

Identification Notes: Several related genera sometimes mistaken for (and/or sometimes included in) *Solidago* are included here as keying "fail-safes". Key adapted (in part) from various sources, especially FNA and SE.

- 1 Inflorescence corymbiform, flat-topped or broadly rounded and about as broad as long, or broader; [section *Parmicoidea*, and section *Solidago* subsection *Multiradiatae*] **Key A**
 1 Inflorescence a panicle, raceme, thyse, or in axillary clusters, usually longer than broad, or with either the central branch well-developed and elongate, or with numerous branches elongate and more-or-less secund heads; [section *Solidago*].

Key to Map
 Symbology:

X : extirpated

- 2 Leaves basally disposed, the basal and lower stem leaves larger, petiolate, and usually persistent, the middle and upper stem leaves smaller and less petiolate.
- 3 Inflorescence cylindrical, of axillary clusters subtended by well-developed stem leaves, or a terminal thyrs or raceme, the branches not secund (unless the stem is arching and the heads become oriented to the side of the axis); [subsections *Glomeruliflorae*, *Humiles*, *Maritimae*, *Squarrosae*] **Key B**
- 3 Inflorescence paniculiform, the major branches (at least) recurved with the heads borne secundly; [subsections *Argutae*, *Junceae*, *Maritimae*, *Nemorales*] **Key C**
- 2 Leaves chiefly on the stem, the basal and lower stem leaves (when not early withering) the same size as or smaller than the middle and upper stem leaves.
- 4 Inflorescence predominantly axillary, with well-developed leaves in at least the lower part of the inflorescence; [subsections *Argutae*, *Glomeruliflorae*, *Squarrosae*, *Thyrsoflorae*] **Key D**
- 4 Inflorescence a well-developed panicle; [subsections *Triplinervae*, *Venosae*] **Key E**

Key A - goldenrods and similar genera with corymbiform inflorescences
(*Bigelowia*, section *Ptarmicoidei*, and section *Solidago*, subsection *Multiradiatae*) (clone)

- 1 Plant a woody shrub; leaves with a markedly pebbled surface *Chrysoma*
- 1 Plant an herb; leaves variously smooth or rugose, but not pebbled.
- 2 Inflorescence flat-topped; disk flowers 2-12, usually fewer than the ray flowers *Bigelowia*
- 2 Inflorescence corymbose (rounded); disk flowers 17-60, more than the ray flowers.
- 5 Leaves of the midstem 1-7 mm wide, 10-20× as long as wide; ray flowers 1-4/head, disk flowers 7-13/head; [AR, OK, MS, LA, and TX] *Solidago nitida*
- 5 Leaves of the midstem 8-20 mm wide, 2-12× as long as wide; ray flowers 6-14/head; disk flowers 6-35/head; [collectively widespread].
- 8 Outer series of phyllaries glabrous on the back (glabrous to short-ciliate on the margin); leaf undersurface glabrous to somewhat hispid (0-20 hairs per square mm) (the margins and midrib beneath often more densely pubescent); stems glabrous to somewhat hispid (0-25 hairs per square mm) *Solidago jacksonii*
- 8 Outer series of phyllaries pubescent on the back (short-ciliate on the margin); leaf undersurface hispid (7-50 hairs per square mm); stems slightly to strongly hispid (10-70 hairs per square mm) *Solidago rigida*

Key B - goldenrods with basally disposed leaves and elongate, cylindrical inflorescences
(section *Solidago*, subsections *Glomeruliflorae*, *Humiles*, *Maritimae*, *Squarrosae*)

- 1 Basal and lower stem leaves with blades truncate to cordate to a winged petiole; heads discoid (lacking ray flowers); [GA and FL Panhandle west through AL and MS to w. LA]; [subgenus *Solidago*, section *Brintonia*] *Solidago discoidea*
- 1 Basal and lower stem leaves sessile, or with blades cuneate to the petiole; heads radiate (with 1-16 disc flowers); [collectively widespread].
- 10 Petioles of lower stem leaves sheathing the stems; [of bog and marsh habitats, growing in soils which are permanently or at least seasonally saturated]; [subsection *Maritimae*] *Solidago virgata*
- 10 Petioles of lower stem leaves not sheathing the stems; [mesic or drier habitats]; [subsection *Squarrosae*].
- 21 Phyllaries linear-lanceolate, attenuate, tapering to a pointed or minutely rounded tip. *Solidago pulverulenta*
- 21 Phyllaries ovate to lanceolate, acute to obtuse or rounded.
- 25 Rays white *Solidago bicolor*
- 25 Rays yellow (may turn pale yellow with age).
- 27 Leaves and stems sparsely to densely hairy with spreading to appressed hairs *Solidago hispida* var. *hispida*
- 27 Leaves and upper stems glabrous.
- 28 Inflorescence either very narrowly thyrsoform and often interrupted or branches well spaced; mid-stem leaves 0.5-2.0 cm wide; [MA to se. IN, south to GA and MI, mostly avoiding the Coastal Plain southward] *Solidago erecta*
- 28 Inflorescence usually denser, broader, and crowded, sometimes more open in robust plants, or narrow in plants outside range of *S. erecta*; mid-stem leaves often > 2.0 cm wide; [MA to GA, west to SD and scattered south in CO to ne. NM].
- 29 Mid-stem leaves 0.4-1.5 (-2.0) cm wide; basal leaves 0.8-2.0 cm wide, entire or slightly serrate, present or absent at flowering *Solidago rigidiuscula*
- 29 Mid-stem leaves usually > 2 cm wide; basal leaves (2.0-) 3.0-5.5 cm wide, coarsely serrate, present at flowering *Solidago speciosa*

Key C - goldenrods with basally disposed leaves and paniculiform inflorescences with heads secund on the branches
(section *Solidago*, subsections *Argutae*, *Junceae*, *Maritimae*, *Nemorales*) {add *S. ulmifolia* vars to Key C}

- 1 Basal and lower stem leaves petiolate with a cordate or subcordate blade and/or a cordate-clasping petiole; [subsection *Argutae*].
- 2 Pappus > 1/2× as long as the disc corollas; rays 1-3 *Solidago auriculata*
- 2 Pappus < 1/4× as long as the disc corollas; rays 3-6 *Solidago sphacelata*
- 1 Basal and lower stem leaves with cuneate leaf blades and petioles not cordate-clasping (though leaves may have petioles which sheath the stem).
- 3 Blades of lower leaves ovate to elliptic to oblanceolate, their bases truncate, abruptly tapering, or gradually tapering to petiole; lower leaves including petioles mostly less than 4× as long as wide (sometimes longer in *S. brachyphylla* with densely puberulent leaf surfaces and stems, and in *S. arguta* var. *bootii* and *S. arguta* var. *caroliniana* with blades sharply serrate and heads lacking phyllary-like bracts interior to ray florets); [subsection *Argutae*].
- 4 Leaves either definitely scabrous or moderately to densely soft-villous or puberulent.
- 5 Leaves scabrous on the upper surface. *Solidago salicina*
- 5 Leaves moderately to densely soft-villous or puberulent. *Solidago brachyphylla*
- 4 Leaves either glabrous (or nearly so) or strigose or strigillose.
- 14 Leaves strigose or strigillose *Solidago bootii*
- 14 Leaves glabrous *Solidago vaseyi*

- 3 Blades of lower leaves oblanceolate to narrowly ovate, gradually tapering to petiole; lower leaves including petioles mostly more than 4× as long as wide (sometimes shorter in *S. juncea* with at least a few phyllary-like bracts interior to ray florets).
- 15 Petiole bases of basal and lower stem leaves not sheathing the stem; [of mesic or dry habitats].
- 16 Stems obviously densely and loosely puberulent; [subsection *Nemorales*]
- *Solidago nemoralis* var. *nemoralis*
- 16 Stems glabrous or nearly so; [subsection *Juncea*].
- 18 Rhizomes thin, elongated, creeping; stem leaves usually 3-nerved; [disjunct from west to glades and barrens]
- *Solidago missouriensis* var. *fasciculata*
- 18 Rhizomes thick, short; stem leaves not 3-nerved; [collectively of various habitats].
- *Solidago juncea*
- 15 Petiole bases of basal and lower stem leaves sheathing the stem; [seasonally saturated habitats]; [subsection *Maritimae*].
- 21 Leaves somewhat fleshy, the stem leaves reduced but not very markedly so; inflorescence almost always with lower branches strongly recurved with secund heads; [usually of maritime or otherwise saline habitats, rarely in nontidal marshes or swamps].
- *Solidago mexicana*
- 21 Leaves not fleshy (rarely so in *S. stricta* of near coastal situations), the stem leaves much reduced relative to the basal; inflorescence showing only relatively weak tendency to recurved branches with secund heads; [inland habitats, except rarely *S. stricta*].
- *Solidago virgata*

Key D - goldenrods with stem leaves dominant and axillary inflorescences
(section *Solidago*, subsections *Argutae*, *Glomeruliflorae*, *Squarrosae*, *Thyrsiflorae*)

- 1 Leaves entire or obscurely few-toothed; achenes glabrous at maturity; outer phyllaries with squarrose tips (tips appressed in *S. rigidiuscula*).
- 2 Outer phyllaries appressed; [subsection *Squarrosae*]..... *Solidago rigidiuscula*
- 2 Outer phyllaries with squarrose tips; [subsection *Thyrsiflorae*].
- 4 Middle and inner series phyllaries glabrous, usually minutely glandular or resinous and shiny; mid and upper stem leaves usually narrowly lanceolate, rarely broadly lanceolate to ovate, green to shiny silvery; [MO to LA west to e. KS to se. and c. TX, disjunct in n. COA]
- *Solidago petiolaris* var. *angusta*
- 4 Middle and inner series phyllaries sparsely to moderately strigose, sometimes minutely glandular; mid and upper stem leaves lanceolate-elliptic to ovate-elliptic; [NC to n. FL west to AL; e. KS, e. OK, c. TX westwards]
- *Solidago petiolaris* var. *petiolaris*
- 1 Leaves generally many- and sharp-toothed; achenes persistently pubescent; outer phyllaries with appressed tips; [subsection *Glomeruliflorae*].
- 6 Stem terete, glaucous.
- 7 Lower midstem leaves narrowly lanceolate, 5-15 cm long, 0.8-3 cm wide, 5-6× as long as wide; stems strongly arching; [plants widespread in our area]
- *Solidago caesia*
- 7 Lower midstem leaves broadly lanceolate to rhombic, 5-9 cm long, 1.3-2.4 cm wide, 3-4× as long as wide; stems weakly arching; [plants of the Gulf Coastal Plain of GA westward].....
- *Solidago zedia*
- 6 Stem striate-angled, green.
- 9 Leaves 1-3 (-3.5)× as long as wide.
- 10 Leaves 1-2.2 (-2.5)× as long as wide, abruptly contracted to a winged petiole; teeth of the leaf margins elongate and narrow, acuminate, mostly (2-) 3-8 mm long (as measured on the upper side of the tooth).....
- *Solidago flexicaulis*
- 10 Leaves (2.2-) 2.5-3 (-3.5)× as long as wide, cuneate to a sessile base; teeth of the leaf margins not notably elongate and narrow, mostly 1-2 (-3) mm long (as measured on the upper side of the tooth)
- *Solidago flaccidifolia*
- 9 Leaves 3-10× as long as wide.
- *Solidago curtisii*

Key E - goldenrods with stem leaves dominant and well-developed paniculiform inflorescences
(section *Solidago*, subsections *Nemorales*, *Triplinervae* and *Venosae*)

- 1 Leaves with only the midvein readily apparent; leaves entire; leaf surfaces finely translucent punctate (most obviously seen with transmitted light or with 10× magnification); fresh leaves usually anise-scented; [subgenus *Triactis*, section *Odorae*].
- *Solidago odora*
- 1 Leaves either triple-veined or pinnately-veined; leaves entire or often at least obscurely toothed; leaf surfaces not translucent punctate; fresh leaves not anise-scented.
- 3 Leaves pinnately veined; leaves mostly 3-5× as long as wide.
- 4 Leaf venation not notably reticulate; plants to 12 dm tall, from a compact caudex; [subgenus *Pleiactila*, section *Venosae*, subsection *Ulmifoliae*].
- *Solidago ulmifolia*
- 4 Leaves pinnately veined and also forming a prominent reticulum, the veins (primary, secondary, and tertiary) very evidently raised on the undersurface (less obviously so in *S. fistulosa*); plants to 30 (-40) dm tall, from long-creeping rhizomes, thus forming clonal patches; [subgenus *Pleiactila*, section *Venosae*, subsection *Venosae*].
- 6 Mid-stem leaves sessile, somewhat clasping; leaf margins nearly entire to obscurely serrulate; leaves planar.....
- *Solidago fistulosa*
- 6 Mid-stem leaves subsessile, not clasping; leaf margins strongly serrate; leaves rugose.
- 8 Leaves relatively thin, not very rugose, usually sharply serrate, the apices acuminate, glabrous or soft-hairy on the surfaces; rays (4-) 5-12 (-13).
- *Solidago rugosa* var. *rugosa*
- 8 Leaves relatively thick and firm, strongly rugose, usually subentire to bluntly serrate, the apices often only acute, slightly to strongly scabrous or stiffly-hairy on the surfaces; rays 4-9.
- 11 Upper stem leaves lanceolate to elliptic, not much reduced relative to leaves lower on the stem.....
- *Solidago rugosa* var. *aspera*
- 11 Upper stem leaves ovate, much reduced relative to leaves lower on the stem.....
- *Solidago rugosa* var. *celtidifolia*
- 3 Leaves triple-veined (two side veins arising near the base of the leaf and arching first away and then back towards the midvein); leaves 2-20× as long as wide.
- 12 Upper stem (above the midpoint, up to the branches of the inflorescence) glabrous.
- 13 Plants to 20 dm tall; basal leaves never present; mid-stem leaves averaging 4-6× as long as wide; upper stem usually slightly to moderately glaucous as well as glabrous; [widespread]; [subgenus *Pleiactilis*, section *Unilaterales*, subsection *Serotiniae*]
- *Solidago gigantea*

13 Plants to 10 dm tall; basal leaves withering or not before flowering (if not, also keyed elsewhere), often with associated sterile offshoots with basal leaves; mid-stem leaves averaging 5-10× as long as wide; upper stem glabrous, green; [KY, TN, and MS westwards].

12 Upper stem hairy (above the midpoint, up to the branches of the inflorescence), variously puberulent, strigillose to strigose, villous, or scabrous.
18 Rays 2-8; midstem leaves 4-15 mm wide, mostly 6-20× as long as wide, either twisted at base or not.

18 Rays 4-17 (-24); midstem leaves 5-30 mm wide, 4-12× as long as wide, not twisted at base.
21 Midstem leaves mostly 8-12× as long as wide.

21 Midstem leaves mostly 4-6× as long as wide; [subgenus *Pleiactilis*, section *Unilaterales*, subsection *Canadensae*].
26 Inflorescence broad; upper stem leaves not reduced in size relative to the mid-stem leaves; [broadly eastern].

26 Inflorescence elongated, narrow; upper stem leaves reduced; [southern].
26 Inflorescence elongated, narrow; upper stem leaves reduced; [southern].

***Solidago altissima* Linnaeus var. *altissima*.** TALL GOLDENROD. **Hab:** Fields, roadsides, disturbed areas. **Dist:** NS, QC, and SK south to n. GA, n. AL, n. MS, AR, and e. OK; introduced in w. North America. **Phen:** Aug-Oct. **Tax:** Semple (2022) reports tetraploid (2n=36) and hexaploid (2n=54) counts for this variety, with most of its broad distribution hexaploid, and smaller zones of distribution of tetraploids centered in the Interior Highlands of AR and OK, and the ne. edge of our region, in NJ and se. NY. **Syn:** = Il, K4, Tx, Semple (2022), Semple et al (2015); < *Solidago altissima* Linnaeus – F, GW2, K1, Mi, Pa, RAB, Tn, WV, Johnson (1995); < *Solidago altissima* ssp. *altissima* – Ar, FNA20, K3, NE; < *Solidago altissima* Linnaeus var. *altissima* – Va; < *Solidago canadensis* – Oh3, W; < *Solidago canadensis* Linnaeus var. *scabra* Torrey & Gray – C, G, GrPl, NcTx, SE1, WH3; < *Solidago hirsutissima* P. TN (Chester, Wofford, & Kral 1997), AR, and se. OK south to GA, c. Panhandle FL, AL, MS, LA, and e. TX. **Phen:** Aug-Sep. **Syn:** = Ar, F17, FNA20, K1, K3, K4, SE1, Tn, Tx, WH3; = *Solidago amplexicaulis* M. Martens; = *Solidago notabilis* Mackenzie – RAB, S. NatureServe G4 (Apparently Secure).

***Solidago bicolor* Linnaeus.** SILVERROD, WHITE GOLDENROD. **Hab:** Woodlands, roadbanks, pastures. **Dist:** NS and MB south to GA and LA. **Phen:** Jul-Oct. **Syn:** = C, FNA20, G, Il, K1, K3, K4, Mi, NE, Oh3, Pa, RAB, S, SE1, Tn, Va, W, WV, Johnson (1995), LeBlond (2000), Semple et al (2017a); > *Solidago bicolor* var. *bicolor* – F; > *Solidago bicolor* var. *ovalis* – F. NatureServe G5 (Secure).

***Solidago boottii* Hooker.** BOOTT'S GOLDENROD. **Hab:** Dry open woodlands, dry slopes, often in sandy or rocky soils. **Dist:** C. SC south to s. AL, west to LA, AR, and s. MO, most common in the Ozarks. Reported for n. WV by Harmon, Ford-Werntz, & Grafton (2006), but it seems likely that this is based on different interpretations of the taxa. **Phen:** Aug-Oct. **Syn:** = Tx, Semple et al (2021); = *Solidago arguta* Aiton ssp. *boottii* (Hooker) G.H. Morton; = *Solidago arguta* ssp. *caroliniana* (A. Gray) G.H. Morton var. *boottii* (Hooker) Palmer & Steyermark – Ar, FNA20; = *Solidago arguta* Aiton var. *boottii* (Hooker) Palmer & Steyermark – K1, K3, K4, SE1, Tn; < *Solidago arguta* – RAB; ~ *Solidago arguta* Ait. var. *strigosa* (Small) Palmer & Steyermark; > *Solidago boottii* Hooker – F, S, WV; > *Solidago boottii* var. *boottii* – G, Johnson (1995); > *Solidago strigosa* – F, G, S.

***Solidago brachyphylla* Chapman.** DIXIE GOLDENROD. **Hab:** Open woodlands, bluff forests. **Dist:** SC (NC?) south to ne. FL and Panhandle FL, west to s. AL (s. MS?). **Phen:** Sep-Nov. **Syn:** < *Solidago brachyphylla* Chapman – F17, FNA20, K1, K3, K4, S, SE1, WH3.

***Solidago caesia*.** AXILLARY GOLDENROD. **Hab:** Moist forested slopes. **Dist:** ME and ON south to FL and LA. **Phen:** Aug-Oct. **Syn:** = Semple & Beck (2021); = *Solidago caesia* Linnaeus var. *caesia* – Ar, FNA20, K3, K4, NE, Va, Johnson (1995); < *Solidago caesia* – C, F, F17, G, Il, K1, Mi, Oh3, Pa, RAB, S, SE1, Tn, Tx, W, WH3, WV.

***Solidago curtisii* Torrey & A. Gray.** CURTIS'S GOLDENROD. **Hab:** Moist forested slopes, and rarely in mafic woodlands in the Piedmont of VA. **Dist:** A Central and Southern Appalachian endemic: PA, WV, and MD south to n. GA and n. AL. **Phen:** Sep-Oct. **Tax:** Var. *curtisii*, with stem glabrous or slightly puberulent in the inflorescence, and var. *pubens* (M.A. Curtis) A. Gray, with stem densely puberulent, are sometimes distinguished. They do not appear to be worthy of taxonomic recognition. **Syn:** = C, K3, K4, Pa, SE1, Tn, Va, W, WV; = *Solidago caesia* Linnaeus var. *curtisii* (Torrey & A. Gray) Wood – Johnson (1995); = *Solidago curtisii* var. *curtisii* – FNA20; < *Solidago curtisii* Torrey & A. Gray – K1; > *Solidago curtisii* Torrey & A. Gray – S; < *Solidago curtisii* var. *curtisii* – RAB; > *Solidago curtisii* var. *curtisii* – F, G; > *Solidago curtisii* var. *pubens* (M.A. Curtis) A. Gray – F, G, RAB; > *Solidago pubens* M.A. Curtis – S. NatureServe GNR (Not Yet Ranked).

***Solidago discoidea* (Elliott) Torrey & A. Gray.** BRINTONIA, RAYLESS MOCK-GOLDENROD. **Hab:** Rich bluff forests. **Dist:** Sw. GA and Panhandle FL west to w. LA. **Phen:** Aug-Oct. **Syn:** = K1; = *Brintonia discoidea* (Elliott) Greene – F17, FNA20, K3, K4, S, SE1, WH3. NatureServe G4G5 (Apparently Secure).

***Solidago erecta* Banks ex Pursh.** **Hab:** Woodlands, old fields, woodland borders, grassy balds. **Dist:** NY and CT south to GA, AL, and MS. **Phen:** Aug-Oct. **Syn:** = C, F, FNA20, G, K1, K3, NE, Oh3, Pa, RAB, S, SE1, Tn, Va, W, WV, Semple et al (2017a); = *Solidago speciosa* Nuttall var. *erecta* (Banks ex Pursh) MacMillan – Johnson (1995); < *Solidago erecta* Banks ex Pursh – FNA20, (also see *S. porteri*).

Solidago fistulosa P. Miller. HAIRY PINEYWOODS GOLDENROD. **Hab:** Pocosins, swamp forests, wet pine savannas, wet pine flatwoods, maritime forests. **Dist:** NJ south to s. FL, west to LA. **Phen:** Aug-Nov. **Syn:** = C, F, F17, FNA20, G, GW2, K1, K3, K4, RAB, S, SE1, Va, WH3, Johnson (1995), Semple, Bzovsky, & Tong (2016). **NatureServe G4G5** (Apparently Secure).

Solidago flaccidifolia Small. APPALACHIAN GOLDENROD. **Hab:** Forests. **Dist:** VA and KY south to GA and ne. AL; disjunct in nc. MS. **Phen:** Sep-Oct. **Syn:** = C, G, K1, K3, K4, SE1, Tn, Va, W; = *Solidago caesia* Linnaeus var. *paniculata* A. Gray; = *Solidago curtisii* Torrey & A. Gray var. *flaccidifolia* (Small) R.E. Cook & Semple – FNA20; = *Solidago latissimifolia* P. Miller – S, misapplied; < *Solidago caesia* – F, RAB.

Solidago flexicaulis Linnaeus. ZIGZAG GOLDENROD, BROAD-LEAVED GOLDENROD. **Hab:** Moist wooded slopes, especially over calcareous or mafic rocks. **Dist:** NS, ON, and ND south to GA, AL, MS, and KS. **Phen:** Jul-Oct. **Syn:** = Ar, C, F, FNA20, G, GrPl, Il, K1, K3, K4, Mi, NE, Oh3, Pa, RAB, S, SE1, Tn, Va, W, WV, Johnson (1995); > *Solidago latifolia* Linnaeus. **NatureServe G5** (Secure).

Solidago gigantea Aiton. SMOOTH GOLDENROD. **Hab:** Old fields, roadsides, streamside meadows, bottomlands. **Dist:** NS west to SK and MT, south to Panhandle FL (Liberty County), TX, and CO. **Phen:** Aug-Sep (-Oct). **Tax:** Three cytotypes are documented and have available names at specific rank -- diploid = *Solidago gigantea*, tetraploid = *Solidago serotinoidea*, and hexaploid = *Solidago shinnersii*. Martino, Semple, & Beck (2020) studied these and recommended against giving them taxonomic status, though they do differ in morphology, distribution, nutrient use, and invasiveness. **Syn:** = Ar, C, F17, GrPl, GW2, Il, K1, K3, K4, Mi, Mo2, NcTx, NE, RAB, Tn, Tx, Va, W, WH3, Martino, Semple, & Beck (2020); = *Solidago serotina* Aiton – S; > *Solidago gigantea* var. *gigantea* – F, G, Oh3, Pa, SE1, WV, Johnson (1995); > *Solidago gigantea* var. *leiophylla* Fernald – F, Oh3, WV; > *Solidago gigantea* Aiton var. *serotina* (Kuntze) Cronquist – G, Pa, SE1, Johnson (1995); > *Solidago serotinoidea* Å. Löve & D. Löve; > *Solidago shinnersii* (Beaudry) Beaudry. **NatureServe G5T5** (Secure).

Solidago hispida Muhlenberg ex Willdenow var. *hispida*. HAIRY GOLDENROD. **Hab:** Dry rocky forests and woodland edges. **Dist:** NL (Labrador) west to SK, south to nw. GA, AL, AR, IA, and SD. **Phen:** Jul-Oct. **Comm:** Widespread in e. and c. TN (Chester, Wofford, & Kral 1997) and in nw. GA (Jones & Coile 1988). Also reported for NC and SC by Kartesz (1999, 2010). Our variety is the typical; other varieties are more northern, around the Great Lakes and in maritime Canada. **Syn:** = F, G, Mi, NE, LeBlond (2000), Semple et al (2017a); < *Solidago hispida* – Ar, C, FNA20, K3, K4, Oh3, Pa, S, SE1, Tn, Va, W, WV, Johnson (1995); > *Solidago hispida* Muhlenberg ex Willdenow var. *hispida* – F, G, Il, K1, Mo2. **NatureServe G5T5** (Secure).

Solidago jacksonii (Kuntze) Fernald. SOUTHEASTERN BOLD GOLDENROD. **Hab:** Glades, barrens, and prairie-like areas, over mafic (such as diabase) or calcareous (such as calcareous shale) rocks, and in adjacent disturbed areas, such as roadbanks and powerline rights-of-way. **Dist:** Sc. VA, se. TN, sc. OH, and e. MO south to c. SC, sw. GA, and e. TX. **Phen:** Late Aug-Oct. **Tax:** This taxon is apparently strictly diploid; it seems to warrant specific rank, though it has been given varietal and subspecific rank. **Comm:** This taxon (variously treated as a species, subspecies, or variety) is rare and scattered throughout its range, restricted to prairie-like, barren, or glade situations. **Syn:** = F; = *Oligoneuron jacksonii* (Kuntze) Small – S; = *Oligoneuron rigidum* (Linnaeus) Small var. *glabratum* (E.L. Braun) Nesom – Il, K1, Nesom (1993b); = *Solidago rigida* ssp. *glabrata* (E.L. Braun) Heard & Semple – Ar, FNA20, K4, Tn, Heard & Semple (1988); = *Solidago rigida* Linnaeus var. *glabrata* E.L. Braun – C, G, K3, SE1, Va; < *Solidago rigida* Linnaeus – NcTx, RAB, Tx, W. **NatureServe G5T4** (Apparently Secure).

Solidago juncea Aiton. EARLY GOLDENROD. **Hab:** Meadows, pastures, roadbanks, woodland borders. **Dist:** NS west to MN, south to GA, AL, MS, and n. LA. **Phen:** Jul-Oct. **Syn:** = Ar, C, FNA20, K3, K4, Mi, Mo2, NE, Oh3, Pa, RAB, S, SE1, Tn, Va, W, WV, Johnson (1995); > *Solidago juncea* var. *juncea* – F, G, K1; > *Solidago juncea* var. *neoboheica* Fernald – F, K1; > *Solidago juncea* var. *ramosa* Porter & Britton – G.

Solidago leavenworthii Torrey & A. Gray. LEAVENWORTH'S GOLDENROD. **Hab:** Wet pine savannas, wet pine flatwoods, pond margins, marshes. **Dist:** Se. NC south to s. FL, west to s. AL. **Phen:** Aug-Nov. **Syn:** = F17, FNA20, GW2, K1, K3, K4, RAB, S, SE1, WH3; > *Solidago nashii* Small. **NatureServe G3G4** (Vulnerable).

Solidago mexicana Linnaeus. SOUTHERN SEASIDE GOLDENROD. **Hab:** Coastal dunes, dune slacks, maritime wet grasslands, tidal marshes. **Dist:** E. MA south to s. FL, west and south to TX and Mexico; West Indies. **Phen:** Late Aug-Dec (and year-round southwards). **Tax:** This taxon warrants distinction at specific rank from *S. sempervirens*. **Syn:** = K4, S, Semple et al (2016a); = *Solidago sempervirens* ssp. *mexicana* (Linnaeus) Semple – FNA20, Semple (2003); = *Solidago sempervirens* var. *mexicana* (Linnaeus) Fernald – C, F, G, GW2, Il, K1, K3, NE, SE1, Tx, Va, Johnson (1995); < *Solidago sempervirens* Linnaeus – Bah, F17, RAB, WH3. **NatureServe G5T5?** (Secure).

Solidago missouriensis Nuttall var. *fasciculata* Holzinger. EASTERN MISSOURI GOLDENROD. **Hab:** Prairies, barrens, woodlands, barrens, "Coosa prairies". **Dist:** MI, w. ON, and s. AB, south to se. TN, nw. GA, MS, AR, se. TX, COA. In nw. GA (T. Govus, pers.comm. 2009); in c. TN (Chester, Wofford, & Kral 1997). **Phen:** (Jul-) Aug-Oct. **Syn:** = C, F, G, GrPl, K1, Mo2, NcTx, SE1, Tn, Tx, Semple & Chmielewski (2021); = *Solidago glaberrima* Martens – Il, S; < *Solidago missouriensis* – FNA20, K3, K4, Mi. **NatureServe G5T5** (Secure).

***Solidago nemoralis* Aiton var. *nemoralis*.** EASTERN GRAY GOLDENROD. **Hab:** Woodlands, glades, barrens, roadbanks. **Dist:** NS west to ND, south to Panhandle FL and TX. **Phen:** Jun-Nov. **Syn:** = K1, K3, NcTx, Oh3, Tx, Va; = *Solidago nemoralis* – Il, Mi; = *Solidago nemoralis* ssp. *nemoralis* – Ar, FNA20, NE, Semple, Kornobis, & Bzovsky (2018); < *Solidago nemoralis* – F17, Pa, RAB, S, Tn, W, WH3, Johnson (1995); > *Solidago nemoralis* var. *haleana* Fernald – C, F, G, SE1, WV; > *Solidago nemoralis* Aiton var. *nemoralis* – C, F, G, SE1, WV.

***Solidago nitida* Torrey & A. Gray.** SHINY GOLDENROD. **Hab:** Pine savannas, sandy prairies. **Dist:** MS west to s. AR, se. OK, and TX. **Phen:** (Jul-) Aug-Oct. **Syn:** = Ar, FNA20, K3, K4, NcTx, SE1, Tx; = *Oligoneuron nitidum* (Torrey & A. Gray) Small – K1, S, Nesom (1993b). [NatureServe G4?](#) (Apparently Secure).

***Solidago odora* Aiton.** LICORICE GOLDENROD. **Hab:** Dry forests and woodlands, especially in dry pinelands, such as sandhills, of the Coastal Plain, inland in dry, fire-maintained sites, such as glades, barrens, and ridgetop pine-oak woodlands. **Dist:** NH, VT, NY, OH, and MO south to FL and TX. **Phen:** Jul-Oct. **Syn:** = F, G, NcTx, Oh3, Pa, RAB, S, Tn, Tx, Va, W, WV, Johnson (1995), Semple, Bzovsky, & Tong (2016); = *Solidago odora* ssp. *odora* – Ar, FNA20, NE; = *Solidago odora* var. *odora* – C, F17, K1, K3, K4, Mo2, WH3. [NatureServe G5T5](#) (Secure).

***Solidago petiolaris* Aiton var. *angusta* (Torrey & A. Gray) A. Gray.** **Hab:** Upland forests and woodlands. **Dist:** S. IL, MO, and e. KS south to LA and c. TX. **Phen:** Late Aug-Nov. **Tax:** See Semple et al. (2017b). **Syn:** = GrPl, K3, K4, SE1, Semple et al (2017b); = *Solidago angusta* Torrey & A. Gray; < *Solidago petiolaris* Aiton – Ar, FNA20, Tx. [NatureServe G5T4?](#) (Apparently Secure).

***Solidago petiolaris* Aiton var. *petiolaris*.** DOWNY GOLDENROD. **Hab:** Upland forests and woodlands. **Dist:** NC, SC, GA, AL, and MS south to n. FL. **Phen:** Late Aug-Nov. **Tax:** The eastern component is sometimes treated as *S. petiolaris* (sensu stricto) and the western as *S. angusta* Torrey & A. Gray. Alternatively these are recognized as the varietal rank (as here), or combined entirely. Var. *angusta* (Torrey & A. Gray) A. Gray and var. *wardii* (Britton) Fernald are Ozarkian and more western (Nesom 2008a). See Semple et al. (2017b). **Syn:** = C, F, GrPl, K1, K3, K4, SE1, Semple et al (2017b); = *Solidago petiolaris* Aiton – G, Il; > *Solidago harperi* Mackenzie in Small – S; > *Solidago milleriana* Mackenzie – S; < *Solidago petiolaris* Aiton – F17, NcTx, RAB, W, WH3. [NatureServe G5T4?](#) (Apparently Secure).

***Solidago pulverulenta* Nuttall.** **Hab:** Savannas, streamhead pocosins, flatwoods, swamps, seepages in pinelands, and disturbed areas. **Dist:** Se. VA south to Panhandle FL, west to LA. **Phen:** Sep-Oct. **Syn:** = S; = *Solidago puberula* ssp. *pulverulenta* (Nuttall) Semple – FNA20, Semple (2003); = *Solidago puberula* Nuttall var. *pulverulenta* (Nuttall) Chapman – C, F, F17, G, K1, K3, K4, RAB, SE1, Va, WH3, Johnson (1995). [NatureServe G5T4T5](#) (Apparently Secure).

***Solidago rigida* Linnaeus.** MIDWESTERN BOLD GOLDENROD. **Hab:** Glades, barrens, and prairie-like areas, over mafic or calcareous rocks. **Dist:** RI and MA west to NY, s. ON, MI, WI, s. MN and c. NE, south to c. VA, sc. NC, w. NC, sc. TN, c. AR, and se. TX. East of MI, IN, IL, MO, and OK, *Solidago rigida* is generally rare and restricted to relictual prairie-like situations. **Phen:** Aug-Oct. **Tax:** This taxon is tetraploid ($2n=36$) through most of its range, with a few diploids reported for OK. **Syn:** =; = *Oligoneuron rigidum* (Linnaeus) Small; = *Oligoneuron rigidum* (Linnaeus) Small var. *rigidum* – Il, K1, NE, Nesom (1993b); = *Solidago rigida* ssp. *rigida* – Ar, FNA20, K3, K4, Mo2, Tn, Heard & Semple (1988); = *Solidago rigida* Linnaeus var. *rigida* – C, G, GrPl, SE1, Va; < *Oligoneuron grandiflorum* (Rafinesque) Small; < *Solidago rigida* Linnaeus – F, Mi, NcTx, Oh3, Pa, RAB, Tx, W, Johnson (1995); < *Solidago rigida* var. *grandiflorum* – S. [NatureServe G5T5](#) (Secure).

***Solidago rigidiuscula* (Torrey & A. Gray) Porter.** NARROWLEAF SHOWY GOLDENROD. **Hab:** Limestone barrens. **Dist:** ON west to ND and WY, south to TN, LA, and TX; disjunct eastward in glade habitats to nw. GA (GANHP), TN (Chester, Wofford, & Kral 1997), KY, and possibly NC and SC. Semple et al. (2012) also mention occurrences as far east as the Carolinas; this requires additional assessment. **Phen:** (Aug-) Sep-Oct. **Tax:** Probably best accorded specific rank, following Semple et al. (2012). **Syn:** = Il, S, Semple et al (2012), Semple, Tong, & Chong (2017a); = *Solidago speciosa* ssp. *speciosa* var. *rigidiuscula* – Ar, FNA20; = *Solidago speciosa* var. *angustata* Torrey & A. 403. ASTERACEAE

*Soliva* Ruiz & Pavón 1794 (BURWEED)

A genus of about 8 species, herbs, of South America. References: Arriagada & Miller (1997); SE1; Watson (2006g) in FNA19 (2006a).

- 1 Achenes (1.5-) 2.5-3.0 mm long, usually winged, the wings not transversely ribbed *Soliva sessilis*
 1 Achenes 1.5-2.2 mm long, winged, transversely ribbed. *Soliva anthemifolia*

* *Soliva anthemifolia* (A.L. de Jussieu) Sweet. **Hab:** Lawns, disturbed areas. **Dist:** Native of South America. **Phen:** Feb-Apr. **Syn:** = Ar, FI7, FNA19, K3, K4, SE1, Arriagada & Miller (1997); = *Gymnostyles anthemifolia* Antoine Laurent de Jussieu – K1, S, WH3; ? *Soliva mutisii* Kunth – NcTx.

* *Soliva sessilis* Ruiz & Pavón. FIELD BURWEED, LAWN BURWEED, SPURWEED, JO-JO, BAREFOOT-DEMON, EVILWEED. **Hab:** Lawns, roadsides. **Dist:** Native of South America. **Phen:** Apr-May. **Comm:** An unpleasant and painful lawn weed. **Syn:** = Ar, FI7, FNA19, K1, K3, S, Va, WH3, Arriagada & Miller (1997); = *Cotula sessilis* (Ruiz & Pavón) Stace – K4; = *Soliva pterosperma* (A.L. de Jussieu) Lessing – NcTx, RAB, SE1. NatureServe GNR (Not Yet Ranked).

*Sonchus* Linnaeus 1753 (SOW-THISTLE, MILK-THISTLE)

A genus of about 50-60 species, herbs and shrubs, of the Old World. References: SE1; Hyatt (2006) in FNA19 (2006a).

- 1 Heads 30-50 mm across in flower, the involucre (10-) 15-20 mm high; perennials from creeping rhizomes. *Sonchus arvensis* var. *glabrescens*
 1 Heads 15-25 mm across in flower, the involucre 9-13 mm high; annuals.
 3 Leaf base auricles rounded; mature achenes not transversely rugose *Sonchus asper*
 3 Leaf base auricles sagittate, the two lobes on either side of the stem coming to a point; mature achenes transversely rugose *Sonchus oleraceus*

* *Sonchus arvensis* Linnaeus var. *glabrescens* (Günther) Grabowski & Wimmer. PERENNIAL SOW-THISTLE. **Hab:** Disturbed areas. **Dist:** Native of Europe. **Phen:** Jun-Nov. **Syn:** = C, NE, SE1, Va, WV; = *Sonchus arvensis* ssp. *uliginosus* (Bieberstein) Nyman – FNA19, GrPl, K1, K3, K4, Pa, Tn; = *Sonchus uliginosus* Bieberstein – G, Il, Oh3; < *Sonchus arvensis* – Mi, RAB, W; > *Sonchus arvensis* Linnaeus var. *glabrescens* (Günther) Grabowski & Wimmer – F; > *Sonchus uliginosus* Bieberstein – F. NatureServe GNR (Not Yet Ranked).

* *Sonchus asper* (Linnaeus) Hill. SPINY-LEAF SOW-THISTLE, PRICKLY SOW-THISTLE. **Hab:** Roadsides, fields, pastures, disturbed areas. **Dist:** Native of Europe. **Phen:** Late Mar-Jul. **Syn:** = Ar, Bah, C, F, FI7, FNA19, G, GrPl, Il, K1, K3, K4, Mi, NcTx, NE, Oh3, Pa, RAB, S, SE1, Tn, Va, W, WH3, WV. NatureServe GNR (Not Yet Ranked).

* *Sonchus oleraceus* Linnaeus. COMMON SOW-THISTLE. **Hab:** Roadsides, fields, pastures, disturbed areas. **Dist:** Native of Europe. **Phen:** Late Mar-Jul. **Syn:** = Ar, Bah, C, F, FI7, FNA19, G, GrPl, Il, K1, K3, K4, Mi, NcTx, NE, Pa, RAB, S, SE1, Tn, Va, W, WH3, WV. NatureServe GNR (Not Yet Ranked).

*Sphagneticola* O. Hoffmann 1900

Key to Map
 Symbology:

* : waif
 EN : endemic
 H : historic

A genus of about 4 species, perennial herbs, of tropical America and Asia. References: Strother (2006qq) in FNA21 (2006c).

* *Sphagneticola trilobata* (Linnaeus) Pruski. CREEPING OXEYE. **Hab:** Disturbed areas. **Dist:** Native of tropical America. Naturalized in FL (including several counties in the Panhandle adjacent to GA) (Wunderlin & Hansen 2003). Reported for Beaufort County, SC (Bradley et al. [in prep.]). **Phen:** Jan-Dec. **Syn:** = F17, FNA21, K1, K3, K4, WH3; = *Wedelia trilobata* (Linnaeus) A.S. Hitchcock – Bah, S, SE1. NatureServe G5 (Secure).

Stokesia L'Héritier 1789 (STOKESIA, STOKES ASTER)

A monotypic genus, an herb, of se. North America. References: SE1; Jones (1982); Loos et al (2019); Strother (2006a) in FNA19 (2006a).

Stokesia laevis (Hill) Greene. STOKESIA, STOKES ASTER, BLUE STOKESIA. **Hab:** Pitcherplant bogs and moist pinelands, and also rather frequently grown as a garden plant and naturalized from cultivation in states outside its native distribution. **Dist:** Native from e. SC south ne. FL, FL Panhandle, west to e. LA (St. Tammany Parish); disjunct in w. LA and e. TX (Loos et al. 2019). **Phen:** Late Jun-Aug. **Tax:** There seems no reason to question the validity and native status of the early record from SC. A unique tetraploid population found by the Atlanta Botanical Garden in Omega, GA (near Tifton) in the 1990s was distinguished by having distinct upright and long scapes, up to 1 meter in length; the original population has been destroyed, but a selection derived from it was named 'Omega Skyrocket' and introduced into the commercial trade (Barb, Werner, & Tallury 2008). **Syn:** = F17, FNA19, K1, K3, K4, RAB, S, SE1, WH3, Jones (1982). NatureServe G4 (Apparently Secure).

Symphyotrichum Nees 1833 (AMERICAN ASTER)

A genus of about 90-100 species, of North America. References: Brouillet & Semple (1981); Brouillet et al (2006) in FNA20 (2006b); Campbell & Seymour (2014); SE1; Haines (2010); Holmes & Singhurst (2021); Jones & Young (1983); Jones (1980a); Jones (1980b); Jones (1983); Jones (1984); Jones (1992); Jones, Witsell, & Nesom (2008); Kauffman et al (2004); Kral (1983a); Lamboy (1987); Lamboy (1992); Medley (2021a); Nesom (1993a, 1993b, 1994, 1997); Nesom (1994a); Nesom (1994b); Nesom (1997a); Nesom (1997b); Nesom (2005b); Nesom (2006oo); Nesom (2007); Noyes & Rieseberg (1999); Reveal & Keener (1981); Semple & Brouillet (1980a); Semple & Brouillet (1980b); Semple & Chmielewski (1987); Semple (2019); Semple, Chmielewski, & Lane (1989); Semple, Heard, & Xiang (1996); Sundberg (2004); Ward (2012a); Warners & Laughlin (1999); Xiang & Semple (1996).

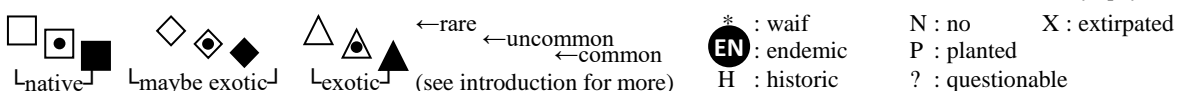

Key to subgenus *Astropolium* based on Nesom (2005b).

- 1 Basal and lower stem leaves both petiolate and with cordate blades..... **Key A**
- 1 Basal and lower stem leaves not both petiolate and with cordate blades..... **Key B**
- 2 Annuals, from a taproot; [of moist, usually maritime, and usually saline habitats]; [subgenus *Astropolium*]..... **Key B**
- 2 Perennials, from a caudex, rhizome, or crown; [collectively of various habitats]..... **Key B**
- 3 Stem leaves fleshy, entire, linear; stems glabrous..... **Symphyotrichum tenuifolium**
- 3 Leaves not fleshy, usually toothed, stems usually variously pubescent..... **Key D**
- 4 Leaves either very numerous on the main stem, the internodes < 1 cm long (in some species the leaves of the lower and middle main stem withered or deciduous by flowering season, the internode length then reckonable by leaf scars), the leaves clasping or sessile, or leaves rather numerous on main stem, the internodes < 3.5 cm long, the leaves of the main stem strongly auriculate clasping (*S. georgianum*, *S. phlogifolium*); stem leaves entire, (often scabrous-margined); rays purple, lavender, rose, or blue (or characteristically white in *S. ericoides* and very rarely also in other species); [subgenus *Virgulus*]..... **Key D**
- 4 Leaves less numerous on the main stem, the internodes averaging > 3.5 cm long, the leaves clasping, subclasping, or not clasping; stem leaves toothed (or rarely entire); rays blue, purple, lavender, pink, or white..... **Key E**
- 5 Stem leaves clasping to sheathing; rays blue, purple, or lavender..... **Key E**
- 5 Stem leaves not clasping; rays blue, purple, lavender, rose, or white..... **Key F**
- 6 Phyllaries (most or all) with an involute (inrolled) subulate green tip..... **Key F**
- 6 Phyllaries flat or sometimes with sides slightly curved, but lacking a subulate tip..... **Key G**

Key A - perennial asters with petiolate, cordate-bladed lower leaves
[of subgenus *Symphyotrichum*, sections *Heterophylli* and *Concinni*]

- 3 Cauline leaf blades sessile and cordate-clasping, or petiolate, the petiole strongly dilated to a cordate-clasping base, or both..... **Symphyotrichum undulatum**
- 3 Cauline leaves not cordate clasping; [collectively widespread]..... **Symphyotrichum cordifolium**
- 4 Lower stems glabrous; upper stems sparsely hirtellous or pilose..... **Symphyotrichum urophyllum**
- 5 Basal leaves deeply cordate; phyllaries with lanceolate diamond shaped blaze (2-3× as long as wide), purple to greenish purple..... **Symphyotrichum cordifolium**
- 5 Basal leaves shallowly cordate to truncate; phyllaries with short diamond shaped blaze (1-1.5× as long as wide) or linear-lanceolate-shaped blaze (> 4× as long as wide), green..... **Symphyotrichum urophyllum**
- 4 Lower stems glabrous to sparsely hirsute; upper stems densely hirtellous to hirsute; [mainly west of the Appalachians]..... **Symphyotrichum oolentangiense**
- 8 Phyllaries with short diamond-shaped green blaze (1-1.5× as long as wide); basal and lower stem leaves mostly crenate to entire; upper stem leaves entire..... **Symphyotrichum oolentangiense**
- 9 Plants with only the basal and lower stem leaf blades cordate or subcordate, the midstem and upper leaves not petiolate and with cuneate bases; phyllary faces glabrous; disc flowers (15-) 20-25 (-30)..... **Symphyotrichum oolentangiense**
- 9 Plants with nearly all basal and stem leaf blades cordate or subcordate; phyllary faces short-pubescent; disc flowers 16-23..... **Symphyotrichum shortii**

Key to Map
 Symbology:

- 8 Phyllaries with elongate green blaze (> 2× as long as wide); basal and lower stem leaves serrate or crenate; upper stem leaves serrate or crenate (to entire).
 10 Plants 4-12 dm tall; cypselas glabrous *Symphyotrichum drummondii*
 10 Plants 3-8 dm tall; cypselas strigillose *Symphyotrichum texanum*

Key B - annual salt-marsh asters
[of subgenus *Astropolium*]

- 1 Heads usually dense in an elongate, pyramidal-paniculate arrangement; inner phyllaries 6-7 mm long, phyllary apices linear-acuminate, distal margins often inrolled/involute, green zone of phyllaries narrowly lanceolate, usually extending the entire length of the phyllary, chartaceous bases short or absent; pappus accrescent, 4-5.5 mm long at maturity and usually longer than coiled ray corollas; [habitats wet, saline] *Symphyotrichum subulatum*
 1 Heads corymbiform to thyrsiform, diffusely paniculate, or secund to subsecund and paniculiform arrangements or at the tips of long, bracteate branches; inner phyllaries 4-6.5 mm long, phyllary apices acute to acuminate, distal margins inrolled/involute or not, green zone of phyllaries lanceolate to elliptic, chartaceous bases usually conspicuous; pappus not accrescent, 3.5-4 (-5) mm long at maturity, longer or shorter than ray corollas; [habitats moist to wet, rarely saline].
 *Symphyotrichum divaricatum*

Key D - perennial asters [of subgenus *Virgulus*]

- 1 Mid and upper stem leaves > 8× as long as wide; phyllaries tipped with a small, white spine; rays white (to pale pink); involucre 2.5-4.5 (-5) mm high; disc flowers 6-12 (-20) per head; [section *Ericoidi*] *Symphyotrichum ericoides* var. *ericoides*
 1 Mid and upper stem leaves 2-7× as long as wide; phyllaries not spine-tipped; rays purple, lavender, rose, blue (rarely nearly white); involucre > 5 mm high (except sometimes as short as 4 mm high in *S. adnatum* of s. GA and FL west to LA); disc flowers (6-) 11-110 per head.
 2 Mid and upper stem leaves with bases rounded to cuneate (or clasping in *S. plumosum* of FL Panhandle), usually twisted at the base by 90 degrees to bring one leaf margin along the stem; phyllaries not stipitate-glandular; [section *Virgulus*].
 3 Rays 13-36; cypselas glabrous. *Symphyotrichum pratense*
 3 Rays 7-16; cypselas densely strigose. *Symphyotrichum concolor* var. *concolor*
 2 Mid and upper stem leaves with bases clasping or auriculate clasping (except cuneate, rounded, or slightly clasping in *S. grandiflorum*, *S. oblongifolium*, and *S. fontinale*), the blade not twisted at the base (except in *S. adnatum*); phyllaries stipitate glandular (or sometimes or always lacking stipitate glands in *S. fontinale* and *S. walteri* (of the Coastal Plain from e. NC southward), and *S. patens* var. *patentissimum* (of KY and MS westward).
 7 Mid-stem leaves < 1.5 cm long, either ascending-appressed, or spreading and with the apical portion abruptly deflexed; rays 5-9 (-11) mm long; [of the Coastal Plain]; [section *Patentes*]. *Symphyotrichum adnatum*
 7 Mid-stem leaves > 2 cm long, spreading; rays > 9 mm long (to as short as 7 mm in *S. fontinale* of Panhandle FL); [collectively widespread].
 9 Mid-stem leaves cuneate, rounded, or subclasping; [section *Grandiflori*]. *Symphyotrichum oblongifolium*
 9 Mid-stem leaves clasping to auriculate-clasping.
 13 Phyllaries with attenuate, loosely spreading tips; disc flowers 50-110; ray flowers (40-) 50-75 (-100); [mainly of sunny, moist to wet marshes, swamps, fens, south to GA, wc. AL, c. MS]; [section *Grandiflori*] *Symphyotrichum novae-angliae*
 13 Phyllaries with obtuse to acute tips (the inner phyllaries sometimes acuminate, but not attenuate); disc flowers 15-50; ray flowers 9-24 (-30); [of sunny to semi-sunny dry sites, or of moist forests, collectively widespread, south to ne. FL, Panhandle FL, s. AL, s. MS, se. LA].
 16 Involucres broadly turbinate, mostly 8-12 mm long; phyllaries in 4-7 series (grading into bracts), more or less appressed, obtuse to acute, middle ones 1.2-1.7 mm wide (ovate to lanceolate), densely strigillose or sericeous-strigose; plants largely eglandular (except for sparse sessile glands on phyllaries), usually with leaves only ca. 2-3 cm long at mid-stem, developing many long stiff branches with abrupt further reduction in leaf size; [from w. KY and w. MS westward] *Symphyotrichum patens* var. *patentissimum*
 16 Involucres campanulate or narrowly turbinate, mostly 5-7.5 mm long; phyllaries in 4-5 (-6) series, often somewhat squarrose, acute to acuminate, middle ones 0.7-1.2 mm wide (linear to lanceolate), densely strigillose to almost glabrous; plants glandular (mostly stipitate-) or largely eglandular, with varied leaf size and branching; [collectively widespread].
 17 Mid-stem leaves mostly 5-7 cm long, separated by internodes of (1-) 1.5-3 (-4) cm at their densest, usually spreading; plants usually 0.8-1.6 m tall; heads mostly 9-12 mm wide *Symphyotrichum patens* var. *patens*
 17 Mid-stem leaves mostly 3-5 cm long, separated by internodes of (0.5-) 1-2 (-3) cm at their densest, often adnate-ascending; plants usually 0.4-0.8 m tall; heads mostly 7-11 mm wide.
 18 Stems and leaves generally eglandular (except sometimes for scattered glands on distal branches), but with dense ascending eglandular hairs; plants usually dull greyish-green, not much darkening when dried; leaves usually with gradual or irregular reduction from base of stem to summit; mid-stem leaves with length/width (2-) 2.5-4 (-4.5), not forming a distinct overlapping cluster; bracts on proximal thirds of peduncles mostly 2-3 (-5) mm wide *Symphyotrichum patens* var. *gracile*
 18 Stems and leaves with dense to sparse stipitate-glands, with or without eglandular hairs; plants somewhat bluish-waxy, often becoming blackish when dried; leaves abruptly reduced in size with each branching order; mid-stem leaves [directly below inflorescence] with length/width (1.5-) 2-2.5(-3), clustered and overlapping along 10-20 cm; bracts on proximal thirds of peduncles mostly 1-2 (-3) mm wide *Symphyotrichum patens* var. *terrigrum*

Key E - perennial asters with clasping or sheathing leaves
[of subgenus *Symphyotrichum*, sections *Symphyotrichum* and *Concinni*]

- 2 Phyllaries appressed (or in some species the outer slightly spreading); plants 0.5-8.5 (12) dm tall.
 5 Leaves basally disposed, the largest basal and persistent; largest leaves linear, to 20 cm × 2.5 cm, avg. 10× as long as wide; leaf margins often strongly scabrous; [mainly of the Coastal Plain, of SC and GA west to AR and TX] *Symphyotrichum attenuatum*
 5 Leaves cauline, the largest on the stem; largest leaves narrowly to broadly lanceolate, avg. < 9× as long as wide; leaf margins usually only slightly scabrous; [mainly of inland provinces, of NS west to MB, south to GA, Panhandle FL, MS, LA, and OK].

Key to Map
 Symbology:

N : no X : extirpated
 P : planted
 ? : questionable

- 6 Larger leaves > 5× as long as wide, rarely > 2.5 cm wide, the bases slightly clasping; [NY and KY south to GA, Panhandle FL (Jackson County), and MS] *Symphyotrichum concinnum*
- 6 Larger leaves < 5× as long as wide, often > 2.5 cm wide, the bases strongly clasping; [NS west to MB, south to GA, LA, and OK] *Symphyotrichum laeve*
- 2 Phyllaries slightly to distinctly spreading, loose, or recurved-squarrose, some at least foliose; plants (4-) 8-30 dm tall.
- 10 Stem leaves cuneate or rounded to an only slightly clasping base *Symphyotrichum elliottii*
- 10 Stem leaves strongly auriculate-clasping *Symphyotrichum puniceum* var. *scabriceule*

Key F - perennial asters with involute phyllaries
[of subgenus *Symphyotrichum*, section *Dumosi*, subsection *Porteriani*]

- 3 Stems sparsely to densely hirsute; leaves pilose *Symphyotrichum pilosum* var. *pilosum*
- 3 Stems glabrous to glabrate; leaves glabrous to glabrate *Symphyotrichum pilosum* var. *pringlei*

Key G - perennial asters
[of subgenus *Symphyotrichum*, section *Dumosi*, subsections *Divergentes* and *Dumosi*]

- 1 Disc corolla lobes ½ - ¾ of the length of the corolla limb (the flared portion above the narrow corolla tube); disc corolla lobes spreading to reflexed.
- 2 Plants caespitose, with short, branched caudices or short-rhizomatous; abaxial leaf faces glabrous, midveins ± densely pilose (rarely glabrate); ray flowers 8-15 (-23); disc corollas white to cream turning pink to purplish, lobes strongly reflexed (lengths 1/2-3/4 corollas); [wide variety of habitats] *Symphyotrichum lateriflorum*
- 2 Plants colonial, long-rhizomatous; abaxial leaf faces and midveins usually sparsely to densely strigose or strigillose, sometimes glabrous (var. *glabratum*); ray flowers (10-) 15-26; disc corollas cream to light yellow turning purple to brown, lobes spreading (lengths ca. 1/2 corollas); [bottomlands and other wetlands] *Symphyotrichum ontarionis* var. *ontarionis*
- 1 Disc corolla lobes < ½ the length of the corolla limb (the flared portion above the narrow corolla tube); disc corolla lobes usually erect.
- 3 Peduncles long (at least some > 2 cm long), with numerous small, closely-spaced bracts mostly 1-4 mm long and much smaller than the leaves; plants mostly not strongly rhizomatous (sometimes with multiple stems from short-creeping rhizomes); plants mostly < 10 dm tall.
- 5 Peduncle bracts, at least lower and middle, mostly spreading or reflexed, oblong to linear-oblong, obtuse to subacute (rarely abruptly mucronate) *Symphyotrichum dumosum* var. *dumosum*
- 5 Peduncle bracts mostly ascending (-appressed), sometimes spreading, oblong-linear to linear-subulate, acute.
- 6 Cauline leaves 3-7 cm long; branches few; peduncles long; rays 14-17 (-20) *Symphyotrichum dumosum* var. *gracilipes*
- 6 Cauline leaves to 15 cm long; branches abundant; peduncles long, short, or absent; rays 13-25. *Symphyotrichum dumosum* var. *subulifolium*
- 3 Peduncles short (mostly < 2 cm long), sparsely bracteate or with leaves rather than bracts in close proximity to the heads; plants strongly colonial from creeping rhizomes; plants mostly > 10 dm tall;
- 9 Involucres (2.5-) 3.5-4.5 (-5.5) mm high; rays mostly < 20, usually white (rarely pink); ray blades 3-8 mm long; plants 3-9 (-10) dm tall.
- 10 Heads densely crowded in spikelike racemes, the peduncles mostly < 7 mm long *Symphyotrichum racemosum* var. *racemosum*
- 10 Heads in loose racemes or scattered on branch ends, the peduncles mostly 10-20 mm long *Symphyotrichum racemosum* var. *subdumosum*
- 9 Involucres 3-7 (-8) mm high; rays mostly > 16, white, pink, or violet; ray blades mostly 6-15 mm long; plants 3-15 (-20) dm tall.
- 11 Leaves thin, planar; peduncle bracts 1-3 (-5) *Symphyotrichum lanceolatum* var. *latifolium*
- 11 Leaves stiff, margins revolute; peduncle bracts 5-12 or more (except 1-3 in *S. boreale*).
- 21 Leaves harshly scabrous above *Symphyotrichum praealtum* var. *subasper*
- 21 Leaves glabrous or nearly so above. *Symphyotrichum praealtum* var. *praealtum*

Symphyotrichum adnatum (Nuttall) Nesom. SCALE-LEAF ASTER. **Hab:** Longleaf pine sandhills, pine flatwoods, pine rocklands. **Dist:** S. GA south to s. FL, west to se. LA; n. Bahamas. **Syn:** = F17, FNA20, K1, K3, K4, WH3, Nesom (1994a); = *Aster adnatus* Nuttall – Bah, S, SE1; = *Lasallea adnata* (Nuttall) Semple & Brouillet – Semple & Brouillet (1980a).

Symphyotrichum attenuatum (Lindley) Semple. GULF COAST SMOOTH ASTER. **Hab:** Open dry woodlands, prairies. **Dist:** SC and GA west to AR and TX. **Phen:** Sep-Oct. **Syn:** = *Aster laevis* Linnaeus var. *purpuratus* (Nees) A. G. Jones; = *Symphyotrichum laeve* (Linnaeus) Löve & Löve var. *purpuratum* (Nees) Nesom – FNA20, K1, K3, K4, Nesom (1994a); > *Aster attenuatus* Lindley ex Hooker – G, S; > *Aster purpuratus* Nees – S. NatureServe G5TNR (Not Yet Ranked).

Symphyotrichum concinnum (Willdenow) Mohlenbrock. HARMONIOUS ASTER, NARROW-LEAVED SMOOTH ASTER. **Hab:** Dry woodlands over mafic or calcareous rocks. **Dist:** NY and KY south to GA, Panhandle FL (Jackson County), and MS. **Phen:** Sep-Oct. **Syn:** = II; = *Aster concinnum* Willdenow – C, G, S, SE1; = *Aster laevis* Linnaeus var. *concinnum* (Willdenow) House – RAB, W; = *Symphyotrichum laeve* ssp. *concinnum* (Willdenow) Semple & Brouillet; = *Symphyotrichum laeve* (Linnaeus) Löve & Löve var. *concinnum* (Willdenow) Nesom – F17, FNA20, K1, K3, Pa, Tn, Va, WH3, Nesom (1994b); < *Aster laevis* – F, WV; < *Symphyotrichum laeve* (Linnaeus) Löve & Löve var. *laeve* – K4.

Symphyotrichum concolor (Linnaeus) Nesom var. *concolor*. EASTERN SILVERY ASTER. **Hab:** Longleaf pine sandhills, Piedmont woodlands, forest edges, pine rocklands, roadbanks. **Dist:** MA and NY south to s. FL, west to LA, inland less commonly to TN and KY. Reports of *Symphyotrichum concolor* for the Bahamas are based on *Symphyotrichum lucayanum* (Britton) Nesom. **Phen:** Sep-Oct. **Syn:** = FNA20, K3, K4; = *Symphyotrichum concolor* ssp. *concolor* – Haines (2010); < *Aster concolor* Linnaeus – C, F, G, RAB, S, SE1, W; < *Symphyotrichum concolor* (Linnaeus) Nesom – F17, K1, Tn, Va, WH3, Nesom (1994a); < *Virgulus concolor* (Linnaeus) Reveal & Keener.

Symphyotrichum cordifolium (Linnaeus) Nesom. HEART-LEAVED ASTER, BLUE WOOD ASTER. **Hab:** Rich forests, shaded roadbanks. **Dist:** NB west to ON and e. ND, south to Panhandle FL and ne. TX. See Holmes & Singhurst (2021) for information on Texas occurrence. **Phen:** Sep-Oct. **Syn:** = Ar, Il, K1, K3, K4, Mi, Mo2, NE, Pa, Tn, Va; = *Aster cordifolius* Linnaeus – C, G, S, SE1, W; < *Aster cordifolius* Linnaeus – RAB; > *Aster cordifolius* var. *cordifolius* – F, WV; > *Aster cordifolius* var. *polycephalus* Porter – F; > *Aster cordifolius* var. *racemiflorus* Fernald – F, WV; < *Symphyotrichum cordifolium* (Linnaeus)

403. ASTERACEAE

773

Nesom – FNA20; > *Symphotrichum cordifolium* (Linnaeus) Nesom var. *cordifolium* – Nesom (1994a); > *Symphotrichum cordifolium* (Linnaeus) Nesom var. *polycephalum* (Porter) Nesom – Nesom (1994a); > *Symphotrichum cordifolium* (Linnaeus) Nesom var. *racemiflorum* (Fernald) Nesom – Nesom (1994a).

Symphotrichum divaricatum (Nuttall) Nesom. ANNUAL WATER ASTER, MIDWESTERN SALT MARSH ASTER, YARD ASTER. **Hab:** Ponds, swamps, ditches, other wet disturbed areas, including mowed fields, yards, periodically flooded floodplains; eastwards in waste areas near wool-combing mills. **Dist:** TN, MO, e. NE and n. NM south to GA, AL, MS, LA, TX, and Mexico. **Phen:** Aug-Jan. **Tax:** See Nesom (2000). **Syn:** = Il, K1, K3, K4, Va, Nesom (1994a), Nesom (2005b); = *Aster exilis* Elliott – F, RAB, S, misapplied; = *Aster subulatus* Michaux var. *ligulatus* Shinnery – NcTx, SE1, Tx; = *Symphotrichum subulatum* (Michaux) Nesom var. *ligulatum* (Shinnery) S.D. Sundberg – Ar, FNA20, Mo2, Tn, Sundberg (2004); < *Aster subulatus* Michaux – GW2; ~ *Aster subulatus* Michx. var. *cubensis* (DC.) Shinnery; < *Aster subulatus* Michaux var. *subulatus*.

Symphotrichum drummondii (Lindley) Nesom. HAIRY HEART-LEAVED ASTER. **Hab:** Mesic to dry forests. **Dist:** PA, OH, MI, WI, MN, and NE, south to MD, WV, TN, AL, MS, and LA (including the Florida Parishes). **Phen:** Aug-Oct. **Syn:** = Il, Mi, Pa, Tn; = *Aster drummondii* var. *drummondii*; = *Aster sagittifolius* var. *drummondii* (Lindley) Shinnery – F; = *Symphotrichum drummondii* (Lindley) Nesom var. *drummondii* – Ar, FNA20, K1, K3, K4, Nesom (1994a); < *Aster drummondii* Lindley – C, G, GrPl, Oh3, SE1. **NatureServe G5T4T5** (Apparently Secure).

Symphotrichum dumosum (Linnaeus) Nesom var. *dumosum*. LONG-STALKED ASTER. **Hab:** Old fields, disturbed areas, pastures. **Dist:** NB, WV, IN, IL, OK south to FL and TX. **Phen:** Late Aug-Oct. **Syn:** = K1, Va, Nesom (1994b); > *Aster coridifolius* Michaux – S; < *Aster dumosum* – C, G, GW2, NcTx, Oh3, RAB, SE1, Tx, W; > *Aster dumosum* – S; > *Aster dumosum* var. *coridifolius* (Michaux) Torrey & A. Gray – F, WV; > *Aster dumosum* Linnaeus var. *dumosum* – F; < *Symphotrichum dumosum* – Ar, F17, FNA20, Il, NE, Pa, Tn, WH3; < *Symphotrichum dumosum* (Linnaeus) Nesom var. *dumosum* – K3, K4. **NatureServe G5T3T5** (Apparently Secure).

Symphotrichum dumosum (Linnaeus) Nesom var. *gracilipes* (Wiegand) Nesom. **Hab:** Pine savannas. **Dist:** SC south to FL, west to LA.

Phen: Late Aug-Oct. **Syn:** = K1; = *Aster dumosum* Linnaeus var. *gracilipes* Wiegand; = *Aster gracilipes* (Wiegand) Alexander – S; < *Aster dumosum* – GW2, RAB, SE1; < *Symphotrichum dumosum* – F17, FNA20, WH3; < *Symphotrichum dumosum* (Linnaeus) Nesom var. *dumosum* – K3, K4.

Symphotrichum dumosum (Linnaeus) Nesom var. *subulifolium* (Torrey & A. Gray) Nesom. **Hab:** Calcareous prairies, dry clayey sites, {other habitats}. **Dist:** ME south to FL, west to TX. **Phen:** Late Aug-Oct. **Syn:** = K1, Nesom (1994a); = *Aster dumosum* Linnaeus var. *subulifolius* Torrey & A. Gray – F; < *Aster dumosum* – C, G, GW2, NcTx, RAB, SE1, Tx, W; < *Symphotrichum dumosum* – F17, FNA20, NE, Pa, WH3; < *Symphotrichum dumosum* (Linnaeus) Nesom var. *dumosum* – K3, K4.

Symphotrichum elliotii (Torrey & A. Gray) Nesom. SOUTHERN SWAMP ASTER, ELLIOTT'S ASTER. **Hab:** Bogs, swamps, and marshes, mainly in the outer Coastal Plain, on tree bases, hummocks, and stumps in tidal freshwater swamps, especially where salinities may occasionally exceed 5-10 ppt. **Dist:** Se. VA south to s. FL, west to LA. The Jones & Coile (1988) record for n. GA and records in the NC Mountains (Kartesz (2020) are rejected (misidentifications of *S. puniceum*). **Phen:** Late Sep-Nov. **Syn:** = F17, FNA20, K1, K3, K4, Va, WH3, Nesom (1994a); = *Aster elliotii* Torrey & A. Gray – C, F, G, GW2, RAB, S, SE1; = *Aster puniceus* Linnaeus var. *elliotii* (Torrey & A. Gray) A.G. Jones.

Symphotrichum ericoides (Linnaeus) Nesom var. *ericoides*. HEATH ASTER, SQUARROSE WHITE ASTER. **Hab:** Limestone glades, prairies, other open, calcareous situations. **Dist:** ME, NL (Labrador), ON, ND, CO, AZ, south to VA, MS, TX, NLE, and COA. **Phen:** (Aug-) Sep-Nov. **Syn:** = Ar, FNA20, K4, NE, Va; = *Aster ericoides* – C, F, GrPl, NcTx, SE1, Tx, W; = *Virgulus ericoides* (Linnaeus) Reveal & Keener; > *Aster ericoides* Linnaeus var. *ericoides* – G, Oh3; > *Aster ericoides* Linnaeus var. *prostratus* (Kuntze) Blake – G, Oh3; < *Lasallea ericoides* (Linnaeus) Semple & Brouillet – Semple & Brouillet (1980a); < *Symphotrichum ericoides* – Mi, Pa, Tn; > *Symphotrichum ericoides* (Linnaeus) Nesom var. *ericoides* – Il, K1, Nesom (1994a); > *Symphotrichum ericoides* (Linnaeus) Nesom var. *prostratus* (Kuntze) Nesom – Il, K1, Nesom (1994a).

Symphotrichum laevis (Linnaeus) Á. Löve & D. Löve. SMOOTH BLUE ASTER. **Hab:** Mesic hardwood forests. **Dist:** NS west to MB, south to GA, LA, and OK. **Phen:** Sep-Oct. **Syn:** = Il, Mi; = *Aster laevis* – Oh3; = *Aster laevis* Linnaeus var. *laevis* – C, G, GrPl, RAB, SE1, W; = *Symphotrichum laevis* (Linnaeus) Löve & Löve var. *laevis* – Ar, FNA20, K1, K3, NE, Pa, Tn, Va, Nesom (1994a); > *Aster falcidens* E.S. Burgess – S; > *Aster laevis* – S; > < *Aster laevis* – F, WV; > *Aster steeleorum* Shinnery – F, WV; < *Symphotrichum laevis* (Linnaeus) Löve & Löve var. *laevis* – K4. **NatureServe G5T5** (Secure).

Symphotrichum lanceolatum (Willdenow) Nesom var. *latifolium* (Semple & Chmielewski) Nesom. BROAD-LEAVED WHITE PANICLED ASTER. **Hab:** Bottomlands, other moist sites. **Dist:** ME west to MB, south to e. Panhandle FL and TX. **Phen:** Sep-Oct. **Syn:** = Ar, F17, FNA20, Il, Mi, Tn, WH3, Nesom (1994a); = *Aster lanceolatus* Willdenow ssp. *lanceolatus* var. *latifolius* Semple & Chmielewski – Semple & Chmielewski (1987); = *Aster lanceolatus* Willdenow var. *simplex* (Willdenow) A. G. Jones – C; = *Aster simplex* var. *simplex* – F, G; = *Symphotrichum lanceolatum* (Willdenow) Nesom ssp. *lanceolatum* var. *latifolium* (Semple & Chmielewski) Nesom – K1, K3, K4, NE; < *Aster lanceolatus* – W; *Aster lanceolatus* Willdenow var. *latifolius* Semple & Chmielewski; < *Aster simplex* Willdenow – GW2, RAB.

Symphotrichum lateriflorum (Linnaeus) Á. Löve & D. Löve. STARVED ASTER, GOBLET ASTER. **Hab:** Mesic to dry upland forests and woodlands, swamps, wet pine flatwoods, clearings, old fields, roadsides, other disturbed areas. **Dist:** NB west to MB, south to s. peninsular FL and e. TX. **Phen:** Sep-Nov. **Tax:** Many infrataxa have been recognized in the past, and warrant modern study. **Syn:** = Ar, F17, FNA20, Il, K3, K4, Mi, NE, Pa,

403. ASTERACEAE

774

SE1, Tn, Va, WH3; = *Aster lateriflorus* Linnaeus – C, G, GW2, NcTx, Oh3, RAB, SE1, Tx, W; > *Aster lateriflorus* var. *hirsuticaulis* (Lindley ex A.P. de Candolle) Porter; > *Aster lateriflorus* (Linnaeus) Britton var. *horizontalis* (Desfontaines) Farwell; > *Aster lateriflorus* (Linnaeus) Britton var. *lateriflorus* – F, GrPl; > *Aster lateriflorus* var. *pendulus* (Aiton) E.S. Burgess – F; > *Aster spatelliformis* E.S. Burgess; > *Symphytotrichum lateriflorum* (Linnaeus) Å. Löve & D. Löve var. *angustifolium* (Wiegand) Nesom – K1, Nesom (1994b); > *Symphytotrichum lateriflorum* var. *hirsuticaule* (Lindley ex A.P. de Candolle) Nesom – Nesom (1994b); > *Symphytotrichum lateriflorum* (Linnaeus) Å. Löve & D. Löve var. *horizontalis* (Desfontaines) Nesom – K1, Nesom (1994b); > *Symphytotrichum lateriflorum* (Linnaeus) Å. Löve & D. Löve var. *lateriflorum* – K1, Nesom (1994b); > *Symphytotrichum lateriflorum* (Linnaeus) Å. Löve & D. Löve var. *spatelliforme* (E.S. Burgess) Nesom – Nesom (1994b).

Symphytotrichum novae-angliae (Linnaeus) Nesom. NEW ENGLAND ASTER, MICHAELMAS-DAISY. **Hab:** Wet meadows, bogs, prairies. **Dist:** NS west to MT, south to GA, wc. AL, c. MS, s. AR, OK, and NM. **Phen:** Sep-Oct. **Syn:** = Ar, FNA20, IL, K1, K3, K4, Mi, NE, Pa, Tn, Va, Jones (1983); = *Aster novae-angliae* Linnaeus – C, F, G, GrPl, GW2, Oh3, RAB, S, SE1, W, WV; = *Lasallea novae-angliae* (Linnaeus) Semple & Brouillet – Semple & Brouillet (1980a); = *Virgulus novae-angliae* (Linnaeus) Reveal & Keener. **NatureServe G5** (Secure).

Symphytotrichum oblongifolium (Nuttall) Nesom. EASTERN AROMATIC ASTER, SHALE-BARREN ASTER. **Hab:** Rock outcrops and dry woodlands over limestone, calcareous shale, calcareous prairies. **Dist:** NY, WI, MN, and MT, south to sc. VA, w. NC, nc. AL, n. MS, TX, and NM. **Phen:** Late Sep-Nov (-Jan). **Syn:** = Ar, FNA20, IL, K1, K3, K4, Pa, Tn, Va, Nesom (1994a); = *Aster oblongifolius* – C, F, GrPl, NcTx, Oh3, RAB, S, Tx, W; = *Lasallea oblongifolia* (Nuttall) Semple & Brouillet – Semple & Brouillet (1980a); = *Virgulus oblongifolius* (Nuttall) Reveal & Keener; > *Aster oblongifolius* Nuttall var. *angustatus* Shinnars – G, SE1; > *Aster oblongifolius* var. *orientis* Shinnars – WV. **NatureServe G5** (Secure).

Symphytotrichum ontarionis (Wiegand) Nesom var. *ontarionis*. BOTTOMLAND ASTER. **Hab:** Bottomlands, swamps, bogs. **Dist:** QC, ON, MN, and SD, south to WV, GA, AL, MS, LA, and TX. **Phen:** Aug-Oct. **Tax:** See Nesom (1997) and Brouillet & Labrecque (1997). **Syn:** = Ar, FNA20, K3, K4, Mi, Va; = *Symphytotrichum ontarione* var. *ontarione* – K1, Nesom (1994a), orthographic variant; < *Aster lateriflorus* Linnaeus – RAB; < *Aster ontarionis* Wiegand – C, F, G, GrPl, SE1, W; < *Symphytotrichum ontarionis* – IL, NE, Tn. **NatureServe G5T4** (Apparently Secure).

Symphytotrichum oolentangiense (Riddell) Nesom var. *oolentangiense*. AZURE ASTER. **Hab:** Prairies, glades. **Dist:** NY, ON, MN, and SD, south to Panhandle FL and TX. **Phen:** Aug-Nov. **Comm:** Reported for GA (Kartesz 1999) on the basis of Fernald (1950), and also reported for GA in FNA. East to sw. TN (Chester, Wofford, & Kral 1997), AL, and Panhandle FL (Wunderlin & Hansen 2008). **Syn:** = K1, Nesom (1994a); = *Aster azureus* Lindley var. *azureus* – F, Tx; < *Aster azureus* – G, SE1; < *Aster oolentangiensis* – C, GrPl, NcTx; < *Symphytotrichum oolentangiense* – Ar, F17, FNA20, K3, K4, Mi, Oh3, WH3; > *Symphytotrichum oolentangiense* var. *laevicaule* (Fernald) Mohlenbrock – IL; > *Symphytotrichum oolentangiense* (Riddell) Nesom var. *oolentangiense* – IL. **NatureServe G5T5** (Secure).

Symphytotrichum patens (Aiton) Nesom var. *gracile* (Hooker) Nesom. **Hab:** Dry woodlands and prairies. **Dist:** Var. *gracile*, as defined more narrowly by R. Jones (1983), ranges east to se. LA, s. MS, and s. AL from a core range in LA, e. and c. TX, and OK. **Phen:** Aug-Nov. **Tax:** Nesom (2006oo) discussed the dubious recognition of this variety. **Syn:** = Ar, FNA20, K1, Mo2; = *Aster patens* var. *gracilis* Hooker – Jones (1983); < *Aster patens* – Tx; < *Aster patens* var. *gracilis* Hooker – C, F, G, NcTx, SE1; < *Lasallea patens* (Aiton) Semple & Brouillet – Semple & Brouillet (1980a); < *Symphytotrichum patens* (Aiton) Nesom var. *patens* – K3, K4.

Symphytotrichum patens (Aiton) Nesom var. *patens*. COMMON CLASPING ASTER. **Hab:** Dry woodlands, longleaf pine sandhills, roadsides, woodland edges, clearings, roadbanks. **Dist:** Var. *patens* ranges from VT and NY west to PA, s. OH, s. IN, s. MO, and se. KS, south to e. GA, ne. FL, Panhandle FL, s. AL, s. MS, s. LA, and sc. TX. **Phen:** Late Aug-early Nov; Oct-Nov. **Syn:** < *Aster patens* – RAB, S, Tx, W; > *Aster patens* var. *gracilis* Hooker – C, F, G, SE1; < *Aster patens* Aiton var. *patens* – C, F, G, NcTx, Oh3, SE1, WV, Jones (1983); < *Lasallea patens* (Aiton) Semple & Brouillet – Semple & Brouillet (1980a); < *Symphytotrichum patens* – F17, IL, Pa, Tn, WH3; < *Symphytotrichum patens* (Aiton) Nesom var. *patens* – Ar, FNA20, K1, K3, K4, Mo2, NE, Va, Nesom (1994a); ~ *Virgulus patens* (Ait.) Reveal & Keener; < *Virgulus patens* (Aiton) Reveal & Keener var. *patens*.

Symphytotrichum patens (Aiton) Nesom var. *patentissimum* (Lindley ex A.P. de Candolle) Nesom. OZARK CLASPING ASTER. **Hab:** Glades, upland prairies, woodlands, forest edges. **Dist:** Var. *patentissimum* is largely Ozarkian, east to scattered locations in w. KY and w. MS. **Phen:** Aug-Oct. **Tax:** See discussion in Nesom (2006oo). **Syn:** = Ar, FNA20, K1, K3, K4, Mo2; = *Aster patens* Aiton var. *patentissimus* (Lindley ex A.P. de Candolle) Torrey & A. Gray – C, F, G, GrPl, NcTx, SE1, Jones (1983); = *Symphytotrichum patentissimum* (Lindley ex A.P. de Candolle) Mohlenbrock – IL; < *Aster patens* – Tx; < *Lasallea patens* (Aiton) Semple & Brouillet – Semple & Brouillet (1980a). **NatureServe G5TNR** (Not Yet Ranked).

Symphytotrichum patens (Aiton) Nesom var. *terranigrum* J.J.N. Campbell & W.R. Seymour. BLACK BELT CLASPING ASTER. **Hab:** Prairies and woodlands. **Dist:** Distribution centered in the AL-MS Black Belt, but allegedly with scattered occurrences over a more widespread area of the Southeastern United States. **Comm:** See Campbell & Seymour (2014) for detailed information. **Syn:** = K4; < *Aster patens* – RAB, S, W; > *Aster patens* var. *gracilis* Hooker – C, F, G, SE1; < *Aster patens* Aiton var. *patens* – C, F, G, SE1, WV, Jones (1983); < *Lasallea patens* (Aiton) Semple & Brouillet – Semple & Brouillet (1980a); < *Symphytotrichum patens* – Pa, WH3; < *Symphytotrichum patens* (Aiton) Nesom var. *patens* – FNA20, K1, Nesom (1994a); < *Virgulus patens* (Aiton) Reveal & Keener var. *patens*.

(see introduction for more)

Symphiotrichum pilosum (Willdenow) Nesom var. *pilosum*. **Hab:** Old fields, disturbed areas, woodland borders. **Dist:** NB west to MN, south to Panhandle FL and TX. **Phen:** Sep-Nov. **Syn:** = Ar, FNA20, IL, K1, K3, K4, Mi, NE, Pa, Va, Nesom (1994a); = *Aster pilosus* Willdenow var. *pilosus* – C, F, G, Oh3, SE1, WV; < *Aster pilosus* – GrPl, RAB, W; < *Symphiotrichum pilosum* – F17, Mo2, Tn, WH3. NatureServe G5T5 (Secure).

Symphiotrichum pilosum (Willdenow) Nesom var. *pringlei* (A. Gray) Nesom. **Hab:** Calcareous glades, calcareous barrens, other dry soil areas, especially or only over limestone or other calcareous rocks. **Dist:** NS west to MN, south to GA and TN (Eastern Highland Rim) and MS Black Belt. **Phen:** Sep-Nov. **Tax:** Likely warranting species rank. **Syn:** = FNA20, IL, K1, K3, Mi, NE, Pa, Va, Nesom (1994a); = *Aster pilosus* Willdenow var. *demotus* Blake – RAB, SE1; = *Aster pilosus* var. *pringlei* A. Gray – C; > *Aster pilosus* Willdenow var. *demotus* Blake – F, G, Oh3, WV; > *Aster pilosus* var. *pringlei* A. Gray – F, G, Oh3, WV. NatureServe G5T5 (Secure).

Symphiotrichum praealtum (Poiret) Nesom var. *praealtum*. NET-VEINED ASTER, WILLOWLEAF ASTER. **Hab:** Moist forests over limestone, wooded fens (with *Acer rubrum* and *Fraxinus nigra*). **Dist:** NY, MN, and SD south to Panhandle FL and e. TX. Reported for Giles County, VA.

Phen: Aug-Oct. **Syn:** = IL, K1, Nesom (1994a); = *Aster praealtus* Poiret var. *praealtus* – F; < *Aster praealtus* Poiret – C, GW2, NcTx, Oh3, W, WV; < *Aster praealtus* Poiret var. *praealtus* – G, GrPl, SE1; > *Aster praealtus* Poiret var. *praealtus* – Tx; > *Aster praealtus* var. *texicola* Wiegand – Tx; < *Symphiotrichum praealtum* (Poiret) Nesom – Ar, FI7, FNA20, Mi, Mo2, Pa, Tn, WH3; < *Symphiotrichum praealtum* (Poiret) Nesom var. *praealtum* – K3, K3, K4. NatureServe G5T5? (Secure).

Symphiotrichum praealtum (Poiret) Nesom var. *subasper* (Lindley) Nesom. ROUGH WILLOWLEAF ASTER. **Hab:** Bottomlands, other moist habitats. **Dist:** KY, IN, IL, MO, and OK south to AL and TX. **Phen:** (Sep-) Oct-Nov. **Syn:** = IL; = *Aster praealtus* Poiret var. *subasper* (Lindley) Wiegand – F; = *Symphiotrichum praealtum* (Poiret) Nesom var. *subasperum* (Lindley) Nesom – K1, orthographic variant; > *Aster coerulescens* A.P. de Candolle; < *Aster praealtus* Poiret – NcTx, Tx; < *Symphiotrichum praealtum* (Poiret) Nesom – FNA20; < *Symphiotrichum praealtum* (Poiret) Nesom var. *praealtum* – K3, K4.

Symphiotrichum pratense (Rafinesque) Nesom. BARRENS SILKY ASTER. **Hab:** Calcareous glades and barrens, prairies. **Dist:** S. AR west to ne. TX and se. OK, south to sc. LA and e. TX; disjunct at scattered localities east of the Mississippi River, as in sw. VA (Ludwig 1999), sw. NC (Kelly & Knapp 2019), c. KY, TN (Chester, Wofford, & Kral 1997), nw. GA, sw. GA, Panhandle FL (Gadsden County), n. and c. AL, and wc. MS. **Phen:** Sep-Nov (-Jan). **Tax:** See Jones, Witsell, & Nesom (2008) for extensive discussion. **Syn:** = Ar, FNA20, K1, K3, K4, Tn, Va, Jones, Witsell, & Nesom (2008), Nesom (1994a); = *Aster phyllolepis* Torrey & A. Gray – SE1; = *Aster pratensis* Rafinesque – NcTx, Tx, Tx; = *Aster sericeus* Ventenat var. *microphyllus* A.P. de Candolle; = *Lasallea sericea* (Ventenat) Greene ssp. *pratensis* (Rafinesque) Semple & Brouillet – Semple & Brouillet (1980a); = *Symphiotrichum sericeum* (Ventenat) Nesom var. *microphyllum* (A.P. de Candolle) Wunderlin & B.F. Hansen – FI7, WH3; < *Aster sericeus* Ventenat – F, G. NatureServe G4? (Apparently Secure).

Symphiotrichum puniceum (Linnaeus) Á. Löve & D. Löve var. *scabricaulis* (Shinners) Nesom. **Hab:** Pineland seepage bogs. **Dist:** AL west to e. TX. **Phen:** Oct. **Syn:** = FNA20, K1, K3, K4, Nesom (1997b); = *Aster scabricaulis* Shinners – Tx; < *Aster puniceus* Linnaeus – C, GW2, S, SE1, W. NatureServe G5T2 (Imperiled).

Symphiotrichum racemosum (Elliott) Nesom var. *racemosum*. SMALL WHITE ASTER. **Hab:** Bottomlands, marshes. **Dist:** ME south to n. FL, west to TX, and inland to OH, IN, IL (?), MO, and OK. **Syn:** = K1, Va, Nesom (1994a); = *Aster vimineus* Lamarck – G, GW2, RAB, SE1, W, misapplied; > *Aster brachypholis* Small – S; < *Aster racemosus* Elliott – C, Oh3; > *Aster racemosus* Elliott – F; > *Aster vimineus* var. *vimineus* – F, misapplied; < *Symphiotrichum racemosum* – Ar, FI7, FNA20, K3, K4, NE, Pa, Tn, WH3.

Symphiotrichum racemosum (Elliott) Nesom var. *subdumosum* (Wiegand) Nesom. SMALL WHITE OLDFIELD ASTER. **Dist:** Uncertain distribution. **Phen:** Aug-Oct. **Syn:** = IL, Nesom (1994a); = *Aster fragilis* Willdenow var. *subdumosus* (Wiegand) A.G. Jones, misapplied; = *Aster vimineus* Lamarck var. *subdumosus* Wiegand – F; < *Aster racemosus* Elliott – C, Oh3; < *Symphiotrichum racemosum* – FNA20, K3, K4, Pa, WH3.

Symphiotrichum shortii (Lindley) Nesom. MIDWESTERN BLUE HEART-LEAVED ASTER, SHORT'S ASTER. **Hab:** Dry, rocky slopes, calcareous hammocks (in FL). **Dist:** PA, s. ON, and MN, south to w. NC, c. GA, Panhandle FL (Gadsden and Jackson counties), MS, and AR. **Phen:** Aug-Oct. **ID Notes:** The lower stem leaves are indeed reminiscent of the leaves of *Asplenium rhizophyllum* (formerly known as *Camptosorus*), explaining one of Small's names for this species. **Syn:** = FI7, FNA20, IL, K1, K3, K4, Mi, Pa, Tn, Va, WH3, Nesom (1994a); = *Aster shortii* Lindley – C, F, G, Oh3, SE1, WV; > *Aster camptosorus* Small – S; > *Aster shortii* Lindley – S; > *Aster shortii* var. *camptosorus* (Small) D.B. Ward – Ward (2012a); ~ *Aster shortii* Lindl. var. *shortii*. NatureServe G5 (Secure).

Symphiotrichum subulatum (Michaux) Nesom. EASTERN SALTMARSH ASTER. **Hab:** Tidal marshes. **Dist:** S. ME south to ne. FL, Panhandle FL, west to LA. **Phen:** Sep-Nov. **Tax:** See Sundberg (2004). **Syn:** = FI7, IL, K1, K3, K4, Mi, Va, WH3, Nesom (1994a), Nesom (2005b); = *Aster subulatus* Michaux var. *euroauster* Fernald & Griscom – Tx; = *Aster subulatus* Michaux var. *subulatus* – C, SE1; = *Symphiotrichum subulatum* var. *subulatum* – Ar, FNA20, NE, Sundberg (2004); < *Aster subulatus* Michaux – GW2, Oh3, RAB; > *Aster subulatus* Michaux var. *euroauster* Fernald & Griscom – F; > *Aster subulatus* var. *obtusifolius* Fernald – F, G; > *Aster subulatus* Michaux var. *subulatus* – F, G.

Symphyotrichum tenuifolium (Linnaeus) Nesom. PERENNIAL SALT-MARSH ASTER. **Hab:** Brackish marshes. **Dist:** ME south to c. peninsular FL, west to se. TX. **Phen:** Jun-Nov. **Tax:** See Sundberg (2004). **Syn:** = K1, K4, Va, Nesom (1994a), Nesom (2005b); = *Aster tenuifolius* Linnaeus – C, G, GW2, RAB, SE1; = *Aster tenuifolius* var. *tenuifolius* – Tx; = *Symphyotrichum tenuifolium* var. *tenuifolium* – FNA20, K3, NE, Sundberg (2004); < *Symphyotrichum tenuifolium* (Linnaeus) Nesom – F17, WH3. **NatureServe G5** (Secure).

Symphyotrichum texanum (E.S. Burgess) Semple. TEXAS ASTER. **Hab:** Limestone cliffs, sandstone cliffs, bluffs. **Dist:** MO and KS south to LA and TX; disjunct east of the Mississippi River in e. LA, e. MS, and w. and c. KY; Coahuila. **Phen:** Aug-Oct. **ID Notes:** The distinctive cordate (heart-shaped) basal and cauline leaves bearing serrate-crenate margins combined with the relatively short ray florets surrounding disc florets that tinge an almost watermelon-pink at anthesis make this one of the easiest *Symphyotrichum* to identify in eastern TX (Aidan Campos, pers.comm. 2021). **Syn:** = II; = *Aster drummondii* Lindley var. *texasus* (E.S. Burgess) A.G. Jones – NcTx; = *Aster texanus* E.S. Burgess – C, G, SE1; = *Symphyotrichum drummondii* (Lindley) Nesom var. *texasus* (E.S. Burgess) Nesom – Ar, FNA20, K1, K3, K4; > *Aster texanus* E.S. Burgess var. *parviceps* Shinnery – Tx; > *Aster texanus* var. *texasus* E.S. Burgess – Tx. **NatureServe G5T3T4** (Vulnerable).

Symphyotrichum undulatum (Linnaeus) Nesom. WAVYLEAF ASTER. **Hab:** Dry forests, woodlands, glades, roadbanks. **Dist:** NS west to s. ON, south to c. peninsular FL and LA. **Phen:** Aug-Nov. **Syn:** = F17, FNA20, II, K1, K3, K4, NE, Pa, Tn, Va, WH3, Nesom (1994a); = *Aster undulatus* Linnaeus – C, G, Oh3, RAB, SE1, W; > *Aster asperifolius* E.S. Gray) Wood; > *Aster undulatus* var. *diversifolius* (Michaux) A. Gray – F; > *Aster undulatus* var. *loriformis* E.S. Burgess – F, WV; > *Aster undulatus* var. *undulatus* – F, WV. **NatureServe G5** (Secure).

Symphyotrichum urophyllum (Lindley ex A.P. de Candolle) Nesom. WHITE ARROWLEAF ASTER. **Hab:** Moist to dry forests, fields, and roadbanks. **Dist:** ME west to MN and NE, south to e. Panhandle FL, MS, and OK. **Phen:** Late Aug-Oct. **Syn:** = Ar, F17, FNA20, II, K1, K3, K4, Mi, Mo2, NE, Pa, Tn, Va, WH3, Nesom (1994a); = *Aster sagittifolius* Wedemeyer ex Willdenow – C, G, GrPl, Oh3, RAB, S, SE1, W; = *Aster sagittifolius* var. *sagittifolius* – F; = *Aster urophyllum* Lindley ex A.P. de Candolle. **NatureServe G4G5** (Apparently Secure).

Tanacetum Linnaeus 1753 (TANSY)

A genus of about 150 species, herbs, of north temperate regions, especially the Old World. References: Arriagada & Miller (1997); SE1; Watson (2006a) in FNA19 (2006a).

- 2 Rays present, white; leaf blades 4-10 cm long, 1-2-pinnate (with 3-5 pairs of primary lobes).....***Tanacetum parthenium***
 2 Rays absent (rarely present and very small, and then yellow); leaf blades 8-20 cm long, 2-3-pinnate (with 4-20+ pairs of primary lobes)***Tanacetum vulgare***

* ***Tanacetum parthenium*** (Linnaeus) Schultz 'Bipontinus'. FEVERFEW. **Hab:** Disturbed areas. **Dist:** Native of Europe. **Phen:** Jun-Sep. **Syn:** = FNA19, II, K1, K3, K4, Mi, Pa, Arriagada & Miller (1997); = *Chrysanthemum parthenium* (Linnaeus) Bernhadi – C, F, G, GrPl, Oh3, RAB, SE1, WV; = *Matricaria parthenium* Linnaeus – S. **NatureServe GNR** (Not Yet Ranked).

* ***Tanacetum vulgare*** Linnaeus. COMMON TANSY, GOLDEN-BUTTONS, GARDEN TANSY. **Hab:** Disturbed areas. **Dist:** Native of Eurasia. **Phen:** Aug-Oct. **Syn:** = Ar, C, F, FNA19, G, GrPl, II, K1, K3, K4, Mi, NE, Oh3, Pa, RAB, S, SE1, Va, W, WV, Arriagada & Miller (1997). **NatureServe GNR** (Not Yet Ranked).

Taraxacum F.H. Wiggers 1780 (DANDELION)

A genus of about 60 species (or as many as 2000 if apomictic microspecies are recognized), herbs, of boreal and temperate regions. There seems little utility in trying to reconcile the numerous European microspecies against our introduced material. References: Brouillet (2006a) in FNA19 (2006a); SE1.

- 1 Cypselas reddish or purplish at maturity; leaves usually deeply cut throughout their length, the lobes narrow *Taraxacum erythrospermum*
 1 Cypselas brown or tan at maturity; leaves less deeply cut, particularly toward the base..... *Taraxacum officinale*

* *Taraxacum erythrospermum* Andrzejowski ex Besser. RED-SEEDED DANDELION. **Hab:** Roadsides, lawns, pastures, other disturbed sites. **Dist:** Native of Eurasia. **Phen:** Jan-Dec. **Tax:** Brouillet in FNA explains the nomenclatural and taxonomic complexities involved with the various names applied, and the reason for retaining *T. erythrospermum* at this time. **Syn:** = Ar, F, FNA19, Il, K3, K4, Mi, Pa, RAB, Tn, Va, WV; >> *Leontodon erythrospermum* (Andrzejowski) von Eichwald – S; >> *Taraxacum laevigatum* (Willdenow) A.P. de Candolle – C, G, GrPl, K1, NcTx, NE, Oh3, SE1, W; < *Taraxacum officinale* F.H. Wiggers – F17.

* *Taraxacum officinale* F.H. Wiggers. COMMON DANDELION. **Hab:** Lawns, roadsides, urban areas, pastures, disturbed areas, trailsides, less commonly in a variety of less disturbed habitats. **Dist:** Native of Eurasia. **Phen:** Jan-Dec. **Syn:** = Ar, Bah, C, FNA19, G, GrPl, Il, K3, K4, Mi, NcTx, NE, Oh3, Pa, RAB, SE1, Tn, Va, W, WH3, WV; = *Leontodon taraxacum* Linnaeus – S; < *Taraxacum officinale* F.H. Wiggers – F17; > *Taraxacum officinale* ssp. *officinale* – K1; > *Taraxacum officinale* var. *officinale* – F; ~ *Taraxacum taraxacum* (L.) Karst. NatureServe G5T5 (Secure).

*Tetragonotheca* Linnaeus 1753 (SQUAREHEAD)

A genus of 4 species, herbs, endemic to se. North America. References: SE1; Strother (2006ww) in FNA21 (2006c); Turner & Dawson (1980).

Tetragonotheca helianthoides Linnaeus. SQUAREHEAD, PINELAND-GINSENG. **Hab:** Longleaf pine sandhills, sandy woodlands, open hammocks, roadsides. **Dist:** Se. VA and e. TN south to c. peninsular FL and s. MS. **Phen:** Apr-Jul. **Syn:** = C, F, FI7, FNA21, G, K1, K3, K4, RAB, S, SE1, Tn, Va, W, WH3, Turner & Dawson (1980). NatureServe G5 (Secure).

Thelesperma Lessing 1831 (GREENTHREAD)

A genus of 10 or more species, of c. and w. North America, Mexico, and South America. References: Strother (2006zz) in FNA21 (2006c).

Key adapted from Strother (2006zz).

Thelesperma filifolium (Hooker) A. Gray var. *filifolium*. STIFF GREENTHREAD. **Hab:** Prairies, glades, and roadsides over calcareous substrates. **Dist:** AR and OK south to w. LA, s. TX, w. TX, and NLE; disjunct eastward in the Black Belt of MS and on a chalk bluff in Sumter County, wc. AL (Keener 2009). **Phen:** Apr-Jun (-Sep). **Syn:** = GrPl, K3, K4, NcTx, SE1, Tx; < *Thelesperma filifolium* (Hooker) A. Gray – Ar, FNA21, Mo2. NatureServe G4G5T4T5 (Apparently Secure).

Thymophylla Lagasca y Segura 1816

A genus of about 13 species, herbs and shrubs, of sw. and sc. United States and Mexico. Key modified from Strother (2006c) and Correll and Johnston (1970). References: Strother (2006ddd) in FNA21 (2006c).

Thymophylla tenuiloba (A.P. de Candolle) Small var. *tenuiloba*. DAHLBERG DAISY, GOLDEN-FLEECE. **Hab:** {TX habitats}, eastwards as an introduction in dry, disturbed areas, waste areas near wool-combing mills. **Dist:** C. TX and s. NM south into Mexico. **Syn:** = FNA21, K1, K3, NcTx, NE; = *Dyssodia tenuiloba* (A.P. de Candolle) B.L. Robinson var. *tenuiloba* – SE1; < *Dyssodia tenuiloba* (A.P. de Candolle) B.L. Robinson – Bah; < *Thymophylla tenuiloba* – FI7, S, WH3. NatureServe G5T5 (Secure).

Trilisa Cassini 1820 (TRILISA)

A genus of 3 species, perennial herbs, endemic to the Southeastern Coastal Plain of North America. The genus name is an anagram of *Liatris*, as is *Litrisa*. Schilling (2011) shows that *Trilisa* and *Litrisa* should be separated

Key to Map

from *Carphephorus*. References: Bridges & Orzell (2017b) in Weakley et al (2017); Correa & Wilbur (1969); SE1; DeLaney, Bissett, & Weidenhamer (1999); Nesom (2006hh) in FNA21 (2006c); Orzell & Bridges (2002); Schilling (2011b); Schilling (2011b).

Identification Notes: *Trilisa* can be distinguished from *Carphephorus* by its smaller heads (involucres 3.5-6 mm high vs. 6-15 mm high), fewer phyllaries per head (6-12 vs. 15-40), and lack of shining resin dots on the leaves (*Carphephorus* has numerous resin dots).

Trilisa odoratissima (J.F. Gmelin) Cassini. DEER'S-TONGUE, VANILLA-LEAF. **Hab:** Moist to mesic pine savannas and flatwoods. **Dist:** Se. NC south to c. peninsular FL and west to e. LA. **Phen:** Late Jun-Oct; Sep-Nov. **Comm:** *T. odoratissima* has the largest leaves of our species of *Carphephorus*, *Trilisa*, and *Litrisa*; its leaves are normally wider than 3 cm, and have a very wide and prominent midrib, usually purple toward the base of the leaf and white toward the tip. This species contains coumarin and gives off a pleasant vanilla odor when drying; it is gathered from the wild and used as a supplementary flavoring in cigarettes. **Syn:** = K4, Bridges & Orzell (2017b) in Weakley et al (2017); = *Carphephorus odoratissimus* – DeLaney, Bissett, & Weidenhamer (1999); = *Carphephorus odoratissimus* (J.F. Gmelin) Herbert var. *odoratissimus* – F17, FNA21, K3, WH3, Orzell & Bridges (2002); = *Trilisa odoratissima* var. *odoratissima* – Schilling (2011b); < *Carphephorus odoratissimus* – GW2, K1, SE1, Correa & Wilbur (1969); < *Trilisa odoratissima* (J.F. Gmelin) Cassini – RAB, S.

Verbesina Linnaeus 1753 (CROWNBEARD, WINGSTEM, FROSTWEED)

A genus of about 200-300 species, trees, shrubs, and herbs, of tropical, subtropical, and warm temperate America. References: Coleman (1966); SE1; Olsen (1979); Strother (2006oo) in FNA21 (2006c).

- 1 Stem and lower leaf-surfaces grey strigose-canescens; annuals, 2-10 dm tall, with taproots..... ***Verbesina encelioides***
- 1 Stem and lower leaf surfaces glabrous or pubescent, but not grey strigose-canescens; perennials, 4-40 dm tall, with fibrous or fleshy-fibrous roots.
 - 2 Leaves primarily opposite (the uppermost sometimes alternate)..... ***Verbesina occidentalis***
 - 2 Leaves primarily alternate (the lowermost sometimes opposite).
 - 7 Heads few, 1-15 (-20) in a compact inflorescence; disc 7-16 mm wide at anthesis; ray flowers (5-) 7-15, yellow; plants 5-12 dm tall..... ***Verbesina helianthoides***
 - 7 Heads numerous, 10-200+ in a dense to open inflorescence; disc 3-15 mm wide at anthesis; ray flowers either absent, or 1-5 and white, or 2-10 and yellow; plants 10-40 dm tall.
 - 8 Ray florets absent; disk flowers white..... ***Verbesina walteri***
 - 8 Ray florets present; disk flowers white or yellow.
 - 9 Ray flowers and disc flowers yellow..... ***Verbesina alternifolia***
 - 9 Ray flowers and disc flowers white..... ***Verbesina virginica* var. *virginica***

Verbesina alternifolia (Linnaeus) Britton ex Kearney. COMMON WINGSTEM. **Hab:** Alluvial forests, marshes, floodplain pastures. **Dist:** NY and s. ON west to IA, south to Panhandle FL, w. LA, and nc. TX. **Phen:** (Jul-) Aug-Sep (-Oct). **Syn:** = Ar, C, F17, FNA21, G, GrPl, GW2, K1, K3, K4, Mi, Mo2, NcTx, NE, Oh3, Pa, RAB, SE1, Tn, Tx, Va, WH3, WV; = *Actinomeris alternifolia* (Linnaeus) Benth – Il; = *Ridan alternifolia* (Linnaeus) Britton – S. NatureServe G5 (Secure).

Verbesina encelioides (Cavanilles) Benth & Hooker f. GOLDEN CROWNBEARD. **Hab:** Fields and disturbed area. **Dist:** NE and TX west to CA, south to Mexico; widely scattered eastwards as an introduction in the se. United States and elsewhere. **Phen:** May-Oct. **Syn:** = Ar, Bah, F17, FNA21, K3, K4, Mi, Mo2, NcTx, SE1, Tx; = *Ximenesia encelioides* Cavanilles; > *Verbesina encelioides* ssp. *encelioides* – GrPl; > *Verbesina encelioides* ssp. *exauriculata* (Robinson & Greenman) J.R. Coleman – GrPl, NE.

Verbesina helianthoides Michaux. OZARK CROWNBEARD. **Hab:** Prairies, oak savannas, glades, dry woodlands over mafic rocks, barrens. **Dist:** OH west to IA and KS, south to c. TN, nw. GA, n. AL, and nc. TX; disjunct in w. NC and e. GA. **Phen:** May-Oct. **Syn:** = Ar, C, F, FNA21, G, GrPl, K1, K3, K4, Mo2, NcTx, Oh3, SE1, Tn, Tx; = *Actinomeris helianthoides* (Michaux) Nuttall – Il; = *Pterophyton helianthoides* (Michaux) Alexander – S. NatureServe G5 (Secure).

Verbesina occidentalis (Linnaeus) Walter. SOUTHERN CROWNBEARD. **Hab:** Forests, woodlands, pastures, and roadsides, especially abundant in alluvial areas or upslope over mafic or calcareous rocks. **Dist:** MD west to OH and MO, south to Panhandle FL and MS. **Syn:** = C, F, F17, FNA21, G, GW2, Il, K1, K3, K4, Oh3, RAB, SE1, Tn, Va, WH3, WV; = *Phaethusa occidentalis* (Linnaeus) Britton – S. NatureServe G5 (Secure).

Verbesina virginica Linnaeus var. ***virginica***. COMMON FROSTWEED. **Hab:** Moist to dryish forests and woodlands, especially over mafic or calcareous rocks, in Coastal Plain ravines in VA over coquina limestone. **Dist:** Sc. NC (e. VA?) west to e. KS, south to n. FL and c. and s. TX. **Phen:** Jul-Oct. **Tax:** Populations of *V. virginica* from e. VA appear to be substantially disjunct from other populations of either variety. **Syn:** = C, GW2, K1, Mo2, RAB, SE1, Va, Olsen (1979); = *Phaethusa virginica* (Linnaeus) Britton – S; < *Verbesina virginica* – Ar, F, F17, FNA21, G, GrPl, Il, K3, K4, NcTx, Oh3, Tn, Tx, WH3. Verbesina walteri Shinnars. WALTER'S WINGSTEM. **Hab:** Floodplains, low moist forests. **Dist:** Coastal Plain of SC south to GA, west to e. TX; disjunct eastwards in NC, SC, and GA, and northward in the Ouachita Mountains of AR and OK. **Phen:** Late Aug-Sep. **Syn:** = Ar, FNA21, GW2, K1, K3, K4, RAB, SE1; = *Ridan paniculata* (Walter) Small – S. NatureServe G4 (Apparently Secure).

Vernonia Schreber 1791 (IRONWEED)

A genus of about 20 species, perennial herbs, of e. and c. North America and n. Mexico; a few species in South America. Traditionally very broadly circumscribed to include about 500 species, trees, shrubs, and herbs, of tropical, subtropical, and warm temperate regions, especially America and Africa; this broader circumscription appears increasingly indefensible. References: Faust (1972); Jones in SE1 (1980); Jones (1982); Siniscalchi et al (2019); Strother (2006l) in FNA19 (2006a); Urbatsch (1972); Ward (2012a).

Identification Notes: Hybrids are frequent between co-occurring species. Only *V. ×georgiana* is keyed separately below (because of its distinctive appearance). Others may be recognized by intermediate morphology and ecological / geographic context.

- 1 Leaves basally disposed (the larger leaves in a basal rosette or in the lower half of the stem, the leaves strongly reduced in size upwards); [mainly Coastal Plain and adjacent areas of inland provinces]
 - 3 Larger leaves 5-25 mm wide; leaf L:W ratio 3-17.

..... *Vernonia texana*
 - 3 Larger leaves 2-4 (-8) mm wide; leaf L:W ratio (8-) 12-30 (-60+).

..... *Vernonia angustifolia* var. *mohrii*
- 1 Basal rosette absent; [collectively of a wide variety of habitats].
 - 8 Phyllary tips subulate to filiform, at broadest at least acuminate.

..... *Vernonia glauca*
 - 8 Phyllary tips acute to rounded (sometimes minutely apiculate), the narrowest short acuminate.
 - 17 Leaf undersurfaces scabrous with appressed awl-shaped hairs, with few or no resin glands.

..... *Vernonia gigantea*
 - 17 Leaf undersurfaces with curled, erect hairs, and with conspicuous resin glands.

..... *Vernonia missurica*

Vernonia angustifolia Michaux var. *mohrii* S.B. Jones. FLORIDA SANDHILL IRONWEED, FLORIDA SLENDER IRONWEED. **Hab:** Longleaf pine sandhills. **Dist:** Sw. GA and Panhandle FL south to c. peninsular FL and west to s. AL and s. MS. **Syn:** = *Vernonia angustifolia* ssp. *mohrii* (S.B. Jones) S.B. Jones & Faust – K1, SE1; < *Vernonia angustifolia* Michaux – F17, FNA19, K3, K4, S, WH3. NatureServe G5TNR (Not Yet Ranked).

Vernonia gigantea (Walter) Trelease. COMMON IRONWEED, GIANT IRONWEED. **Hab:** Pastures, bottomlands, streamsides. **Dist:** W. NY, s. MI and e. NE south to SC, FL, and TX. **Phen:** Late Aug-Oct; Aug-Nov. **Syn:** = Ar, GrPl, Mi, NcTx, Pa, Tn, Va, W; = *Vernonia altissima* Nuttall – G, RAB, Tx, WV; = *Vernonia gigantea* (Walter) Trelease ssp. *gigantea* – K1, Mo2, Oh3, SE1, Urbatsch (1972); = *Vernonia gigantea* var. *gigantea* – C; > *Vernonia altissima* Nuttall – S; > *Vernonia altissima* var. *altissima* – F; > *Vernonia altissima* var. *taeniotricha* S.F. Blake – F; < *Vernonia gigantea* (Walter) Trelease – F17, FNA19, K3, K4, WH3; > *Vernonia gigantea* (Walter) Trelease – S; > *Vernonia gigantea* var. *gigantea* – Il; > *Vernonia gigantea* var. *taeniotricha* – Il, nomen nudum. NatureServe G5T5 (Secure).

Vernonia glauca (Linnaeus) Willdenow. APPALACHIAN IRONWEED, TAWNY IRONWEED. **Hab:** Pastures, bottomlands, streamsides. **Dist:** NJ and PA south to GA, AL, and MS. **Phen:** Late Jun-Sep; Aug-Oct. **Syn:** = C, F, FNA19, G, K1, K3, K4, NE, Pa, RAB, S, SE1, Va, W, WV. NatureServe G5 (Secure).

Vernonia missurica Rafinesque. MISSOURI IRONWEED. **Hab:** Wet hammocks, prairies, glades. **Dist:** IN, c. TN (Chester, Wofford, & Kral 1997), GA (FNA), and Panhandle FL, west to se. IA, e. KS, OK, and TX. **Phen:** Jul-Sep. **Syn:** = C, F, F17, GrPl, Il, K1, K3, K4, Mi, NcTx, NE, Oh3, S, SE1, Tn, Tx, WH3, Faust (1972). NatureServe G4G5 (Apparently Secure).

Vernonia texana (A. Gray) Small. TEXAS IRONWEED. **Hab:** Longleaf pinelands, {other habitats}. **Dist:** S. MS west to OK and TX. **Phen:** Jun-Aug. **Syn:** = Ar, FNA19, K1, K3, K4, NcTx, S, SE1, Tx. NatureServe G4G5 (Apparently Secure).

Xanthium Linnaeus 1753 (COCKLEBUR)

A genus of about 3-20 or more species, herbs, cosmopolitan (of somewhat uncertain original distribution). References: SE1; Fernald (1946); Löve & Dansereau (1959); Millspaugh & Sherff (1919); Strother (2006ee) in FNA20 (2006b); Tomasello (2018).

Identification Notes: Mature burs are needed for the identification of most species.

- 1 Leaf axil with a 1-3 cm long, yellow, 3-forked spine; leaf blades lanceolate to ovate, mostly 2-5× as long as wide, cuneate at the base; burs bearing 0-1 apical beak (if 2, then unequal); [section *Acanthoxanthium*].

Key to Map

N : no
P : planted
? : questionable

- *Xanthium spinosum*
- 1 Leaf axil lacking a spine; leaf blades orbicular or broadly ovate, mostly 0.8-1.5× as long as wide, cordate, truncate, rounded, or cuneate at the base; burs bearing 2 equal apical beaks; [section *Xanthium*].
- 5 Burs generally glabrous or puberulent, usually light tan at maturity; burs 1.0-2.0 (-2.5) cm long (including the beaks); prickles mostly straight, hooked prickles restricted to the upper portion of the bur; beaks straight..... *Xanthium chinense*
- 5 Burs generally hirsute, usually brown at maturity; burs up to 3 cm long (including the beaks); prickles uncinat; beaks straight or curved
- *Xanthium orientale*

Xanthium chinense P. Miller. COCKLEBUR. **Hab:** Barnyards, pastures, bottomlands, other disturbed areas. **Dist:** Widespread in e. North America, and now nearly cosmopolitan; its original distribution uncertain. Despite the name, this species is likely native to e. North America. **Phen:** Aug-Oct. **Syn:** = Tomasello (2018); = *Xanthium strumarium* Linnaeus ssp. *cavanillesii* (Schouw) D. Löve & Dansereau var. *glabratum* (A.P. de Candolle) Cronquist – Löve & Dansereau (1959); = *Xanthium strumarium* var. *glabratum* (A.P. de Candolle) Cronquist – C, G, GrPl, K1, NE, Oh3, RAB, SE1, W; > *Xanthium americanum* Walter; > *Xanthium chasei* Fernald – F, II; > *Xanthium chinense* P. Miller – F, II; > *Xanthium glabrum* Small; > *Xanthium globosum* Shull – F, II; > *Xanthium inflexum* Mackenzie & Bush – F, II; < *Xanthium strumarium* Linnaeus – Bah, FI7, FNA21, GW2, K3, K4, Mi, Mo2, Pa, Tn, Tx, Va, WH3. [NatureServe G5T5?](#) (Secure).

Xanthium orientale Linnaeus. **Hab:** Disturbed ground, roadsides, pastures, barnyards. **Dist:** Widespread in e. North America, and now nearly cosmopolitan; the details of its original distribution uncertain. **Phen:** Aug-Oct. **Comm:** Löve. **Syn:** < *Xanthium orientale* Linnaeus – Tomasello (2018); > *Xanthium pensylvanicum* Wallroth – F; < *Xanthium strumarium* Linnaeus – Bah, FI7, FNA21, GW2, K3, K4, Mi, Mo2, Pa, Tn, Tx, Va, WH3; < *Xanthium strumarium* Linnaeus ssp. *cavanillesii* (Schouw) D. 408. **VIBURNACEAE** Rafinesque 1820 (VIBURNUM FAMILY) [in DIPSACALES]

A family of about 5 genera and about 175-210 species, shrubs, small trees, and herbs (here interpreted as including *Sambucus* and *Viburnum*), mainly of the Northern Hemisphere. There now appears to be little doubt that *Sambucus* and *Viburnum* are more naturally placed in a separate family, in contrast to their traditional placement in the Caprifoliaceae (Backlund & Bittrich in Kadereit & Bittrich 2016; Zhang et al. 2003; Eriksson & Donoghue 1997). The correct name for that segregate family has been in dispute, but the failure of a 'super-conservation' proposal for Adoxaceae means that Viburnaceae is the correct name (Wilson 2016). References: Backlund & Bittrich in Kadereit & Bittrich (2016); Ferguson (1966a); Wilson (2016).

- 1 Leaves pinnately compound; fruit 3-5-seeded; [subfamily Adoxoideae; tribe Sambuceae] *Sambucus*
 1 Leaves simple; fruit 1-seeded; [subfamily Viburnoideae; tribe Viburneae] *Viburnum*

Sambucus Linnaeus 1753 (ELDERBERRY)

A genus of about 10 species, shrubs, small trees, and rarely a perennial herb, north temperate and subtropical. References: Backlund & Bittrich in Kadereit & Bittrich (2016); Bolli (1994); Ferguson (1966a); Tucker, Seigler, & Ebinger in FNA () (in prep).

Sambucus canadensis Linnaeus. COMMON ELDERBERRY. **Hab:** Bottomland and riparian forests, streambanks, thickets, marshes, swamps, seeps, spring runs, mesic upland forests, pond margins, pastures, fencerows, other disturbed areas. **Dist:** NS west to MB, south to s. FL, TX; montane Mexico and Central America; West Indies.

Phen: Late Apr-Jul; Jul-Aug. **Tax:** Bolli (1994) treats this taxon as a subspecies of a very broadly defined *S. nigra*. He recognizes six subspecies: ssp. *nigra* in Europe, ssp. *palmensis* (Link) R. Bolli in the Canary Islands, ssp. *maderensis* (Lowe) R. Bolli in Madeira Island, ssp. *canadensis* in eastern North America, Mexico, Central America, and the West Indies, ssp. *cerulea* (Rafinesque) R. Bolli of western North America, and ssp. *peruviana* (Kunth) R. Bolli of South America. I prefer to retain these taxa at the species level, particularly as Bolli states "the geographical races, in the following defined as subspecies, turned out to be the biological units in *Sambucus*".

Bolli further discusses three races within what is here called *S. canadensis* (his *S. nigra* ssp. *canadensis*), one from eastern North America, another from montane Mexico and Central America, and a third from subtropical se. North America and the West Indies; he considers these geographic races to represent "morphological and perhaps genetical" differences, and that "at present, all races are probably interconnected". This variation may be worthy of taxonomic recognition at the varietal level, and these "races" have formerly been considered to be species or varieties. If given varietal recognition, plants of most of our area represent *S. canadensis* var. *canadensis*, while evergreen (or tardily deciduous), bipinnate plants of FL, s. GA, s. AL, s. MS, s. LA, se. TX, and the West Indies represent *S. canadensis* var. *laciniata* A. Gray. The variation is clinal, and bipinnate leaves are seen as far north as coastal NC. **ID Notes:** The leaflets, particularly of young shoots or stunted sprouts, are often variegated. This is one of the first woody plants to leaf out in the spring. **Syn:** = Ar, C, FNA, GrPl, GW2, Mi, Pa, RAB, Tn, Va, W, WV, Ferguson (1966a); = *Sambucus canadensis* var. *nigra* – NcTx, name not published; = *Sambucus nigra* Linnaeus ssp. *canadensis* (Linnaeus) R. Bolli – F17, K1, K3, K4, NE, WH3, Bolli (1994); > *Sambucus canadensis* Linnaeus – S; > *Sambucus canadensis* var. *canadensis* – F, G, Tx; > *Sambucus canadensis* Linnaeus var. *laciniata* A. Gray; > *Sambucus canadensis* var. *submollis* Rehder – F, G, Tx; >> *Sambucus nigra* var. *nigra* – Il; >> *Sambucus nigra* var. *submollis* – Il, Quoted; name not published; > *Sambucus simpsonii* Rehder ex Sargent – S.

Viburnum Linnaeus 1753 (VIBURNUM)

Contributed by B.A. Sorrie & A.S. Weakley

A genus of about 160-200 species, shrubs and small trees, largely temperate, and primarily in Asia and North America. There remain a number of taxonomic problems, particularly in the *Viburnum dentatum* complex; the treatment and key for that group is provisional. Dirr (2007) discusses the genus in detail from a horticultural perspective. References: Clement et al (2014); Clement et al (2021); Ferguson (1966a); Floden & Saxton (2020); Landis et al (2021); McAtee (1956); Spriggs et al (2019a); Spriggs et al (2019b); Weckman et al (2002); Winkworth & Donoghue (2005).

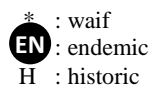

Identification Notes: Leaves vary in shape in some taxa more than in others; we have allowed for some of this variation in the key, but readers should expect that some specimens will not key cleanly, especially rapidly-growing vegetative shoots. Petiole length of leaves varies considerably, even with those possessing "short" petioles. However, by measuring only the petioles of the first leaves below an inflorescence one reduces the chances of misidentifications greatly. Warning: even in some of the "long" petioled taxa, one may occasionally encounter unusually short petioles; therefore it is wise to examine several twigs. Density of pubescence and glandularity of leaves, petioles, and inflorescences varies more in some taxa than in others; we have allowed for some of this variation in the key, but readers should expect that some specimens will not key cleanly, especially vegetative shoots. Stipitate glands are usually very short, especially those on leaf veins; a 10× lens may not be adequate to see them clearly. It is our belief, based on thousands of specimens examined and years of fieldwork, that most *Viburnum* tend to lose pubescence, and perhaps glandularity as well, as the season progresses.

- 1 Leaves (at least the larger and better developed) palmately lobed and veined. *Viburnum acerifolium*
 1 Leaves unlobed and pinnately veined.
 4 Lateral veins curving and branching repeatedly through most of their length, not noticeably parallel, the lateral veins becoming obscure in the general pattern of anastomosing veins and not obviously leading to marginal teeth; [section *Lentago*].
 5 Leaves entire or with a crenate margin, the teeth < 5 per cm of margin.
 8 Peduncle usually 16-29 mm long; fruits pink to dark blue or black in late Jul-Aug; leaves smaller (usually 10-18 square cm); leaf blade avg. 6.1 × 2.0 cm; leaf apices acuminate to acute. *Viburnum nitidum*

- 8 Peduncle usually 33-44 mm long; fruits pale green to white in late Jul-Aug (later turning dark blue or black); leaves larger (usually 20-30 square cm); leaf blade avg. 8.3×3.8 cm; leaf apices acute to obtuse..... *Viburnum nudum*
- 5 Leaves serrulate, the teeth > 5 per cm of margin.
- 10 Leaves herbaceous in texture, dull above (sun leaves slightly glossy); petioles and veins (lower surface) glabrous or slightly brown-scurfy; leaves elliptical (widest near the midpoint of the leaf); leaf apex usually acuminate; [widespread in our area, usually in bottomland or other mesic forests]..... *Viburnum prunifolium*
- 10 Leaves somewhat coriaceous in texture, glossy above (as if lacquered); petioles and veins (lower surface) red-scurfy; leaves mostly obovate (wider towards the apex); leaf apex often rounded (but variable); [of c. VA southward, usually in dry to dry-mesic woodlands and forests]..... *Viburnum rufidulum*
- 4 Lateral veins of the leaves nearly straight and prominently parallel for most of their length, many of them forking near the margin, the ultimate veins leading to a tooth..... *Viburnum scabrellum*

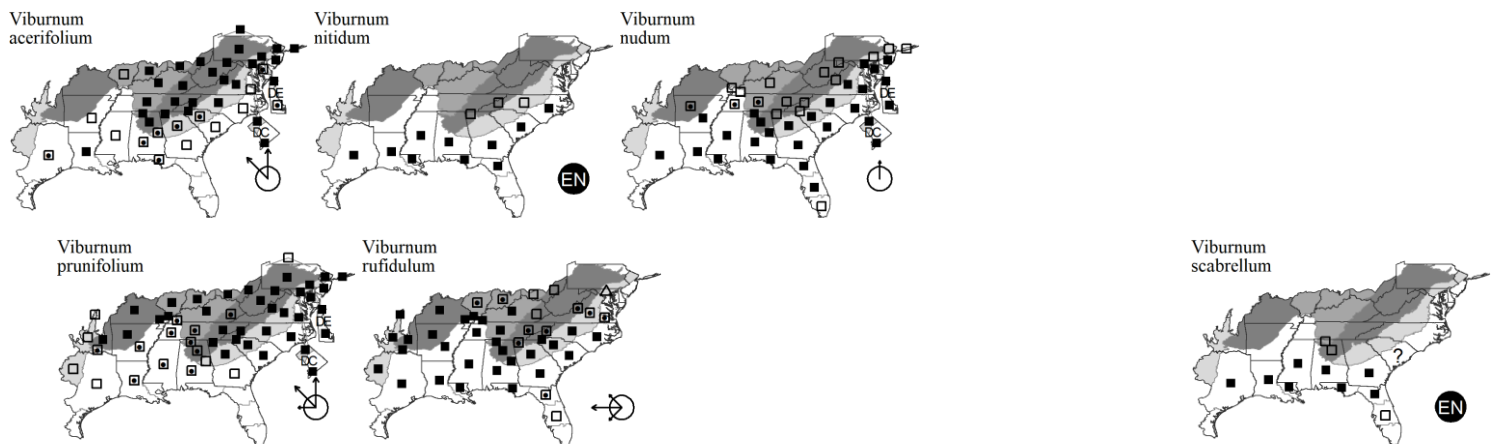

Viburnum acerifolium Linnaeus. MAPLELEAF VIBURNUM, DOCKMACKIE. **Hab:** Mesic to dry forests and woodlands. **Dist:** NB, ON, WI, and ne. IA south to Panhandle FL and e. TX. **Phen:** Late Apr-early Jun; Aug-Oct. **Syn:** = C, FI7, G, IL, K3, K4, Mi, NE, Pa, RAB, Tn, Va, W, WH3, WV, Ferguson (1966a); > *Viburnum acerifolium* Linnaeus – S; > *Viburnum acerifolium* var. *acerifolium* – F, Tx, McAtee (1956); > *Viburnum acerifolium* var. *densiflorum* (Chapman) McAtee – McAtee (1956); > *Viburnum acerifolium* Linnaeus var. *glabrescens* Rehder – F, Tx, McAtee (1956); > *Viburnum acerifolium* var. *ovatum* (Rehder) McAtee – McAtee (1956); > *Viburnum densiflorum* Chapman – S.

Viburnum nitidum Aiton. **Hab:** Bogs and swamps. **Dist:** Ne. NC (or se. VA?) south to n. FL, west to e. TX; rarely inland, as in w. NC. **Phen:** Apr-Jun. **Tax:** See Spriggs et al. (2019) for detailed information. **Syn:** = Tx, Spriggs et al (2019a); = *Viburnum nudum* L. var. *angustifolium* Torr. & A. Gray – F; = *Viburnum nudum* Linnaeus var. *serotinum* Ravenel ex Chapman; > *Viburnum cassinoides* Linnaeus var. *harbisonii* McAtee – McAtee (1956); > *Viburnum cassinoides* Linnaeus var. *nitidum* (Aiton) McAtee – McAtee (1956); < *Viburnum nudum* Linnaeus – FI7, GW2, RAB, S, Va, W, WH3; < *Viburnum nudum* Linnaeus var. *cassinoides* (Linnaeus) Torrey & A. Gray – K4; < *Viburnum nudum* var. *nudum* – C, K1, K3.

Viburnum nudum Linnaeus. SOUTHERN WILD RAISIN, POSSUMHAW. **Hab:** Bogs, blackwater floodplains, wooded seeps, swamps, margins of ponds and lakes, especially in areas with acidic groundwater influence. **Dist:** RI, CT, and NY south to c. peninsular FL, west to TX, inland to w. NC, TN, w. KY, and AR. **Phen:** Apr-May; Aug-Oct. **Tax:** See Spriggs et al. (2019) for the separation of *V. nitidum* from *V. nudum*. **Syn:** = Ar, Pa, Tn, Tx, McAtee (1956), Spriggs et al (2019a); = *Viburnum nudum* var. *nudum* – F, K4; < *Viburnum nudum* Linnaeus – FI7, G, GW2, RAB, S, Va, W, WH3, Ferguson (1966a); ~ *Viburnum nudum* L. var. *angustifolium* Torr. & A. Gray; < *Viburnum nudum* var. *nudum* – C, K1, K3, NE. [NatureServe G5T5](#) (Secure).

Viburnum prunifolium Linnaeus. BLACK HAW, NANNYBERRY. **Hab:** Bottomland and riparian forests, stream banks, bluffs, mesic upland forests. **Dist:** NY, MI, WI, IA, and KS south to GA, AL, MS, LA, and TX. **Phen:** Mar-Apr; Sep-Oct. **Syn:** = Ar, C, GrPl, IL, K1, K3, K4, Mi, NE, Pa, RAB, S, Tn, Tx, Va, W, WV, Ferguson (1966a), McAtee (1956); > *Viburnum prunifolium* Linnaeus var. *bushii* (Ashe) Palmer & Steyermark – F, G; > *Viburnum prunifolium* var. *prunifolium* – F, G. [NatureServe G5](#) (Secure).

Viburnum rufidulum Rafinesque. SOUTHERN BLACK HAW, RUSTY BLACK-HAW. **Hab:** Dry woodlands, dry-mesic woodlands and forests, glade margins, especially common over calcareous or mafic rocks (but not at all restricted to such sites), less commonly in bottomland forests and on stream banks. **Dist:** C. VA, OH, IL, and KS south to n. peninsular FL, TX, and Mexico (COA). **Phen:** Late Mar-Apr; Sep-Oct. **ID Notes:** The bark is checkered into small tannish-brown plates, reminiscent of *Benthamidia* (*Cornus florida*). **Syn:** = Ar, C, F, FI7, G, GrPl, IL, K1, K3, K4, NcTx, RAB, Tn, Tx, Va, W, WH3, Ferguson (1966a), McAtee (1956); ~ *Viburnum prunifolium* L. var. *ferrugineum* Torr. & A. Gray; > *Viburnum rufidulum* Rafinesque – S; > *Viburnum rufotomentosum* Small. [NatureServe G5](#) (Secure).

Viburnum scabrellum (Torrey & A. Gray) Chapman. SOUTHERN ARROW-WOOD. **Hab:** Streambanks, marshes, swamps, other moist sites. **Dist:** A Coastal Plain endemic, ranging from se. GA south to c. peninsular FL, west to e. TX; with scattered collections north to ec. GA (Richmond County), ne. AL (Cherokee County), nw. AL (Lamar County), c. MS, and n. LA. **Comm:** Expected in s. AR, but no specimens seen. Specimens of *V. dentatum* from s. SC show signs of hybridization. Mohr (1901) and some other 19th century authors misapplied the name *V. molle* to it. **Syn:** = *Viburnum dentatum* Linnaeus var. *scabrellum* Torrey & A. Gray – Ar, C, IL, Tx; = *Viburnum dentatum* var. *venosum* (Britton) Gleason – G, K1; < *Viburnum dentatum* Linnaeus – FI7, GW2, K4, W, WH3, Ferguson (1966a); < *Viburnum dentatum* var. *dentatum* – K3, RAB; > *Viburnum scabrellum* var. *ashei* (Bush) McAtee – McAtee (1956); > *Viburnum scabrellum* (Torrey & Gray) Chapman var. *scabrellum* – McAtee (1956); < *Viburnum semitomentosum* (Michaux) Rehder – S, misapplied.

409b. CAPRIFOLIACEAE A.L. de Jussieu 1789 (HONEYSUCKLE FAMILY) [in DIPSACALES]

Circumscription of the family is controversial. Various segregate families (or reassignments) of taxa traditionally placed in the Caprifoliaceae have been proposed, including the transfer of *Sambucus* and *Viburnum* to the Adoxaceae, placement of *Diervilla* and *Weigela* in the Diervillaceae (Backlund & Pyck 1998), placement of *Abelia* and *Linnaea* in the Linnaeaceae (Backlund & Pyck 1998; Pyck et al. 2002), and retention of *Lonicera*, *Symphoricarpos*, and *Triosteum* in a much more narrowly circumscribed Caprifoliaceae. Alternatively, all these taxa could be included in the Caprifoliaceae, along with Dipsacaceae and Valerianaceae, as a more broadly circumscribed Caprifoliaceae (APG III 2009). Kadereit & Bittrich (2016) adopt an intermediate solution. References: Backlund & Pyck (1998); Bell (2004); Ferguson (1965); Ferguson (1966a); Hofmann & Bittrich (2016) in Kadereit & Bittrich (2016); Mayer (2016) in Kadereit & Bittrich (2016); Pyck et al (2002); Wang et al (2015); Weberling & Bittrich in Kadereit & Bittrich (2016).

- 1 Erect herbs; corollas purplish, red, or greenish..... *Triosteum*
- 1 Shrubs (erect or arching) or woody lianas; corollas white, yellow, red, or pink.
 - 2 Corolla usually > 10 mm long, bilaterally symmetrical; ovary 2-3-locular *Lonicera*
 - 2 Corolla 3-8 mm long, radially symmetrical or nearly so; ovary 4-locular *Symphoricarpos*

***Lonicera* Linnaeus 1753 (HONEYSUCKLE)**

A genus of about 180 species, shrubs and lianas (woody vines), mainly north temperate. References: Ferguson (1966a); Green (1966); Hofmann & Bittrich (2016) in Kadereit & Bittrich (2016); Rehder (1903); Singhurst, Holmes, & Carr (2021).

- 1 Flowers in opposite 3-flowered cymes, borne in terminal clusters subtended by connate leaves; corolla red, yellow, orange, or creamy white; twining vine or shrub with vining tendencies (in *L. flava* the "vininess" sometimes not apparent)..... *Lonicera sempervirens*
- 1 Flowers in peduncled pairs in the axils of leaves, not subtended by connate leaves; corolla white to pastel pink or yellow; plant an erect shrub or (*L. japonica*) a trailing or climbing vine.
 - 7 Trailing or climbing vine; corolla 30-50 mm long; fruit black at maturity; leaves of vigorous shoots often pinnately lobed *Lonicera japonica*
 - 7 Upright shrub; corolla 7-25 mm long; fruit red or yellow at maturity; leaves unlobed.
 - 8 Branches with solid and continuous, white pith; [native and exotic species]..... *Lonicera fragrantissima*
 - 8 Branches hollow between the nodes, with tannish pith; [exotic species, many of them seriously invasive and likely to be encountered in natural areas]..... *Lonicera maackii*

* ***Lonicera fragrantissima*** Lindley & Paxton. SWEET-BREATH-OF-SPRING. **Hab:** Forests, woodlands, roadbanks, old house sites, spreading (sometimes aggressively) from horticultural use. **Dist:** Native of China. **Phen:** (Jan-) Feb-early Apr; Apr-May. **Syn:** = Ar, K1, K3, K4, NcTx, Pa, RAB, Tn, Va, Ferguson (1966a), Rehder (1903); = *Xylosteon fragrantissimum* (Lindley & Paxton) Small – S. **NatureServe GNR** (Not Yet Ranked).

* ***Lonicera japonica*** Thunberg. JAPANESE HONEYSUCKLE. **Hab:** Nearly ubiquitous, especially common in the Piedmont and Coastal Plain and in mesic habitats. **Dist:** Native of e. Asia. **Phen:** (Mar-) Apr-Jun; Aug-Oct. **Comm:** Schweitzer & Larson (1999) report on physiological characteristics that make *L. japonica* a successful invasive species. **Syn:** = Ar, C, F17, G, GrPl, GW2, K1, K3, K4, Mi, Mo2, NcTx, NE, Pa, RAB, Tn, Tx, Va, W, WH3, WV, Ferguson (1966a); = *Nintooa japonica* (Thunberg) Sweet – S; > *Lonicera japonica* var. *chinensis* (P.W. Watson) Baker – F, Il, Rehder (1903); > *Lonicera japonica* var. *japonica* – F, Il, Rehder (1903).

* ***Lonicera maackii*** (Ruprecht) Herder. AMUR HONEYSUCKLE. **Hab:** Suburban woodlands, moist forests, fencerows, especially in areas with circumneutral soils. **Dist:** Native of e. Asia (Korea, China, Japan). This is one of worst "shrub-weeds", aggressively invasive in various parts of eastern North America, as in the vicinity of DC and in calcareous substrate parts of the interior South. **Phen:** May-Jun. **Comm:** See Luken & Thieret (1994) for a detailed account of this species, its discovery, nomenclature, and issues regarding its invasiveness. **Syn:** = Ar, C, GrPl, K1, K3, K4, Mi, Mo2, NcTx, NE, Pa, Tn, Va, Ferguson (1966a), Rehder (1903); > *Lonicera maackii* var. *erubescens* (Rehder) Q. E. Yang, Landrein, Borosova & J. Osborne – FoC; > *Lonicera maackii* var. *maackii* – FoC. **NatureServe GNR** (Not Yet Ranked).

Lonicera sempervirens Linnaeus. CORAL HONEYSUCKLE, TRUMPET HONEYSUCKLE. **Hab:** Dry forests and woodlands, maritime forests. **Dist:** CT to OH and OK, south to c. peninsular FL and TX; and more widely distributed as an escape from cultivation. **Phen:** Mar-Jul (and sporadically to Nov); Jul-Sep. **Comm:** Var. *hirsutula* has sometimes been maintained, differing from var. *sempervirens* in its ciliate leaf margins, pubescent upper leaf surfaces, sometimes glandular hypanthia and stems (vs. glabrous); it is doubtful that these distinctions are taxonomically meaningful. **Syn:** = Ar, F17, GrPl, GW2, Il, K3, K4, Mi, Mo2, NcTx, Pa, RAB, Tn, Tx, Va, W, WH3, WV, Ferguson (1966a); = *Phenianthus sempervirens* (Linnaeus) Rafinesque – S; > *Lonicera sempervirens* var. *hirsutula* – C, F, G, K1, Rehder (1903); > *Lonicera sempervirens* var. *minor* Aiton – F; > *Lonicera sempervirens* Linnaeus var. *sempervirens* – C, F, G, K1, NE, Rehder (1903).

Symphoricarpos Duhamel 1755 (SNOWBERRY, CORALBERRY, BUCKBRUSH)

A genus of about 10-17 species, shrubs, of North America and e. Asia. References: Bell & Gonzalez (2019); Ferguson (1966a); Jones (1940).

Symphoricarpos orbiculatus Moench. CORALBERRY, BUCKBRUSH. **Hab:** Moist to dry forests, woodlands, thickets, pastures, and old fields, especially over mafic or calcareous rocks. **Dist:** CT west to IN, MN, and CO, south to Panhandle FL, TX, and Mexico; the original native distribution somewhat uncertain due to cultivation and escapes. Seemingly increasing in VA and behaving aggressively in dry woodlands and barrens over greenstone and diabase. **Phen:** Late Jul-Sep; Sep-Nov (and often persisting well into winter). **Syn:** = C, F, FI7, G, GrPl, Il, K1, K3, K4, Mi, NcTx, NE, Pa, RAB, Tn, Tx, Va, W, WH3, WV, Ferguson (1966a); = *Symphoricarpos symphoricarpos* (Linnaeus) C. MacMillan – S. NatureServe G5 (Secure).

Triosteum Linnaeus 1753 (HORSE-GENTIAN, FEVERWORT)

A genus of 6 species, rather woody herbs, of e. Asia (3 species) and e. North America (3 species); the 3 North American species form one clade, the 3 Asian species another (Gould & Donoghue 2000). References: Ferguson (1966a); Gould & Donoghue (2000); Hofmann & Bittrich (2016) in Kadereit & Bittrich (2016).

Triosteum angustifolium Linnaeus var. *angustifolium*. SMOOTH LESSER HORSE-GENTIAN. **Hab:** Mesic forests, bluffs, outcrops, especially over calcareous or mafic rocks. **Dist:** CT west to ON and MO, south to NC, nw. GA (Jones & Coile 1988), AL, and LA. **Phen:** Apr-May; Jul-Aug. **Syn:** = C, F, G; = *Triosteum angustifolium* – K4, NE; < *Triosteum angustifolium* – Ar, GrPl, Il, K1, K3, Mo2, NcTx, Pa, RAB, S, Tn, Tx, Va, W, WV, Ferguson (1966a).

409c. LINNAEACEAE Backlund 1998 (TWINFLOWER FAMILY) [in DIPSACALES]

A family of 6-7 genera and 50-60 species, shrubs, of the northern hemisphere, especially e. Asia. References: Christenhusz (2013); Hofmann & Bittrich (2016) in Kadereit & Bittrich (2016); Wang et al (2015).

Abelia R. Brown 1818 (ABELIA)

A genus of about 30-40 species, shrubs, primarily of s. and e. Asia. Generic circumscription has been controversial, with a radical lumping proposed by Christenhusz (2013), but not widely supported (Wang et al. 2015, and others). We here circumscribe it narrowly. References: Christenhusz (2013); Hofmann & Bittrich (2016) in Kadereit & Bittrich (2016).

* *Abelia xgrandiflora* (André) Rehder [*Abelia chinensis* × *uniflora*]. ABELIA. **Hab:** Suburban thickets, commonly planted in our area, sometimes persistent or rarely weakly naturalizing. **Dist:** Horticultural hybrid of *A. chinensis* and *A. uniflora* (the parent species native of China). Reported for AL (Diamond & Woods 2009). Reported for Arkansas (Serviss & Peck 2019). **Syn:** = FI7, K1, K3, K4, WH3; = *Abelia chinensis* × *uniflora*; = *Linnaea xgrandiflora* (André) Christenhusz – Christenhusz (2013); = n/a – RAB.

409d. VALERIANACEAE Batsch 1802 (VALERIAN FAMILY) [in DIPSACALES]

A family of about 7 genera and 200 species, herbs, of Eurasia and North America.

Valerianella P. Miller 1754 (CORN-SALAD)

A genus of about 60-70 species, herbs, of temperate North America, Eurasia, and n. Africa. Christenhusz, Fay, & Byng (2018) propose combining *Valerianella* into *Valeriana*, a course not taken here. References: Christenhusz, Fay, & Byng (2018); Dyal (1938); Ware (1983); Weberling & Bittrich in Kadereit & Bittrich (2016).

Identification Notes: *Valerianella* species exhibit an interesting set of fruit polymorphisms; the fruit forms in a single species are often strikingly different, and these forms were traditionally regarded as separate taxa. Ware (1983) demonstrated that they were under simple genetic control, and that different fruit forms were found in the same population. Thus, some taxa previously considered distinct are best considered mere fruit types. The fruit consists of three locules, one of which is fertile and dorsal to or more-or-less flanked by the two sterile locules. The sterile locules may be elongate, forming (between them) a groove, or they may be expanded laterally well beyond the width of the fertile locule into flattened or bulbous wings. In *V. locusta*, there is additionally a corky mass on the side of the fertile locule opposite the two sterile locules.

- 2 Fruit greatly thickened by a corky mass on the back of the fertile locule; corolla pale blue (or white)..... *Valerianella locusta*
2 Fruit lacking a corky mass on the back of the fertile locule; corolla white.
..... *Valerianella radiata*

409d. VALERIANACEAE

* **Valerianella locusta** (Linnaeus) Betcke. EUROPEAN CORN-SALAD. **Hab:** Roadsides, moist forests, bottomlands, disturbed areas. **Dist:** Native of Europe. **Phen:** Apr-Jun. **Syn:** = C, Il, K1, K3, K4, Mi, NE, Pa, RAB, S, Tn, Va, WV, Ware (1983); = *Valeriana locusta* Linnaeus – Christenhusz, Fay, & Byng (2018); = *Valerianella olitoria* (Linnaeus) Pollich – F, G, Dyal (1938). **NatureServe G5** (Secure).

Valerianella radiata (Linnaeus) Dufresne. **Hab:** Moist forests, bottomlands, disturbed areas. **Dist:** VA, s. IL, and KS, south to n. FL, Panhandle FL, and TX. **Phen:** Apr-May. **Tax:** Ware (1983) raised the question of whether *V. woodsiana* is a distinct taxon; further study is needed. **Syn:** = Ar, C, Fl7, GrPl, K3, K4, NcTx, NE, RAB, Tn, WH3, WV; > *Valeriana valerianella* Christenhusz & Byng – Christenhusz, Fay, & Byng (2018); > *Valeriana woodsiana* (Torrey & A. Gray) Christenhusz & Byng – Christenhusz, Fay, & Byng (2018); > *Valerianella radiata* (Linnaeus) Dufresne – K1, S, Va, Dyal (1938), Ware (1983); > *Valerianella radiata* var. *fernaldii* Dyal – F, G, Tx, Dyal (1938); > *Valerianella radiata* var. *missouriensis* Dyal – F, Il, Dyal (1938); > *Valerianella radiata* var. *radiata* – F, G, Il, Tx, Dyal (1938); > *Valerianella woodsiana* – K1, NcTx, S, Tx, Va, Dyal (1938), Ware (1983).

409e. DIPSACACEAE A.L. de Jussieu 1789 (TEASEL FAMILY) [in DIPSACALES]

A family of about 11 genera and about 350 species, herbs (perennials and biennials) and shrubs, of Eurasia and n. Africa. References: Carlson, Mayer, & Donoghue (2009).

Dipsacus Linnaeus 1753 (TEASEL)

A genus of about 25 species, herbs, of Eurasia. *Dipsacus* begins flowering about halfway up the head, the flowers then opening sequentially toward both the base and the tip of the inflorescence. References: Ferguson & Brizicky (1965); Ferguson (1965); Mayer (2016) in Kadereit & Bittrich (2016); Stace (2010).

* **Dipsacus fullonum** Linnaeus. WILD TEASEL, COMMON TEASEL. **Hab:** Roadsides, pastures, disturbed areas. **Dist:** Native of Europe. Recently discovered for GA in Floyd County (T. Govus, pers. comm. 2009). **Phen:** Jul-Sep; Sep-Oct. **Comm:** The inflorescences are frequently collected for crafts and dried arrangements. **Syn:** = Ar, GB14, Il, K1, K3, K4, Mi, NE, Tn, Va, W, Ferguson (1965); = *Dipsacus fullonum* ssp. *sylvestris* (Hudson) Clapham; = *Dipsacus sylvestris* Hudson – C, F, G, Pa, RAB, S, WV; < *Dipsacus fullonum* Linnaeus – GrPl.

414. ARALIACEAE A.L. de Jussieu 1789 (GINSENG FAMILY) [in APIALES]

A family of about 40-47 genera and about 1900 species, trees, shrubs, vines, and rarely herbs, mainly tropical in distribution (Plunkett et al. 2018b). *Hydrocotyle* is more closely related to Araliaceae than to Apiaceae, and is transferred here (Nicolas & Plunkett 2009; Chandler & Plunkett 2003). References: Frodin & Govaerts (2003); Graham (1966); Haines (2020a); Plunkett et al (2018b) in Kadereit & Bittrich (2018); Smith (1944); Zuo, Wen, & Zhou (2017).

- 1 Plant a woody vine; [subfamily *Aralioideae*; tribe *Schefflereae*]..... **Hedera**
- 1 Plant an herb, shrub, or tree.
 - 2 Leaves simple, peltate or cordate, roundish (if lobed, with 3-5 rounded lobes), 0.3-10 cm wide; rhizomatous, creeping herbs; [subfamily *Hydrocotyloideae*]..... **Hydrocotyle**
 - 2 Leaves either compound with 3-many leaflets or simple and then with 5-15 pointed lobes, > 10 cm wide; herbs, shrubs, or trees.
 - 6 Leaves 2-3× compound, at least the final order of division pinnate; leaves either 1 from a subterranean stem or 2-many, alternate on an aboveground stem; inflorescence compound, consisting of (2-) 3-many umbels, either on a separate peduncle from the rhizome or in a terminal panicle or raceme of umbels; fruit purple or black; [subfamily *Aralioideae*; tribe *Aralieae*]..... **Aralia**
 - 6 Leaves 1× palmately compound, leaflets 3-7; leaves 3-5 in a whorl at the summit of the stem (*Panax*) or many, clustered on spur shoots (*Eleutherococcus*); inflorescence of a single, simple umbel borne terminally on the stem; fruit red to yellow (*Panax*) or black (*Eleutherococcus*).
..... **Panax**

Aralia Linnaeus 1753 (ARALIA)

A genus of about 74 species, herbs, shrubs, vines, and trees, primarily of e. North America, e. Asia, and se. Asia. Wen (1998) has suggested that *A. nudicaulis* may need to be removed from the genus *Aralia* in order to maintain both *Aralia* and *Panax* as monophyletic genera; more recent studies remain equivocal (Wen 2011) or agree with the removal (Zuo, Wen, & Zhou (2017)). References: Frodin & Govaerts (2003); Moore, Glenn, & Ma (2009); Plunkett et al (2018b) in Kadereit & Bittrich (2018); Smith (1944); Smith (1982); Wen (1993); Wen (1998); Wen (1998); Wen (2011); Wen et al (1998); Zuo, Wen, & Zhou (2017).

- 1 Plant a shrub or small tree, 3-6 (-10) m tall, definitely woody; stem armed throughout with prickles, those on the stem stout, broad-based, and distributed to the summit of the stem; leaves usually armed with prickles on the axes and the main veins; [section *Dimorphanthus*]..... **Aralia spinosa**

414. ARALIACEAE

- 1 Plant an acaulescent herb or stout, suffrutescent herb or slightly woody shrub, not at all to somewhat woody at the base; stem unarmed (or in *A. hispida* bristly with thin prickles on the lower stem only); leaves unarmed.

..... *Aralia racemosa*

Aralia racemosa Linnaeus. SPIKENARD, HUNGRY-ROOT. **Hab:** Rich woodlands, trail margins and roadsides. **Dist:** NB and QC west to MB, MN, and e. SD, south to nw. SC. N. GA, n. AL, n. MS, c. AR, e. KS. **Phen:** Jun-Aug. **Tax:** The related *A. bicrenata* Wootton & Standley (sometimes treated as a subspecies of *A. racemosa* or simply included in it) occurs in AZ, NM, TX, and n. Mexico (Wen 2011). **Syn:** = Ar, C, F, G, GrPl, Il, K4, Mi, Mo2, Pa, RAB, S, Tn, Va, W, Frodin & Govaerts (2003), Smith (1944), Smith (1982), Wen (2011); = *Aralia racemosa* Linnaeus ssp. *racemosa* – K1, K3, NE. NatureServe G5T5 (Secure).

Aralia spinosa Linnaeus. DEVIL'S-WALKING-STICK, HERCULES'S-CLUB, PRICKLY-ASH. **Hab:** Disturbed pocosins and bottomlands, disturbed areas, moist to dry forests and woodlands. **Dist:** NJ west to s. IN, IL, and IA, south to c. peninsular FL and e. TX. **Phen:** Jun-Sep. **Comm:** Smith (1982) discusses the juvenile (prickly) and adult (unarmed) leaf phases of *A. spinosa*. **Syn:** = Ar, C, F, FI7, G, GW2, Il, K1, K3, K4, Mo2, NE, Pa, RAB, S, Tn, Tx, Va, W, WH3, Frodin & Govaerts (2003), Moore, Glenn, & Ma (2009), Smith (1944), Smith (1982). NatureServe G5 (Secure).

***Hedera*** Linnaeus 1753 (IVY)

A genus of 15 species, lianas, distributed from Mediterranean Europe west to e. Asia (Plunkett et al. 2018b). References: Ackerfield & Wen (2002); Frodin & Govaerts (2003); Graham (1966); Green, Ramsey, & Ramsey (2011); Stace (2010); Staff of the Bailey Hortorium (1976).

Identification Notes: The leaves of *Hedera* are dimorphic, sometimes confusing observers; "juvenile" leaves (those of the sterile branches) are about as wide as long and (in *H. helix*) palmately 3-5-lobed, those of the fertile branches (less commonly seen) are obovate or elliptic.

* ***Hedera helix*** Linnaeus var. *helix*. COMMON IVY, ENGLISH IVY. **Hab:** Persistent, established, and spreading around old home sites, in suburban woodlands and waste areas. **Dist:** Native of Europe. **Phen:** Jun-Jul. **Comm:** Var. *helix* is diploid, n = 24. Hundreds of cultivars, varying greatly in habit and leaf size, lobing, and marbling are grown; see for instance, Staff of the Bailey Hortorium (1976) for a partial listing and brief descriptions. **Syn:** = Mo2, Graham (1966), Staff of the Bailey Hortorium (1976); = *Hedera helix* ssp. *helix* – Ackerfield & Wen (2002), Frodin & Govaerts (2003), Green, Ramsey, & Ramsey (2011), Stace (2010); < *Hedera helix* – Ar, C, F, FI7, G, Il, K1, K3, K4, NcTx, Pa, RAB, S, Tn, Va, W, WH3.

***Hydrocotyle*** Linnaeus 1753 (WATER-PENNYWORT)

A genus of about 180 species, perennial and annual herbs, cosmopolitan (especially Australia) (Plunkett et al. 2018b). Molecular analyses have clarified that the affinities of *Hydrocotyle* lie with the Araliaceae rather than the Apiaceae (Downie et al. 1998; Chandler & Plunkett 2004). References: MC; Plunkett et al (2018b) in Kadereit & Bittrich (2018).

- 1 Leaves peltate, lacking a sinus extending to the attachment of the petiole.
- 2 Inflorescence umbellate; leaves 1-4 (-7) cm wide *Hydrocotyle umbellata*
- 2 Inflorescence verticillate or umbellate-verticillate (when first developing sometimes appearing merely umbellate); leaves 1-15 cm wide.
- 3 Inflorescence compound, the main inflorescence axis with nodes which produce verticils or umbels of pedicellate flowers, the inflorescence nodes also producing branches which themselves produce verticils or umbels of flowers; leaves (1-) 4-15 cm wide *Hydrocotyle bonariensis*
- 3 Inflorescence verticillate, all the flowers borne sessile or on pedicels on the unbranched inflorescence axis; leaves 1-6 cm wide.
- 4 Flowers and fruits pedicellate, the pedicels 1-10 mm long *Hydrocotyle tribotrys*
- 4 Flowers and fruits sessile or subsessile *Hydrocotyle verticillata*
- 1 Leaves not peltate, a sinus extending to the attachment of the petiole.
- 5 Central leaf lobe notably more distinct than the other lobes (the sinuses on either side extending 1/3 to 3/4 of the way to the petiolar attachment); stems and petioles fleshy *Hydrocotyle ranunculoides*
- 5 Central leaf lobe not more distinct than the other lobes (the sinuses on either side extending 1/10 to 1/4 the way to the petiolar attachment); stems and petioles filiform. *Hydrocotyle sibthorpioides*

Hydrocotyle bonariensis Lamarck. DUNE PENNYWORT, SOMBRERILLO. **Hab:** Beaches, dunes, and moist sandy areas. **Dist:** Widespread in South and Central America, north in North America to the Southeastern Coastal Plain, se. VA to s. FL and TX and s. AR. **Phen:** Apr-Sep. **Syn:** = Ar, FI7, GW2, K1, K3, K4, MC, Meso4.1, RAB, S, Tx, Va, WH3. NatureServe G5 (Secure).

Hydrocotyle ranunculoides Linnaeus f. SWAMP WATER-PENNYWORT. **Hab:** Stagnant to (less commonly) swiftly flowing waters of swamps pools, backwaters, blackwater streams, sometimes forming floating mats. **Dist:** NY, IL, MO, and KS south to s. FL and se. TX; BC south to CA, AZ,

[NatureServe G5T5](#) (Secure).

***Panax* Linnaeus 1753 (GINSENG)**

A genus of ca. 14 species, perennial herbs, 16 of e. Asia and 1 of e. North America (Plunkett et al. 2018b; Haines 2020a). Wen & Zimmer (1996) and Choi & Wen (2000) studied the phylogeny of *Panax* using molecular techniques. *P. trifolius* does not appear to be closely related to any of the other species, and is a basal component of the genus -- or separable as a monotypic genus, *Nanopanax* (Haines 2020a), as here done. *P. quinquefolius* is most closely related to *P. ginseng* C.A. Meyer and *P. japonicus* C.A. Meyer. References: Choi & Wen (2000); Frodin & Govaerts (2003); Haines (2020a); Lee & Wen (2004); Liu et al (2018); Plunkett et al (2018b) in Kadereit & Bittrich (2018); Smith (1944); Wen & Zimmer (1996); Zuo, Wen, & Zhou (2017).

Panax quinquefolius Linnaeus. GINSENG, SANG, AMERICAN GINSENG. **Hab:** Cove forests, mesic hardwood forests, generally in nutrient-rich forests though tending to avoid the richest coves. **Dist:** ME and QC west to MN and SD, south to e. VA, e. NC, nc. SC, sw. GA, s. AL, s. MS, e. LA, and OK. **Phen:** May-Jun; Aug-Oct. **Comm:** *P. quinquefolius* is gathered in quantity throughout its range for the herbal trade; most of the North American harvest is shipped to China, where it is prized for medicinal uses. Dried roots command prices in excess of \$1000 per kilogram; in our area, "sang" is a multimillion dollar industry. Formerly abundant and occurring in large populations, *P. quinquefolius* has been reduced in most of its range to small populations of scattered individuals, a classic example of a "predator-prey" relationship. Collection and trade in ginseng is monitored and regulated in most states. In NC, it is illegal for ginseng dealers to buy ginseng from collectors before Sep; this allows the plants to mature fruits prior to collection. Schlessman (1985) discusses the floral biology of *P. quinquefolius*. **Syn:** = Ar, F, Il, K1, K3, K4, Mi, Mo2, Pa, Tn, Va, W, WV, Frodin & Govaerts (2003), Haines (2020a), Smith (1944); = *Panax quinquefolium* Linnaeus – C, G, GrPl, RAB, S, orthographic variant. [NatureServe G3G4](#) (Vulnerable).

**416. APIACEAE Lindley 1836 (CARROT FAMILY) [in APIALES]**

A family of about 466 genera and about 3820 species of herbs (rarely shrubs or trees), cosmopolitan, but especially north temperate (Plunkett et al. 2018). *Hydrocotyle* is more closely related to Araliaceae, and has been transferred there (Chandler & Plunkett 2004; Plunkett et al. 2018). References: MC; Plunkett et al (2018a) in Kadereit & Bittrich (2018).

Identification Notes: The Apiaceae is an easy family to recognize (with some exceptions). These are herbs, typically with a clasping petiole base and often a variously (and often highly) compound leaf, either 1-5× pinnately, palmately, pinnately-ternately, or ternately compound (less commonly simple or phyllodial). The inflorescence is typically a simple or compound umbel (sometimes subcapitate or truly modified into a head) with numerous small flowers. Subtending the inflorescence is (usually) an involucre of individual bracts. If the umbel is compound, rays support umbellets, each of which may be subtended by an involucre of individual bractlets. The ovary is 2-carpellate, with 2 styles at the summit, these often swollen at the base into a stylopodium capping the ovary. The fruit develops into 2 mericarps, united by their faces at the commissure; each mericarp may be terete, flattened dorsally (parallel to the commissure, the commissure therefore broad), or flattened laterally (perpendicular to the commissure, the commissure therefore narrow). Each mericarp has 5 primary ribs, one down the back (the dorsal rib), 2 near each edge near the commissure (the lateral ribs or lateral wings), and 2 in-between (the intermediate ribs). The ribs may be thin and filiform in ×-section, corky, or winged, and they (or the entire outer surface of the mericarp) may also be ornamented with hairs, spines, uncinat prickles, etc.

- 1 Principal leaves either all simple (though sometimes palmately or pinnately lobed) or those that are basally disposed simple (those on the upper stem sometimes compound)..... **Key A**
- 1 Principal leaves all variously compound (small bracteal leaves on the upper stem sometimes reduced and simple).
- 2 Leaves 1-palmately or 1-pinnately compound (all leaflets attached to the summit of the petiole or to the primary inflorescence rachis).
- 3 Leaves 1-palmately compound, all of the 3-7 leaflets attached to the summit of the petiole..... **Key B**
- 3 Leaves 1-pinnately compound, all of the 3-13 leaflets attached to a primary inflorescence rachis..... **Key C**
- 2 Leaves 2-5× compound.
- 4 Leaves 2-4× pinnately or pinnately-ternately compound, the ultimate segments consisting of relatively few (usually < 25), discreet, typically broad (elliptic, ovate, or lanceolate) leaflets..... **Key D**
- 4 Leaves 2-5× pinnately or pinnately-ternately decompound, the ultimate segments either linear (and then flat or angled in ×-section) or broader, but then very many (> 50) and often imperfectly separated from one another..... **Key E**

Key A - Apiaceae with simple leaves

- 1 Leaves linear, lanceolate, or oblanceolate, > 4× as long as wide.
- 2 Leaves phyllodial (hollow, septate, segmented); flowers white or purple; [plants of wetlands].
- 3 Umbels simple; leaves spatulate, broader towards the tip, often flattened in ×-section, rounded or obtuse at the apex..... *Lilaeopsis*
- 3 Umbels compound; leaves tapering to a pointed tip, terete in ×-section.
..... *Tiedemannia*
- 2 Leaves "normal" (flat, non-septate, continuous, and in some cases lobed, toothed, or spinose-margined); flowers blue, yellow, white, or whitish-green; [plants of wetlands or uplands].
- 5 Flowers borne in involucre heads; corolla blue or greenish-white..... *Eryngium*
- 5 Flowers in compound umbels; corolla yellow or white.
..... *Cynoscium*
- 1 Leaves orbicular, ovate, or elliptic, < 4× as long as wide.
- 7 Leaves orbicular, as wide as or wider than long; base peltate or cordate.
- 9 Foliage and fruits (or ovaries) stellate-pubescent or glochidiate; leaves lobed, but otherwise entire; [rare alien] *Bowlesia*
- 9 Foliage and fruits (or ovaries) glabrous; leaves toothed, sometimes also lobed; [common natives and aliens] *Araliaceae*
- 7 Leaves ovate or elliptic, 1.2-4× as wide as long; base cordate, peltate, or truncate.
- 12 Flowers greenish or blue; leaves all simple (sometimes stem leaves lobed); inflorescence a head or very congested (subcapitate) umbel; [plants of wetland situations, prostrate, creeping, or erect].
- 13 Inflorescence a very congested (subcapitate) umbel, with 4-9 flowers; leaves cordate at the base, long-petiolate, the petioles characteristically 2× as long as the leaf..... *Centella erecta*
- 13 Inflorescence a head, with > 20 flowers; leaves cuneate to truncate at the base, sessile to short petiolate, the petioles < 1× as long as the leaf (except *E. prostratum*)..... *Eryngium*
- 12 Flowers yellow or purple; basal leaves simple, stem leaves usually compound; Inflorescence a compound umbel; [erect plants of upland situations].
- 14 Fruits (partly to fully mature) with thin-edged wings; flowers yellow or purple; central flower of each umbellet staminate and pedicelled; fruits all pedicelled in all umbellets *Thaspium*
- 14 Fruits ribbed (with rounded, cordlike ribs), lacking thin-edged wings; flowers yellow; central flower of each umbellet either staminate and pedicelled, or pistillate and sessile; fruits all pedicelled in some umbellets (those with a staminate central flower), or the central fruit sessile in some umbellets (those with a pistillate central flower) *Zizia*

Key B - Apiaceae with 1-palmate leaves

- 1 Leaflets narrowly lanceolate or linear, > 8× as long as wide, entire; umbels compound and regular, the rays and pedicels each of relatively uniform lengths; leaves 3-5-foliolate.
..... *Cynoscium digitatum*
- 1 Leaflets ovate, obovate, broadly lanceolate, or broadly oblanceolate, 1-5× as long as wide, serrate or variously incised or cleft; umbels compound and irregular, the rays and/or pedicels of widely varying lengths; leaves 3-7-foliolate.
- 3 Rays 3-8, the involucre absent or inconspicuous; umbellets with 3-10 pedicellate perfect flowers; fruits linear-oblong, glabrous; leaves 3-foliolate, the lateral leaflets often 2-parted; corollas white..... *Cryptotaenia canadensis*
- 3 Rays few, the involucre of prominent, broad, foliaceous bracts; umbellets with 3 sessile to subsessile or short-pedicellate perfect flowers and a variable number of pedicellate staminate flowers; fruits ovoid, obovoid, or subglobose, covered with uncinat bristles; leaves palmately 3-7-foliolate, the lateral sometimes 2-parted; corollas greenish-white, yellowish-green, or white..... *Sanicula*

Key C - Apiaceae with 1-pinnate leaves

- 2 Leaflets entire or with a few teeth (rarely as many as 7 on each side), these usually near the midpoint of the leaflet; fruits 4-7 mm long; corolla white *Oxypolis rigidior*
- 2 Leaflets rather finely toothed (and sometimes also deeply lobed), the teeth evenly disposed along the margins; fruits 1-6 mm long; corolla white or yellow.
..... *Sium suave*

Key D - Apiaceae with leaves 2-4× pinnately-ternately compound, the ultimate leaflets distinct and relatively broad

- 1 Leaflets entire.
..... *Taenidia*
- 1 Leaflets variously serrate, dentate, and/or incised.
- 3 Plants in flower.
- 4 Corolla yellow, maroon, or pale creamy yellow.

- 5 Flowers yellow, maroon, or pale creamy-yellow; central flower of each umbellet staminate and pedicelled; fruits all pedicelled in all umbellets; developing fruits subterete to slightly dorsally compressed, several or all of the ribs with thin-edged wings *Thaspium*
- 5 Flowers yellow; central flower of each umbellet either staminate and pedicelled, or pistillate and sessile; fruits all pedicelled in some umbellets (those with a staminate central flower), or the central fruit sessile in some umbellets (those with a pistillate central flower); developing fruits laterally compressed, all of the ribs rounded and cordlike *Zizia*
- 4 Corolla white. {Add to keylead 4b: *Ammi majus*, *Angelica dentata*, *Apium graveolens* var. *dulce*, *Cicuta bolanderi*, *Cicuta mexicana*, *Imperatoria ostruthium*, *Petroselinum crispum*}
- 6 Ovary hispid or pubescent.
- 7 Rays 16-25; leaves somewhat coriaceous; leaflet bases often cuneate or obliquely truncate; [plants of dry habitats] *Angelica*
- 7 Rays 3-5; leaves thin in texture; leaflet bases rounded, subcordate, or broadly cuneate; [plants of moist forests] *Osmorhiza*
- 6 Ovary glabrous.
- 10 Sheaths of the upper leaves dilated, > 1 cm wide when flattened; [plants of moist habitats, from GA northward in the Mountains, extending into adjacent provinces towards the northern edge of our area] *Angelica*
- 10 Sheaths of the upper leaves not dilated, < 1 cm wide; [plants either of wetlands or of moist to dry forests].
- 11 Veins of the leaflets directed to the sinuses; leaflets mostly 2.5-5× as long as wide, acuminate at the tip; [of wetlands] *Cicuta*
- 11 Veins of the leaflets directed to the tips of the teeth or lobes; leaflets mostly 1.3-1.8× as long as wide, acute to obtuse at the tip; [of moist to dry forests] *Ligusticum*
- 3 Plants in fruit. {Add to key 3b: *Ammi majus*, *Apium graveolens* var. *dulce*, *Imperatoria ostruthium*, *Petroselinum crispum*, }
- 12 Fruit hispid or pubescent (regardless of winging).
- 13 Fruits 4-6 mm long, hispid across the surfaces; rays 16-25; leaves somewhat coriaceous; leaflet bases often cuneate or obliquely truncate; [plants of dry habitats] *Angelica*
- 13 Fruits 18-24 mm long, oblanceolate or linear, appressed-pubescent on the ribs; rays 3-5; leaves thin in texture; leaflet bases rounded, subcordate, or broadly cuneate; [plants of moist forests] *Osmorhiza*
- 12 Fruit glabrous (sometimes winged or prominently ribbed as well).
- 14 Fruits dorsally compressed (strongly to slightly) or subterete, either thin-winged or corky-winged.
- 16 Rays 12-30; fruits 4-8 mm long; plant 6-20 dm tall; sheaths of the upper leaves dilated, > 1 cm wide when flattened *Angelica*
- 16 Rays 5-10; fruits 3-6 mm long; plant 5-10 dm tall; sheaths of the upper leaves not dilated, < 1 cm wide *Thaspium*
- 14 Fruits laterally compressed, not winged (except thin-winged in *Ligusticum*).
- 17 Veins of the leaflets directed to the sinuses; leaflets mostly 2.5-5× as long as wide, acuminate at the tip; [of wetlands] *Cicuta*
- 17 Veins of the leaflets either directed to the tips of the teeth or lobes, or reticulating extensively and becoming obscure before reaching the margin; leaflets mostly 1.3-1.8× as long as wide, acute to obtuse at the tip; [of moist to dry forests].
- 19 Lateral veins of the leaflet parallel and straight, clearly extending to the tip of each tooth; leaflet base often strongly oblique; leaflet margin entire in the lower ¼ to 1/3 *Ligusticum*
- 19 Lateral veins of the leaflet arcing, reticulating and becoming obscure before reaching the leaflet margin; leaflet base symmetrical or slightly oblique; leaflet margin toothed to or very close to the base *Zizia*

Key E

- 1 Ultimate leaf-segments linear to filiform, the margins parallel.
- 2 Corolla yellow; rays 15-40; plants 5-21 dm tall, annual, biennial, or perennial; [naturalized aromatic culinary herbs of upland situations].
- 3 Petiolar sheaths of the principal leaves 1-2.5 (-3) cm long; mericarps dorsally flattened, at least the lateral ribs thin-winged; fresh plants with dill odor; annual. *Anethum graveolens*
- 3 Petiolar sheaths of the principal leaves 3-10 cm long; mericarps subterete or slightly laterally flattened, the ribs not winged; fresh plants with fennel odor; biennial or perennial *Foeniculum vulgare*
- 2 Corolla white; rays 5-20; plants 1-15 dm tall; annual; [native or naturalized herbs of upland or wetland situations].
- 4 Mericarps (and ovary) ornamented with pustules, spines, or sharp-pointed projections (in addition to the ribs) *Spermolepis*
- 4 Mericarps (and ovary) glabrous.
- 5 Umbels leaf-opposed; umbels simple to compound *Cyclospermum leptophyllum*
- 5 Umbels terminal or on axillary branches; umbels compound *Ptilimnium*
- 1 Ultimate leaf segments flat, ovate, elliptic, lanceolate, or irregular, the margins not neatly parallel.
- 6 Plants perennial or biennial (annual in *Daucus pusillus*), 10-30 dm tall (or as short as 3 dm tall in *Daucus* and *Conioselinum*); rays 12-60 (or 5-25 in *Conioselinum*).
- 7 Leaves ¼-½× as wide as long; mericarps (and ovaries) bristled; mericarps 3-5 mm long; rays 10-60 (or more) *Daucus*
- 7 Leaves ½-1× as long as wide; mericarps (and ovaries) glabrous; fruits either 4-6 mm or 2-2.5 mm long; rays 5-20. *Conium*
- 6 Plants annual (perennial in *Erigenia* and sometimes *Anthriscus*), 0.5-8 (-10) dm tall; rays 1-7 (or to as many as 12 in *Anthriscus* and *Torilis*).
- 9 Plants perennial from a globose tuber; flowering Feb-Mar; [of rich forests] *Erigenia bulbosa*
- 9 Plants annual (or sometimes a short-lived perennial in *Anthriscus*) from fibrous roots; flowering Apr-Jun; [of rich forests and weedy situations].
- 10 Rays (1-) 3 (-5); mericarps 5.5-10 mm long, glabrous or pubescent with weak appressed hairs *Chaerophyllum*
- 10 Rays 3-12; mericarps 3-6 mm long, glabrous or densely bristled with hooked (uncinate) bristles. *Torilis*

Ammi Linnaeus 1753 (BISHOP'S-WEED)

A genus of about 3-4 species, annual or biennial herbs, distributed in Mediterranean Europe. References: MC; Plunkett et al (2018a) in Kadereit & Bittrich (2018).

Key to Map
Symbology:

* : waif
EN : endemic

N : no
P : planted
? : questionable

* ***Ammi majus*** Linnaeus. BULLWORT, GREATER AMMI. **Hab:** Disturbed areas. **Dist:** Native of Mediterranean Europe. **Phen:** Mar-Jun. **Syn:** = Bah, FI7, K3, K4, MC, Meso4.1, Mo2, NcTx, RAB, S, Tx, WH3. NatureServe GNR (Not Yet Ranked).

Ammoselinum Torrey & A. Gray 1855 (SAND-PARSLEY)

A genus of 3-4 species, annual herbs, of sc. and sw. North America and temperate s. South America. References: MC; Nesom (2012c); Plunkett et al (2018a) in Kadereit & Bittrich (2018).

Ammoselinum butleri (Engelmann ex S. Watson) Coulter & Rose. BUTLER'S SAND-PARSLEY. **Hab:** Bottomlands and mesic forests; eastwards in lawns, disturbed places. **Dist:** MO and se. KS south through AR and OK to LA and s. TX. Boufford (1977) reported the naturalization of this diminutive midwestern umbel on a grassy, weed-covered slope in NC, and it has since been reported from additional southeastern states, including MS (Bryson 1991) and AL (Keener 2007). **Phen:** Mar-Apr (-May). **Syn:** = Ar, GrPl, GW2, K1, K3, K4, MC, Mo2, NcTx, Tn, Tx, Nesom (2012c); = n/a – RAB. NatureServe G5 (Secure).

Anethum Linnaeus 1753 (DILL)

A monotypic genus, an annual herb, apparently native to sw. Asia and/or the Mediterranean region (Plunkett et al. 2018). Closely related to *Foeniculum*. References: MC; Plunkett et al (2018a) in Kadereit & Bittrich (2018).

* ***Anethum graveolens*** Linnaeus. DILL, DILLWEED. **Hab:** Roadsides, disturbed areas, abandoned garden plots, a waif from garden use. **Dist:** Native of sw. Asia. **Phen:** Jun-Aug. **Syn:** = Ar, Bah, C, F, FI7, G, GrPl, Il, K1, K3, K4, MC, Meso4.1, Mi, Mo2, NcTx, NE, Pa, RAB, S, Tx. NatureServe GNR (Not Yet Ranked).

Angelica Linnaeus 1753 (ANGELICA)

A genus of about 120 species, perennial herbs of the northern hemisphere. Recent analyses, such as by Liao et al. (2013), suggest that *Angelica* will be divided in the future, with North American species likely placed in a new genus. References: Levin in FNA () (in prep); Liao et al (2013); Liao et al (2021); MC; Plunkett et al (2018a) in Kadereit & Bittrich (2018).

Angelica venenosa (J. Greenway) Fernald. HAIRY ANGELICA, DEADLY ANGELICA, WOODLAND ANGELICA. **Hab:** Dry forests and woodlands, woodland borders, longleaf pine sandhills, hammocks, prairies. **Dist:** MA west to MN, south to Panhandle FL, MS, and AR. **Phen:** May-Aug; Jul-Sep. **Comm:** Populations of this species in dry sandhill communities in the Fall Line Sandhills have a number of peculiar features: basal leaves often borne appressed against the ground, small leaflets, coarse and more equilateral toothing of the leaflets. These populations may be worthy of taxonomic recognition; they need further study. **Syn:** = Ar, C, F, FI7, G, Il, K1, K3, K4, MC, Mi, Mo2, NE, Pa, RAB, Tn, Va, W, WH3, Levin in FNA () (in prep); = *Angelica venenosa* ssp. *venenosa* – Liao et al (2021); = *Angelica villosa* (Walter) Britton, Sterns, & Poggenburg – S. NatureServe G5 (Secure).

Apium Linnaeus 1753 (CELERY)

A genus of about 10 species, perennial and biennial herbs, of temperate and subtropical regions, mainly Southern Hemisphere. References: MC; Plunkett et al (2018a) in Kadereit & Bittrich (2018); Ronse et al (2010).

* ***Apium graveolens*** Linnaeus. CELERY. **Hab:** Disturbed areas, escaped or persisting from cultivation. **Dist:** Native of Europe. **Phen:** Jun-Jul; Jul-Aug. **Tax:** Escapes in our area appear to be a reverted wild form, sometimes treated as *A. graveolens* var. *graveolens*. This species occurs in forms or cultivars, which have sometimes been treated as botanical varieties: *A. graveolens* var. *dulce* (P. Miller) A.P. de Candolle (Celery), *A. graveolens* var. *rapaceum* A.P. de Candolle (Celeriac), and others. **Syn:** = C, F, FI7, G, MC, Meso4.1, Mo2, NE, RAB, Tx, WH3, WV, Ronse et al (2010); = *Celeri graveolens* (Linnaeus) Britton – S; > *Apium graveolens* ssp. *dulce* (P. Miller) Bertoloni; > *Apium graveolens* Linnaeus var. *dulce* (P. Miller) A.P. de Candolle – K1, K3, K4. NatureServe GNRTNR (Not Yet Ranked).

Bowlesia Ruiz & Pavón 1794 (BOWLESIA)

A genus of ca. 15 species, perennial and annual herbs, native of South America and Central America (Plunkett et al. 2018). References: MC; Mathias & Constance (1965); Plunkett et al (2018a) in Kadereit & Bittrich (2018).

* ***Bowlesia incana*** Ruiz & Pavón. **Hab:** Open wet hammocks and bottomlands, suburban woodlands. **Dist:** Native of South America. The native distribution of this species is uncertain. Reported from multiple locations in SC (Bradley et al. [in prep.]). **Phen:** Feb-Jun. **Syn:** = Ar, FI7, GW2, K1, K3, K4, MC, NcTx, Tx, WH3, Mathias & Constance (1965); = *Bowlesia septentrionalis* Coulter & Rose – S. NatureServe G5 (Secure).

Centella Linnaeus 1764 (CENTELLA, COINLEAF)

A genus of about 45 species, of warm temperate and tropical regions, centered in s. Africa (Plunkett et al. 2018). References: Alqatani et al (2017); MC; Nesom in FNA () (in prep); Plunkett et al (2018a) in Kadereit & Bittrich (2018).

Centella erecta (Linnaeus f.) Fernald. CENTELLA, COINLEAF. **Hab:** Pine savannas, pondshores, ditches, and a wide variety of other moist to wet habitats. **Dist:** S. NJ and DE south to s. FL, west to s. TX; West Indies, Mexico, Central America. **Phen:** May-Sep; Jul-Oct. **Tax:** Sometimes included in *C. asiatica*, which otherwise has an Old World distribution, but Alqatani et al. (2017) found good evidence to treat *C. erecta* and *C. asiatica* as specifically distinct. **Syn:** = Ar, C, F, G, K1, MC, Meso4.1, NcTx, Va, Alqatani et al (2017); = *Centella repanda* (Persoon) Small – S; < *Centella asiatica* (Linnaeus) Urban – Bah, FI7, GW2, K3, K4, RAB, Tx, WH3, Zhang, Zhang, & Endress (2003).

Chaerophyllum Linnaeus 1753 (CHERVIL)

A genus of about 35 species, annual, biennial, and perennial herbs, of north temperate areas (Plunkett et al. 2018). References: MC; Plunkett et al (2018a) in Kadereit & Bittrich (2018).

- 1 Ribs of fruit broad, the intervals between the ribs much narrower than the ribs; pedicels somewhat club-shaped; stem and leaf surfaces mostly pilose *Chaerophyllum tainturieri*
- 1 Ribs of fruit narrow, the intervals between the ribs equal to or wider than the ribs; pedicels mostly uniform in shape; stem and leaf surfaces essentially glabrous. *Chaerophyllum procumbens* var. *procumbens*

Chaerophyllum procumbens (Linnaeus) Crantz var. *procumbens*. COMMON SPREADING CHERVIL. **Hab:** Alluvial forests. **Dist:** NY and s. ON to MI, s. WI, and e. NE, south to GA, n. peninsular FL (Alachua County), AR, and OK. **Phen:** Late Mar-Apr; Apr-May. **Syn:** = C, F, G, GrPl, Il, K1, K3, MC, RAB, Va; = *Chaerophyllum procumbens* – S; < *Chaerophyllum procumbens* – Ar, FI7, GW2, K4, Mi, Mo2, Pa, Tn, W, WH3. NatureServe G5T5 (Secure).

Chaerophyllum tainturieri Hooker. SOUTHERN CHERVIL. **Hab:** Roadsides, disturbed areas, fields. **Dist:** MD west to NE, south to c. peninsular FL, TX, and AZ. **Phen:** Mar-Apr; Apr-May. **Tax:** Var. *tainturieri* (with fruits glabrous) and var. *dasycarpum* (with fruits pubescent) are sometimes distinguished (see synonymy). They have largely overlapping distributions, and seem unlikely to warrant taxonomic status, but need additional study. *C. texanum* Coulter & Rose is reported as a native in the Nashville Basin of TN (Chester, Wofford, & Kral 1997); it is usually now included in *C. tainturieri* (var. *tainturieri*). **Syn:** = Ar, C, FI7, GW2, Il, K3, K4, Mo2, RAB, Tn, Va, W, WH3; > *Chaerophyllum dasycarpum* (Hooker ex S. Watson) Nuttall ex Small – S; > *Chaerophyllum floridanum* (Coulter & Rose) Bush – S; ~ *Chaerophyllum floridanum* (Coulter & Rose) Bush; > *Chaerophyllum tainturieri* var. *dasycarpum* – GrPl, K1, MC, NcTx, Tx; > *Chaerophyllum tainturieri* var. *floridanum* Coulter & Rose – F; > *Chaerophyllum tainturieri* var. *tainturieri* – F, G, GrPl, K1, MC, NcTx, Tx; ~ *Chaerophyllum tainturieri* Hook. var. *texanum* Coulter & Rose; > *Chaerophyllum tainturieri* – S, orthographic variant; > *Chaerophyllum texanum* Coulter & Rose – F, G, MC.

*Cicuta* Linnaeus 1753 (WATER-HEMLOCK)

A genus of 8 species, perennial herbs, north temperate in distribution (Plunkett et al. 2018). References: MC; Mulligan (1980); Plunkett et al (2018a) in Kadereit & Bittrich (2018).

- 2 Lateral ribs of the commissure flush against one another; leaflets lanceolate, 0.6-3 cm wide *Cicuta maculata* var. *maculata*
- 2 Lateral ribs of the commissure separated by a groove; leaflets ovate, up to 3.5-5 cm wide *Cicuta mexicana*

Cicuta maculata Linnaeus var. *maculata*. WATER-HEMLOCK. **Hab:** Marshes, bogs, seepages, ditches, swamp forests. **Dist:** NS west to AK, south to FL, CA; Mexico. **Phen:** May-Aug; Jul-Sep. **Tax:** Two other varieties are more northern or western: var. *victorinii* (Fernald) B. Boivin of QC and var. *angustifolia* Hooker of western North America. **Comm:** All parts of the plant, especially the tubers, are dangerously poisonous. **Syn:** = C, F, G, K1, NE, Pa, Va; < *Cicuta maculata* Linnaeus – Ar, FI7, GW2, Il, MC, Mi, NcTx, RAB, Tn, Tx, W, WH3; > *Cicuta maculata* var. *bolanderi* (S. Watson) G.A. Mulligan – GrPl, Mo2, Mulligan (1980); < *Cicuta maculata* Linnaeus var. *maculata* – K3, K4; > *Cicuta maculata* Linnaeus var. *maculata* – GrPl, Mo2, Mulligan (1980).

Cicuta mexicana Coulter & Rose. SOUTHERN WATER-HEMLOCK. **Hab:** Marshes, bogs, seepages, ditches, swamp forests, floating vegetation mats. **Dist:** Se. VA (GW), south to FL, and west to TX, south into Mexico (more inland records in our area and westward are of uncertain disposition). **Phen:** May-Aug; Jul-Sep. **Comm:** Though not recognized by Mulligan (1980), this taxon appears to warrant taxonomic recognition. It is a generally coarser plant than *C. maculata*. **Syn:** = GW2, MC, RAB, Tx; = *Cicuta curtissii* Coulter & Rose – S; = *Cicuta maculata* var. *curtissii* (Coulter & Rose) Fernald – F, G; < *Cicuta maculata* Linnaeus – FI7; < *Cicuta maculata* Linnaeus var. *maculata* – K3, K4, Mulligan (1980).

416. APIACEAE

Cicuta maculata
var. maculataCicuta
mexicana*Conium* Linnaeus 1753 (POISON-HEMLOCK)

A genus of 7 species, biennial herbs, of Eurasia and n. and s. Africa (Plunkett et al. 2018). References: MC; Plunkett et al (2018a) in Kadereit & Bittrich (2018).

* *Conium maculatum* Linnaeus. POISON-HEMLOCK. **Hab:** Ditches, roadsides, streambanks, disturbed areas.

Dist: Native of Eurasia. **Phen:** May-Jun; Jun-Jul. **Comm:** All parts of the plant are highly toxic if ingested, causing respiratory failure in humans and other mammals. **Syn:** = C, F, GrPl, GW2, Il, K1, K3, K4, MC, Meso4.1, Mo2, NE, Pa, RAB, S, Tn, Tx, Va, W, WV. NatureServe G5 (Secure).

Cryptotaenia A.P. de Candolle 1829 (HONEWORT)

A genus of about 7 species, biennial and perennial herbs, in north temperate areas; polyphyletic as circumscribed (Plunkett et al. 2018). References: MC; Nesom in FNA () (in prep); Plunkett et al (2018a) in Kadereit & Bittrich (2018).

Cryptotaenia canadensis (Linnaeus) A.P. de Candolle. HONEWORT. **Hab:** Moist and nutrient-rich forests (alluvial, bottomland, slope, and cove forests). **Dist:** NB and QC to MB, south to e. GA, sw. GA, Panhandle FL, AL, and TX. **Phen:** May-Jun; Jun-Aug. **Tax:** Closely related to *C. japonica* Hasskarl, which has sometimes been subsumed within it. **Syn:** = Ar, F, FI7, FNA, GrPl, GW2, Il, K1, K3, K4, MC, Mi, Mo2, NcTx, NE, Pa, RAB, Tn, Tx, Va, WH3, WV; = *Deringa canadensis* (Linnaeus) Kuntze – S; < *Cryptotaenia canadensis* (Linnaeus) A.P. de Candolle – C, G. NatureServe G5 (Secure).

Cyclospermum Lagasca y Segura 1821 (MARSH-PARSLEY)

A genus of 3 species, annual herbs, of tropical and warm temperate America (Plunkett et al. 2018a). Only distantly related to *Apium* and warranting generic status (Ronse et al. 2010). References: MC; Plunkett et al (2018a) in Kadereit & Bittrich (2018); Ronse et al (2010).

Cyclospermum leptophyllum (Persoon) Sprague ex Britton & Wilson. MARSH-PARSLEY. **Hab:** Freshwater marshes, disturbed areas, roadside ditches. **Dist:** Widespread in se. North America, from NC and OK south into tropical America, the native distribution uncertain. **Phen:** Apr-early Jun; Jun-Jul. **Syn:** = Ar, FI7, K1, K3, K4, Meso4.1, NcTx, Tn, Va, WH3, Ronse et al (2010); = *Apium leptophyllum* (Persoon) F. Mueller ex Bentham – Bah, C, G, GW2, Il, MC, RAB, Tx; ? *Cyclospermum ammi* (Linnaeus) Lagasca y Segura – S. NatureServe G5 (Secure).

Cynosciadium A.P. de Candolle 1829

A monotypic genus, an annual herb, of sc. North America (Plunkett et al. 2018a). References: MC; Plunkett et al (2018a) in Kadereit & Bittrich (2018).

Cynosciadium digitatum A.P. de Candolle. FINGER DOGSHADE. **Hab:** Swampy forests, other wet places, ditches, blackland prairies. **Dist:** IL, sw. TN (Shelby County), and AL west to OK and TX. **Phen:** May-Jun. **Syn:** = Ar, C, F, FNA, G, GW2, Il, K1, K3, K4, MC, Mo2, NcTx, S, Tn, Tx. NatureServe G4G5 (Apparently Secure).

Daucus Linnaeus 1753 (WILD CARROT, QUEEN-ANNE'S-LACE)

A genus of about 22-25 species, herbs, of temperate and tropical areas, primarily Old World (Plunkett et al. 2018a). Spooner et al. (2013) suggest a slightly broader circumscription of the genus. Our two species, the European *D. carota* (2n=18) and the apparently native *D. pusillus* (2n=22) are in the two separate clades within the genus (Spooner et al. 2013). References: Arbizu et al (2014); Iorizzo et al (2013); Martínez-Flores et al (2020); MC; Spooner et al (2013).

- 1 Involucral bracts not scarious-margined, appressed-ascending in fruit; spines of the fruit prominently barbed apically with a set of retrorse barbs; umbel rays 5-26 mm long; umbellets 5-12 flowered; central flower of the umbel white; plant an unbranched (or rarely few-branched) annual.....*Daucus pusillus*
- 1 Involucral bracts scarious-margined, spreading or reflexed in fruit; spines of fruit not prominently barbed apically; umbel rays 10-65 mm long (at least some in a given inflorescence usually exceeding 30 mm); umbellets (10-) 20-numerous flowered; central flower of the umbel usually dark purple; plant a freely-branched biennial

EN

- 2 Taproot thin, woody; interior taproot color white, tan, or pale yellow; [roadsides, disturbed areas, fields, pastures, etc.]..... *Daucus carota* ssp. *carota*
- 2 Taproot thick, swollen, and fleshy; interior taproot color orange, yellow, purple, red, or white; [garden plants, waifs near gardens]..... *Daucus carota* ssp. *sativus*

* *Daucus carota* Linnaeus ssp. *carota*. QUEEN-ANNE'S-LACE, WILD CARROT. **Hab:** Pastures, fields, roadsides, waste places. **Dist:** Native of Europe. **Phen:** May-Sep. **Tax:** The wild carrot or Queen-Anne's-Lace so common through most of our region was introduced independently from western Europe and is best treated as a separate subspecies from the cultivated carrot, which is derived from a central Asian wild relative (Iorizzo et al 2013; Martínez-Flores et al 2020). **Comm:** The cultivated carrot (ssp. *sativus*) has a fleshy taproot rich in carotene; the familiar field weed (ssp. *carota*) has a "carroty" flavor, but the root is woody and tan in color. **Syn:** = Mo2, Iorizzo et al (2013), Martínez-Flores et al (2020); < *Daucus carota* Linnaeus – Ar, C, F, FI7, G, GrPl, Il, K1, K3, K4, MC, Meso4.1, Mi, NcTx, NE, Pa, RAB, S, Tn, Tx, Va, W, WH3, WV, Arbizu et al (2014), Spooner et al (2013).

* *Daucus carota* Linnaeus ssp. *sativus* Schübler & G. von Martens. GARDEN CARROT. **Hab:** Planted as a garden vegetable, and as a short-lived waif around gardens. **Dist:** Originated in central Asia only about 1000 years ago from an ancestor genetically differentiated from *D. carota* ssp. *carota* (Iorizzo et al. 2013). **Tax:** Intrataxon rank seems warranted to emphasize the separate evolutionary clades and history of ssp. *carota* and ssp. *sativus*. **Comm:** The familiar "orange form" was apparently only selected from other cultivated carrots (of purple or yellow color) around 1500 a.d. (Iorizzo et al. 2013). **Syn:** = Mo2, Iorizzo et al (2013), Martínez-Flores et al (2020); < *Daucus carota* Linnaeus – Ar, C, F, FI7, G, Il, K1, K3, K4, MC, Meso4.1, Mi, NcTx, NE, Pa, RAB, S, Tn, Va, W, WH3, WV, Arbizu et al (2014), Spooner et al (2013).

Daucus pusillus Michaux. AMERICAN QUEEN-ANNE'S-LACE, AMERICAN CARROT, RATTLESNAKEWEED, SEED-TICKS. **Hab:** Rocky prairies, open woodlands, pastures, fields, roadsides, waste places. **Dist:** Widespread in Southeastern United States, north to NC and MO; also distributed on the west coast of North America and south into n. Mexico. It should be expected in the lower Piedmont of NC and in the Coastal Plain of se. VA, which it closely approaches. Robert Wright has collected this species as a waif in Henrico County, VA (R. Wright, 2002, pers. comm.). The native distribution of this species is speculative. **Phen:** Apr-May; May-Jun. **ID Notes:** This native carrot is smaller and less branched than the ubiquitously naturalized *D. carota*, and the involucre held bowl-like under the compound umbel and extending beyond it in flower and to about its edge in fruit is a distinctive gestalt. **Syn:** = Ar, C, F, FI7, G, GrPl, Il, K1, K3, K4, MC, NcTx, RAB, S, Tn, Tx, W, WH3, Arbizu et al (2014), Spooner et al (2013). [NatureServe G5](#) (Secure).

Erigenia Nuttall 1818 (HARBINGER-OF-SPRING, PEPPER-AND-SALT)

A monotypic genus, a perennial herb, of e. North America (Plunkett et al. 2018a). References: Buddell & Thieret (1985); MC; Nesom in FNA () (in prep).

Erigenia bulbosa (Michaux) Nuttall. HARBINGER-OF-SPRING, PEPPER-AND-SALT, ERIGENIA. **Hab:** Mesic, nutrient-rich forests, either over calcareous substrate or on very rich alluvial deposits (such as riverbanks). **Dist:** S. PA, w. NY, s. ON, c. MI, and se. WI south to w. MD, DC, c. VA, w. VA, nc. NC, w. NC, e. TN, nw. GA, c. AL, n. MS, sw. AR, and se. KS (almost entirely west of the Blue Ridge). Rodgers (1950) stated that *E. bulbosa* was "reported in mtns. of N.C. by Kephart and Hyams", but Radford, Ahles, & Bell (1968) excluded it from the state's flora. *E. bulbosa* has now been documented from both the nc. Piedmont and the Mountains of NC. **Phen:** (Jan-) Feb-May. **Comm:** See Buddell & Thieret (1985) for a very interesting and entertaining account of this plant. **Syn:** = Ar, C, F, G, GrPl, Il, K1, K3, K4, MC, Mi, Mo2, Pa, RAB, S, Tn, Va, W, WV, Buddell & Thieret (1985). [NatureServe G5](#) (Secure).

Eryngium Linnaeus 1753 (ERYNGO)

A genus of about 250 species, herbs, tropical and temperate (Plunkett et al. 2018). References: Bell (1963); Calviño & Downie (2007); Calviño & Levin (2019); Calviño, Martínez, & Downie (2008); Calviño, Martínez, & Downie (2010); MC; Plunkett et al (2018a) in Kadereit & Bittrich (2018).

- 1 Inflorescence unbranched, the heads solitary on peduncles from the leaf axils of the prostrate to erect stem. *Eryngium prostratum*
- 1 Inflorescence branched, the heads in a cyme borne terminally on the erect or prostrate stem.
- 4 Basal and cauline leaves unlobed (except sometimes the uppermost; note that bracts in the inflorescence are often lobed), 3-100 cm long; leaf margins without coarse spine-tips (finely spinulose in *E. foetidum*).
- 6 Blades of basal and lower cauline leaves 3-7 (-10) cm long, acute to obtuse apically, cordate to truncate basally, with a length/width ratio of 1.5-3 (-6)..... *Eryngium integrifolium*
- 6 Blades of basal and lower cauline leaves 10-100 cm long, acuminate to acute apically, clasping basally, with a length/width ratio of 5-50.
- 7 Leaves with primary veins pinnate-reticulate, with or without marginal bristles; flowers blue. *Eryngium aquaticum*
- 7 Leaves with primary veins parallel, with marginal bristles; flowers greenish-white.

- 9 Larger leaves < 1.5 cm wide; marginal bristles in fascicles of 1-3 (-4), those on the lower portion of the leaf usually in fascicles of 2-3 *Eryngium yuccifolium* var. *synchaetum*
- 9 Larger leaves > 1.5 cm wide; marginal bristles of leaves solitary
- 10 Plant green; marginal bristles triangular (broadened at the base); flowering late *Eryngium species 1*
- 10 Plant glaucous; marginal bristles acicular; flowering early *Eryngium yuccifolium* var. *yuccifolium*
- 4 Basal and cauline leaves (all, or at least many of the cauline) definitely deeply lobed into 3 or more divisions, < 10 cm long; leaf lobes tipped with moderately stiff to very stiff spine tips. *Eryngium hookeri*

Eryngium aquaticum Linnaeus. MARSH ERYNGO. **Hab:** Tidal freshwater to brackish marshes; slightly inland over calcareous substrates. **Dist:** NJ to ne. FL along the Atlantic coast. **Phen:** Jul-Sep. **Syn:** = *Eryngium aquaticum* Linnaeus var. *aquaticum* – K1, K3, K4, MC, RAB, Va, Bell (1963); = *Eryngium virginianum* Lamarck – S; < *Eryngium aquaticum* Linnaeus – C, F, F17, G, GW2, Pa, WH3. **NatureServe G4T4** (Apparently Secure).

Eryngium hookeri Walpers. HOOKER'S ERYNGO. **Hab:** Ditches, other wet areas. **Dist:** W. MS and AR west to OK and TX, perhaps recently adventive in the eastward portions of that distribution, not credited as occurring east of TX in Matthias & Constance (1945). **Phen:** Jul-Sep. **Syn:** = Ar, K1, K3, K4, MC, NcTx, Tx. **NatureServe G3G5** (Apparently Secure).

Eryngium integrifolium Walter. SAVANNA ERYNGO. **Hab:** Pine savannas, pine flatwoods, seepages, swamps, wet meadows, other moist, nutrient-poor places. **Dist:** Se. VA (Greensville County) (Belden et al. 2004) and e. NC south to ne. FL and Panhandle FL, west to OK and TX, inland in c. TN. **Phen:** Aug-Oct. **Tax:** Variation within *Eryngium integrifolium* probably warrants taxonomic recognition; it is under study by John Kees, Derick Poindexter, and Alan Weakley. **Syn:** = Ar, F17, K1, K3, K4, MC, NcTx, RAB, Tn, Tx, Va, W, WH3, Bell (1963); > *Eryngium integrifolium* Walter – S; ~ *Eryngium integrifolium* Walt. var. *ludovicianum* (Morong.) Coult. & Rose; > *Eryngium ludovicianum* Morong – S. **NatureServe G5** (Secure).

Eryngium prostratum Nuttall ex A.P. de Candolle. CREEPING ERYNGO, SPREADING ERYNGO. **Hab:** Floodplain forests, bogs, pond margins, moist ditches and lawns, other moist, open habitats; definitely native southward, perhaps only rather recently spread to the northern parts of our area. **Dist:** Se. VA south to FL, west to OK and TX. **Phen:** May-Nov. **Syn:** = Ar, C, F17, GW2, Il, K1, K3, K4, MC, Mo2, NcTx, RAB, S, Tn, Tx, Va, W, WH3, Bell (1963); > *Eryngium prostratum* var. *disjunctum* Fernald – F, G; > *Eryngium prostratum* var. *prostratum* – F, G. **NatureServe G5** (Secure).

Eryngium species 1. MOCCASIN-MASTER. **Hab:** Along small streams through longleaf pine savannas. **Dist:** So far as is known, endemic to e. LA (Florida parishes) and s. MS. **Comm:** Probably warranting species status; under study by Latimore Smith, Derick Poindexter, Cassandra Karlsson, and Alan Weakley.

Eryngium yuccifolium* Michaux var. *synchaetum A. Gray ex Coulter & Rose. SOUTHERN RATTLESNAKE-MASTER. **Hab:** Wet savannas, especially those over calcareous clay soils. **Dist:** A Southeastern Coastal Plain endemic: se. NC to s. FL and west across the Gulf Coastal Plain, the exact range limits obscure. **Phen:** Jun-Aug. **Comm:** The distinction between the two varieties, seemingly clear in NC and elsewhere in states bordering the Atlantic, seems to become less straightforward farther west, as in LA and AR. In NC it has been seen in Pender, Brunswick, Columbus, Bladen, and Robeson counties. **Syn:** = K1, K3, K4, MC, RAB, Tx, Bell (1963); = *Eryngium synchaetum* (A. Gray ex Coulter & Rose) Coulter & Rose – S; < *Eryngium yuccifolium* Michaux – F17, GW2, NcTx, WH3. **NatureServe G5T5** (Secure).

Eryngium yuccifolium* Michaux var. *yuccifolium. NORTHERN RATTLESNAKE-MASTER. **Hab:** Diabase barrens and glades, olivine barrens, pine savannas, pine flatwoods over loamy or clay soils, prairies, other open sites with at least periodic moisture, generally in sites showing some prairie affinities. **Dist:** Widespread in southeastern and midwestern North America, the exact range limits of the typical variety and var. *synchaetum* somewhat obscure; probably distributed from NJ, OH, s. MI, WI, MN, and NE south to Panhandle FL, AL, MS, n. LA, and e. TX. **Phen:** Jun-Aug. **Syn:** = K1, K3, K4, MC, NE, RAB, Tx, Va, Bell (1963); = *Eryngium aquaticum* Linnaeus – S, misapplied; < *Eryngium yuccifolium* Michaux – Ar, C, F, F17, G, GrPl, GW2, Il, Mi, Mo2, NcTx, Tn, W, WH3.

Foeniculum P. Miller 1763 (FENNEL)

A genus of 4-5 species, perennial and biennial herbs, of Asia and Mediterranean Europe (Plunkett et al. 2018a). References: MC; Plunkett et al (2018a) in Kadereit & Bittrich (2018).

* ***Foeniculum vulgare*** P. Miller. FENNEL. **Hab:** Fields, dredge spoil, old gardens, waste places, vacant lots, roadsides. **Dist:** Native of Mediterranean Europe. This is the common garden fennel, cultivated for its seeds,

416. **APIACEAE**

leaves, "bulbs" (finocchio), and ornamental appearance (especially bronze forms), widely used in Mediterranean cuisines. **Phen:** May-Aug; Aug-Sep. **Syn:** = Bah, C, F, FI7, G, IL, K1, K3, K4, MC, Meso4.1, Mi, Mo2, NcTx, NE, RAB, Tn, Tx, Va, W, WH3, WV; = *Foeniculum foeniculum* (Linnaeus) Karsten – S. NatureServe GNR (Not Yet Ranked).

Ligusticum Linnaeus 1753 (LOVAGE)

A genus of 40-50 species, perennial herbs, circumboreal and north temperate. Zhou et al. (2020) and Plunkett et al. (2018a) make clear that *Ligusticum* in this broad circumscription is rampantly polyphyletic, and restrict it to three species widely distributed in Asia, Europe and n. North America. *Ligusticum canadense* awaits an appropriate genus placement. References: MC; Plunkett et al (2018a) in Kadereit & Bittrich (2018); Zhou et al (2020).

Ligusticum canadense (Linnaeus) Britton. NONDO, ANGELICO, AMERICAN LOVAGE. **Hab:** Moist to dryish, nutrient-rich forests and woodlands. **Dist:** S. PA south to c. GA, AL, and Panhandle FL; also in s. MO and n. AR, centered in the Southern and Central Appalachians and the Ozarks-Ouachitas, but extending considerably into adjacent provinces, and even slightly into the Coastal Plain. **Phen:** Jun-Jul; Aug-Sep. **ID Notes:** A distinctive vegetative character is the straightish and toothless basal portion of each leaflet. **Syn:** = Ar, C, F, FI7, G, K1, K3, MC, Mo2, Pa, RAB, S, Tn, Va, W, WH3, WV. NatureServe G4 (Apparently Secure).

Lilaeopsis Greene 1891 (LILAEOPSIS)

A genus of about 15 species, perennial herbs, warm temperate and tropical, of America, Australia, and New Zealand (Plunkett et al. 2018a). References: Affolter (1985); Bone et al (2011); Hatch & Slack (2008); MC; Plunkett et al (2018a) in Kadereit & Bittrich (2018).

- 1 Leaves 7-30 (or more) cm long, often spatulate, up to 11 mm wide toward the apex, with (7-) 10-20 transverse septae; peduncles much shorter than the leaves; pedicels 5-10 mm long..... *Lilaeopsis carolinensis*
- 1 Leaves 1-5 cm long, linear (rarely spatulate), 1-2 (-5) mm wide, with 4-8 (-10) transverse septae; peduncles about as long as or longer than the leaves; pedicels 3-4 mm long..... *Lilaeopsis chinensis*

Lilaeopsis carolinensis Coulter & Rose. CAROLINA LILAEOPSIS, CAROLINA STRAPWORT. **Hab:** Freshwater marshes, pondshores and lakeshores, ditches, interdune ponds, shores of brackish to freshwater estuarine sounds and rivers. **Dist:** Se. VA south to FL and west to e. TX (Hatch & Slack 2008); it is also found in South America (Argentina, Brazil, and Paraguay). **Phen:** May-Jun. **Syn:** = Ar, F, FI7, GW2, K1, K3, K4, RAB, S, Va, WH3, Affolter (1985); = *Lilaeopsis attenuata* (Hooker & Arnott) Fernald – C, G, MC.

Lilaeopsis chinensis (Linnaeus) Kuntze. MARSH LILAEOPSIS, TIDAL STRAPWORT, FIDDLER-CRAB TURF. **Hab:** Brackish and freshwater tidal marshes, especially in mud-flats in the intertidal zone. **Dist:** NS south to c. peninsular FL and west to se. TX (Brown & Marcus 1998). **Phen:** May-Jun. **Comm:** The epithet "*chinensis*" is a misnomer; the species is native to e. North America and has nothing to do with China. **Syn:** = C, F, FI7, G, GW2, K1, K3, K4, MC, NE, RAB, Va, WH3, Affolter (1985); = *Lilaeopsis lineata* (Michaux) Greene – S. NatureServe G5 (Secure).

*Limnoscium* Mathias & Constance 1941 (DOGSHADE)

A genus of 2 species, annual herbs, of sc. North America (Plunkett et al. 2018a). References: MC; Plunkett et al (2018a) in Kadereit & Bittrich (2018).

Limnoscium pinnatum (A.P. de Candolle) Mathias & Constance. ARKANSAS DOGSHADE, TANSY DOGSHADE. **Hab:** Pond margins, ditches. **Dist:** S. IL, s. MO, and se. KS, south to wc. AL, MS, LA, and s. TX.

Phen: May-Jul. **Syn:** = Ar, FNA, GrPl, GW2, IL, K3, K4, MC, Mo2, NcTx, Tx; = *Cynoscium pinnatum* A.P. de Candolle – F. NatureServe G5? (Secure).

*Osmorhiza* Rafinesque 1819 (SWEET CICELY, WILD CHERVIL)

A genus of about 10 species, perennial herbs, of temperate North America, temperate South America, montane tropical Central and South America, and Asia (Wen et al. 2002; Plunkett et al. 2018a). References: Lowry & Jones (1979); MC; Plunkett et al (2018a) in Kadereit & Bittrich (2018); Wen et al (2002).

- 1 Styles plus stylopodium 0.5-1.5 mm long; flowers 4-7 (-10) per umbellet (including withering staminate flowers); flowers 3-4 mm across; umbellets 3-5 (-6) per umbel, on rays 2-8 (-10) cm long, the umbel therefore relatively uncrowded; roots (and foliage) not at all or only slightly anise-scented, often mildly carrot-scented..... *Osmorhiza claytonii*
- 1 Styles plus stylopodium 2.0-3.5 mm long; flowers (6-) 9-18 per umbellet (including withering staminate flowers); flowers 5-6 mm across; umbellets 4-6 (-8) per umbel, on rays 1.5-5.0 (-7.5) cm long, the umbel therefore rather crowded; roots (and foliage) strongly anise- or licorice-scented..... *Osmorhiza longistylis*

NM. **Phen:** Apr-May; May-Jun. **Syn:** = Ar, C, F, G, K1, K3, K4, Mi, Mo2, NcTx, NE, Pa, RAB, Tn, Tx, Va, W, Lowry & Jones (1979); = *Osmorhiza longistylis* – S, misspelling; = *Washingtonia longistylis* (Torrey) Britton; > *Osmorhiza longistylis* var. *brachycoma* Blake – F, MC, WV; > *Osmorhiza longistylis* var. *longistylis* – F, GrPl, Il, MC, WV; > *Osmorhiza longistylis* var. *villicaulis* Fernald – F, GrPl, Il, MC.

***Oxypolis* Rafinesque 1825 (DROPWORT, HOG-FENNEL, COWBANE)**

A genus of about 4 species, perennial herbs, of temperate North America (Plunkett et al. 2018a). Based on work of Feist et al. (2012) and Feist & Downie (2008), *Oxypolis* has been limited to the species with compound leaves, distributed in eastern and w. North America. The compound-leaved *Oxypolis* form a clade far-removed within tribe Oenantheae from the quill-leaved *Oxypolis* and *Ptilimnium* and compound-leaved *Ptilimnium*. The 3 taxa of *Oxypolis* with “quill-“ or “rachis-leaves” are placed in *Tiedemannia*, endemic to se. United States and the West Indies. References: Feist & Downie (2008); Feist et al (2012); Kral (1981a); MC; Plunkett et al (2018a) in Kadereit & Bittrich (2018); Tucker et al (1983).

Oxypolis rigidior (Linnaeus) Rafinesque. COWBANE, PIG-POTATO. **Hab:** Bogs, seepages, swamps, wet meadows, streambanks. **Dist:** NY west to MN and south to n. FL and TX. **Phen:** Aug-Oct; Oct-Nov. **Comm:** Very variable in the size, shape, and toothing/lobing of the leaflets. **Syn:** = Ar, C, F17, G, GW2, K1, K3, K4, MC, Mi, Mo2, NcTx, Pa, RAB, Tn, Tx, Va, W, WH3; > *Oxypolis rigidior* (Linnaeus) Rafinesque – S; > *Oxypolis rigidior* var. *ambigua* (Nuttall) Robinson – F, Il, WV; > *Oxypolis rigidior* var. *rigidior* – F, Il, WV; > *Oxypolis turgida* Small – S.

***Perideridia* Reichenbach 1837**

A genus of about 14 species, perennial herbs, mainly of c. and w. North America (Plunkett 2018a). References: MC; Plunkett et al (2018a) in Kadereit & Bittrich (2018); Sun & Downie in FNA () (in prep).

Perideridia americana (Nuttall ex A.P. de Candolle) Reichenbach. EASTERN YAMPAH. **Hab:** Floodplains, oak savannahs, prairies, rocky woodlands, dolomite glades, shale barrens, and open woodlands, usually on limestone but less typically on sandstone. **Dist:** OH, IN, IL, IA, and KS south to ne. AL, nw. AL, wc. MS, n. AR, and OK. **Phen:** Apr-Jul. **Syn:** = Ar, C, F, G, GrPl, K1, K3, K4, MC, Mo2, Tn, Sun & Downie in FNA () (in prep); = *Eulophus americanus* Nuttall ex A.P. de Candolle – S. NatureServe G4 (Apparently Secure).

***Petroselinum* J. Hill 1756 (PARSLEY)**

A genus of about 1-3 species, annual to biennial herbs, of Mediterranean Europe (Plunkett et al. 2018a). References: MC; Nesom in FNA () (in prep); Plunkett et al (2018a) in Kadereit & Bittrich (2018).

* ***Petroselinum crispum*** (P. Miller) Nyman ex A.W. Hill. PARSLEY, GARDEN PARSLEY. **Hab:** Commonly cultivated in gardens, rarely persistent or weakly escaped. **Dist:** Native of Mediterranean Europe. **Phen:** Jun-Jul. **Syn:** = C, F, F17, FNA, G, K1, K3, K4, MC, Meso4.1, Mi, NcTx, NE, RAB, Tx, WH3; = *Apium petroselinum* Linnaeus – S. NatureServe GNR (Not Yet Ranked).

***Polytaenia* A.P. de Candolle 1830**

A genus of 2 species, perennial herbs, of c. North America (Plunkett et al. 2018a). References: MC; Nesom (2012b); Nesom in FNA () (in prep); Plunkett et al (2018a) in Kadereit & Bittrich (2018).

Polytaenia nuttallii A.P. de Candolle. PRAIRIE-PARSLEY. **Hab:** Dry prairies, glades, open woodlands. **Dist:** MI (formerly) west to NE, south to TX and NM, occurring as a disjunct eastward in prairie-like or glade situations in c. TN (Chester, Wofford, & Kral 1998; Nesom 2012), c. KY, AL, MS, and e. LA (Nesom 2012). **Phen:** Apr-Jun. **Syn:** = Ar, C, F, FNA, G, Il, K1, K3, MC, Mi, Mo2, Tn, Tx, Nesom (2012b); = *Pleiotenia nuttallii* (A.P. de Candolle) Coulter & Rose – S; < *Polytaenia nuttallii* A.P. de Candolle – NcTx.

Ptilimnium Rafinesque 1819 (BISHOPWEED, HARPERELLA)

A genus of 5 species, annual and perennial herbs, temperate, of e. North America (Plunkett et al. 2018a). *Ptilimnium* should be re-split into two genera, *Harperella* and *Ptilimnium*; as *Ptilimnium* (s.s.) with compound leaves is more closely related *Tiedemannia* (formerly *Oxypolis* with quill leaves) than it is to *Harperella* (Feist & Downie 2008; Feist et al. 2012). References: Easterly (1957); Feist & Downie (2008); Feist (2010); Feist et al. (2012); Kral (1981a); Kress, Maddox, & Roesel (1994); MC; Plunkett et al. (2018a) in Kadereit & Bittrich (2018); Rose (1911); Weakley & Nesom (2004).

- 2 Middle and upper stem leaves with petioles papillate on the upper surface; styles (on the fruit) 0.1-0.2 mm long, erect-ascending to spreading; calyx teeth <0.2 mm long, deltoid. *Ptilimnium capillaceum*
- 2 Middle and upper stem leaves with petioles not papillate on the upper surface; styles (on the fruit) (0.3-) 0.4-2.0 mm long, spreading to strongly recurved; calyx teeth >0.2 mm long, narrowly triangular.
 - 4 Midstem leaves with 2-4 (-5) nodes along the rachis, the primary leaf segments usually alternate or opposite at the nodes (not including the node at the apex of the rachis); individual leaf segments often much longer than the rachis; involucre bract segments 1 (-3); stem sometimes slightly thickened at the base but never forming a corm; styles (0.3-) 0.4-0.6 mm long; fruits 1.0-1.9 mm long; dorsal ribs of the fruit thick, rounded; flowering Apr-Jul; fruiting late May-early Aug. *Ptilimnium nuttallii*
 - 4 Midstem leaves with (6-) 7-16 nodes along the rachis, the primary leaf segments whorled or verticillate at the major nodes; individual leaf segments shorter than the rachis (or rarely as long as in *P. texense*); involucre bract segments (1-) 3 (-7); stem thickened and rounded at base, forming a globose or slightly elongate corm; styles (0.3-) 0.5-2.0 mm long; fruits 2.2-4.0 mm long; dorsal ribs of the fruit narrow, sharp-edged to blunt; flowering Jul-Oct; fruiting mid Jul-Nov. *Ptilimnium costatum*

Ptilimnium capillaceum (Michaux) Rafinesque. EASTERN BISHOPWEED, ATLANTIC BISHOPWEED. **Hab:** Ditches, marshes, other wet places. **Dist:** MA, NY, and MO south to s. FL and TX. **Phen:** Jun-Aug; Jul-Sep. **Syn:** = Ar, C, F, FI7, G, GrPl, GW2, K1, MC, Mo2, NcTx, NE, Pa, S, Tn, Tx, Va, W, WH3, Easterly (1957), Weakley & Nesom (2004); < *Ptilimnium capillaceum* (Michaux) Rafinesque – K3, K4, RAB, Feist (2010).

Ptilimnium costatum (Elliott) Rafinesque. BIG BISHOPWEED. **Hab:** Tidal freshwater marshes, wet prairies, bottomland hardwood forests. **Dist:** Se. NC south to GA, and west to IL, MO, and AR (material from LA and TX is of *P. texense*); it is rare and disjunct through much of that range. Reported for Georgetown County, SC (Bradley et al. [in prep.]). **Phen:** Jun-Oct; mid Jul-Oct. **Comm:** It has the potential to be a great deal larger and coarser than any other member of the genus, but individuals will be encountered no larger than a fairly robust plant of *P. ahlesii* or *P. capillaceum*. **Syn:** = Ar, C, F, G, GW2, II, K1, MC, Mo2, RAB, S, Tn, Easterly (1957), Feist (2010), Feist et al. (2012), Weakley & Nesom (2004); < *Ptilimnium costatum* (Elliott) Rafinesque – K3, K4. **NatureServe G4** (Apparently Secure).

Ptilimnium nuttallii (A.P. de Candolle) Britton. LACEFLOWER, MIDWESTERN BISHOPWEED. **Hab:** Marshes, ditches, wetlands. **Dist:** KY, MO, and KS south to se. TN (Chester, Wofford, & Kral 1997; Tn Flora Committee 2015), s. AL, s. LA, and e. TX. **Phen:** Apr-Jul; late May-early Aug. **Syn:** = Ar, C, F, G, GrPl, GW2, II, K1, K3, K4, MC, Mo2, NcTx, S, Tn, Tx, Easterly (1957), Feist (2010), Feist et al. (2012), Weakley & Nesom (2004). **NatureServe G5?** (Secure).

*Sanicula* Linnaeus 1753 (SANICLE, SNAKEROOT)

A genus of about 41 species, herbs, nearly cosmopolitan (Plunkett et al. 2018). References: MC; Plunkett et al. (2018a) in Kadereit & Bittrich (2018); Pryer & Phillippe (1989).

Identification Notes: Identification note: Most *Sanicula* species cannot be reliably determined from sterile plants; fruits or flowers are required for identification. An important character is the length of the styles in relation to the calyx and/or to the bristles on the fruit. In the longer-styled species, the styles are slender and curved outward, sometimes enmeshed in the bristles, but distinctly longer than them or than the calyx. In the shorter-styled species, the styles are straight to slightly curved, shorter than or about as long as the bristles, and more or less included in the calyx. In most species the calyx is inconspicuous, but consists of 5 deltoid to narrowly triangular (or even subulate) calyx lobes, 0.4-2.0 mm long, at the summit of the schizocarp (the fruit).

- 1 Styles 1.5× or more as long as the calyx; umbellets dimorphic – some contain both perfect and staminate flowers, while others contain staminate flowers only (except sometimes *S. canadensis* var. *grandis*, which may have polygamous umbellets only); larger leaves 3-7-lobed.
 - 2 Calyx lobes 0.4-0.7 mm long, deltoid, flexible or weak in texture, the apices acute to obtuse; petals yellowish green, much longer than the calyx. *Sanicula odorata*
 - 2 Calyx lobes 0.7-2.0 mm long, narrowly triangular to subulate, rigid in texture, the apices acute-acuminate; petals white or greenish-white, equal to or slightly longer than the calyx. *Sanicula marilandica*
- 1 Styles shorter than (or rarely as long as) the calyx; umbellets usually monomorphic (all containing both perfect and staminate flowers), with staminate flowers 1-7 per umbellet; larger leaves 3-foliolate (the lateral leaflets often deeply lobed) or rarely 5-foliolate.
 - 5 Plant a perennial, from thickened, cordlike roots; umbellets with 7-9 flowers (3 perfect and 4-6 staminate) *Sanicula smallii*
 - 5 Plant a biennial, from slender, fibrous roots; umbellets with 4-6 flowers (3 perfect and 1-3 staminate).

Spermolepis Rafinesque 1825 (SPERMOLEPIS)

A genus of 5 species, annual herbs, of North America, Argentina, and Hawaii (Plunkett et al. 2018a). References: MC; Nesom (2012c); Plunkett et al (2018a) in Kadereit & Bittrich (2018).

- 1 Ovary and fruit with hooked bristles..... *Spermolepis echinata*
- 1 Ovary and fruit with pointed hairs or rounded tubercles.
 - 2 Ovary and fruit with sharply pointed thick-based, single-celled hairs; primary rays of the umbel widely spreading to weakly ascending, not greatly differing in length *Spermolepis divaricata*
 - 2 Ovary and fruit with multicellular tubercles, lacking a sharp tip; primary rays of the umbel strongly ascending, differing conspicuously in length *Spermolepis inermis*

Spermolepis divaricata (Walter) Rafinesque ex Seringe. SOUTHERN SPERMOLEPIS, ROUGHFRUIT SPERMOLEPIS. **Hab:** Sandy roadsides, disturbed areas. **Dist:** VA south to s. FL, west to e. TX. Endemic to our region, though weedy in behavior, and perhaps introduced only in VA. **Phen:** Apr-May; May-Jun. **Syn:** = K4, Nesom (2012c); < *Spermolepis divaricata* (Walter) Rafinesque ex Seringe – Ar, C, FI7, G, GW2, K1, K3, MC, Mo2, NcTx, RAB, S, Tx, Va, WH3. [NatureServe GNR](#) (Not Yet Ranked).

Spermolepis echinata (Nuttall ex A.P. de Candolle) A. Heller. BRISTLEFRUIT SPERMOLEPIS, HOOKED SPERMOLEPIS. **Hab:** Sandy prairies, sandy roadsides and disturbed areas. **Dist:** IL and s. KS south to Mexico (Coahuila and Tamaulipas, other states); more eastern parts of the distribution are of uncertain nativity. **Phen:** Apr; May. **Syn:** = Ar, C, F, FI7, G, GrPl, Il, K1, K3, MC, Mo2, NcTx, RAB, S, Tn, Tx, WH3, Nesom (2012c). [NatureServe GNR](#) (Not Yet Ranked).

Spermolepis inermis (Nuttall ex A.P. de Candolle) Mathias & Constance. WESTERN SPERMOLEPIS. **Hab:** Sandy prairies and open woodlands, calcareous prairies in the Mountains (GA), disturbed areas in the Coastal Plain (NC). **Dist:** IN, IL, IA, MN, and NE south to w. LA, TX, se. NM, and COA; disjunct eastwards in TN, G, AL, MS, and e. LA as a native, and also a rare waif (as in e. NC). **Phen:** Apr; May. **Syn:** = Ar, C, F, G, GrPl, Il, K4, MC, Mo2, NcTx, RAB, Tn, Tx, Nesom (2012c); < *Spermolepis inermis* (Nuttall ex A.P. de Candolle) Mathias & Constance – K1, K3; ? *Spermolepis patens* (Nuttall ex A.P. de Candolle) B.L. Robinson – S.

Taenidia (Torrey & A. Gray) Drude 1898 (YELLOW PIMPERNEL)

Contributed by D.B. Poindexter and A.S. Weakley

A genus of 2 species, perennial herbs, of temperate e. North America. Since its naming, *Taenidia montana* has been traditionally separated into a monotypic genus, *Pseudotaenidia*; Cronquist (1982) has suggested that *Pseudotaenidia* be submersed in *Taenidia*. Cronquist's argument that the two monotypes are most closely related to one another is very possibly correct and has been generally followed since, but awaits further assessment with molecular methods. Plunkett et al. (2018) retained *Pseudotaenidia* and *Taenidia* as monotypic genera. References: Cronquist (1982); MC; Plunkett et al (2018a) in Kadereit & Bittrich (2018).

Taenidia integrerrima (Linnaeus) Drude. YELLOW PIMPERNEL. **Hab:** In rocky, dry to dry-mesic forests and woodlands over mafic or calcareous rock, such as diabase, amphibolite, calcareous siltstone, calcareous shale, or limestone. **Dist:** QC, ON, MN, and SD south to c. GA, AL, MS, LA, and TX. **Phen:** Apr-May (-Jun); May-Jun. **Syn:** = Ar, C, F, G, GrPl, Il, K1, K3, K4, MC, Mi, Mo2, NE, Pa, RAB, S, Tn, Tx, Va, W, WV, Cronquist (1982), Plunkett et al (2018a) in Kadereit & Bittrich (2018). [NatureServe G5](#) (Secure).

Thaspium Nuttall 1818 (MEADOW-PARSNIP)

A genus of 3-6 species, perennial herbs, temperate, of e. North America (Plunkett et al. 2018a). *Thaspium* and *Zizia* are closely related (sister to one another) and their traditional separation as genera should be re-evaluated. References: Cooperider (1985); Coulter & Rose (1900); Floden (2019); MC; Plunkett et al (2018a) in Kadereit & Bittrich (2018).

Identification Notes: Because *Thaspium* and *Zizia* are often confused when not in fruit, a combined key emphasizing vegetative characters has been provided; it may also be helpful to use the key to genera, and if a clear answer is obtained, then use the *Thaspium-Zizia* combined key, skipping taxa of the "wrong" genus.

Key to Map
 Symbology: (see introduction for more)

416. APIACEAE

- 3 Basal leaves at least in part 2-ternate or more divided (with 5 or more leaflets).
 4 Leaflets coarsely and rather lacerately serrate or incised, many of the teeth at least 2 mm long as measured on the shorter side; leaflet margins ciliate, not hyaline-whitened; umbel rays 8-10, < 3.5 cm long even in fruit; petals pale to creamy yellow; plant hispidulous to sparsely pubescent.
 *Thaspium chapmanii*
 4 Leaflets finely to coarsely serrate, but not lacerate or incised, few if any of the teeth > 2 mm long as measured on the shorter side; leaflet margins glabrous and hyaline-whitened; umbel rays mostly either more in number (than 8-10) or longer (than 3.5 cm long); petals golden yellow; plant glabrous.
 *Zizia aurea*
 3 Basal leaves simple or 3-foliolate (with 1-3 leaflets).
 9 Flowers golden yellow; stems and leaves green, rarely purple-tinged..... *Thaspium trifoliatum* var. *aureum*
 9 Flowers dark maroon; stems and leaves usually purple-tinged..... *Thaspium trifoliatum* var. *trifoliatum*

Thaspium chapmanii (Coulter & Rose) Small. **Hab:** Calcareous bluffs, dry to mesic forests and woodlands, especially over calcareous substrates, open disturbed sites. **Dist:** Sw. PA, s. ON, s. MI, sw. WI, and s. MN south to Panhandle FL (Jackson County) and e. TX (Houston County). **Phen:** Apr-Jun. **Syn:** = K3, K4, Mi, Tn, Floden (2019); = *Thaspium barbinode* var. *angustifolium* Coulter & Rose – F; < *Thaspium barbinode* (Michaux) Nuttall – C, Fl7, G, GrPl, Il, K1, MC, Mo2, Pa, WH3, WV, Cooperrider (1985); > *Thaspium barbinode* var. *angustifolium* Coulter & Rose – Coulter & Rose (1900); > *Thaspium barbinode* var. *chapmanii* Coulter & Rose – Coulter & Rose (1900).

Thaspium trifoliatum (Linnaeus) A. Gray var. *aureum* (Linnaeus) Britton. **Hab:** Moist forests. **Dist:** NY west to MN, south to SC, AL, AR, and se. KS. **Phen:** Apr-May; Jul-Aug. **Tax:** Various workers have differed on the characters used to separate two varieties in *T. trifoliatum*. RAB and C separate the two strictly on petal color; F, however, allows var. *aureum* to sometimes have purple petals, seeming to regard the critical differences to be var. *aureum*'s generally more robust size and larger fruits (4.5 mm long vs. 3-4 mm long). It is presently not clear how two varieties should be separated, or, indeed, if varieties are warranted. Though the ranges overlap, var. *aureum* is generally more northern and western, var. *trifoliatum* more southern and eastern. **Syn:** = Ar, K1, K3, K4, S, Coulter & Rose (1900); = *Thaspium trifoliatum* var. *flavum* Blake – C, F, GrPl, Il, MC, Mo2, Pa, RAB, Tn, W, WV, Cooperrider (1985); < *Thaspium trifoliatum* – G, Mi, Va, Floden (2019). **NatureServe G5T5** (Secure).

Thaspium trifoliatum (Linnaeus) A. Gray var. *trifoliatum*. PURPLE MEADOW-PARSNIP. **Hab:** Moist forests. **Dist:** NJ, PA, and MO, south to Panhandle FL and LA. **Phen:** Apr-May; Jul-Aug. **Syn:** = Ar, C, F, Il, K1, K3, K4, MC, Mo2, Pa, RAB, S, Tn, W, WV, Cooperrider (1985), Coulter & Rose (1900); = *Thaspium trifoliatum* var. *trifoliatum* – NE, misspelling; < *Thaspium trifoliatum* – Fl7, G, Va, WH3. **NatureServe G5T5** (Secure).

Tiedemannia A.P. de Candolle 1829 (WATER DROPWORT)

A genus of 2 species and 3 taxa, perennial herbs, of se. United States and the West Indies (Bahamas and Cuba) (Plunkett et al. 2018a). See Feist et al. (2012) for discussion of the relationships of this genus, which is sister to compound-leaved species of *Ptilimnium* (sensu stricto, excluding *Harperella*). References: Feist & Downie (2008); Feist et al (2012); Judd (1982b); Kral (1981c); MC; Plunkett et al (2018a) in Kadereit & Bittrich (2018); Tucker et al (1983).

Tiedemannia filiformis (Walter) Feist & S.R. Downie ssp. *filiformis*. WATER DROPWORT. **Hab:** Wet savannas, sandhill seepages. **Dist:** Se. NC south to s. FL, west to se. TX; West Indies. **Phen:** Jul-Sep; Aug-Oct. **Syn:** = Fl7, K3, K4, Feist et al (2012); = *Oxypolis filiformis* (Walter) Britton – Bah, GW2, K1, MC, NcTx, RAB, S, Tx; = *Oxypolis filiformis* ssp. *filiformis* – WH3, Judd (1982b). **NatureServe G5** (Secure).

Torilis Adanson 1763 (HEDGE-PARSLEY, BUR-PARSLEY)

A genus of about 15 species, annual herbs, temperate, of the Old World (Plunkett et al. 2018a). References: Banfi, Galasso, & Soldano (2011); DiTommaso et al (2014); Jury (1996); Jury (2003); MC; Plunkett et al (2018a) in Kadereit & Bittrich (2018).

- 1 Rays reduced or absent, < 5 mm long, the inflorescence therefore compact, appearing like a head; inflorescences opposite the leaves, on peduncles 0-1 (-2) cm long; central schizocarps in each umbellet with both mericarps tuberculate; peripheral schizocarps in each umbellet with only the outer mericarp spiny..... *Torilis nodosa*
 *Torilis nodosa*
 1 Rays and pedicels well-developed, > 5 mm long, the inflorescence therefore open, distinctly and obviously an umbel; inflorescences opposite the leaves and terminal, on peduncles (1-) 3-16 cm long; schizocarps with both mericarps spiny or sometimes with 1 mericarp tuberculate.
 2 Involucral bracts 5-6, generally 1 per ray; fruits 2-2.5 mm long (not including the spines); schizocarps with strongly forward-curved spines, the apices acute with a single erect spicule (thus the spine not appearing hooked), elsewhere on the spines spicules smaller and erect or forward-pointing; mericarps with more or less conspicuous green dorsal ribs, the ribs glabrous or with a few scattered hairs not obscuring the ribs..... *Torilis japonica*
 *Torilis japonica*
 2 Involucral bracts 0-1 (-3); fruits 3-4 mm long (not including the spines); spines straight or nearly so, with a minute hook at the tip; schizocarps more or less straight to slightly forward-curved spines, the apices barbed with one to two backward-pointing spicules, elsewhere on the spines spicules smaller and erect to backward-pointing; mature mericarp with inconspicuous dorsal ribs, which are obscured by lines of white hairs similar to those on pedicels
 *Torilis helvetica*

416. APIACEAE

* ***Torilis helvetica*** (Jacquin) C.C. Gmelin. SPREADING BUR-PARSLEY, FIELD HEDGE-PARSLEY. **Hab:** Roadsides, fields, disturbed areas. **Dist:** Native of Mediterranean Europe and n. Africa. Reported as new to DE (Longbottom, Naczi, & Knapp 2016). **Phen:** May-Jun (-Jul). **Tax:** The widely naturalized *Torilis* in eastern North America is not *Torilis arvensis* s.s., or *Torilis arvensis* ssp. *arvensis*, but *Torilis arvensis* ssp. *recta* or (if treated at species rank, as here) *Torilis helvetica*. **Syn:** = Banfi, Galasso, & Soldano (2011); = *Torilis arvensis* ssp. *recta* – Jury (1996), Jury (2003); < *Torilis arvensis* (Hudson) Link – Ar, C, FI7, GrPl, II, MC, Mo2, NcTx, RAB, Tn, Va, W, WH3, DiTommaso et al (2014); < *Torilis arvensis* ssp. *arvensis* – FNA, K1, K3, K4. NatureServe GNRTNR (Not Yet Ranked).

* ***Torilis japonica*** (Houttuyn) A.P. de Candolle. JAPANESE HEDGE-PARSLEY. **Hab:** Disturbed areas. **Dist:** Native of Eurasia. Naturalized south to se. PA, VA, and w. NC (Denslow 2011). **Phen:** Jun-Jul. **Syn:** = C, F, G, II, K1, K3, K4, MC, Mi, Mo2, NE, Pa, Va, WV, DiTommaso et al (2014); = *Torilis anthriscus* (Linnaeus) Gaertner. NatureServe GNR (Not Yet Ranked).

* ***Torilis nodosa*** (Linnaeus) Gaertner. KNOTTED BUR-PARSLEY. **Hab:** Disturbed areas. **Dist:** Native of Mediterranean Europe. **Phen:** Apr-Jun. **Syn:** = Ar, G, GrPl, K1, K3, K4, MC, Mi, Mo2, NcTx, RAB, S, Tx. NatureServe GNR (Not Yet Ranked).

Trepocarpus Nuttall ex A.P. de Candolle 1829 (WHITE-NYMPH)

A monotypic genus, an annual herb, temperate, of se. United States (Plunkett et al. 2018a). References: MC; Nesom in FNA () (in prep); Plunkett et al (2018a) in Kadereit & Bittrich (2018).

Trepocarpus aethusae Nuttall ex A.P. de Candolle. WHITE-NYMPH. **Hab:** Rich moist forests, calcareous glades, sometimes weedy in disturbed soils. **Dist:** Nc. NC south to Panhandle FL and AL, west to e. TX, north in the interior to w. TN, w. KY, AR, and se. OK. **Phen:** May-Jun. **Comm:** Nelson (1993) states that despite "something of a reputation as a rarity", *Trepocarpus* is "a reasonably successful weed". **Syn:** = Ar, C, FI7, FNA, GW2, II, K1, K3, K4, MC, Mo2, NcTx, RAB, Tn, Tx, WH3. NatureServe G4G5 (Apparently Secure).

Zizia W.D.J. Koch 1825 (GOLDEN-ALEXANDERS)

A genus of about 4 species, perennial herbs, temperate, of North America. References: Cooperrider (1985); MC.

[see combined key to *Thaspium* and *Zizia* under *Thaspium*]

Zizia aurea (Linnaeus) W.D.J. Koch. COMMON GOLDEN-ALEXANDERS. **Hab:** Moist forests, moist prairies.

Dist: NB west to SK, south to sw. GA, Panhandle FL, and e. TX. **Phen:** Apr-May; Jun-Jul. **Syn:** = Ar, C, F, FI7, G, GrPl, GW2, II, K1, K3, K4, MC, Mi, Mo2, NcTx, NE, Pa, RAB, S, Tn, Tx, Va, W, WH3, WV, Cooperrider (1985). NatureServe G5 (Secure).

Index of Common Names

"Anacharis" *Egeria densa*
 "Appalachian Gametophyte" *Vittaria appalachiana*
 "Black Alder" *Ilex verticillata*
 "Broom Sage" *Andropogon virginicus**
 "Clemathy-vine" *Clematis terniflora*
 "Elodea" *Egeria densa*
 "False Solomon's-seal" *Maianthemum racemosum*
 "Pin Oak" *Quercus phellos*
 "Privy Hedge" *Ligustrum sinense*
 "Red Milkweed" *Asclepias rubra*
 "Sage Grass" *Andropogon virginicus**
 "Sedge Grass" *A. virginicus**
 {name} *Silphium asperrimum*
 Abelia *Abelia grandiflora*
Acacia, Longspine *Vachellia macracantha*
 —, Small's Sweet *V. densiflora*
 Acorn Squash *Cucurbita melopepo**
 Adam-and-Eve *Aplectrum hyemale*
 Addermouth *Pogonia ophioglossoides*
 Adder's-mouth, Green *Malaxis unifolia*
 Adonis, Autumn *Adonis annua*
 Adzuki Bean *Vigna angularis*
 African Bristlegrass *Setaria sphacelata*
 African Indigo *Indigofera tinctoria*
Agalinis, Beautiful *Agalinis pulchella*
 —, Common *A. purpurea*
 —, Flatflower *A. homalantha*
 —, Gattinger's *A. gattingeri*
 —, Green *A. viridis*
 —, Harper's *A. harperi*
 —, Midwestern *A. gattingeri*
 —, Plukenet's *A. plukenetii*
 —, Prairie *A. heterophylla*
 —, Scale-leaf *A. aphylla*
 —, Slenderleaf *A. tenuifolia*
 —, Southern Saltmarsh *A. maritima**
 —, Spindly *A. filicaulis*
 —, Threadleaf *A. setacea*
 Agave, Eastern *Agave virginica*
Ageratum *Ageratum conyzoides*
 — *Conoclinium coelestinum*
Agrimony, Common *Agrimonia gryposepala*
 —, Downy *A. pubescens*
 —, Low *A. microcarpa*
 —, Pineland *A. incisa*
 —, Southern *A. parviflora*
 —, Swamp *A. gryposepala*
 —, Woodland *A. rostellata*
 Agueweed, Western *Gentianella occidentalis*
 Air Yam *Dioscorea bulbifera*
 Alabama Azalea *Rhododendron alabamense*
 Alabama Beaksedge *Rhynchospora crinipes*
 Alabama Cane *Arundinaria species 1*
 Alabama Chinquapin *Castanea alabamensis*
 Alabama Evening-primrose *Oenothera heterophylla**
 Alabama Grapefern *Sceptridium jenmanii*
Alabama Hawthorn *Crataegus alabamensis*
 —, Smooth *C. teres*
 Alabama Leatherflower *Clematis species 5*
 Alabama Lipfern *Myriopteris alabamensis*
 Alabama Snow-wreath *Neviusia alabamensis*
 Alabama Supplejack *Berchemia scandens*
 Alacrancillo *Heliotropium indicum*
 Alamo Vine *Distimake dissectus*
 Albertville Hawthorn *Crataegus mendosa*
Alder, Black *Alnus glutinosa*
 —, European *A. glutinosa*
 —, Hazel *A. serrulata*
 —, Smooth *A. serrulata*
 —, Tag *A. serrulata*
 Alexander Grass *Urochloa plantaginea*

Alfalfa *Medicago sativa*
 Alfalfa Dodder, Bigseed *Cuscuta indecora*
Alfalfa, Blue *Medicago sativa*
 —, Yellow *M. sativa*
 Alfalfilla *Melilotus indicus*
 Alfileria *Erodium cicutarium*
 Alfilerillo *E. cicutarium*
 Allegheny Hawthorn *Crataegus alleghaniensis*
 Allegheny Monkeyflower *Mimulus ringens**
 Allegheny-spurge *Pachysandra procumbens*
 Alligator-weed *Alternanthera philoxeroides*
 Allspice, Carolina *Calycanthus floridus*
 Alsike Clover *Trifolium hybridum*
 Alta Fescue *Lolium arundinaceum*
 Alternate-leaf Dogwood *Swida alternifolia*
 Alternate-leaved Seedbox *Ludwigia alternifolia*
 Alternate-leaved Water-milfoil *Myriophyllum pinnatum*
 — *Hibiscus syriacus*
 Althaea *Heuchera americana*
Alumroot, American *Heuchera americana*
 —, Giant *H. macrorhiza*
 —, Interior Low Plateau Grotto *H. missouriensis*
 Alyce Clover *Alysicarpus ovalifolius*
 Alyssum, Sweet *Lobularia maritima*
 Amapola Grande *Alcea rosea*
Amaranth, Green *Amaranthus hybridus**
 —, Green *A. powellii*
 —, Livid *A. blitum**
 —, Palmer's *A. palmeri*
 —, Powell's *A. powellii*
 —, Purple *A. blitum**
 —, Redroot *A. retroflexus*
 —, Slender *A. viridis*
 —, Slim *A. hybridus**
 —, Smooth *A. hybridus**
 —, Spiny *A. spinosus*
 —, Tropical Green *A. viridis*
 —, Tumbleweed *A. albus*
 Amazon Sprangletop *Dinebra panicoides*
 Amberique Bean *Strophostyles helvola*
 American Alumroot *Heuchera americana*
 American Ash *Fraxinus americana*
 American Basketflower *Plectocephalus americanus*
 American Beautyberry *Callicarpa americana*
 American Beech *Fagus grandifolia**
 American Bittersweet *Celastrus scandens*
 American Black Nightshade *Solanum americanum*
 American Bluehearts *Buchnera americana*
 American Bugleweed *Lycopus americanus*
 American Burnweed *Erechtites hieraciifolius*
 American Bur-reed *Sparganium americanum*
 American Carrot *Daucus pusillus*
 American Centaury *Sabatia angularis*
 American Chestnut *Castanea dentata*
 American Columbo *Frasera caroliniensis*
 American Cupscale *Sacciolepis striata*
 American Dragon's-head *Dracocephalum parviflorum*
 American Elm *Ulmus americana**
 American Filbert *Corylus americana*
 American Frog's-bit *Limnium spongia*
 American Ginseng *Panax quinquefolius*
 American Gromwell *Lithospermum latifolium*
 American Halfchaff *Cyperus neotropicalis*
 American Hazelnut *Corylus americana*
 American Holly *Ilex opaca*
 American Hop-hornbeam *Ostrya virginiana*
 American Lipocarpha *Cyperus neotropicalis*
 American Lopseed *Phryma leptostachya*
 American Lotus-lily *Nelumbo lutea*
 American Lovage *Ligusticum canadense*
 American Mandrake *Podophyllum peltatum*
 American Mistletoe *Phoradendron leucarpum**
 American Penthorum *Penthorum sedoides*

American Persimmon *Diospyros virginiana*
 American Plantain *Plantago rugelii*
 American Pondweed *Potamogeton nodosus*
 American Queen-Anne's-lace *Daucus pusillus*
 American Rattan *Berchemia scandens*
 American Royal Fern *Osmunda spectabilis*
 American Self-heal *Prunella vulgaris**
 American Silverberry *Elaeagnus commutata*
 American Slough Grass *Beckmannia syzigachne*
American Snowbell *Styrax americanus**
 —, Downy *S. americanus**
 American Stinging Nettle *Urtica gracilis**
 American Storax *Styrax americanus**
 American Wahoo *Euonymus atropurpureus*
 American Water-willow *Justicia americana*
 American Wild Lettuce *Lactuca canadensis*
 American Wild Plum *Prunus americana*
 American Wisteria *Wisteria frutescens**
 American-dittany *Cunila origanoides*
 Ammi, Greater *Ammi majus*
 Amur Honeysuckle *Lonicera maackii*
 Amur Peppervine *Ampelopsis glandulosa*
 Amur Privet *Ligustrum obtusifolium**
 Ancho *Capsicum annuum**
 and many others *C. annuum**
Anemone, Carolina *Anemone caroliniana*
 —, Eastern Prairie *A. berlandieri*
 —, Prairie *A. caroliniana*
 —, Tall *A. virginiana**
 —, Ten-petal *A. berlandieri*
 —, Wood *A. quinquefolia*
Angelica, Deadly *Angelica venenosa*
 —, Hairly *A. venenosa*
 —, Woodland *A. venenosa*
 Angelico *Ligusticum canadense*
Anglepod, Eastern *Gonolobus suberosus**
 —, Western *G. suberosus**
 Angle-stem Beaksedge *Rhynchospora caduca*
 Anise Horsebalm *Collinsonia anisata*
 Anise-root *Osmorhiza longistylis*
 Annual Beardgrass *Polypogon monspeliensis*
 Annual Blue-eyed-grass *Sisyrinchium rosulatum*
 Annual Bluegrass *Poa annua*
 Annual Fimbrly *Fimbristylis annua*
 Annual Fleabane *Erigeron annuus*
 Annual Greenhead Sedge *Cyperus hortensis*
 Annual Knawel *Scleranthus annuus**
 Annual Mugwort *Artemisia annua*
 Annual Pearlwort *Sagina decumbens*
 Annual Phlox *Phlox drummondii**
 Annual Rabbitfoot Grass *Polypogon monspeliensis*
 Annual Rye-grass *Lolium multiflorum*
 Annual Sand Bean *Strophostyles helvola*
 Annual Sea-pink *Sabatia stellaris*
 Annual Silver Hairgrass *Aira elegans*
 Annual Vernal Grass *Anthoxanthum aristatum*
 Annual Water Aster *Symphotrichum divaricatum*
 Anoda, Spurred *Anoda cristata*
 Anomalous Eupatorium *Eupatorium anomalum*
 Apalachicola Doll's-daisy *Boltonia apalachicolensis*
 Apalachicola Indiangrass *Sorghastrum apalachicolense*
 Apodanthus Daffodil *Narcissus jonquilla*
 Apopanax *Vachellia macracantha*
 Appalachian Arrowhead *Sagittaria arifalis*
 Appalachian Beardtongue *Penstemon canescens*
 Appalachian Coneflower *Rudbeckia umbrosa*
 Appalachian Filmy Fern *Vandenboschia boschiana*
 Appalachian Goldenrod *Solidago flaccidifolia*
 Appalachian Ironweed *Vernonia glauca*
 Appalachian Milkwort *Polygala curtissii*
 Appalachian Mock-orange *Philadelphus inodorus*
 Appalachian Oak-leech *Aureolaria levigata*
 Appalachian Phacelia *Phacelia dubia**

*Common name applies to a subspecies or variety of this species.

INDEX OF COMMON NAMES

- Appalachian Pinweed *Lechea racemulosa*
 Appalachian Quillwort *Isoetes appalachiana*
 Appalachian Ragwort *Packera anonyma*

INDEX OF COMMON NAMES

Soft Rush *Juncus effusus**

Soft-headed Pipewort *Eriocaulon compressum*

Softstem Bulrush *Schoenoplectus tabernaemontani*

Soldier Orchid *Zeuxine strateumatica*

Solomon's-plume, Eastern *Maianthemum racemosum*

—, Starry *M. stellatum*

Solomon's-seal, King *Polygonatum biflorum**

—, Large *P. biflorum**

—, Small *P. biflorum**

Sombrerillo *Hydrocotyle bonariensis*

Sorghum *Sorghum bicolor**

Sorgo *S. bicolor**

Sorrel Vine *Causonis japonica*

Sorrel-tree *Oxydendrum arboreum*

Sorrel-vine *Cissus trifoliata*

Sour Gum *Nyssa sylvatica*

Sour Paspalum *Paspalum conjugatum*

Sourclover *Melilotus indicus*

Sourgrass *Rumex acetosella**

— *Trichachne insularis*

Sourwood *Oxydendrum arboreum*

South American Horsetweed *Erigeron bonariensis*

South American Skullcap *Scutellaria racemosa*

South American Vervain *Glandularia aristigera*

South American Water-hyssop *Bacopa repens*

Southeastern Bold Goldenrod *Solidago jacksonii*

Southeastern Ceanothus *Ceanothus americanus**

Southeastern Flatsedge *Cyperus filiculmis*

Southeastern Flowering Spurge *Euphorbia pubertissima*

Southeastern Gaura *Oenothera simulans*

Southeastern New Jersey Tea *Ceanothus americanus**

Southeastern Noseburn *Tragia urens*

Southeastern Panic Grass *Coleataenia tenera*

Southeastern Poison Oak *Toxicodendron pubescens*

Southeastern Slim-spike Three-awn *Aristida longespica*

Southeastern Tansy-mustard *Descurainia pinnata**

Southeastern Wild-rye *Elymus glabriflorus**

Southeastern Woollywhite *Hymenopappus scabiosaeus**

Southern Adder's-tongue *Ophioglossum pycnostichum*

Southern Agrimony *Agrimonia parviflora*

Southern Arrowfeather *Aristida tenuispica*

Southern Arrowgrass *Triglochin striata*

Southern Arrow-wood *Viburnum scabrellum*

Southern Barren Strawberry *Waldsteinia doniana*

Southern Basswood *Tilia americana**

Southern Bayberry *Morrellia cerifera*

Southern Beaksedge *Rhynchospora microcarpa*

Southern Beardtongue *Penstemon australis*

Southern Bee-blossom *Oenothera simulans*

Southern Bentgrass *Agrostis elliottiana*

Southern Black Haw *Viburnum rufidulum*

Southern Bladderwort *Utricularia juncea*

Southern Blue Flag *Iris virginica*

Southern Bluet *Houstonia micrantha*

Southern Bog Asphodel *Triantha racemosa*

Southern Bog Water-horehound *Lycopus angustifolius*

Southern Bog-Clubmoss *Lycopodiella appressa*

Southern Bracken *Pteridium pseudocaudatum*

Southern Bristly Greenbriar *Smilax hispida**

Southern Bulrush *Schoenoplectus californicus*

Southern Carpetgrass *Axonopus compressus*

Southern Catalpa *Catalpa bignonioides*

Southern Cattail *Typha domingensis*

Southern Chervil *Chaerophyllum tainturieri*

Southern Coastal Violet *Viola septemloba*

Southern Corydalis *Corydalis halei*

Southern Crab Grass *Digitaria ciliaris*

Southern Crownbeard *Verbesina occidentalis*

Southern Cutgrass *Leersia hexandra*

Southern Dark Green Sedge *Carex oblita*

Southern Dawnflower *Stylisma humistrata*

Southern Shieldfern *Dryopteris australis*

Southern Single-head Pussytoes *Antennaria solitaria*

Southern Six-weeks Fescue *Festuca octoflora**

Southern Skullcap *Scutellaria australis*

Southern Slender Ladies'-tresses *Spiranthes lacera**

Southern Slender Woodland Sedge *Carex digitalis**

Southern Snailseed Pondweed *Potamogeton diversifolius*

Southern Sneezeweed *Helenium flexuosum*

Southern Spormolepis *Spermolepis divaricata*

Southern Spicebush *Lindera melissifolia*

Southern Stoneseed *Lithospermum tuberosum*

Southern Sugar Maple *Acer floridanum*

Southern Sundial Lupine *Lupinus perennis**

Southern Swamp Aster *Symphyotrichum elliottii*

Southern Swamp Dogwood *Swida foemina*

Southern Sweet Bay *Magnolia virginiana**

Southern Tall Flat-topped Aster *Doellingeria sericocarpoides*

Southern Tall Goldenrod *Solidago altissima**

Southern Three-awn *Aristida simpliciflora*

Southern Three-lobed Violet *Viola palmata**

Southern Toothache Tree *Zanthoxylum clava-herculis*

Southern Twayblade *Neottia bifolia*

Southern Umbrella-sedge *Fuirena scirpoidea*

Southern Venus's Looking-glass *Triodanis biflora*

Southern Water Grass *Luziola fluitans**

Southern Water Violet *Viola vittata*

Southern Water-hemlock *Cicuta mexicana*

Southern Water-hemp *Amaranthus australis*

Southern Water-milfoil *Myriophyllum heterophyllum*

Southern Water-plantain *Alisma subcordatum*

Southern Waxy Sedge *Carex glaucescens*

Southern Wedge-leaf Violet *Viola tenuipes*

Southern White Beaksedge *Rhynchospora macra*

Southern White Colic-root *Alettris obovata*

Southern White-tinged Sedge *Carex albicans**

Southern Wild Comfrey *Andersonglossum virginianum*

Southern Wild Hydrangea *Hydrangea cinerea*

Southern Wild Raisin *Viburnum nudum*

Southern Wild-rice *Zizania aquatica**

— *Zizaniopsis miliacea*

Southern Willdenow's Sedge *Carex basiantha*

Southern Winged Loosestrife *Lythrum lanceolatum*

Southern Wiregrass *Aristida beyrichiana*

Southern Woodfern *Dryopteris australis*

— *D. ludoviciana*

Southern Woodland Violet *Viola hirsutula*

Southern Woolly Violet *V. villosa*

Southern Yellow Poplar *Liriodendron tulipifera**

Southern Yellow Thistle *Cirsium horridulum**

Southern Yellow Wood-sorrel *Oxalis dillenii*

Southern-privet *Forestiera ligustrina*

Sowbane *Chenopodium murale*

Sow-thistle, Common *Sonchus oleraceus*

—, Perennial *S. arvensis**

—, Prickly *S. asper*

—, Spinyleaf *S. asper*

Soybean *Glycine max*

Spach's Evening-primrose *Oenothera spachiana*

Spaghetti Squash *Cucurbita melopepo**

Spanish Dagger *Yucca aloifolia*

Spanish Needles *Bidens bipinnata*

Spanish Oak *Quercus falcata*

—, Swamp *Q. pagoda*

Spanish-larkspur *Ipomopsis rubra*

Spanish-moss *Tillandsia usneoides*

Sparkleberry *Vaccinium arboreum*

Sparrow Vetch *Vicia tetrasperma*

Sparrowgrass *Asparagus officinalis*

Spargrass *Poa annua*

— *P. pratensis**
